To Court (Accounts produced):—The deduction is from the 14th January, inclusive; 18 days.

James Annand, sworn:—I am Head Foreman of the Locomotive Department. Cripps left his work on January 14th, at 12, noon. I am quite sure of that. When a man in his position goes to Hospital, it is his duty to report himself ready for duty on his return. He did not do so.

To Plaintiff:—I do not remember your reporting yourself on a previous occasion when you were sick. I do not remember speaking to you on the platform, on the Saturday, and asking you how you were getting on.

This concluded the evidence.

Mr. Davidson, on behalf of the Railway Authorities, addressed the Court. He said the case was a trivial one, for a very small sum. The question was simply one of discipline; as to whether a person in the position of Cripps was at liberty to absent himself from his service without leave. (Counsel here read the Agreement between the Government and Plaintiff). He admitted being fit for work, and yet he didn't report himself.

Plaintiff said that after he left the Hospital he never left the government premises from morning till night. He was ready for duty.

Mr. Davidson (To Court):—The rate of Hospital deduction for January was 1 yen 14 sen per day.

Plaintiff (To Court):—I received \$2.96 per day; that is hardly \$90 per month.

Mr. Davidson (To Court):—The overtime amounts to 5 yen 92 sen.

His Honour said he was quite clear that when a man in the position of plaintiff had to go into Hospital it was his duty to report himself when fit for duty. But more than that, in this particular case, plaintiff had left the Hospital without obtaining the consent of the Medical officer, who could not report him as fit for duty, and therefore he could not claim for the amount of the days when he was not at work. It was a pity that the case had been allowed to come into Court. The man was evidently dissatisfied and

preferred to remain at home instead of giving proper notice that he was ready for work. There would be judgment for the amount of the overtime, 5 yen 92 sen. As it had been shown that it had been tendered to plaintiff and refused, there would be no costs.

## H. B. M.'s Consular Court.

Before N. J. HANNEN, Esq., *Acting-Assst. Judge.*  
Wednesday, March 11th 1874.

COCKING & SINGLETON *vs.* P. & O. S. N. Co.

This was an action instituted by Messrs. Cocking & Singleton in consequence of non-delivery of a case of haberdashery, shipped in England per defendants' steamer *Columbian*, in May 1873, for account of plaintiffs, and alleged by them to have been stolen, through the negligence of the Co., from the *Tiptree* hulk, moored in the harbour of Yokohama, whence it had been transhipped from the steamer *Madras*—by which it arrived in August last—without their knowledge or consent.

Mr. Singleton conducted the case on behalf of his firm. Mr. F. V. Dickens appeared for defendants.

W. C. Singleton, sworn:—About the 8th October 1873, we presented to defendants a Bill of Lading for a case marked C. S. in diamond, H underneath, No. 1. We sent the Bill of Lading aboard for it, but it was not to be had. We have had several cases of same marks and numbers.

With the consent of Court, Mr. Singleton here read over at large a statement of the facts of the case, and his arguments in support of a verdict against defendants:

1st.—That, on or about the 8th of October 1873, we presented a Bill of Lading that came into our possession in the usual course of business to the defendants, for the delivery of one case supposed to contain as per invoice 125 gross silk braids, shipped per the defendants' steamer *Columbian*, and marked on said Bill of Lading C. S. in diamond, H under, No. 1.

2nd.—That the said Bill of Lading acknowledged that a case so marked and numbered was shipped on board the abovenamed vessel of the defendants at Southampton, and said Bill of Lading agrees to deliver the said goods in good order and condition to the order of the shipper of said goods at the port of Yokohama, freight being paid in England.

3rd.—That, after taking delivery of the case in Yokohama, marked as above and supposed to be ex steamer *Columbian*, and giving up the Bill of Lading to defendants, we, on opening the same at our godowns a short time after, to obtain samples, found that the contents of said case did not agree with our invoice, and that we had received a case, marked and numbered the same, containing buttons instead of braids.

4th.—That, owing to the existence of a confusion of marks and numbers, and there being altogether 4 separate Bills of Lading, by the same number of different vessels, these 4 Bills of Lading represented a total of seven cases, each of all of said cases being of the same mark and numbers, but of different contents and value, it resulted in the defendants giving us delivery on the wrong cases on the wrong Bills of Lading.

5.—That we duly informed the defendants that we were receiving these and other goods on wrong Bills of Lading, and also informed them of our receiving a case of buttons instead of a case of braids per *Columbian*.

6.—That, in accordance with defendants' reply, we waited until we had received and presented to them the last of the four Bills of Lading; viz one for 2 cases per S. S. *Simla*, and the defendants were only able to give us delivery of one case, which we had received, thus making a total delivery to us of six cases out of seven cases, which the four Bills of Lading we have altogether received, of the mark C. S. in diamond, H underneath, represented.

7.—That, on 15th December, we presented defendants, extract as follows: With reference to the Bills of Lading for C. S. in diamond, H underneath No. 1, per *Simla*, which we at present hold, we beg to say that we will give it up to you on your giving us in exchange the Bills of Lading for C. S. in diamond,

"H underneath, No. 1, ex-Columbian, (containing 125 gross silk braids), which case we have not yet received, having received another case of the same mark and number but by a different ship.

8.—That the defendants answer to above, dated 18th December, agreed to exchange Bills of Lading as proposed, and therefore the defendants do not deny our having one case short, and that that case is the one we now claim for, viz. one containing silk braids shipped per *Columbian*.

9th.—That we have presented the following claim to the defendants, as being the contents and value of the case that we maintain is missing:—

C S. in diamond, H under; No. 1. To 1 case containing

50 gross black silk braids, No. 16	
50 " " " " 18	
25 " " " " 20=1250 yds.	
	@ \$ 6 00 \$ 750

The above is the contents of the case according to our invoice.

10th.—That we have applied for delivery of the said missing case or payment of its value, and the defendants refuse us both, stating they have not the case in question, but that it may have been lost or buried among the coals on board their store hulk *Tiptree*.

11th.—That when we applied, early in December, for delivery of the remaining case and of the seven, the said missing case was in the defendants' possession and in a broken condition, but we were told by defendant or his servants that they had not it in their possession.

12th.—We therefore maintain that the defendants have failed to carry out their contract as stated in the Bill of Lading:—To carry 1 case goods, marked C. S. in diamond, H. under, and numbered No. 1, which they acknowledge by said Bill of Lading as having received at Southampton, and have failed to deliver same, as per tenor of said B. L., in Yokohama, and as they agreed by said B. L. so to do. And we further maintain that their inability to fulfil their contract is owing to gross negligence on the part of the defendants, or their servants on board of their store hulk *Tiptree* or elsewhere, while the said goods were in their possession.

13th.—We therefore pray, as rightful owners of the said B. L. and the goods mentioned therein, that, as the defendants have refused or are unable to deliver us the said goods as per contract in Bill of Lading, this honourable court will grant us the relief we now seek.

By Court:—The case which we received was exactly like the one we wanted, as regards marks &c. There was another case that we received that had no mark on it whatever.

Mr. Singleton here handed in: statement, taken from Bills of Lading, shewing the different cases shipped; 2 letters, defendants' reply, dated 18th and 19th December 1873; letter, original complaint of plaintiffs, 15th December 1873.

To Court:—What is referred to in Pars. 5 and 6 was not done in writing but by verbal communication.

Early in December, I called on defendants and asked them what they were going to do about the case that was missing. I saw a gentleman, Mr. Henley, who said he didn't know what had become of the case; it might be down amongst the coals for all they knew; they had not looked. These were the exact words he used. I also called there in November or December, and requested Mr. Davidson to go off and survey the goods, as some of them were damaged. I was told it would have to stand over. There were other goods missing, for which they have settled since.

To Court:—The Bill of Lading was not exchanged, in accordance with the letters read. (Bill of Lading put in). We have received only one of the *Simla* cases. We are still one case short. I received one box, which purported to be ex *Columbian*. There are four points that I reply on in the prosecution of my case, viz:

1st.—No notice whatever was given, by advertisement, letter, or otherwise, of the arrival of the *Columbian*, or of the other steamers.

2nd.—It is the custom to store all unclaimed goods in the bonded warehouses; which the defendants did not do. 3rd.—That the case was lost, if it was lost, through the gross carelessness of defendants; that they kept

a man in charge of the *Tiptree* who was a notorious drunkard; that on the very day we sent on board for the case that man was sent to the Hospital, suffering from *delirium tremens*; and that he was discharged for drunkenness and neglect of duty. 4th.—That when application was made for the case, about the 6th October, it was actually on board the *Tiptree*, although in a broken condition; that part of the original goods were in the case; and that the party in charge had burnt the labels and the boxes they were in, so as to get rid of them, to prevent discovery. This tallies with what Mr. Henley said about the case being, probably, down amongst the coals; as it really was.

With regard to the first proposition, that defendants did not notify the arrival of the *Columbian*, *Simla*, and other steamers, either by advertisement, letter, or otherwise, I will produce advertisement cuttings from the local papers to shew that they did not do so.

His Honour said that would be merely negative evidence, and could not be received. Witness had already stated in evidence that they had not done so.

I can also prove that other companies in Yokohama invariably advertise the names of the steamers by which goods arriving are forwarded; otherwise, it would be impossible for people to know when their goods arrived; also, that the marks, numbers and contents when known, are invariably advertised by other companies; and that defendants, evidently seeing it is the correct thing to do, have done so themselves since the 7th November, but not before.

Witness here read over a list of agents of 13 lines of steamers, in Yokohama, who invariably advertised the names of the steamers by which the goods were forwarded; and was about to put in advertisement cuttings in proof when,

Mr. Dickens objected; they might serve to shew that the persons referred to had done so in one instance.

His Honour said he could not admit the advertisements Mr. Singleton wished to produce in support of his first proposition, that defendants had not advertised as was customary.

Mr. Singleton maintained that, without such notices, it was impossible for consignees to know when their goods had arrived; more especially as it was quite a common thing—for other companies as well as the P. & O.—to hold over goods for one or two mails at Hongkong or other way ports. He continued: With regard to the second point, as to the custom of other companies to store goods in bonded warehouses; from my experience it is invariably the custom to do so, and I will show it by the following advertisement of a Steamship Co., "Goods remaining unclaimed will be stored in bonded warehouse, at consignees' risk and expense." Notice is invariably given. Other companies have godowns of their own, in which the goods are stored until claimed; the Pacific Mail Co., for instance.

Mr. Singleton was here about to enlarge on his third proposition, when

Mr. Dickens interposed. Was Mr. Singleton to be allowed to state his case and give evidence at the same time? He objected to his making assertions as to what was the custom, as they had received no notice of Mr. Singleton's intention to bring forward any such assertions, and were not, consequently, prepared to produce evidence that such was not the custom. Counsel cited *Rules of Procedure* in support.

His Honour said he saw no objection to Mr. Singleton's giving such evidence; any more than any other witness. He could not see that Mr. Singleton should be prevented stating what had come under his own notice as a custom. There might, perhaps, be grounds for applying for an adjournment, if defendants were not prepared to combat Mr. Singleton's arguments as to the

custom in such cases. In answer to His Honour, Mr. Dickens said he objected to any evidence being given as to any custom of the storage of unclaimed goods.

Court, nevertheless, would admit the evidence.

As to the negligence of defendant's servants, I shall prove to your Honour that the man Howell, who was in charge of the *Tiptree*, was constantly drunk; that he was sent to the Hospital suffering from *delirium tremens*, and that two men had to be kept to prevent him jumping overboard.

In reply to Court, Mr. Dickens said he would object to Mr. Singleton's putting in as evidence a copy of the registry of the hospital, shewing that Howell had been admitted, on 6th October, suffering from *delirium tremens*.

I will prove that he was constantly in a state of muddle; that he was in the habit of drinking 3 or 4 bottles of gin a day; that he kept Japanese to watch for the Agent's coming off, to rouse him up, and also to prevent him from jumping overboard. There were only two foreigners employed on board, and it was usual for the other foreigner to go ashore in the evening on business or pleasure, leaving the Japanese on board to help themselves to what they pleased. The keys of the 'tween decks were not kept under lock and key; I saw one of the Japanese, myself, go and take a key and unlock the hatch. I maintain that two foreigners were not enough to look after the goods and the 60 coolies employed. One foreigner was forward whilst cargo was being taken in, and the other right aft, and it was well known that stealing was constantly going on. With regard to point 4, Mr. Singleton read an extract from a letter of defendants, stating that the *Tiptree* was not a store-ship, but only a coal-hulk, and that they had permission from the Commissioner of Customs to tranship goods only under special circumstances; he contended that therefore they had no business to put the case in her.

T. A. Singleton, cross-examined by Mr. Dickens:—I cannot recollect whether we have had goods by the P. & O. Co. before; we have shipped goods. I cannot say whether I received goods from the *Tiptree* previous to 6th Oct. I have not, that I am aware of, made any protest to the P. & O. Co. as to their transhipping goods to the *Tiptree*. I know, from the advertisements, that it is their custom to do so. The Bill of Lading produced, per *Columbian*, is dated, May 3rd 1873. (B. of L. produced) It was hypothecated to the Hongkong and Shanghai Bank. There were 6 cases "C S H, 1 or 2;" one of them was marked 1 only. I cannot remember their values. I did not expect the *Columbian* to come right on to Yokohama with the goods. In ordinary circumstances it is the custom of steamship companies to advertise the names of the steamers they are shipped in and the steamers they come by. I know that it is not the custom of the P. & O. Co. to advertise particular goods. It was about 6th Oct. when we first made application for the goods. In October I remember Mr. Davidson of the P. & O. Co. coming to our office about the goods. I do not remember his coming in September. I think he came twice. I think it was to take delivery of some cases, C S H 1, 2, and another case C S T. I remember he said the marks were more or less gone. He said they were on board the *Tiptree*. I did not object to their being there. I sent for them; about 3 or 4 days after he came. It was early in Oct. when he came; in the morning about 10. Subsequent to Mr. Davidson's visit, I received chits from him, (Chits produced). I have received all the cases mentioned in the chits except the one in question. I presume the *Columbian* case is one of those mentioned in the chits. I have never paid or been asked to pay anything for storage on board the *Tiptree*. I do not recollect making any enquiry at the Co's office, during August or September, about the cases. To the best of my belief I did not see Mr. Davidson until early in October.

G. W. Miller, sworn:—I know Howell, who was master on board the *Tiptree*. He is an intimate acquaintance of mine. I never saw him drunk. He took a drink; I have taken one with him. I couldn't say he was temperate. I never saw him suffering from *delirium tremens*. Coolies require to be watched; they all steal. Two Europeans could not look

after 60 coolies, but the latter could be searched before leaving the ship. It is my experience that they will steal if they can.

William White, sworn:—I was in the employ of the P. & O. Co. from 20th August to 22nd Dec. last. I recollect seeing a case C. S. in diamond, H under, No. 1, on board the *Tiptree*. It was in a damaged condition; it had been repaired. I had it mended up. It was a small case, measuring about 5 feet. I made a return of the goods on board when I joined the ship. Mr. Davidson came on board 4 or 5 days after I joined, and took a list of all cargo on board. The case was there, on the port side. It was included in the return. (Cargo book produced). The entry in ink, "Not in the ship, August 25th" was done by me, Mr. Ricketts was frequently on board. He saw the case. He said he was sorry to see the condition of the case, as he would have to pay so much for it. I think he said £100 or £150. Subsequently, a Chinaman came off with an order for the delivery of two cases, one of them marked C. & S. in diamond, H under. Only one could be found. I searched all over the ship, and, some time after, found an empty case, with some straw and pasteboard boxes in it, and I reported the matter to the officer in charge of the ship. He and I examined the marks and I was told to say nothing about it, that it was all right. The pasteboard boxes were 6 or 7 inches long, marked with a flying horse; I think they were thrown overboard. Some time after, Mr. Singleton and Mr. Davidson came on board to overhaul another case of the same mark as that missing, which had been broken open; so I came to the conclusion that it was the same case. The box now produced is similar to the one I saw on the occasion referred to. The officer in charge of the ship told me to throw them overboard with the straw, and say nothing about it. The case was kept in the carpenter's store-room for some time, and afterwards used. There were 2 Europeans on board, and from 20 to 60 coolies. Both myself and Mr. Howell would be stationed on the upper deck whilst any steamer alongside was being discharged. We could not see the coolies, who were on the lower deck. They might steal; they all steal. I believe complaints have before been made of goods being short. The keys of the doors in the bulkheads were kept in my room. The hatches were locked and the keys were also kept in my room, at the foot of my bed. It was possible for Japanese employees to get them in my absence. Capt. Howell was in charge of the *Tiptree* whilst I was on board. He was given to drink. He had fits on board. I did not report him to the office. He would drink whenever he could get it. A doctor came off and ordered him to the Hospital. I could go ashore when there was no work on board.

By Mr. Dickins:—The Chinaman came on board for the 2 cases, with a guarantee, after the case in question was missed. It was about September. He got one case on September 26th. Our or about 29th August there were about 5 or 6 packages on board. They were in the after store-room, locked up, except this case C. S. H., which was outside, in the hold. At night the hatches would be on and locked. The hold would be open through the day, as we would be working. On an average, there would be 200 packages by every steamer. The coolies were searched on leaving the ship. We never found any of plaintiffs' goods on them. The goods are stored in the same place as the coals. The entry I made in the cargo book, "Not in the ship, Aug. 25th," is a mistake as regards the date. It was there before I came. I spoke to Mr. Davidson about the mistake. The case referred to was marked C & S in diamond, H under; No. 1 or 2, I can't say which. It was in the after store-room, right in the run. If the hold were open, only one key would have to be used to get at it. Coolies were there, working.

By Mr. Singleton:—On one occasion, about 100 cases were put on the upper deck, outside the hold. They came out of the *Geelong*.

Kudgero, cautioned to speak the truth:—Howell was fond of drink. He drank a good deal; by night as well as by day. He got the grog on board. Witness saw one of the *Tiptree*, and used to watch to see any boat were coming off from the office. Was not specially told to do so. Would inform Howell, but not specially rouse him.

By Mr. Dickins:—When he was very friendly with Howell would go every day for drink; otherwise every other day.

Halgio, cautioned:—Was employed as carpenter on the *Tiptree*. Does not remember a box being put among the coals. The case was none found. Has heard that Howell was fond of drink but never saw him drink.

Benkitchi, cautioned:—A broken box was discovered by White and himself whilst looking among the coals. White told him to take it on deck. It was about 2 feet long. It contained some straw and

paper. No small boxes were in it. Capt. Howell was very fond of drink. Can't say how much he drank in a day.

This closed plaintiffs' case.

Mr. Dickins said the case before the Court was a very simple one, and might have been very easily settled. He would call His Honour's attention to the facts before the Court. There were several cases marked C. & S. in a diamond, H under, and if defendants were liable it would be for the least valuable. His contention was that they were not liable at all. Even if it were proved that the case had been lost, they were only liable for the least valuable of those marked as described. The case arrived on the 10th August, but plaintiffs never applied for delivery of the goods until 6th October, alleging as a reason for the delay the confusion of the marks on the cases. It was not the duty of owners of ships to give notice to consignees of the arrival of their goods. Even if it were, it was not a custom binding in law. The goods arrived by the *Madras* on the 10th Aug. The vessel, being a mail boat, had to leave immediately, and the goods not claimed, forwarded by her, were put on board the *Tiptree*, in accordance with the advertisement. He would call the attention of Court to two clauses in the advertisement; one was as follows: "In the event of any packages not coming forward, consignees are requested to give notice to the undersigned as soon as possible, before the departure of the steamer." The other was; "the steamer is now ready to discharge. Any goods impeding discharge will be transhipped to the *Tiptree*, or landed, at their expense and risk." The case marked C. S. H. was, in accordance with the advertisement, put on board the *Tiptree*, at plaintiffs' risk and expense. The Bill of Lading distinctly stated that consignees were to be ready to take delivery on ship's arrival, otherwise the Company reserved to themselves the right, according to Bill of Lading, to tranship the goods to the *Tiptree*. The *Tiptree* was not a storeship, but properly a coal-hulk. The Company might put the goods into bonded warehouse, but, for the convenience of consignees, and to save them expense, they were put into the *Tiptree*, free of any charge for storage. Was it to be declared that if goods were so disposed of under such circumstances, without any charge for storage, that defendants should be held liable for their value? They were really involuntary bailees, and wanted to get rid of the goods. They had carried them to Yokohama and wanted to get quit of them, but they had been obliged to keep them. Everybody in Yokohama knew what the *Tiptree* was, and that goods left on board were at the risk and expense of consignees. The Company had men on board to take care of the goods, which were locked up, and, as far as the Company could judge, every care was taken of them. The evidence of the plaintiffs themselves showed that the Company did really all that they could be expected to do. (Counsel here cited parallel cases from Holt, as to the responsibility of bailees, showing that they were not liable for anything short of gross negligence.) The evidence before the Court was such that he thought it unnecessary to call any witnesses, as no evidence had been given of negligence. Under all these circumstances he would ask His Honour for a nonsuit.

Court said he could not entertain Counsel's proposition, there being no grounds for such a request. If, therefore, he had any witnesses to call for the defence he had better do so.

Mr. Dickins then called Mr. Rickett.

J. Rickett, sworn:—I am the defendant in this case. The *Tiptree* is intended simply as a coal-hulk, but, under a special arrangement with the Customs authorities, she is allowed to be used as a receiver, to facilitate the discharge of the steamers. Cargo is never put on board of her unless in case of extreme necessity, or in case of a steamer being late and having to turn round, when the cargo is transferred. Generally, very few packages are put on board; some half dozen. Once or twice during the twelve months we have had to put the whole of the cargo on board the *Tiptree*. The package C. H. S. arrived ex *Columbian*, or a package supposed to be that one arrived by the *Madras* on the 10th August; the steamer by which it was due. According to my notification by advertisement it was transferred to the *Tiptree* on the 16th (Saturday), so as to enable the *Madras* to clear out on the Monday. I believe verbal notice was given to the consignees of its being there. The *Geelong* arrived on the 31st, and her cargo was discharged principally into the *Tiptree*. I landed what cargo I could, having borrowed a lighter from the P.M. Co. It was blowing very hard, a N.E. gale, consequently I had to turn nearly all the *Geelong's* cargo into the *Tiptree*. The case C. S. was kept in the lazaretto, in the hold, where it was perfectly safe, but, owing to having to put the *Geelong's* cargo into the *Tiptree*, that place had to be opened. White's predecessor, Duncan, was there, and a trustworthy man named

Hood, besides Mr. Davidson. Altogether there were 5 Europeans and an Indian, at the time the *Geelong* was discharging, and I visited the ship myself two or three times a day, so that every precaution was taken.

J. Rickett, (examined by Mr. Dickins):—On a former occasion, I have placed cases belonging to plaintiffs in the *Tiptree*; in the beginning of the year. Some 15 cases altogether. They did not object to it. I never made any charge for that convenience; neither on that nor any other occasion. White never informed me of the loss of the case. I went on board the *Tiptree* about 6th September, after the mail steamer had gone, to see what cargo was on board. I handed Mr. Davidson a list of what was on board. He said there ought to be 2 C. S. cases; I had only one down. I told him he had better go on board to see about it. There were very few packages, about 12 altogether. They were all in the lazaretto. I spoke to White about the package being missing, and told him he would have to account for it, as his attention had been called to there being two packages when he joined. That was the second time I spoke to him about it. I searched every part of the ship but could find no trace of it. Afterwards there was pointed out to me, on board, some straw and shreds of paper, and pieces of paper marked with what White describes as a flying horse. I told them to put the fragments aside, thinking it had occurred from Shōme and Francke's having been opening some cases. I have had no complaints about goods being stolen. Once some coolies were caught with some skeleton umbrellas in their possession, and they were punished at the Saibansho. Plaintiffs always delay taking away their goods. It has never been our custom to advertise goods out of a particular steamer, as they may be sent by different routes, and it is impossible for me to tell how they come until they actually arrive.

Cross-examined by Singleton:—A case arrived on 10th August, by the *Madras*. I suppose that to be the case. A case by her was marked C. S. in a diamond, H under. Goods arriving are entered in the manifest. I have paid for goods damaged, broken, or stolen or whilst on the steamer; never whilst on the *Tiptree*. When I sent Howell home I was obliged to report him to the directors. I thought he was addicted to drink, and I discharged him as soon as I found it out. I believe he was sent to the Hospital, suffering from *delirium tremens*. I never told White I would have to pay £150 for the missing case. I did not know its value. I sometimes advertise goods. It is not a custom; it has only lately come in here, as I can prove. The *Tiptree* is not a storeship. Goods are put into her for your (plaintiffs) convenience. About the 6th September the case was in the ship. Until lately I never had occasion to caution Howell about drunkenness. I had great difficulty in proving it.

F. J. Davidson, sworn:—I am employed by the P. & O. Company. The package which has been lost was shipped from England per *Columbian* on 6th June, and arrived by the *Madras* on 10th August. On 29th August, White joined the *Tiptree* as mate, and we three went all over the ship and took and inventory of everything on board, 6 packages. I wrote it in this book (produced). The package was then on board. Mr. White then took charge and kept the keys of the hold and of the lazaretto. I asked him for an explanation of the entry in ink, but never got any. About 6th September one package marked C. S. arrived by the *Geelong*, and I saw the two packages together. We had nothing to guide us as to who these packages belonged to; they were consigned to order. When Mr. Rickett came on shore and said there was only one C & S I went on board and hunted all over the ship; there was only one. I found on referring to back shipments that similar marks had belonged to Cocking & Singleton, to whose office I at once went to find out whether the package was theirs; they said they didn't know anything about it. They said they presumed it didn't belong to them; they had no information about it. The two packages were in perfect order when they went on board the *Tiptree*. Cocking and Singleton presented a bill of lading for one case ex *Columbian*, on October 6th. At the same time they presented a bill of lading for 2 packages by the *Madras*. On 6th October 5 packages had arrived; one of them was missing. On the 8th October 2 more arrived, which made up the 7. Two bills of lading were signed on 6th October, one on November 2nd, and the other we haven't seen yet. The 7 packages were under 4 bills of lading. Two packages arrived on 6th October. One was broken, only the tin case enclosed the packages, some of which were abstracted. Plaintiffs recognised them and we settled.

Two lots of goods previously arrived for Cocking and Singleton, and 25 packages were transhipped to

the *Tiptree*. No objection was made by plaintiffs at the time. Messrs. Cocking and Singleton's mark is a swan. The box now produced is not marked the same. I had frequent conversation with Mr. Singleton about the goods in the *Tiptree*. I communicated with him about the package that was lost; he said they knew nothing about it.

Cross-examined by Mr. Singleton:—I saw the tin case referred to as having been found in the hold. It was about 2 feet long, by 1 foot 4. Your cases are about 3 feet long. I did not know Howell to be constantly drunk. I guessed that he did drink from the small.

Mr. Singleton produced Invoice to shew that the case was not the same size as stated by Mr. Davidson, viz: 2 feet 4 by 1 foot 5 by 2 feet 7.

Mr. Dickens said with reference to the remarks which had been made respecting the character of the persons employed by the Company:—Every care was used in the selection of persons put in responsible positions in their employ. As regarded Howell it had been shown that he had been discharged as soon as it was found that he was unfit to hold the position he occupied. The evidence of both plaintiff and defendants proved that all reasonable care had been used in taking charge of the packages. The missing case had been either lost or mixed with the *Geelong's* cargo. Nothing whatever had been produced to shew gross negligence on the part of defendants. They were not bailees at all; simply agents for the consignees, and they placed the goods on board the *Tiptree* for their convenience. The case must have been lost in one of three ways; either mixed with the *Geelong's* goods, stolen by Europeans, or by Japanese. He maintained that by the exceptions of the Bill of Lading the Company were exempted from liability—"thieves, robbers, or pirates excepted." There was no negligence shewn on the part of the Company. On the contrary, every precaution had been taken. Whatever the custom of Yokohama might be it had been shewn that plaintiffs had before accepted the storing of their goods on board the *Tiptree*. As regarded the paper, &c., found on board the *Tiptree*, cases landed from steamers about to depart on the return voyage were frequently taken on board the *Tiptree* for survey, and also for the convenience of parties wishing to open their goods on board. He submitted that there was no negligence on the part of defendants, and that, therefore, they were not responsible for the loss of the case; and even if it were proved that they were liable it would only be for the least valuable of all the cases so marked.

Cocking Jun., sworn:—The Invoice cost of the missing box, laid down here, is \$562.50. The value would be about \$6 per gross. I had an enquiry from a Japanese for the goods; I asked him \$8.

By Mr. Dickens:—I have sold none lately, and therefore cannot say the market value. There is no market price now. There is nothing at all doing at present. I have had no enquiry for such during the last 3 or 4 weeks.

Mr. Dickens again addressed the Court, reiterating that his clients had done all they engaged to do in the Bill of Lading, and that there was no negligence on their part.

Mr. Singleton, in reply, reviewed the evidence which had been given by the witnesses on both sides, and maintained that the Company ought to have placed the case in bonded warehouse as other Companies do. With regard to the value of the goods he thought they were worth at least \$10 per gross. He thought that gross negligence had been exhibited by defendants, and he trusted the Court would hold them liable, and give him a verdict.

Judgment reserved.

Monday, March 16th, 1874.

SATAMA HURAINO vs. W. H. SMITH.

Claim for \$1,500, for additions and alterations to a contract entered into by plaintiff in 1871, for the removal and re-erection of a bowling saloon on account of defendant, acting for the Yokohama United Club.

Satama Huraino, cautioned to speak the truth, said that, on the 12th day of the 2nd month, 1871, he made a contract to transport, and re-erection, a bowling alley, from No. 17, Swamp, to No. 5 Bund; the contract to be completed within 60 days. He afterwards received orders which entirely altered the original contract, as the building was to be 6 feet higher. (Contract produced, signed by Laufenberg and Drake). Laufenberg acted as agent, drawing up the

plans &c. The advances on the contract were always made to plaintiff by Mr. Smith, to whom he gave receipts for them. There was a balance left on the original contract of \$200. He was told that payment would be made him for the additional work, but neither the balance of the original contract nor that due for the extra work was paid him, and he was compelled to bring the case before the German Court, against Laufenberg, when he recovered the \$200, the balance of the original contract. For the rest (the additions) he was told to sue Mr. Smith in the English Court. The present action was for the cost of the additions. On the 15th of the month on which he commenced an entirely new plan was put into his hands. Originally there was no plan; he was simply to re-erection the building as it stood on No. 127. (Copy of plan of the additions produced.) He always worked by that plan. Even after it was drawn there were many alterations and improvements made by Mr. Smith's order.

After he had half erected the building Mr. Smith made him take it down, and put it up with stone and polish it. Laufenberg was the agent who gave him Smith's orders and told him to go to work on the plan. He received the money on account from Smith.

Leonard Laufenberg, sworn:—I made a contract with plaintiff for the removal of this building. There were no alterations whatever in the contract, nor extra work of any kind. The building is the same height as it formerly was. The stanchions had to be sunk 6 feet in the ground; that is what plaintiff means by saying it was 6 feet higher. It was understood from the first that it was to be so. If there had been any alterations the expenses incurred would have been on my part. During my absence in Europe plaintiff sued me in the German Court for the \$200 balance and \$1,363 for alterations. Judgment was given against me for the \$200. I can get a copy of that judgment from the Court. The German Court went into the question as to whether extra work had been done. My defence then was that there was no extra work done, and not that Mr. Smith was liable instead of myself.

His Honour adjourned the case until Wednesday morning at 10 o'clock, for the translation of the contract (which was in Japanese) and the production of the evidence in the case heard in the German Court.

Mr. W. H. Smith asked permission to address the Court. He maintained that he was not the principal in the case. The Racket Club Committee were the parties plaintiff should have sued. He only paid plaintiff on Mr. Laufenberg's order, as any banker would. He would ask Mr. Wallace, the only member of the Racket Club Committee at present in Yokohama, to appear in his place as defendant.

His Honour thereupon intimated that the summons would be amended, if Mr. Wallace as willing to appear as defendant, by substituting his name for that of Mr. Smith.

Court adjourned.

Wednesday, March 18th 1874.

Court having communicated with Mr. Ed. Zappe, Consul for Germany, who is unable at present to produce the evidence required, the case was further adjourned until Wednesday next, 25th inst.

Thursday, 19th March, 1874.

George Taylor was charged with having, on the previous evening, stolen a gold watch and silver chain from Mr. Scott, at the Brooklyn Hotel.

Prisoner pleaded that he knew nothing whatever about it.

Frederick Crittenden, sworn:—Yesterday, my partner came down from Yedo about seven o'clock, and laid down in his own room, which is a private one. The prisoner came from Yedo in the same train with him, and saw him go to bed. Prisoner left the house, then returned by the back way, went to my partner's room, and took his watch and chain. My partner came down at half past nine or a quarter to ten. He was scarcely awake, and said someone had taken his watch and chain. He did not know who it was. I at once went upstairs, and found the prisoner on the landing. There was no one else upstairs. There is a back door to the Brooklyn Hotel. I am sure prisoner must have come in that way. I accused him of stealing my partner's watch and chain. He said he had not; but, on my saying "there is no one else can have it but you, so give it to me," he put his hand in his pocket and gave it me. I then went to the police station, but during my absence he made his escape. I went with the police to the "British Queen" Hotel, where I found prisoner, and gave him in charge. Whilst this was going on someone else complained to me about his chest having been broken open and a revolver abstracted. After I had given prisoner in charge I found that the proprietor of the "British Queen" had taken a revolver and a razor from him. I have known prisoner some time. He is an engineer and a very good mechanic. He will do anything but work, I am sorry to say. So far as I know, I think he bears a suspicious character. He was drunk at the time, but knew perfectly well what he was about.

M. Scott, sworn:—Between nine and ten o'clock I went to bed. I awoke about a quarter past eleven. I was awakened by prisoner falling off the side of my bed on to the floor. I asked him what he was doing in my room, and said if he did not go out I would shoot him. I recognised the prisoner, there being a lamp in the hall. I searched my pockets and discovered that my watch and chain were gone. I at once went down stairs and told Mr. Crittenden, and accused the prisoner. Mr. Crittenden then went upstairs and found that the prisoner had the watch and chain. I saw him go out at the front door. I recognise the watch and chain. The chain at one time belonged to the prisoner. He was under the influence of drink at the time, and I hope your Honour will deal leniently with him.

P. C. Carter, sworn:—I took the prisoner in charge at 10.30 last night. He had been drinking, but knew what he was about very well. I have seen him before, but know nothing of his character.

In defence, prisoner said:—I do not recollect anything about it. I have been drinking very hard for the last five or six days, and cannot account for my doing such a thing.

His Honour said drunkenness was no excuse for stealing, and sentenced him to three months imprisonment.

The prisoner was much affected, and left the Court in tears.

Before RUSSELL ROBERTSON, Esq., Consul.

March 17th, 1874.

Alfred Lyne was this morning brought up on a charge of having in the year 1870 embezzled certain government stores.

The particulars are as follows:—

In Sept. 1870 Alfred Lyne was foreman in charge of H. M. Control Department stores in Yokohama. During the early part of 1870, on

taking an inventory, some stores were missing, but no particular notice was taken of this till on the departure of the mail steamer for San Francisco in September, when Mr. Buchanan the Control officer went to the stores as usual in the morning and found them all open. On enquiry for Mr. Lyne, he was nowhere to be found, both he and his wife having, as was afterwards ascertained, left by the mail steamer.

On the day previous, Mr. Buchanan had ordered Lyne to ship on board H.M.S. *Adventure* a large amount of stores, Blankets, Clothing, &c. for conveyance to Hongkong. Mr. Buchanan at once enquired about these stores and at the Custom House learnt that they had been cleared for H.M.S. *Adventure*. The police authorities were at once communicated with. The boats, after a search, were found with the goods, when certain Japanese came forward who stated they had bought the goods from Lyne. A warrant was then issued for his apprehension for having appropriated to his own use proceeds of the above stores.

### In the U. S. Consular Court.

Before GEO. N. MITCHELL Esq., *Vice-Consul*.

*Friday, March 13th, 1874.*

Arthur Taylor pleaded not guilty to a charge of petty larceny at the fire at Nos. 60-61.

Prisoner said he was formerly in the *Costa Rica*. On the night in question he had been recommended by a person named Henderson to Mr. Gargan, to look after his property at the fire. He had a small toy in his hand, and was screwing it about, when the French postmaster came up and knocked it and an umbrella he had out of his hands. He remonstrated with him, when immediately a French policeman collared him and struck him on the head with his baton, and a Japanese policeman also collared him. He had picked up a scarf-ring and a baby's hood that were knocking about and put them in his pocket with the intention of delivering them up. Has been 4 days in Yokohama. Came up from Kobe. Is at present out of employment.

E. C. Laffette, French Constable, sworn:—Whilst on duty at the fire last night, Mr. Degron, the French postmaster, told me that a man (prisoner) had stolen 200 cigars and an umbrella, near the French Church. Prisoner told me the umbrella was his own. It was taken from Thierner's store opposite. I made him leave the goods in front of the Church. I took him to the station and an English policeman searched him and found in his coat pocket a lady's head-dress and 2 rings. (A knitted head-dress and 3 rings produced to Court.) Two of the rings produced are those which were taken out of his pocket.

Joseph Connors, European Constable, sworn:—Last night, prisoner was brought to the police station, at about 10 minutes to 11, charged by a French policeman with stealing 200 cigars and an umbrella. I asked him what he had on him, and he turned out of his pocket the 3 rings and the head-dress now produced. He said he had been put in charge of the property by a man.

As the evidence of Mr. Degron was essential, and prisoner wished to bring witnesses in his defence, he was remanded to gaol till Monday next at 11 o'clock, when the case will be heard.

*Monday, 16th March 1874.*

Arthur Taylor, remanded from Friday last on a charge of stealing property from the site of the fire on Main Street, was this morning brought up for final trial.

For the prosecution, Mr. H. Degron gave evidence that he saw prisoner putting cigars into his pocket, out of a box, taken from one of the burning stores, which he had under his arms.

In defence, prisoner called two witnesses; their evidence, however, was not of weight. He stated that whilst standing looking at the fire he was arrested by the French policeman. One of the rings found on him was his own; the other two he had merely omitted to remove from his pocket.

Court, considering prisoner guilty of having in his possession articles which he knew did not belong to him, sentenced him to 15 days imprisonment.

Consequent on this decision prisoner became grossly insolent towards Court; the sentence of imprisonment was therefore doubled and he was removed to gaol.

### NI-JGATA.

March 9th, 1874.

THERE is to be an Exhibition held here during the Spring, in a large tea house of the priests newly erected in the grounds of the Hak-san temple. Many things have been promised and a great success is anticipated.

Sportsmen have not met with much success this year in the neighbourhood, and, in addition to the restrictions of game laws &c., in all the little woods and places where of old birds were to be found, notices have been put up forbidding shooting in them.

Many new plantations of mulberry trees may be seen springing up around us.

A NOTIFICATION has been issued regarding the cards upon which silk-worm's eggs are to be placed, the heads of which are as follows:—

In future all cards will be manufactured by the Nai-mu-sho, and will be sold at the towns of Fukaya in Musashi, Fukushima in Yewashiro and Wada in Shinomo. All persons are in future forbidden to make or sell other cards.

These cards will be on sale at the above places from April 1st to May 31st in each year. The price for thick cards for the Spring eggs will be R. 200 per 1,000, and for the thin cards for the Summer eggs R. 60 per 1,000, cash.

Persons at the end of the season having more cards than they have use for must return them to the office where they were bought, before Sept. 15th in the same year. If they are going to continue in the same business a similar number will be given to them free next year, and if not, the price first paid will be returned. This is in order to find out correctly the total number of cards used. Any person breaking this rule and keeping the cards not used will have them taken from him and be fined double their original cost, and any person who shall give notice to the authorities of others breaking these rules shall receive a tenth part of the value confiscated, or a tenth part of the fine.

The spring cards have a scroll around them, on the back, made up of cocoons and silkworm moths, and are 1 ft. 2 inches long by nine inches wide.

The summer cards are plain, with only a stamp stating the sort; they measure 1 foot long by 11 inches wide.

FROM JULY to December 1873, 2,816 patients were treated at the Hospital, the sum paid for medicine being R. 832 and the cost of drugs R. 790. The monthly expenses, including salaries, amounted to R. 600.

It is the custom in Japan, when a new bridge is opened for traffic, to get the oldest man and wife resident near to first cross over; the older these are the longer the bridge is supposed to last. The newspaper here, speaking of the proposed new bridge to Nottare, says, "There are now living here a man aged 92 and his wife 89, and if they only live to open this bridge it will be most fortunate, and the old couple will get much honour in this world and in the world to come."

IN YOUR Hong List you credit us with two French Missionaries, they, however, have not arrived, owing, it is said, to their inability to obtain leave to come overland, and so may not be expected here before the spring. Settlers are during the winter nearly as much shut up as the Dutch were in former days at Decima, as no communication with other treaty ports can be made by sea, owing to the prevailing gales and want of safe harbours, and to its being next to impossible for any one of late to obtain leave to travel overland.

THE WEATHER continues exceptionally mild. The table herewith, showing observations taken during the months of January and February, from 1870 to 1874, may prove of interest.

	REAMUR.			
	Highest.	Lowest.	Highest.	Lowest.
1870	plus 7	minus 7	plus 7	minus 5
1871	" 7	" 7	" 4	" 6
1872	" 6	" 6	" 5	" 4
1873	" 6	" 3	" 9	" 7½
1874	" 6	" 1½	" 9	" 1

MANY NEW plantations of Mulberry and Tea plants have been commenced around Nagaoka and Takata, chiefly by old northern officers, who, being out of employment, thus seek to earn a living.

ONE HUNDRED men of the regiment stationed here left for Yelo yesterday afternoon (6th), their comrades marching a little way with them. The medical attendants wore the Genova red cross. There has been much activity shown in drilling lately, a large amount of blank cartridges having been expended, but never any ball practice; nor is there any range, although there are many places where one could easily be made. The barracks are strong and well built, on the European plan, and heated by stoves, the whole being surrounded by a very high stout fence. They are not, however, well placed, being just under a hill, from the top of which an attacking party could entirely command them.

THE ENGLISH custom of throwing shoes for good luck after a wedding party has its counterpart in Japan, with this difference—Here it is customary to throw small stones against the paper windows of the house of a newly-married pair, for good luck. The other day, a woman who had ill-will against a new-married couple, instead of small stones us usual throw a large one, doing much damage to the windows, for which she was arrested and punished.

A LARGE canal, which now takes off much of the water from our river into the Arinogawa, is to be stopped up; and it is hoped that the increase of water will do much to scour the river mouth, as, previous to the opening of the canal, there was 18 ft. to 20 ft. on the bar, in place of 8 ft. to 9 ft. as now.

### Meeting of the Agents of the Fire Insurance Companies of Yokohama.

We have been favoured with the following report of a meeting of the Agents of the various Fire Insurance Companies represented in Yokohama, held on Wednesday, the 18th inst., at the Chamber of Commerce.

*Present.*—Messrs. Smith, Wilkin, Hurlbut, Macpherson, Schwabe, Brent, Farley, Oll, Reddelien, Johnstone, Bissett, Abbott and Snethlage; *On behalf of the following offices:* Guardian Assurance, Sun Fire, China Fire, Imperial, Phoenix, Manchester, Lancashire, Batavia Fire, Victoria Fire, Transatlantic London Assurance, North British and Mercantile, Scottish Commercial, Northern, Commercial Union Fire, London & Lancashire, Hamburg & Bremen, and North German.

Mr. A. J. Wilkin having been elected to the chair, stated briefly his objects for having called the meeting, viz: that the following suggestions had been made:

1st.—That the Agents of the various Insurance Companies of Yokohama form themselves into a Society for Mutual Assistance.

2nd.—That a standing committee of three be appointed, whose duty it shall be to generally watch the interests of the various Fire Offices, and to call together the agents when desirable; such committee to be appointed by ballot, at a meeting to be held in January of each year, with power to fill vacancies in the interim.

3rd.—That this committee shall appoint one of its number to be secretary or gerant.

4th.—That it shall be the special duty of the standing committee after the occurrence of any and every fire in the settlement to cause an investigation of all circumstances connected therewith to be held; such investigation to be held either by a session of the standing committee, or of three of the agents, (to be nominated by the committee,) more immediately interested in the fire; such session of enquiry to invite and collect all possible evidence, and record the same in writing. Any agent shall be at liberty to be present at such enquiry, but only to take part therein subject to the direction of the three forming the special or standing committee for the time being, and the record of the enquiry shall be open to the inspection of each of the agents.

5th.—That the incidental expenses of advertising, &c. shall be shared by the various Insurance Companies.

6th.—That a copy of these rules be given to each member of this Society.

7th.—That Resolution 4 have a retrospective effect, and that a regular enquiry into the circumstances of the fire of the 12th instant be at once commenced.

After the lapse of several minutes, the chairman suggested that the various propositions before the meeting should be dealt with separately, whereupon Mr. Macpherson proposed, and Mr. Brent seconded, that No. 1 of the resolutions be passed. Carried.

Mr. Macpherson proposed No. 2; seconded by Mr. Johnstone. Carried.

Mr. Macpherson proposed No. 3, and suggested that the following amendment be made: "That this Committee have power to appoint an unpaid Secretary." Carried.

Mr. Macpherson likewise proposed Nos. 4, 5, 6, and 7, which were equally approved of, and carried by the meeting unanimously.

The Chairman then stated that, as these propositions had met with the general approval

of those present, the next business to be done was to ballot for a committee, which, on being taken, resulted in the agents of the Sun, Imperial, and Phoenix being elected.

Mr. Hurlbut then addressed the meeting, and stated he had a very urgent case to bring before them. Some time back, the head coolie of his brigade had been seriously injured at a fire, but, at the fire on the night of the 12th inst., the unfortunate man had met with such injuries that death ultimately resulted. He had worked for several years with the American Brigade, and proved himself to be a most useful and valuable assistant. He leaves a wife and two children quite unprovided for. A subscription had already been started on their behalf, and he trusted the Companies then present would assist him in raising the amount to \$150, which he considered would be ample to support them. After a short deliberation it was agreed that the sum should be raised by private subscription, and placed in the hands of the Treasurer of the Fire Brigade, who would provide for their maintenance as far as the funds in his hands would permit.

The Chairman next read a long letter, addressed to the agents of the various Fire Companies by Mr. Hohnholz, which enumerated a variety of services he had rendered while in command of the Private Fire Hook and Ladder Brigade. The nucleus of his correspondence was to point out to the meeting that, at the fire on the night of the 12th instant and on previous occasions, he had been the means of saving much valuable property. Of the fire of the 12th inst., he more especially speaks, and remarks that he is credited to some extent as having saved several of the adjacent buildings with his engine. He is a loser by this fire to the extent of \$2,700, and was uninsured. In laying these remarks before the meeting Mr. Hohnholz trusts that (in consideration of his services) the agents will to some extent compensate him for the heavy loss he has sustained.

After much discussion upon the subject, the Chairman collected the following views from those present:

That, much as they regretted Mr. Hohnholz's loss at the late fire, they did not consider themselves in a position to grant him any compensation. For his valuable services at all fires they tendered him their best thanks, at the same time remarking that the brigade under his superintendence was one that was supported by subscription, and was not, as might be supposed, an entirely private brigade; while, further, the case was scarcely one in which Mr. Hohnholz had lost his own property through his endeavour to protect other property.

The Chairman then read a letter from Messrs. Cheshire & Co., suggesting the formation of a salvage corps, and, in the event of their starting one, enquiring if the Fire Companies would recognize them, and what per-centage the Companies would allow them. After many suggestions, it was proposed that the letter should be handed to the Fire Brigade Committee for them to reply to, as the formation of a salvage corps had already been spoken of in conjunction with the Yokohama Fire Brigade.

The Chairman stated that he had been requested to speak to those present on the desirability at large fires of blowing up houses in the vicinity of the conflagration, in order to prevent the spread of the flames. In the fire of 1896 several houses were so dealt with.

Several of the agents stated that this means of preventing the spread of a fire was not favourably accepted by the offices at home, as it generally did more harm than good; besides, there

was always a great difficulty in finding anyone who would undertake the responsibility of blowing up houses. The remarks did not receive a favourable support, as those present considered nothing could be done unless a Municipal Council were formed, and the necessary power granted to deal with such matters.

A long discussion here ensued about the water supply.

Mr. Macpherson suggested it should be brought from the native town, as, he was given to understand, there was always a plentiful supply to be obtained there, and that it was only a matter of having pipes connected between the foreign and native settlements to insure at any emergency a large supply of water.

Mr. Hurlbut stated he had already given orders for a new well to be constructed between Lots 75 and 76, Main Street, but owing to the limited amount of funds in hand he was afraid that not more than two of these necessary provisions could so far be proceeded with, as they would cost about \$500 each; and he feared that the bringing of water pipes into the Settlement would be far beyond their means.

The Chairman thought a stationary engine at the top of Water Street, on the Creek, would be extremely useful.

Several other remarks of a similar nature were made, when the Chairman suggested that the Fire Committee be requested to consult with the Fire Brigade Committee, in order to take into consideration the best means for providing the settlement at all times with an ample supply of water.

The meeting terminated with a vote of thanks to the Chairman.

EDGAR ABBOTT,  
*Secretary, pro. tem.*

### YOKOHAMA RACE CLUB.

Report of Extraordinary General Meeting, held in the Chamber of Commerce Rooms on Friday, the 13th inst., at 4 P.M.

About 30 members were present.

On the motion of Major Snow, R.M., seconded by Mr. Johnstone, Mr. Hannen was called to the Chair.

The Chairman having read the printed notice convening the meeting, and also Mr. Nicolas' proposition, to consider which the members had come together, called on Mr. Kingdon for any remarks he might wish to make in support of his motion. Before doing so, however, he had no doubt the meeting would consent to listen to a few words of explanation from the Hon. Sec., on behalf of the Committee.

The Hon. Sec. made a short statement, in which he referred to letters which had passed between Mr. Kingdon and himself on the question now before the meeting, and said that the Committee had deemed it advisable to ascertain the feeling at large, with regard to the proposed change. For this reason, the present meeting had been called, and he would ask the members, before coming to a decision, to consider well whether the adoption of Mr. Kingdon's suggestion would be for the general good of the Club or otherwise.

Mr. Kingdon then addressed the meeting in support of his motion, and, in the course of his remarks, referred to the difficulty he had experienced in finding riders of suitable weights at the Autumn Races. He made his proposition with the view of obviating the difficulty, and he did not think, that, if it were accepted, the interests of the Race Club would suffer in

any way. His suggestion he wished to put before the meeting in the following form:—"That the Committee be authorised to allow 'non-members to ride in some of the races 'at each meeting—the Committee having the 'power to accept or reject the nomination of 'such riders. Each nomination for each race 'to be accompanied by a fee of \$5."

Mr. E. J. Geoghegan, seconded the motion.

Several other members present, including Capt. Walsh R. M., Mr. Winstanley, and Mr. Ed. Wallace, spoke against the adoption of Mr. Kingdon's suggestion, which they thought would not conduce to the interests of the Club. Mr. Kingdon having briefly replied, the Chairman put the motion to the meeting, but, on a show of hands being taken, it was lost. The meeting then terminated.

### Y. M. LITERARY SOCIETY.

The first ordinary General Meeting of this Society was held on Friday the 6th instant. There was a good attendance of Members and their friends. The chair was taken by the President, G. P. Ness, Esq., at half-past eight o'clock.

After the customary routine business of reading Minutes and proposing Members, the Chairman gave a short address, briefly describing the origin, objects, constitution, and present position of the Society,

W. W. Cargill, Esq. then read the paper for the evening, on "The Rise and Progress of the System of Banking carried on in the East." Having stated that, with one exception, none of the existing English Exchange Banks, had their origin in Europe, but that the system had been commenced in British India, he proceeded to describe the rise and development of the great Eastern trade in India, the Straits, and China. At Bombay, where the want of such a system was most felt, the incorporation in 1840 of the first public Bank having given little practical relief to the Mercantile Community, the Bank of Western India was established two years later, which was subsequently merged into the Oriental Bank, and became the foundation of the whole Eastern Exchange Bank system as it now exists.

The serious difficulties to be encountered; the jealousy and hostility to be overcome; and the legal disabilities to be put up with, were next noticed; and the precautionary measures adopted to meet these difficulties, were described. The paper shewed that the great commercial crisis of 1847 had enhanced the credit of the Oriental Bank, and given it a solidity it never afterwards lost. For it had been able at that critical period to supply its customers freely with sight drafts on England, and to make heavy shipments of bullion to London, which had arrived there at the height of the panic and attracted public notice in the city. The effects of the collapse of the Union Bank of Calcutta in 1848, upon the Oriental Bank and its numerous branches;—and the despondency and uneasiness of its proprietors until the grant of a Royal Charter limiting their liability and containing adequate powers of conducting their business, were graphically detailed.

In conclusion, Mr. Cargill remarked that now no other part of the British Dominions and no other portions of British trade enjoy more banking facilities than those in the East, and that the Oriental Bank was the first institution to create general exchange business; its history was therefore truly the history of the system of general Banking and Exchange in the East, and its unrivalled success, followed

by others on the same model, had provided that aid to commerce which we now see in living operation.

A short discussion followed on the subject of limited liability; and a cordial vote of thanks was awarded to the author for his very interesting and valuable paper.

It was announced that at the next meeting a paper would be read by R. H. Brunton, Esq., on "Optics, as applied to Lighthouse Apparatus," illustrated by diagrams and specimens.

### Correspondence.

To the Editor of the Japan Gazette.

YOKOHAMA, 10th March, 1874.

SIR,—I venture to address a few words to you on the subject of "A Layman's" letter to the *Herald* of last night, and the notice taken of it in the *Daily Advertiser* this morning, feeling sure that the community in general cannot help being deeply interested in the controversy that has been raised.

"A Layman" writes as if he had a "real grievance to complain of;" but if he had not lately arrived, he might, by thinking over the matter, have come to the conclusion that "comparing the reform" he would appear to desire, is not the same thing as remedying grievances. From the tone and style of his letter I imagine him to belong to that school of earnest and zealous Churchmen termed ritualists, of whom the Rev. Mr. Maconochie, alluded to by him, is one of the most extreme and advanced; and it must be evident to your readers that in a community like that of Yokohama, the Church of that community should be furnished and adorned, and its services conducted in such a way as will respond to the feelings and wishes of most of us, and not in the manner most congenial to the ideas of an extreme party or a small section. While, therefore, thinking that broad and liberal views should be the leading characteristics in our Church establishment here, I regretted to read the strictures contained in the leading article of this morning's paper, especially where "harsh measures" are advocated towards the letter of "A Layman,"—rather, I would advise, kindly point out to him his errors, and convince him where wrong.

"A Layman" is, perhaps, unaware of what we owe to the gentleman who so kindly interests himself in the musical portion of our services, or he would have let his opinions on this point be couched in different terms. Surely, sir, the appropriateness of hymns and tunes, and the time at which they should be taken, are matters which should be left entirely to the taste and feelings of those who do their best to render them fitly. Whilst deprecating, however, the introduction into the Yokohama Church of the irreverent rapidity of holy jigs, yet, I would certainly like to hear our organist and choir hurry up a little now and then; as I fear, at times, their "slow and stately chorales," more nearly approach a dreary drawl than the style of the "great schools" of English cathedrals.

I am, Sir,

Yours faithfully,  
YOKOHAMA.

To the Editor of the Japan Gazette.

SIR,

In our small community, where events are scarce, a good deal of interest has lately been felt in the performances of the *Vasco de Gama* and *Japan*. After an italicised flourish in one of your contemporaries, that the *Japan* had

beaten the *Vasco de Gama* by a day and a half on the way to San Francisco, silence reigned for a time.

This statement, I believe, obtained no credence whatever from persons at all conversant with the performances of steamers crossing the Atlantic.

At last, a *précis* of the facts appeared in the *Herald*; and in your paper of last night was also an extract from the *Alta California*, full of "difference of time" and "longitude," which had nothing in the world to do with the matter, as both ships were equally affected in that respect. It is headed, in sensational capitals, "The *Vasco de Gama* beats the *Japan* twelve hours." Now, why not state the real truth, thus: "The *Vasco de Gama* beat the *Japan*, between Hong-kong and Yokohama (1620 miles), by 32 hours and 21 minutes; and between Yokohama to San Francisco, 36 hours 46 minutes. That is the truth itself, as given by the *Alta California*; but, in order to exhibit a less degree of inferiority than is really the case, the stoppages of the two ships in Yokohama are added to the voyage. What has that to do with the speed of the ships?—the real question at issue.

The *Japan*, from the superior facilities possessed by an old-established and well-organised company, in the way of coal and cargo lighters, water tanks, steam tugs, and a disciplined staff of men, was able to do in 2 days and 11 hours what it took the *Vasco de Gama* 4 days, 19 hours 45 minutes to get through.

This discrepancy will soon disappear, and it is refreshing to find that the *Japan*, when pushed, can make the passage in such an unprecedentedly short space of time as 20 days 14 hours.

Now there is scarcely any anxiety felt when the steamer from San Francisco is 30 or 35 days out.

The *Japan* being of far greater tonnage than the *Vasco de Gama* ought to have beaten her easily; but, in the Pacific as well as in the Atlantic, side wheels must give way to propellers.

But why say 12 hours in place of 36h. 45m.? or, including the run from Hongkong to Yokohama, seventy hours fifty five minutes, on the running time, by the *Alta's* own account?

And how did the *Vasco de Gama* get "southerly winds, with the usual rough weather" while the *Japan* had "heavy monsoons and heavy weather" nearly all the way?

Your Obedient Servant,

SUUM CUIQUE.

To the Editor of the Japan Gazette.

Yokohama, 21st March, 1874.

SIR,

As you have already kindly alluded to my services and my losses in the late fires, will you further oblige me by allowing me to speak for myself, in order to explain and justify my application to the Agents of the Insurance offices.

I sent a letter to them because I considered that they, as well as the proprietors of the property saved mainly by my personal exertions, would see that my case was a peculiar one. I claim that I specially prevented the destruction of hundreds of thousands of dollars worth of property, a large proportion of which the Insurance offices would have had to pay, but for the supply of water which I, as a private individual and not as foreman of a public association, kept for my own use on my own premises. Let those who saw the fire fly from one end to the other of Bank Build-

ings, answer what might have been expected had either the Hongkong and Shanghai Bank or Mrs. Searle's store once fairly caught? It is impossible to say where the mischief would have ended; or how greatly their losses would have been augmented. Yet I am told that though my services are worthy of thanks they can give me nothing else, as I was working first as a member of a publicly supported association, and, secondly, that I was really working to save my own property. I will reply to the first; and as to the second I may say, that they might have said this with greater shew of propriety if I had never been found among the active workers at fires far away from my own store.

I believe that my letter was not properly understood by those to whom it was addressed; and this is the reason why I ask for this space in your columns.

In the report of the meeting of the Agents as given by the papers, it says "the Brigade under his (my) superintendence was one that was supported by subscription, and not, as might be supposed, an entirely private brigade; while, further, the case was scarcely one in which Mr. Hohnholz had lost his own property through his endeavours to protect other persons' property."

I will explain. In the month of May 1872, I, of my own accord, got up a subscription list, for starting a new Brigade. I headed the list with 825, and went round to many persons I knew to be uninsured, and we established a private association, purchasing one of the engines of the Yokohama Fire Brigade. I called a meeting of those who had subscribed, and laws were laid down for our government.

The association was to be called Private Fire Brigade, and the engine was to belong to those who subscribed for it, and should be used for the protection of *their* property in case of fire. I was appointed foreman for one year, and there were about twenty working members. These all worked well at first, but gradually one after another stayed away; and, during the last twelve months, I have had hardly any assistance from them at fires. Thus, I may with truth say that I am the only one who has kept up the very name of the Private Brigade, as an actual working member at fires. I alone have taken care of the engine and got subscriptions to pay the expenses; and I have never benefitted personally by the Brigade, whilst my clothes have been damaged, and my life has been more than once in danger; for no one can say I ever scrupled to work where I saw it be necessary; or that I ever sent one of my firemen or assistants to any duty I was unwilling to take myself.

Now, Sir, I do not consider that these facts entitle me to be called a member of a public Brigade. The Brigade of which I am a member is a Private one, and the engine is, by the bye laws, specifically for the protection of the property of members. So far as non-members are concerned, the Engine and the Brigade men are, by rights, not called upon to assist at all. But this is not the spirit in which I have worked. I have taken the engine myself with my coolies to every fire, whether the endangered property belonged to subscribers or not. Fires in the Japanese Town, at Honcho, on the Bunko, as well as in the Settlement, and whether accompanied or not by other European members of the Brigade, I have attended. I have never been the last at a fire, but generally the first to arrive with an engine; and thus, I have been able on several occasions to prevent small fires from becoming large ones. On the 6th

of December 1872, on the occasion of the fire at the "Café du Japon," I saved the "Britannia"; and, if I had not, a godown with 600 casks of kerosine oil must inevitably have been burnt. I was successful in saving this by being so early on the spot.

In 1873, I started the "Hook and Ladder Brigade" and again exerted myself to collect funds; and in this I succeeded. At the fire at No. 114, on the Creek, I was mainly the preserver of the biggest house on the premises, with the engine and coolies of the Private Brigade. Of the fires at No. 31, the French Hotel, and 60, 61, and 81, you have already made generous mention. But allow me to demur to the remark, I read in the report of the meeting of the Agents, that "I did not lose my own property at Lot 82 through my endeavours to save other people's." In one sense I might emphatically answer that I did: inasmuch as if I had taken my own goods from my store to a place of safety, I should have seen that they were removed carefully and that my men, of whom I have seventy under my charge, took care of all that they conveyed away. As it was, I and most of my men worked at putting out the fire at Fabre's godown, and the removal of the goods from my store was effected by others, who, however wishful to save me from loss, did not know what to take care of and what was comparatively valueless, and so could not use the discrimination or the watchfulness I could personally have done.

But even on other grounds I contend that the view of the Agents is erroneous. I have always 1,000 gallons of water on my premises, which I kept there at my own expense, apart from any brigade public or private. It was this small store of water which I assert prevented the spread of the flames.

I have spoken but of one engine, but in fact I have another—a small one bought by Mr. Liebermann and myself—under my charge. Had the fire been left to itself, and the bank and other large buildings been permitted to burn, it is probable that with these two engines and the large number of coolies at my disposal I could have saved my own property. But, be this as it may, whether the Insurance offices be disposed to assist or not in preserving me from the ruin that seems in one night to have come upon me, I cannot admit the justice of their argument that I have not lost my property through my exertions to save that of others, which by parity of reasoning declares that I only exerted myself to save other people's property in order to save my own.

I am, Sir, your obedient servant,

H. W. HONHOLZ.

Houses built in foreign style are rapidly increasing in number, and, we may add, improving in style of architecture, in the capital. In almost every part of the city, though especially within the central portions of it, scaffolding and buildings in process of erection are to be seen. The new edifice intended for the use of the Nai Mu Sho or Home Department is nearly finished. From Nihon Bashi one can see the tall brick chimney belonging to some new building devoted to manufacturing purposes. Inside the castle proper, in that portion on the northern side in which the two houses of the Go San Kigo, the Shimizu and Tayasu, formerly resided, the extensive infantry and artillery barracks have recently been finished and occupied. Houses for westernized native officials and "high foreigners" are numerous and al-

ways present a pleasing contrast, with their bright paint and cheerful appearance, to the dingy monotony of the less pretentious wooden dwellings of the common, conservative, or modest natives. The old wood-cut pretending to portray "Jeddo" from the citadel, which did duty so long in the geographies, but which, being evolved out of the imagination of the artist and further "improved" by the engraver, was most villainously libellous, in that it represented the Japanese capital with the features of a European city, has in process of time become a true picture. Old one-storied shanties are rapidly passing out of fashion, and stone and brick coming in. The Emperor Mutsuhito is likely to become the Augustus of Japan, in finding his capital *Ki* and leaving it *ishi*. Standing at Shimbashi, and seeing from that point of view the station, the bank-buildings, the new boulevards, and the Engineering College, one can hardly believe himself in the old Yedo of even three years ago. To walk past the barracks of Sakurada, and along the beautiful western moat, and past the spacious ground and buildings of the new British Legation, then down to the Kudan and around the slope to the new Polytechnic School, past the new offices of the Home and Treasury Department, and to see all the various modern structures, is to be filled with surprise at the rapidity of the changes wrought, not only in the life of the people, but with the revolution in architecture caused by the adoption of foreign ideas. The old resident misses with a feeling of regret the old castle towers and imposing gateways: but he also finds with pleasure the splendid new stone bridges taking the place of the ancient humpbacked and rickety structures of wood. However useful Japanese bridges may be, they are as ugly specimens of carpenter-work as one can find, and we are glad to note that an improvement in the manner of building bridges, as well as of houses, has come in vogue. During the past week, the buttresses of the Koishikawa Go Mon have been demolished to obtain granite and other rock for new and substantial modern structures elsewhere. We notice also that several writers have stimulated the taste for architecture by preparing books on the subject. Several practical men have also put their ideas on paper, and a few good foreign works have been translated.

THERE WAS another miscellaneous entertainment provided for the *habitués* and supporters of the Temperance Hall last night. Although one or two disappointments occurred, through the non-arrival of gentlemen who had promised to assist, their places were ably filled by volunteers and the whole affair passed off, as usual, with *éclat*. The room was full, as it generally is, and one thing must have struck the philanthropic promoters of these pleasant affairs, as it certainly has struck us more than once, namely, the increasing necessity for larger accommodation. We are given to understand that the same want is felt in the general arrangements of the establishment, the demand for room exceeding the supply. We daresay the Committee and those concerned in the well-being of the institution will see the necessity of securing a continuance of the good work which has been begun, by making provision for the increasing demands which continue to be made on the capabilities of the Institution, which is undoubtedly growing in public favour; more especially amongst the class it is intended to reach, and amongst whom the greatest good may be done—the suffering community.

# Hokohama Market Report and Prices Current.

## STAPLE IMPORTS.

A perceptible improvement is to be noted in the condition of both Import and Export Markets, and considerable business of a genuine character has been done since our last report. In the Import market, prices, nevertheless, have undergone little alteration, but, as stocks are being lessened, an improvement on rates may be confidently anticipated.

SHIRTINGS have been in better demand, and although the heavy stocks have been decreased prices remain much as last quoted. COTTON GOODS generally have rallied, and prices are hardening. VELVETS are in no request. WOOLLENS continue to improve, for most sorts. There has been further business done in MOUSSELINEs, mostly speculative however, and prices have undergone no material alteration.

In BLANKETS a sale of a parcel of 5,000 to Government is the only transaction reported; prices as last quoted. The market for IRON shows no improvement, and prices have still a downward tendency. SUGARS are still rather quiet, though Brown Formosa is being enquired for, and prices are a shade better. RAW COTTON shows an improvement as regards demand, but quotations are still in favour of the buyer.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—The market, we are glad to be able to report, shews signs of considerable improvement, and the previously limited stocks have been still further decreased. Prices have advanced, and the market closes firm. The improvement is attributable to more encouraging home advices, which indicate a better demand, whilst stocks here continue to steadily decrease; what remains consisting mostly of inferior grades.

In HANKS much business has been done at greatly improved figures for all qualities. Settlements amount to 750 Bales, and hardly 500 Bales remain on hand, and that of indifferent quality. OSHIUS have fully shared in the general improvement, and prices of all sorts have advanced as much as \$30 to \$40 per picul. Other sorts have also commanded better prices.

Total settlements amount to 1,110 Bales.

The stock is about 1,000 Bales.

The market closes very firm.

**TEA.**—Business in tea since last mail issue has been extensive, considering the late period of the season, settlements rather exceeding 3,500 piculs. The demand has continued on the Medium grades, with some settlements of very low common class, ranging from \$12 to \$18 per picul. Arrivals have been scanty, and the merchantable stock at present in this place does not exceed 500 piculs.

It is useless to give quotations by this opportunity, the character of all parcels for the last fortnight or three weeks being so old and mixed, and many settlements having been made on a very irregular basis; it is better, therefore, to entirely withhold them than risk creating a false impression on our readers.

Of the new crop nothing reliable has yet transpired. The weather continues fair, and by the first week in May we may look for first musters of "Garden Teas."

Our export to date is roughly estimated at about 11½ million pounds, and the cargo of bearer hereof will nearly raise it to the amount we anticipated for this season, viz. 12 million pounds.

## ARRIVALS.

March 9, Am. str. *Costa Rica*, Williams, 1,917, from Hakodate, general, to P. M. Co.  
 March 10, Am. str. *Colorado*, H. C. Dearborn, 3,727, from San Francisco, 14th Feb., general, to P. M. Co.  
 March 10, Brit. str. *Washi*, Withers, 221, from Nagasaki, Coal, to Hudson, Malcolm & Co.  
 March 15, Brit. str. *Bombay*, Davies, 1,325, from Hongkong, general, to P. & O. Co.  
 March 15, Brit. str. *Vasco de Sama*, Rice, 1,981, from San Francisco, general, to Hudson, Malcolm & Co.  
 March 15, German barq. *Amaide*, Brinkmeier, 371, from Hakodate, ice, L. Haber & Co.  
 March 15, Brit. barq. *Messe*, Robinson, 628, from London, general, to Van Oordt & Co.  
 March 19, Am. str. *New York*, Furber, 2,119, from Hakodate, general, to P. M. Co.  
 March 20, Brit. barq. *Sarah Scott*, Estell, 530, from Cardiff, Coal, to P. & O. Co.  
 March 20, N. G. barq. *Diamant*, Ackermann, from Hamburg, general, to Simon, Evers & Co.  
 March 20, Brit. barq. *Mistletoe*, Pyne, 268, from Nagasaki, Coal, to Hudson, Malcolm & Co.  
 March 22, Am. str. *Golden Age*, Coy, 1,870, from Shanghai, general, &c., to P. M. S. S. Co.  
 March 25, Am. barq. *Acors Burns*, Allen, 296, from Sandwich Islands, 15th Dec., 150 bbls. sperm oil, to Captain.  
 March 25, Am. str. *China*, Cobb, 4,000, from Hongkong, general, to P. M. Co.

## DEPARTURES.

March 9, Am. str. *New York*, Furber, 2,119, for Hakodate, general, despatched by P. M. Co.  
 March 10, Brit. str. *Behar*, Andrews, 1,686, for Hongkong, general, despatched by P. & O. Co.  
 March 10, Brit. ship *Dorothy*, McLean, 760, for Hiogo, ballast, despatched by Gilman & Co.  
 March 10, Am. str. *Alaska*, Morse, 3,012, for San Francisco, general, despatched by P. M. Co.  
 March 12, Am. str. *Colorado*, Dearborn, 3,727, for Hongkong, general, despatched by P. M. Co.  
 March 14, Am. str. *Costa Rica*, Williams, 1,917, for Shanghai &c., general, despatched by P. M. Co.  
 March 15, Brit. str. *Glenartney*, Keay, 1,870, for Hiogo, ballast, despatched by Jardine, Matheson & Co.  
 March 16, U. S. sloop *Ashuelot*, Cassell, 1,080 tons, for Yokoska.  
 March 17, Brit. barq. *Flying Spur*, Croote, 735 for Hiogo, general, despatched by Wilkin & Robinson.  
 March 17, Brit. str. *Vasco de Gama*, Rice, 1,981, for Hongkong, general, despatched by Hudson, Malcolm & Co.  
 March 18, French str. *Volga*, Samat, 690, for Hongkong, general, despatched by M. M. Co.  
 March 19, Brit. str. *Washi*, Withers, 221, for Nagasaki, ballast, despatched by Hudson, Malcolm & Co.  
 March 21, Russian str. *Courier*, Lemanefsky, 459, for Shanghai, coal, despatched by Walsh, Hall & Co.  
 March 21, Am. str. *New York*, Furber, 2,119, for Shanghai, general, despatched by P. M. Co.  
 March 24, Brit. str. *Bombay*, Davies, 1,325, for Hongkong, general, despatched by P. & O. Co.

## PASSENGERS.

Per Am. str. *Costa Rica*, from Hakodate.  
 Messrs. J. R. Clark, T. L. Brown, Nohman, and 59 Japanese.  
 Per Am. str. *New York*, for Hakodate.  
 Mrs. Eldridge.  
 Per Brit. str. *Behar*, for Hongkong.  
 Messrs. Bibbey, His E. Enamoto, S. Yamamoto, B. Itchikawa, F. Yoshi, K. Ooka, Mr. Grob. 2nd class:—N. Hanson, Private French, Ah Kye, wife and children; and 24 on deck.  
 Per Am. str. *Alaska*, for San Francisco.  
 Rev. C. Walworth, Miss Nelly Walworth, D. W. Kline:—Steerage. J. L. Kline, T. J. Morris, W. S. Hanks, D. Henry, S. Carpenter, S. Utida.  
 Per Am. str. *Colorado*, from San Francisco.  
 FOR YOKOHAMA.  
 Col. E. Chambers, G. Purcell, V. G. Scofield.  
 Per Am. str. *Colorado*, for Hongkong.  
 Mr. G. B. Elliott.  
 Per Am. str. *Costa Rica*, for Shanghai.  
 R. P. Maynard, Mr. Wadley, Dr. Jones, H. J. Keels, Bishop Williams, and 15 Chinese in the steerage.  
 FOR HIOGO.  
 W. Bramsen, C. Rohde, 3 Japanese, and 56 in the steerage.  
 FOR NAGASAKI.  
 Dr. Fisher, Col. Chambers, D. G. Scofield, and 37 in the steerage.

Per Brit. str. *Bombay*, from Hongkong.  
 Messrs. Cope, Yates, Clayton, Marks, Wood, Dawson, Westphael, Bromley, Marston, Stiles, Peacock, Hall, and Ginsburg.  
 Per Brit. str. *Vasco de Gama*, from San Francisco.  
 Messrs. Spencer, Comstock, Lang, and M'Lure, and 23 Chinese in the steerage.  
 Per Brit. str. *Vasco de Gama*, for Hongkong.  
 Mr. and Mrs. Hudson.  
 Per French str. *Volga*, for Hongkong.  
 Messrs. A. Garoin, F. W. White, Henderson, Babut, M'lles C. Vielsaure, L. Maurier, A. Vallet, Geo. B. Berrick, and Bouille.

## FOR POINT DE GALLE.

Mr. Dumortier.  
 Per Am. str. *New York*, for Kobe.  
 Madame Soulier, W. Heise, 3 Japanese, and 34 in the steerage.

## FOR NAGASAKI.

1 Japanese, and 29 in the steerage.

## FOR SHANGHAI.

Mrs. Searle and child, Dr. and Mrs. Carmichael, Jas. Davidson, W. F. Drew, and 4 Chinese in Steerage.  
 Per Am. str. *Golden Age*, from Shanghai, &c.:  
 Mrs. C. S. Coy, Mrs. W. Jackson, Geo. Olliver, 3 Japanese officers, Mr. Olorovsky and servant, Bishop Petitjean, W. E. Clarke, W. F. Driscoll, E. C. Kirby, Mrs. Green, Miss Helen Green, Mr. Schinac, Mr. and Mrs. Pyke, infant and 3 servants, Mr. and Mrs. J. Bradfield, Mr. and Mrs. Florent, child and 2 servants, Capt. J. Bennett, Mr. J. H. Spoor, P. H. Ramee and servant, H. S. Gunth, Mr. Francke, Rev. D. C. Greene and servant; and 68 in steerage.

## FOR SAN FRANCISCO.

Mr. and Mrs. W. W. Parkin, Mrs. J. R. Leyenberger, Jno. H. Winsor, F. D. Bush, H. D. Duval, W. Pardon, Rev. R. W. Nelson, Rev. J. Bell, Mr. J. Blydenbergh, Capt. Percy, and H. F. Jeffreys.  
 Per Brit. str. *Bombay*, for Hongkong.  
 Messrs. Kahn, P. Bennett, J. J. Mitchell, one Chinese woman, and 5 Chinese on deck.  
 Per P. M. S. S. *China*, from Hongkong.

## FOR YOKOHAMA.

Mrs. Simmons and servant, Mr. Whitall, wife, child, and servants, Mrs. Robinson and servant.

## FOR SHANGHAI.

R. D. Mehta and servant.

## FOR SAN FRANCISCO.

Lady Kennedy, Miss Kennedy and maid, Mrs. Garcia, E. W. Stevens, Rev. E. Simmons and wife, E. P. Monroe, N. J. Houston, U. S. N. 1032 Chinese.

## FOR EUROPE.

Rev. T. F. Morton, Capt. Fairlie, R.N., S. Koch.

## REPORTS.

Report of the British barque *Sarah Scott*, of Sunderland:—Towed out of the East Bute Dock, Cardiff, at 4 p.m. on the 17th of October, 1873. Sighted Cape Finisterre on the 24th and got the North East Trades in the last named latitude and longitude on the 27th. Sighted the S. W. point of Madeira, bearing E.S.E., at noon on the 29th. At noon on the 5th November, St. Antonie (Cape Verde) bore S.E.  $\frac{1}{2}$  E, distant about 15 miles; here we lost the trades and got south-easterly winds until the evening of the 9th, in Lat.  $8^{\circ}$  N. Long.  $21.20^{\circ}$  W. where we got variable winds, squalls and calms. Crossed the Equator in Long.  $27^{\circ} 10'$  W. at about 11.15 p.m. on the 14th, just 28 days 7 hours from Cardiff. Had variable winds nearly all through the S.E. trades, until we arrived in Lat.  $28^{\circ}$  S., Long.  $32^{\circ}$  W., where we got the winds from N.E., North, and N.W. December 5th, 4 p.m., saw the Peak of Tristan D'A Cunha, bearing N. N. E.  $\frac{1}{2}$  E.; Nightingale Island N. E., distant about 7 miles. After passing these islands had a continuance of easterly winds, with thick foggy weather for several days. Crossed the meridian of the Cape of Good Hope on the 19th, in Lat.  $42.20^{\circ}$  south. January 4th, 1874, at 7 a.m., the south point of St. Paul's Island bore N.N.W., distant  $1\frac{1}{2}$  miles. Had variable winds and weather all the way down from the meridian of the Cape. At noon on the 24th January, Fly Island bore W. by N., and Cape Blackwood (Sandalwood Island) N. by E. On 26th and 27th passed through the Omboy Channel, and after this had the winds down from the N. Eastward. On 31st, rounded Cape Palpettoe (Boerco Island). February 4th, passed between the Lawn and Pisang Islands. The 6th, weathered Gagy Island. The 7th, passed to windward of Geby Island. At about 9.45 a.m., while the ship was lying becalmed, His Majesty the King of

Geby came on board to inquire after the health of His Majesty Queen Victoria and the royal family. I brought on board with him some fruits, birds, shells, &c., as a present for the captain, but at the same time requested to be supplied with cigars, spirits, tobacco, coffee, sugar, tea, guns, gunpowder, sails, his boat, a compass to steer by, and other articles numerous to mention. After supplying him with quantity of coffee, tea, sugar, tobacco, &c., and his finding that he could get nothing more, he spoke to his men and they took away nearly everything that they pretended came as a present to the captain. The King then shook hands with the captain, and him good day, got into his boat or state barge, mounted his throne (a sort of stage rigged up) and we away on shore. So much for a royal visit. At noon the 8th, Syand Island bore N. E. distant about 10 miles. Sounded ground in  $7\frac{1}{2}$  fathoms. At 11 a.m. the 10th exchanged signals with a North-German barque from Hamburg to Japan, Hamburg 25th September 1873, all well on board. At noon the 11th Wayamole Head (Gilolo Island), bore S. W.  $\frac{1}{2}$  W. and Salamay Head W.  $\frac{1}{2}$  S.; found the current setting very strong to the south-westward. During the whole of February had nothing but light variable winds from the N. Eastward, with squalls, calms, and much rain. On 10th March crossed the Tropic of Cancer, were we had light variable winds from the southward, with very fine weather for five days. After this had strong winds from south, veering round by the west to north, attended with much rain and squalls. At daylight on the 8th saw Mount Fusi-yama, bearing N.N.E. At 1.30 p.m. Rock Island bore North  $\frac{1}{2}$  mile. At 2.20 p.m. got a Yokohama pilot on board. At 5 p.m. light variable winds and calms. A.m., 19th, light variable winds from the N. Eastward. P.m. light south-westerly winds. At 6.30 p.m. anchored in Yokohama bay, having been 153 days on the passage.

The German barque *Diamant* reports: Experienced fine weather during most of the voyage. In the Bay of Biscay met with some stormy weather and a heavy sea, and also for a short time off the Cape. Came up through the Gilolo passage. For 40 days in the Pacific had nothing but light winds and calm.

## NOTICE.

MR. E. H. HUNTER ceases to sign my name and firm per procurator from this date.

E. C. KIRBY,

Yokohama, March 2nd, 1874. 1m.

## NOTICE.

I HAVE this day established myself at this Port as

**MERCHANT**  
AND

GENERAL COMMISSION AGENT,  
under the style and firm of

**E. H. HUNTER & Co.,**

E. H. HUNTER,

No. 51 Main Street.

Yokohama, March 2nd, 1874. 1m.

## NOTICE.

FROM and after this date, Mr. FERDINAND ANGUS THIEL is authorized to sign our firm, per procurator.

**HOWARD CHURCH & Co.**

Yokohama, March 14th, 1874. 1m.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 26TH MARCH TO APRIL 7TH, 1874.

OUR LAST MAIL, dispatched by the P. M. Steamer *China* on the 26th ulto. We are since in receipt of the following mails:—

ARRIVED.	DUE.
1874.	1874.

The P. M. S. S. <i>Japan</i>	March 27.	March 27.
„ P. & O. Co.'s str. <i>Madras</i>	„ 27.	„ 29.
„ M. M. Co.'s str. <i>Volga</i>	April 5.	April 5.

Latest public telegrams are to March 24th.  
Letter dates are to Feb. 13th.

### Summary.

THE COURT life of Japan has been quite without incident since our last. The 3rd April, only, offered any kind of break to the usual monotony; it being the Coronation day (Sukoi) of the first Emperor Zinmu Tenno; but the ordinary visits of felicitation, even, were dispensed with.

THE DAIJOKUAN have resolved at length to take some hostile steps against the Formosans, who killed and ate a portion of a crew belonging to Loo-choo. The Loochoosans appealed to Japan; but seeing that they pay tribute both to Japan and to China it seems to us that they might just as well have asked the latter, who claims the island of Formosa, to punish the savage tribe who acted so barbarously toward them. The government has declared its intention of punishing them, and three or four ships are to be sent, with some 2,000 fighting men. Steamers have been sent to Nagasaki, to embark troops from among those who were recently engaged putting down the rebellion in Saga.

THE FOLLOWING is from the *Japan Mail*, and is likely to be pretty correct:—

The Trade Report for 1871 of Mr. Gregory, Acting British Consul at Takow, gives the following account of the incident which has led to the present expedition of the Japanese.

The ship *Loudoun Castle*, of Glasgow, 895 tons, bound from Foochow to Manila, was wrecked on the south end of Formosa on the 27th July. The master and part of the crew fell into the hands of the aborigines. Mr. Warren of this Consulate was sent by Mr. Hewlett to their assistance, and happily was able to bring them all back.

On the 27th December four men from a wrecked Lewchew (or more strictly speaking Meiacosima) junk arrived here (Takow). They had been brought by Chinese from the south end of Formosa. Among them were some of Mandarin rank. They were taken charge of by the Chinese authorities, Mr. Warren having also interested himself on their behalf. It appears that, about the same time, another junk, the companion of this one, was wrecked on the eastern side of Formosa, and most of those on board are said to have been slaughtered by the savages. The kindness which the Meiacosima (and probably other Lewchew) people have repeatedly shewn to our people when shipwrecked gives them a special claim on our sympathies.

It will be observed that the crew of the *Loudoun Castle* who fell into the hands of the Formosans were well treated by them; while the crew of the junk from Meiacosima, which was wrecked on the same spot a few months afterwards, were slaughtered.

We believe that the plan intended to be adopted by the Japanese Government for the prevention of similar outrages for the future, is the occupation of the south point of Formosa, which will enable them to command the aboriginal territory. The Chinese Government, we believe, disclaims all jurisdiction over this territory, and all responsibility in regard to the tribes occupying it. Indeed, the Chinese maps of Formosa are drawn with a sharp line running north and south through the island, intimating this very decidedly. The step of the Japanese Government involves the difficulty of joint occupation—one never free from difficulties, and often provocative of collision, as their experience of Saghalien must have taught them; and how they will agree with the Chinese, with whom they will certainly come more or less into contact, remains to be seen.

MUCH EXCITEMENT and great sorrow has been caused in our community by the wreck of the French Mail steamer *Nil*, and the loss of all her passengers and crew except four persons—two sailors, the ship's baker, and a passenger who was formerly cook to the French Minister here. The misfortune happened on the night of the 20th ulto., but the news did not reach Yokohama until the 25th—five days after the occurrence. The ship was due here on the 22nd; so, but for the accident, she would have been a little before

time. The number of persons supposed to have been on board appears to have been about 111. It is supposed that the boats could not be launched quickly because they were in-board, in consequence of the bad weather which had been experienced. Grave doubts are entertained as to the condition of the engines; and some say plainly that they were known to be out of order. An enquiry has taken place at the French Consulate, but the representatives of the Press were excluded. We believe, however, that little was elicited from the survivors beyond what will be found in our general columns.

We gave a list of the unfortunate passengers who were transferred to the *Nil* from the M. M. Co.'s steamer *Sinde* at Hongkong in our first report of the casualty. At last, we get the information that, (so far fortunately), that list comprised the whole of the passengers of the *Nil*. The list of names we then published, however, contained one or two press errors; we therefore furnish a corrected statement:

FROM MARSEILLES:—M. Leiseberg, M. Bovenschen, (natives of Germany); Mme. Avril, M. Liccioni, M. Muraour (natives of France—the latter saved); Mr. Laurence, (native of England); Mr. Yoshida (native of Japan).

FROM SAIGON:—M. O. Pallier (native of France).

It is reported in Tokio that Eto, the leader of the Saga insurgents, has committed suicide by hara-kiri, although some say he has been arrested. Nothing definite is known.

It has been determined that the parliament shall be established at once; and that it shall consist of two houses, an upper and a lower. But the upper house, the members of which shall be nominated, will be established first, and the lower house afterwards; its members being elective or representative. The president of the upper house will, according to present arrangements, be Ito Hirofumi.

IN ANNOUNCING that war had been determined on with Formosa, we reported 15,000 as the number of soldiers to be despatched. We have made particular enquiries, and find that this is greatly overstated. It is more likely that the number will be about 2,000, and all of them marines. We are not altogether without hope that better counsels may prevail, and this folly be even yet prevented.

IT HAS been a source of much regret to many Americans, as well as to others of our foreign community, that foolish reports from this country so frequently find their way into the newspapers of the United States. Lately, an extract of a letter, said to have been received from the present American Minister here, Judge Bingham, was published in America, and severely handled by one of the Yokohama papers; on which Judge Bingham, in another paper, disavowed the authorship. But, to read the nonsense that is constantly appearing in print in the States, one would be apt to suppose that the foreign community was divided into opposing sections; and that the foreign ministers, with the sole exception of Judge Bingham, were intent on swallowing up Japan, and would do so in double-quick time but for the protection of the star-spangled banner, waved menacingly before them—upon which they gazed and trembled.

It is desirable that (whilst those who write privately from here the mendacious accounts we have alluded to) a true statement of the facts connected with the intercourse between Japan and foreign nations as it has recently stood and still continues to be should be presented.

Everyone knows that, during the past two years, the Revision of the Treaties has been a prominent subject in the minds of both foreign and Japanese Ministers. It was partly with a view to obtaining certain concessions from foreign governments by personal communication that Iwakura was lately accredited to the sovereigns of Treaty Powers as the Ambassador of the Emperor of Japan. The failure experienced at the very outset in Washington may have had much to do in modifying his instructions; and it was soon made known that nothing would be done abroad, but that the whole subject would be taken up and arranged in Yedo.

Several of the Foreign Representatives were in Europe at the time when the Japanese Embassy was expected; but even with them at hand to consult their government preferred the negotiations taking place in Japan, where they could all sit together in consultation, and arrange such matters as they knew far more about than their chief at home as was best both for Japan and the countries in treaty with her.

By the middle of last year the foreign ministers most essential to the discussion of the subject had returned to Japan; the former French Minister, M. Outrey, being replaced by M. Berthemy, who is said to have been especially selected for his ability in such matters as were expected to come on for consideration. Sir Harry Parkes, the British Minister, was not new to his duties. Not only had he shown himself to be "the right man in the right place" during a long training in China, but, since July 1865, when he first arrived in this country as the Queen's Representative, he has shown himself the tried and consistent friend of Japan, as well as a staunch upholder of the right, not of Englishmen alone, but of all foreigners.

Mr. Von Brandt, the North German Minister, has had even a longer experience in Japan than Sir Harry Parkes, and his friendly sentiments towards the nation are well known.

The United States' Minister, Mr. De Long, wonderfully ingratiated himself with the Japanese Government, albeit he was firm in obtaining the settlement of several very large claims due to American citizens from the Government. It was thought to be a pity that he should have been removed just at that particular moment, when his four years

experience and the cordiality of his relations with his colleagues and the Japanese Foreign Office might have been very useful.

It must be remembered that there are always in every foreign legation matters of a somewhat disagreeable nature to be pressed between the Ministers and the Foreign Office. It would be absurd to say, or expect our readers to believe, that all the interviews that take place between Japanese and foreign officials is of a pleasant rose-water character. But this may be said, that, whatever may have been the nature of the dissensions or the terms in which they may have been conducted, no unfriendliness has ever exhibited itself, such as would justify remarks which have been lately quoted from American newspapers.

That Judge Bingham has not thought it consistent with the best interests of the United States to join his colleagues in their recent action is true; but a few facts may serve to shew that the course taken by the other ministers is at least dictated by the best motives, both as affects all foreigners and the Japanese themselves.

We go back, then, to July 1873. It seems sufficiently early for our purpose, and is a good starting point.

It has become a settled wish of Japan to obtain that jurisdiction over foreigners resident in the country which by the treaties was retained in the hands of the foreign governments. The same provision exists between China, Turkey, Siam, and other nations where law is administered in a looser manner than modern civilization approves of; and it admits of no question that this arrangement, which has no drawback but the mere sentimental one of touching the pride of the natives, has been productive of infinite good, and has prevented conflicts which must have otherwise inevitably taken place. This is one of the principle reasons why Japan desired a Revision of the Treaties; but this, it is clear, it is impossible for foreign governments to accede to. A country where there is no written law and no incorruptible judge; where no public opinion can be brought to bear on a judgment given; where officials are appointed not for their ability or learning, an acquaintance even with traditional procedure in the country, but in an almost hap-hazard way; and where every official not only accepts but expects a bribe; where the prisons are so bad and the treatment of prisoners so wretched that it has before now caused the death of at least one foreigner; and where the punishments are of a character alternately of undue severity and unreasonable lenity—who could consent to be under the laws of such a country? What government would hand over its subjects to be dealt with by such a power? Theoretically, no doubt it is very desirable that every government should exercise full jurisdiction over every person that occupies its soil. But practically it is, in this 19th century, impossible. And all who have experience of residence in eastern countries know that some of those who utter most loudly such cries as "Japan for the Japanese," &c., are the very men who would be likely to have most occasion to regret such a change being carried into effect.

For some time, up to the middle of 1873, the government had been very liberal in their reading of the clause in the treaties which restricts foreigners from visiting the interior of Japan, and confines them within certain limits—10 ri from the Treaty Ports. So long as their behaviour was such

as did not bring them under the particular notice of the officials they were not molested, if they chose to go beyond the boundaries; and many visited Fusi-yama and the country around it, Nikko, and other places, without the preliminary trouble of obtaining a pass. A circumstance, however, took place which induced somewhat more stringency, and subsequently the cord was drawn very tight; for the reason that, as foreigners were clamouring for permission to travel in the interior freely, the government decided to make this concession as a set-off to the Foreign Powers giving in on the jurisdiction question. The foreign ministers never for a moment allowed them to think such an arrangement could be made; but the government at once gave very strict orders to the officials of every village throughout the country, that every foreigner travelling without a pass should be sent back to the nearest Treaty Port.

It so happened that a German subject was so sent back, and reported to his Consul, who fined him for breaking the Treaty.

The North German Minister did not allow the fine, however; as he said the Japanese permit many men to go and reside in the interior, to suit their own convenience, and thus themselves break the Treaty. He demanded, in strict diplomatic form and language, that if German subjects were allowed to sojourn in the interior as teachers, or as otherwise employed by the Japanese, the same privilege should be accorded to all. He then wrote to the other ministers, informing them of the steps he had taken, and, shortly afterwards, Sir Harry Parkes drew up a proposal for combined action on the part of all the foreign ministers on this point among others. The argument was simply this:—That the Japanese desire to see foreigners enjoy this privilege, and that it was unfair that the privilege should be granted to one foreigner to go into the country to suit the Japanese convenience, while his countrymen are debarred from going on their own affairs. It was agreed that a joint representation should be made; and in this we are pretty certain Mr. DeLong acquiesced.

Up to this point then, all diplomatic action was uniform on the particular subject which seems of late to have given such umbrage to those whose antagonistic effusions have found their way into print.

The joint expression of the views of the foreign ministers was delivered to Soejima, if we mistake not; and a polite diplomatic acknowledgment showed that there was nothing wrong up to this point. Not a single line, expression, or word could be construed into anything like "bullying" on either side.

Judge Bingham arrived, and at once entered on his duties. He exercised the right of private judgment, as he was perfectly justified in doing. He differed from his colleagues on some points, and thus there is not now that complete unity which has generally marked the proceedings of the diplomatic corps. But that does not arise from any hostility between themselves; nor from either one or the other "bullying" the Japanese.

Stress was laid, in a letter lately quoted in the *Japan Herald*, on the disrespectful language used to the Mikado in their address on New Year's day; from which, it was said, the American minister alone dissented. This is mere invention. To that address Judge Bingham assented; and, as is the universal rule, it was sent in two days before the interview, that it might be approved, and a reply framed by or for His Majesty. Had there been anything disrespectful it would have

been at once objected to; but it was, in fact, the very reverse. Judge Bingham was absent from the interview at which the address was presented, as the weather was very inclement and he was suffering from indisposition.

We have given these few facts in the hope that thereby we may be able to assure all candid thinkers that there is no reason for the jealousy that alone must dictate the assertion we deprecate—not to throw oil upon troubled waters here; for, happily, all those strifes between nationalities that have been spoken of, do not exist: but that the minds of friends at home may be disabused, and the reason of both editors and readers in the United States may be convinced.

Those who are apprehensive of one nation getting advantages to the detriment of others should remember that this is provided against in each of the Treaties, by what is known as "the most favoured nation clause;" which gives to all whatever privileges are granted to the "most favoured nation." Until, therefore, this clause is repealed, it matters not how favourable a Treaty may be made with one Power; as this clause at once gives the same advantages to all. One nation cannot therefore over-reach its neighbours in this matter even if it would—a fact entirely ignored by the croakers.

It is probable that nine-tenths of those who have read of the 'bullying' to which the Japanese are said to have been subjected, (but which we have shown is purely imaginary), are not aware of the real matter at issue between the Japanese and foreigners. It is explained in a few words in the portion of this article published last evening:—The Japanese wish to have all foreigners under their own jurisdiction. The foreign ministers, except the American, object. On the other hand, the foreigners desire the right of travel and residence (under certain rigid conditions) all over the country. The Japanese say, "Concede to us what we want, and the country is free to you."

At the first blush of the thing, especially to these who know nothing about eastern nations, the thing seems 'plain as a pikestaff.' "Why should the Japanese demand be refused? What can be more reasonable? They might as well require of other nations that Japanese travelling or residing in them should be under Japanese law."

All this is good, so far as it goes. But how far does it? It breaks down at the start. And that fact is what all should keep constantly before them. The Japanese have no written law! And, although they sometimes say that such and such is an offence "according to our law," there is really no such thing in existence.

True, they are now trying to frame a code of laws, based on the *Côte Napoléon*; but it will be long before even that is completed; and much longer before judges are trained to administer it.

Suppose, then, for an instant, that the country was thrown open, and all foreigners were under Japanese jurisdiction. Who would be the first to rush into the country? Not only the globe-trotter, the merchant, the artist, and the capitalist; but the rowdy who has heard Japan cried up above all lands as a land of promise, not indeed flowing with milk and honey, but abounding with mines of gold and silver that only want proper working to be a veritable *El Dorado*. Let such men get in among the high spirited Japanese and what would their lives be worth? Not a day's purchase. We know them well; and we hope the day for their freedom of re-

sidence in the interior, under Japanese law, may be postponed until there is a law properly and honestly administered, to protect the well-disposed and to punish the evil-doers.

This is all that is desired by foreign Powers:—That their subjects may not live without law, and yet that they be not subject to the caprice or cupidity of an ignorant judge, or to punishments only known to barbarism; and, be they ever so innocent of a charge brought against them, liable to be beaten and tortured, to make them confess themselves guilty.

The day will come when these desires of the Japanese will be reasonable and acceptable. But that day is yet distant.

THE DISASTER that we have now to mourn, in the loss of the French mail steamer *Nil*, adds another to the lengthening list of fine vessels which have been victims to the currents of the ocean and the rocks which gird this treacherous coast. It must indeed be "an ever-changing and mysterious main;" for from time to time the best charts are at fault as to the set of the currents, which often run with an almost mill-race velocity.

Fogs, stormy winds, variable and powerful currents, are in themselves dangerous enemies to contend with; but when, added to these, there are sunken reefs miles out from the land, on nearly every part of the coast, the chances of accident are greatly multiplied; and it must be no light load that settles upon the mind of the captain of a ship, (especially where there are many persons on board,) as he approaches the coast of Japan. It is a coast on which every ship that is caught by these hidden traps disappears in a few minutes; and when the attention of landmen who have passed these dangers more or less frequently in safety is arrested by such a calamity as that which now fills our thoughts we cannot but feel it is not mere chance that has preserved us, but that, under Providence, skill and care have done their part, and deserve our gratitude. If by reason of the greatest skill and the utmost care, less than one per cent of the ships and passengers meet with disaster, surely acknowledgement should be made of the ability of those through whom such safety is assured. It is always pleasant to see the letters signed by passengers and addressed to the captain and officers after a long voyage—such, for instance, as from England to Australia; but the recipients of those letters have far less anxiety to endure than the officers of ships who are constantly on these coasts. What must be the anxiety, for instance, of the captain of a huge 4,000 ton wooden steamer, with a thousand persons on board, in these seas? It is but right that the public should be reminded of such facts, that honour may be rendered to whom honour is due.

But there is yet another direction in which praise must be accorded for the comparative immunity we have enjoyed from these crushing calamities. And this we are induced to mention, by some remarks of a rather thoughtless character we lately heard respecting the Lighthouse Department. Our own opinion has been ere now expressed, that it is not only one of the most useful but is the best and most economically managed of all government departments subject to foreign supervision. Much of the safety of the heavy coasting trade now carried on is due to the lights which occupy the most prominent points and most dangerous rocks. A very little consideration will satisfy even the most ordinary intellect of the inestimable value of the lighthouses; and the government of Japan is to be commended for this:—that

since it first took in hand to erect them it has never allowed the work to linger, nor carried it on in a niggard way. Directly the foreign staff arrived the whole coast was visited, to see what was of the greatest importance to be done first; and this decided on, all the most essential lighthouses were at once proceeded with, and the majority are now completed. A large measure of praise is but due then, to the Japanese government, for what they have done in securing the safety of vessels navigating the coasts. It is true that many of their own ships reap the benefit of the lighthouses; but, after all, only a small number as compared with the foreign ships; and it is the height of folly for men who claim to belong to civilized and intelligent nations to find fault with, or cast ridicule upon, exertions which have been so well and beneficially directed.

There is a spirit dominating some persons, to "run down" and ridicule anything and everything done or undertaken by the Japanese in the advance of science and the general progress of the country. Whilst we do not care to take up the cudgels seriously against such cavillers, we do most emphatically claim credit for the thoroughly practical and effective manner in which the government is lighting the coast. The department is of little less importance—perhaps no less—than the Railway Department; and it was a "happy thought" that resulted in the visit which His Majesty lately paid to Benten, and thereby shewed the weight attached to the work in the estimation of the government.

To the activity and skill of the commanders and officers of ships the safety of vessels and their passengers and cargoes is primarily due; but often all their watchfulness and their knowledge would be useless, but for the lighthouses.

It is therefore but right that the public should remember that safety is not due to chance, but that it is due alike to the skilful officers and brave crews afloat; and to the careful light-providing government ashore.

THE GOVERNMENT of this country is now in the hands of men, the half of whom have been abroad for the express purpose of observing the governmental principles of foreign nations. Some of the persons who are in the highest offices under government have received their education in Europe and America, and are solely indebted to their foreign teaching for the positions they occupy. How is it then, that among these men in particular are found the most steady opponents to the extension of the privileges we now enjoy in Japan?

We believe that the reason is, that their more extensive intercourse with foreigners has shewn them, more clearly than the mass of their countrymen have seen, the prevalent faults of foreigners. No man is a hero to his *violet de chambre*. And so no foreigner is a hero to those Japanese who are admitted into familiar intercourse. The first thing they observe is that foreigners have generally so much to say, not of that which would be instructive to themselves or their guests, but of tittle-tattle about each other; and, strangely enough, the idea engendered in the minds of the Japanese is, that the preponderance of such tittle-tattle takes the form of fault-finding. It is hardly to be expected that they will give us a better character than we give each other. We have repeatedly alluded to this before. But just now it again forces itself upon us, by the letters and articles which have appeared in certain American papers, and the extreme stress that has been laid upon them in the *Japan Mail*.

It is quite true that we have ourselves called attention to these effusions; but we have not thought them worthy of so much notice as has been taken of them by the *Mail*. And, seriously, we are inclined to think that the fact of giving so much prominence to them, and hammering at them so heavily, is of itself calculated to lower foreigners generally in the estimation of the Japanese who read the foreign papers. It may be very natural, but it is not very commendable, that the great delight of the majority of newspaper readers is to see rival editors abusing each other. It is declared to be "great fun," and very spicy; but it is not the way to make the papers respected. And so with these articles and letters. They may give a little piquancy to the reading, but they must, to a greater or lesser extent, have a depreciating effect. In the same way as we repeatedly see our neighbours rubbing their hands over the "rounds" between the rival papers here, so can we imagine the Japanese who read the English papers to chuckle over the attacks and counter attacks made in them, by foreigners upon one another. They cannot be supposed to discriminate, as foreigners themselves may be able to do. For instance, nine-tenths of the Americans here deprecate these statements that have led to so much comment, as much as other foreigners do; and we should never think of writing a word about the objectionable matter, to convince Americans here that it was unjustifiable. Our only object, when we did allude to it at any length, was to point out to a portion of the press in America that it had been deceived, and was arguing on an unsubstantial foundation.

But the Japanese, putting together the facts that they constantly hear individual foreigners scandalizing one another, and that they read in the papers these criminations, are justified in supposing that in reality all foreigners are tarred with the same brush; and that in fact they are what they represent one another to be.

The question may reasonably be put to us, then, would we allow such statements to pass uncontradicted? We have answered practically, by ourselves saying as much as we thought necessary about them. But our object is not to object to the contradictions that have been given, or the lash that has been administered. We only point out what we consider to be one of the principal reasons why the Japanese who understand our language, and have the most intimate relations with us, disappoint us by their apparent hostility, instead of reciprocating our friendship, as we fancy they ought to do.

Newspapers are wayward things. They have their own policy, so called; and often, when the public imagines the editors are fighting "hammer and tongs," they are enjoying the strife as much as, or more than, their readers. As a matter of course, therefore, they would not only not follow the advice each might be disposed to offer the other, but, in all probability, they would retaliate, and politely or otherwise refer to the "mote and the beam."

But a word to the wise—by which we mean, to the public at large—may suffice. It would be well for them, at least, to consider whether they cannot find other subjects of conversation than their neighbour's affairs; and whether they cannot occasionally, when they are in company with Japanese, find at least something to commend in those whom they ordinarily meet on terms of friendship, and of whom they would not think of speaking disrespectfully to their face.

We have told our readers before, and we now repeat, that there is no trait in the character of foreigners more striking to Japanese

than this hateful one of constantly talking of and depreciating one another. It isn't a very pleasant character, therefore, we have obtained for ourselves.

WE SUPPOSE we are expected to take it for granted that before the Daijokuan advised the Emperor to sanction the dispatch of an armed force to Formosa the subject had been duly considered and the cost counted. It has been long talked of, but we had always believed that there were none among the council of the Emperor who would seriously propose it; and that if one should be so insane, none would be found to support it. But it has been both proposed and determined; and, unless better counsels prevail, it will be proceeded with. The news came out in grand language. War has been declared with Formosa. As if, for instance, England were to declare war with the Isle of Wight, or France with the Channel Islands. We must hope that the utmost that intended is the punishment of a single tribe;—that tribe of anthropophagi, amongst whom one unfortunate Japanese junk's crew fell. That such barbarians deserve punishment we quite admit; but whether it is now possible to discover it, or for Japan to send a strong force to administer the merited chastisement, is to our minds far more than doubtful. We cannot conceive that the government has really weighed the possible consequences of any such enterprise.

The primary object of the government is evident. It is simply to cajole the samurai into the belief that they have the honour of the country very much at heart, and that they are determined to deal vigorously with those who molest Japanese. They fancy it will close the mouths of the samurai who are clamorous to avenge the insults offered to the Empire by the Koreans; and they perhaps imagine that by this warlike measure they will obtain the confidence of the public, which they have hitherto been totally unable to secure. And so it is that they treat the discontented like barking dogs, and throw them a bone to keep them quiet.

But at what expense. It is stated in Yedo that the little insurrection in Saga cost the country 2,000,000 of dollars; and although we cannot see how it can have cost anything like so much, it certainly must have made a large hole in the Imperial money chest. To fit out an expedition of 2,000 Marines and despatch them in transports on foreign service will cost very much more, besides the expense of the men-of-war which are to accompany them. But it is not the money cost that we think most of.

Formosa is an island which for its size is one of the most fertile in the world. Its western coast seems continually to be gradually but surely rising from the sea, but there are only a few places capable of receiving large ships. From the coast the country slowly rises. Large fertile plains gradually sweep upwards until the hills attain a considerable altitude; and they then drop rapidly on the eastern side into the sea. The Chinese have gradually pushed the native tribes back from the richest land, and occupied it themselves. The aborigines are of various degree of barbarity, according to their proximity to or remoteness from the dominant race; and it was by no means reserved for the Japanese to discover how utterly wanting some of the tribes are in humanity. Towards the southern end of the island, particularly, they have barely the very first rudiments of civilization. They are savages, and, as Japan discovered by the treatment their shipwrecked countrymen

received, some of them are cannibals. It is quite reasonable that China should allow any nation that felt itself aggrieved as Japan now does, by the action of such tribes, to take the law into their own hands and punish them. It has been tried before, by both Europeans and Americans, but not very successfully. The people retire before a landing force, get among the hills and the woods, and can keep up a constant and harassing fire upon an enemy in the open, whilst they are themselves unseen. It is therefore a far more easy matter to send an army to Formosa than to bring it face to face with these tribes when it gets there.

This is one great fact, but there are others of no less moment. For example;—all the tribes are not cannibals; nor are they cruel to people whom the sea casts upon their coasts. Our readers must remember quite recently the account we gave of the treatment of another junk's crew, whose vessel had been wrecked there. They were taken care of, and ultimately sent back to Japan. Surely these ought to escape the threatened hostilities. But how are the commanders of the expedition to learn with certainty which are the friendly and which the unfriendly tribes?

But the greatest danger lies in the fact that Formosa is a Chinese possession. It is a *foo* under the authority of the viceroy of Fohkien and Chekiang. A large proportion of the inhabitants of the cities are Chinamen; all the high civil and military officers are Chinese; and the military guard is entirely Chinese. The greatest caution will have to be exercised, therefore; otherwise complications may arise between China and Japan. There is no love between these celestials and the aborigines. On the contrary. It has frequently been the case that the peace-loving citizens have been the victims of tribes which "rushed like a torrent down upon the plains." Still, if the expedition should, perchance, fall foul of these, there can be little doubt of China resenting it.

The difficulty of fixing the punishment on the right persons or tribes; the propriety of excluding tribes which have acted kindly to shipwrecked Japanese; and the possibility of treading on the heels of China, should all be well considered before dispatching an expedition.

But the absurdity of its being imagined by the government that this will satisfy those who were eager to go against Corea, long before the Formosa outrage happened, is what most strikes us. We disagree *in toto* with those who think it necessary for Japan to wipe out with the sword the insults that Corea has heaped upon her. But undoubtedly those insults have been of a character calculated to rouse the blood of Japanese Samurai; and their demand to be led against their challengers is quite intelligible. This Formosan affair is not. It is mere waste of money. A vast expense for a most inadequate result. A frittering away of the national resources. It is quite another thing for a Power which has a squadron doing police duty in these seas sending a vessel to summarily chastise savage tribes. No great expense is involved in that, and the thing is done, as it were, "in a morning and an evening," without any fuss. But this is quite a different affair and instead of reflecting credit on Japan it makes her appear ridiculous in the eyes of the whole world.

THE FOLLOWING we transfer to our columns from the *Japan Mail*. It will be seen that they are some of the documents alluded to in our articles of the 24th and 25th instant. The Regulations for admission of foreigners into

interior we have had translated from the *Shin Shanjishi*, but we prefer giving them in original.

### Regulations for Interior—First Draft for Consideration.

#### I.

Foreigners may travel for their pleasure or for purposes of trade to all parts of the interior under passport, which will be issued upon the demand of their respective Ministers or Consuls by the Japanese authorities. Passports will not be demanded for seamen or any person who has no ostensible means of livelihood, or who has been convicted of felony or twice convicted of misdemeanour.

#### II.

The passport will not be transferable. It will give full the names, description, residence and nationality of the person to whom it is granted, and will state the time for which it is issued. On the expiration of the time named in the passport it must be returned by the holder through his Minister or Consul to proper Japanese authorities.

#### III.

Upon application for a passport the applicant shall deposit with his Minister or Consul security to the amount of two hundred dollars, which shall be returned to him ten days after the passport shall have been given up to the Japanese authorities, provided no claim charge relative to the conduct of the holder while in the interior shall have been laid against him. Otherwise the security shall be retained until the said claim or charge shall have been heard and decided by a Consul.

#### IV.

If the holder of a passport transfer it to another person he shall forfeit the whole of his security. If, owing to any culpable or avoidable cause, he fail to return the passport as soon as it has expired, he may forfeit either the whole or such portion of his security as may be deemed by his Consul to be an adequate punishment for his neglect.

#### V.

Any foreigner travelling in the interior beyond the Treaty Limits without a passport duly obtained, or with a passport which has expired, may be arrested by the Japanese authorities, and will be liable to a fine not exceeding two hundred dollars, or to imprisonment not exceeding thirty days, on conviction before a Consul.

#### VI.

Foreigners travelling in the interior shall enjoy the same facilities as Japanese for hiring persons, vehicles, transport of any kind for the carriage of themselves or their merchandise, and shall not pay higher rates than those which are paid by Japanese.

#### VII.

If a foreigner while travelling beyond Treaty Limits fail to pay or wishes to complain of any claim for horse or coolie hire, transport, lodging or entertainment of any kind, the local Japanese officer shall inquire into such claim or complaint, and shall state the amount that he considers due. The foreigner shall thereupon pay that amount, and if he refuse to do so he may be arrested by the Japanese authorities, and if the foreigner be dissatisfied with the amount named by the local officer, he may pay the same under protest, and in that case the local officer will be bound to furnish him with a written statement of his claim, and the amount the officer has called upon the foreigner to pay, in order that the same may be reconsidered by the Japanese Foreign Minister upon the demand of the Diplomatic Representative of the foreigner.

#### VIII.

Every foreigner travelling in the interior must observe all local municipal laws or regulations which shall be made known to him, and if he fail to do so, or if he commits any crime or offence, or is riotous, or disorderly, he may be arrested by the Japanese authorities.

#### IX.

Any foreigner arrested under these Regulations by the Japanese authorities shall be conveyed to the nearest Treaty port, and handed over to his Consul, with a charge stating the offence he has committed. But he must not be subjected to ill-usage or undue severity, either on the occasion of his arrest or while he remains in the hands of the Japanese authorities.

#### X.

The expenses incurred by the arrest of any foreigner for any of the causes above-named, or by his conveyance under arrest to a Treaty port, will be made good to the Japanese Government out of the security deposited by the said foreigner on receiving his passport, upon conviction of the offence charged. In the

case of any foreigner arrested in the interior without a passport, the judgment of the Minister or Consul shall include an order for the repayment by the offender of all expenses incurred by the Japanese Government.

September, 1874.

### THE LOSS OF THE NIL.

AS YET little has transpired calculated to throw any further light on the circumstances surrounding the terrible catastrophe which we last night chronicled, in connection with the loss of the ill-fated *Nil*. The cause, of course, is still veiled in obscurity, and whether it will ever be brought to light is perhaps more than doubtful. The French gun-boat *Bourayne* left port this morning for the scene of the wreck, conveying Mr. J. Chapsal, the acting agent of the Messageries Maritimes Cie., the French Consul, and other European and Japanese officials.

Mr. G. C. Pearson, of the firm of Pearson and Laurence, this morning (March 26th) started overland for the scene of the disaster, in the hope of gaining some tidings respecting his partner, Mr. Laurence, who was a passenger by the wrecked vessel.

It seems, from the intelligence brought by the native messenger, that of four of the crew who attempted to swim ashore from the wreck only one managed to gain the shore. Three other persons succeeded in reaching the land—one of them said to be a merchant—and were kindly tended by the natives. The rudder and steering gear, it appears, were all swept away by the heavy seas, and the boats were rendered useless from the same cause, which will account for the terrible loss of life which occurred.

The information to hand speaks of the boiler having bursted, but it is idle to conjecture whether this occurred before or after the vessel struck, as nothing more than a mere guess can be hazarded until the *Bourayne* returns with details. She left this morning at daylight, and would probably reach the site of the catastrophe this afternoon, so that we may reasonably expect—unless she is detained at Idzu for the purpose of saving property—that we shall be placed in possession of full particulars in time for publication to-morrow evening.

Several bodies have been washed ashore, and a lot of wreckage and salvage.

THROUGH THE courtesy of Mr. Henry Johnson, Pilot, who has just returned from the wreck of the *Nil* in his cutter *White Cloud*, we are enabled to give the following details of the loss of the ill-fated vessel.

On the 24th (Thursday), whilst at Cape Idzu, Mr. Johnson heard of the catastrophe, and immediately proceeded to the spot in the hope of being able to render some assistance. He found the wreck lying in deep water, about a cable's length from the shore,  $4\frac{1}{2}$  miles from Iro-o-saki, where there is a lighthouse. Her topsail yards were above water. Four or 5 miles out from that light (which is only intended for junks) there is another on Rock Island, for which Yokohama-bound vessels always make, passing outside of it. It is supposed that on account of the weather, which was extremely thick, with drizzling rain, the vessel had got too far into the land, inside the Gulf of Tsuraga, in such a position that the smaller light on Iro-o-saki was completely shut out from view. The machinery, it appears, broke down during the night, but was repaired, and the vessel again went ahead. During that momentous interval, no doubt influenced by the tremendous set of the currents thereabout, she must have swept inshore. She was making for the

light on Rock Island we are informed, but nothing precise seemed to be known of her position till she struck. This was at about half past twelve on the night of 20th/21st. It was half an hour after she struck before she went down, with the boats hanging to her davits, as the Captain, we are told, would give no orders for them to be lowered; otherwise—it is the opinion of one of the survivors—nearly if not every soul on board might have been saved. There is said to have been a total of 71 Europeans on board, and about 40 Chinamen. All of the latter were drowned, and, of the former, four only escaped, as was first reported. These were saved in the following manner: Two of the crew thinking it dangerous to remain any longer by the wreck lowered a boat at their own risk, and, after much buffeting with the waves, managed to get safely ashore. Another of the hands gained the land on a piece of the wreck, and Mr. Muraour, formerly cook at the Yokohama Club, entrusted himself to the deep in a life preserver, and, after lying in the water for two hours, was picked up by the boat containing the two men. Query? Might there not have been a chance for all had they taken to the boats,—seeing that the three men managed to reach the shore by their unaided exertions? Four bodies were washed ashore, 2 Europeans and two Chinamen. The survivors are being kindly treated by the Japanese. Mr. Johnson offered to bring them up, but the authorities preferred to wait the arrival of the relief party. As we have said, only one passenger was saved, M. Muraour. Of the crew who managed to reach the land two were seamen, and the other was the ship's baker.

Our informant left Milla, the village where the survivors are now living, on Wednesday evening, 25th. Yesterday morning, at 8 o'clock, he met the *Bourayne* coming out of Simoda Harbour, on her way to the scene of the wreck. She left here on Thursday morning about 7 o'clock; delay enough, surely, seeing that the news of the disaster reached Yokohama on Wednesday, shortly after noon. Can this further delay be explained?

THE French gunboat *Bourayne*, Captain Bose, which left here for the scene of the wreck of the *Nil* on Thursday morning last, returned to port yesterday (March 29th). The information she brings, however, adds scarcely anything to what we were enabled to present on Saturday night, which came up direct from the site of the disaster.

The official report of the *Bourayne* is as follows: "The Messageries Maritimes Co.'s steamship *Nil* was wrecked in Yoshida Bay, in about 40 metres depth of water (about 22 fathoms.) The top of her main and fore masts are still visible. The light on Rock Island was not sighted at the time she struck, which was at about 10.30 p.m. on the night of the 20th inst., Friday.

As soon as she touched the engines were reversed, but only one would answer, the piston of the other being broken. A few minutes later she struck another rock, and immediately afterward went down."

The *Bourayne* brings the only four persons saved: M. Muraour, a passenger, two seamen (one a Greek, the other a Corsican), and the ship's baker, a Frenchman.

There seems still to be great doubt as to the actual number of persons lost in the vessel. It is now said that there were, all told, only 93; namely, 7 European passengers, the mail agent, and 85 persons composing the crew, of whom 60 were Europeans and the remaining 25 Chinese.

As regards the number of passengers, we fear the figures are under-stated, as, it will be remembered, in our first report of the catastrophe we chronicled the names of eight persons who had reached Hongkong in the Co.'s Steamer *Sindh*, bound to Yokohama, who were supposed to have taken passage in the *Nil*; one of whom was a lady, Mme. Avril. Of these, one, M. Muraour, has been saved, and another, Mr. Luccioni, is known to have been drowned. It is reasonable to suppose that a much larger number than is anticipated—of passengers at least—have gone down in the unfortunate vessel, as the steamers of the Company usually bring a great many more. On the other hand, it is consolatory to know that the number originally stated, 146 souls, is considerably over the mark. This discrepancy is, however, explained by the fact that a draft of blue-jackets for the *Bourayne*, supposed to have taken passage in the *Nil*, from some unexplained cause—providentially as it turns out—were left behind. It seems a most remarkable thing, however, that the Company should not have received intelligence, by wire from Hongkong, (the vessel's last point of departure) of the names of the passengers booked by her. No information on the subject is vouchsafed by the Company, and the presumption is that they are as much uninformed in that respect as the public, who have a right to the fullest details.

On the 21st, the body of M. Luccioni, a passenger, was washed ashore, and some days after, the bodies of two Chinese and another European were recovered. A piece of ground in the village of Iro-ma has been set apart by the Japanese authorities, for the decent interment of the bodies cast ashore. Those already recovered have been committed to their last resting place.

The further information to hand is, in substance, what we published in our last issue. It will be seen, indeed, that the news the *Bourayne* brings is substantially what has already been published. We hope, however, to be in possession of further details to-morrow.

The Company's steamer *Volga* is due here on Sunday next, 5th, and may possibly put us in possession of more satisfactory information as to the names of the passengers who left Hongkong in the unfortunate vessel.

AN OFFICIAL enquiry into the loss of the French Mail Steamer *Nil* was recently held at the French Consulate, but as it was conducted privately we are unable to give details.

The steamer now lies in 20 fathoms of water. On the night of the unfortunate occurrence, 20th ult., she first struck the rocks, slightly, at 11.20 p.m. The engines were immediately ordered to go full speed astern, but at that critical moment the machinery broke down, and such was the force of the sea that the vessel was again hurled upon the rocks.

The Captain, erroneously thinking he was in shoal water, let go the anchors, when the steamer, which had been filling fast, went down bow first in deep water. Captain Samat was on deck from 8.30 p.m. until the time she sank. M. de Tiel was the officer of the watch at the time of the accident. We are given to understand that there is no chance of the mails or any portion of the cargo being recovered.

It is customary, under similar unhappy circumstances in England, to hold an official enquiry, and to publish the particulars, that the public may be fully informed as to the cause and consequences of the disaster. "We manage such things better (!) in France," however. But, nevertheless, looking to the fact that a

considerable number of persons other than French make use of the M. M. Co.'s vessels, we fancy the commencing ought to be placed in possession of the whole circumstances of the recent disaster; and we venture to opine that it would be to the interest of the Messageries Maritime Co. that the fullest enquiry should be courted.

### YOKOHAMA ANNUAL REGATTA, 1874.

The meeting called for the election of a committee and the making of arrangements for the usual Annual Regatta came off at the Chamber of Commerce Rooms—kindly lent for the occasion—yesterday afternoon at 5 o'clock.

Probably on account of the inclement state of the weather, there was not a large attendance. Mr. J. Rickett was voted to the Chair.

The Chairman having stated the objects of the meeting, said that he hoped the next Regatta, with the permission of the Clerk of the weather, would be as great a success as the two previous ones had been. He then called upon the Hon. Secy. (Mr. J. J. Dare) to read the statement of accounts for the past year, which was as follows, viz:

THE Hon. Secretary in account with the Yokohama Annual Regatta:

Dr.	To Balance of last account	...	...	\$135.02
	" Subscriptions as per list	...	...	911.00
	" do Ladies' Purse...	...	...	77.00
	" Entrance Fees	...	...	106.75
				<u>\$1,229.77</u>
Cr.	By Prizes	...	...	\$468.00
	" Ladies' Purse	...	...	75.00

	" Balance	...	...	220.82
				<u>\$1,229.77</u>
	To Balance	...	...	\$220.82

E. & O. E.

Yokohama, 30th June, 1873.

J. J. DARE,

Hon. Sec.

It was proposed by Mr. Jones and seconded by Mr. Leckie that the accounts for the past year, as read, be passed. Carried.

The Chairman said the next business before the meeting was the election of a Committee, in place of the one retiring. He, himself, would be happy to serve again. Capt. Lane and Mr. Hannen, who were now on the Committee, were both leaving Yokohama. In place of Capt. Lane he proposed that the name of Mr. A. Center, Agent of the Pacific Mail Co., be placed on the list; and, in reply to a gentleman present, said the Hon. Sec. was one of the Committee, *ex officio*.

Mr. Dare said he did not offer himself for re-election.

A gentleman suggested that, in place of balloting, as many of the old Committee as would be willing to do so should be asked to serve again.

The Chairman said that, last year, it was done by proposition.

In reply to an enquiry, the Hon. Sec. stated that the Captain of the men-of-war in harbour were always asked to act on the Committee.

The Chairman said the Committee consisted of 6 residents, including the Hon. Sec.

It was then proposed by Mr. Leckie that the Committee for the ensuing year consist of:

Captains Purves and Walsh, Messrs. Rickett, A. Center, Hudson, and H. J. H. Tripp.

Seconded by Capt. Purves, and carried by shew of hands, *nem. con.*

A gentleman pointed out that last year there were six gentlemen on the committee, besides the Hon. Sec. He suggested that Mr. Milsom be requested to serve. Some discussion ensued, when

The Hon. Sec. proposed that the name of Mr. Black be added.

Dr. Dalliston spoke in approval. They had had Mr. Black on the committee two years ago, and he had worked very hard. If Mr. Black could possibly be present he would venture to say that he would make a point of doing so, and he would be a great acquisition. He had much pleasure in seconding the proposition.

Carried by shew of hands.

Capt. Purves suggested that, if the morning of the Regatta should prove calm, the sailing matches for large yachts be put off until a more favorable opportunity, and as regarded the race for the smaller boats, which have a shorter course, that they be run off later on in the day, if a breeze should spring up. The last 2 years, the mornings had been almost calm; it seemed to be usual at the time of the year the regatta was held.

The Hon. Sec. said it was in the power of the committee to postpone the race.

Dr. Dalliston thought it would be better, if the sailing matches could not be brought off towards the close of the day—say 4 or 5 o'clock—that the committee be empowered to declare the race null and void. He thought there would be a large number of sailing boats this year. Cook was building one, which was nearly finished: the Flying Cloud was coming out, and, altogether, he thought there would be at least 5 large boats. He was sorry to hear that Mr. Dare was not going to enter his boat.

Captain Purves remarked that all these suggestions would be for the consideration of the Committee.

The Chairman said he did not think they could make two days of the Regatta. The Committee had power to put off the races if necessary.

Dr. Dalliston made some remarks as to prizes for the rowing races which led to some general conversation. At a meeting of that kind, he observed, it was advisable to bring forward any suggestions for the future consideration of the Committee. He would therefore ask the Hon. Sec. to read over the whole of the Rules, so that any might be altered or rescinded if it were thought necessary.

Mr. Dare then proceeded to read the rules as requested, during which

Dr. Dalliston made a proposition that, in the case of a foul during a race, the erring boat should pay the damage, and cited English rule in such cases.

A Rule was however subsequently read providing for such contingencies and empowering the committee to decide the question.

Mr. Leckie proposed a vote of thanks to Mr. Rickett for his great exertions during the past

year; particularly for the loan of the steamer, and the trouble he had taken with the tiffin arrangements. Capt Lane's name was coupled with that of Mr. Rickett

Seconded by Mr. Whitfield, and carried *nem. con.*

The Chairman said he should be happy to do whatever lay in his power this year.

A vote of thanks to the Chair closed the proceedings.

### NI-IGATA.

MARCH 29TH, 1874.

THE OFFICERS of the Kencho have gone in for a trap, and have been learning driving. But our streets are not well adapted for unskilful Jehu's, and, last night, boatmen were busy getting the pony trap and driver out of the canal; branches of which, connecting with the river, run down the middle of nearly every street.

OUR BEEF has never been equal to "Domoney's," and now it is forbidden to kill any cows until they are past the age for calving. It is very "leathery" indeed.

THE WORKS on the Tera-do-mari cutting have been stopped, as the plan for the harbour and the filling in of the canal that now takes much of our river water into the Arakawa are all to be fully discussed before work is again commenced. One of the foreign engineers in the government employ is shortly expected, and he, no doubt, aided by plans and measurements taken last year, will soon give in his report.

DR. VIDAL is leaving the hospital. No successor has been named, but the authorities are treating with a Dutch practitioner. Dr. Vidal goes to the silk-reeling factory at Tomi-Oka.

ALL KEROSENE the produce of the Ken is to be brought to this place, where it will be refined. A building for this purpose is to be erected at a safe distance from the town, among the sandhills. Some of the machinery and six large iron cauldrons have already arrived. The whole will be under foreign supervision.

THE RIVER has been very high indeed; caused by the melting of the snow, which is rapidly going off the mountains.

THE TOWN has been full of conscripts and their friends during the last week. The former have just been brought in from the surrounding villages, and are being drilled every day. They are very green, and furnish much amusement to numbers of spectators. Last week the troops marched out to a hill-side within a hundred yards of the camp, piled arms, lighted two large fires, and put up a small tent for the officers. Shortly after, some coolies brought up rations of rice, &c., and in the evening they all went into barracks. On enquiry as to the reason of the affair the answer given was, it was done to accustom the men to camp out. How is this for autumn manoeuvres?

THE SITE of the Ni-igata post-office was formerly occupied by a tall watch tower, in which hung a large bell on which the hours were struck, and alarms were given in case of fire. The authorities, thinking the daily time-gun fired by the military sufficient, demolished

the tower and sold the bell to a foreign firm, who removed it to the wharf ready for shipment. A week or so after, the townsmen missed their old friend so much that they raised a subscription and re-purchased it. It was presented to a temple, where it now booms forth as of old.

THE FOLLOWING letters, addressed to the Chairman of the Committee of Fire Insurance Agents, contain thoughtful suggestions on the subject of the avoidance of similar calamities to those to which we have recently been subjected which are worth the attention of all householders, although primarily intended for the consideration of the Fire Committee which owes its existence to the recent serious losses sustained by Yokohama, from causes which many think ought to be, and might be, obviated.

SIR,—In the capacity of an old resident in Yokohama who has been present at all the fires which have successively desolated our settlement, I beg permission to address you the following reflections:

I have read with the greatest attention the minutes of the meeting at which you presided on the 18th instant, and entirely concur in the wisdom of the resolution adopted by yourself and your colleagues to discover the causes of those fires, and the incendiaries, if such there be. These measures, which seem primarily dictated by the interest of the insurers, will not be profitable for them alone, since, in almost all the fires, there are as many uninsured as insured persons.

I observe that you have taken into consideration a proposition made by Messrs. Cheshire & Co. for the formation of a corps of salvors.

These gentlemen frankly state that such a corps should be paid; and they are right, because

1st.—The removal of bales, furniture, &c. in the face of a fire is a dangerous and laborious work which every one cannot perform.

2nd.—Because if you want work to be well done you must pay for it.

All this is therefore very good, but it does not appear to me sufficient, and, as a supplement to the proposition of Messrs. Cheshire & Co., I beg to submit the following:—

That a body of residents, well known, and volunteers, be formed to act exclusively as a police during fires.

That these volunteers (of course, with the consent of our Consuls) should wear a badge on which the word "Fire Police," or something analagous, should be inscribed; that they should be sworn-in as constables, and be bound to apprehend and take into custody any person pointed out to them as a thief by any bearer of this badge.

I have often remarked during fires that in the clearing out of houses there is quite as much property stolen as there is burnt. This arises from three causes:

1st.—Because all the Japanese policemen go to a fire as to a fête. They work well there, and display great courage, but during all this time it is a thieves' holiday.

2nd.—Because in Yokohama the number of "loafers" increases incessantly.

3rd.—Because, as the *Japan Gazette* said very sensibly the other day, the greater part of the residents look on, smoke their cigars, and say, when they see a thief;—"That is not my affair; let him go and be hanged elsewhere."

I think it is time, Sir, that all this was stopped.

I said, above, that if you would be well served you must pay. But there is yet another means; do it yourself. To what nationalities soever we may belong we are all here bound to act against the rogues. Let a number of persons join me, under the orders of one of the Members of this Committee, and I will guarantee that such scenes of pillage as were witnessed on the night of the 12th will not be repeated.

I am, Sir,

Your obedient servant,

H. DEGRON.

To the Chairman of the

Committee of Fire Insurance Agents.

Yokohama, 23rd March, 1874.

SIR,—In the move which is being made by the Agents of the Insurance Companies for some more efficient protection from fire than at present exists, I have thought it might be useful to you if I mention what strike me as two very important points to which consideration should be given. First, I think that the wooden framework now in almost universal use in Yokohama houses should be abolished. It is the weakest system of construction on which it is possible to build a house; it forms an uncomfortable and insecure building; it is constantly in need of repairs; and it has no durability. I don't think the Japanese are sufficiently *au fait* in the making of bricks, and certainly not in the laying of them, to warrant their adoption in the foreign settlement. But I can see no reason whatever why the substance known as concrete should not be largely employed. The materials of which it is made can be procured with ease; it requires no skill in making it, or forming a wall of it; it would resist fire more perfectly and I believe it would stand earthquakes better than any other system of construction. Its cost, from experiments I have made, is only about a fourth of that of brickwork, and I believe it would compare favourably with even the flimsy wooden framework usually erected here.

The second point to which I would direct your attention is the supply of water. The wells proposed to be sunk, or the stationary engine proposed to be established on the creek, would certainly prove to be more or less ineffectual, as, in all likelihood, they would be found wanting at those times at which they are most needed. I therefore think that the only really effectual means of procuring the necessary supply of water is by a gravitation supply from such a height as would throw jets over the highest houses. From investigations I made some years ago, this could be done by taking water from a stream some six miles distant, and it could be filtered, stored, and distributed through the whole settlement for a sum of about \$200,000. I need not point out the advantages of such a supply in a sanitary point of view; as, with the known unhealthy character of the water in the Yokohama wells, these are apparent. I estimated the revenue to be derived from levying a water rate at \$20,000 per annum. The Japanese Local Government have granted a concession to a Native Company for a water supply to the native town, which has been carried out in the most primitive fashion, and is utterly useless in cases of fire. But I should imagine that this is no reason why the leading residents here, backed by the Insurance Companies, should not do

something towards the carrying out of such an important work as that I have just mentioned.

Apologizing for intruding on you with these remarks,

I am, yours truly,

R. HENRY BRUNTON.

A. J. WILKIN, Esq.,

Chairman of the Meeting of  
Fire Insurance Agents.

To the Editor of the *Japan Gazette*.

SIR,—I observe in the *Herald* of the 24th inst. a letter signed Mih-ho-loong, commenting on what has been said in your paper respecting myself, and shall feel obliged if you will permit me to reply to the inaccurate statements contained in it.

I have never spoken of "my private engine," and if Mih-ho-loong will read my letter in the *Gazette* properly, he will see nothing of the kind mentioned. What I have stated there is the truth, and I repeat it; and if Mih-ho-loong or anyone else is able to prove that it is not so, let him come forward and state it. I am labouring under no delusion; I know very well what I say and do, and what I have stated. I have never made use of the expression that I was the only fireman in Yokohama. I know very well that there are plenty of others, and that they do their best at every fire. I have never said anything against the members of the Yokohama Fire Brigade. In speaking of the Private Fire Hook and Ladder Brigade and its members, I have not claimed all the credit for myself. I have merely claimed what I am entitled to, and no more. Since it was started, I have been at every fire with the Brigade engine, and have worked my share. I have claimed, and I do it again, that I started, and have kept up, the Private Fire Hook and Ladder Brigade, as regards working and collecting money for its support; but I have never said that I kept it up from my own funds. I have always paid my share of the subscriptions, and have kept the Brigade together at my own risk as regards expense. I advise Mih-ho-loong to carefully re-read my letter in the *Gazette* of the 23rd, and if he would know who the subscribers to the Private Fire Brigade are, and what the bye-laws drawn up for its guidance say, I advise him to inspect the information contained in the latter, that he may read the truth and find out what is meant by the Private Fire Brigade. And if he would know who are the subscribers to the Hook and Ladder Brigade (now amalgamated with the Private Fire Brigade) I will submit to him, at any time, the list, that he may read it. I would inform him that I started the Hook and Ladder Brigade because I saw, by the fire of December 14th 1872, at the godown on the Swamp, that in the absence of water, a Hook and Ladder Company, (had it existed,) might have pulled down the wooden shed where the fire originated, and so prevented the destruction of the godown and much valuable property.

If Mih-ho-loong had taken an active interest in the matter, as a good fireman,—which I have no doubt he is—and started a Hook and Ladder Company for Yokohama before I did, he would have had all the credit to himself; but, as it is, I had to do it, and so cannot thank anyone for the trouble, except those who kindly assisted me by subscribing towards the funds. With respect to the fire on the 12th inst., and particularly as regards the Hongkong and Shanghai Bank, I would say that I am aware that there was a steam

fire engine at the French Hatoba, but its hose only reached as far as the godown in Hatoba Street, next to the Bank. I asked the man in charge if they could assist me on the other side, as, in all probability, North's store would catch fire, and, as the wind was blowing towards the Swamp, the danger was on the side where Searle's store stood. The reply was, "We have no more hose." I admit that the engines gave some water to the Bank, but, at the outbreak of the fire, it was low tide, and there was a heavy sea on, so that the water only came out of the hose by fits and starts, as the sea rose and fell. And, besides, the wind came from the direction of the Hatoba, so that the danger lay on the other side. Otherwise, all the buildings from the Bank to Cobb & Co.'s would have gone. Be that as it may, I had no assistance from the engine on the side where the greatest danger was, where the buildings had already caught fire, and there was no other water used than my own. I don't know whether any other person keeps 1,000 gallons of water; I believe not. I know of none, except what is kept by private individuals on their own premises for domestic use or similar purposes. But what is the use of such wells? They are in general too deep for a suction hose to reach. If Mih-ho-loong, for instance, has an adequate supply of water stored for public use why did he not use it at the last fire, where it was so valuable, when there was no other water? If there was water, why didn't the engines use it when North's store took fire? I myself saw a large engine going from the Homura Road drain towards the Hatoba. If, therefore, there was more than 1,000 gallons of water available why was it not used?

I hope I have given Mih-ho-loong an ample answer to his letter; should he, however, desire any further information, I am ready to supply him with it—or any other Mih-ho-loong.

I am, Sir, Etc.

H. W. HOHNOLZ.

To the Editor of the *Japan Gazette*.

DEAR SIR,

"Margaret Mason," in a "Sketch from Japan" in the Boston Transcript, says that at the large fire in Yedo last fall a Japanese merchant was a loser of silk to the extent of "one hundred thousand bales, valued at one and a half million of dollars"—Will some one "in the trade" inform me if this man was not fearfully overstocked with a very low-priced article? 100,000 bales at dollars 15 per bale!

ANA SKER.

March 31st, 1874.

### THE "FORTY QUESTIONS" FOR THE KAITAKUSHI.

To the Editor of the *Japan Gazette*.

SIR,

A letter, taken from the *Nisshin Shinjishi* of 13th February, which lately appeared in the *Japan Gazette*, being evidently "inspired" requires some notice; otherwise statements therein might mislead persons not actually acquainted with the doings of the Kaitakushi.

In the first place, the writer (or writers) complains that the "Forty Questions" reflect on the management of the department, and that they are likely to throw a false light on its operations. Still, with such impression on his mind, he has not undertaken the task of answering them. In fact, he throws out a hint that they are hardly worth answering; but yet he has picked out

some, and lamely endeavoured by means of unreliable statistics and deliberate mis-statements to defend his department, and distort the actual state of affairs in Yezo.

Taking the questions as originally numbered, the correspondent of the *Nisshin Shinjishi* (who is doubtless an official of the Kaitakushi) says.

1.—That Governor-General Kuroda expects material advantages to result in thirty years.

2.—Not answered.

3.—The population has increased, but not to any considerable extent.

4.—He says the defence of Hokaido is entrusted to six thousand militia. These would be soldiers must exist in the imagination of the writer, or perhaps on the books of the Kaitakushi; but they are certainly not in Yezo.

5.—The trade has increased, but, although such are probably the easiest kind of statistics to collect, none are produced.

6.—As to the fisheries, not answered.

7.—The agricultural productions reckoned at thousands of koku are untrue.

8.—The position of Sapporo for the capital, he says, was selected as being central, and at the same time, close to the port of Otaru. It is really not under twenty-five miles from Otaru. It is moreover far from being in the centre of Yezo; but, if it were, would it be in its right place? Hokaido is a province of Japan; its capital consequently should be the most available port nearest to the seat of government of the empire. Would the British government, for instance, have acted wisely in building up a seat of government at enormous expense in the centre of the continent of Australia, in the wilds of South Africa, or amidst the mountains of New Zealand? No—such an idea was reserved in embryo to be hatched in the fertile mind of an unpractical brain. It was the idea at the commencement of the Kaitaku scheme in 1869 under Shingashiki Kuze, and it was blindly followed by Kuroda in 1871. It is the stumbling block of the whole scheme. But it has exactly suited the officials. Expenditure was their aim, and squeezing, out of this expenditure, their object. Had a central capital not been decided on, the greatest item in the expenditure of the department, namely, cutting a road from Hakodadi to Mori, building a useless but most expensive pier there, the fixed settlements of Shin Moran, on the north side of Volcano Bay, and the road thence to Sapporo, would have been saved, to say nothing of the building of Sapporo itself, the many thousands thrown away on the erection of a "state house" and residences for native and foreign officials, the maintenance of settlements to people the capital, the travelling expenses of all officials to and from the "capital," and the enormous additional cost of transport by sea, by river, and by land, of all supplies for that capital. It is as well to repeat that Sapporo is the stumbling-block of the Kaitakushi, and notwithstanding the millions it has drawn out of the imperial treasury, Sapporo will die. But had there been no Sapporo many officials would now be beggars. Among foreigners, it is usual to attribute this and many other mistakes to General Capron. As has been before said, however, the idea originated two years at least before his arrival in the country. How is General Capron responsible for many, or even as many as can be ascertained, for any of the ridiculous schemes of the department? That he placed his veto on many is certain, and that his advice has been in few, if any instances followed, is likewise true. It suits the

cials, however, to have a scapegoat; and the General had, for the first two years, too little experience of the official class to suspect what use they would make of him. Honesty of purpose and a confiding nature are thrown away on such people.

But to revert:

9.—This question is answered only partially, and that by saying that the department has run steamers for the benefit of the trading class in Yezo. In place of such being the case, a sort of chartered company, the Honinsha, tries to try to run these vessels at a profit to themselves. Their rates of freight are usually higher than even the Pacific Mail S. S. Co., without the same guarantees of safety; while their insurance is higher than the rates of foreign offices.

10.—A complete survey of Yezo will be made, the writer says. But when? The question was, "why has not a general preliminary survey" been set going? Simply because the idea is to carry out a laborious, extensive trigonometrical operation; a quite unnecessary proceeding, totally useless in the rude state of the country, but one which will find employment for native and foreign officials for some years to come. And the necessary instruments have not yet arrived. One step in the right direction has been made, but Governor-General Kuroda is not responsible for it. It is the survey of Osima province, (the southern extremity of Yezo, in which Hakodadi is situated) and is, by the authority of the local Governor, being carried out by a young official and two or three assistants whom he has trained. Rather over half the province has been completed, and is now being mapped. The measurements by chain and bearings by prismatic compass have been checked by numerous astronomical observations; heights being determined by basometrical measurements. The thing is very complete, and reflects great credit on the conductor, while the expense has been trifling.

11.—Mines; no satisfactory information yet.

12.—Sea Otter fishing, not touched upon.

23.—That there is a single road in Yezo fit to travel on in bad weather the writer has not the audacity to declare. He has entirely shirked the question.

14.—Regarding non-working of coal mines, likewise not alluded to.

15.—As to developing a direct trade between Yezo and China, it is said the Kaitakushi has established a place of business in Shanghai; but this is only an office kept up by the Honinsha Trading Company for its own purpose. None of the Kaitakushi steamers have been put on this very necessary line.

16.—In the matter of timber, the writer mentions one small saw-mill at Sapporo, which there is; and another at Shin-mororan, which there is not.

17.—The advantage (?) of the farm in Yedo to the island of Yezo is not explained.

18.—Neither why the Governor-General prefers a residence in Tokio for the greater part of the year.

19.—On the admittance of foreigners in Yezo the *Nishin Shinjishi* correspondent is silent.

20.—The preservation of salmon fisheries he seems to think not worth his attention, for he has not even touched upon this vital question.

20 and 21.—As to municipal government and establishment of newspapers; quite passed over.

23.—The letter enumerates a few schools, but what do they amount to?

24, 25, and 26.—Against roads, bridges, money orders, and saving banks, is probably set off the money lending office of the Kaitakushi. The writer places the rate of interest at eight per cent.; while it really is fifteen per cent., compounded every three months. Why does he not tell the truth?

27.—The postal service, such as it is, has been established since the "Forty Questions" were published.

28 and 29.—The foreign office complaints, and the squeezing in collection of the revenue, are not referred to.

30.—An important point—the coast produce duty—is again met with a direct falsehood. If the duties were what the writer (who, as mentioned before, is doubtless a Kaitakushi official) says they are, the coast lessees and fishermen would have little to complain of. The amount of duty collected from this source is put down at something over 500,000 rios. If faithfully collected it would double that amount, and not be necessarily felt as a burden.

31 and 32.—Unanswered.

33.—The statement that 25,000 koku rice is in the Kaitakushi store-houses is distinctly false. They had probably not on the whole island this winter 5,000 koku.

35, 36, and 37.—Unanswered. And from thence to the end the only information given regards some little known land regulations.

The whole paper is meagre, and, as has been shown, much of it is false. People here who have seen it say it was not intended to be read in Hakodadi. They laugh at it!

MATSUMAI.

Hakodadi, 25th March 1874.

### Miscellaneous.

This forenoon, both the Army and Navy Departments have been notified by Daijokuan that WAR HAS BEEN DECLARED by Japan against the island of Formosa. Three ships will leave immediately, to join the one now in Chefoo, and they will proceed at once to Formosa. 15,000 soldiers will also be sent quickly.

THE NUMBER of words dispatched on the telegraphic wires from the 28 stations in Japan, during the year 1873 was 186,449, of which 167,133 were Japanese and 19,316 European. The sum received for them was 48,539 yen 76 sen, and 1238 dollars. The expenditure of the department, like that of the Railway and other departments, is not given.

SPECIAL ORDERS have been issued to the Shiga Ken that foreigners who visit Kioto during the time the exhibition is open be permitted to visit Lake Biwa.

ON THE completion of the spacious and handsome barracks for the soldiers in the large city of Nagoya of Owari a grand celebration is to be held at one of the temples in the city. The announcement is of interest mainly in showing how buildings erected according to foreign principles and fashions of architecture are becoming numerous in the interior, as well as in the large cities open to foreigners.

THE TEMPLE of E Ko In, near Riegoku Bashi, Tokio is now the scene of much activity and bustle. This temple seems to be a boon resort for all itinerant idols and metallic divinities of all sorts; and, at present, a celebrated deity (or demon, since it is difficult to distinguish which) is on exhibition, to the delight of crowds who flock thither. There seems to be an ancient

arrangement between the bonzes and the wrestlers, for whenever a matsuri is held at the temple a wrestling-match is held in the arena next to the sacred (!) edifice, an elaborate structure of straw mats being erected for the occasion. The divinity now on exhibition is shown once in ten years, the other nine being spent in a godown or some other secluded place, whither cash-flinging worshippers come not. The side-shows at present consist, (besides the wrestling-matches,) of races, exhibition of living curiosities, acrobatic performances, and such like accompaniments. Many thousand persons have attended during the past week.

SOMETHING LIKE book-criticism and reviewing appears to be in process of development in the native newspapers. A few weeks ago, an elementary grammar of the Japanese language by two native Japanese scholars was published. Some purist or critic has been reading it, and finds several things in it with which he does not agree, and he writes to that effect to the editor of the *Nichi Nichi Shimbun*. He is not very specific however, and one cannot tell from his missive whether his critique is merely a squib intended to allow the fizzing of a little personal spite or a burst of captious hyper-criticism; or whether it is a sincere effort to prevent grammatical heresies from being promulgated among the natives, who are none too careful in speaking their own language grammatically. It is a good sign, however, even to see this beginning of literary criticism in a Japanese newspaper. Any one who cares enough about the subject to examine the issues of the Japanese press will see the necessity of something like a *Saturday Review* or *Athenaeum* among the Japanese book-makers. The native press is very prolific, and translations and works constructed on foreign models now issue from the press (or rather the block) with a rapidity that is wonderful. Too many of the books, however, are very inferior productions, and some of them are the work of mere schoolboys, who have picked up a few facts from foreign books or teachers and have rushed into print with little or no fitness for their work. The phrase-books, writing-books, reading and spelling-books, "First Steps in English," etc., seem apparently to have been the production of literary jin-riki-sha men, or of studious shop-boys anxious to let their light shine. If the critics can choke this wretched brood a great deal of good paper, ink, and wood will be saved for better uses.

It is found by the foreign ladies who have charge of both private and government schools a matter of difficulty to keep their pupils for a satisfactory length of time. The pupils seem to be perfectly willing to stay and complete a tolerably fair term of study, but, unfortunately for their teachers, they become so ineffably attractive to young government officials and other eligible youth that nothing but betrothal negotiations, marriage, and, let us hope, happy wedlock long continued, are the results. We noticed in the *Nichi-nichi Shimbun*, a few weeks ago, an announcement of the marriage of a young Japanese gentleman and lady, both students of the English language, whose united ages were 34 or 35. The notice of the marriage was very similar to that of a foreign couple. It was also stated that "they were married in foreign style," i.e. they simply joined hands. It is not a privilege given to foreigners to be present at Japanese weddings, but it is well known, by those who watch the changes of the times, that Japanese nuptial ceremonies are no longer the elaborate, costly, and troublesome affairs they were in old times,

but are becoming very plain and business-like, greatly to the relief of anxious papas who had to furnish the wherewithal to pay for the daughter's *trousseau* and the uncounted et-ceteras which require hard cash. The brides like the new style, because it is novel; nor do the grooms object to it, because it is "civilized." A Japanese lady's wedding outfit these days usually includes at least one full suit of foreign clothes. Among the native converts the marriage ceremony as solemnized in christian churches is fully performed. The "middleman" is still indispensable, and the parents make the choice and arrange the details as of old; the idea of free love—to be understood in the best sense of the term—not having yet entered this country, while the word "rights" cannot as yet be found in a Japanese woman's vocabulary.

ADVICES FROM Saga, dated the 13th, state that the telegraph wires were cut in several places over a distance of five miles, and many of the poles were destroyed.

Only a portion of the Castle has been destroyed, including the Government House, godowns, &c. No part of the town was injured, and the hospital is safe and filled with the wounded. The villages to the north have suffered severely. The city is full of troops, quartered upon the inhabitants.

Report says that 1,500 men were killed, including 300 of the Imperial troops. 3,000 men surrendered, and there are at the Castle over 6,000 swords taken from the rebels.—*Japan Mail*.

Mr. HANNEN and Mr. Tamano, who have lately been jointly examining the claims of British subjects upon the Japanese Government, have now been appointed to adjust them on joint agreement, the Minister of France having agreed to act as empire in cases where the two Commissioners may not agree.—*Idem*.

AT HALF-PAST ONE o'clock this afternoon March 25th a fire broke out in some premises in course of erection in Minato-cho, the site of the last great fire in the native town. Owing to the building being detached and the early arrival of a Japanese, Shand & Mason engine the damage was confined to the seat of the outbreak, the house, however, being consumed. The services of the new steam fire engine, that of the Private Fire Brigade, and another hand engine, which reached the spot simultaneously, were not called into requisition.

THE NUMBER of killed and wounded of the Imperial troops in the late insurrection is thus given in the *Hochi Shimbun*:

Wounded, now in the Military hospital at Yanagawa	104
Wounded, now in the Military hospital at Fukuoka	55
Wounded, (in the latter) insurgent	1
Wounded, (in the latter) labourer	1
32 were killed; of whom 9 were Samourai of Fukuoka. They were all buried in the new burial-ground of Hakozaki.	

A YOUNG officer (Gocho) of the Imperial army has got himself into trouble by knocking a policeman's lantern out of his hand and assaulting two other police and slightly wounding them with his bayonet.

THREE LITTLE fellows of 5 and 6 years old nearly caused a conflagration the other day through having found a box of matches on the road. They entered a godown in which was a lot of straw littered about, and, igniting the matches, threw them one by one on the floor.

At last, one which was not extinguished in its fall ignited some of the straw, and the children not knowing what to do ran away as fast as they could, without giving any alarm. Two policemen, however, seeing smoke issue from the door, went to see the cause; and then giving the alarm to the neighbours they all worked together, and soon succeeded in getting the flames under. The parents went at once to the Police office and acknowledged their children's act, and they were warned to take care of them for the future.

ALL THE soldiers and non-commissioned officers of the 8th Regiment of the Imperial army, now in Tokoi, lately presented a memorial to the head of the War Department, asking to be allowed to contribute a portion of their pay towards reduction of the foreign debt. Saigo Jindo (brother of Kichinosake), presented it to Sanjo, Daijo Daijin, on the 17th instant. The reply of the premier was that, although the request could not be complied with, yet the patriotism of the troops was worthy of all commendation, and should be rewarded.

NAKAYAMA NOBUYUKI, the vice-commissioner of the Revenue Department, has made a return to Okuma Shigenobu, Minister of Finance, of the duties, storage fees, fines &c., received during the year 1873, at the Custom-houses of the six open ports.

THIS morning, a funeral service to the memory of the unfortunate victims who lost their lives by the wreck of the M. M. Co.'s str. *Nil* was celebrated at the Roman Catholic Church.

The Church was crowded, the sailors and marines from the war steamer *Bourayne* occupying seats round the chancel. The service, which was simple and impressive, concluded with a suitable discourse, delivered by Bishop Petitjean.

A WRITER in one of the native papers complains of the savage customs of the people of Oshiu, in the northern part of the main island of Japan. He says that the people there eat horse-flesh, kill their newly-born children because food is scarce, and are converts to the Greek church!! Further, they hang straw on the telegraph-poles, (evidently to ward off the baleful influences of these suppose instruments of evil) and do many other improper and uncivilized things for which they ought to be publicly scolded in the newspapers.

BEDS of coal have recently been found in the province of Isé. The coal is said to be of very good quality. From the same source comes the complaint that there are very few schools and very few Shinto preachers in the province, but that worshippers at the shrines are visiting the shrines in increasing numbers.

THE silk-manufacturing village of Teshima, in Kumagaye Ken, on the 21st day of March was burned to the ground. Over nine-tenths of all the houses are in ashes. The local authorities have issued rice to the sufferers.

THE COUNTRY folks do not seem to be in raptures over the new copper coinage, and they find it hard to become familiarized with the new denominations. They still use the old terms, and a Tokio editor waxes wrathful over this incontestable proof of a lack of "civilization" among the rural population of the capital. It seems that the favorite, if not the worst epithet, now applicable to a Japanese is that he is "uncivilized."

A NOTICE has been put up on the boards at Nihon Bashi that, on the 17th and 18th days of this month, the tombs at Shiba will be open to the inspection of the public. Thousands of natives will doubtless take their first glimpse of the resting places of the Tokugawas.

A MAN who buys a brand-new hat is very likely to buy a new coat to match, and a new suit requires new casings for head and feet. A few months ago, when the magnificent new granite bridge at the northern end of the Main street in Tokio was finished, the neighbourhood and especially the streets looked a little meaner than usual by sheer contrast. Lately, however, the neighbourhood of what the foreigners call the "stone bridge" has begun to put on a festal air. The street has been carefully re-laid, with stone drains at the side; and several score of evergreen and blossoming trees have been planted. The neighbourhood is now one of the handsomest in the city of Tokio, and is well worthy to be next to the new stone Bridge of Ten Thousand Reigns, of which the Japanese are so proud. As usual, the native artist has made this new novelty a theme for his pencil, and a smartly coloured tri-leaved picture, so far ahead of time as to have the cherry-trees all in full bloom, has been issued and is for sale in the shops. It will be a relief to all dwellers in the capital when the entire portion of the Main street is re-paved, and the unsightly and intermittent work thereon is finished. The plan of repairing the Tori is to tear up a few hundred yards, blockade all passages leading to it with wretchedly constructed bamboo palisades, and then to proceed at a snail's gallop until the blockaded portion is finished, the pedestrians meanwhile being obliged to flounder through puddles and mud-holes, and to stumble over dirt-heaps. After careful calculation, we may suppose that the entire street will be finished about A. D. 1876.

A VERY proper prohibition has been made by Kido, the Minister of Education. It would appear that some books have been printed in Japan, copies of foreign books, without the name of either printer, writer, or editor. All booksellers are forbidden to sell them; and the people are also ordered not to purchase them, pending an enquiry. The titles of the books are "Yei-Futsu Tsuwa" (English and French conversations;) and "Yei Wa Tsuwa" (English and Japanese conversations.)

IT HAS been found necessary for Katsu Awa, the Minister of the Navy, to publish an advertisement warning people against purchasing or lending money upon caps and clothes of any kind having the Navy mark upon them.

AT THE hospital at Obyena, on the 29th March, a man named Kajima was supposed to be dead. His mother being unable to afford to bury him immediately, the funeral was deferred until the evening of the 30th. Whilst preparations were being made to convey the corpse away the man moved, his senses returned, and seeing how things were, he gave a sudden start on to his feet. The doctor was sent for, medicines again administered, and the man is now fast recovering.

HIGASHI FUSHIMI NO MIYA, Yamagata, and Ito have been relieved of their duties in connection with the southern insurrection, and have returned to Tokoi.

THE Hongkong papers mention that the celebrated Blondin, the tight-rope walker, is now performing in Bombay, and is likely to visit the Far East.

Most of the officers who went to Vienna in connection with the Great Exposition there returned on the 7th of this month. They have procured "many hundreds of different kinds of instruments and machines most recently invented in Europe and America: a variety of articles important to students and searchers for knowledge, and necessary for the use of the people: and many other curious and rare things." These were generally either purchased or exchanged for Japanese articles at the Exhibition. They did not come in the same ship as the officers, but are daily expected. When they arrive they are to be placed in the Imperial Exhibition, Yamashita, Tokai, "for the purpose of helping the people to let themselves improve in knowledge."

A CELEBRATION in honour of Toshugue, the first Tai-oon, will be observed at Ueno and Shiba, Tokio, on the 17th inst. In connection with it there will be an exhibition of Japanese pictures at the former of the two burial places of the Shoguns, which will continue for three days, from the 16th to the 18th. There will also be an exhibition of Kirishima Shinsha, a sword entitled Amano Sakahoko, which will be open, for 30 days from the 16th, at the latter place. The exhibition of Shiba-yama Nio (a Buddhist idol) was opened on the 2nd inst., at Yakoin, Riogoku, Tokio.

### Law Reports.

#### In H. B. M.'s Provincial Court at Hiogo.

Before A. A. ANNESLEY, Esq., V.-Consul.  
March 27th, 1874.

REGINA v. R. HERBERT, E. JONES, and W. JOHNSON.

**Charge.**—For that they did commit a breach of the Treaty, by going beyond the limits defined for foreigners in Japan.

The prisoners pleaded guilty, but, in extenuation, said they had been engaged to go to Himeji by Japanese, who told them it was within Treaty Limits, and that they would procure passes to enable them to proceed further. Prisoners also pleaded that they had not been long in the port, and did not know they were beyond Limits.

**Finding.**—That the accused Richard Herbert, Edwin Jones, and William Johnson did proceed to Himeji (in Shikawa Ken) situated a short distance beyond the Treaty Limits.

The Court is, however, satisfied that the prisoners did not wilfully commit a breach of the Treaty in proceeding to Himeji, as the evidence shows that they were engaged by four Japanese subjects to go to that place for the purpose of performing music, and were informed by their employers that the necessary permission would be obtained to enable them to travel to different places beyond Himeji. One of the accused likewise received a document bearing a seal of a Japanese Government Department, certifying that the bearer had left Kobe for Himeji, with the request that he would receive every hospitality. The Court has taken the above facts into consideration, together with the time the prisoners have been in jail awaiting trial.

**Sentence.**—To pay all Jail and Court expenses, and to be discharged with a severe warning.

On expressing a wish to proceed, for the recovery of wages, against the natives who engaged them, prisoners were told by the Court they had no remedy, as they had made an illegal agreement.—*Hiogo News.*

#### In H. B. M.'s Provincial Court.

Before RUSSELL ROBERTSON, Esq., Consul.  
Saturday, March 28th, 1874.

Alfred Lyne was again brought up on remand, charged with embezzling a large quantity of government stores, whilst employed in the Control Department, in 1870.

Oguchi Tomiyo, residing at Goehome, Shinto Meechi, Yedo, general dealer, cautioned to speak the truth, stated:—On 27th of 8th month of the 3rd year of Meiji, Tsuboki Tokujiro came to me and asked if I wanted to buy any blankets. I entered into arrangements to buy for \$3,636. There were 54 bales of blankets. Tsuboki knows more of the details than I do. I was at the Government stores when the goods were taken down to the Hatoba, and remained until they had all been cleared out. When all the goods were out I went with accused to the Hatoba and then the money was paid by me, viz. \$3,236. \$14 were wanting to complete the transaction, which were promised to be paid on the following day. The goods were then placed in three boats and I went in one of them, but the boats were stopped by a custom-house officer for the following reason—that the foreigners who had applied for the goods to be passed had stated that they were intended for an English man-of-war. I then returned home. I was summoned to the Custom House the next day, and was sent from the Custom House to the police station, together with Tokujiro. We were in custody 17 days. I there learnt that the goods were Government property, and had been embezzled. After this I left for Yedo. Last year, about July, I received \$9 and 9 Boos from the Saibansho, in respect to this affair. My total loss is \$3236. Tokujiro's losses are \$400. I recognise accused's face well.

Tsuboki Tokujiro, residing at Homura Sanchome, stated:—I was, a few years back, doing business as a general dealer, when accused's servant came to me, in the 8th month of the 3rd year of Meiji, and said, "I have a quantity of government stores for sale, do you want to buy them?" He brought a sample under-shirt blanket. I went to the military store godown to inspect the goods, and was shewn 54 or 56 bales of the description of goods in question. Accused said to me, "If you want to buy, make up your mind at once and say so, otherwise the goods will be sold to some one else." I agreed to buy the goods, and paid \$300 bargain money, and, in addition, another \$100. I was then allowed to take away 8 bales. Tomiyo then happened to come down to Yokohama, and I mentioned that there was a desirable opportunity to purchase these goods, if he was prepared to pay the price. Tomiyo said he would buy them, and was prepared with the money on the 28th day of the same month. Tomiyo brought \$3,250, out of which \$80 odd dollars were returned as bad. I agreed to change them on the following day. I paid \$3,236 to accused at some house on the Bund; I forget the exact number. I thought that everything was all right and was prepared to take goods and ship them from the French Hatoba, and made application to the Custom House accordingly. I should mention that the goods were brought by coolies from the godowns to the Hatoba between 12 and 3 o'clock of the 28th; the goods were, however, stopped at the Custom House, upon which I went down to enquire, when the Custom House officer stated that there was something suspicious about the goods; they appeared to be government goods, and as such should have been shipped off in some man-of-war's boat. The following day, at 10 a.m., a British officer came to the Hatoba and said the goods had been stolen from the stores. Tomiyo

and I were arrested on suspicion of being concerned in the robbery. While in confinement, I heard that the goods had been embezzled by the accused, and that he had absconded on the 28th, the day after I paid him the money. Tomiyo and I are still under a sort of suspicion on account of this matter.

To accused:—The only person I saw in the godown was yourself and your Japanese servant, who is since dead. It was at first intended to ship the goods from close to the store godowns; but they were found to be too bulky, and so it was arranged that they should be sent to the French Hatoba. Meanwhile, I was to go and get the necessary permission for their shipment to Yedo. I perfectly recognise you as the man to whom the money was paid. It was paid to you somewhere near No. 11, on the Bund. \$400 of the amount paid were mine; the balance belonged to Tomiyo.

To the Court:—Tomiyo accompanied the goods from the godown to the Hatoba. After the money was paid accused entered the Oriental Bank, at No. 11.

Tokujiro, recalled:—It was about 8 in the morning when I went to see the blankets. There were 54 or 56 Bales. They were packed in a lot of hempen covering. I had no idea they belonged to Government, for, at the same time, there were a great many things being sold from the Godowns; such as old iron, hoops &c. I could point out the house where the money was paid to accused.

Remanded till Tuesday, 31st, at 10 A.M.

Before N. J. HANNEN, Esq., Act. Asst. Judge.  
Saturday, March 28th, 1874.

GEORGE CRIPPS vs. W. W. CARGILL.

Mr. F. V. Dickins for plaintiff.

Mr. J. F. Davidson for Mr. Cargill, who represented the Japanese Government.

Mr. Dickins, in stating the case, said the claim was made under an agreement entered into between his client, who was an engine-driver, with the Railway Department. The amount sued for was 22 yen 68 sen, balance of wages due to him for the months of January and a portion of February. Although the case was apparently a very small one, a principle was involved which really made it of great importance. He would shew that, under the contract, there was no valid reason for deducting the amount now claimed. (Agreement handed in and read.) Before proceeding to call his client, he would make a few observations. (Counsel recapitulated at some length the circumstances upon which the present action was founded.)

George Cripps, sworn:—I was employed in the Railway Department as an engine driver. The agreement produced is the one under which I was engaged. I was not paid the whole of my wages for January and February. No reason has been assigned to me for the non-payment of the 22 yen 68 sen. I went into Hospital on the 14th January. I remained there 19 days. I was ordered to Hospital by the doctor, suffering from a wound in the leg. At about a quarter past 7 on 17th November, as I was going to work, I injured my leg. I have never signed any request to the government touching the providing of Hospital accommodation.

Geo. Cripps, cross-examined by Mr. Davidson:—I went into Hospital on 14th January, and left it finally on 3rd February. I had left it before, temporarily, on several occasions. I left it on the 2nd. I saw Mr. Aldrich on that day and got some money from him. I signed the pay-sheet for what I received. (Pay-sheets produced, for January and February.) The Hospital deductions are there made. I signed for the balance, after the deductions were

taken away. I objected to paying the Hospital charges. I told Mr. Aldrich it was a great deal too much. When I received the money I told him that I thought it should not be charged at all; I did not say so exactly in those words. I never spoke to Mr. Annand respecting the Hospital deductions. I had no idea, whilst I was in Hospital, that I should be charged for expenses there. Except the \$22.68, which is for the month of February, I got all my wages, less the Hospital deductions. It was not my wish to go to Hospital. I protested very much against it. I remember saying to Dr. Purcell, (in the Hospital) when he told me I might go out and be treated in my own quarters, that I would rather stay. He did not mention any particular time; he said, perhaps in a week. I returned to the Hospital on 2nd February, after I had received my wages for January, less the Hospital deductions. I do not recollect what I said in the witness box, at the last trial, with reference to a conversation I had with Dr. Purcell when I went back to the Hospital. Last time I was in this Court I objected entirely to the Hospital charges. Whilst I was in Hospital I was paying my share of the mess account. Two or three of us mess together at my quarters. Whilst I was in Hospital I had things sent up to me there from my quarters; pigeons, and such like.

Mr. Davidson said the Hospital had been started at the request of the men. No charge was made for medical attendance or medicines; merely for the food and the comforts they were furnished with—which charges were not sufficient to cover the cost of the necessaries provided.

A. S. Aldrich, sworn:—I am Chief Accountant of the Railway Department. The schedule produced is the scale of Hospital deductions. The regulations were in force previous to my coming to the country. The date printed on the schedule is Sept. 1st 1871. I have frequently deducted similar charges; almost every month. There has never been a single objection made to them. The employés all knew of them, because almost all of them have been in Hospital at different times. On or about 2nd February Cripps came to the office to take his salary for January. It was paid to him in my presence, and he signed the sheet. (Pay sheets produced.) The signature on sheets produced is his. He made no objection whatever, on that occasion, about the deduction of the Hospital charges. He made an objection about the way the amount was made up. I endeavoured to explain it to him, but he was unable to see it and went away grumbling. It was the same objection he made the other day, at the last trial. The deductions are exactly in conformity with the regulations laid down. The charges are for the supplying of necessary comforts to patients while in Hospital. I have had 13 years experience of Railways in England, where similar institutions are in force. I never heard any objections made there. Persons going into Hospital here are charged *pro rata*; according to their wages.

By Mr. Dickens:—If the doctor recommended me to go to Hospital I should certainly go, and my salary would suffer in the same way. Assistants in my own office have been in Hospital and have paid similar charges; and for necessaries besides. I am certain I did not express any opinion to Cripps, when he signed the sheet on 2nd February, as to whether it would prevent him from taking any proceedings to recover any further sum for wages. I told him to use his own discretion. I have frequently given out circulars relating to the Hospital deductions. I gave Cripps one. I know that those Companies in whose employ I have been in England have no medical officer attached to

them. I do not think it is the duty of a Company to provide medical assistance for a person injured in its service.

By Mr. Davidson:—What I said to Cripps about using his own discretion had sole reference to the seven days stopped from him, and not to Hospital deductions.

T. A. Purcell, Principal Medical Officer to the Railway Department, sworn:—Cripps came into Hospital on 14th January, and left on 3rd February. Whilst there, in addition to medicines, medical attendance, accommodation &c., he was daily provided with a bottle of porter,  $\frac{1}{2}$  lb. beef, butter, tea and coffee, eggs, &c. &c.; in fact with a generous diet. The book now produced is one in which I write directions for the diet of a patient. Whilst Cripps was in Hospital I told him that if he was getting restless I would treat him at his own quarters. He replied, "No, I prefer to have the job finished here."

James Annand, Foreman, Loco. Depart., Government Railways, sworn:—I believe the Hospital regulations are generally known amongst the employés. I believe Cripps did speak to me about deductions after he came out of Hospital. He said that charges had been made in excess, and he asked me to put them right.

Mr. Dickens pointed out that the contract under which the deductions were made was not a contract for hire, but a special contract. His client was entitled to pay for every day that he was in the employ of the Japanese Government. He was injured whilst going to his work, and was sent into Hospital by the doctor's orders. He was ordered to go into Hospital, he would like it to be understood, and did not go of his own free-will.

His Honour said his only doubt was as to the legal right of the Company to deduct the sum from the pay: whether they had the right to set off the amount from that due him for his services. As the matter might be of importance to the men employed in the Department, he would take time to consider it.

Saturday, March 28th, 1874.

COCKING & SINGLETON vs. P. & O. S. N. Co.

The decision in this case was delivered by His Honour Actg. Asst. Judge Hannen this morning.

The point in dispute was the liability of defendants for the non-delivery of a parcel of goods of which plaintiffs were the consignees. The goods were shipped at Southampton on board the Co.'s steamer *Columbian*, and were to be carried under their white bill of lading from Southampton to Yokohama, deliverable at the latter port to order.

His Honor read the following decision:—

The package in question, marked "C & S in diamond H under." No. 1 or 2, arrived in Yokohama by the P. & O. Co.'s steamer *Madras*, on the 10th day of August, 1873; remained on board that steamer until the 16th, and was then transferred to the *Tiptree*, the P. & O. Co.'s coal hulk, which they are in the habit of using for storing cargo not claimed before the departure of the ship by which it arrives.

On the 11th August and subsequent days the defendants had the following advertisement inserted in the local newspapers. [The P. & O. Co.'s usual advertisement was here read.]

On or before the 6th of September the package in question was missing, and has never since been found by defendants or plaintiffs. Previous to the loss of the goods no notice other than that to be obtained from the advertisement before set out was given by the defendants to the plaintiffs of the arrival of the goods.

Subsequent to the loss of the goods, the defendants gave notice to the plaintiffs that a package marked as before mentioned had arrived by the *Madras*; but the plaintiffs appear not to have received the bill of lading until after such notice was given. On the 6th day of October, the plaintiffs presented the bill of lading for the goods in question, and received a package of goods other than that to which the bill of lading related, and for which package they have since handed the defendants the bill of lading.

The goods in question have never been delivered to the plaintiffs.

No custom was proved at the trial as to the course adopted by shipowners when goods remain unclaimed upon the departure or re-loading of a ship; but there are bonded warehouses where such goods may be placed, and it was proved that many shipowners advertised that they would make use of them for the purpose of storing goods unclaimed by a certain day.

The value of the goods at the time the plaintiffs first discovered that they were missing was \$750; and there was no evidence to contradict this.

Sitting as a jury, I find that the facts above set out were proved; and I have now to consider what should be the judgment of the Court upon the facts so proved.

It was contended on behalf of the plaintiffs that the defendants were liable on the following grounds:—

1.—That no notice of the arrival of the cargo shipped per *Columbian*, or of this specific article, was given to the plaintiffs, either by advertisement or otherwise.

2.—That the goods on being taken out of the ship which brought them should have been stored in the bonded warehouse.

3.—That the package was lost by the gross negligence of the defendants.

With regard to this last point, I may at once say that no gross negligence on the part of the defendants was proved.

On behalf of the defendants it was contended that they were not liable, on the following grounds:—

1.—That there was no duty on the part of the master or owners to give notice to the consignee of the arrival of the ship or goods; but that if there was such a duty, then the advertisement before set out was sufficient notice to the consignees of the arrival of the goods in question.

2.—That immediately after the 16th of August they became involuntary bailees, and were only liable for positive fraud on their part.

3.—That if they were bailees, bound to take reasonable care of the goods, they did take such reasonable care, and were therefore not liable.

4.—That the exception "robbers and thieves" in the bill of lading protected them, even if they were at the time of the loss of the goods still in charge of them under the bill of lading.

5.—That the clause, "Consignees or their assigns must be ready to take delivery of goods as soon as the ship is ready to discharge them, otherwise the Company shall be at liberty to land and warehouse or discharge them into a store ship, at the merchant's risk and expense, and shall have a lien thereon for such expense," exempted them from all liability for the loss of the goods after they were placed on board the *Tiptree*.

The case was tried before me on the 11th inst the plaintiffs conducting their case in person, and citing no authorities. Mr. Dickens appeared for the defendants, and cited "Coggs v. Bernard," and the notes to that case, and judgment was reserved.

I have had considerable difficulty in arriving at a confident opinion upon this case; but I have come to the conclusion that there must be judgment for the defendants.

The American authorities seem to support the plaintiffs' first contention, and Mr. Parsons, in his "Law of Shipping," volume I., page 224, lays down the doctrine that "in all cases the master is required to give notice to the consignee of the arrival of the vessel, and of his readiness to discharge cargo;" giving as his authority "Golden v. Manning, 3, Wilson's Reports," (decided before the year 1873 in the Common Pleas), and referring to a number of other cases, both English and American. But this doctrine is not to be found in MacLachlan or Abbott; and although there is nothing in either of those works to show directly that such a duty does not exist, the fact that neither, while devoting considerable attention to "The duties of the Master," mentions any such duty as this, goes far in itself to suggest that the rule of English law differs from the American. Here is a passage in MacLachlan, at p. 446, which favours the contention of the defendants, but on consideration it does not seem quite applicable. The author is there speaking of the liability of the charter for demurrage under the bill of lading, and he says, "If the time has been lost through ignorance of the ship's arrival, yet that is no excuse for the defendant, who is bound to watch for it, and is not entitled to notice." That being the case of a charterer, and not of a consignee of goods in a general ship, the rule might be grounded upon different considerations than those which govern the present case. In Harrison's "Digest," however, title, "Ship,"—sub-head, "Notice of arrival," there are cases which show that so far as liability to demurrage is concerned, the fact that the ship is a general ship will not alter the rule; and in a *Nisi Prius* case, "Houlder v. General Steam Navigation Company," the present Lord Chief Justice is reported

to have laid down the rule, almost as broadly as the American authorities, but in the very contrary sense.

From the later English authorities, then, it would appear that there is no such rule as the one laid down by Mr. Parsons.

If the consignee is not in general entitled to notice of the arrival of the goods or ship, it was for the plaintiffs to allege and show that under the bill of lading, or by the custom of the port, the consignees in the present case were entitled to such notice. I do not think there is anything in the bill of lading to support such a contention, and such custom was not made out by the evidence given at the trial. Moreover, it would appear from the case "*Stanton v. Austin and others*," L. R. VII., p. 651, that the allegation of want of notice in cases where it is material, must be accompanied by an allegation that in consequence of such want of notice the consignees were unable to take delivery. Now, in the present case there is no such allegation, and, there had been, it certainly was not made out at the trial.

I consider that it was conclusively proved that the plaintiffs were not in possession of the bill of lading for the goods, or of notice from the consignor that they had been shipped, until after the discovery of the defendants of the loss of the package. The want of notice was not, therefore, the cause of their failure to take delivery according to the terms of the bill of lading, and the fact of its not having been given in this case becomes immaterial.

But there may be cases in which the shipowner is bound to give notice, as a consequence of the settled rule that the consignee is entitled to reasonable time and opportunity of coming to the ship's side to take delivery. [See *Smith's L. M.*, p. 372, and *Edwards on Contracts*, 9th edn., p. 237, on the authority of *Bourne vs. Gatliffe*]. Now, under the circumstances of a mail steamer known to the whole community to come in at a particular time, bringing the mails and goods shipped, not later than a certain day, it cannot be said that it is the fault of the shipowner if the consignee has not notice of the probable arrival of his goods, and then by the terms of the bill of lading he is bound to be ready to take delivery as soon as the ship is ready to discharge them.

Under the circumstances of the present case I am therefore of opinion that the shipowners were not bound to advertise in the newspapers the arrival of this particular packet of goods; and as the consignees were not known, they could not give notice in any way except by advertisement.

Besides having a reasonable opportunity, the consignee must have a reasonable time for taking delivery; or, in other words, the carrier is bound to keep a reasonable time, at his own risk, for the owner. [See *L. S. C.*, p. 222, notes to *Coggs vs. Bernard*.] His liability is his liability as a common carrier, which he may limit by the terms of the bill of lading; and it becomes important, therefore, to see in what way the liability of the present defendants has been limited by the bill of lading.

The terms applicable are:—"Consignees, or their assigns, must be ready to take delivery of goods as soon as the ship is ready to discharge them, otherwise the Company shall be at liberty to land and warehouse, or discharge them into a storeroom, at the merchant's risk and expense, and shall have a lien thereon for such expense."

Now, in the case of *Wilson vs. London, Italian & Adriatic S. N. Co.*, 1 L. R. C. P., p. 61, the terms of the bill of lading were very similar. They were as follows:—

"Simultaneously with the ship being ready to unload, the consignee of said goods is hereby bound to be ready to receive same from the ship's side, and in default thereof, the master or agent of the ship is hereby authorised to enter the said goods at the Custom House, and land, warehouse, or place them in lighters at the risk and expense of the said consignee, etc."

The ship in that case arrived shortly after noon and began discharging cargo shortly before midnight, and it was never disputed by any one in the case that the consignees were absolutely bound by the words of the bill of lading to be ready simultaneously with the readiness of the ship.

If, then, less than twelve hours is a reasonable time in London, and under the circumstances of that port, and under words very similar to those in the present bill of lading, a Consignee is entitled practically to no time, I am bound to hold that the Consignees having arrived from the 10th to the 16th of August to take delivery of the goods, the defendants had fulfilled the terms of their bill of lading when they transhipped the parcel in question from the *Madras* to the *Tiptree*. And I find as a fact that this parcel did arrive in the *Madras*, and was on board of her, waiting to be delivered, from the 10th to the 16th (August), and that on the 16th it was transhipped to the *Tiptree*.

I am, therefore, of opinion that the extraordinary liability of the defendants in regard to those goods as common carriers, and under the bill of lading, ceased on the 16th; and it remains to consider in what character, and under what liabilities, they held the goods from that day until they were lost.

It was contended by the defendants that they were involuntary gratuitous bailees, and that they were therefore only liable for actual fraud.

I think this contention is too strong. Even if they were involuntary gratuitous bailees they were bound to use reasonable care. But this particular point need not be decided, because I cannot say that they were involuntary bailees.

They were involuntary bailees of the goods from the time when they took the goods from the *Madras* until they placed them in security; and had they taken them from the ship to store them in the bonded warehouse, and the goods been lost in the landing, without gross negligence, I think they would have been discharged from all liability. But instead of taking them to the bonded warehouse they chose to keep them on board their coal-hulk. They were not, therefore, involuntary bailees.

But they were apparently gratuitous bailees, and the judgment of Lord Holt, in the case of *Coggs v. Bernard*, is very plain upon the liability of such bailees. He says, in describing the various sorts of bailment:—"As to the first sort, where a man takes goods in his custody to keep for the use of the bailor, I shall consider for what things such a bailee is answerable. He is not answerable if they were stolen without any fault in him, neither will a common neglect make him chargeable, but he must be guilty of some gross neglect."

This doctrine has never been questioned, and has been followed in a long series of cases. The latest case I have been able to find which I think in point is *Giblin vs. McMullan*, L. R. P. C. 317. It is a case by a person depositing a box with bankers for safe custody, against the bank for the value of securities extracted from the box by the cashier of the bank. It is not precisely in point, but the principles there laid down seem to apply; and they show that the dicta of Lord Holt in the leading case are still law, and on the authority of that case I must hold that as gratuitous bailees the defendants exercised such care about the custody of the goods as to relieve them from liability for their loss by theft.

In conclusion, as an opportunity may not again occur of stating it judicially, I wish to point out that the Court is dependent on the Consulate for its Law-books, and that the Consulate is entirely unprovided with Reports of any description. It has only a few old editions of common text-books.

The legal practitioners here are always willing to assist the Court by lending any Reports or Text-books they may have, but as these are naturally not very numerous, and the Court does not know exactly what Reports or Text-books can be obtained, it is almost impossible in practice to make any extensive use of them.

I say thus much to excuse the length of time I have frequently been obliged to take before delivering judgment, and the very unsatisfactory method I am compelled by necessity to adopt of referring in many instances not to original Reports, but to Text-books, the high value of which no one more fully appreciates than I do, but whose dicta are never so valuable and applicable as the cases upon which they are based.

There will be judgment for the defendants, with costs.

Tuesday, March 31st 1874.

CRIPPS v. CARGILL.

His Honour gave his decision this morning, as follows, viz.:—

"I am of opinion that there is sufficient evidence to prove a new contract between the plaintiff and defendant, to the effect that these deductions should be made.

I am unfortunately unable to believe the plaintiff when he says he knew nothing of these deductions when he went into Hospital. I am convinced that he was perfectly acquainted with them, and was only dissatisfied with the way they had been reckoned up to the date of the last trial between the present parties. Moreover, his signing the pay sheets with a reservation applying to a deduction different from the one now in dispute concludes him with regard to these deductions which he did not and never intended to object to altogether. I think the deductions for food, &c. reasonable, and I dismiss the summons."

Tuesday, March 31st, 1874.

Alfred Lyne, charged with embezzling Government stores belonging to the Control Department, in 1870, was again brought up this morning.

Mr. C. J. Gardner appeared to prosecute, on behalf of the Commissariat Department.

William Smeaton, sworn:—I am messenger at the Oriental Bank. I know accused. In 1870 I was in the habit of going down to the French Hatoba, where all the shipping was then done, and frequently saw him landing and shipping goods, which it was his duty to do. On the day the American mail left I observed him, about three or four o'clock, assisted by an artillery-man and 3 or 4 coolies, engaged in shipping goods in some sampans. Finally, he went off in one of the sampans, and the coolies went in the others.

By Court:—As far as I can remember, this was in the month of September 1870. I recognise accused perfectly, as the man I saw shipping the goods. At the time, it did not strike me that there was anything suspicious in the circumstances; but, next day, when I heard of the robbery, I recollected that prisoner and his coolies seemed to be in a tremendous hurry in shipping the goods. I remember seeing prisoner leave the bank about 3 o'clock on that same day. I do not know the name of the artilleryman referred to. He was a tall, stout man.

Mr. Gardner having stated that the evidence of Mr. Lotz—who is at present absent at Yokoska—was most essential, and Court having suggested that the Oriental Bank authorities might, in all probability, be able to furnish some important evidence as to the payment to accused of the \$3,000 (odd), the case was adjourned until Saturday next, 4th proximo, at 10 o'clock; His Honour intimating that the case would no doubt be got through on that day.

Before RUSSELL ROBERTSON, Esq., Consul.

Saturday, April 4th, 1874.

REGINA vs. ALFRED LYNE.

Mr. C. J. Gardner, prosecuting on behalf of the Commissariat Department, said he was not prepared with any further evidence, but submitted that the evidence already brought forward was sufficient to warrant the committal for trial of Lyne.

The depositions of the various witnesses were then read over to prisoner, and the usual charge administered to him.

Accused, in reply, stated that he had nothing to say at present.

Committed for trial.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

The improvement noted in the Import market in our last has on the whole been sustained, although business has not been as brisk as might be wished in some lines. Two Canal Steamers and a few sailing vessels have arrived with general cargoes, and the stocks thus augmented are likely to be increased, heavy shipments having been telegraphed from Europe. Prices therefore have undergone little change.

**SHIRTINGS.**—A fair business has been done since our last.

**COTTON YARNS.**—Business done has been on a liberal scale. The demand on Nos. 16 to 24 and 28 to 32 has continued.

**VELVETS.**—In somewhat better demand at about former figures.

**WOOLLENS.**—Very quiet.

**BLANKETS** are now worth even less money than last quoted. Two parcels of 5,000 each were quitted to the Japanese Government, instead of one, as noted in our last. The price has not transpired, but we are assured that the importers had to submit to a loss of from 8 to 10 cents per lb.

**IRON** and other **METALS** there is little change to be reported, either as regards demand or value.

**SUGARS** still remain very quiet, and transactions are unimportant.

**RAW COTTON** continues to improve, prices having an upward tendency.

Articles.		Price.		Remarks.
Cotton Piece Goods.				
G. E. Grey Shirtings:—

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Our market since the despatch of last report has undergone little change, prices remaining at about former quotations, and arrivals of good quality Silk continuing sparse.

Arrivals have total'd 200 bales. Settlements have exceeded that quantity, but much of that offered has been rejected, on account of its very poor quality; a drawback we have had occasion to point out for several weeks past.

The market closes rather quietly, with a tendency to lower prices.

**SILKWORM'S EGGS.**—Amongst our items of Ni-gata intelligence in last mail issue we gave some interesting information respecting the new regulations pertaining to the export of silkworm's eggs. In order to obtain accurate data, as to the production of that staple, and probably as a check on the export, official cards will be issued to breeders during the ensuing season, and all eggs exported are required to be on such cards. It is not improbable that a restriction may be placed on the quantity sent out of the country, as was the case last year.

**TEA.**—Business in Tea has almost concluded for this season, and since our last issue nothing of importance has transpired. Settlements hardly exceed Pcls. 1,000, mostly low-class grade, leaving stock in Yokohama merely nominal.

Reports from the country so far promise fairly for the new crop; but it would be premature to found much hopes on them, inasmuch as we are just now at the critical period for the development of the young leaf. The weather so far has been favourable, and ought to promise a good crop.

Our export from Yokohama to all ports to date amounts to 11,873,497 lbs., against a total export for season 1873-74 of some 12,000,000 lbs. Further shipments will be made from this prior to the opening of the new season. These will consist largely of new crop, but they will yet be credited to current season. Our earliest shipments of these will probably be by first steamer in May.

## ARRIVALS.

March 27, Am. whaler *Arctic*, Whitney, 340, from Honolulu, 27th Nov., whaling gear, to Captain.  
 March 27, Am. whaler *Active*, Campbell, 291, from Honolulu, 27th Nov., whaling gear, to Captain.  
 March 27, Am. str. *Japan*, Freeman, 4,200, from San Francisco, 2nd March, general, to P. M. Co.  
 March 27, Am. whaler *Triton*, Heppingstone, 264, from Honolulu, 28th Nov., whaling gear, to Captain.  
 March 27, Brit. str. *Madras*, Fernard, 1,352, from Hongkong, 18th March, general, to P. & O. Co.  
 March 29, Brit. str. *Cawdor Castle*, Cowie, R.N.R., 2,174, from London, via Shanghai, general, to Adamson, Bell & Co.  
 March 30, Brit. str. *Acantha*, Young, 1,985, from Shanghai and Ports, March 22nd, general, to P. M. Company.  
 March 30, French gun-boat *Bourayne*, Bose, from Cape Idsu, Shimoda Bay, and Tago.  
 April 2, French Transport, *Rance*, Capt. Lambal, from New Caledonia, 1,909 tons.  
 April 2, Brit. ship *Westminster*, Capt. Grose, 1434, from Cardiff, Coal, to P. & O. Co.  
 April 2, Am. barq. *Northern Light*, Smith, 385, from Bonin Islands, whaling gear, to Captain.  
 April 3, Brit. str. *Yorkshire*, Loulin, 2,232, from London, via Kobe, general, to Gilman & Co.  
 April 3, Am. str. *Costa Rica*, Williams, 1,917, from Shanghai, general, to P. M. Co.  
 April 4, Am. ship. *St. George*, on whaling cruise, from Bonin Islands.  
 April 4, Am. str. *Colorado*, Dearborn, 3,727, from Hongkong, general, to P. M. Co.

## DEPARTURES.

March 26, German brig. *Anaïde*, Brinkmeier, 374, for Kobe, Ica, despatched by L. Haber & Co.  
 March 26, French gun-boat, *Bourayne*, Bose, 700, to search for the wreck of M. M. steamer *Nil*.  
 March 27, Am. str. *China*, Cobb, 4,000, for San Francisco, general, despatched by P. M. Co.  
 March 27, Am. str. *Golden Age*, Coy, 1,870, for Shanghai, general, despatched by P. M. Co.  
 March 30, Am. str. *Japan*, Freeman, 4,200, for Hongkong, general, despatched by P. M. Co.  
 March 31, French str., *Menzaleh*, Mourrut, 1,066, for Hongkong, general, despatched by M. M. Co.  
 April 1, Brit. ship *Elizabeth Nicholson*, Webster, 906, for Manila, ballast, despatched by Van Oordt & Co.  
 April 2, Brit. str. *Cawdor Castle*, Cowie, 2,000, for Hiogo and Nagasaki, ballast, despatched by Adamson, Bell & Co.  
 April 4, Brit. str. *Acantha*, Young, 1,985, for Shanghai, general, despatched by P. M. Co.

## PASSENGERS.

Per str. *Japan*, from San Francisco:

## FOR YOKOHAMA.

Geo. Boomer, E. de San, M. Jenks, C. G. Osgood, G. Opitz, J. H. Hall, W. P. Mitchell and wife, C. G. Wilson and wife, S. Samishima, K. S. Otori.

## FOR SHANGHAI.

Rev. W. B. Sprague and wife, Rev. J. M. Farnham, wife and 4 children, R. W. B. McLellan.

## FOR HONGKONG.

W. Winslow. 88 Chinese in the steerage.

Per P. M. S. S. *China*, from San Francisco:

N. F. Houston, Madame Garcia, W. W. Shaffer, Lady Kennedy, Miss Keunedy and maid, P. Wroughton, A. W. Neeld, Capt. Fairlie, R. S. Schwabe, A. G. Genth, D. Cooper, J. H. Mossop, S. Koch, J. Regen-berg, Rev. S. F. Morton, D. W. Ap. Jones, Capt. Percy, A. S. Duval, Rev. R. Nelson, Mr. and Mrs. Parkin, Rev. E. L. Simmons and wife, Mrs. C. R. Simpson and family, Mrs. Cobb, Mrs. J. A. Leyenberger and children, E. W. Stevens, J. H. Wisner, and F. D. Bush.

Per Brit. str. *Madras*, from Hongkong:

Mr. and Mrs. Strachan, Messrs. Bland, Liquors, Miss Bae, Yushima, Madame Lieberman Nephew, and European female servant; and 12 Chinese.

Per P. M. S. S. *Golden Age*, for Shanghai:

A. Inglis, F. H. Sanders, J. R. Bromley, T. Leiper, V. Chartron, S. Sylvester, W. Brown, J. Junap, W. Gardner and servant, C. R. Simpson, C. Brauer, Revd. J. Farnham, wife and 4 children, Mr. and Mrs. Bradfield, Roy, McLellan, Gervaise, Purcell, Revd. Mr. Sprague and wife, J. A. Spoor, J. W. Shillingford, and Winslow.

Per Am. str. *Japan*, for Hongkong.

Mr. and Mrs. Marks, Mr. Chapman, Lieuts. Turner and Franklin, U. S. N.

Per Brit. str. *Cawdor Castle*, from Shanghai.

Messrs. D. A. Ross, and Dunn.

Per Brit. str. *Acantha*, from Shanghai.

Mrs. Stewart and 3 children, Rev. J. Baker, A. G. Schofield, C. R. Rohda, S. V. Brush, Geo. Oliver, W. Morris, H. J. Jaffray, W. Pardon, E. H. M. Gower, Habesima, Hara, Ojushio; 2 Europeans, 2 Chinese, and 50 Japanese in the steerage.

Per French str. *Menzaleh*, for Hongkong:

Messrs. Hyslop, and Kniffler.

Per Brit. str. *Yorkshire*, from London.

Mr. and Mrs. Duncan, Mr. Blumbey, Mrs. McGregor, Harries, Dr. Goettz.

Per Am. str. *Costa Rica*, from Shanghai.

Miss Winn, Messrs. A. Center, Wadley, Jones, E. Fischer, C. Wiggins, R. Skey, G. H. Howell, A. E. Luce, Col. Chambers, Major Saltmarsh, R. P. Maynard; R. Lindsay, and 62 Japanese in the steerage.

## FOR AMERICA.

Messrs. A. Fanshaw, J. C. Hawthorne; Mrs. Fuller and 4 children, and C. L. Reinhardt in the steerage.

Per S. S. *Acantha*, for Shanghai:

Messrs. C. Drake, P. A. Ramee, Mons. Soulier and troupe, R. D. Mehta, Dr. Green, W. Renton, F. S. Jacobs, Dr. Painter, A. von Knobloch, Mr. Harris, H. Ludwig and servant, L. Colomb; and 55 Japanese in the steerage.

Per P. M. S. S. *Colorado* from Hongkong.

Dr. W. M. King, J. C. Wilson, U. S. N., Capt. S. B. Elliott; 824 Chinese in steerage.

## REPORTS.

The Am. str. *Colorado* reports encountered light and variable winds until long. 170 E. Since then strong N. W. Gales.

The Brit. str. *Bombay* reports strong head winds and thick foggy weather through the Formosa Channel. Passed the P. M. S. Co.'s steamer, standing to the westward, at 3 a.m., this morning.

The Brit. str. *Vasco de Gama* reports experienced strong head winds, squally weather, and heavy sea during the run.

The Brit. barq. *Merse* reports, after leaving London, October 14th, had light variable winds till off the Isle of Wight. On the 21st, when heavy weather came on, ship labouring much and shipping large quantities of water, was obliged to put back under the island for shelter. Sailed again on the 23rd, with light, favourable winds and fine weather. Sighted Cape de Verde Islands November 14th, and crossed the Equator, on the 29th, in 28 deg. N.; experienced a very strong current setting to the westward for some days. Saw Tristan d'Acunha on the 17th December, thence experienced strong westerly and N. W. gales to the Cape on the 24th December. After passing the Cape had strong winds from W. S. W. with a heavy sea running; January 12th, the sea smashed in portion of starboard bulwark, broke in fore-castle doors and flooded everything, washing the watch out of their berths; wind moderating afterwards, came through the Ombay passage, sighting Sandalwood Island on the 30th January; thence had light winds into port—150 days from London.

The Brit. barq. *Mistletoe* reports stormy weather and very changeable winds during the passage.

The N. G. barque *Diamant* reports left Hamburg Sept. 20th. Fine weather throughout the passage.

The Am. barq. *Acors Bavis* reports pleasant weather during the cruise, until nearing the Japan coast. For the last few days the weather has been rough and stormy.

The Brit. str. *Cawdor Castle*, reports, left London on 17th Jan. Experienced heavy gales in the Bay of Biscay, which continued until arrival at Port Said. Very cold and rough in the Red Sea, with much rain. Fine weather until nearing Hongkong; from thence to Yokohama very thick weather, and heavy rains with N. E. gales. Detained forty eight hours since leaving Shanghai by fogs. Anchored midnight 29th March, weather very thick and rain.

Elijah Brown suddenly died at 4 a.m. this morning, from internal aneurism.

The Brit. steamer *Yorkshire* reports fine weather throughout.

The Brit. ship *Westminster* reports: while on the passage, in the vicinity of St. Pauls, sprung a leak, and has been making a steady amount of water ever since. The locality of the leak having been found out, it is presumed that it can easily be stopped after the cargo is discharged.

The *St. George* touched at this port to obtain a fresh supply of potatoes. She is bound to the Arctic seas on a whaling cruise. Experienced fine weather till nearing the coast of Japan. Rough weather, heavy sea and strong variable winds for the last seven days.

## NOTICE.

MR. E. H. HUNTER ceases to sign my name and firm per procuration from this date.

E. C. KIRBY,

Yokohama, March 2nd, 1874.

1.m.

## NOTICE.

I HAVE this day established myself at this Port as

## MERCHANT

AND

GENERAL COMMISSION AGENT,

under the style and firm of

E. H. HUNTER & Co.,

E. H. HUNTER,

No. 51 Main Street.

Yokohama, March 2nd, 1874.

1.m.

## NOTICE.

FROM and after this date, Mr. FERDINAND ANGUS THIEL is authorized to sign our firm, per procuration.

HOWARD CHURCH & Co.

Yokohama, March 14th, 1874.

1m.

## NOTICE.

FROM and after this date, Mr. RUSSELL DOWSON is authorized to sign the name of our firm.

WHITFIELD & DOWSON.

Yokohama Iron Works,

March 16th, 1874.

1.m.

## The New York Agent

FOR

THE "JAPAN GAZETTE," published every evening in Tokei (Yedo) and Yokohama;

The "Japan Gazette Mail Summary," published for every United States Mail Steamer;

The "Nisshin Shinjishi," the Official Organ of the Japanese Government, published daily in Tokei, in the Japanese language;

The "Nippon Advertiser" a weekly advertising sheet, published in Japanese, and distributed gratuitously in all parts of the Empire—guaranteed circulation 5000 copies;

And,

The "Far East," a monthly Journal, published in Yokohama, illustrated by photographs;

IS

Mr. Andrew Wind,

133, NASSAU STREET, NEW YORK; who will receive Subscriptions, Advertisements, &c., for any of the above papers.

85, Yokohama, December, 1873.

Printed and published for the proprietors by JAMES R. ANGLIN, at the "JAPAN GAZETTE" Printing Office, No. 85, Main Street, Yokohama, Japan.

### THE "Japan Gazette" MAIL SUMMARY.

FROM THE 7TH TO THE 23RD APRIL, 1874.

#### MARRIED.

On the 11th inst., at the British Consulate, and afterwards at Christ Church, Yokohama, by the Rev. E. W. Syle, M.A.T.C.D., son of the late Thos. Nisbett Wright, Esq., of Foulksrath Castle, Co. Kilkenny, Ireland, to EMMA, daughter of the late Capt. Henry Smith, of King's Lynn, Norfolk.

On Thursday, 16th inst., at Christ Church, Yokohama, by the Rev. E. W. Syle, FREDERICH WILHELM KERTZ, Esq., Merchant, Yokohama, to ADELE, daughter of Professor VANK, of Pests, Hungary.

European and American papers please copy.

#### DEATH.

On the 14th instant, at No. 78, Main Street, Yokohama, RICHARD BECKWITH BAKER, Esq., Manager of the Chartered Mercantile Bank of India, London and China, aged 42 years.

OUR LAST Mail Summary was dispatched by the P. M. steamer *Colorado* on the 7th instant. We are since in receipt of the following Mails:—

DUE. ARRIVED.

French Mail *Menzaleh*, April 19th, April 19th.  
English Mail *Bombay*, „ 22nd, „ 22nd.

### Summary.

THE MIKADO has had his time sufficiently occupied by the Formosan expedition, and has not made any public appearances since our last.

The Empress spent the afternoon of the 9th instant, at Hama-Go-Ten, where a few ladies of rank were invited to join her.

THE SAGA rebellion has been ended by the capture of Yeto Shimpei, who became its leader almost by chance; certainly not by choice. His capture was followed by his decapitation and the exposure of his head.

THE PRINCIPAL topic in the minds of all people in Japan, during the fortnight, has been the proposed expedition to Formosa. The government has been making great preparations; and besides hiring foreign vessels for the conveyance of troops and stores, has appointed foreigners to command the transports hired from their own Steamboat Companies. The exact force it had been determined to send, has never, with any certainty, been revealed. The rendezvous for which most of the ships that have already been dispatched from this, have sailed, is Nagasaki; but some vessels are believed to have gone direct to Formosa. Be that as it may, we believe we are correct in saying that at the last moment, better counsels have prevailed; and the expedition will be abandoned. It is a question how to get out of the affair decently. Public opinion has been very strongly against the government on this matter; and that public opinion has been backed by the native and foreign Press, as well as by the friendly remonstrances of foreign ministers. We shall be glad to see Japan removed from a false position; and will rather commend the government for being wise in time, than chuckle over their folly and failure.

INFORMATION reaches us, that it is seriously intended to change the destination of the force prepared for Formosa; and adding to its strength, to send it to Corea.

OF THE disaster that befel the French Mail steamer *Nil* we have not much more to tell than has already been published. No more lives have been saved than the four previously mentioned. An enquiry has taken place at the French Consulate, but it was with closed doors. Nothing however was elicited, beyond what may be gathered from the letters of Mr. Chapsal, which appears in later columns.

FROM OSAKA we learn that the Railway between that city and Kobe is quite completed; and that it was expected His Majesty the Emperor would visit Osaka for the purpose of opening it on the 1st May. It is hoped that Kioto may also be visited by the Mikado, and that the exhibition there may be benefitted by his presence. As yet, however, Japanese Exhibitions are not very grand affairs.

THERE is a talk of an Exhibition to be held at Niigata, the open port on the Western coast of Japan, this spring. This is indeed to call little things by big names. It is to be held in a tea-house! a native hotel! But it shews the spirit that is in the people.

It is reported that the Colonisation of Yezo is not to be extended any further by the government. The utmost to be done is to protect the colonists who have already settled there, but it has already cost the country a mint of money, and retrenchment is to be the order of the day. It is proposed, however, to appropriate 6,000 troops, between Yezo and Saghalien.

THE SUBJECT of an official Board for the examination and control of the Mercantile Marine, has been brought forward; and it is likely to bear fruit.

AT A reception given by the Mikado to General Le Gendre on the eve of his expected departure to Formosa, His Majesty presented him with the sword ordinarily worn by himself. Probably such an honour as this has not previously been accorded to a foreigner. General Le Gendre was the principal adviser of the government in the Formosan Expedition; and was to have accompanied it, had it been carried out.

COPIES of the Mikado's photograph having got into circulation, the Chiji (Mayor) of Tokei has forbidden their sale; and all persons possessing them are ordered to give them up.

WE HAVE with regret, to announce the death of Mr. R. B. Baker, the late Manager of the Chartered Mercantile Bank. It took place on the 14th instant, after two months of suffering.

A CONCERT was given by Mr. Marsh on the 8th instant, at which two young ladies, the Misses Miles, made their debut before a Yokohama audience. Mr. Marsh leaves by this opportunity for San Francisco; whether he bears with him the good wishes of the friends he has made during his sojourn here,

THE FORMOSAN expedition begins to assume a definite shape. The idea is to land a number of troops on the portion of the island over which China has said she claims no sovereignty, and where dwell those savages who dealt so roughly with the Japanese subjects. Of the precise intention we are not quite sure, but it looks as if a joint occupation with China of the Island of Formosa had been resolved upon. If this be so, it is a sorry look-out for Japan; for China would not be indifferent to such a proposal, were there anything in the part of the island the Japanese troops are going to, worth caring for; and to land and form a camp, and remain any length of time would involve considerable expense; for which there would be no possibility of an adequate return. There is also the probability of the natives giving a good deal of trouble, and of many lives being lost—lives which may be said to be far more valuable than those of the Formosan cannibals.

The only intelligible advantage that, as it appears to us, can be gained by such an expedition, is to give the army and navy administrators and the generals and officers engaged a practical idea of the requirements and expense of a foreign expedition, and of the proper method of conducting it. If this be the idea of the government we can understand it; but we have not heard this hinted by any Japanese. With the experience of Saghalien, and the trouble arising from the joint occupancy with Russia, surely Japan cannot have any notion of a permanent lodgment in Formosa, with the almost certainty of coming into antagonism with China sooner or later. As to the moral effect of the expedition upon the natives, it must at best be of a very ephemeral character, if even the expedition should be successful at first: which is quite doubtful.

Several foreign master mariners, in whose competency the government has long learnt to feel confidence, have been engaged as pilots and sailing masters; but they have no rank as officers in the Japanese service, and are simply for the duty of navigating the ships on what is recognised to be a dangerous coast.

A NEW Department has been established by the government, to look specially after the Formosan affairs. Whilst they are about it, it would be well if the Government would establish yet another for the control of the mercantile marine; or, if it be too much to expect that this should be deemed of sufficient importance to form a department by itself, it really would be desirable to combine something equivalent to a Board of Trade and the Trinity House. Japanese trade is not yet of any grand extent, nor is the merchant shipping numerous; but both are increasing, and both are worthy of particular care and nurture. It is already apparent that Japan is to have a large trade at some future day, although things seem very gloomy at present. Sooner or later, it is safe to predict, this depression will pass away, and there will be less for foreign merchants to complain of. Every year the trade does increase, so far as is shown by statistics; though the competition between foreigners and the combinations among Japanese give the latter a great advantage both in the export and import markets, and profits are few and far between.

The Consular reports which have from year to year been published have always mentioned the unreliable character of the statistics as obtained from the Custom house. We hear also individual merchants complain of the inaccuracy of the statistics kept by the Chamber of Commerce; and it is patent to

all that the trade returns as ordinarily published do not include anything approaching to a correct estimate of the total value of the import trade. They only profess to deal with staples, but many of those things which are excluded are found to be very important articles of commerce to those who import them, and quite worthy of notice in tabulating the returns of the empire's commerce.

A Board of Trade might deal effectively with all these things, and render essential service to the country. Even to this day, there are very few real merchants among the Japanese. Men of capital there are. Men of enterprise also. But far seeing, calculating men are comparatively rare. They have never been accustomed to statistical details; and are only now beginning to see their value—nay, their absolute necessity, to the true merchant. It were easy for a Board of Trade so to obtain and impart information to the merchants as to encourage them vastly, and aid them materially in their transactions. The desire which has exhibited itself during the last few years to cultivate to a greater extent than heretofore the most staple productions of the country, will bear fruit ere long; and the opening of mines which, if not so judiciously done as it might be (but for the prohibition to form partnerships with foreigners, or to borrow money from foreigners on the security of the mines themselves), at least progresses, and will yearly show larger effects. The coasting steamers also tend by the regularity of their passages to increase the trade of the country, week by week. There are already two recognised companies whose ships make the whole circuit of Japan periodically. One is that known as Tosa's, which, being mainly worked by a spirited foreign firm, has a particularly good name for the condition of the ships and the care with which they are navigated; all of them having foreign commanders and chief engineers. The other is the National Mail Steamship Company; which possesses 18 steamers, 9 sailing vessels, and any quantity of 'junks'. The Kaitakushi—the Colonization Department—has also several steamers, which, though engaged on the particular service of the Department, all serve to aid the development of the commerce of the country. We believe that the Mail service done by these steamers now extends from Yedo to Hakodate, Niigata, Osaka, Nagasaki, Kogima and even to Loo-Kiu;—and includes all the available ports between these principal ones, "if inducement offers." The National Mail S. S. Company, is, we see, putting its best foot forwards. It has already commenced adopting the most economical plans of steaming, as may be remembered by those who read the report of the alterations made at Yokoska to the engines and boilers of the *Undine*. They are now going further, and advertising for good steady masters and engineers; and if they will only treat them properly when they get them, and give them the real instead of mere nominal charge of their ships and engines, they will quickly see the benefit of it. It is in this direction that the need of a Trinity Board and a Board of Trade is most felt. At present, good Japanese seamen and officers are difficult to find, because Jack is as good as his master. There is no discipline on board a Japanese merchant ship; and, except in rare instances, even the foreign skippers and engineers find themselves helpless to enforce their orders, and are perforce obliged to adopt Midshipman Easy's plan and "take it coolly." Our observation also leads us to believe that the ambition of Japanese officers and seamen is to get into the Imperial Navy

and sport gold lace and gilt buttons, or a man-of-war seaman's easy-going toggery.

It is desirable that means should be devised of giving to the officers and men of the merchant service a pride in their own line. Of course, we admit that every British seaman has a *penchant* for the British Navy; but there is the advantage of better pay, less severe control, and more frequent completion of the contracts in the merchant service. Many men find the strict discipline of a man-of-war very irksome; and the length of time they are obliged to serve, when once they have entered on a newly commissioned ship, is an objection to others; and so it is that some of England's very best sailors still cling to the Merchant ships. The officers of the Mercantile Marine also are brought up to look with pride on their service; and in these days of fine ships and wonderfully scientific navigation, there is emulation among young officers fully equaling if not exceeding that among officers of the Navy. The examinations they have to pass for each grade keep them constantly at work, learning their duty theoretically and practically. The discipline on board the better class of vessels, both sailing ships and steamers, equals that of men-of-war; and both officers and men being less numerous, they frequently become better seamen and navigators than the majority of the Naval men.

Why then should not a similar class of men be encouraged here? Why should not the officers be obliged to undergo examinations for the various grades, and receive certificates accordingly? Of course, at first, the examiners would have to be foreigners, but in the course of a few years a great improvement would be seen both in the *personnel* and the condition of the merchant Navy of Japan; and the cheery, active seamen might quickly earn for themselves a name, like unto that of the seamen of the "right little, tight little island" of the West.

SINCE writing the article which appeared in our Saturday's issue, circumstances which cannot be particularized have brought under our notice the urgency of the want of such a Board or Department as we there alluded to, in Japan. It is marvellous that no more accidents happen to Japanese steamers and other ships than there are; but foreigners do not hear of all that do happen. We remember a case related to us by a gentleman well known to all the community, an old ship's captain, who had been to Hakodate and was returning as a passenger in a Japanese steamer, on board of which there was no foreigner but himself. In bad weather, but in broad daylight, he saw that the ship was being very ignorantly navigated, and he went into the cabin, where was the man upon whom he looked as the captain. He pointed out to him what was wrong, when he was referred to another officer, the remark being "It's not my affair, I'm the Captain!" Such was a Japanese skipper's idea of his responsibilities in 1868, when this occurred.

Within the last six months a Japanese captain took his steamer into a harbour 20 miles from that he intended to make. The anchor was dropped; the steam was being blown off, and all would have been made snug, had not a boat from the shore called the captain's attention to the fact that this was not his port at all, and he had to hoist up the anchor, get up steam, and return some score of miles; literally to seeking or feeling for the place he had to make. With such ships, such captains, and such crews as the

Japanese possess, (where there is no foreign officer), how is it that they escape so easily?

Doubtless some of the ships sold to the Japanese have been splendid vessels and in first rate order, but in many instances they have been sold only when they were half worn out, and could no longer compete profitably with newer, faster and more economically worked steamers. The very best of them, after having been run for years by Japanese alone, are in equally bad order "alow and aloft." The hulls wearing thin; the boilers and the condensers in a critical state; the slide valves, bearings, &c., not requiring repairs but renewal; and all kept in the most filthy condition by the natives on board, nothing but good fortune can be thanked for the comparative immunity from casualty. Plenty of difficulties do occur; but, as the vessels get worse and worse from age and wear and tear, they will be very much greater and more frequent unless some steps be taken to obtain a proper supervision over all vessels going to sea, that none go in an unseaworthy condition; and over all officers in charge of them, that they may understand their duties and prove themselves competent to perform them.

In the Japanese merchant service, "Rising goes by favour," quite irrespective of ability. We remember seeing a man who had been a seaman on board of a Japanese coasting steamer, within six months captain of one of the Yedo steamers. He had been but a short time on board the coasting steamer, to learn (as he told us)! And, although a mere passage boat such as that he was in charge of required little of either skill or knowledge, as compared with sea-going vessels, it is too frequently the case that appointments are made to the latter of men of very little more experience than the one we have mentioned. We have known a man who was objected to by a foreign chief engineer as incompetent for the duties of second engineer, quietly removed and made chief in another steamer. In the absence of any regulations to the contrary, there is nothing to prevent a man being employed as seaman, fireman, captain and chief engineer alternately. Practically, no doubt, some of the officers have become very good and efficient men, but not many of them are so; and this is what the government should look to.

The merchant service of England is looked upon as the nursery for the navy; and in the event of a great war, (which Heaven forefend), the Royal Naval Reserve men would be an efficient adjunct to the Navy itself. In Japan, now that they are beginning to send troops here and there, it would be wise to see that the ships they depend upon to transport them are properly officered, at least. And stringent rules as to discipline should also be laid down and enforced. The expedition now being sent to Formosa has called for several ships of the merchant service. Several of them, however, have had foreign officers attached to them for the occasion; and will it be believed that hardly one of them could be said to be ready for sea, in the state foreigners consider a ship should be? Those which have had foreign officers on board are better, but, for reasons we have already described, even these are not all their foreign officers would make them, if they could but secure proper discipline.

We have no wish to depreciate the Japanese. Our desire is simply that men who admittedly have many sterling qualities should be obliged to superadd knowledge and experience to their native talents before they have many lives, expensive ships and valuable

cargoes entrusted to them. We quite sympathise with that ambition which prompts the employment of as many of their own people and as few foreigners as possible. But, as yet, it is not possible to do any good with their merchant ships unless they employ foreigners, or compel their own people to make themselves competent.

The Japanese are by no means unwilling to admit their own deficiencies, when first they are brought in contact with higher knowledge. But they quickly learn a little, and then fancy they are able to run alone. And that is the mistake too often made. Now, we desire to see them hasten a little more slowly. They will find it infinitely better in the long run. We cannot conceive a nation with better prospects of becoming as important as they wish to do, provided they go the right way to work; and as trading and navigation are among the most important aids to the progress they desire, too much stress cannot be laid on the necessity of the government seeing that the one is untrammelled, and the other carried on by well instructed, disciplined men.

It is somewhat difficult to get the precise information which would give point to the subject; because people are so afraid of its being supposed that they are dissatisfied with their employment. But we shall endeavour to give more information on the Mercantile Marine of Japan, within a short time.

WE DO not often write about home subjects, much as they are in the minds of many of us. The reason may be that the community for whom we principally cater is composed of so many different nationalities, that whatever subject we select must be foreign to a large proportion of our readers. The position of England, however, as to its relations with all the world in regard of commerce, compels every one, of whatever nationality, to know something more of its political concerns than is generally known of other foreign nations; and the state of politics is at this time so unique, not only in the history of England, but almost of the world, that it really is well worth drawing attention to. Never since the days of Sacheverel,

When civil dudgeon first ran high,  
And men fell out—they knew not why,

has there been seen such a state of things as each recent mail has revealed to us. A strong minister of the crown and his ministry, after a reasonably lengthy tenure of office, during which they had passed several measures of the very first importance; whose budgets have always had surpluses to deal with; who have been able to commend themselves by the success of some of their measures, which have already begun to bear good fruit; these men, who commanded at the beginning of their official career a splendid working majority in the House of Commons, are suddenly ousted! Suddenly driven by circumstances to dissolve parliament! Suddenly find the elections dead against them! Suddenly are obliged to resign office, and to advise the Queen to send for—for whom? The man who successfully opposed their policy? No! For the leader of a party without a policy. For the leader who certainly had talked about the "blundering and the plundering" of his opponents; but as for "worsting" them on any great measure, why, the legislation seems to have been so industriously wrought, that there was no great matter to make even a party question for the hustings. All the retiring minister had to say was—"Open your mouth, and shut your eyes, and see what I will send you;" and he popped in a sugar-plum in

the shape of a big surplus of £5,000,000, and promised to abolish the income tax. And all his opponents could do was to talk of "blundering and plundering" nonsense, and suggest nothing and promise nothing. And yet the country said, "Not this man, but another. Any other." If we ask "Why, what evil hath he done?" there can be no answer but this—"We are tired of him. He has done this, that, and the other, all very good—but we have taken into our heads to dislike him, and to dislike the team he works with, and we must have some one else." And so some one else they have got.

And now what do we see? A most unwonted state of affairs indeed. First, the two parties so gradually merging into one another, that it were absurd now to raise the cry "measures, not men." The country has most emphatically acted on the reverse—"men, not measures." The old whig and tory, the great parties who had done duty in office and in opposition for centuries, were split up into Whigs, Tories, Radicals and Conservatives. Then the Whigs and Radicals merged into Liberals and the Tories were lost in the Conservatives; but now we have Moderate Liberals and Liberal Conservatives; and in fact it is hard to see where the line is drawn, they are so nicely shaded into one another.

As to the leader of the party now in the ascendant, he is taken by surprise. He has striven, and successfully, to attain greatness; but in this juncture his strivings have little to do with his accession to power. He has had greatness thrust upon him; and he at first found it a kind of white elephant. A surplus of £5,000,000! Why, here is a monster of itself! What is to be done with it? Gladstone says "Abolish the Income tax." But that would never do, because he says so. Better give some of it to famine stricken India, or—or—or—well, anything rather than adopt Gladstone's suggestion, although he is admittedly the greatest Finance Minister England has ever had. Still, it's hard to know what to do with it.

And so does England—steady-going, cautious Old England—take the ball out of the hand of one of her ablest players, and pitch it to another, not for love of the latter, nor because the former has been playing successfully; but simply because—well, because things had become monotonous. She wanted a change. In truth we believe this was the true reason. It is amusing to read the home papers. One says the cause of the downfall of Gladstone was this, another says it was that, whilst a third says it was the other. A fourth twits his confères with their shallowness in not seeing that it was all these things together. But, undoubtedly, all the principal papers have taken the cudgel in hand to give poor Mr. Gladstone a parting blow—making his devoted head suffer for the iniquities of all his party. And in like manner do they all pat Mr. Disraeli encouragingly on the back. This fact convinces us more than anything else, that John Bull had become a little hypochondriacal, under a continuous run of prosperity. He must grumble, and he had nothing to grumble at; and so he grumbled because his foreman, who had long conducted his business with remarkable boldness and success, refused to touch his hat to him, and sometimes even lost his temper. So he turned him away at a moment's notice, and took another in his place; one who "can talk like an archbishop," and is imperturbably good tempered, as one of his panegyrists declares; but who certainly has done nothing great as yet—unless his Reform Bill be considered so.

We wore the Tory colours at the passing of the Old Reform Bill in 1832. The develop-

ment theory finds us in this year of grace 1874 a Liberal Conservative. We gladly adopt this new name because it is so delightfully non-committal. We are not disposed to thunder against the fallen statesman to whom Great Britain and, we may truly say, the world owes so much; yet we, like others, have long felt that the "Economy" so loudly vaunted by the *ultras* of his party had often degenerated into little cheese-scraping, and some of the most beneficial of their measures have carried with them a greater amount of injustice to individuals than they need have done. England is rich enough to be generous; and she is great enough to be just. Changes which are admittedly for the universal good, will, when all is done that can be, have their attendant evils; but it were better that the annual surplus should be a million or so less, than that unnecessary hardships should be inflicted on classes and on individuals; and this, we strongly opine, Mr. Gladstone and his colleagues disregarded. Everything had to give way before the creating as large a surplus as possible.

Well! We shall now see what a Conservative Government will or can do for us. We take it that, in the main, the time has come when it matters very little who is in power. But it is the first time that the world has ever seen, in a free country, a successful minister ousted from office, and his place filled by the leader of a Party without a Policy.

#### JAPANESE COMPANIES.

AN ARTICLE with the heading "Japanese Companies" appears in the *Japan Mail* of Saturday last; and if the government would read it carefully, and separate the wheat from the chaff, it would be likely to be useful both to natives and foreigners. The writer says that "Companies, as understood and practised by Western nations, must be impossible in the absence of these three elements, viz: first, a sound legal basis; second, an adequate supply of accumulated wealth; and third, sufficient confidence between man and man in money matters." We agree with the *Mail* that, in the absence of these three elements, successful Companies cannot be expected.

But we are not prepared to say that these three elements are wanting in Japan.

"A sound legal basis" is a term well understood by foreigners; and every one who takes shares in a company in Europe and America knows, or may know, exactly what security or protection is afforded by the law. But there was a time when laws especially applicable to Joint Stock Companies were unknown, and these were only made when the actual establishment of the companies proved them to be requisite. The companies were formed first and produced the laws, not the laws companies. Although Japanese law is supposed by foreigners to be somewhat mythical, still, amongst themselves, combinations are by no means uncommon, and the government has never shewn itself unable to give them such powers as they applied for, so far as was thought proper, nor unwilling to uphold and maintain for them the power so accorded. A sound legal basis must mean a basis consonant with the laws of the country; and if this is the foundation on which the companies in Japan are raised, the first requisite exists.

"An adequate supply of accumulated private wealth" is the second element mentioned. The *Mail* says that there are not ample resources in Japan. The second requisite, then, is wanting. But who knows this for certain? We contend, and if we are contradicted we still maintain, that neither the writer of the article in the *Mail* nor any foreigner whatsoever knows much

about the accumulated private wealth of the Japanese. What is wealth? It is a question of degree. What is penury for one is wealth for another. The Marquis of Westminster, if reduced to an income of £10,000 a year, would be esteemed a pauper, while many a working man who out of his wages has put by a few hundred pounds is looked upon by his relatives as a prodigy of wealth. So if Japan be compared with England, no doubt she is poor enough; but, so far as these companies are concerned, if her people have in their private coffers sufficient to pay the value of their shares, and still to live without pinching themselves until the profits begin to shew themselves; then we think no one will deny that there is "an adequate supply." Now, many companies have been formed, and the money for the shares has been paid. How can any one say that the resources are not ample? We grant that it is quite possible that some companies may have partaken of a "bogus" character; but if so they are the exception. The rule holds good.

The third requisite, "sufficient confidence between man and man in money matters," is almost proved to exist by the fact of the existence of the companies themselves; especially those whose capital is paid up, or *bona fide* subscribed. We do not pretend to an extraordinary knowledge of Japanese. On the contrary we have a very limited knowledge of them; particularly of the mercantile classes. Yet we have seen enough to know that, although they have learnt very little of what is conveyed to an European mind by the very word "merchant," they are by no means deficient in confidence in money matters, where they believe it to be due. And foreigners are not less apt than Japanese to withhold it where it is otherwise.

We are disposed, therefore, to join issue with the *Mail* on the premises. And we do so because those premises appear to us unsoundly based. It is easy to assert, and that roundly—that there is capital to be found in Japan. But we see a great many large and flourishing traders in the country who both can and do produce large sums when they please. It is easy also to declare that there is no commercial credit among the Japanese. This is altogether a mistake, as any one may easily satisfy himself who will condescend to make enquiry.

But the *Mail* singles out two classes of Joint Stock Companies as possessing elements of difficulty in this country, viz: Banking and Railway Companies, "the former demanding, in addition to mutual confidence as between their shareholders and managers, the confidence of the commercial and general public; the latter requiring cash subscriptions of so large an amount, as to tax even wealthy communities to supply them."

Yes. It is admitted that these both possess elements of difficulty. So they did in England. But they succeeded, for all that. How many such schemes were proposed for one that was carried into execution in Europe and America?—and how many of those which commenced business came to grief! Japan must have its beginnings, like any other country; and we totally dissent from those who see insuperable difficulties in the way of success, either of Banks or of Railway Companies. We shall have more to say upon this subject in a few days.

But we are anxious now to refer to what we think worthy of consideration in the *Mail's* article. It is for the Japanese government to take it in hand; and to see the injury that is being done to Japan, now that it is in commercial intercourse with all the world, by the delay in framing and promulgating a code of laws. But this we would say: We are undesirous that

they should do this hurriedly, if this implies carelessly. It would, however, be very wise to settle the more important measures of commercial law first, and let it be distinctly understood, not only by their own people but by foreigners, what is being done; for thereby they would be likely to receive information which would give them valuable aid. They want laws applicable to Japan. It were absurd, therefore, to take a French or English law and simply paste it into the Japanese Statute Book.

We have shewn that we entirely disagree with the premises laid down by the writer in the *Mail*. But he has opened up a wide subject, and, as we think, a very important one: the ventilation of which cannot but be useful.

Banking and Railways are in their infancy in this empire; and our opinion is, that their being worked by companies is no more a "delusion" here than elsewhere. The *Mail* concludes by saying that "until adequate laws, capital, and mutual confidence are forthcoming, individual energy is all that can be looked to for promoting the commerce and industry of the country." Why, so it might be written of any country. It is a mere truism. But we say that, as yet, no one can say there is insufficient capital for, at any rate, moderate ventures, or that mutual confidence is wanting. Adequate laws undoubtedly exist for the establishment of the companies; and, for the rest, the law will be developed as required.

The spirit of the country is clearly the opposite of what it has been described. Combination, in one form or another, has always been one of its most prominent and observable characteristics: and the foreign merchants know it to their cost. Why it should be successful in one case and impossible of success in another we are at a loss to see; but it is this well-known principle among them that induces them so readily to form Companies.

WE cannot blame ourselves for the smallness of the audience at the concert given by Mr. Marsh on the 7th inst. We told the public that a treat was in store for them; and it is their own affair, not ours, if they failed to take advantage of it. One thing is certain:—that, of those present, very few went dissatisfied away; and the general feeling was that the *debut* of the Misses Miles before a Yokohama audience was quite successful.

We wished for a full house, on this particular occasion, for two especial reasons. One, because the engagement of the two ladies by Mr. Marsh had somewhat of the character of public spirit, which deserved support; and the other, that it is a very great trial for any person to make a first appearance before a small audience. None but the very strongest nerves can face empty benches; and although we cannot pretend that this extreme ordeal had to be endured, still it would have been better if the audience had been treble its real number. Under these circumstances we shall not criticise, but merely report. We hope we shall have other opportunities of hearing the Misses Miles, when circumstances are as much in their favour as last night they were against them.

Having said so much, it may perhaps be thought that we have to apologize for, or soften the poignancy of, a comparative *fiasco*. Very far from it. It is simply that there were one or two imperfections, arising solely out of the circumstances, which we must not be supposed to be oblivious of, or indifferent to. But these would be only observed by musicians; who, understanding them, would know how to make allowances for them. The performances of the young ladies gave to the general audience unqualified delight; and, say what we may, there

has not been any such singing in public in Yokohama for more than ten years. The voice of Miss S. Miles is a *mezzo soprano*, particularly sweet, clear and smooth in the upper register, but not quite so agreeable in the lower notes. Her vocalization is fluent and easy; and, with the training such a voice ought to have, would be capable of great brilliancy. Possessed of much artistic feeling, Miss Miles sang with a sensitive appreciation of the sentiment of both words and music; and in some instances surprised us with the power she threw into certain passages.

Her appearance was greeted with a warm round of applause, for which we were quite prepared; for, on looking round, we saw that those persons who were present included those of all others whom we most desired to see. Persons who went for the pure love of music; who could judge correctly, and were sure to judge fairly; and who would be equally ready to condemn a failure, or to stamp a success. It was evident that they were satisfied directly they heard the opening recitative, that Miss Miles was a vocalist worthy of their approbation and support.

The selection made for her first effort was that lovely song from "Ernani," *Ernani, involami*; in itself an ambitious selection, and one that shewed confidence in her powers. Suffice it, that it fairly gained the audience, and that, at the conclusion of it, the applause was long and loud; but the young lady, no doubt judiciously considering all that she had to sing in the course of the evening, did not respond to the most unmistakable *encore*. Her next appearance was with her sister, with whom she sang the duett *Cheerfulness*, the voices so nicely blending, and the two vocalists being so thoroughly animated by the same spirit, that the effect was very charming. A canzonetta by F. Abt, *A happy dream*, a highly effective song, extremely well sung by Miss S. Miles, concluded the first part. In the second part Miss Josephine Miles sang a pretty ballad entitled *One dear Smile*. This young lady does not look upon music in the light of a profession, but sang as an aid to her sister. But her simple, unaffected manner, and her sweet contralto voice, very smooth and sympathetic, took the house by storm. An irresistible *encore* was her reward; in response to which she repeated the last verse. As the evening proceeded so did every effort of the young ladies improve. Wallace's beautiful duet from *Maritana*, *Holy Mother, guide his footsteps*, accompanied on the Harp by Mr. Marsh, was so admirably done as to elicit a powerful redemand. But the *pièce de résistance* was reserved for the last song of the evening, *Perche non ho*, from "Lucia." Well known, attractive and sparkling, it was sung with a finish and a correctness of intonation that left nothing to be desired. The work of the two young ladies was thus finished for the evening, triumphantly.

The great want experienced by Yokohama in the way of music has been that of lady singers. On three occasions, ladies have kindly given their services most efficiently, at concerts got up for special public purposes. Those ladies, several of whom were accomplished musicians, whatever their capabilities were, did not attempt such music as was given last night; nor could they be expected to step from their drawing rooms on to a stage, and sing with the confidence and force of those accustomed to face the glare of the footlights, and the gaze of an expectant multitude. It is therefore out of the question to allude to them, as coming into any kind of comparison with others. And leaving them out, we have had none others but the Misses Chambers before the public

here, since the visit of Miss Amelia Bailey; and certainly the Misses Chambers were very inferior to the ladies who were heard last night. We hope, therefore, that we may have the pleasure of again hearing the Misses Miles, from time to time; and are satisfied that they will never again in Yokohama lack numbers to hear them, when their names are announced.

Of the rest of the concert, we have left ourselves little room to speak. Mr. Jaquemot sang with much spirit a capital song by J. Peters, "*Rheinlied*," and was deservedly recalled to sing the last verse again. Mr. Fletcher being prevented from attending the concert at the last moment, sent to excuse himself from singing the song put down for him, and Mr. Jaquemot most kindly took his place, singing a German song, *Das Erkennen*, by Johann, which was well received. The only other vocalist was Mr. Black.

The instrumental music consisted of the opening overture, "*Il Barbiere*," arranged for violin, violoncello, harp and piano; a solo on the harp by Mr. Marsh; and the *duo concertante*, for flute and piano, which had already been played twice before at concerts by Mr. Marsh and Mr. Wagner.

The programme would have been better had it been confined to twelve instead of fourteen pieces; and the interval between the parts was far too long.

In future, too, we must hope that more time will be given to the preparation of the music, than has been the case of late. Perfection only comes by practice; and no real satisfaction can attend a slovenly got up musical performance. If, therefore, the musicians themselves are to derive any pleasure from their own exertions, they must have the opportunity of rendering themselves as perfect as possible; and the public have also a right to expect that they be not required to pay a liberal admission fee to hear what has cost the performers little of either time or trouble. There were no glees on this occasion, for lack of opportunity of practice; and the overture suffered from the same defect.

#### GAIETY THEATRE-AMATEUR PERFORMANCE.

*The Rivals*—or rather the combined attractions of the production of that excellent comedy and its representation by our Amateurs, drew together at the Gaiety Theatre last night (17th inst.) a well-filled house. On the whole, we think, the anticipations of those who, on the one hand, had perhaps more than once witnessed the play in other countries, supported by an efficient caste of professionals, and, on the other, of many who, having had neither the opportunity nor the inclination to do so, had contented themselves with a perusal of the argument of the story—a pleasure indulged in by many non-playgoers—on the whole, we think, the anticipations of those present at its representation last night must have been fairly realised; allowing, of course, for such unavoidable drawbacks as the absence of lady performers, and keeping in mind that those taking part in it were, with one exception, amateurs; though, it must be said, by no means novices.

The way in which the piece was put upon the stage evinced great painstaking, care, and a knowledge of what was required—of the proprieties and the unities—on the part of those concerned in its "get-up." The dresses were not only in keeping, but really very elegant and tasteful, and everything in that respect seemed to be good, and certainly betrayed no signs of the tawdry costuming generally associated with the common idea of stage properties. A portion of the scenery, a synopsis of which was given in the programme, had

been painted for the occasion, and was creditable to the scenic artist. It seemed a pity, though, that, whilst he was about it, something more appropriate was not prepared for the concluding scene, supposed to represent "King's-mead fields," near the city of Bath. The wood, with lofty trees and a view of (we suppose) Fuji-yama the Inevitable in the distance, was just a little incongruous. Of the band, principally strings, perhaps the less said the better; otherwise, those who did their best, and did well, might inadvertently suffer for the faults of those who are evidently still open to improvement. We believe the fault is attributed to want of joint practice. It is doubtful whether that ought to be put forward as an excuse.

The piece itself went smoothly, with hardly a perceptible hitch, and rehearsals, it was apparent, had been neither infrequent nor deficient in the observance of the most trivial detail.

The great success of the evening was undoubtedly Mr. — or, let us say, "Mrs. Sophia Spurgeon"—that being the professional name by which the gentleman who so admirably portrayed the part of Mr. Puff in *The Critic* chose to be known on the occasion under notice. The character of Mrs. *Malaprop*, it is perhaps unnecessary to say, is an exceedingly difficult one to delineate under any circumstances, even for a professional lady. But it is needless to make use of language on such a point which of necessity must be hackneyed. Let it suffice to say, that the gentleman who undertook to portray it last night, did so with a due appreciation of what was required of him, and that he accomplished his task in a most admirable manner, the portrait being certainly most entertaining, and as near the stage ideal of a perhaps somewhat overdrawn character as might be imagined. It had evidently received careful study; the various little minutiae were carefully observed, and any appearance of exaggeration was rigidly guarded against. Much applause greeted the performer.

The part of *Miss Lydia Languish* was sustained by a military gentleman, who assumed the exceedingly stagey name of "Miss Augusta St. Aubyn." It was well dressed and well played, considering that it is also a somewhat difficult part, especially for an amateur, and above all for one of the sterner sex. A rather masculine style of carriage was one of the most noticeable defects; not a very serious one. *Lucy*, the maid, was played by "Miss Matthews," who looked the part to perfection and played, though quietly, well. A slight nervousness, under the circumstances perhaps to be expected, will no doubt wear off, with more frequent appearances in public. *Sir Anthony Absolute* was played by Mr. Pauncefort. *Sir Lucius O'Trigger*, played by Mr. Sutton, the Captain Hawksley in *Still waters*, did well, but did not come up to our ideas of the fighting Irishman. He was too quiet, and the brogue attempted at intervals had better have been omitted altogether. "Mr. Fredericks," a gentleman well-known on the Yokohama boards, personated *Captain Jack Absolute*, in an easy, graceful, unconstrained manner which left little to be desired. He looked every inch a soldier; just such a handsome young fellow as romantic novel reading young ladies would be likely to rave about. *Mr. Faulkland* was assigned to "Mr. Felix Percy," who will be, by-and-bye, capable of better play than he shewed last night. "Mr. Vernon" did *Bob Acres*, and "Mr. J.G. Oddson" *David*—both of them good conceptions; the latter verging a little, perhaps, on the exaggerated, a fault sometimes difficult to be avoided. *Mr. Fag* is an excellent part, and was ably handled by

"Mr. Coventry," who is well-known to Yokohama play-goers, and is capable of sustaining much heavier parts than he generally, from choice, undertakes. It was an excellent impersonation of the "gentleman's gentleman." *Thomas* (the Coachman) had not much to say, but what he had was creditably given.

The *Rivals* constituted the whole of the entertainment offered, and the performance was consequently brought to a conclusion about half past 11.

### THE LOSS OF THE "NIL."

We are indebted to Mr. Pearson, who has just returned with Captain Walsh, R.M., from the scene of the wreck of the *Nil*, for the following additional particulars.

Mr. Pearson and Captain Walsh arrived at the village of Iruma, near Cape Idzu, on the afternoon of the 31st March, after a journey of five days from Yokohama. Four bodies, two Europeans and two Chinamen, had already been washed ashore. Since then, up to the afternoon of the 4th inst., the bodies of eleven more Europeans and one Chinaman have been recovered. In every instance, the remains were perfectly unrecognisable, although held together by the clothes. Not one nude body has been washed ashore.

Only one of the bodies seems to indicate any probability of its being that of a passenger. On it was found a gold watch and chain, and a red-bordered pocket handkerchief, with the initials D. L. embroidered in the corner. The others were evidently those of seamen; and nothing was found in their pockets, with the exception of a knife or a key. Many of them had on their water-proof clothing and south-westerners.

Over 200 coolies are detailed to watch the coast, in the neighbourhood of Cape Idzu. The bodies, immediately they are found, are conveyed to Iruma, either by water or overland. One was brought in from a distance of 28 miles.

At Iruma, coffins are made at the temple, and the remains interred at a proper depth, in a portion of a cemetery set apart for their reception. Nothing is done without a careful inspection. And here we would say a word in praise of Mr. Maida, the Japanese official from the Ashigara Ken, who is in charge at Iruma. He gives the whole his personal supervision, and everything found which might possibly lead to the identification of the former owner is carefully noted. Mr. Maida sees personally to the burial of each body; and at the head of the grave has erected a wooden cross, on which is written every particular connected with the remains. It would be impossible to find a more active or a more feeling officer.

Great praise is also due to M. Bonneau, who was sent down by the M. M. Co., and whose zeal in the performance of his duty and courtesy are warmly acknowledged.

No wreckage has been washed ashore, with the exception of a portion of the vessel's bridge.

It appears it was fully twenty minutes after the ship struck the rocks before she went down. The two seamen who escaped in the ship's boat, fearing the dangerous nature of the shore, wisely did not attempt to land till daylight, but kept the boat's bow to the sea all the night-without shipping a drop of water. They then beached her in a sheltered cove in the morning. The boat now lies high and dry, without a scratch. It is quite a wonder that others did not avail themselves either of this or the other boats. The one in question had oars and all her gear in her, and would have held twenty-five people.

The Japanese employed in the sad task of consigning to their last resting place the remains

of the drowned can hardly be too highly commended for their care, and the delicacy with which they carry out their disagreeable task.

The steamer now lies in about 20 fathoms of water. Her mainmast head is about a yard above water, and her mizen-mast head is just a-wash at low water.

The rock she struck is from a third to half of a mile from the shore; but, having afterwards gone astern, she now lies about 400 yards from the point first struck.

THE AGENT of the Messageries Maritimes Co. states that another name is to be added to the list of passengers lost in the *Nil*; that of a Mr. Bateman, who embarked at Marseilles. This gentleman's name appeared in the list we published in our first report of the casualty.

ANY information tending to throw light on the probable causes which led to the loss of the *Nil* will no doubt be acceptable to our readers; the more especially as all official information on the subject is refused by those from whom it might have been expected, and which in England and America would have been published at once, as a matter of course.

Capt. Hussey, of the *Mowtan*, was in the immediate vicinity of the scene of disaster on the very night, and at about the same hour that the unfortunate *Nil* met destruction. The report, which through his kindness we are enabled to give below, is exceedingly interesting, and to a large extent enables one to realise the overwhelming odds which the devoted ship had to fight against, in the almost unexampled war of the elements. In justice to the memory of Capt. Samat and his officers, and as a solution of the doubts which, in the absence of any positive intelligence on the subject, must arise in the minds of the public, as to whether all was done that could be done to avert the calamity which overtook the *Nil*, the statement of Capt. Hussey is of great value:

REPORT OF S. S. *Fuso Maru* (late *Mowtan*)—Left Yokohama for Osaka at 1 P.M. 20th March; weather hazy, wind light from S. E. Barometer (mercurial) 30.00. At 8 P.M. passed Vries Island. Wind freshened from E. S. E., with rain and heavy sea; steered for Rock Island. At 10.30 P.M., wind blowing hard from E. S. E. Shifted suddenly to N. W. and blew hard for two hours, when it again shifted round S. to E., creating a fearful sea, in which the ship laboured very heavily. At 2 A.M., keeping additional look-out, knowing the treacherous nature of the currents thereabout. Made Simoda reef, bearing W. S. W., distant one mile. Hauled up to S. and soon after made Rock Island light, bearing S. W. by S., distant 2½ miles. The light was burning brightly, but so thick and dark was the night that the light could not be seen at a greater distance. Altogether it was one of the worst nights I have ever experienced at sea, and certainly the worst I have ever had on this coast. There was no change in the barometer.

Judging from the distance run, and the position of my ship at the time I made the light, the current must have been setting to the W. N. W. at least 4 knots per hour, and to this treacherous current I think may be attributed the loss of the *Nil*, and her passengers and crew.

P. HUSSEY.

Master—*Fuso Maru*.

To the Editor of the *Japan Gazette*.

SIR,—In view of the sad emotions into which the loss of the *Nil* has thrown the foreign community of Yokohama, I have been for some time desirous of giving to the public, through the press, some information as to the circumstances which led to the loss of this unfortunate steamer. Unfortunately, the small number of survivors from the accident, (two sailors, the ship's baker, and a cook—a passenger), and, above all, their incompetence to give any exact account of the disaster, made me fear to give particulars which might not be correct, so that I saw myself obliged to await the result of the painful and laborious search which has just terminated.

The *Nil* left Hongkong on the 13th of March. Up to the 20th the passage was accomplished as is usual at this time of year—that is to say, with rough and fine weather alternately. During the day, on the 20th, the weather became cloudy, the sea rough, and the wind blew with great violence from the S. E. In consequence of the state of the atmosphere, observations were not able to be taken at mid-day. At night, the fog had become very thick, it rained heavily, and the sea was extremely rough.

About 10 in the evening, Capt. Samat must have supposed from his dead reckoning that he was in sight of the lighthouse on Rock Island, but the darkness of a rainy and foggy night prevented the rays of light being seen, and, not perceiving a light to guide him, he ordered speed to be slackened. They were then steering N. E., with staysails and the two jibs set, when, at about a quarter past eleven o'clock, a slight shock was felt. The vessel, drawn out of her course by the violent currents of which so little is known, and which surround these Islands, the Captain found himself entangled in the midst of rocks from which it was impossible to extricate himself.

The group of rocks upon which the *Nil* was lost is known to the inhabitants of the coast as Mitsun Ichi\*. It is composed of three principal ones, forming a triangle, of which the base is towards the sea; and in the limit of which all evolutions are impossible to a steamer of the dimensions of the *Nil*. The only means by which the unfortunate steamer could escape was in going astern, or in crossing the line of rocks. At the moment of the shock, Captain Samat, who was upon the bridge, immediately gave the order to go astern, and to take in sail, but scarcely had the engines made one revolution before one of the piston rods broke, so the order could not be executed. However, he was forced at any price whatsoever to extricate himself from his present perilous situation. The steamer, deprived of all help from her engines, could no longer be steered; she had simply become the plaything of a furious sea, and struck with violence against the rocks, the water rushing in at an opening made in the fore part of the hull. The Captain then probably resolved to attempt the only hope of saving his ship, that is to say, by crossing the line of breakers ahead of him, and upon which the wind and the sea were driving him. Perhaps he observed at a short distance on the other side of the rocks a small bay, where he may have hoped his vessel would have run aground, and thus save the lives of the passengers and crew. The Captain ordered the jibs to be run up, the main topsail to be loosed—the main topgallant sail (?) was prepared. Assisted by the sails, and helped also a little by the only engine that was in working order, but which was too feeble of itself to work them astern, the *Nil* forged ahead; but all

efforts were futile, for, in a moment, the vessel found herself upon a rock. It was then that the Captain, seeing the equal impossibility of following out his ideas, and doubtless hoping to await daylight, and thus save the ship and effect a landing under less perilous conditions, gave the order to let go the two anchors and take in sail, but these last orders had not time to be wholly executed.

The apertures in the ship's hull being so considerable, and the hold filling so rapidly, she began to plunge forward, when an enormous wave caused her to slide upon the rock where her stern still touched, and cross the rock; when she immediately went down, bow first.

At the last moment, the two sailors managed to launch a small boat, and thus effected their own rescue.

In view of this almost unhopd for escape, one immediately asks oneself why all the boats were not launched, and one is naturally led to think that by this means—if not all, at least a great number of the unfortunate victims might have been saved.

Is there not, however, room to believe that if only two sailors were enabled to launch a boat and thus save their lives, it might not have been the same, in a general order, when it was a question of embarking nearly a hundred persons in the midst of a furious sea? It is beyond doubt that, in a similar case, (and similar accidents prove it), that there is confusion, the Captain and officers are little if at all listened to, and the violent haste, easily explained under such circumstances, is often the cause of the death of a great number.

The last orders of Capt. Samat seem to prove that he was under the impression that his steamer had run upon a bank; thus the lives of those on board would be for a few hours at least, out of danger; and this seems also to have been the opinion of most of the others, as the deposition of the baker Michel proves.

The two sailors who managed to launch the boat invited Michel to join them, but he refused, thinking the means of escape too critical. He thought, so he declares, "that the ship was then aground, and that all danger for the present had disappeared." These are doubtless the motives which prevented Capt. Samat from attempting this means of rescue, and it was in doing his utmost to save everyone that the loss of all became fatally certain.

This, Mr. Editor, is the only information that it is possible for one to give, upon the circumstances which probably led to the loss of the *Nil*. I say "probable circumstances," for those to whom any responsibility whatsoever could attach, and who alone could throw a light upon the gloomy drama of the night of the 20th March, perished at their post: giving a noble example followed by all on board; struggling courageously with death until the end.

Veuillez agréer, Monsieur, &c.

J. CHAPSAL,

Acting Agent, M. M. Co.

\* The observations made at Cape Idzu are not of a nature to permit us to give the precise position of the rocks upon which the *Nil* was lost. It is only by an examination of the projecting points of the coast that one can approximately determine the position of the wreck. She now lies in 34° 37' N. lat., and 136° 28' E. longitude.

To the Editor of the *Japan Gazette*.

SIR,—What is everybody's business seems to be nobody's business, and we want a well-

paid, active, authorised busy-body, to look after us.

Anyone can refer to the old files of the local papers, and see year, after, year complaints of the same troubles.

Petty official interference.

Mismanagement.

Misery of servants.

Bad roads.

No police.

Filthy streets and filthy people.

We have no building act.

No tax gatherer, (a necessary evil.)

No streets lit.

No honest employees.

Our business spoiled.

Our houses robbed or burned down.

The settlement full of bad characters of both sexes, native and foreign.

And yet all this has been made public year after year.

Now, what we want is a "Working Committee of Public Safety," with certain paid men to devote themselves to the wants of the residents.

And this is how I propose to do it:

Let the Ken Rei (Governor) of Kanagawa, the chief officer of the Sai Ban or Shi Ho (Local Court), each of the Consuls of the Treaty Powers,

A member elected annually by the insurance companies,

A member elected by the land renters,

A member elected by the householders,

A member elected by the registered foreign residents—to form a Board, or Municipal Council; electing from amongst them a permanent Chairman, employing a Secretary—one of the Banks being chosen as Treasurer. This council can appoint, from their own body, committees of not less than three members, to enquire into any matter, or act in special cases, but *no deputies*, especially of the Japanese, be allowed to act.

The Council to advertise for employés, and to receive applications from those seeking employment, and submit the names of those most suitable, to a general public meeting of all voters, to assist in case of fire or other danger.

The details are so obvious that it is unnecessary to occupy space here in enumerating them.

The funds to do all this, and light the settlement, must be raised,—how?—is the great query. The Council, could, no doubt, arrange with the native government to take over certain burdens and responsibilities at a certain fixed sum, say portion of land rent; the Japanese companies and residents would have to subscribe the rest.

We must form a little Republic for mutual aid, and all interests would be represented by the proposed scheme.

We would have public servants who would require to study the public good or lose their place; over whom we had some control, who could help us to guard against fire, see our streets lit and passable, as well as safe to travel at all hours; leave us free from care as to the danger of our property when absent or asleep, who would see that our servants were not unduly interfered with, and that some check was held on this most troublesome class.

We require regulation in everything—some means to attain and retain a respectable class of natives as our employés, to keep the settlement and its surroundings free of bad characters. We require organization and discipline in case of fire or other alarm. We require Gas in the public thoroughfares, watchmen who do not sleep, police who are visible, engines and hose that will work, and water for them—some check on the numerous evils we are surrounded with.

Somebody to have power, and use it, to make us comfortable and comparatively safe.

The persons to be employed are:

First.—A Secretary to the Municipal Directory; a man who has some experience in the country, and who will exert himself for the public good. He will continually be in communication with the Council, and be on the alert at all times for suppression of grievances, misconduct, or matters entailing loss or inconvenience to the residents, and who will act as a public prosecutor; and, of course, properly authorized by the Council.

Second.—Superintendent of Police, who will have full control over the police in the Foreign Settlement, and be responsible to Council for its efficiency.

Superintendent of Fire Brigade, to be responsible for efficiency of engines, firemen; and direct at fires.

Street Inspector, to see after roads, obstructions, nuisances, &c.

The body of electors would form a corps of volunteers and special constables. Who is there to interest themselves in public affairs, as the matter now stands? No credit, and but little result, for the most public-spirited resident.

Hoping the matter does not drop,

I am, yours, &c.,

E. S. D.

To the Editor of the *Japan Gazette*.

TOKIO, JAPAN, April 12th, 1874.

SIR,

A letter appeared in your issue of the 1st instant, in which the administration of the affairs of the Kaitakushi was rather roughly handled, written by a correspondent in Hakodate, signing himself "Matsumai."

There were many statements in that letter which could be mentioned as incorrect, but I wish particularly to notice that portion of the article which had reference to the surveying operations which were commenced in Yezo last year, and which Mr. "Matsumai" in his letter dealt with with the greatest unfairness.

In a previous letter, called in his last "the forty questions," the writer had asked why the surveyors of the Kaitakushi had not commenced a complete preliminary survey of the whole Island. In reply to this, a correspondent of a Japanese paper in Tokio—(a translation of whose letter appeared in the *Gazette*), stated that the survey of the Island had been commenced under my directions. Mr. "Matsumai," in his last, says of this, that a survey such as contemplated is useless, and also insinuates that it has been undertaken only "to give employment for a few years to native and foreign officials." He also calls attention to what he is pleased to style "a step in the right direction," made by a man, a young officer, under the direction of the local Governor of the district in which Hakodate is situated; and clinches his argument by saying that the instruments for the Trigonometrical Survey have not even arrived. I shall notice these statements briefly and in their order, as I think they are calculated to give the public very erroneous ideas of the work, and should therefore not be allowed to pass without remark.

The writer, who, from the style of his composition, is evidently a foreigner, shows, either that he does not know much about surveys in general and this one in particular, or that he does not wish to tell the truth.

The Japanese have now several maps of the Island, made from preliminary native surveys, and some of them pretty good in their way. What is wanted now is a complete and correct map of the Island; and those who are even moderately well informed on such subjects know very well that for this purpose a trigonometrical survey is not only the best, but that

it is the only one which can be employed with accuracy, when the object is to extend the work over a large area of country.

In regard to the necessity or advisability of such a work at present, I think it may be safely said that in that respect it will compare favorably with most of the enterprises undertaken in Japan. The need of accurate maps, not only of Yezo but of the whole of Japan, is too palpable to need further mention. It is something of value and interest not to the Japanese merely but to the public generally, and to all scientific men in all countries. The mere tyro knows that this cannot be accomplished by means of compass and chain with the accuracy required, even when in the hands of well-instructed and practical men; and it certainly does not require much logic to prove that such instruments when used by a young Japanese officer, assisted by two or three students whom he had taught, would produce very unsatisfactory results. Had it been otherwise, the other more laborious system of triangulation would hardly have been devised and adopted to the same extent as in all countries, and nowhere to greater advantage or with finer results than in the United States.

Now, let us see what has been done in the way of surveying in Yezo. I was appointed to this work a year ago. The necessary instruments were ordered, and, pending their arrival, I was employed in finishing the location of the new road to Satpuro, which had been left unfinished at the close of the previous season. This finished, a careful examination of a large portion of the Island was made, in order to collect such data as would enable us to prosecute the work to the greatest advantage, and with the greatest economy of time and money; and to select a location for a base line which would be best suited to the requirements of the case; at the same time collecting much information about the resources of those parts of the Island until then comparatively unknown. By the time this should be accomplished, we expected to receive the instruments necessary to carry on the triangulation, but were unfortunately disappointed in this, as we were unable to procure them in time for the work. In order to lose no time, we undertook some of the local work which should follow the triangulation; and selected the valley of the Ishikari River as the region to be operated in for the season. We were led to this selection by the consideration that this valley is one of the most valuable and important of the whole Island, and yet comparatively unknown. A trip up that river, made early in the year, had shown that this valley was rich in timber and coal, resources which can be most readily utilized; besides this, in much of it, there is a fine soil admirably adapted to cultivation. In order to develop these resources, a thorough survey was necessary. We began work, therefore, at the mouth of that river, in such a manner as to be able to connect with the future triangulation so as to correct the positions, and continued as late as the season would permit. The result is that we have been able to lay down on paper this winter, while we could not be engaged in the field, a pretty accurate representation of this most valuable section of the Island, embracing an area from fifty to sixty miles square; besides having made (by Mr. Day) an important hydrographic survey of the Ishikari, from its mouth to that of the Horomoi, about forty miles above.

I give this information simply for the reason that any one reading Mr. "Matsumai's" letter would be led to suppose that nothing has been done in this direction, except by the young officer near Hakodate with his compass and

chain, "checked by numerous astronomical observations." This last phrase sounds very nicely, but if the instrument used was a sextant, (as I believe to have been the case) I may say that the results would hardly be considered satisfactory (except for a rough reconnaissance) by competent surveyors. To attain even tolerable accuracy in astronomical work requires nicer observations than can be made with the sextant, and, this Spring, the necessary instruments for this purpose, to be used in connection with the triangulation of the Island, will arrive.

In regard to this being a laborious and tedious work, requiring many years to complete it, something should be said. It is, of course, not intended to make a detailed topographical map of the Island, which would be an operation of some years: but a survey—so made as to give the correct position of the coast line, and of important rivers; and which, at the same time, will give the general character of the country—is not such an interminable task as "Mr. Matsumai" would have us believe, even when triangulation is the method employed. And no argument is required to show the value of such a work, or the bearing it will have on the future development of the country. On this point it will be sufficient for me to add, that the work, as proposed, has received the sanction and approval of gentlemen in Japan, as competent to judge of it as any in the country, and as zealous in serving the Japanese Government faithfully as Mr. "Matsumai" would have us believe that he is. But in order to prove the folly of the proposition to make a thorough survey of Yezo, it certainly was not necessary for Mr. "Matsumai" to attack the personal character of those employed on it. Personally, I am ready to say that I do not wish employment of any kind in the Japanese Government for several years to come; and certainly the same could be said of Mr. Day, who has been my associate in this work.

In making the insinuation that he did, that the survey was only thought of to give employment to native and foreign officials, it would have been more polite had Mr. "Matsumai" subscribed his own name to his article, instead of an assumed one; in order that we might know to whom we are indebted for the compliment. By doing so, he would, politeness aside, have given an appearance of truth to his assertion that well-informed people are not inclined always to attach to what is said anonymously, or over an assumed name.

The man who has such deep resources of knowledge has but a doubtful right to deprive a grateful and admiring public of the privilege of knowing and applauding him for the vast mental power which has sustained him in making the researches that must have been necessary before he could have known so much about affairs which perhaps after all don't concern him. He should overcome his modesty (?) and let us know what his real name is. Gentlemen, in making assertions which they know to be true, have no very good reason for concealing their names, and have, certainly no right to do so where they assert things that are injurious to others.

In short, would not Mr. "Matsumai" be willing to put a handle to his statements by giving us his other name?

Mr. "Matsumai" severely stigmatizes the reply lately published, and says "it was not intended to be read in Hakodate." I have the pleasure of informing him that this letter is written for general reading, but more particularly with the view to enlighten him on one or two points about which he seems, with all his vast resources, to be but indifferently well informed.

Taking it is a whole, his attack, though vicious, is weak; and contains many gross mis-statements. One, in reading all of his letters carefully, would almost be led to think that he had some deep-seated personal feeling against the Department. I wonder if it could be possible that he suffers some disappointment from not having been employed in some way in the Kaitakushi? I don't know so well how this may be as I would were I informed of his identity; and only offer the hypothesis because it would seem to partially explain the bitter animosity shown in every paragraph of his letter.

I must ask your pardon for occupying your space to such a great length, and I would not have done so had I not deemed the attack of Mr. "Matsumai" both malicious and unjust.

I will only add, in conclusion, that, having terminated my connection with the Kaitakushi, I expect to be absent temporarily from Japan. On my return, however, I shall hold myself personally responsible for the truth of this letter, every word of which is susceptible of the most rigid proof. To this end, I shall ask you to publish this over my name; by doing which Mr. "Matsumai" will be enabled to apply to the proper person for further information.

I am,

Very Respectfully,

Yours, &c.,

JAS. R. WASSON,

(late) Surveyor-in-chief,

Kaitakushi of Hokaido.

#### TRAINING NOTES.

To the Editor of the Japan Gazette.

DEAR SIR,—The late fine weather having tempted me out of a morning, I am enabled to give you some straightforward and early information as to the doings at the Race Course, now that the training of the ponies has commenced in earnest. It would be a great treat to you, Sir, if you would get up early some morning and walk with me to the Paddock, for the fresh air is delicious, the sight of many old faces lately returned decidedly refreshing, and the appearance of many new ponies most promising for the forthcoming meeting; but, lor' bless you, Sir, you must not imagine I go inside the Paddock—I'm not allowed there, in fact, Sir, but this you must keep a secret. I'm paid to keep away, and there is only one gentleman knows where I am to be found. Not even the MOMBAN can twig my movements, and he is always here, there, and everywhere, with his stop watch, poking and prying his old nose into every ditch round the course.

Of course, the old favorites *Crusader* and *Calabar* have wintered well, but not one of the new ponies comes up to their style of moving; *Chanticleer* requires care, while *Hard Lines* looks dickey on his hind legs.

*Carrots* is much improved in every way, and goes freely. The white griffin is now a fine free-going pony, that's bound to win a long race or two this meeting, provided the Stable do not start *Lingerer*, a pony with a high reputation in China, and one that he is likely to sustain on this course, as he's built for hard work.

*Seismograph* is too fat and goes short, and does not look as if he would stand training. *Loup Garou* is evidently only half fed, whilst *Typhoon* gets too much corn, and not half

enough work. *Genseric* is a ghost of his former greatness.

*Snowball* gets very hard work, but goes as well as ever. *Dibs* is really in magnificent order and looks a finer pony than ever; his being in harness during the winter has brought his muscles out fine. A pony called *Heather Bell* gallops well for a short distance. A chestnut with white stockings, generally in company with *Dibs*, goes a mile and a half in good style, whilst *Tim Whistler*, who is as musical as ever, goes round with a little black China pony that was ridden in a couple of paper hunts, so he's of no account.

*Simoom* frisks his tail about and goes as if he meant winning a race, but it's all show, he's too small; but there's a nice-looking China griffin out of the Camp Stable that canters very prettily. But, of all the ponies, give me *Lodi*—he's perfection, nothing comes up to that beautiful creature, and he's bound to win this meeting. So back him, and put on a few Mexicans for Yours Truly. I won't forget to repay you next month.

Now, that is all about the good ponies; but, goodness gracious me, these Japanese griffins annoy me, for just as I am lying down to take a nap (it don't matter what hour of the day), I am awake by the clatter of horses' hoofs, accompanied by the most fearful language used by the riders. As to the ponies, they ought to remain up-country, carrying pack saddles, and the stewards ought to take notice of the bad language, for it's really disgraceful.

I hope "noble owners" will take a hint from this, and ask their jockeys to control their temper.

You must not expect more now, as the sun is getting high, but believe me to remain,

Yours independ'tly

"THE SNAKE IN THE GRASS."

The Wishing Bridge,  
April 18th, 1874.

### Miscellaneous.

ON THE 8th instant, at 10 o'clock a.m., C. W. Goodwin, Esq., Asst. Judge, H. B. M.'s Supreme Court, who arrived from Hongkong per *Volga* on Monday, took his seat on the bench.

The following members of the bar assembled to receive him: Messrs. J. F. Davidson (Japanese Public Works Department—the Senior Barrister of Yokohama), Gavin P. Ness, Hiram S. Wilkinson (H. B. M.'s Consular Service), J. F. Lowder (Japanese Customs Department), F. W. Marks, G. W. Hill (Legal Adviser to the Sai Bansho), W. W. Cargill (Japanese Govt. Railways and Telegraphs), and Mr. Duncan.

On the Bench with His Honour were His Ex. Sir Harry Parkes, and Russell Robertson Esq., H. B. M.'s Consul.

N. J. Hannen Esq., the Retiring Judge, took his seat amongst the legal gentlemen, and participated in the gratulations to His Lordship.

The gentlemen taking part in the address occupied seats immediately in front of the Bench; the table usually devoted to their use and the witness box having been removed.

Mr. Davidson, (addressing His Lordship) speaking on behalf of the members of the Bar of Yokohama, expressed the cordial feelings which animated them in welcoming His Lordship to the Bench of that Court. Mr. Davidson then expressed in lengthy and highly eulogistic terms, the great respect and regard in which Mr. Hannen was held by the members of the legal profession in the community, and their regret at his approaching departure from among

them. He had almost hoped to have seen Mr. Hannen on the Bench by the side of His Lordship, but he had elected to take his place amongst them, that he might join in the welcome they now had the honour of tendering him. After the many years Mr. Hannen had so ably and judiciously presided over them, they parted from him with regret, but, in leaving Japan, he might rest assured that he carried away with him the best wishes of everyone.

Mr. Davidson concluded by bidding His Lordship welcome, in the name of the Bar of Yokohama.

His Lordship, in reply, addressing Mr. Davidson and the Gentlemen of the Bar, thanked them for the good opinions they had just expressed, and hoped that the good feeling might continue and increase, and that when it came to his turn to vacate the seat he occupied, the same feelings might exist which had just been expressed for Mr. Hannen.

This concluded the ceremony, and the gentlemen of the Bar took their leave.

THE FOLLOWING information respecting the anticipated movements of war vessels on this station may be relied upon as authentic:

THE U. S. S. *Hartford*, Capt Colhoun, the Flag-ship of the China Station, left Hongkong for Yokohama on the 10th inst., and may be looked for about the 24th or 25th current. She comes up to receive the new Admiral, who is expected here by the next Pacific Mail, due on the 27th. The *Kearsage* is also on her way hither, from San Francisco: which port she left on 10th March. The *Tuscarora*, the vessel engaged in deep-sea soundings in the North Pacific, may arrive at any moment, and will prove an interesting visitor. The *Saco* has received orders to prepare for sea, and the *Ashuelot* will go to China.

British vessels will move as follows:—

The *Iron Duke* will be here at the end of the present month, to go into dock at Yokoska with the spring tides, early in May. The Admiral's flag, now flying in the *Frolic*, will be transferred at Shanghai to the *Cadmus*, which will reach us next month. The *Thalia* will be here late in May, to remain as Senior Naval Officer. The *Modeste* is on her way out. The *Charybdis* is now probably at Singapore, as Senior Naval Officer there. The *Thistle* leaves for Kobe on Saturday next. The *Ringdove* remains here.

Folk who are complaining of dullness in the Settlement may now look forward to a somewhat livelier time; especially with the Athletic Sports, the Regatta, and the Races looming ahead.

We regret to have to announce the death of Mr. Richard B. Baker, Manager of the Chartered Mercantile Bank, who expired shortly after 6 last night (14th inst.), after a somewhat lengthy and painful illness. The deceased gentleman was universally liked, and his death, which was not altogether unexpected, will leave a gap in our community not easily to be filled. The remains were conveyed to their last resting place at 5 o'clock this evening; followed by all our prominent citizens, notwithstanding the inclemency of the weather, on foot.

THE Japanese steamer *Chilli* arrived this morning from the South, having on board Prince Satsuma and a large number of soldiers. She proceeded to Shinagawa at 9 a.m. The prince and several of his kera took the train for Tokei.

WE HAVE received from L' Abbe Evrard the first part of a work entitled *Cours de Langue Japonaise, en Soixante Leçons*, the second portion of which is now in preparation and will shortly be ready for issue.

The method adopted in the construction of the treatise seems to be somewhat novel, and is evidently calculated to impart a thorough grounding in the principles of the Japanese language. Each of the thirty lessons contained in this portion of the work has an example in Japanese, with a literal and general translation, exercises in phraseology, and a grammatical analysis, critical and explanatory. There is, besides, a vocabulary of words used in the body of the work, and a concise table of the conjugations of verbs.

The work evinces great care and pains in its compilation, and is an acceptable addition to the list of manuals in the French language on the study of Japanese. It is issued from the press of *L' Echo du Japon*, and is a creditable specimen of the typographic art. The price is \$3.50.

THE P. M. S. S. *Colorado*, which leaves us to-day for San Francisco, bears away many whose names are not unfamiliar to the people of Yokohama. But amongst those there is one whose departure will be observed with regret by all classes of the community. Captain Geo. E. Lane, who has for so many years been identified with the Pacific Mail Co.'s interests at this port, carries away with him the hearty good wishes of everyone, high and low, and we feel sure that we shall be upheld by the voice of public opinion when we say that it would be difficult—and perhaps impossible—to find one single individual in this country who could say, *honestly*, other than a good word for him. Good deeds are doubly good when done to those who can hold out no hope of reward, and if these valedictory words should chance to meet the eyes of those in other lands who have cause to bless the genial-hearted yet unobtrusive kindness which, perhaps at a dire extremity, enabled them, at the hands of Capt. Lane, to become new men and again look the whole world in the face, we fear not that they will join with us in re-echoing the words of the great bard, "We could have better spared a better man."

CAPTAIN BROWN, late of the *Thabor*, was presented, on Friday last (10th inst.), to His Majesty the Mikado, who addressed him in a few complimentary words, on the occasion of his approaching departure with the Taiwan Expedition, and presented him with a handsome testimonial.

THE *New York* is actively engaged in taking in supplies for the Formosan expedition—Japanese chow-chow of every sort, bottled ale, iron huts, and munitions of war of all descriptions, including a number of shells. Amongst her cargo is a quantity of firewood, in the ordinary small bundles; in all, some two or three hundred tons. What it is intended for seems to be a mystery to all except those ordering its shipment.

THERE HAVE been several noted arrivals lately. They are mosquitos of a size and weight which show that their musical and mechanical powers are in no way diminished by a winter's fast. A busy season seems to open before them. They will doubtless be followed in due time by their brown-backed cousins, for which this country is so noted.

A REMARKABLE instance of tenacity to life has just been related to us. Yesterday afternoon (12th), a snake about 5 feet long, being under the impression, no doubt, from the close and sultry state of the weather, that Spring had arrived, emerged from his lair, situated some short distance in the country, and repaired to the nearest temperance establishment to celebrate the event by a drink. Just as he was about to dip his head into a pond, however, a member of the police force who happened to be around, went for him, and took him in charge: if not for being drunk, perhaps for being incapable—of taking care of himself. Duly conveyed to the police station in a handkerchief,—indulging in sundry cheerful gyrations on the way thither—he was persuaded to take possession of a capacious pickle bottle, which had been provided for his accommodation; which he did without any unnecessary fuss. Now comes the improbable part of the story. Into the bottle where he lay ensconced was poured the greater part of a “square-face” of—we were going to say *gin*—of what Jack Ashore generally indulges in, under the impression that it is *gin*, or perhaps brandy, but which is known to the initiate as “chain-lightning,” “tangle-foot,” “long-range,” and by sundry other names of a suggestive character.

Now, it is a fact well-known to all who have any cognizance of police court matters, that two glasses of any such infernal compound are sufficient to turn over Jack, for the time being, as dead as a herring, and to render him totally oblivious to all his surroundings, until he finds himself in the somewhat circumscribed lodgings provided by the police authorities. And yet this simple-minded snake, just emerged from a dormant state, and presumably unaccustomed to anything stronger than cold water, after being immersed in a sufficiency of fire-water to kill, say, one watch of a ship's company, struggled about for 4 or 5 hours (notwithstanding the fact that he had already been, it was supposed, effectually scotched) before he would pass in his checks, and retire to the happy hunting grounds of the *reptilia* family!

Can the Temperance Hall folk, or any one else, explain the mysterious fact?

Seriously, though,—apropos of this story—something ought to be done to stop the traffic in the nefarious compounds sold to unsuspecting (and perhaps reckless) seamen and others, whose lives not infrequently, although perhaps not immediately, pay forfeit for their excessive indulgence in these devilish mixtures.

*Per Contra*, we take the following from *L'Echo du Japon*:—

The report runs in Tokio that a complete transformation is about to take place in the Corea. The new Sovereign has decided upon adopting a liberal policy, to open the country to Europeans, and to allow them the free exercise of their religion. Already the dowager queen, who sometime ago was converted to Christianity, has obtained the dismissal of the old king's ministers, who had persuaded him to give orders for the assassination of the French Missionaries in 1866; and Mgr. Ridel, Bishop of Corea, who miraculously escaped into Mantchouria with two of his priests, is once again preparing to take charge of his dangerous diocese.

This good news, it appears, has created a sensation very easy to understand in all official circles. The actual ministers of government—who are so desirous of bringing to a happy termination the treaties which will at length open the country to foreigners, but whose good intentions are paralysed through fear of the

To-djin—will not fail to make use of this circumstance to bring their opponents to reason, and, as, after all, the Japanese are not deprived of good sense, they will easily understand that they can no longer persist in living apart, “and outside of the common right.”

For sometime past, foreigners have been allowed in China, and missionaries are permitted to preach the Gospel. Yesterday, Tonquin opened her gates: to-day it is the turn of the Corea; to-morrow Japan will hasten to follow that example, and will perhaps regret that they allowed themselves to be forestalled by those people whom they are pleased to regard as savages, but who at this moment are giving them a lesson that they were very far from expecting. If the Ministers of the Mikado do not hasten to inspire those who surround them with the liberal ideas they themselves are animated with, they will perhaps have the pain of giving to the world, and at no distant time either, the spectacle of the Corea and Tonquin uniting with the western powers to compel Japan, in the name of civilization, to open its gates to foreigners.

THE “Mysteries of Japan,” would not be an unattractive title for a book, if we could only get such an author as Eugène Sue to undertake it. It would require a good deal of his powerful imagination perhaps to make it interesting; but the title and his name would assuredly make it sell. To the very best friends of Japan, everything connected with her policy is wondrously mysterious, and at the present time it appears to be even more so than ever. Is it not remarkable that such an expedition as that now being prepared for Formosa should be a fact, and yet the government be unwilling to give even the foreign representatives any precise information of their real intentions? Suppose England were to fit out an expedition on an unwonted scale, avowedly for aggressive purposes on any small island in the Atlantic—say Madeira. Would the other powers be satisfied with the assurance that no hostilities were intended against Portugal or any other state? They would say naturally enough:—“We cannot trust you. Nations don't fit out such expeditions for nothing. Satisfy us by telling us of your real objects, and if we are not prejudiced thereby, you may take your own way; otherwise we must fit out expeditions to watch you, and see that your designs are as peaceable as you say they are.” No European Power could make such preparations as Japan is now making, without being called upon for explanations.

The last light that has been thrown upon the Formosan Expedition, is, that it is made, with a view to colonization. This is seriously stated, absurd as it appears to be. The government, however, still rests in its silence. And this only adds another modicum to the mystery in which the whole affair is enwrapped.

That the government attaches the greatest importance to the expedition is but natural. It is the first foreign enterprise in which their forces have been engaged for centuries; and, of course, they are fascinated with it. General Le Gendre, who has been the principal adviser as to Formosa, accompanies the expedition. He was presented to the Mikado yesterday, as we learn from Yedo to-day, when His Majesty presented him with a sword hitherto worn by himself. This is not merely a high honour, but all who know anything of the ancient customs of Japan, will recognise in it a very significant gift.

DURING the breeze early this morning (18th), the Japanese man-of-war *Skuba-Kan* (late *Malacca*) dragged her moorings and went ashore on the break-water at Yokoska. She is now lying with her stern high out of the water, and as the tide recedes will be quite dry.

THE BLUFF robbers, who seem to have been lying quiet for awhile, have again got into harness, and, this time, have selected a particularly quite spot for their little games.

In the early morning of Thursday last, (9th) probably about 3 o'clock, the burglars managed to effect an entrance, without noise, into the house of Mr. F. Perregaux, who resides at No. 168 Bluff. Their operations were confined to the bedroom of that gentleman, and a clean sweep of everything portable seems to have been made. The following is an abbreviated catalogue of the articles “annexed”: 1 barometer, 1 clock, books, table-cover, clothes, boots, hats, a bunch of keys, and a gold watch and chain which were lying on a table close to a night-light. The watch had the name of the owner engraved within the case. The total value of the goods stolen is estimated at \$200.

It seems evident that the thieves were perfectly acquainted with the different parts of the premises and the habits of the proprietor. A reward of \$50 has been offered by the despoiled gentleman, as a stimulus to the energies of the police; we fancy he may do so with little fear of its being claimed.

There seems to be a general opinion that in these cases house servants and the *monban*, could, if they would, say a good deal on the matter.

How is this for sensation?

Last night, at Hegt's Brewery, No. 68 Bluff, some evil-disposed animal or animals broke into the pigsty, the doors of which were of good, strong iron boards, and converted into pork four pigs. Two were completely eaten; the remains of the other two only were left.

Tracks of some animal with large paws, (four inches in diameter,) are plainly to be seen on the ground, and marks of its fore paws are on the top of the door, four feet above.

It seems evident that the animal could not have been a dog, for although there are some pretty large brutes—more of the wolf than the dog—on the rampage at night, we have not as yet heard of one with paws a third of a foot wide. Our informant, whose veracity is not to be questioned, surmises that it might have been a bear. But where could he have come from? We certainly observed a large black one exposed for sale in a wooden cage near the gas works, lately, but he could hardly have travelled all the way up to the Bluff without being taken in charge. It seems evident that the “baste” is endowed with bibulous proclivities.

THE NATIVE police have donned their new caps to-day. They differ but little from those worn by the European constables; the band of scarlet being narrower, and the peak being hollowed instead of following the usual “cheese-cutter” type.

No doubt they will prove to be much more serviceable than the old reversed-saucer pattern, which was sadly in the way when a scuffle eventuated; but they will hardly afford the same protection from sun and rain.

They, however, give the men a much smarter appearance.

ON THE 30th March, a policeman named Takagawa stabbed one of his officers, and killed him. To this day he has not given a reason for the fatal act.

THE THREE-masted schooner *Jessie McDonald*, when off Oosima on her passage to this port from Takow, on 4th April, at about 7 p.m., fell in with a Japanese boat (containing three men) which had been blown off the coast. There was a strong, fair wind blowing.

The men all jumped on board, letting their boat drift astern. Some of the schooner's crew tried to secure the boat, but were unable to do so, owing to the way the schooner was making.

Capt. Seivewright, not liking to take the men too far from their homes, shortened sail and stood close in-shore until daylight, when he landed them, much to their delight. By their expressions and conversation, of which scarcely a word was intelligible to any on board the schooner, they seemed to thank the Captain, and to regret that his kindness to them had detained his ship so long, when a fair wind favored.

It was reported in Tokei yesterday (20th inst.) that the Formosa expedition is to be recalled.

We did not notice it in our last night's issue, because we are not sure that a decision has actually been come to. But that, even, at this thirteenth hour (for some of the expedition has actually left), reconsideration has shewn the government the utter folly of the affair, is undoubtedly true; and they are trying to find a way out of it.

WHATEVER information can be gleaned from the interior may be useful. The following extract from a letter is worth insertion:—

CHOSHI, at the mouth of the Tonegawa, is a town of about 50,000 inhabitants. There are no manufactures worth mentioning. Most of the goods sold there are brought from Yedo, over a hundred miles, by the river Tonegawa. About this season a good trade is done in the Iwashi fishing, a great number of men being employed in the boats. These fish are caught in large quantities, and are used for the oil that is extracted from them, the refuse being sold to the farmers for manure.

Pigs are at a discount; they are to be had for the taking away. Some time ago they brought a very high price. At present food is scarce and dear; what a pity—and so much good land lying waste! Some have driven them into the woods, and future ages may reap the benefit: as the poor emigrant in New Zealand has often appeased his hunger with some of the descendants of Captain Cook's stock.

This place has been visited by some members of the Agricultural Commission. I hear of no good being done yet through it.

A little over two miles from here is Inaboye Lighthouse, which is drawing near completion. The tower is 90 feet in height, built with brick, and granite capital. The material is all landed at Choshi, then transported over to the station in rudely constructed waggons, as there is no means of landing anything nearer on account of the continual swell setting in, and the rock-bound coast. I am told, with the exception of the stone, brick, and wood, every other thing in connection with the erection and maintenance of the Light will have to be brought by river *via* Yedo, a distance of from 15 to 20 days. In fact, barring a small steamer built on the Yokohama Creek, and plying on the river between here and Kurashi, a distance of 50 miles, everything is in a most primitive state.

A TOKIO newspaper gives in one paragraph an account of three pairs of lovers who in various ways committed suicide during the week past.

A PAIR of lovers committed suicide in a cemetery in Tokio recently. Takijiro, the brother of a merchant in Yedo, aged 33 years, and a married woman named T'sna, aged 60 years, at 4 o'clock in the morning of the 2nd inst., terminated their existence by stabbing; "as two lovers," the native paper says.

When the pair were discovered, the woman was dead, and although the man is yet alive, he is said to be wounded beyond hope of recovery.

A JAPANESE girl committed suicide last evening about 8 o'clock, by jumping down a well in Honcho Dori. A quarrel with her lover, who resides in Homura, is assigned as the cause.

Similar cases have been very frequent of late, arguing a sort of epidemic amongst lovers. It is to be hoped it will not spread amongst those of the European community.

ON THE 26th March, the bodies of a man about 20 years of age and a girl of about 18 were taken out of the river in front of the temple of Mimeguri Inari, Mukojima. They were tied together by a long white cotton cloth twisted round their waists. This is a very ancient method of departing this life adopted in Japan by infatuated lovers. The girl had about her person the name of the house she belonged to, proving her to have been "one more unfortunate." She also had the wooden *fula* with the name of Matsmoto Taki upon it.

THE *Yokshire* proceeds no further than Nagasaki, and will not go on to Formosa as originally supposed.

THE SHOPS in which mosquito-nets are sold are preparing for a brisk campaign, and from various other indications, a lively summer is before us. It is sometimes complained of that the birds of Japan do not sing; this deficiency is made good, however, by the lively insects for whose reception the net-makers are preparing to protect us. Some of the advance guard of the coming host are now around, collecting bills. They have considerably greater success than the ordinary duns, probably because, to their superior number of feet is added a pair of lively wings.

THE JAPANESE press, which appears to have exhausted its power in belabouring the samurai class, seems now to be taking up the cudgels against native physicians. Several articles have recently appeared in the native newspapers, holding up native physicians of the old school to ridicule. In one or two, the object seems to be to show the vast advantage of the foreign methods of cure, and to prove the general advantage of the new over the old systems of medicine and pathology. In the other cases a lack of game for the editorial arrows to be shot at seems to be the chief cause of this crusade against a harmless (?) class of men.

THE OFFICERS of the various native police stations in and around Yokohama have been changed, and it is intended, it is said, to continue the transfer of them from one station to another every month; probably with the view of making them thoroughly acquainted with each portion of the settlement.

ON WEDNESDAY (15th), a Buddhist idol representing Dōriu-Sama was brought from Tokio, and placed with great ceremonies in the temple of Fudo-Sama at O-ota, Yokohama. It is to be exposed to the public gaze in a few days, when a performance similar to that gone through in Tokio recently will be given. Dōriu-Sama drew crowded houses in the Capital.

ON THURSDAY afternoon (9th inst.) the Empress held a levee and pleasure party at En Rio Kan, formerly called Hama Goten. It was attended exclusively by Japanese ladies of noble rank, most of them being members of the Kuzoku families, kugés' and daimios' wives and daughters. A very pleasant afternoon was spent, but as no reporters were allowed to be present we can give no details.

EVERY ONE who has visited a large Buddhist temple must have noticed the two hideous demons which stand in the gate-hall before the main temple. One is red, and the other green. In them the Asiatic delight in ugliness seems to have reached its climax of excellence. Exposure to the weather for ten or twenty years seems to add fresh wonders of hideousness to their peeled and cracked surface. These fellows are called Niō, or "the two kings." Two of them that have long done duty as sentinels before the temple of E Ko In, near Riogoku-bashi in Tokio, have recently been put on the retired list, and a couple of new demons, after a great procession and pow-wow, have taken their places. Alas for the old Niō! They have been sold at auction, and have been purchased by a bath-house keeper, who will use their once holy timber to heat the water with which the local public will parboil themselves. From their excessively ugly and suggestive appearance, their wooden carcasses ought to give an unusual heat, and be very profitable to the irreverent buyer of old gods and worn-out demons.

WE HAVE sad news to tell. Yeto Shimpei, who, until October last, was a Sangi and the Minister of Justice, has been beheaded with Shima Danyemon, and ten other leaders in the late Saga rebellion. The heads of the two former were exposed to the public, but not the heads of the latter.

Yeto has suffered for his impatience. He had good cause to be annoyed with the government, inasmuch as judgments given by the judges were rendered nugatory by the absurd doctrine raised by the Okurasho and supported by the government, that a certain delinquent of the Department, who had been brought up from Osaka by order of the Judicial Department, tried and condemned to punishment, was not subject to the Judicial, but only to his own, Department. This, as our readers will remember, led to the indignant resignation of several of the judicial officers.

Yeto was a strong advocate for the representative parliament, and was one of those who signed the Memorial. Had he been content to wait until it was established in a constitutional manner, like his colleagues, he might be alive now.

A JAPANESE newspaper sighs over the superstition of the people. At Takasaki in Awa, a man had a stone fall on his foot and partially crush it. He had a spring in his ground, into the water of which he plunged his injured limb, and kept up this rough kind of cold-water cure until his foot got well. The neighbours, hearing of it, supposed that the cure must have been wrought by some wonderful medicinal qualities of the spring, or the presence and active intervention of a god. The man took advantage of this belief, and failed not to give out that his cure had been miraculous. The consequence is that his spring became a kind of gold mine to him. We wonder whether the grieving editor regrets most the superstition of the people, or that such a golden opportunity has not happened to himself.

SO FAR, the gang (or gangs) of burglars who have driven such lucrative business in this neighbourhood seem to have been some what diffident about trying their hands within the bounds of the settlement; the robberies which have taken place in its immediate vicinity partaking more, as a rule, of the character of larcenies by native servants.

In order to vary things, however, and render the business of burglary somewhat less monotonous, the Professors, who have hitherto mainly confined their operations to the Bluff, have extended their field of operations, and paid Yokohama the compliment of a visit to its very centre. It is evident that the gentlemen referred to are no novices at their business. They seem to know exactly where to go, when to go, and how to go to work with little or no fear of discovery. Last night (14th inst.), everything seeming to be propitious, and their plans being no doubt well laid, they paid a visit to Messrs. W. Watson & Co. of No. 82, and notwithstanding the fact that the house has been but newly opened here, they accorded them their patronage, and took delivery of 5 lengths of valuable silk, measuring in all about 230 yards. The particulars of the goods taken are these: 4 lengths were of black silk, 2 had a white and 2 a purple edge, and the remaining length was a very handsome dress silk, with bouquets of bright colored flowers.

The rascals succeeded in gaining an entrance into the store by cutting out the lower panel of the back door.

The matter is in the hands of the police, who will no doubt do all they can to recover the stolen property, which must be of some considerable value. Judging from past experience of similar affairs, we fear but slender hopes can be entertained of anything being heard of it.

Such cases as we now have occasion to chronicle naturally bring up the old question, "Where are the police?" The Japanese police are around, it is true, and (perhaps) do their duty—to the best of their ability. The Municipal police (Foreign) are also around—somewhat—but, as things obtain at present, its members not being ubiquitous, it is hardly to be wondered at that robberies do occur. Just now, during the eight hours of night, when thieves and rowdies hold high holiday, there is just one European constable on duty in the whole of the Settlement. As his watchword cannot, unfortunately, be *hic et ubique*, the fraternity of villians of course have the game to themselves. Formerly, the Municipal police force consisted of 6 members each of English, French, and Chinese. The French quota is now reduced to one, and the Chinese to two. What the state of affairs amongst us will be when the expected war vessels arrive, and Jack Ashore gets more than an allowance of Yokohama firewater aboard, may be "better imagined than described." Manifestly, one man, unassisted, will be totally unable to cope with a *posse* of powerful men, frenzied by draughts of liquid poison.

MOTENO KOJI and Yama-Oka, two kuges, have been sent to Kagoshima by steamer, to convey the Emperor's thanks to Shimadzu Saburo.

ON THE 31st ulto., the coolies engaged in digging at Sakurada gate, Tokei, came upon a little store of nineteen golden Kobangs, which had evidently been buried there "long, long ago, long ago."

A WHALE fishery has at length been established on the coast of Kaga, north-west of Japan. The former Daimio was desirous of adding to his wealth and that of his people by fitting out whaling boats, but with all his power, wealth, and influence, he found it was impossible. The people worshipped the whale as a god; and they thought that whoever should catch a whale would incur the displeasure of the deity. The daimio even engaged men accustomed to whaling elsewhere to teach his own subjects. But the fear of the god was greater than the fear of their lord; and the attempt was abandoned. Late-ly, one of the men of Ishikawa Ken, named Kawanamu Yudo, who had been brooding over the subject for some time, managed to get two or three men to try their hand with him; and, on the 2nd of March last, they succeeded in capturing a large mammal, by which they made the pretty little haul of 2,000 rios. This has had a very practical effect. A company has already been formed; and Kaga and Noto will have a valuable product of the sea added to the resources of their district.

ALL THE Ken are ordered to report what pasture land belonging to government exists within their several limits. This looks like an intention of making use of them for cattle and sheep. Indeed, a return is also to be sent in of the number of cattle and horses in each Ken.

A POLICEMAN in Tokei has obtained great praise for rushing in among the crowd who were carrying the car in which the idol Kwanon of Shibayama was being taken to Kiyogoku. The way in which this kind of thing is done is well known—the crowd being divided between those who support the car, and those who attempt to overthrow it; and it may well be supposed that a child 7 or 8 years old getting into such a crowd would fare badly. Such a misfortune happened to a little creature, on this occasion, when the policeman seeing the danger it was in, being thrown down and trampled on by the thoughtless revellers (for they are nothing else) managed by almost superhuman exertions to create a pause and to extricate the child—much damaged, but still alive. It turned out to be the child of a well known embroiderer, Motoji, who lives in Kaji-cho-ichomé; who was as anxious as he was able to reward the deliverer.

On the same day twelve children were lost in the city. And the next day, when the car of Shaka arrived in Tokei from Kioto, and passed through the streets to Asakusa, eleven children were lost. It is always more or less the case on the occasion of these crowds that children get astray. They are generally recovered, though, by the agency of the police.

A WOMAN was attacked in the streets of Tokei a few evenings back, and received a severe stab with some sharp instrument. She rushed to a doctor to get her wound dressed, but he flatly refused to do anything for her, unless she came with a proper "go-between." The poor thing in her distress went to the police station, and a man was sent with her to the chururgeon, who expressed himself satisfied, and did the needful. A queer kind of humanity, it seems.

TOKUDAIJI DAINAGON and Yamaoka Jijubanchō have left Yokohama for Hongkong, on the business of the Formosa expedition. Troops were expected to leave yesterday for the rendezvous.

TOKIO is all-glorious with cherry-blossoms. On the new boulevards at Ueno, and many other places, the trees are clothed in clouds of bloom; but the place *par excellence* to see cherry-blossoms is Mukojima, which is on the east bank of the Sumidagawa, and is easily reached by passing over the Riogoku or Adzuma bridge. Every one should see this splendid sight at least once. The present is the best time to go.

How much dependence is to be placed on official information in Japan is a problem yet to be solved. A native paper publishes, yesterday, intelligence received from a quarter which ought to be well-informed; and which ought to be careful not to mislead the public. It will be seen that the information is similar to that originally published by us:—

"It is reported that, in a few days, an expedition consisting of 15,000 men and five ships of war, under the command of Arisugawa No Miya, will be sent against Taiwan (Formosa)."

We believe our later report is much more to be relied upon. But, as the troops proposed for the service are some of those who have lately been employed in Saga, there is some uncertainty whether it will be well to take them all away from Kiusiu just yet. Certain ships belonging to the native companies have been ordered to go south to receive troops, and the old *Bahama* leaves Yedo to-day for this purpose. Our belief is, however, that the whole affair is in a very nebulous condition; and that whatever is done will be guided by circumstances, as chance rather than any well desired plan may dictate.

"ONE HALF of the world knows not how the other half lives." On the 26th of March a policeman saved a woman from self-destruction, the poor creature giving the following statement at the police office: "My husband and I are both old. We live at Asakusa. By the hardest labour we can do we only earn between us about *three quarters* of a *bu* a month. We reverence Kuanon-sama, and, on the 24th March, when the image of Kuanon (Goddess of Mercy) arrived in Tokei, I went out to receive it, with many neighbours; and I took *three quarters*, a month's earnings, with me. This I spent foolishly in eating and drinking; and so, feeling vexed with myself, and ashamed to meet my husband, I thought the best thing for me was to die."

Melancholy as the story is, the account in the *Nisshin Shinjishi* has this "rider"; (for no report can be given by a Japanese reporter without some moral reflection):—"She was helped by the kindness of Heaven, and sent safely home by the police!"

THERE is a reaction at Osaka in the matter of dressing the hair. A hair-dresser complains that, according to government order, he is acting illegally if he dresses hair in the old Japanese style; but as most of the people to whom he looks for custom insist upon it he wishes to know what is right for him to do—to obey his customers and live on the fat of the land, or, to obey the government and starve? He goes into statistics, and says that, in certain streets of Osaka, out of 623 men, no less than 565 have gone back to the old fashion, "the new style having melted away like foam", within the last six months. Yet no one reproves them—"not even the officers who put their seals to the notification." So much for government interference with the domestic habits of the people!

THE BRIDGE which has for some time been under construction over the river Abé, at Tsuruga, was opened on the 24th March. The Abé is one of the most rapid streams that cross the Tokaido; and the want of a bridge, though always severely felt by travellers from Yedo to Osaka or Kioto, has never until now induced the government to build one. Like most of such works in Japan, this bridge was built through the energy of one man, who took the matter up warmly, and added another proof of the adage that applies to so many undertakings—"It only wants someone to begin." Miyazaki Sogo, an inhabitant of Tsuruga, laid a formal complaint and petition before the authorities of Shidzuoka Ken, and offered to exert himself in its construction. In what way he so exerted himself we are not informed; but the result is that the bridge, 1800 feet long by 12 wide, is finished, and is now at the service of the public. The old custom in Japan, that an old person should cross a new bridge first, was not forgotten. The idea is that the bridge shall last as long as his years. On this occasion, it should seem that a very old person was unavailable, as a man 62 years of age, and his wife 57, were selected. They were followed by their son, with his wife and their grandson. After them came the officials and the multitude, and the day was given up to enjoyment. And so another improvement is added to the numerous ones upon the highways and byways of Japan.

ALL THE past week, Ooyono has been lovely with the cherry blossom, which gives the appearance of the trees being covered with snow. The visitors, therefore, have been very numerous, and it is a complete holiday scene. Singing and dancing and all kinds of amusements are going on under the trees, and all seems "merry as a marriage bell." Asaku-yama is also bursting into beauty, and Mukojima is beginning to attract its myriads. A few days will see the river's bank at Mukojima one mass of blossom, the avenue of cherry trees skirting the water being about a mile long. It is a very pleasant sight; though, as yet, the weather is hardly warm enough for enjoyment.

THE GOVERNMENT has resolved not to extend any further, in Yeso, the operations of Kaitakushi. They will merely continue to hold the colony together until it has a fair trial; and if the colonists find that they can "make it pay," they will not be neglected; but that is all. There is a talk of putting 6,000 soldiers in Yeso, to hold it against any descent that Russia might be disposed to make. And a garrison of 2,000 soldiers is proposed for Saghalien. Altogether the government does not lie, just now, on a bed of roses.

SAIGO, WHOSE appointment to the command of the Formosan expedition, we have already mentioned, left Yokohama on the 9th instant in the man-of-war *Nisshin Kuan*, with a large suite of military officers. His present destination is Kumamoto, in Higo. A man-of-war was despatched on the 7th instant from Yedo, and up to this time about 1,000 troops have gone from the capital. It is reported that these, united with the troops who were recently engaged in crushing the rebellion in Saga, and with the imperial troops now in Kumamoto, will form the expedition.

A Department of Taiwan affairs has been established.

THE SURVEY for the laying of gas-pipes from Shimbashi to Suzikai commenced on Wednesday last, the 8th instant. The gas-works are being very rapidly proceeded with.

FROM HAMADA KEN we hear of several rather sharp shocks of earthquake. Four occurred in one day, producing much alarm among the inhabitants.

THE IRON bridge Yojo in Kioto having been completed, it was opened on the 1st of this month. After a little preliminary ceremony, several hundred geishas (singing girls) made a long and beautiful procession, and they were followed by the students, male and female, of some of the public schools. It seems to have been quite a festival day, but we do not see anything about the "oldest inhabitant" on this occasion, as is usual at the opening of bridges in Japan.

LAST November, a fire occurred at Riyo-goku in which premises of Murakami Gohei, the Cho Yakunin were destroyed, and a godown belonging to a woman named Hashimoto Yone (in whose dwelling house the fire originated) escaped. Shortly after Yone sold her godown for 400 yen, and went to Gohei to get him to put his official stamp to the documents of sale and transfer. Gohei at first refused; and subsequently offered her 250 yen for the godown for himself. She declined, and was told that, in that case she must pay 200 yen for the stamp. She offered to pay 25 rios rather than have any difficulty; but he held out, and at length succeeded in mulcting her of 100 rios. The money was paid, the seal affixed, and the sale was completed. But the end of the transaction was not yet seen. By some means or other, the matter became known to government, and Gohei was called up to explain his part in the matters? He has now been adjudged to spend the next five years in laborious employment for the benefit of his country.

THE EXPEDITION destined for the subjugation of the wild tribes of Formosa,—men-of-war, tugs and tenders—is expected to get under weigh on Wednesday next. The fleet will rendezvous either at Foochow or Amoy.

The P. M. S. S. *New York* is chartered to convey troops, in addition to the British str. *Yorkshire*, and other vessels of the National Mail S. S. Co. of Nippon; now engaged in embarking stores and munitions of war.

ON THE 4th instant, Saigo Judo was appointed Chūjo, the general second in command of the army, still retaining the position of Taiyu (second in rank) of the Army Department. On the 5th instant he was appointed to the command of the Formosan campaign. Several officers have also received appointments under him, some of whom are expected to leave on the 12th, and some on the 22nd instant.

ON THE 2nd instant, as Riki, the daughter of a barber, Hatchobori, Tokei, was spreading out some clothes to dry, a fellow who resides in the same street, came behind her, and made a stab at her face. The wound extended from the forehead, down the cheek, and into the mouth. The wound is not a mortal one; but, of course, the poor girl is disfigured for life. The assailant went direct to the police station and gave himself up.

A NEW shrine was recently established in Fukagawa in Tokio. The people in the neighborhood turned out *en masse*, carrying stores and dirt in their hands to make a mound. Hundreds of singing girls were out on the occasion, dressed in fine clothes, powder, and hair pins, and added to the attractions by some vigorous bawling.

THE *Osaka Shimbun* says, that, on the 17th March, the steamer *Ichu-Maru*, which plies on Lake Biwa, started from Oura in Omi, with passengers on board, and also towing several boats with about 70 more passengers. A storm came on, the snow rendering it impossible to see the last of the boats, and the gusts of wind placing all in great danger. The steamer and the boats parted company, and great apprehensions were felt for the safety of the latter. As the snow ceased, a "life-boat" from Funaki put off and assisted them in, but one of the passengers is missing.

The editor complains of the carelessness of the people connected with the steamers on the lake; and says they act as if they had charge of a box of dolls, instead of passenger steamers.

ALL THE materials of the Castles of Koga and Seki-yado, in Chiba Ken, are to be sold by public tender.

THE TAXES collected from the singing and dancing girls, and on rabbits (what a queer mixture!) during last month, amounting to 6,515 yen, are appropriated to the Yo-ikuin, the establishment for foundlings.

A FIRE recently broke out at Nitta, Rikuzen, which destroyed 221 houses, of which no less than 197 belonged to poor people, of whom many died from starvation. A contribution of 225 yen was at once sent by Ono-gumi, but even that went but a small way in such a calamity.

AN INTIMATION has been given that, as many murders and fires had been caused by madmen, such people must be carefully watched by their relatives, and any accidents arising from their being at large without a proper watch over them would be followed by the punishment of those whose duty it is to look after them.

THE Police Department has issued instructions to the policemen, to prevent any crowding around foreigners when they stop at shops to make purchases or are walking in the streets. The officers of the various Cho are also ordered to warn their people against this practice.

KODAMA JUNICHERO, who studied law in America, and recently distinguished himself in conducting the case of Mitatana Sankuro (the great oil hypothecation case) successfully, has been induced to enter the service of the government, at the salary of seventy yen *per mensem*.

DURING THE late very wet weather, no less than three fires in Tokei were caused by the rain penetrating into houses in which quicklime was stored, and slaking the lime, producing heat sufficient to ignite the adjacent wood-work.

YETO SHIMPEI is declared to have been arrested in Uwajima. Nakayama, Kacho, and two other of his most faithful friends are said to have been arrested before him. Although this comes to us from an ordinarily good source, we do not know how much reliance to place in it.

IN FINE weather now, in Yedo, the dust is something distressing. We wish Mr. Davis would go up and shew them his water carts. Perhaps they might take a lesson, and, by the small outlay necessary for such useful contrivance, save the great loss occasioned by their goods being spoilt by the dust.

A NOTIFICATION issued by Okubo, the mayor of Tokio, forbids the sale of photographs of His Majesty the Mikado. Those who are in possession of copies are enjoined to deliver them up.

VISITORS to the Public Exhibition of European and native curiosities at Yama Shita Gomon, Tokio, between 1st and 31st ulto. numbered 22,549; although, for about half of that time the weather was either rainy or very threatening.

THE FOLLOWING sketch is the offshoot of a Japanese contributor's fancy; but slightly altered.

During the reign of Tokugawa Shogoon there lived a very cowardly samurai, who always disliked to walk alone at night, feeling afraid of some of the most harmless things. He often took trees or other inanimate things for monsters, and lost his presence of mind. On the 16th day of the 12th month, he went out to Asakusa, accompanied by some friends. Here, every year, a great market is held, in which various kinds of articles to be employed in the festivities of the first month are sold. The cowardly fellow bought a large wooden ladle, which he kept sticking in his neck. He lost his companion on the way, and was obliged to return alone, at which he felt very fearful. When he reached the front of Mito's palace, where now stands the military school, he saw a large round head in front of him. He forgot the ladle that he held in his neck, and the round shape of which was reflected by the moon-light. This he took for a O-niudo, which was supposed to be a gigantic demon or devil, who devoured men. The superstitious and cowardly man hardly escaped from fainting, and ran away as fast as his feet could carry him. When he reached a shady place, away from the moon-light, the O-niudo disappeared, to his great joy, and there he gave a rest to his feet; and though he thought over it as best he might, he could not reflect on it, because his mind was surprised and bewildered. As soon as he went on to a place where the moon-light was just as bright as the day, the O-niudo re-appeared, on which he again speedily ran. But it came after him, wherever he went. When he reached his house to his (no) little joy, he jumped into it with the utmost speed. But the ladle hindered his entrance, and it obstructed at the gate. Now, the cowardly man felt that he was seized by the O-niudo, and he struggled to get away from it. Having pressed with his whole power, the handle of the ladle broke in two, by which he was thrown down. He thus found himself deceived, but felt, still, fearful about some things. At length, he fell into a sickness, and died, crying, "How dreadful! How dreadful!" There were many who resembled him, under Tokugawa's reign.

A GREAT fire is reported from Gifu, in which city between four and five hundred houses were burned.

It is reported that 3,000 houses in Saga were burned during the late fighting in that city.

JOURNALISM in the capital seems to be improving, and journalistic enterprise is being cultivated to a noteworthy extent. We notice that the chief editor of the *Nichi Nichi Shimbun* in Toki accompanies the Formosa expedition, to collect and forward news concerning the events which are likely to happen there. A new newspaper has also been lately started.

A FIRE broke out last night (16th) about half past ten, in a small dwelling on No. 145, occupied by Chinese. There was a considerable breeze at the time, but owing to good luck the fire was confined to the house where it originated. The latter was, however, quite destroyed. The engine of the Private Fire Brigade was early on the spot, and a supply of water having been obtained from the Swamp, advantage was taken of the proximity of an adjoining godown to direct a stream from the roof on a portion of the burning premises. The Steam Fire, the "Volunteer" and one or two hand engines afterwards arrived, but their services were not called into requisition, as the fire had burned itself nearly out, and there was little or no danger of its spreading. As usual, there was no lack of people earnestly engaged in tendering advice, chiefly as to the advisability of demolishing the building; the actual work done, however, was by one or two Chinese. Several members of the "Salvage" Corps were present—and so were the police, who kept their eyes on them, and prevented business in that line. The alarm bell of the Church at No. 81 was not rung until the fire had gained considerable headway.

A LITERARY party recently assembled in Tokei, consisting of twelve jovial old sexagenarians and octogenarians, whose united ages amounted, together with two young men over sixty years of age, to the sum of one thousand and thirty-six years. They had a delightful time together, writing poetry and indulging in other antique and exciting amusements.

The following official notification, which appeared in the *Nisshin Shinjishi* yesterday will rejoice some hearts:

To foreigners who have discharged their duty industriously during their engagement by the Japanese government, a reward should be given. Every Ken, therefore, may appropriate the sum of 490 yen (to each) in addition to his pay, and send minute details to Daijokuan. But those who have shewn extraordinary merit shall receive a larger reward if requested (by the Ken officials).

SANJO MITSUYOSHI,

DAIJO DAIJIN.

18th April, 1874.

\* \* We call the attention of our readers to above signature "Mitsuyoshi." Ordinarily, Sanjo is called "Saneyoshi;"—so that at first sight it looks like a change of signature. In the Chinese character however, it is simply the character 三—which every one knows is in Japanese either "San" or "Mitsu." Thus the written signature is unaltered; but some call it San-yoshi and some Mitsu-yoshi.

ABOUT 9.30 P.M. on the 19th instant, a fire broke out in the house of John H. Smith, Esquire, Irefunicho, Tskidji. It originated in the kitchen, and the flames burst out so suddenly and laid hold of the entire premises so rapidly, that neither Mr. Smith nor Mr. Brush, who was his guest, both of whom were in the upper floor, had time to save anything. The loss was total. Even the contents of Mr. Smith's safe, which consisted of his books, securities and paper money, were so burnt as to be useless; and Mr. Brush, who had all his effects packed up, his outfit and his cash in portmanteaux, ready for his departure by the P. M. Steamer, lost everything but a single valise. His loss is not less in all than \$4,200. It is impossible to withhold our sympathy from the sufferers. The fire extended to three other houses.

EDUCATIONAL AFFAIRS are reported to be flourishing in Iwashiro province.

SHOP-KEEPERS in Tokei complain of the lack of small cash; caused, it is said, by the machinations of certain merchants and brokers, against whom vengeance is threatened.

### The Loss of the Steamer "Manchu."

The uncertainty which hung over the fate of the *Manchu* was at length dispelled by the arrival, on Friday, of the S.S.N. steamer *Shing-kiang*, bringing from Chefoo Capt. Lowell, the 2nd mate, and one fireman—the sole survivors, it is unfortunately too probable, of the crew of the lost steamer. The story they have to tell is one of the most harrowing that can well be conceived. We give the simple facts, with but slight verbal emendation, as they have been stated in Captain Lowell's deposition made at the U. S. Consulate-General on Saturday, which was courteously placed at our service.

The *Manchu* left Nagasaki for Shanghai at 11 o'clock on the morning of the 14th March, with 823 tons of coal, including the contents of her bunkers. She had on board, besides Captain Lowell, D. R. Spedding, the registered owner; J. H. Cocker, a passenger; H. T. Jones, mate; A. Courage, 2nd mate; Tau chert, chief engineer, and Goder, 2nd engineer. The non-European portion of the crew and passengers (we believe the latter were few) numbered 45, so far as is known to Captain Lowell. The steamer proceeded to sea, and about halfway from Nagasaki to Cape Gotto, a Japanese fishing boat was run into and sunk. The vessel was at once turned round, a boat lowered, and all the crew picked up. Of these there were five, thus making a total of fifty persons, besides Europeans, on board the *Manchu*. The steamer then continued her voyage, all going well until Monday, the 16th, when a strong N.N.W. blow came on, with a heavy sea which caused her to roll a great deal. In consequence, the two coal bunkers gave way at once, and the small coal running therefrom choked the pumps and the engine, stopping the latter by falling in and all around it. From that time, about 5.30 a.m., the engine ceased to move. Every endeavour was used to free the pumps and pipes, but to no avail. The crew were set to work to bale with buckets, some coal which was in bags on the main deck was thrown overboard, and then all hands, including passengers, were engaged in baling. These efforts were futile, however, the water speedily gaining. Captain Lowell next got out drags to try to get the vessel's head to the wind, but they proved of little use, owing to the rolling of the ship, and the high and boisterous sea running. During the night of the 16th and morning of the 17th, the second mate, by his orders, was getting the boats ready, and putting provisions, water, compasses, &c., in them. At daylight on the 17th the water was up to the main deck beams. Captain Lowell then ordered the crew and passengers into the boats, of which there were four—two life-boats in good order, and two ordinary wooden ship's boats. The boats were successfully launched, and exhausted with fatigue and anxiety as they were, all embarked in them safely, and they pulled a short distance from the ship. They had not been in them more than 15 or 20 minutes however, when the mate's boat (a lifeboat) filled with water and swamped, losing the 2nd engineer and number of the crew. Captain Lowell went to their assistance, and pulled into his boat the chief engineer and six Chinese; these he apportioned between the two

wooden boats, and then went back a second time to rescue some who still remained. Before he reached the swamped boat, however, it had turned over, and all who were in it were lost, except Jones, the mate, and a Chinese boy, who were got into the captain's boat, the former (Jones) being at this time insane from exposure. In a few minutes, Captain Lowell saw that one of the wooden boats had swamped, and went to rescue again, only to find, when he reached it, that all its occupants were drowned. This boat was in charge of the quartermasters, and did not contain any Europeans. At this time the sea became worse, and Captain Lowell heaved his boat to. The remaining wooden boat was last seen about one-eighth of a mile distant, apparently water-logged, and drifting before the wind. In her were the chief engineer and two quartermasters. This left Captain Lowell in the only other boat with Mr. Spedding, Mr. Cocker, Mr. Jones, Mr. Courage, and twelve Chinese. The condition of the chief engineer's boat renders it certain that she, one of inferior wooden ones, water-logged and helpless, must have shared the fate of the two already swamped; and though, seeing her dangerous state, the lifeboat would have gone to her assistance, Captain Lowell reports that the heavy sea running, and the fact that his boat was overloaded, rendered it impossible to do so. To diminish as much as possible the peril of his own boat's situation, Captain Lowell therefore kept her hove to until 2 p.m. of the 17th, when, the wind hauling more to the westward, sail was made and a course steered for the coast of Japan. Her position at the time was about 130 miles from Cape Gotto, in a S.W. by W.  $\frac{1}{2}$  W. direction. About 10 minutes after putting sail on her, the boat swamped, and turned partly over, losing nine Chinese. She was now water-logged, and as each successive sea broke over her, the frightful position of her crew may be imagined. About 4.30 p.m., Mr. Cocker, in the madness of despair, jumped overboard, having bid his comrades good-bye, saying he could stand it no longer, the agony was unsupportable and he wanted to put an end to his sufferings. He had suffered from sea-sickness, and was sick when he went on board at Nagasaki. About dark, Mr. Jones, who had been in a state of raving insanity from the time he was taken from his own boat, crawled overboard. What must have been the feelings of the few unhappy survivors, after a series of such fearful incidents, happening under their eyes, and which they were not only powerless to avert but compelled to contemplate as their own probable fate! It is little wonder that about this time Mr. Spedding told Captain Lowell that he saw no chance of his life being saved, and that he wanted to get out of his misery. Utterly exhausted and reduced to despair, he drank some brandy, and died about an hour afterwards. A Chinese who ate a quantity of opium next died in the boat, but still Captain Lowell and his mate hoped on, and they were rewarded. The weather moderated, and they put the only two remaining Chinese overboard, with a rope to each oar, for them to rest on, in order that the water-logged boat could be baled out. While they were doing this, one of the Chinese threw up his hands, let go his oar, and disappeared. Shortly after, the boat having been baled out, and the sea being comparatively calm, the only surviving Chinaman was taken inboard again, and the two exhausted men rested themselves. The next night was passed in the boat. All this time, the only things that had been found to eat and drink were two Chinese hams and one bottle of Bourbon whiskey—the water breakers

and much besides having been lost. At daylight of the 19th a sail was sighted, and the boat pulled for her, making signals with two towels on an oar. The vessel fortunately observed the signals, and, running down to the boat, picked up the small remnant which had survived such awful experiences to tell of them and the sad fate of 54 of the 57 who had left the sinking steamer. The vessel that thus opportunely crossed the track of the cast-aways proved to be the German brig *Otto*, Captain Adamson, bound from Yokohama to Chefoo, and the greatest kindness was manifested to the shipwrecked men by all on board of her, during the 11 days which elapsed before Chefoo was reached.

At the U. S. Consulate-General, on Saturday, a number of the widows and friends of Chinese lost in the *Manchu* appeared, to get news of their friends or assistance for themselves. Some six or eight were widows with families; and, as we believe there are no funds from which they can be relieved, we commend their case to the public of Shanghai, never deaf to an appeal for charity. Of the stern reality of their destitute condition there can be no doubt; and we think the widows and children of Chinese sailors who man foreign vessels have some claims to the sympathy and aid which would be extended to their foreign sisters under similar circumstances. Dr. Yates will, we understand, take charge of contributions and see to their proper application.—*N.C. Daily News*.

MR. MIHO, who has for several years been an officer in the school of Foreign languages in Tokai, has been transferred to Niigata, as director of the foreign school in that place.

SOME MONTHS AGO, Yeto Shimpei, when Minister of Justice in Tokai, attempted to introduce the European system of photographing the faces of convicts and accused, so as to form a "rogue's gallery" similar to those which ornament detective's offices in London and New York. For the sake of all students of morbid mental anatomy, as well as of all investigators of the various phases of Japanese human nature, it is a pity that the idea was not carried out. Yeto, however, was an enthusiast on the subject, and to encourage the introduction of the lens and camera in court (?) jestingly proposed to sit for a picture himself, and was photographed. Strange mutation of fate! In less than three months thereafter, Yeto Shimpei had fled the capital and headed the rebels in Saga. Escaping from the castle, after the rout of his followers, he secretly fled and hid himself. In order to find him, however, copies of his own photograph, made as above stated, were taken, and by means of one of these, (some say, by means of the original picture itself) he was recognised and caught. He had feathered the shaft by which he was shot. The ex-Minister of Justice had meted out to him a full measure of grim justice, such as he himself had often felt it his duty to pronounce upon others. Strange and humiliating fortune!—that the first one of the "rogue's gallery" who felt the weight of the law was the founder of the gallery himself.

A NORMAL SCHOOL, on the model of the very successful one in Tokai, is to be established in Nagoya. Mr. Izawa has been chosen director. There will not be any foreigners connected with the enterprise.

YESTERDAY AFTERNOON, a fire broke out in the cook-house of the "What Cheer" Tavern, in Homura Road, which was fortunately suppressed before any material damage was done.

Had the flames been allowed to gain headway the destruction of the innumerable wooden shanties, in the vicinity, mostly occupied by Chinese, would probably have been the result, as they are old and dry and would have burnt like tinder. The engine of the P. F. B. was quickly on the spot, and with its aid, and that of an *Extincteur*, borne on the back of Mr. Hohnholz, the fire was quickly suppressed.

In a community like this, where water for fire purposes seems to be as valuable as silver, the use of the little chemical apparatus mentioned ought to be much more general.

THE Expedition to Formosa is recalled. And it is not at all unlikely that it will be despatched, on an enlarged scale, to Corea.

A PUBLIC notification has been issued in Corea, to the effect that any Japanese found in the country will be put to death. And that the slayer shall be rewarded.

LAST EVENING, about 5 o'clock, a little Japanese girl, about 9 years old, carrying a still smaller specimen of native humanity on her back, approached too closely the wooden cage of a large black bear, domiciled on the now vacant lot adjoining the store of Mr. Giovanni Franchi (Garibaldi) on Homura Road, and owned by a Chinaman who carries on business immediately opposite. The ferocious brute, as she passed, stretched forth his paws through the bars of the cage, and seized hold of her left arm with the one and her leg with the other. Her cries ultimately brought help, and she was released, but it was found that the arm had sustained a terrible wound, which may yet necessitate its amputation. She was immediately conveyed to the residence of Dr. Simmons on the Creek, who dressed the wound and ordered her immediate removal to the Native Hospital at Noge-Yama, where she is now progressing as well as might be reasonably hoped. Fortunately, none of the main arteries were seriously injured, otherwise the consequences might have been grave. Even now, it cannot be predicted that the arm will be saved. The little child she carried was uninjured.

The bear was shot by Mr. Franchi, and attracted a considerable crowd where he lay slaughtered; he was a formidable brute. There is another of the same kind being exposed for sale near the Railway station, towards Takashima-cho. He seems equally dangerous, and ought to be removed out of the range of possible harm.

THE GERMAN ship *Hermann*, which arrived on the 21st from Formosa, reports the arrival there of a large Chinese man-of-war and 500 troops, sent thither in consequence of the Chinese having observed the *Keangsoo*, the well-known Japanese despatch-boat, cruising about on the coast and taking surveys. (She was sent some two months back to Hongkong, nominally on a cruise.) This confirms the statements of the Shanghai papers relative to the despatch of troops to Formosa.—*Japan Mail*.

Two Japanese have just absconded from Kobe under somewhat peculiar circumstances. They belonged to Yamato, but for some time past have been earning their living in Kobe by acting as middlemen in obtaining advances from pawn-brokers on goods, in which transactions their names were used as the borrowers. A few days ago they redeemed some goods which had been pawned in their names, sold them, and decamped with the proceeds, without intimating their intention to the *bond fide* owner of the articles.

## Law Reports.

## In H. B. M.'s Provincial Court.

Before C. W. GOODWIN, Esq., *Assist. Judge.**Friday, April 17th, 1874.*

## COCKING &amp; SINGLETON vs. P. &amp; O. S. N. Co.

Mr. Gavin P. Ness, on behalf of Messrs. Cocking and Singleton, made application this morning before His Honour Judge Goodwin, for a new trial in the above case, on the ground that the decision given by N. J. Haunen, Esq., Ac'g. Asst. Judge, was against the weight of evidence, as to the negligence of defendants whilst in charge of plaintiffs' goods.

Mr. F. V. Dickens, for the Peninsular and Oriental Steam Navigation Company, replied.

His Honour dismissed the motion for a new trial, but intimated that plaintiffs were at liberty to appeal, on the question of Mr. Haunen's decision.

*Monday, 20th April, 1874.*

## S. &amp; J. MENDELSON vs. W. H. TALBOT.

This was a claim for \$1,999, brought by plaintiffs, Messrs. Mendelson Bros., against Mr. W. H. Talbot, then Agent for Reuter's Telegram Co., for damages alleged to have been sustained through non-delivery by the Agents of the Company of two telegrams, handed to them for transmission to San Francisco in the latter part of last year.

Mr. F. V. Dickens for plaintiffs, and Mr. Gavin P. Ness for the Telegram Co.

Mr. Dickens said the present case was one in which damages were demanded by his clients in consequence of the non-delivery of two telegrams, which were sent from Yokohama at the end of last year, and which never reached their destination, and this, it would be shewn, was owing to the gross negligence of defendants. In consideration of the sum of \$67, defendants agreed to forward to its destination, on 2nd November, a telegram to be sent to San Francisco. The telegrams were never delivered. Had they been, they would have arrived in San Francisco about 16th or 17th Nov. They did not arrive, and the consequence was that no rabbits were sent by next steamer, as ordered, nor any harness leather. He would shew that, in consequence of non-delivery, a loss was sustained by his clients something near that mentioned in the petition. The defendants in the case before the Court, were really the Reuter's Telegram Co., who despatched telegrams entrusted to them by various Telegraph Cos. in different parts of the world. In the answer of defendant to the petition he states that "he did not promise to convey the message, as alleged," but further on he altogether contradicts himself. At the end of the petition he says, "In further answer to the said petition—" he made the promise mentioned in the petition "except under certain conditions." The condition was simply that "neither the Company nor its Agents would be liable for delays or mistakes in the transmission or non-delivery of telegrams," and then it went on to say that "every precaution would be taken, &c." There had been but few cases in England of a similar character to that under notice, but in America there had been several such. He would cite cases in point from an American work which had frequently been referred to in Westminster Hall. (Copy of the Reuter's Co.'s form handed in.) He would proceed to shew that conditions of the kind put forth in that form were invalid. (Counsel here referred to *Railway and Canal Traffic Act, 1854, Smith's Leading Cases Common Law, Vol. 1.*) The mere fact of putting such conditions on paper and getting the other party to sign them, did not render them binding in law. In the important cases, *Peck vs. North Staffordshire Railway Co., Law Journal, 1864*, and *Allday vs. Great Western Railway Co.*, it was decided that, although plaintiffs had signed the conditions, they were invalid. It might probably be said by the learned counsel for the other side that they did not know the importance or value of the message, but he should prove that they did know, (10th vol. *Milson and Wensleydale's Reports, Walker vs. Jackson*, cited). From this he contended that, with respect to the message, it was not necessary for his clients to inform the defendants that the message was an important one. In fact, it was evident that the messages were important, otherwise they would not

have been sent. He would prove negligence on the part of defendants. He would shew that in other and similar cases negligence had been shewn; where his clients had received telegrams intended for other people; and that messages sent by his clients, when received could not be made head or tail of. In order to economise words in the sending of telegrams, fictitious names were assigned to business firms. Messrs. Ahrens & Co. were assigned a name, and, posterior to that, his clients had been assigned exactly the same name, and this, he contended, was an evidence of gross negligence on the part of the company, and had resulted in the losses to which his clients had been subjected.

H. Ahrens, sworn:—We have a firm in Yedo, an agency in Berlin, and one here. I cannot say whether I have my address registered here and in Berlin by the Telegraph Agency at this port. I cannot recognise the handwriting in paper now produced (Counsel for plaintiffs said he should put in the paper as the handwriting of Mr. Talbot). I believe the word *Monteagle* was the word used by the Company in the transmission of messages from my firm here to my firm in Berlin. I remember something about a telegram sent by my firm about May 1873; it was the telegram you now read, and was sent from here to Berlin, where I was at the time. It had not arrived in Berlin, when I left in October 1873. I have received other letters from my people in Berlin, stating that other telegrams sent from here had not been received.

Mr. Ness objected to the proposed handing in of letters from Ahrens of Berlin to their firm in Yedo, stating that certain telegrams had not been received. They could only be received as secondary evidence.

Mr. Dickens said the law was clear, that where primary evidence was not to be had, secondary evidence might be received.

Mr. Ness said that his learned friend had admitted that primary evidence could be brought forward, and therefore the letters could not be put in.

Mr. Dickens contended that the letters really were primary evidence.

His Honour ultimately decided to receive the letters in evidence, but would, at Mr. Ness' request, take a note of his objection.

Mr. Dickens said the first letter was dated Vienna, 22nd October 1873, acknowledging receipt of a telegram ordering a quantity of "long-eared, spotted rabbits," which telegram really had been sent by Messrs. Mendelson, his clients, and not by Messrs. Ahrens of Yedo at all. In fact the telegram was mis-sent. Another, dated 13th November 1873, the second of his clients' telegrams, ordering 30 piculs harness, was received by Messrs. Ahrens & Co., Berlin, instead of by his clients' firm in San Francisco.

H. Ahrens (to Mr. Dickens):—The letter from our firm in Berlin, explaining that they could not understand the meaning of the telegrams, I did not send to the Company.

(To Mr. Ness):—I was in Berlin when the telegrams were received there. The way I know that the telegrams were sent from Yokohama is, that a copy of all telegrams are sent on by the first mail leaving after their despatch. I was not in Yokohama when the telegrams were sent, and therefore do not of my own knowledge know they were forwarded. I only know it by receiving a copy of them by letter. I am convinced that they were sent, but do not know it of my own knowledge. A member of our firm, Mr. Schmidt, was in Vienna at the Exhibition at the time. That is the reason why the letters referring to the receipt of the telegrams in Berlin were sent from the former place. I do not know that such a telegram, referring to rabbits, was not sent by my firm here to the firm in Berlin. I believe no such telegram was sent. Of my own knowledge I know nothing of the transmission or receipt of such telegrams.

Jonas Mendelson, sworn:—I am a member of the firm of Mendelson Brothers in Yokohama. We have an agency in San Francisco. I remember sending a telegram on the 11th October, 1873, through the defendant's agency. That is the telegram respecting the rabbits. I remember sending another on 7th Nov., ordering 30 piculs harness. The receipts now shewn me are those for the payment of the telegrams referred to. To the best of my knowledge, the telegrams did not arrive. I have repeatedly sent telegrams to San Francisco. Since the line between here and Nagasaki has been in operation we have received telegrams through from San Francisco in 5 to 10 days. We have never heard of the telegrams in question being received in San Francisco. We have not received the goods mentioned in the telegrams. (A letter was handed in from the Telegraph Company in London to the firm of Mendelson Bros. in San Francisco, notifying them that the word *Monteagle* had been registered in London for them.)—Mr. Ness would not admit a letter, dated Yokohama, 13th

June, 1873, from W. H. Talbot, notifying Messrs. Mendelson Bros. that the word *Monteagle* had been registered in London by the Company, to be used between the firm in San Francisco and the firm here. Another letter received by witness about May or June 1873, from his firm in San Francisco, written by his brother there, who had charge, stating that he had received a telegram, was objected to by Mr. Ness.

Mr. Dickens said the writer was now dead, and therefore there could be no objection to receiving the letter, as he could not give evidence himself.

Mr. Ness said an objection should be recorded to all these letters. His objection to this particular letter was not so great, but it had not been proved that there were no others in San Francisco who could prove that the telegram had not been received.

His Honour over-ruled Mr. Ness' objection, but would take a note of it.

Mr. Ness, in reply to Mr. Dickens, said his objection was that the letter was only secondary evidence, and that primary evidence could be obtained.

Mr. J. Mendelson read a letter, dated 19th May, from his brother in San Francisco, referring to the receipt of a telegram which was incomprehensible to him.

To Mr. Dickens:—At the time the letter was written I had no other brother in San Francisco. He then represented our house there. On receipt of the letter I went to the office of the Reuter Telegram Co., and saw either Mr. Major or Mr. Talbot; I think both. I told him that my brother in San Francisco had received such a telegram, (telling them the words of it) which I had never sent; and asked for an explanation. He told me that the London office had made a mistake. This was shortly after I received the letter, about the end of June. As the matter did not interest me any further I did not say anything more about it. That was all that passed between us. I first knew that our own telegram had not arrived when another brother came back to Yokohama from San Francisco, on the 14th December. The goods ought to have arrived here as much as a month before he did. Goods telegraphed a month before came by same steamer as he did. When I found the rabbits had not arrived I wrote to the Telegram Agency here, asking them to explain why the telegram had not reached its destination. I do not remember the date of that letter; I did not take a copy of it. They sent me an answer to it. (Letter produced, dated December 3rd, 1873, addressed to Messrs. Mendelson Bros. and signed by Mr. Major; stating that, owing to an interruption in the line at Nagasaki, the telegram had not been despatched until 15th October, but that it would reach San Francisco in time for the goods to be shipped by the steamer leaving there on 1st November). When I mentioned in their office here that our firm in San Francisco had received a telegram they could not understand, it was mentioned by some one in the office that the same word *Monteagle* was used for a firm in Berlin. When our second telegram went wrong, knowing that several houses here had branches in Berlin, I determined to go among them, to enquire if any of them had the same word. I went to Ahrens first, knowing they had a house there. On my way to Yedo I met Mr. Bair, of Ahrens & Co. He informed me that they had received at their office in Yedo 2 letters, at different times—

Mr. Ness objected to hearing the remarks evidence of Mr. Bair, as merely hearsay.

—I received information from Mr. Bair which led me to believe that their firm in Berlin had received the telegrams intended for our house in San Francisco. I made no direct application to defendants in consequence of receiving that information. We did so through our Consul.

Mr. Ness objected to Mr. Dickens asking witness the market value of harness leather. There was no claim made for special damage in the petition. As for the rabbits, they might have been for pet or for presents.

Mr. Dickens maintained that the petition had been drawn up in exact accordance with Sec. 28 of the Rules of Procedure. The amount of damage, \$1,999, had been put at that so as to cover the whole of the possible damage. He would bring forward evidence which would influence His Lordship, sitting as a jury, as to the market value of the goods.

Jonas Mendelson, (examination resumed).—By "harness" meant harness leather; leather used for making harness. Harness leather is sold by the lb. When it is black it is called harness; when it is light it is called "skirting." The leather would have been worth \$52 to \$53 a picul in Yokohama, had it arrived then. It is worth about the same now. For a long time there was a very regular trade in rabbits. There was a rage, or mania, for them amongst the natives. The price became so high, \$200 or \$300 a piece—that we thought we would speculate. Large, spotted rabbits, with long ears, as described in the

telegram, were worth, at the very lowest, \$100 a piece. At the time they should have arrived there was a fair demand for them. I could have sold them at that price. I do not know their price in San Francisco.

By Mr. Ness:—At the latest, the rabbit telegram ought to have reached San Francisco on 20th Oct. I know that there were rabbits there of the class I telegraphed for, because some arrived by the steamer that mine ought to have come by; the steamer which left San Francisco on 1st November. I saw the rabbits which arrived by that steamer; a cage of large, spotted, long-eared rabbits. There might have been, say, 10 or 15 in the cage answering that description. I do not know who they came to. I never heard of anybody else telegraphing for similar rabbits. I have heard that persons here sent to San Francisco for rabbits, and could not get them; simply because they would not pay the price for them. I believe a firm in San Francisco offered \$1500 or \$1600 for 100 rabbits, but the persons holding them would not take it. This is merely hearsay. The firm was R. Isaacs & Co. I have not heard, directly or indirectly, that any one sent for a similar class of rabbits,—“long-eared &c.” and could not get them. I did not know that there was a scarcity of rabbits in San Francisco. I think the rabbits I saw on the *Colorado* were sold. I never heard that some of them are still unsold. About the middle of December the market went down. The Japanese Government put a tax on them. I do not know that the market went down immediately on the arrival of the *Colorado*. I made enquiries, after her arrival, as to the values of such rabbits. The market was good for some time after. I enquired their value of Japanese. “Harness” is a technical name for harness leather. If a weight of “harness” is ordered, harness leather is understood. Harness itself is not sold by the picul. Any merchant in this country would understand the term “harness” as applied in this case. Of my own knowledge, I do not know that the telegrams were not received in San Francisco; I only know it by letter. I do not know, of my own knowledge, that Ahrens & Co. of Berlin received our telegrams intended for San Francisco. The signatures to the telegrams now exhibited are mine. I don't know whether there is any advantage obtained by using Reuter's Telegram Agency. It was certainly not an advantage in this case. In point of cheapness it is an advantage, on account of the cypher they use. I do not absolutely know that Messrs. Ahrens & Co. and ourselves were making use of the same word at the same time.

To Mr. Dickens:—I have no doubt in my own mind on that point; nor that the telegrams which ought to have been sent to us were sent to Ahrens & Co. of Berlin. The offer made by Mr. Isaacs (\$1,500) I believe was about the 1st Dec. in San Francisco. If I were to ask any merchant for 30 piculs harness, I don't think he would make any mistake.

Court adjourned until 2 o'clock.

Solomon Mendelson, sworn:—I am a partner in the firm of Mendelson Bros., and brother of last witness. I was in San Francisco until the 17th Nov. last. While there I did not receive either of the telegrams mentioned in the petition. Neither of them came to hand whilst I was in San Francisco. Rabbits were in the market there up to 1st November; some were shipped by the steamer which left on that day. I have no reason to think that the stock was exhausted by the 17th November. I have lived in San Francisco for a number of years. Rabbits were never scarce there to my knowledge. They were plentiful until the time I left. I heard of parties making large offers after that date. They sold from \$2½ up to \$10. Up to that time harness leather was not scarce in San Francisco. At that time I could have bought it at about 35 cents per Japanese lb., about \$39 per picul, San Francisco weight. 100 Japanese pounds are equal to a picul of 133 pounds. The cost of conveyance would be about 12 per cent., to cover all charges. The P. M. Co. charged 80 cents per cubic foot for the conveyance of rabbits in cages to Yokohama. A cage for 40 rabbits would measure about 25 feet. Whilst a demand existed we did as large a business in harness leather as any firm in Yokohama. Most of it comes from America. If I ordered harness by weight no person in the business would doubt what I meant. I was in Yokohama when the first telegram, in May, was despatched to San Francisco instead of Berlin. I know nothing of the circumstances further than what I learned from the letters I received from our brother in San Francisco.

By Mr. Ness:—I arrived in San Francisco on 14th Oct., and left on 17th Nov. 1873. With the exception of 6 days in the beginning of Nov. I was in San Francisco during the whole of the interval. As far as I can judge, no such telegram or telegrams arrived in San Francisco. I reached Yokohama on my return on the 14th December. During my sojourn in San Francisco neither of the telegrams

reached me. On my return to Yokohama we did not repeat the messages to San Francisco; because we did not know whether the telegrams might have arrived there after my leaving. Since then, we have received advices from our agent in San Francisco, that he has received no such instructions as we forwarded. We did not, after that, repeat the order we had originally sent, either for rabbits or harness. Both were ordered on speculation, because we thought if we had them we could make a good thing of them. The market for “harness in San Francisco” does not vary half a cent a lb. during the year. It is a staple article. I do not know that it has varied much in Yokohama. If the goods had been shipped we should have made our profit. Whilst I was in San Francisco I received no word from the firm here with respect to rabbits; except that, in a letter previously, my brother wrote me that a great demand existed in Yokohama for rabbits; and that if it continued he would probably telegraph me to ship rabbits. Of my own knowledge I did not know that rabbits were worth more in Yokohama than they cost in San Francisco. I kept myself posted as to what was being shipped in San Francisco for Yokohama. What I learned about rabbits being shipped then I heard casually; I made no direct enquiry. I could not swear to there being the class of rabbits in San Francisco described as “large, spotted, long-eared, &c.” I know nothing of the price of rabbits in Yokohama. I heard that one person in Yokohama had 30 rabbits brought over, for which he received \$1600. I cannot say whether any of them answered this description. They were sold from the *Colorado*. I heard it from Mr. Roth, and from other parties. They were sold on the steamer's arrival. I do not know whether Mr. Roth was in Yokohama at the time the rabbits arrived. I saw him in San Francisco a week or 10 days before I left; which was on the 17th November. That would make it about the 10th November. The *Colorado* left on the 1st Nov. With one or two exceptions all leather is sold by the picul. The advantage of sending through Reuter's Co. is, that there is a saving of \$3 on every telegram in the address and the signature.

Hadjiro, cautioned to speak the truth:—I am a merchant in Yokohama. Last year, I was in the habit of buying rabbits from foreigners. About the end of last year prices varied much, but they sometimes amounted to as much as 800 yen for a single rabbit. “Large, spotted rabbits, with long ears” fetched from \$300 upwards.

By Mr. Ness:—From the 10th month, through the 11th month, and up to the first decade of the 12th month prices were high. I was absent from Yokohama between the end of November and the middle of December.

Nowa Schichi, cautioned to speak the truth:—I am a merchant. I have often bought quantities of rabbits from foreigners. In the 7th and 8th months there were no very good ones with long ears to be had. During the 9th and 10th months out of 100 perhaps 3 or 4 would be of the description in question. In the 10th month I sold one to an ex-Daimio in Yedo for \$800. That was the very best kind. I sold 10, good and bad, of this description for 2,200 rios; \$220 each. That was between the 20th and the 30th of the 10th month. On the 11th Nov. the American steamer came in, bringing 31 rabbits. Amongst those were 5 or 6 of the description in question. Bought the lot of 31 for \$2000. In the first decade of the 12th month an Imperial decree came out, imposing a tax of one yen per month on every rabbit, good or bad, large or small. In consequence could not get rid of the large stock I had. Hawked them about Yedo, but could not sell them. Had it not been for the tax I could have sold them for \$100 or \$200.

By Mr. Ness:—In consequence of that decree there were no buyers. I could sell them, but perhaps for \$25, what, otherwise, I should have got \$50; for; in fact, for rather less than they cost me. Even after the decree came out and they became very cheap in Yedo, it was possible to get good prices. It did not stop their sale altogether. I bought rabbits of the description in question in the first month of this year. It was said there were no good ones in San Francisco about that time. Mr. Lotz, of No. 179, who went to San Francisco, was asked by me to purchase rabbits of that kind. He returned to Yokohama in the latter part of December, and said there were no good ones to be had. At the time of Lotz's return I bought a rabbit, which, as an especial favor, I got for \$60; \$75 was the price. Bought none in December except that one. In January bought only one.

Morris Bieber, sworn:—I am a clerk in the employ of Herzog and Roth. I remember the *Colorado* arriving at the end of November. Rabbits arrived by her. I do not know who bought them. I saw 6 or 8 sold for \$400. Those were all I saw sold. Japanese were offering \$70 or \$80 each. They were black and white spotted rabbits.

By Mr. Ness:—The rabbits I speak of were sold for \$400 on the morning of the arrival of the *Colorado*. I don't remember whether there were any long-eared ones; they were spotted. I don't know the price of rabbits after 1st December. Previous to 12th December I did not know anything of the market. On that date the market fell. In October good rabbits were scarce in San Francisco. On 27th August I sent a telegram to San Francisco for 100 large spotted rabbits. Mr. Roth wrote that it was too much trouble to sent the rabbits. We had a contract for them. When Mr. Roth went to San Francisco he got the two hundred rabbits. He got some of the class he wanted—40; The rest were not in the market, and \$50 or \$60 was asked for some and he wouldn't buy them. He arrived in San Francisco about 12th Novr. He was to have sold them in Yokohama for \$22 each, so that he could not afford to give \$50 for them. He had bought some of that kind in San Francisco for \$3, for which he was to get \$22. In October some of that description were fetching \$100 or \$200.

To Mr. Dickens:—At the end of November 6 or 8 sold for \$400. They were large, spotted rabbits; I believe they were long-eared. The latter are more valuable than short-eared.

Hadjiro, recalled, (to Mr. Dickens):—In November and December harness leather in Yokohama was worth about \$50 per picul. There is no leather of that description in the market now. I had a large order from the Government, to buy any quantity I could; even half a picul. I was told by a person that if any were to be had the price would be \$60 per picul. I sent to Osaka and found there were 5 piculs to be had there, for which \$65 per picul was asked.

W. H. Talbot, sworn:—I am the defendant in this case. I represent Reuter's Telegram Co. in this matter. I know Frederick J. Griffiths; he is Secretary of our Company. The letter produced is lithographed. It probably came from the office. I do not know in whose writing it is. I do not know of any reason why it should not have issued from the office. I have not been advised of any such circular. The signature to it is like that of Mr. Griffiths. It is the first one I have seen. In May 1873 I was Agent for the Company. At that time the word *Monteagle* was not used by Ahrens & Co. It was used for their firm at one time. The change was made in London on the 14th March, 1873. I was advised of that by the ordinary form sent out from London. On 28th April I was still under the impression that the name *Monteagle* was being used for Ahrens & Co. It must have been early in May when I became aware of the change. I remember, early in May, the firm of Ahrens & Co. bringing a telegram for Berlin to me. It must have been before I received intimation of the change in the name. I can tell by referring to the Register, now in the possession of the Agent. I have no knowledge of the telegram having been sent to either San Francisco or Berlin. The indicator *Monteagle* for Mendelson in San Francisco was advised to me in the early part of March. It is not the custom to advise a change by telegraph; they occur so rarely—we only hear of a change by mail. The indicator was changed in 7 days from the date of its being first advised. If I were to write from here as to a change it would take 3 months to get an acknowledgment of the change. Until I had received advice of the change of indicator I would not have forwarded a message for any one else than Ahrens & Co. I do not know whether the messages sent to Mendelson have arrived, except from what I have heard to-day. The mistake might have been made in Bombay. At the time Mendelson's telegram arrived in London the office there must have been aware that the word *Monteagle* was no longer used for Ahrens, but for Mendelson. There has been complaint made, I believe, to the London office about this matter; but there has been no answer that I am aware of. When Mendelson complained to me of the mistake made in May, in their having received a telegram in San Francisco not intended for them, I pointed it out to the London office.

By Mr. Ness:—The contracts produced are those in use by the Company. The conditions read are those under which messages are forwarded. Our Co. offers superior advantages to senders. We have a system by which we can afford to send messages at less rates than other Co.'s, who charge the same rate for 2 or 20 words. By coming to us they gain advantages they would not get by going to the offices direct. Of my own knowledge, I do not know anything about the telegrams not having been delivered. No value was declared on the telegrams when sent. I have no idea of the loss plaintiffs sustained through the telegrams having miscarried.

By Mr. Dickens:—I was absent from Yokohama for about 6 weeks, from 26th September into November. Otherwise I was in Yokohama all the time.

During 1873, I remember hearing of Japanese buying rabbits, but I didn't believe a word about it. I must have heard about it. It didn't interest me.

To Court:—I was absent at the time the telegram was sent, but when I saw it afterwards I thought the term "piculs harness" referred to something else altogether.

Mr. Ness said he had no evidence to bring forward.

Adjourned till to-morrow (21st) at 10 o'clock.

*Tuesday, April 21st, 1874.*

The evidence being concluded, Mr. Dickens proceeded to address the Court on behalf of plaintiffs, but before doing so intimated that his learned friend on the other side had agreed to dispense with the translation of the two letters read by Mr. Ahrens during his examination on the previous day. The two letters were dated Vienna, although they were really from the Berlin firm of Ahrens & Co.—the representative of that house being in Vienna for the Exhibition. The first was dated Oct. 22nd, 1873, and referred to the receipt of a telegram ordering rabbits. The second referred the harness telegram, and was dated Nov. 13th. Before going thoroughly into the case, Mr. Dickens said, it would be well that all the questions involved should be made clear to His Lordship. The Company acted, not as a Telegraph Company, but as collectors of telegraphs for other companies; just as Pickford & Co., the great carriers, act as agents for companies engaged in railway traffic. The mode in which they made their profit was this. If you go to another telegraph company they charge you the same for a message of 10 words or any number under. But if two persons choose to put two telegrams of 10 words into one they save proportionately. This is termed "packing" messages, and it is easy to see that a great saving is effected by so doing. The Telegram Agency thus makes a great profit, but the sender does not. On the other hand, he runs an extra risk of neglect or fraud on the part of the agents. An extra cheapness is produced by the "packing" system, but there is an extra risk. It was quite evident that the Company had received a consideration. In the telegram there were 19 words, for which the sum of \$90 was paid, besides the address. The fact of such a large sum of money having been paid must be looked upon that the message was an important one, and the payment of such a large sum argued the possession of a considerable amount of skill on the part of the Company. Merchants here do not continually telegraph to their correspondents at home; they only telegraph such matters as are of importance. That, then, was the contract for which the consideration money was paid; the duty of defendants being to convey the message to San Francisco. The defendants admit the contract, subject to a certain condition—"neither the Company nor its agents will be liable for any delay or mistake in the transmission of messages"—then it goes on to say that "every precaution would be taken, &c." He would remark on the form of the contract. This particular contract was to carry a particular message to America, and not to India, China or Australia. The conditions stated in the contract expressly referred to those places. The message was not to any of those places, but to America, and therefore the conditions did not apply to this case. Thus, as the case stood between plaintiffs and defendants, it was an ordinary contract, and not limited by any condition whatever. Next, supposing that the conditions did apply to the contract in question, he contended that it was invalid. The case of *Peck vs. North Staffordshire Railway Co.*, which had been already cited, he submitted was analogous. The whole question there was discussed at great length in various Courts, and finally carried to the House of Lords. Certain goods were conveyed by railway and some of them were damaged. The Company pleaded a certain condition contained in their contract, which they contended the plaintiff was bound by. The condition was that the Company should not be held liable for damage to marble and other articles of a fragile nature. The plaintiffs proceeded on two grounds—firstly, that they had never signed any such agreement, and secondly that such a condition was unreasonable. The judge held that such a condition was unreasonable, as it exempted the Company from all liability. The reason given by the Court why it was void was, that it would entirely exempt the Company from the consequences of fraud, &c., by their servants. If such were the case, where the Company was held to be liable, the question arose should the Telegraph Company be held free of liability. Telegraph Companies were very similar in their operations to Railway Companies. They carried messages, the value of which they did not know. When large sums are paid for the transmission of messages, it might fairly be inferred that the Company are aware of the importance of the messages they are carrying. If goods are handed in to an ordinary

carrier without any declaration as to the value of the goods, and he undertakes to convey them, it is quite evident that he must be aware of their importance, and is bound to deliver them. The case of *Walker vs. Jackson* was in point, and the case of *Peck vs. Jackson* was endorsed by others before quoted. There were also a number of American cases bearing on the circumstances. It was objected that plaintiffs did not declare the value, but it was quite evident from the fact of a large sum, \$100, being paid that considerable value was attached to the telegram. It was a commercial telegram of a certain importance. But also, as a matter of fact, as regarded the rabbits, the agent here must have been aware of the great importance of the telegram, and must have had a shrewd idea of the value of it. The rabbit mania amongst the Japanese was notorious for some considerable time, and everyone in the place must have been aware of it. With regard to declaring the value of goods forwarded it was possible, but in the case of telegrams it would be impossible. And yet were the plaintiffs to endure the loss, through the fault of the Agents, because it was impossible to declare their value? From an ordinary equitable point of view he contended that defendants must be held liable for the full extent of the loss sustained by plaintiffs. Even if the message had been in cypher, so that they could not have been aware of its contents, they must still be held liable. They take all sorts of messages, and it would be unfair that they should turn round in the case of an important message and say, "Oh, we cannot hold ourselves liable for any misadventure." In one of the cases quoted it was shewn that it was quite unnecessary to declare the value of the goods. There were very few cases of this sort in England, but in the 30th volume of the California Reports there was a number of cases cited with regard to telegraph companies, the majority of which seemed to be in his favour.

In *Parke vs. Alta California Telegraph Co.*, owing to the non-delivery of a telegram, the plaintiff lost the whole benefit of it, and it was held that the Company were to be held liable, as common carriers, for the full amount of the loss sustained, \$1,800. In *Bryant vs. American Telegraph Co.*, the telegram was one which the Company could not possibly guess the value of. Owing to it not having been sent at the proper time a certain loss was sustained, and that loss was decreed to be paid by the American Telegraph Co. (*Sedgwick*, page 408, 1865.) In the case of *Strasburg vs. Western Union Telegraph Co.*, as recently as 1867, an action was brought to recover damages from the Co. in respect of a telegram directing the purchase of gold. The despatch was not sent, and there was a considerable fall in gold. The presiding Judge held that the Company were bound to infer that the message was of value, and ought to have exercised ordinary care as common carriers. It had been shewn that defendants had been paid well, and they should have exercised due skill. It was certain that the telegrams which ought to have been sent to San Francisco were delivered in Berlin. This was due to the default of the Company themselves. It was a point of considerable importance. In order to fully explain the whole, he would recapitulate the facts connected with the transmission of the first telegram in May, sent to San Francisco and intended for Berlin. He would shew that, although it did not immediately concern his clients, it had really very much to do with his case, as it shewed great negligence on the part of the Co. He was exceedingly glad that he had put Mr. Talbot into the box, as it was now clear that he was not altogether to blame in the matter, but that the error was really that of another. The other side had brought forward no evidence, and did not even put Mr. Talbot into the witness box. Prior to March 1873, the indicator *Monteagle* was used by Ahrens & Co. During the early part of March it was changed by the Co. What ought to have been done was this. Immediate telegraphic communication of the change should have been sent out here. It was sent by mail. It was evident that by the 28th March the change had not been known in Yokohama. They had Mr. Talbot's statement that the change was not known by him until May. The old indicator was used, because he had not been notified of the change. A message sent from here, which ought to have gone on to Berlin, was sent to San Francisco. That was the first piece of carelessness. The plaintiffs went to the office of the Co. here and informed them that they had received a telegram at San Francisco not intended for them. He thought it was the duty of Mr. Talbot to telegraph the fact to London, and that seemed to him where carelessness was attributable to him. It was evident that the telegrams did not arrive in San Francisco, and that they did arrive in Berlin. When the telegram bearing the name *Monteagle* arrived in London, the office there, forgetting that the name had been discarded, read the word as Ahrens & Co., Berlin, and sent it there instead of to San

Francisco. He submitted that shewed great carelessness on the part of the Co. When they made such a change they must be almost certain that a mistake would be made, unless the fact of the change was intimated to the Agent at the outport at once. Where such a time as 6 months was allowed to elapse without notification there was absolutely no excuse. It could not but be considered as a piece of gross negligence. It was quite evident from the letter dated June 16th that the new assignment of the indicator to Mendelson Bros. had been made prior to that time. The other side had not brought forward a single fact or a single witness, and when Mr. Talbot was put in the box he was not asked a single question to shew that the Co. was not liable. His contention was that the Co. were bound to shew that they were not liable. The facts of the case were peculiarly within the knowledge of defendants, and peculiarly out of the knowledge of his clients, and it would be easy for the former to prove the absence of neglect, whereas for his clients it must be a matter of difficulty to substantiate the charge.

In the case of *McAndrews and other vs. Electric Telegraph Co.*, damages were sought against a telegraph company because a certain telegram handed to them was not delivered in proper time. The Co. pleaded that a certain condition exempted them, and they were discharged from liability. The condition was that they would not be responsible for unrepeatable messages. That was held to be a reasonable condition; but even then it was not said that it would excuse gross negligence. On the form before the Court no such condition was expressed. The Co. simply refuse to hold themselves liable for any negligence whatever. Although that case, at first sight, might appear to go against his argument, in reality it was very strongly in his favour; of which he felt sure His Honour would be convinced. His learned friend acknowledged that his clients were the proper parties to sue, and therefore it would be unnecessary to take up the time of the Court on that point. He would briefly address the Court on the subject of damages. No witnesses had been called by the other side. The evidence of plaintiffs had been rejected on technical grounds; in fact, the defence had been purely technical from the beginning. That Court was a Court of equity, as well as a Court of law. It was a Court of conscience, and people coming there might expect to have a case judged by the laws of equity, without a strictly rigid reference to the legal aspects of the case. With regard to the value, it had been proved by plaintiffs that when the telegram should have arrived in San Francisco the price of rabbits was low; from \$2 to \$10. At home \$10 would be a high price, and it is to be supposed that, in a large city like San Francisco, rabbits were plentiful. There was nothing to shew that they were scarce there; \$10 was the highest price. The only evidence that rabbits were scarce was the evidence of Mr. Bieber, on the authority of Mr. Roth. If Mr. Roth could have given evidence of the value of rabbits in San Francisco it was rather curious that he was not called. The evidence of Mr. Bieber shewed that there was no such thing as a scarcity, and that the reason he did not buy was because he was not willing to pay the price demanded. The same witness proved that on the arrival of the *Colorado* in November, very high prices were paid; and as much as \$70 and \$80 for inferior rabbits. The evidence of Mr. Bieber was, that there was no scarcity of rabbits in San Francisco, and that the price here was extremely high. The other witnesses, the Japanese, agreed on that point. That of Hadjiro was to the effect that, during the 10th, 11th, and 12th months prices were high. On the 10th December, in consequence of a tax which had been imposed by the government, prices went down, but, nevertheless, rabbits still sold for \$25 and \$30. In the 7th and 8th months, according to the second Japanese witness, good rabbits were scarce. In the 9th month he sold 10 at \$220 each, and in November he bought 31 for \$2000. On the 12th December a tax was imposed, and no rabbits were sold. Up to the 12th December the kind ordered were worth \$75 or \$80. Presuming that 30 of his clients' rabbits had arrived, and they had sold them even at \$70 each—the lowest price mentioned by any witness—that would have been \$2100; and, putting their cost and the expenses of transit at \$25 each, there would be a profit left of \$1350. He thought he had put the loss on the rabbits at a very low figure, and they might reasonably have expected a very much larger price than that he had mentioned.

With regard to the harness leather—From the evidence it would appear that the cost in San Francisco would have been about \$40 per picul, and the price here about \$52. Thirty piculs were ordered, and taking the price at even \$50, that would shew a loss of \$300 on the leather. The price was now higher, say, \$52 or \$53. An argument had been made use of by his learned friend, that his clients might have written to San

Francisco to repeat the order; but even when Mr. Mendelson arrived from San Francisco he did not know that the telegram had not arrived there. What they had a right to ask was the amount of the loss of profit, between the price of the harness in San Francisco and the price here when the telegram should have arrived. So that, putting the value of the harness and the rabbits at a small figure, his clients were really subjected to a loss of \$1600 or \$1700. The only other question he would remark upon was with respect to the meaning of the word "harness," about which so much had been said. It was quite evident that anyone would understand that horse harness would not be sold by the lb. It differed very materially, of course, with regard to the pattern, the ornamentation, and perhaps with regard to the quality of the leather, and therefore it would be utterly absurd to suppose that anything but harness leather, known to everybody connected with its sale as "harness", could be meant. It would be known throughout the trade as "harness", and even if it were not it could be taken in no other sense. The damages he asked for were not remote or consequential, but direct. He only asked for the difference in the market values and for nothing else; damages due for the profit which would have been made in the ordinary course of business had the goods arrived. At the least he must ask the defendants to return his clients the \$95 or \$100 they paid them for the telegram, as they had done nothing for it. They had acted wrongly throughout. Even when they found out the mistake which had been committed with respect to the word *Monteagle*, they took no pains or trouble to rectify it.

Mr. Ness, in reply, said the present case was one of grave importance to his clients. The evidence adduced by his learned friend was entirely of a secondary character. (Counsel here cited *Taylor*, as to hearsay evidence.) The contract entered into by his client he was willing to admit; the breach of it he would in no wise admit. (Evidence of the witnesses for the other side reviewed at length). He would ask His Honour to dismiss altogether the evidence which had been given by Mr. Ahrens, as being entirely secondary evidence. It was evidence of the loosest character, and there was no reliance to be placed upon it, inasmuch as it was not in the slightest degree primary, but depended entirely upon letters, which there was no means of verifying. The evidence of Mr. Mendelson, the resident partner in Yokohama, was simply to the effect that he did not know that the telegrams despatched to San Francisco had not arrived. He maintained that his learned friend had signally failed to prove a breach of contract. The rules of that Court required that the whole particulars of the case should be set forth in the petition, and that had not been done. His learned friend had complained that he had not put defendant into the witness box. He did not consider it necessary to do so, and the fact of Mr. Talbot being allowed to enter it for examination by the other side was purely a matter of indulgence, as he had not been sub-poenaed. He contended that plaintiffs' counsel had failed to shew that any loss had been sustained; on the contrary, it had been proved that the price of rabbits was actually greater in San Francisco than in Yokohama. As regarded the evidence of the two plaintiffs, one, it had been shewn, knew nothing of the price of rabbits here, from the beginning of the mania till December, so that his ideas on the question of the damage sustained were not very much to be depended upon; and as regarded the other brother, who admitted that whilst in San Francisco he knew little or nothing about the state of the mania in Yokohama, it was plain that his evidence on the point could be of little value. Another witness had proved that a contract had been entered into here for the delivery of 200 rabbits at \$22 each, and that the price asked in San Francisco had been \$50 each. It was evident, on the face of it, that plaintiffs, far from suffering any loss by the non-receipt of the rabbits, had actually benefited by it, and perhaps saved themselves from heavy loss. And with respect to the harness, it had been shewn that the market here had not fallen, but had actually arisen. The telegram was transmitted under the condition that no liability would be assumed for delays or mistakes. There had been no evidence that it was an invalid contract. It was incumbent on the part of the side alleging gross negligence on the part of the other to prove that gross negligence, and that was not to be inferred under such a contract, when they were especially exempted by its conditions. As to what his learned friend had brought forward with respect to his clients being carriers, he was willing to admit that. Supposing the defendants to be carriers, their liabilities as such would be under Common Law. He was willing to concede that they were carriers, either under Common Law, or by the *Railway Carriers Act*, but they were certainly not subject to the regulations of the *Railway and Canal Traffic Act*, cited by his learn-

ed friend. (Counsel here read at length a great many cases bearing on the question, shewing that the Co. had a right, in entering into a special contract, to protect themselves by such conditions). The next point was that defendants were not carriers. (Quoted Roscoe, as to the definition of the word carrier, and shewed that under no circumstances could defendants be brought under the category of carriers). It had been tried and proved that the Postmaster-General was not a common carrier, and still less could a telegraph company be considered so. What the Company undertake to deliver is not goods but simply ideas, and that by the most delicate machinery; subject to damage at any point and at any moment. Further, there was no custody, and there was no insurable value. The latter was apparent. Messages were sent by code, and frequently "packed," so that no value could be supposed to attach to them. He contended that a telegraph company were not carriers. (Cited *Sedgwick, Reese and Munford vs. Western Telegraph Co.*, and *Law Reports*, vol. 4, *Playford vs. United Kingdom Telegraph Co.*, and other cases, the whole contention being that the Company were not common carriers). If the defendants were not common carriers, they were in the position of private contractors, and according to the rules of Common Law, they were only liable in the case of absolute fraud. He had proved that if they were common carriers they were not liable; and further that they were not carriers. The plaintiffs received particular advantages by coming to the Company's office, and in doing so they subjected themselves to the conditions of the contract. The Company was not bound to receive messages, and they had no monopoly. The plaintiffs came to his clients because they offered them advantages which they could not get elsewhere; so that there was a *quid pro quo*. He would point out to His Lordship that the question was one of the very highest importance to his clients. It went to the very root of their business, and rendered them liable, at any moment, to ruin, through the negligence of their servants.

His Honour said he would take time to consider his decision.

April 21st, 1874.

G. W. MILLER vs. HUDSON, MALCOLM & Co.

Claim for \$22.50, for 60 tons ballast at 37½ cents a ton. Mr. Arthur Brent appeared to represent defendants, and denied the claim.

G. W. Miller, sworn:—I am a stevedore, and ballast-master. On Sunday morning, the 12th instant, 60 tons of ballast was ordered by defendants for the steamer *Washi*. It was ordered by letter. (Letter produced). The ballast was ready, and notice given to the Captain to that effect, but he told me not to bring it alongside, till he had time to clean the ship's limbers; when ready for it he would send word to my house. This was on Sunday afternoon or Monday morning. The price of ballast was 75 cents a ton, free on board. On Tuesday morning, I received a letter from defendants to say they did not require any ballast for the *Washi*. I then had it brought back to my compound; but on going off to the *Washi*, I saw they were taking in ballast. The custom of the port is to charge half price for ballast ordered, but not required; providing it has been sent afloat.

To defendant:—The ballast was not sent alongside, owing to the Captain's orders to the contrary. On going alongside the steamer, I saw Captain Martin putting on board similar ballast. I then made this claim, and notified defendants on Wednesday, 15th instant.

Arthur Brent, to Court:—The ballast not being alongside as ordered on the morning of the 13th, the order was countermanded on that account. To this letter I received no reply, and was led to believe that the ballast was not ready, or at all events had not been sent afloat. It was never once put alongside. I was not aware of the Captains' contrary orders.

The Judge ruled that defendants were bound by the Captain's order.

Judgment for plaintiff.

### THE COMING RACES.

To the Editor of the Japan Gazette.

SIR,

The interesting part of the training having now fairly commenced, I send you, as promised, a few racing notes, which I hope will

greatly benefit both yourself and the public. I think a few words on the programme may not be out of place, for although we learn in our youthful school-books that "In the multitude of councillors there is wisdom," I fear that, in this instance, taking the Race Club Committee to be councillors, the old proverb is seriously at fault. In the "New Comers Cup," ponies that have won in Hongkong and China are excluded. This is something new, and hardly fair to those owners who have imported good cattle. This clause excludes *Lingerer*, and makes the race almost a gift to *Divey*, who ran a close third, in Shanghai, to better ponies than *Lingerer* ever met. Certainly the Camp griffin is said to be a flyer; but unless he run much better than he did in his last dark trial the race is even now virtually over. Again, throughout the whole programme of Japan Pony Races the highest penalty is 10lbs., and only one exclusion throughout the whole meeting.

This is decidedly rough on owners that have been to such trouble and expense in getting Griffins down, as they have not a single chance under such unfavorable circumstances; and a pony with the condition and turn of speed that *Typhoon* has should be able to clear out every *Japan Race* he starts for during the meeting. Hitherto, the winner of the "Nippon Champion" and "Ladies Purse", at least, have been excluded, and a penalty of 14lbs. for two or more races would be far more in accordance with the penalties imposed upon China winners—10lbs. to a Japanese pony is scarcely equal, comparatively speaking, to 4lbs. to a China pony; a fact we have seen verified over and over again. The "Kioto Cup" is neither one thing nor the other. It takes the place of the "Hack Stakes," and at the same time admits crack ponies imported for the "New Comers Cup", and does not even exclude the winner of that race. Surely this is an oversight on the part of the Committee.

Another funny race is the *Welter*. Ever since we have had races in Japan the *Welter* has been a hurdle race. Now it is a "half-mile, owners up, 12 st. 4;" so that *Loup Garou*, the largest and fastest half-mile pony that has been brought out for some years, will meet his antagonists at even weights, provided any one be foolish enough to run against him; whereas, by the scale of weights for other races, he would have to give a good many of the China ponies 9lbs. Were I a Japanese, I should remark "Okashi do'na!!!"

On the second day there are some very nice races, but these little mistakes seem still to have crept in. There are not sufficient exclusions, and one good China pony should be able easily to win three races on that day alone, and I am afraid there will be a repetition of last meeting, and that nearly all the races will fall to one stable. The remarks in the *Herald* on combination were not made too soon. Competition is the life and soul of racing, and, in a small place like this, where only 4 or 5 Stables exist, racing is reduced to an absurdity if owners try horses from different stables, clandestinely, against one another; and there can be no doubt that the Committee ought to disqualify *instantly* any ponies tried in this way.

I am glad to see so many of the old faces back again, after their long absence. They nearly all seem to be going in for China Ponies or Griffins, and it is a great pity that the programme is so arranged that they will have all their labour in vain. There are over forty ponies in training, nearly half of them Japanese Griffins, about which I need not say much; the early risers can judge for themselves, and the star-at-homes would not be very much wiser for

any information I could give them. The best looking animals on the course are *Crusader*, *Loup Garou*, *Typhoon*, and the Camp Griffin, and they will require a deal of beating. Mr Edward Ola, however, has a very good stable: comprising *Lingerer*, *Carrots*, *Grand Duke*, and sundry Japanese Ponies, which seem to have various owners, and to change about to suit circumstances. The Tartan Stable is badly represented. *Chanticleer* is out at grass, and *Calabar* does not appear to go kindly, but they have a good pony in *Crusader*. Still, it will take them all their time to beat such cattle as I have mentioned, especially as they will have further antagonists in *Heather Bell*, *Dixey*, and *Dibs*, etc., which the "Mystery" Stable in Homura Road have well in training, and manage to keep very dark. *Seismograph* also is a good pony, and has the advantage of being steered by a rider of such capabilities as we seldom see on this course. *Othello* has been imported from Kobe, and, although he looks very pretty, and is a most perfect miniature race-horse, I think this course will be one too many for him. *Snowball* is undergoing very careful training, and looks in better form than I ever saw him before. I understand that the *Hurdle Race* is likely to be a question between him, *Kingcraft*, and *Carrots*, in which case we shall see some good sport. I cannot yet tell you the names of all the Japanese ponies. Mr. Nicolas has *Lodi*, *Moh Stots*, and some others. Mr. Von Zittan has from one to ten griffins, and there are a lot of unnamed animals, about which I will give you my impressions after the entries are out.

Yours truly,

"HAWK'S EYE."

23rd April 1874.

THE GERMAN ship *Hermann*, which arrived on the 21st from Formosa, reports the arrival there of a large Chinese man-of-war and 500 troops, sent thither in consequence of the Chinese having observed the *Keangsoo*, the well-known Japanese despatch-boat, cruising about on the coast and taking surveys. (She was sent some two months back to Hongkong, nominally on a cruise.) This confirms the statements of the Shanghai papers relative to the despatch of troops to Formosa.—*Japan Mail*.

Kido and Okuma have offered their resignation to the Mikado.

FROM ANSWERS to special enquiries in Tokei to-day, (which we acknowledge were sufficiently vague to satisfy the cleverest diplomatist) we are inclined to the belief that the government has no intention of sending troops to Corea at present.

A VESSEL which came in yesterday from Tai-wan reports that the Chinese troops began to arrive in Formosa on the 27th March. The Chinese man-of-war of which we spoke yesterday was entirely manned and officered by natives.—*Japan Mail*.

MORE RESIGNATIONS of Sangi are reported to-day. Kido continues his office as Kiyo of the Nai-musho, but retires from the Daijo-kuan.

## Niigata.

APRIL 17TH, 1874.

THE Public Gardens here are now looking their best, the numerous cherry, plum, peach, and pear trees being all in bloom. One of the

most frequented temples of the town is situated in the middle of the gardens; and numbers of people daily visit it, and stay and enjoy themselves in the grounds.

The gardens are situated on an island at the south end of the town, containing about 5,000 tsuboos. There are at one end some large godowns, but they will shortly be pulled down, and the ground added to the gardens. The nice paths and shady trees, a large pond full of water-lilies, a fine view of the river which flows close by, and of the distant snow-capped mountains, make the place a very popular resort.

THE CHARGE now made per month for day scholars at the town school is  $1\frac{1}{2}$  boos, and for boarders 3 rios. The school fund has been so largely increased by subscriptions that it now amounts to 10,000 riyos; and it is intended to admit a number of poor boys as boarders, free of charge.

EARLY IN last year, a law was passed that no more dead bodies were to be burnt, but that they must be buried. This caused great inconvenience here, for, although the old grave-yards around the numerous temples were quite large enough to hold the remains when reduced to ashes and placed in a little jar as formerly, they were quite inadequate for burials under the new system. Many persons have, in consequence, buried their dead friends in their own fields and gardens. The authorities, not liking this, have taken the matter in hand, and a large cemetery is being laid out on the hills about half a mile in the rear of the town.

A MEETING of all the Kochos or magistrates of this Ken has just taken place, in a large new building erected for that purpose in rear of the Kencho. There were 260 present and the assembly lasted for twelve days, during which many local matters were discussed and different members brought forward their respective motions. The whole was presided over by the Kenrei, M. Kusumoto. This is the first meeting of the kind held here. It has given much satisfaction, and it is intended to repeat it once every year, or oftener if occasion require.

OUR PAPER has been at war with a milkman, whom it publicly accused of having been seen, by the editor, watering the milk.

WE HAVE now three banks here. They pay 8 per cent. per annum on deposits for twelve months, and charge  $1\frac{1}{2}$  per cent. per month for advances made on securities of goods or land.

THE WEATHER has been very fine and mild, and numerous junks are constantly arriving, mostly from the south: their cargoes are principally sugar, salt, small quantities of iron, and cotton. Those from the north bring fish.

THE FIRST swallows were seen on the 10th instant. Notwithstanding the exceptionally mild winter, they are later than last year.

THE NATIVES are anxiously looking for the little steamer which is coming from Yokohama to run up the river to Nagaoka, distant 18 ri. If she is any good, there will be plenty for her to do.

## The New York Agent FOR

THE "JAPAN GAZETTE," published every evening in Tokei (Yedo) and Yokohama;

The "Japan Gazette Mail Summary," published for every United States Mail Steamer;

The "Nisshin Shinjishi," the Official Organ of the Japanese Government, published daily in Tokei, in the Japanese language;

The "Nippon Advertiser" a weekly advertising sheet, published in Japanese, and distributed gratuitously in all parts of the Empire—guaranteed circulation 5000 copies;

And,

The "Far East," a monthly Journal, published in Yokohama, illustrated by photographs;

IS

Mr. Andrew Wind,

133, NASSAU STREET, NEW YORK; who will receive Subscriptions, Advertisements, &c., for any of the above papers.

85, Yokohama, December, 1873.

## GRAND HOTEL, No. 20, Yokohama.

THE above fine Hotel has lately been opened to the Public, and offers great advantages to Residents and Tourists.

It is situated in the best location in Yokohama, at the extreme end of the Praya or Bund, and the view from it, for marine scenery, is unsurpassed in any part of the world.

The Hotel is replete with every western convenience and accommodation, and may safely be said to be, without exception, the finest Hotel in the East. It contains splendid Suites of Private Apartments, most elegantly furnished, after the first European and American styles; Ladies' and Gentlemen's Waiting Rooms, Sitting Rooms, Reading Rooms, Public and Private Dining Rooms, and commodious Bath Rooms.

There is a fine Billiard Room attached to the Hotel, with English and American Tables, by the very first makers.

The Cuisine is under the superintendence of an accomplished French chef, with able assistants, and the table is furnished with every luxury. Wines only of the best brands provided.

Experienced European Stewards are employed to look after the well-being and comfort of guests, and thus save them the many little annoyances to which residents in the East are subject, from the ignorance of native servants.

A European female is retained specially for the lady guests at the Hotel.

The Hotel will really (despite the hackneyed phrase) be found to contain all the comforts of a home, with luxuries that can never be found in any but establishments on a large scale.

A European will always attend the arrival of all vessels, and take charge of the Baggage of Passengers, thus saving them the trouble and inconvenience of passing it through the Custom House.

Every information afforded to Travellers wishing to visit the interior of the country, and they can be supplied with experienced Native or Foreign Guides.

Per Mensem.

### SUITES OF APARTMENTS.

(Four Rooms and two Servants' ditto,) suitable for Private Families or parties of Single Gentlemen, &c. Let, on very moderate terms.

Yokohama, 7th Feb., 1874

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

During the last fortnight business has been exceedingly dull, and prices have a further downward tendency.

Mails delivered during the interval have been as follows: English, per P. & O. str. *Behar*, on the 8th; French, per M. M. str. *Menzaleh*, on the 19th; and English, per P. & O. str. *Bombay*, yesterday, 22nd inst. The next American mail is due here from San Francisco on the 27th.

Latest dates are—per telegram, to 1st instant; per letter, March 6th.

The steamer *Crocus*, from London, via Shanghai, brings a general cargo.

SHIRTINGS.—A moderate business has been done at lower prices.

COTTON YARNS.—Transactions have been small, and mostly confined to Nos. 16 to 24.

VELVETS.—Not enquired for.

WOOLLENS.—Exceedingly quiet.

BLANKETS.—No demand.

IRON AND METALS.—Nothing stirring; quotations altogether nominal.

SUGARS.—Stock large. Market depressed in consequence of further heavy arrivals.

RAW COTTON.—Stagnant.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Since our last, but little change is to be noted in the condition of the market. Arrivals have continued meagre, and stocks are now low, say 800 Bales. Settlements have amounted to 500 Bales, half in HANKS, which are not so firm. OSHIUS are in fair demand, but SODAIS have suffered a decline of fully \$40 per picul.

**TEA.**—Business in Tea since our last issue has been small and unimportant, total settlements since the 6th inst. only equalling piculs 1,000, and arrivals for same period about piculs 1,300.

These transactions comprise most grades, but the only sale worth quoting is some piculs 300, said to grade as "fine," @ \$40, but we all know that Teas purchased so late in the season find small favour with American buyers, and if the Tea market should be dull on their arrival they will very likely be graded down a degree.

Of the New Crop we have had the usual "Garden-grown" musters, but they convey no definite information. We are promised, however, arrivals of the Crop early next month.

The *Vasco de Gama*, which sailed on the 4th instant, took for San Francisco 135,086 lbs., and for New York 26,971 lbs. The present steamer has about 280,000 lbs., engaged.

 April 9, U. S. sloop, *Ashuelot*, Mathews, 1,080, for Hongkong.  
 April 9, Am. barq. *Northern Light*, Smith, 485, for the Arctic, general, despatched by Captain.  
 April 10, Brit. barq. *Sarah Scott*, Estall, 565, for Nagasaki, ballast, despatched by Captain.  
 April 10, Brit. ship, *Ada Fredeale*, Napton, 997, for Kobe, ballast, despatched by E. C. Kirby & Co.  
 April 10, N. G. barq. *Diamant*, Ackermann, 266, for Hiogo, general, despatched by Simon, Evers & Co.  
 April 11, Brit. barq. *Merse*, Robinson, 682, for Hiogo, general, despatched by Van Oordt & Co.  
 April 10, Brit. str. *Scotland*, Washborn, 1,179, for San Francisco, Rice, despatched by Hudson, Malcolm & Co.  
 April 12, Am. ship, *St. George*, Knowles, 392, for whaling cruise, Whaling gear, despatched by Captain.  
 April 13, Am. str. *Costa Rica*, Conner, 1,917, for Shanghai, general, despatched by P. M. Co.  
 April 14, Brit. str. *Vasco de Gama*, Rice, 1,981, for San Francisco, general, despatched by Hudson, Malcolm & Co.  
 April 15, Fr. str. *Volga*, Flambeau, 960, for Hongkong, Mails and general, despatched by M. M. Co.  
 April 15, Am. whaling bq. *Northern Light*, Smith, 385, for Pacific, despatched by Captain.  
 April 15, Am. whaling bq. *Triton*, Hoppingstone, 274, for Pacific, despatched by Captain.  
 April 15, Brit. str. *Behar*, Andrews, 1,639, for Hongkong, general, despatched by P. & O. Co.  
 April 17, Am. whaler *Arctic*, Whitney, 340, for Pacific, Whaling gear, despatched by Captain.  
 April 17, Brit. str. *Yorkshire*, Longlin, 2,232, for Nagasaki, general, despatched by Gilman & Co.  
 April 17, Am. str. *New York*, Furber, 2,119, for Nagasaki, general, despatched by P. M. Co.

April 18, H. B. M.'s Gun-boat *Thistle*, Sterling, 464, for Kobe.  
 April 20, Am. str. *Oregonian*, Harris, 1,914, for Niigata and Hakodate, general, despatched by P. M. Co.  
 April 22, French str. *Menzaleh*, Mourrut, 1,008, for Hongkong, general, despatched by M. M. Co.  
 April 22, Am. ship, *Europa*, McKenzie, 322, for Whaling Cruise, Whaling gear, despatched by Captain.  
 April 22, Am. barq. *B. Gosnold*, Willis, 365, for Whaling Cruise, Whaling gear, despatched by Captain.  
 April 24, Brit. schr. *Jessie McDonald*, Sievwright, 275, for Chefoo, ballast, despatched by Captain.  
 April 24, Brit. schr. *Countess of Errol*, Taylor, 218, for Shanghai, coal, despatched by Walsh, Hall & Co.

## PASSENGERS.

Per French str. *Volga*, from Hongkong.  
 Mr. and Mrs. Goodwin, Miss Goodwin, and 4 children, Messrs. Angot, Brunache, False, Mornat, Orno, Guerineau and wife.  
 Per Brit. str. *Scotland*, from Hongkong.  
 640 Chinese in the steerage.  
 Per Brit. str. *Madras*, for Hongkong.  
 Miss Headland, Messrs. P. S. Dowson, Greaves, Eusign C. S. Clark, U. S. N., Messrs. Rama, Gioranni, and 7 Chinese.  
 Per Brit. str. *Behar*, from Hongkong:  
 Capt. Singleton R. N., Capt. Sterling R. N., Messrs. F. Page, B. Harold, Lackenstein, Cantopher, Hawkins; and 7 Chinese in steerage.  
 Per P. M. S. S. *Colorado*, for San Francisco:  
 Capt. G. E. Lane, Mr. G. Hurlbut, Mr. and Mrs. Blydenburg and daughters, Mrs. Ellis, Miss Tracy, Capt. F. Williams, Messrs. A. Fanshaw, H. L. Arbuthnot, C. Barthe, A. E. Luce, Wadley, Jones, Mrs. M. R. Ballagh, 3 children and nurse, Messrs. J. C. Hawthorne, R. P. Maynard, D. G. Scofield, Paul Rousiter, Major Saltmarsh, Rev. J. Bates, and Mr. Ernest Koch.  
 Per British str. *Vasco de Gama*, from Hongkong:  
 Messrs. Roensch, T. Arratooth, W. S. Potter, Miss W. G. Potter, Mr. N. S. James, U.S.N., Capt. Woodworth, Messrs. Neilson, A. B. Downs, C. J. Perkins and Holding. 626 Chinese.  
 Per Am. str. *New York*, from Shanghai:  
 Messrs. J. L. C. Palm, Dr. A. Williamson, F. Hillyer, A. Michel, D. Turner, U. S. Consul, Hiogo, J. Shillingforth, J. Davidson, M. Columbo, Capt. Brown; and 41 in the steerage.

## FOR SAN FRANCISCO:

Two Misses Wiggins, Charles Wiggins, and W. Newman.

Per Am. str. *Costa Rica*, for Shanghai:

Miss Robinson, Mr. and Mrs. Whittall, child and servant, Mr. and Mrs. Clapp and servant, Mrs. Cartman, Messrs. Seabrook, Coughtrie, Dr. Brown, D. Turner, U. S. Consul, F. Goodwin, W. C. Van Oordt, L. B. Koutsky, H. Constock, G. Bayfield, Dr. Goentz, Chas. Kickerby, R. J. Walsh and servant, A. Curtis, R. Key, 9 Japanese.

Per Brit. str. *Vasco de Gama*, for San Francisco:

Messrs. H. E. Palm, F. Hillyer, Baron L. Noblhoff, J. Swire, D. E. Spencer, M. Roensch, W. B. Walter, and Julius Blass.

Per French str. *Volga*, for Hongkong:

M. and Madame Florent and daughter, and two seamen saved from the Nil.

Per Brit. str. *Behar*, for Hongkong:

Capt. H. K. Leet, R. N.; Lieut. Ronzell, R. N.; Messrs. F. Knoblauch, G. Oliver, Davis, Mr. & Mrs. Pyke, infant and European Female Servant; and 3 Chinese.

Per Am. str. *Golden Age*, from Shanghai:

Mrs. Jackson and child, Mr. and Mrs. Anderson, G. Beuntschli, Rev. T. Hach, J. D. Carroll, Rev. M. Deming, wife and 2 children, Miss Green, Captain Ward, C. Drake, H. Finke, G. Jellies, J. B. Coughtrie, J. A. Spoor, Father Relu, F. Low, W. McGregor, 1 European, 9 Chinese; and 67 Chinese in steerage.

## FOR SAN FRANCISCO:

Mrs. M. M. Nelson, Miss A. A. Nelson, C. E. Bennett, J. M. Kelly, Mrs. C. Holcomb, Miss Blodgett, Miss M. C. Andrews, Dr. A. O. Trout, J. O. Carleton, J. C. Utley, Dr. Focke; and 1 European in steerage.

Per French str. *Menzaleh*, from Hongkong:  
 M. M. Sada, Ito, Harmand, Deschant, and Omashino.

Per French str. *Menzaleh*, for Singapore.  
 M. Lecques.

Per Brit. str. *Hombay*, from Hongkong.

Miss Dennis, Miss Joyner, Messrs. Waghorn, Jameson, Potter, Durham, Chessman Pfeifer and 9 Chinese.

Per Am. str. *Japan*, from Hongkong.

Messrs. H. Hart, wife, child, and 2 servants, Mrs. Voucher and servant, Miss Walker, F. G. Arnold, S. da Rosa, Lieut. Baker, Mrs. C. J. Langsch, Frau Doryer and servant, F. K. Banajee, and servant, and 3 in the steerage.

## FOR SAN FRANCISCO.

S. C. Farnham, Miss Farnham, Capt. T. A. Harris, T. H. de Silver and servant, and J. Bremuer.

## FOR NEW YORK.

O. Fredericks and wife, and Dr. Van Ruppen, U.S.N.

## FOR EUROPE.

E. T. Bird.

## CARGO.

Per Am. str. *New York*, from Shanghai:

Treasure, .....\$48,250.

Per Am. str. *Golden Age*, from Shanghai.

Treasure, .....\$57,800.

## REPORTS.

The Am. ship *Josephine* reports left Honolulu, 8th December, fair weather throughout passage.

The Brit. str. *Behar* reports left Hongkong Wednesday 1st April, at 5 p.m., strong monsoon up to Taiwan Island; variable winds since.

The Brit. str. *Vasco de Gama* reports left Hongkong 4th April, 4.40 p.m. Head winds all the passage.

The Am. str. *New York* reports: experienced very bad weather after leaving Kobe, a strong gale from S. E.; raising up a tremendous sea. The vessel had to lie-to for some hours after passing Omaisaki.

The American ship *Europa* reports very rough weather during the passage.

The Brit. str. *Crocus*, reports: had generally fine weather during the passage, some strong northerly winds coming along the coast of Japan. Arrived at Yokohama 1 p.m., 20th instant averaging 11½ knot throughout, and making the run to this port in 56 hours.

The Brit. str. *Bombay* reports left Hongkong, 14th April 5 p.m. Experienced head wind most of the passage.

The Am. str. *Japan* reports left Hongkong, April 15th, first part of passage experienced heavy N. E. winds, latter part strong southerly winds and this weather. On N. E. end of Naki Island saw a volcano only 200 feet from the sea, think it has recently broke out, having passed there last January and did not see it.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 20th MAY 1874.

#### BIRTH.

At Kobe, on the 2nd May, Mrs. HENRY LEONAS, of a son.

At Yokohama, on the 10th May, the wife of W. M. STRACHAN, of a son.

#### MARRIED.

On the 30th April, at H. B. M.'s Legation, Yedo, by the Rev. W. B. Wright, M.A., THOMAS MANSON RYMER JONES, M.I.C.E., eldest son of Thomas Rymer Jones, Esq., F.R.S., F.R.C.S., of Westbourne Park, London, to MARGARET, second daughter of Henry St. John Joyner, Esq., Northwick, Harrow, England.

May 1st, 1874, at Kobe, at the residence of W. H. Morse, Esq., by the Reverend A. R. Morris, of the American Episcopal Mission, in the presence of Daniel Turner, Esq., United States Consul, PHILIP A. RAMEE to KITTIE W., daughter of the late P. STANFORD BURCHAN, Esq., New York.

#### DEATH.

At the Yokohama General Hospital, May 11th, at 3 A.M., JOSEPH CRETIN, late of M. M. str. *Menzaleh*, a native of France, aged 18 years.

May 11th, at the Camp, Yokohama, WILLIAM JAMES INGRAM, Private R.M.L.I., aged 22.

At No. 172, Bluff, May 14th, 1874, of Diphtheria, THOMAS FREDERICK, the eldest son of Frederick and Mary Dickins, aged four years and one month.

OUR LAST Mail Summary was to the 23rd ulto., and left this by the P. M. steamer *Japan*. The mails received since then are:

	DUR.	ARRIVED.
American Mail ..	April 27th	April 27th.
French Mail ..	" 29th	May 1st.
English Mail ..	May 6th	" 5th.
American Mail ..	" 13th	" 13th.
French Mail ..	" 13th	" 15th.
English Mail ..	" 20th	" 19th.

Telegrams reach to the 7th May.  
are to April 3rd.

### Summary.

It is utterly impossible to give exact information of the political movements since our last; all has been so uncertain and wavering. After having countermanded the Formosan expedition, however, the government were compelled to resume it; as the *Yokohama* had been selected for it declared that they positively would go, and refused to obey any orders to the contrary. The result was, that the government took the affair in hand again, sending them to Amoy, ostensibly to communicate with the Chinese authorities. This, at first sight, seems an absurd movement, as Amoy is so far from the seat of government that the ships will probably have to remain a long time before they can hear anything from the Chinese government.

An Envoy has been sent from here to Peking on this particular business. A young Kugé, Yanagewara, has been selected. It is idle to speculate on the course events may take; but it is generally felt, that all danger of any actual hostilities between Japan and China is removed by this plan of communicating with the authorities before acting inimically.

Since the above was in type, news has reached Yokohama of the arrival of the expedition at the Island of Formosa, and the landing of the troops without opposition.

DURING the month, all kinds of rumours have, as usual, obtained circulation, and some, respecting the resignation of certain ministers of the Mikado, were undoubtedly true. But no action seems to have been taken on them, and it is generally understood that the same men retain their places for the present.

AN OUTRAGE took place a fortnight ago at the British Legation, Yedo. A policeman being on duty near the new Legation buildings, over-

stepped his duty, and wandered on to the sacred ground. He there fancied himself called upon to shew his zeal on a coolie whom he supposed to be doing some wrong; and on making an altercation with him an English overseer of works came out of his house and ordered them off. The coolie escaped, and the indignant policeman went and laid his information at the Police station, when a Sergeant and many men went to the Legation buildings to scent out the foreigner who had offended. He was absent. But they fell upon another man in the most brutal manner: beating him with sticks, and refusing to listen to anything he had to say. They took him to the station wounded and bruised, and refused to allow him to see even a Japanese doctor, or to allow any one to carry a communication for him to any person whatsoever. Fortunately, the man's servant saw his master being ill-treated, and ran off for a member of the Legation, whose application at the Police station for the man's release was met by insults; and he was obliged to go to high officials of the government before the necessary order for release could be obtained. Sir Harry Parkes at once made strong representations to the government. He has obtained an apology, and proper punishment is to be awarded to the police; and the punishment and the crime are to be notified throughout the empire.

ALTOGETHER there is a decidedly improved tone in the demeanour of the Japanese government towards foreigners, which, it is much to be hoped, will continue.

THE SPRING MEETING of the Yokohama Race Club has occupied much attention during the month. The three race days, the 14th, 15th and 16th, passed off well.

ATHLETIC SPORTS took place immediately after the departure of our last, and the Annual Regatta comes off on the 23rd instant. So that, for a small community, there has been no lack of amusement.

AN "Organ Recital" took place on the 20th instant in Christ Church, at which, in addition to the actual performances on the organ, several solos and choruses from Oratorios were sung with excellent effect.

OUR information from Tokei is that more of the Ministers have resigned. There is a very decided feeling of interest, amounting almost to anxiety, amongst officials to-day, such as we have never seen before; and whatever may have occurred in the Daijo-kuan, or whatever may have led to it, it is manifest that the "situation" is one of much difficulty. The men who have been in office since October last have made such a hash of the national business that no one sees how to right it; or who is to be the deliverer. Our own eyes turn to Soyeshima, Saigo and Goto; and if poor Yeto had still been in the flesh, we should have included him—but his ill-timed visit to his own country, and the false position he was thus forced into as the apparent head of the Saga rebellion, brought his hitherto bright career to a lamentable close.

There was a time when the Ministers had it in their own hands, to quell the disturbances in Saga without striking a blow. They had determined that the prayer of the petitioners for the Representative Assembly should be complied with. This was the great end of the leaders of the party of whom the Saga insurgents formed a part. And it would have sufficed if the government had taken the proper method of explaining to them that, as it had been determined to establish a parliament, the decision of the Formosan and Corean affairs should be left to that assembly. This would have been sufficient. Yeto himself could have quieted the rebels in Saga with this assurance. They would have been patient, and waited again as they had waited before. Instead of that, the ministers elected to hold no parley, but to strike. And now we see with what effect. Far better would it have been for them to have signed long ago, as it seemed imminent that they would; for now they have rendered themselves again one of the most obnoxious of the leaders of the people; and are at last obliged to retire in disgrace—hated by the people. They have rendered the government unpopular; they have created bad feeling with foreigners; they have injured the credit of the country abroad.

With all this, we say that it is only a temporary dead-lock they have come to. There is no need for any alarm. All is quiet, and all will remain so; and we are in hopes that the only great effect of the present difficulty will be to restore to power those who have a decided line of policy, viz:—the establishment of freedom of speech, and of free representative institutions. Time will reveal whether out of these will flow peace or war.

FROM Corea, an official intimation of a most painful as well as insolent character has been received.

It is to the effect that 18 Japanese having been shipwrecked on the coast of Corea, they were, on the 14th of last month, beheaded, "because they were Japanese." Had they belonged to any other nation they would have been taken care of. Sympathy is expressed with their families, with whom perhaps, on a future occasion, Corea may have an opportunity of dealing; but this massacre was necessary to shew the hatred that exists towards Japan.

No allusion, so far as we can learn, has been made to the change in Government, as mentioned in the China local papers; but it is most clearly ascertained that Corea has been making most vigorous preparations for a long time, in anticipation of seeing the Japanese. Not only have they built forts, but they have mounted them with the newest cannon, and their troops are instructed in artillery, and drilled generally, by Chinese who have been instructed by French officers.

And now, while on this subject, we will take the opportunity of saying that a Corean expedition from this country is a mere question of time. But there is much to be done before it takes place. It must be by the voice of the country speaking through its representatives; and this as yet cannot be heard. It has been already told that the establishment of the representative parliament is agreed upon; but it is deferred for the present. This places it almost in as unsatisfactory a position as if it were rejected altogether. And this seems likely to provoke civil discord of a more severe nature than the late rebellion.

The return of Shimadzu Saburo to Tokei is closely connected with it. His object in going to Kagoshima was primarily to induce Saigo Kitchinoski to come to Tokei and assist the government. Saigo so fully explained to him the impossibility of carrying on the government in its present shape that Shimadzu is a convert; and he has himself demanded the fulfilment of the prayer of the petitioners who asked for the establishment of a parliament. If it be not carried out he will assume his former rank and call his clansmen to their own country. If it be carried out all will be well.

The delay arises from the disclosures that are sure to follow the assembling of the members. Every department of state to some extent dreads the betrayal of its secrets; and the old Sangi assert that, under the present system, it is impossible to obtain from the departments the information required by government, or to have their orders enforced.

They refer to the Finance Department as it was under the late chief, and to the Kobusho. They ask how they are to prevent the oppression of the people if they are unable to ascertain the expenses of the government and of public works. They have a short line of railway, but cannot obtain any exact information as to its cost; and they have kinsats as legal currency, and cannot ascertain reliably the amount. In other matters it is the same. Now, the party who desire sound and solid progress are resolved that all such affairs shall be closely investigated. Hence the opposition and the delay. It is well known that the very first things that will be brought under public discussion are the Corean insults and these departmental affairs: the former would not be objected to, the latter are dreaded.

Recent events, however, are working to the desired end. Among those who became Sangi in October last are some who now express the same opinions as those of the memorialists. For the moment the government has come to a kind of dead-lock. Several of the Sangi have resigned, but their resignations have not yet been accepted. It may be observed, too, that, as yet, no official government notification has announced Yeto's death. In fact, the government strongly disapprove of it; and Okubo has himself to answer to his colleagues for his severity. Before his death, Yeto wrote a farewell address, and this the government have taken the greatest pains to suppress. But one significant fact in connection with Yeto is, that Sanjo Daijin has taken his widow and family under his own protection. Sanjo, we have long ago told our readers, has always been favourable to the free speech party, of whom Yeto was so prominent a member; and our readers will doubtless remember that, as far back as last Christmas, Sanjo asked to be allowed to resign his high office, simply because he disapproved of the opinions and proceedings of the present government.

The situation then is something like this. Practically the government of the country for the moment, at a standstill. But the Prime Minister, some of the Sangi, and Shimadzu

(in addition to the Mikado himself), are for the representative house; and the longer it is delayed the greater the danger and difficulty become. The inherent respect of the Japanese for the Emperor is the safety valve at present; but things are in that state which renders everything uncertain from day to day. No one knows what to do with that Formosan expedition, but we do not think there is much chance of diverting it to Corea.

At this moment, we look upon the condition of Japan as more thoroughly unsatisfactory than we have ever before known it. There are dangers ahead; and there seems to be no one willing, (we think there are some able), to take the command and steer the ship clear of them.

DIRECT antagonism appears to be fast taking the place of the constantly improving relations which for a long time characterised the intercourse between Japan and other countries. It originated in the discontent with which some of the Japanese leaders have chosen to view the clause in the treaties which provides for foreigners in this country being subject to their own laws. This is the seed of all the ill-feeling that has sprung up; and unfortunately, under existing circumstances, there is no possibility of its being rooted up.

It is hardly a question for argument, whether the Japanese have or have not reason on their side. All things being equal, no one would think of opposing the principle on which they take their stand. The laws of every land should be administered exclusively within its own boundaries, and on its own soil. But in this case all things are not equal. Besides, there is no rule without an exception; and the exception in this instance must be made as to those who have no written law, no properly educated, experienced, and uncorrupt judges; and whose system is one of cruelty and injustice.

A reference to what is constantly before us shews how utterly impracticable it would be for foreigners, at least those who belong to countries where the purity of the judgment seat is one of the highest boasts of the people, to consent to submit themselves to Japanese jurisdiction. What, for example, would be said in Europe, to the delay which has taken place in respect of the "claims against the Hans?" Or, how great would be the outcry at the long refusal of the government to allow those claims to be enquired into at all? Every man who has had the misfortune to have a difference with Japanese which necessitated an appeal to the Japanese courts knows the difficulty of getting anything done, even when the facts are acknowledged and there only remains the judgment to be given and enforced.

Take the mode of examination, also, which obtains in its full rigour to this day. We could mention a case in point that occurred within our own knowledge; and only refrain from doing so, because we fear it would act prejudicially on the minds of the officials, to the detriment of the plaintiff's interests. But we will refer to the case of those who attacked Iwakura. Any one would imagine that in such a case as that, the greatest publicity would be given, to secure the ends of justice; and that all persons should be allowed to see that if the police were unable to discover the malefactors engaged in such a murderous affair, at least they had made every exertion to do so.

amination under severe punishment, nothing having been elicited from them, a large proportion have been released. Now, either these men were innocent or guilty. If innocent, why should they be tortured? If guilty, even the torture failed to elicit a confession. Would a foreigner willingly lay himself open to this kind of thing? There may be some who adopt the views of the Japanese, and would argue for the emphatic acceptance of the dogma "Right is right," but even these would, we think, be very sorry to see the change actually made. It is well for us all that our governments watch over us so far; and that they are unwilling to hand us over to the tender mercies of those whose justice is of so very questionable a character.

The fact, however, has become far too apparent to be ignored, that in the minds of those who have the direction of state affairs in Japan the apparent confidence of former times has given place to a real unmistakable hostility. It is also a marked and most disagreeable feature that this has culminated under the very individuals who have been petted and made much of in Europe, on the simple ground of their belonging to a nation which, it was supposed, was making an effort to raise the curtain which has so long kept it in darkness, and was honestly desirous of letting in the light. What would have been the treatment of the ambassador Iwakura, the vice-ambassadors Kido, Ito, and Yamaguchi, and all their satellites, had it been known that they were only seeking for the knowledge which would enable them, not to cement friendship between Japanese and foreigners, but to create discord? It is most true, that the treatment of foreigners by the government, for months past, has, whilst maintaining all the external appearances of friendship, been most unfriendly. The policy that has been adopted is secret, selfish, and oppressive: and they must not be surprised that a strong feeling of annoyance and indignation is felt by many who have hitherto regarded the Japanese with affection, and witnessed all their proceedings with a kindly and forbearing consideration. The effect is, that now the government having got into a most hopeless tangle, from which it finds itself powerless to escape, all who were its firm friends stand by and look on with regret; whilst others freely criticise the follies which have been committed, and cast them in their teeth. But there is yet reliance to be placed on the former. The slightest move on the part of the Japanese government towards a restoration of the old harmony would be gladly hailed; and it is more than likely that the good offices of all the foreign ministers would be secured, towards helping them out of the extremely unpleasant and embarrassing position in which they now stand.

Something must be done. They have irritated China by their Formosan preparations; and they have irritated their own soldiers by stopping them when on the eve of departure. Okubo had but returned a few days from the South, where he had successfully grappled with the insurrection in Saga, when he had to return with all speed to Nagasaki to quiet the troops; and his report is looked for with much anxiety; for, when he left, there were some who declared that his only plan would be to let the expedition go; a "misunderstanding" with China being a lesser evil than disloyalty in the army and navy.

But all is doubt and perplexity. The officials are at their wit's end. They are afraid to tell the truth, and constantly endeavour to discredit statements that have been made in foreign papers that they know to be true but do

not scruple to deny. And, unfortunately, they have in one writer for the Yokohama press, a man who willingly allows himself to be their dupe; and whose lucubrations find admittance into a paper which, but for them, would be entitled to a certain share of respect; and whose principal aim seems to be to endeavour to prevent others better informed than himself from obtaining the credence which he is unable, with all his inflation and vanity, to obtain.

With him, however, we have nothing to do. Our sympathies are with Japan; and our desires are to see her relieved from the most unsatisfactory condition in which we now find her; and to encourage her rulers to retrace their steps, and to seek and find the friendship of those who are little less interested in her welfare than are the Japanese themselves.

IT HAS been said by a Japanese subsidised writer that the Representative Assembly exists almost exclusively in the columns of the *Japan Gazette*. We were unaware of the fact—if it be a fact. For, so far as we know, all that the *Japan Gazette* has done has been to give the public the information of the hopes and intentions of its promoters with regard to it, as they have from time to time developed themselves. The statements we made, now a year and a half ago, have all been shown to be true, as regards these hopes and intentions; and we cannot be responsible for the singularly limited and frequently incorrect information that reaches the interested and scurrilous scribbler, who, if he could but see himself as others see him, would hide his diminished head, and be filled with hot burning shame at the ridiculous figure he cuts, week by week crowing, on his own dang-hill, pæans of self-glorification.

Whether he has been right or wrong, however, in his remark alluded to above, for some time to come it is more than likely the Representative Assembly now exists elsewhere than in the columns of the *Japan Gazette*; for, on the 2nd May—i.e. on Saturday last, a proclamation was issued, signed by Sanjo Daijin, by which it would appear that a Parliament (this is the word written by the Japanese translator of the proclamation) has been determined upon, and the rules for its government are published. It will be quite evident to all who know anything about the "ins and outs" of Japanese affairs that this fact quite proves all we have stated. The accession of Shimaizu Saburo to office most certainly would not have been agreed to by him unless something had been done towards granting the prayer of the memorialists who called for a representative assembly. The present is a preliminary arrangement. It will be called in the form described below for the present; and consideration will be given by it to the manner in which the "representative" system shall be introduced. This is perfectly reasonable; and although we do not like its component parts being the very persons who are most interested in keeping free discussion under, still there are so many good men and true amongst them, that we do not entertain a shadow of doubt as to their following the wishes of the thinking men of the nation. It will be most interesting to watch closely the proceedings of the new Assembly, when called together. It is to be called GI IN, and the following is a free translation of the rules.

1.—An Assembly of the chiefs of all Departments and heads of offices shall be called together once (for one session) a year. If it

be necessary to call it unexpectedly, due notice shall be given. If the chief of a Department cannot attend he must send his next officer as his deputy.

2.—In the Assembly, the members or their deputies may give their opinions; but they will not be permitted to determine all matters.

3.—The session will be opened and closed by the Emperor himself.

4.—Matters referred to the Assembly by the Emperor must be answered minutely, after full discussion.

5.—All discussion must be addressed to the Speaker; and, on an act being passed, it must be referred to the Emperor, who shall have the right of veto.

6.—As the object of the Assembly is to weigh well public affairs (to make clear the convenience or inconvenience of administering the affairs) all the members must work uprightly and impartially.

7.—It is in the majority to decide all matters debated. The Speaker to have a casting vote.

8.—In the assembly, every member may discuss freely. Offence shall not be taken at anything brought forward in course of argument. (Though any one feel angry at the discussion, no fault or crime may be imputed).

9.—All matters that cannot be decided by the Assembly may be referred to the Emperor.

10.—All matters connected with taxation shall be decided by the Assembly; and after their decision has been given they must receive the sanction of the Emperor. It is in the Emperor's power to allow them or not.

11.—It is the prerogative of the Emperor to adopt or disallow all acts of the Assembly.

12.—The Speaker shall be chosen by the members, but must be appointed by the Emperor.

13.—The Speaker shall rule the Assembly; consider fully and thoroughly everything proposed by the members, and decide according to the votes of the majority.

#### Further rules of GI IN.

The full assembly will be called Dai-kai-gi. Committees will be called Sho-kai-gi. When it is necessary to discuss matters minutely, the Speaker will leave the chair and take his seat among the members. In their discussions nothing but the particular matter before Committee must be introduced. They shall be presided over by the Kuan-ji-cho. A committee of the whole house will be called So-ho-kai-gi. Sometimes, several committees will be appointed. Their meetings will be called Sen-nin Sho-kai-gi.

1.—Kuanji-cho is the next officer to the Speaker. In the absence of the Speaker, he will preside as his deputy; and in Sho-kai-gi he will always preside.

2.—Kuanji has the duty of managing all the business in Gi In, after consulting the Speaker. He examines all memoranda and petitions; as to the propriety of their being offered to the Assembly.

3.—Shoki-kuan keeps all Gi In records.

4.—Shoki-sei assists the preceding officer.

5.—Shi-kei-cho attends to disbursements.

6.—Shi-kei assists above.

All these are appointed by the Speaker's recommendation to the Emperor.

7.—Gi In members—63. All Chiji, kei, and Kiyo when in assembly MUST CONSIDER THEMSELVES THE REPRESENTATIVES OF THE WHOLE OF THE INHABITANTS.

8.—The Speaker may divide the house, in order to count the ayes and noes.

9.—The order of seats will be settled by drawing lots. The chairs will be numbered, and every one must take the chair corresponding with the number he draws. On the Speaker taking his seat all members must salute him.

10.—The hours of assembly will be from 9 A.M. to 4 P.M. The lengthening or shortening a sitting is with the Speaker.

Further rules are to be published. So we see that at last a move has been made. And once more the *Japan Gazette* is justified.

And so a word to the writer who scribbles impertinences for the *Japan Mail*, and scatters aspersions intended to fall murderously like hailstones, but really melting like snowflakes harmlessly, upon those who never harmed him, or wrote one word with a malicious object during an entire decade of journalizing in Yokohama. One word to that man of self-laudation. He is fond of quotations. Lavater says:

"A habit of sneering marks the egotist, or the fool, or the knave—or all three." The art of sneering unquestionably he is master of; an art only (like others) perfected by practice. We leave him to decide what the habit marks in him. We and the public of Yokohama, at large, have our minds quite made up on the subject.

WE HAVE said very little about the Formosan expedition, because it is evident that it has brought the government into a "fix," out of which it is very difficult to see an opening.

The expedition, at first unwisely commenced, none but the Daijokuan are responsible for. But why or wherefore it was determined upon and prepared is unlikely to be explained. We have, therefore, only to form our own surmises on the subject, and this has been done universally. It is supposed that it was a "sop in the pan," to quiet discontented clansmen and others who were eager to flesh the sword of Japan; and of the only two directions in which an opportunity for this presented itself, that was chosen which appeared the easiest. But

"The best laid schemes o' mice and men  
Gang aft agley;"

it happens they have selected one which quickly revealed itself as by far the most dangerous. The consequence was, that, to avoid a war with China, the expedition was countermanded.

But now arose an unforeseen trouble. The backbone of the troops selected for this enterprise consisted of the few loyal troops who could be sent from Tokei and other places to crush the rebels in Saga. It is not possible to say whether any promises were held out to them, before they left, of being sent to Formosa; but we do not believe it was so. It is the opinion of Japanese, that, when it was seen that the trained soldiers had really the advantage which discipline gives over numbers, and that they both could and would fight well under their officers, Formosa was determined upon, as a field affording them a larger opportunity of displaying their valour before the world; and probably of bringing *kudos* to the ministry by the annexation of a portion of it to Japan.

The life and soul of the affair from the commencement was Okuma; upon whom most persons look as the ablest of the Sangi. For a long time the government was totally deaf to all remonstrances, and only at the last moment, when much of the mischief had been done and the spirit of China had been aroused,

did the government see their folly, and then (like sensible men) acknowledge their precipitancy and stop the departure of the force.

It was the immediate result of the order of recall that all things at head-quarters in Tokei, and at Nagasaki, the rendezvous, were thrown into confusion. The resignation of several ministers was sent in (but nothing more said about it); the officers who had been appointed to lead the troops were disgusted, and the soldiers did not scruple to declare that they were resolved to go forward. Okuma was at his wits' end, between two stools—the government and the soldiers. Okubo, who had just returned from quelling the insurrection in Saga, was obliged to depart, *instantly*, to the south, to use all his powers and popularity among the troops to keep them loyal and obedient. All, however, failed. Saigo, (the brother of Saigo Kitchinoske), who had been appointed Commander-in-chief, left for Kagosima; and the instant he had taken his departure there was an end to submission to the Yedo Government. It is as yet unknown for certain whether the expedition (or a portion of it) left with or without Okuma's sanction. Government says nothing; but report is by no means slow to attribute the departure to that disappointed minister. By whomsoever the order was given, it became known on Thursday last that a portion of the expeditionary force had gone; and thenceforward all is a blank.

It is expected that the next move will be that the Daijo-kuan will declare it a piratical expedition, and so endeavour to wash its hands of the whole affair, and thus relieve the empire of responsibility as before foreign nations, China, and itself. If this be done, it ought to be without delay, for the news must have already been transmitted by wire from Nagasaki, and the Chinese government will probably be ere this, on the *qui vive*.

But the most deplorable aspect of the matter, in our estimation, is this. The troops who have thus gone, against the positive commands of the government, were those who alone had been relied upon as the upholders of order in the late insurrection. It must be within the recollection of our readers that, at one time, it appeared as if none could be induced to leave Tokei to fight against Saga. And, at last, as a bold stroke, the Imperial Marines and Imperial Guard were sent, who formed the nucleus of the little army with which Okubo quelled the rising. Soldiers were sent from Osaka and one or two other places; but great care was taken to ascertain their loyal feeling before sending them; and to provide that the arms sent in support of the government should not be turned against it.

These very soldiers are now the rebels. And the unfortunate feature in the case is, that if the government disavows them they will have the sympathy of the strongest portion of the samurai with them; and the government will be in an alarming minority. What then can the government do?

It is a fearful position the country is now in. And it is absurd to attempt to make light of it. On the one hand, if the expedition is fathered by the government, what will China do? On the other, if the soldiers are disavowed, what will they do?

To us, it looks like an alternative between a war with China, or a civil war.

The only chance against one or the other is, the extraordinary way in which Easterns act on such occasions. It is quite on the cards that China may remain inactive; or that, by some cajolery or tergiversation, government may be able to "make things right" with its people.

But if such a muddle existed in Europe, there is no doubt that internal or external war would have commenced by this time.

THE BRITISH Minister has not hauled down his flag. This we have seen with our own eyes. But, yesterday, whilst all sorts of rumours were flying about, a gentleman entered our office, and told us that things had even come to that pitch. The cause assigned was the so-called "attack on the Legation." It was at the same time asserted that all the Japanese ministers had resigned; and that all sorts of evils were at hand.

As to the resignation of ministers, it may or may not be true. We know that resignations have been so freely sent in, and that so little notice has been taken of them, that we now attribute but small value to them. When we have heard that the men who are said to have resigned have been actually replaced by other men, we shall then pay more attention to them. As we said last night, there is a complete muddle; and, so far as the outside world is concerned, all is mystery.

As to the British Minister hauling down his flag, Sir Harry Parkes is not the man to take such a step as that, except under very extreme circumstances; and we do not think he would allow things to go to such extremes without allowing it, by some means or other, to be known publicly, that the limits of forbearance were being approached. Not being in the secrets of the Legation, of course we can know no more than others what course affairs take from day to day, in special matters. But looking at that which has caused so much excitement—the attack at the Legation in Yedo—we think the public seem to have lost their heads.

Primarily, it is a simple case of the police exceeding their duty. It was no attack upon Her Majesty's Legation, in any sense. It was simply a foolish, hair-brained attack on an individual, not knowing who or what he was, under a mistaken idea that he had interfered with the police whilst in the execution of their duty. This was followed by most reprehensible conduct on the part of the police-officers, but, so far as we know, there is no further offence. There may be delay in giving the satisfaction demanded, but there is not, we imagine, any political difficulty arising out of the case. So far as we have been able to ascertain, after somewhat close enquiry, it appears that, on the evening when the affair took place, Mr. Hooper, who, in the absence of another gentleman, has the supervision of the works on the new buildings for the English Legation in Tokei, heard a noise outside of his house. He went to the door to see what it was; and beheld a man, who had the appearance of a coolie, "kowtowing" to some policemen, who were rating him to the top of their bent. On enquiring, he found that the culprit had been guilty of some trifling offence, and Mr. Hooper told them all that they must not stay and make such a row outside of his door, and told them all to "piggie." The coolie obeyed the order in double-quick time; rising from his knees, and making off as fast as possible, before the police could lay hold of him. Mr. Hooper, at the same time, went into his house, and had no idea of having given any offence; nor did he think anything more about the matter. The policemen left, and, shortly afterwards, Mr. Hooper left home in a jinrikisha, and went to spend the evening with a friend.

Presently, however, a number of policemen went to his house, and, not finding him at home, went to the site where the new Legation

buildings are being erected, in hopes of finding him there. In his absence, Mr. Wood come forward; when, without considering whether he was the person they sought or not, they at once attacked him with their long staves, beating him about the head in such a manner as to seriously damage him. They then bound him, and, in spite of all he could urge, hurried him off to the station house and bundled him into a cell. He asked them to send for a doctor, as he was ill, apart from the cruel treatment they had accorded to him; and, he said, even a Japanese doctor would do. They would neither send for a doctor nor allow him to communicate with anyone.

It happened that Mr. Wood's servant saw what was going on, and he quietly slipped out and went to Mr. Satow, whose house is at no great distance from the spot. Mr. Satow, with the quiet energy characteristic of him, went at once to the police office, and pointed out the heavy nature of the offence that had been committed; demanding Mr. Wood's immediate release. The reply he got was in the shape of insults, which, of themselves, were disgraceful for any Japanese to be guilty of. Mr. Satow then went to the house of Mr. Kido, and, not finding him, to another official of the Home Department, and the order for release was obtained.

From this it appears, that a very gross, violent, and cowardly attack has been made upon an innocent man. Under any circumstances, the course taken by the police was totally unjustifiable; and it only gives one more striking proof of the necessity of resisting the desire to bring foreigners under Japanese jurisdiction. But, apart from this, there is no doubt in our minds that Mr. Hooper, without the slightest intention of interfering with the police, or any thought of the possibility of giving offence, actually did produce this affair by his intervention. There is an amusing fact connected with it, that Mr. Hooper being a tall, powerfully built man, the policemen he first addressed looked at him with awe, and deemed themselves, even when armed with thick staves, nearly four feet long, too weak to cope with him. But their prey having escaped them, they were so indignant that, reporting it at once to the head station of the district, they were reinforced, and "the little army" returned blindly to attack any big foreigner they saw—one being as good as another to them.

This is the affair that has been magnified into an attack on the British Legation; and which has called forth a solemn warning from one writer, that Great Britain has the power to protect her subjects, and will use it. But it will hardly come to that yet; and, if we wait with a little patience, we shall find the government make the proper amends.

The excitement this has caused ought to convince the Japanese government of the manner in which their recent policy towards foreigners has alienated them. Everything done by the government now is looked upon with suspicion, and the good feeling that has been so easily lost will but slowly be restored, let the future course of the government be what it may. So easy is it to wound—so hard to heal.

Yet we would ask our readers not to judge too harshly. Great patience is needful under existing circumstances. The addition of such a small matter as even this "attack" ought to be, is a great load, in the state of anxiety under which the Daijo-kuan at present labours; and we must use all the forbearance we can. Our own impression strongly leans to the conclusion that all these *contretemps* are working to one end—to shew the Japanese how unable they are as yet to run alone; the absurdity of attempting to bring foreigners under their own

jurisdiction; and the desirableness of encouraging the old friendly feeling, by facilitating intercourse with the interior.

To-day, the clouds are very lowering. No one can tell what an hour will bring forth. All we hear respecting Formosa is constantly more and more vague; and all we see around us is anything but assuring. Still, as every cloud is supposed to have a silver lining, we shall hope for the best; and trust that out of all this evil good may come.

WE took occasion a few days ago to refer to the great efforts which were being made by the new Directorate of the Pacific Mail S. S. Co., to maintain and increase the *prestige* it had obtained during a long course of almost unexampled prosperity. The infusion of new blood throughout the various and vast ramifications of the Company is beginning to make itself felt, and it is evident that those at headquarters are determined to leave nothing undone which energy and acumen can bring to bear upon every detail of their gigantic business. The new steamers which are being placed on their several routes, and notably on that which affects us most, the Californian and Japan Line, have been built with special regard for the requirements of the particular trade in which they are to be employed, the comfort of passengers, and a high rate of speed; the old-fashioned side-wheelers having given place to the propeller, driven by compound engines fitted with every improvement which science (to the moment of the vessel's being floated) has suggested. What with the vessels already in the water and those in course of completion, the Company will, in the course of a few months (and indeed is now) as formidable an antagonist to the newer companies competing for a share of public business as it was to its rivals 10 or 20 years ago, when it commanded a virtual monopoly of whatever trade its vessels were engaged in.

The Agent of the Company here has received a telegram stating that the teas for New York per the *Great Republic* on her last voyage hence, were delivered, *via* Panama, 4 days ahead of those forwarded overland *ex* same steamer. The *Colorado* has made a quick passage to San Francisco, and her teas for New York, *via* Panama, will be delivered at their destination in 49 days from Yokohama.

The shortest time hitherto made by the overland route, we believe, was 44 days, with the single exception of the first voyage of the *Vasco de Gama*, when her teas were pushed through in the remarkably short space of 38 days. It is doubtful, however, whether this smart feat will be repeated in a hurry. Although the Company's time, *via* Panama, is not able to compare quite favourably with the overland route, such advantages they offer in the shape of reduced freights (as much as 20 per cent. cheaper, we are informed) will probably command for them the lion's share of tea *in transitu* to New York. Finally, they express their determination to make as good time *via* Panama as the Railroad has done heretofore.

Wherever the Co. has extended its operations the community has been benefited, and Yokohama has reaped a full share of the advantages; necessarily arising from the circumstance of its being a head-quarters of the gigantic Company. There is room enough on the line between the Far East and the Far West for both the Companies now engaged in the trade, and legitimate competition never did and never will result in other than prosperity for those engaged in friendly rivalry. The tea season will shortly open, and we venture to say that

both English and Americans will have their work pretty well cut out for some time to come, in the conveyance across the broad Pacific of the valuable products of China and Japan.

ON the 6th inst., we presented our readers with an account of those Tritons of the deep, the *City of Peking* and the *Bohnia*; we have now equal pleasure in noticing the minnows of the Creek, on our own shores. If the building trade of the Creek in river steamers, steam launches, sloops, schooners, and yachts, goes on increasing, it will be entitled to rank, though at a somewhat long interval perhaps, with the Clyde, the Tyne and the Delaware!

We had the pleasure of witnessing the trial trip, yesterday, of a paddle steamer, built for service on the river at Ni-gata, by our enterprising townsmen Messrs. Whitfield and Dowson. The problem of constructing a river steamer of very light draught, to carry a paying number of passengers, and at the same time able to stem successfully the current of a rapid river, is one far from being easy of solution, and has occupied the attention of Bourne, Scott Russell, and other eminent engineers of our day. The conditions imposed on the contractors were, that, in running order, the vessel should not draw more than 15 inches of water, and, with 20 tons of cargo and 100 passengers on board, not more than 2 feet 3 inches; and also that a speed of 8 miles an hour should be attained. These conditions, requiring the most exact calculations as to weight, horse-power, and displacement, have been fulfilled in the most satisfactory manner, in every respect; besides leaving a good margin.

The vessel is 84 feet long and 16 feet beam, and is propelled by paddle wheels 12 feet in diameter. Her bottom is quite flat, but is strengthened by longitudinal trussed girders, arranged one on each side of the vessel. Our American brethren are much in favour of stern wheels for boats of this description, but they have the great disadvantage of being obliged to put the boilers at the forward end of the boat, to keep the vessel in trim. This compels them to have the steam pipes running all the length of the vessel, involving a great loss of fuel by condensation of steam. In the present instance the wheels are in the usual place, and, in order to develop the necessary horse-power, are worked by spur gearing, in the ratio of 5.25 revolutions of the engines to one of the wheels. The engine, (double), of 16 H. P., is by the well known firm of Robey, of Lincoln, made expressly to the instructions of the contractors; their name alone is a guarantee for the excellence of the workmanship, and the material employed.

The steamer left the creek about 5.0 p.m., and the trial course was arranged to be from the Light-ship to the flagstaff on the jetty of the Lighthouse Establishment at Benten, and back. The time observed was as follows:

	<i>h.</i>	<i>m.</i>
Light-ship, abeam .. ..	5	17
Red Buoy, " .. ..	5	27
Benten, " .. ..	5	37

On the return,

	<i>h.</i>	<i>m.</i>
Benten, abeam .. ..	5	40
Red Buoy, " .. ..	5	50
Light ship, " .. ..	6	1

The distance being three statute miles, the speed of the vessel was nine miles an hour, or one mile more than the contract. The draught was 13½ inches, in place of 15. The engines worked admirably, and without the slightest

hitch in the way of hot bearings or priming, those two great bugbears on a trial trip. The steering gear, a most important matter in river steamers, answered in the most efficient manner. There are two rudders, of great size, worked simultaneously: either from the wheel-house forward, or by tillers aft, in case of need; and she came round like a top in little more than her own length.

Her accommodation for passengers is excellent, and, we admired especially, the snug little ladies' cabin, forward, tastefully fitted with sofas, toilette glasses, &c. The rest of the vessel is arranged to suit the requirements of the Japanese passengers.

Amongst the witnesses of the trial we observed Captain Purvis, R. N., Messrs. Waters, Shillingford, and other professional gentlemen, who all expressed themselves highly pleased with the performance of the vessel.

We hope this little craft is the fore-runner of many such, to facilitate intercourse and traffic on the rivers of Japan. We have great pleasure in congratulating the builders on their success.

HITHERTO, we have considered a police-station a public office, to which the public had the right of admittance when business directed their footsteps to its precincts. The Japanese seem to think differently, however; at least in Yokohama. At the old station, until recently located in Honcho Dori, those whom business compelled to visit it did so without let or hindrance—as a matter of course, one would think. But at the new premises in Sakai-cho, fronting the Swamp, two Japanese representatives of the majesty of the law (save the mark!) are now stationed at the gates, to demand of entrants whether they are going, and who and what they want; which information is immediately conveyed to a yakunin at the office within. The European police office is situate within the sacred precincts, and it seems, as there is no Municipality in Yokohama, that the European police are in reality servants of the Japanese Government. The office is, thus, not an European office but Japanese, and therefore, we suppose, the todjin ought to be very thankful that he is allowed to enter its portals, and should meekly submit himself to examination as to his intent in daring to approach them.

The change has been made with the transfer of the station to the new site. Why? Are we to expect in Yokohama a duplication of the insolent attitude assumed by the Tokai police force? It behoves us to be "very humble."

A SOCIETY has been formed, of nobles (fifteen in number), the prospectus of which is to this effect:—

"The Kazoku (nobles) occupy the highest rank in Japan; exercise influence and power over all; and, moreover, receive personal favour from the Emperor himself. But there is no reason to preserve them. In every civilized nation of the world there are noble families, especially in England. All of them are industrious, and make themselves proficient in every science and art; and they assist both high and low, by protecting the rights and freedom of the people. They are always anxious to promote the welfare of the country; and thus they secure the favour of the ruler. But the nobles of our country spend much of their time carelessly and negligently. They do not attempt to employ it beneficially; though they are higher in rank than either Shizoku or Heimin.

But we have now awakened from our long sleep; and we form ourselves into an association with the determination to do all in our power to support it, under the name of Shojoku Kuwan (library). We desire to study, with famous and learned men, all arts and sciences.

Since the revolution, the Emperor has often encouraged us with enlightening words, such as:—"Your rank is high, and your conduct should be an example to all. Therefore, it becomes you to brighten and improve yourselves by industry, as much as possible."

Now, in accordance with his kind words, we hope to assist the progress of civilization; that prosperity may be hastened. If we accomplish our end, one hundredth part of his benevolence will be requited."

WE HAVE so many proofs of the sincerity of Japanese in their desire for dispersing the darkness of ignorance, in which their country has been enveloped until now, that we can quite sympathise with the indignation with which the *Nichi Nichi Shimbun* reports the following:—

"A few days ago," it says, "we received very hateful and deplorable news from a scholar of the town of Ajiki. In Chiba Ken there are two schools, the expense of which is borne by the inhabitants. The Kocho (civil magistrate) of Suga, Otsuka Riyōhei, presented a petition signed by sixty persons, which, when opened, was found to be in this laconic form:—We do not require to learn either arts, science or literature, and request to be set free from contributing to the expense of the schools.' Since the great revolution, (goes on the editor) government has issued many proclamations respecting the necessity of all classes being educated. Some of those whose names appeared in the petition were ignorant of its existence, and an enquiry was made respecting it. It turns out that the Kocho, as was formerly the custom, was appointed to the office, not for his abilities or any good qualities, but only because his family was a very old one in the town. This is the effect of giving power and influence into such abandoned hands. It is enough to put an end to all progress."

OKUBO ICHIRO, Chiji of Tokai Fu, announces that the Public Hospital at Atagomachi Nichomé is completed. Mr. Asshurst, an American doctor, will superintend it, and Iwasa, Sasaki, and other native doctors will assist. It was opened on the 7th May, and all persons may avail themselves of it.

SMALL-POX has been very prevalent in Tokai since the beginning of April. The compulsory vaccination, which was determined upon three years ago, has quite sunk into abeyance, and the result is the loss of many children, and the disfigurement of more.

A BOOK has been published within the last three or four days, on Christianity. It is said to be the work of a Sinto priest connected officially with the Kiyobusho (Department of Religion). It is so violent and so blasphemous that even Japanese say that the writer defeats his own ends.

A TOKAI newspaper says that the ceremonies at the opening of the shrine of Durio-sama, in Yokohama, have been very prosperous. Durio-sama is supposed to be Tengu-sama, generally represented on pictures with a long nose, wings, and two claws on each foot and hand. Many geyshas (sing-

ing and dancing girls) from Tokai, attended, all dressed uniformly. Previous to this festival, permission was given to open the shrine in which the image of Kusunoki is contained, but very few worshippers attended; which fact gives the editor the opportunity of asking the question, "What does this prove?"—and he answers it evidently to his great satisfaction: "That the Japanese believe in Buddhism much more than in Shintoism!"

ON THE 4th of this month, a man named Isobe Toyokichi, who lived at Kanda Sakamacho, committed *harakiri*, after having killed his eldest son Sentaro. No reason can be assigned for the diabolism.

ON THE 27th inst., a somewhat mysterious circumstance occurred at H. B. M.'s Court—of all places in Yokohama perhaps the last to be thought of in connection with the mysterious. A motion was being made *In Chambers*, before C. W. Goodwin, Esq., Assist. Judge. The case was that of *Weintraub vs. Oriental Bank Corporation*, and, as is usual in Yokohama and elsewhere, the reporters were excluded. And yet the *Herald* of last night contains a most minute statement of all that took place, with the remarks of the Judge and the counsel for either side. We have already said that no reporters were present, the very fact of the sitting being "In Chambers" implying that the proceedings were not intended to be laid before the public eye. It is manifest that the Judge himself could not have furnished the report, and we are assured by the only other officer of the Court then present that no particulars were given by him. The matter thus lies between the two counsel, Messrs. Dickens and Marks. The former gentleman, it is perhaps needless to say, gave no information to anyone on the matter, and the inference is to who did furnish the report must be obvious. There can be no possible objection to a legal gentleman amusing himself (if not the public) in the columns of a newspaper, always presuming that he keeps within the bounds of good taste and decency; but as to whether he ought to give an report of an important case in which he is the petitioning counsel and whether it is likely to be an impartial one, there can hardly be two opinions. We leave the question to the public to decide.

THE entertainment at the Temperance Hall last night was, notwithstanding the rain, a success. Unpleasant weather on such occasions seems to make but this difference—when it rains there are seats for all, and when it doesn't it is only by dint of much squeezing and artful picking that all are accommodated. Shortly, we hear, the complaint of want of room will be met by the facilities about to be provided in the shape of more extensive premises, preparations for the erection of which have already been made, the site selected being the now vacant lot immediately opposite Messrs. D. Nowrojee & Co.'s.

The only observable effect of the wet weather last night was the absence of one or two whose names had been set down in the programme. Their places were so ably filled, however, that but little cause for regret could exist. Amongst the "singists," Mr. A. Wylie undoubtedly bore off the honours of the evening. His first song was a comical one, describing the last Coronation; the second the woful ballad by Thackeray, entitled *Little Billie*, in which the singer accompanied himself on the piano. This elicited uproarious applause, and in response to an imperative encore, Mr. Wylie

gave that essentially Scotch melody, *The Barren o' the door*." The deliciously imperturbable manner of the singer, when everyone else was nearly convulsed with laughter, added much to the success of the songs. The Chairman of the evening, Mr. Wilton Hack, gave a reading, and recited, with much feeling, that admired piece *Bernardo del Carpio*. He was cordially received. Songs, readings, and dramatic selections by red jackets and blue jackets, some of them well rendered, filled out a pleasant evening, the proceedings being brought to a close shortly before 10 o'clock.

WE HAVE to thank Mr. Marks for the communication which appears in another column, and which dissipates a great deal of the mist in which, as he says, the writer of the paragraph in our last night's issue was involved. We are glad to find that Mr. Marks did really write the report in question, because we have taken steps to assure ourselves that, in Yokohama, the reporters are not admitted to the hearing of cases "In Chambers." At all events, no such instance has occurred within the past two years; and if such cases have been reported "fully," as stated by our correspondent, it must have been in a way similar to that now under notice. Thus, the mystery is dispelled. Mr. Marks says that he has, on several occasions, furnished reports to the *Herald*, "wherein he was concerned," because "he did not wish to see them hashed and full of mistakes." This is by no means complimentary to the proprietors of that journal or its reporting staff; but he is in error in stating that "there are no short-hand reporters in Yokohama;" which statement, indeed, savours a little of presumption, as Mr. Marks, although generally well-informed, cannot reasonably claim to be posted as to all who are resident in Japan, and their attainments. "Mr. Dickens' speeches," Mr. Marks observes, "are wonderfully well reported, generally speaking." As the latter gentleman complains of his reports being "hashed and full of mistakes" in the *Herald*, (and surely he cannot accuse that journal of invidiously singling him out for such mutilation) we conclude that he intends the compliment for ourselves. We thank him. The insinuation that Mr. Dickens did not furnish a statement of the proceedings "because he was unsuccessful before the Court" may be taken for what it is worth. But, by a parity of reasoning, Mr. Marks cannot help acknowledging that he wrote the statement because he was successful.

WE ARE strongly in hopes that the difficulties of the Government are now so far arranged as to allow of all working together. If so, it can only be in one way; as the prominent members of the Free Speech party have most resolutely refused to have anything to do with government, unless their views were carried into effect. As we now see a probability of their return to power we can only argue that their firmness has prevailed. A few days will now reveal much. If all is favourable it is mainly due to the resolute demeanour of Shimadzu.

ON THE 22nd instant, a fire which consumed 40 houses broke out at Senji. It was burning some three hours.

WE WERE unwilling, last evening, to speak at any length on the matter of the attack made on one of the guards of the British Legation at Yedo, until assured of the undoubted authen-

ticity of the details of the circumstance. The particulars we have since obtained from the authorities are these:

A Japanese employed, with several others, on some additions to the Legation buildings, at present going on was guilty of some paltry offence, and a Japanese constable who, it appears, was within the grounds, (why, is not stated) took upon himself to admonish the offender, in presence of his fellow-workmen, who were brought to the spot that they might profit by the lecture. This occurred on Wednesday afternoon. Mr. John Hooper, Clerk of Works, who was superintending the building operations, and W. Wood, of the Mounted Escort, went up to the spot, and directed the men to leave off koo-too-ing to the Japanese and go back to their work, at the same time requesting the representative of the law to leave. This he did, and nothing more was thought of the matter. At about 7.15 p.m., a posse of 15 or 20 Japanese police entered the Legation premises and arrested and forcibly carried off Wood. Shortly after, a detachment of native constables, to the number of about 40, were stationed at all the avenues leading to the Legation, probably with the intention of bagging Mr. Hooper—who was with Mr. Wood when the apparently trivial circumstance occurred which gave rise to the trouble—and Mr. Bennett, another Clerk of Works, both of whom were at Shinbashi. Instructions were sent to them not to venture on returning to the Legation. They nevertheless did so about midnight, but found that matters had been arranged and the police withdrawn.

The news of the kidnapping having reached Mr. Satow, who resides near the Legation, he immediately started off to the house of Kido (Minister for Home Affairs) who was, however, absent. Ultimately, through the intervention of another high official, the man was released about midnight. He had been most grossly maltreated by the native police, who used the large staves with which they are now armed most unmercifully; his head having been selected as the most eligible spot for attack. It would appear from the details, that it takes, on an average, 15 Japanese, armed with bludgeons, to effect the capture of one quiet white man. The persons in charge of the police station refused to allow the unfortunate man to send a message to the Legation, and even the attendance of a medical man was denied him. The sergeant in charge refused to give him up for a long time, and was grossly insolent.

The Japanese Government will, of course, have to account for the gross violation of the immunities attaching to a Legation; which they do not attempt to defend. The escort man had committed no offence whatever, and was most brutally ill-used by the Japanese police, who, it is suggested, mistook him for another person!

Comment on the facts is perhaps unnecessary, and would probably be injudicious. It is sufficient to say that the matter is in the hands of Sir Harry Parkes. *C'est assez*.

PRACTICE TRAINS have been running on the Kobe and Osaka Railway line since the 6th instant, and on Monday, the 11th instant, the conveyance of passengers will commence, and continue regularly in future.

THE DEPARTURE of Mr. and Mrs. Hannen from Yokohama leaves a blank far more than usually felt. For three years Mr. Hannen has occupied the post of Acting Assistant Judge of H. M.'s Supreme Court, in a manner which has been most creditable

to himself and beneficial to the community; and none who have observed his painstaking and impartiality, and the justice of his decisions, can fail to hope that a proper recognition of the qualities he has displayed as a judge may be shewn at home. But not only as a judge has Mr. Hannen deserved all the commendation that can be awarded, but in private life he has made himself equally popular. His house was ever open. The hospitality of Mr. and Mrs. Hannen was without stint; and no persons who ever came to this place will be more missed by so many young men, to whom home influences such as were there found are invaluable. On their departure, they were rowed off to the steamer by six gentlemen of the Amateur Rowing Club, and many gentlemen and ladies went to see them off and take a last farewell. It was evident that all were more or less affected at the separation; and we can but express the hope that if, in the course of things, our present judge should be promoted to Shanghai, as may reasonably be expected, we shall see our most excellent and much appreciated friends back again.

A FIVE-MILE boat race, which excited some interest, came off this morning, between the ship's cutters of the U. S. Surveying Steamer *Tuscarora*, and the U. S. Corvette *Saco*. A start was made from the *Tuscarora* at 11.30 A.M., but almost from the outset it was evident that the *Saco* had the advantage, her boat being of a much lighter build—the crew being thus enabled to pull a fuller stroke. Throughout the first mile neither of the boats could be said to have greatly the advantage, but after that the *Sacos* gained perceptibly, and succeeded in rounding the stake boat, moored outside the Light-ship (2½ miles) in 21 minutes: the *Tuscaroras* passing it 1½ minutes afterwards. The final result was entirely in the hands of the *Sacos*, who came in easy winners; time not stated. Had the crews been more evenly matched as regards weight of boats the result might have been different.

#### TELEGRAMS.

TOKEI, 28th April, 4.55 p.m.

Shimadzu Saburo appointed Sa Daijin. His acceptance looks favourable for both parties.

YEDO, 11th May—5 p.m.

The *Shooylin*, *Tsuru*, and *Sakana* left Shinagawa for Nagasaki yesterday.

The *Chihli* sails to-day for Nagasaki, to embark one thousand troops.

THE FOLLOWING telegram has been received from Kobe, announcing the successful opening of the Railway for public traffic:—

Kobe, 11th May, 1874.

"Railway to Osaka was this day successfully opened for public traffic."

TOKEI, 12th May—2.55 p.m.

The Formosan expedition goes first to Amoy. Government acknowledges it. The Chinese authorities are to be conferred with.

Sir Harry Parkes received humble apology for outrage at British Legation. The punishment to police is under consideration. It is to be exemplary, and made universally known.

ON THE 21st instant, a deer managed to get loose from some compound and ran through the streets, followed by a crowd of people; who so frightened the poor animal that, at Sendagaya, it jumped over a bridge into the canal and was drowned.

YESTERDAY, the 28th instant, a grand performance took place in Tokei, which for its novelty many would have liked to have witnessed. Kineya Rokuzayemon, reputed the greatest musician in the empire, desirous of holding a "mass" for his father's soul, engaged all the most famous musicians and singers, male and female, to assist. With the performances of the Mikado's private band, (in attendance at the Yedo terminus on the occasion of the opening of the railway), still dwelling in our memory, we should not expect anything very harmonious; but probably it would have been weird and wailing, and doubtless interesting to a western barbarian.

THERE ARE plenty of philanthropists in Japan, as is frequently revealed in our native news items:

Ono, the banker, hearing of the great poverty into which the Kuanzoku of Miyagi Ken have fallen, raised a subscription among the Tokei merchants and gave them a sum of money, which they laid out in planting 40,000 mulberry trees. These are now coming on fast, and doubtless this well-timed aid will turn out a permanent means of livelihood for the people, and a benefit to the district.

ROBBERIES are fearfully rife in Tokei. About ten days ago, the store of the Yorinda Company was opened most ingeniously. It was fastened by an upper and lower bolt and locked. A hole was made at each place large enough for a man to thrust in his hand, to unbolt and unlock the door. The thieves then entered and had it all their own way. They took a superb dressing case which had been got out for presentation to the Mikado, valued at \$2,000; besides a number of other things. They even took a roll of carpet; but this seems to have been too weighty or inconvenient, as the thieves dropped it in front of the next house.

ROBBERIES are now, more often than not, committed by fellows who enter the houses with naked weapons. A fellow made good his footing on the inside of a house a few evenings back, and deliberately woke the owner by rubbing his face with the flat of his sword, telling him not to move or cry out. The suggestion didn't seem to take with the householder, who cried out loudly, "Thieves," "Murder!" and the robber, making a lunge at him, inflicted a nasty wound, and fled. The wife seized a stick used in rubbing misô in a suribachi, and gave chase. He was too quick for the plucky woman, but she says "I only wish I'd caught him. I'd ha' shown him that there are more uses than one for a misô stick!" How true, that "One touch of nature makes the whole world kin."

A PACK HORSE, recently, as he was quietly being led through the street, suddenly went mad as he approached the bank of the river Sumida, and bit his leader viciously. The man died in a few hours. The horse then ran "amuck" through the street, wounding several people, and upsetting everything in its course. Our informant, who was an eye-witness of the career of the brute through the thoroughfare, could not tell us of his ultimate fate.

THE NIIGATA newspaper tells of a farmer who, being visited by a priest, asked him whether it was true there was such a place as Paradise? Being answered in the affirmative, the farmer said, "I have a geography and a globe, and I've looked and looked, but cannot find it." "No," said the priest. "It is far away from this world, and none but ourselves and those who are true to us to go there." "Then," said the farmer, "I don't see the use of the globe and geography, if they don't shew me the whereabouts of the only place I care to know about." And he went there and then and burnt them both. And yet, "the school-master is abroad" in Japan.

A NATIVE paper contains this letter, from a correspondent;—

"I, Tamigawa, having read your paper, see that the Sintoo sect of Kurosimi-kio is strongly alluded to. I also hate the sect, and I will tell you why. Last year, one of its preachers, Kurosimi Munetoku, came to Awa country, and began to preach; and he actually made the foolish people believe that to him were they indebted for all the valuables they possessed. The people became so infatuated that they neglected their daily work to go and listen to him. The place was always crowded. At last, the officers of Nato Ken, hearing of what was going on, ordered him to cease preaching, and return to his own house. On this, notwithstanding he was "on duty," without replying by one word to the order, he ran away like a rat from a cat. By this may be seen the clumsiness and rudeness of the teaching of the sect. I will mention a few things I have seen myself in Awa:—

1.—If a man wishes to join the sect, a paper is handed to him, supposed to contain the divine will, for which he has to pay a high price; and he is compelled to take an oath that he will belong to the sect his whole life long.

2.—After a sermon, the water or rice which has been offered to the gods is given to those present, who are expected to offer money in return. The disciples say that the offering is not sold to them, but given; and that they give the money as a thank-offering. But it is a dishonest apology. If the rice is given to keep off evil-spirits, conscientiously, the priests should give it gratuitously, from their hearts; but, on the contrary, they covet the money, and moreover, they put forward a large box, called saisen-bako, to receive it.

3.—The monsters pretend to cure all diseases by their magic arts and by prayer. If people can be so healed, it were better to shut up the apothecaries' shops, and abolish the medical school; and give up the whole business to them. Of what use can they be? They well deserve to be called the traitors of Japan.

4.—They say that all men will be restored by sucking in the air against the sun. And many other ridiculous things they persist in teaching their disciples.

I think, if they are human beings and have souls, they should leave all such follies, and be true and faithful subjects of the Emperor.

THE burgling profession continues to flourish. Last night, (Ap. 29) or early this morning, three thieves, armed with drawn swords and masked, broke into the residence of Mr. Bourne, No. 31 Bluff, (at present undergoing repairs), and after tying up the cook, (whom they addressed in Japanese as riyori-nin, shewing that they were not altogether unacquainted with the run of the establishment) they proceeded with their work of plunder. The cook's wife, however, succeeded in getting out into the road, shouting

out "dorobo, dorobo." The rascals made several cuts at the plucky little woman, and she received some wounds, across the hand, on the face and neck, &c. That on the hand was a clean, sharp slash, apparently done with an instrument as sharp as a razor, but we are glad to hear that her wounds are not of a dangerous character. The cries of the woman alarmed the neighbours, and the scoundrels decamped. The house being at present under repair, the locks, bolts, hinges, &c. were all taken off, and placed together, and as the thieves paid the house a visit a few nights ago and "borrowed" some tools belonging to one of the carpenters, it is to be presumed they came for the furnishings referred to. The police at the Bluff station were immediately communicated with, but they seemed to take the matter very coolly, and up to this afternoon they had not reported the affair to the Saibansho.

Wouldn't a Vigilance Committee be a healthy idea?

"PACIFIC MAIL," which has been under a cloud for some time in the United States, is again coming to the front with new life, and is likely to re-assert and maintain its claim to be the premier steamship company of America. It has undergone an almost entire change; and is, to all intents and purposes, an altogether new association. The old foggy notions which hampered and retarded its progress have been pretty well exploded, and the company is now undergoing a process of reconstruction, so far as regards the character of the vessels to be employed in its various services, likely to set at rest the foreboding of its old friends and well-wishers, that the more advanced ideas of rival companies (put into practical operation in the shape of compound engines and propellers) would result in the "wiping out" of the pioneer company." It will be seen by advertisement elsewhere, that the Co. purpose despatching a steamer from San Francisco for Japan and China fortnightly, on every alternate Saturday. The *Alaska* left, under the new arrangement, on the 18th ulto, and will probably reach us in another 10 days, or less. The two following boats will be the *Grunada* and the *Colima*, both very fine specimens of modern naval architecture. The *Great Republic* will leave the Hongkong end on 13th inst., and will be followed by other vessels at fortnightly intervals. Should sufficient inducement offer during the tea season extra steamers will be despatched from the Californian terminus. The rival British company will have to put on a full head of steam, or it will yet be left behind.

THE IDOL of Minato-gawa Shinsha, an old hero and patriot, Kusunoki-Masashigé, has been brought to Yokohama for public exhibition at Benten, Hagoromo-cho.

This morning (May 1) there was a great pow-wow and procession, which took its way through the principal streets. It rested, at noon, at the house of Odai-kan, Homura, *en route*. The procession was rather an imposing one, from a Japanese point of view. It was preceded by a drum, carried by two heathen Japanees, and beaten by a third. Emblematic banners, trees, boxes, horses and horsemen followed; the whole being accompanied by a crowd, raising a din calculated to "astonish the weak nerves" of any evil spirits that might happen to be around.

WE LEARN that fifty-two new students entered the Ko Gaku Riyo (Engineering College) after the late examinations.

**ATTEMPTED MURDER AND SUICIDE.—CORONER'S INQUEST.**

ON MONDAY, (11th inst.) at 2 o'clock, an enquiry was held at the British Camp, Bluff, before Hiram S. Wilkinson, Esq., H. B. M.'s Vice Consul, on the body of William James Ingram, a private of Royal Marine Light Infantry, who came to his death on Saturday evening, 9th inst., by a pistol shot, supposed to have been inflicted by his own hand. The Jury empanelled was composed of Messrs. H. A. Crane, J. H. Hall, and A. Jaffray; who were duly sworn, and proceeded to view the body.

John Caldwell, Staff-Surgeon, R. M. L. I., sworn:—Shortly after 9 o'clock on the 9th inst., I was called to see the deceased, Private Wm. Ingram, R.M. On examination I found him profoundly insensible, with a wound in the region of the right ear, from which brain substance was protruding. The patient remained insensible until death took place, at 4.40 this morning.

To a Juror:—He never spoke; he was insensible.

To Coroner:—The wound was a bullet wound. The bullet traversed both hemispheres of the brain, and lodged in the bone of the skull, on the opposite side. There can be no doubt as to the bullet being there; I have felt it with a probe.

Wm. H. Putsey, Surgeon, R. M. L. I., sworn:—I have heard the evidence given by Dr. Caldwell. I agree with his statement as to the cause of death in every particular. I examined deceased half an hour after Dr. Caldwell did so. He was in a comatose state from a wound in the right ear, through which blood and brains were exuding. He remained in that condition until 4.40 this morning, when he died. I have since examined the body, and ascertained that the bullet had traversed both hemispheres of the brain, and lodged in the inner table of the skull, on the opposite side. The direction it had taken was upwards and slightly backwards.

Charles Mitchell, sworn:—I live at the "Sailor's Home," and am a British subject. On Saturday night, at a quarter past 8, I went up to the canteen to see Private Courts. I went in to see if he was there, but was told he was not in. One of the parties behind the bar told me he lived in the same hut as Ingram. I went over to his hut, and this person (Miss Anderson) was there. I made the remark that had I known she was there I would not have come in. She wanted to know the reason of my being in Camp, and I told her the party I came to see. She asked me to take her home, but I objected to do so. I was sitting in the room at the time the shooting happened. I was just about to leave, when one of the men asked me to go to the canteen and have a glass of beer with him. I left at a quarter past 9. Miss Anderson asked me how I was getting on, and so did Ingram. I shook hands with both of them: that was all that passed. I saw her leave the hut. Ingram went out with her, but no one else, to my knowledge. I was in the hut when I heard the report of a pistol, and I said to one of the men in Camp that there was some shooting outside. He remarked that it was pigeon shooting. After a lapse of 6 minutes I heard another report. One of the men said they were playing with caps. Directly afterwards we heard a shriek. I and two more then ran out into the road. One of them said, "There is someone shot." We got to the place and found her lying there; but him I did not see at all, until I observed him being carried away. I then went to the canteen, and soon after returned home.

To a Juror:—Deceased and Miss Anderson both went out together. I remained inside. There was some row outside on the verandah. It was six minutes after their going out I heard shooting and a shriek. I had been on friendly terms with Miss Anderson; I knew her in New Zealand. I refused to take her home because she was intoxicated. I did take her home once before, but she was intoxicated then.

To Coroner:—I knew of no jealousy on the part of Ingram. I made the remark that had I known her to be inside I would not have gone in; because Ingram might think I came up after her. Ingram never spoke to me about her. At the time, he treated me very coldly. He was a little intoxicated. It was because he was cool towards me that I told him that I would not have gone in had I known she was there. I know of a quarrel which took place between Ingram and this woman before. It happened at Plummer's public-house. He knocked a couple of teeth out of her jaw, on the right side. I do not know what it was about. I did not see the quarrel. She told me she would shoot him like a dog, if she got the chance. This was on a Saturday night. The quarrel took place a week ago last Friday. She drew a revolver out of her breast, and swore by the Eternal God that she would shoot him if ever he touched her again. She was swinging the revolver about, and I told her the best thing she could do was to keep quiet. I got the revolver into my possession, but gave it back to her afterwards. The last man I saw who had possession of it was Geo. Dutton, the barman at Plummer's. (Revolver produced). I would know the revolver; this is not the one. When I took the revolver from her, it was loaded in six chambers. Ingram was not present when this occurred. I never saw her present a revolver at Ingram, but she has told me she would shoot him. The reason she gave was, his having knocked two teeth out of her jaw.

To a Juror:—This is not the revolver. The other was a little larger, with some brass mounting.

John Hill, Private, R. M., sworn:—I was in my room on the night of the 9th instant. I heard three reports of a revolver, and went out to see what was the matter. I saw Jenny Anderson lying down, bleeding. I tried to raise her; she said "Let me lie and die." I asked her for the revolver, but she did not speak. I went to Ingram; he repeated the same words, "Let me lie and die." I felt the revolver in his hand. I took it from him and ran away with it. I threw it over some rails, and then followed him to the Hospital. I went back to the Canteen and had one quart of beer. In going to my room again I heard them making enquiry for the revolver. I told the Corporal in my room that I had done with it: that I had taken it from deceased and thrown it away. I then went to the Corporal in the room again, and asked him to take me before the Colonel, with the revolver. He did so.

To Coroner:—This is the pistol; I am confident of it. I put a mark on it.

To Jury:—They were between two and three yards apart when lying on the ground. The revolver was in deceased's hand. There was only one revolver. I threw it away; I was frightened. When I asked her for the revolver she never spoke. (The Coroner and jury here left to view the spot where the bodies were found.) An interval of 5 or 6 minutes elapsed between first and second shots; and of 5 or 6 seconds between second and third shots.

To Coroner:—The first shot was fired between the ends of the tree huts in the centre row; between my room and the other one.

The last witness, Mitchell, drank the beer with me (afterwards) and another man, R. Cross. I saw them in the hut, but heard none of their conversation. I never saw deceased in possession of a pistol. There was one Japanese woman and several soldiers in the hut with deceased and the woman.

To a Juror:—Deceased was not drunk.

To Coroner:—I did not see what shots were left in the revolver.

To a Juror:—I did not see the Japanese woman after she went out with them. She was gone when I went out.

Jenny Voers (known as Jenny Anderson), sworn:—I am a German subject. (A lady present was here requested to leave the Court.) I recognise this letter, (Letter produced). I received it on Saturday; it was written on the evening of the 8th. I know the handwriting, it is Ingram's; it was addressed to me. (The letter, which was of a most affectionate nature, was here read). I came up to the Camp about six o'clock. I brought my Japanese girl with me; she begged so hard of me to let her go. I went inside and spoke to Ingram. He did not seem quite in the same mood he generally was in; he was generally so pleased when he saw me. I asked what was the matter with him; he said he was vexed because he had not written to his sister Mary. He had intended writing to her for some time; and said if she would send him some money he would pay his debts right off, otherwise it would take him three months to get clear. I stayed there until it was quite dark; in the meantime, I told my Japanese girl to lie down, as she felt tired. Ingram was very much excited, and made me very angry at the way he spoke to me. At last he said "Here comes Charley Mitchell. I suppose he is come up to see you, you have made an appointment to meet him." I then said, "Don't be so foolish, you have seen him since I have, and, another thing, he is always annoying me, trying to persuade me to go back to Mills'; I will not go back to people who try to separate us." He was getting more excited every minute, when I said, if he was such a fool of himself as that, I should go home. We got up and went outside of the hut, on the verandah. We stood there for some little time. He said he would shoot himself, and me too. He had a revolver in his hand, but it was dark, and I could not see very well. When I saw the revolver I thought it was an old rusty one, and that he was trying to frighten me. I begged him five or six times to give it up to me. My Japanese girl said, "O, missis, come home," when Ingram said, "do not go so soon as this." After that, he put his arms round me, and kissed me, and said "I can't bear it, this will be the last." He let go with one arm, when I felt something cold strike my ear. I did not at first think it was a shot; I thought he had struck me with his hand. I was afterwards unconscious, until I found myself in the Camp Hospital. This is my revolver; I recognise it by the number on it. I never saw it since the day the bear was shot in Homura Road. I have had it in my possession fifteen or eighteen months.

To Coroner:—I have known deceased about two years, but did not know much of him until the time of the fire in March last. I am a married woman, but I went to the Consul to try and get a divorce. There was an arrangement pending for our being married, if I could get a divorce. That arrangement was in force on the 9th instant, and on that day I wrote to the Consul to know if I could get a divorce. Deceased said if I got it he would ask permission from his Colonel to get married. On the night of the 9th he asked me if I had got a divorce. I told him the Consul was not at home. We

have had quarrels. Once we had a bit of a quarrel because he struck me. On the evening of Friday, 1st inst., I had a quarrel with him. He was drunk. It was through drink we quarrelled. He had expressed jealousy towards Mitchell before this. I told him Mitchell had never been on intimate terms with me. He wrote me a letter, and said he would come for an answer at 11 a.m. next day. He often used to say, "I wish I had money enough to take you out of this house, (Mills'); it has been my ruin." Losing his stripes seemed to prey on his mind. I was standing near the edge of the verandah when I was shot, but I think I must have reeled back a few paces; I remember nothing afterwards. He was excited all the evening. He generally was so pleased to see me, but that evening he was quite different. I did not hear the report; I might have heard two reports, but was so excited at the time. Ingram was in the habit of going to my room; I often gave him the key to go and wash his hands there. He told me, the night the bear was shot, that he had taken my revolver to clean it for me. I visited him between the 3rd and 9th of May, whilst he was confined to barracks; except on days when he was on guard. We did not quarrel. I never enquired for my revolver; I never missed it. I used to keep it in a small drawer in my bedroom. The revolver was given me. I used to clean it once or twice a week.

To a Juror:—The Coroner said he had endeavoured to find the Japanese woman, but had not been able to do so.

George Dutton, sworn:—I live at No. 133, and am a British subject. I had a revolver in my possession, belonging to Jenny Anderson. I haven't it now. I think I should know it, but could not swear positively to its identification. She had the revolver back from me. I do not remember when, but think about two and a half months ago; it was before the bear was shot in Nomura road. (Witness hereupon examined the revolver.) I think it is the same, but will not swear to it. The revolver has either been repaired or altered since I had it. I injured the revolver by taking out the chambers and spiking them all with wooden pegs; I pegged the barrel with wood. The reason I did so was, because she once drew it on a friend of mine, before. (A spring of the revolver produced was broken.)

To the Coroner:—She drew the revolver once before on Mr. Plummer. I witnessed no dispute between deceased and Jenny Anderson. If there was any, it would only have been a sort of lover's quarrel. The quarrel I saw was about eight days ago. It amounted to nothing; merely simple words. It is very difficult, in this country, to tell who are lovers, and who not. I saw no blows struck. She could not have had two teeth knocked out, unless they were false ones; and then she must have put 'em in again, before next morning, without my knowing.

(The revolver was here handed to an Armourer Sergeant for examination, to ascertain if any spring was broken.)

Anthony Arnold, Private, R.M., sworn:—On Saturday, the 9th inst., at about 9 P.M., I was under the verandah of the hut in which Ingram lived. I went outside, on the off side from where this affair happened, nearer the sea. I heard the report. George Johns was with me on the verandah. I heard some one cry out. I ran in the direction I thought it came from. After I got off the verandah I heard something like a firelock, or miss fire, click twice. I looked, and from the light of a window that was opposite me, I could see a man with a revolver in his hand. His hand was raised above his

shoulder. I next heard the report, and went to the assistance of that young person (Mrs. Voegel), and helped to assist her to the hospital. I saw the deceased and her; they were lying together.

To a Juror:—I was in the hut with the deceased. I heard no quarrel. I went out and left them there. I saw a man with a revolver, and ran in that direction; but before I reached the woman I heard the second report and saw Ingram fall. I am sure of all this. No other revolver was near her. I should have had Ingram in a second, but he fell. I only heard two shots. If a shot had been fired six minutes before I should have heard it; as I was on the parade near the flagstaff, within fifteen yards of my hut. When I saw deceased last he was not in liquor.

(As it was then getting dark, the Coroner and Jury, seeing no reason to the contrary, gave a certificate to allow of the burial of deceased.)

George Johns, Private R.M., sworn:—I was in B.C. hut, where Ingram lived, when he came to me, and asked if I would accompany Miss Anderson down the hill to her jin-riki-sha. I said I would. I then put on my tunic; we were by the door. I went outside on to the verandah with them. I saw Ingram was very much excited at the time. They stood talking to each other, on the left of the doorway as they came out. I went to the Canteen for a box of matches; I was away about three or four minutes. When I came back they still stood under the verandah. Ingram's head was on her shoulder; he was crying. When he saw me close to them he said "George, will you stop under the verandah, whilst we go round to the back of the hut by ourselves?" I walked up and down the verandah for seven or eight minutes, when I heard a report of firearms; another man, Arnold, was coming out of the door at the same time. I said "Someone is shot." He said "Come on, let us see what's up." We ran away, both together. As we got to the end of the hut I saw some one standing just outside C. 2 verandah. I ran towards them. I heard the noise of the spring in cocking the revolver; then at once I heard the report. I was within about six paces. I went up and looked at the man. I was not quite certain it was Ingram. He was quite still. I saw, at the same time, a person lying across the drain. I had before heard the voice of a female, evidently in pain, immediately after the first shot. I went to her, and asked her what was the matter. I saw it was Jenny Anderson. She made no answer. I called out, "Who will go for the doctor." No one answered me, so I thought I had better go myself. I ran to the officer's mess to fetch the doctor. When I came back they were carrying them away.

To a Juror:—I saw it was Ingram.

To the Coroner:—I heard two shots, at an interval of six or eight seconds. If another shot had been fired I did not hear it; but I was on the verandah, I should think, more than six minutes.

Christopher Lanahn, Private, R.M., sworn:—On Saturday night, about 9 o'clock, I was sitting on A. 3 verandah immediately opposite deceased's hut. I heard the report of firearms. I passed the remark that some one was firing in Camp. Some man said it was not, it was some one hitting the verandah with a stick. About five minutes afterward I was going to the door, when I heard a scream, and found a female lying in the drain. I raised her up and called her name. I knew who she was; it was Miss Anderson. I asked what was the matter with her. She said "It's done it." I asked her who she meant, but she did not speak. I raised her up. She pointed towards C. 2 verandah. I then left her, and went to Ingram. I raised him up, and called him by

name, but he did not answer. The sergeant of the guard then came. I was one who searched the woman for a revolver. We found none. I was ordered to search her by the sergeant of the guard.

To the Coroner:—I heard two shots fired, at an interval of five minutes. I heard a scream after the second shot. I thought I was the first to arrive. There was no one else there, but some one was running away towards the officer's mess.

To a Juror:—I am certain as to the five minutes interval between the shots. I can swear it was a woman's voice I heard after the second shot.

Colonel J. Fleetwood Richards, R.M., sworn:—I knew the deceased; he has been in the battalion since we left England. I know him to have been a man of a morbid and sensitive disposition, but he was a smart young soldier. I promoted him to be Corporal about two years ago. He held that position for about six months, but, on one occasion, he having received a slight admonition from the officer commanding his company, an admonition that did not affect his position in any way, he immediately absented himself from Camp, with the expressed intention (not expressed to myself) of being reduced. He was absent two days, and was reduced to the ranks accordingly. Since then his conduct has been irregular, but not amounting to crime. On Saturday, 2nd May, I received a letter signed, "J. Anderson," complaining that Ingram had beaten her, and had threatened to do so again. I then sent word to this woman that she had better bring her complaint before a Civil Magistrate. Afterwards, Ingram was confined to barracks. He has been confined to barracks since Monday last, 4th inst.

Dr. Caldwell, recalled, stated that it was his opinion that the deceased committed suicide; and that the wound of the woman was not self-inflicted, but was caused by a pistol shot fired by deceased. Of this, he was in his own mind quite satisfied.

The Coroner then addressed the Jury on the facts of the evidence.

Without retiring, the Jury returned a verdict—"That deceased came to his death by a self-inflicted wound, whilst labouring under a fit of temporary insanity."

## Law Reports.

### In H. B. M.'s Provincial Court.

Before C. W. GOODWIN, Esq., *Assist. Judge*.

Monday, May 4th, 1874.

S. & J. MENDELSON

vs.

W. H. TALBOT, (*Reuter's Agent*.)

Mr. F. V. Dickens for plaintiffs; Mr. Gavin P. Ness for defendant.

His Honour gave judgment in this case as follows:

The plaintiffs in this case claim damages to the amount of 1,999 dollars, for loss arising from the non-transmission of two telegrams by the defendant, who is Agent for Reuter's Telegram Company.

For one of these telegrams the sum of \$67.25 was paid; for the other \$28.50. The return of these sums is claimed, and the rest of the damage arises from loss of profits which might have been gained had the telegrams been duly delivered. I consider it sufficiently proved that neither telegram reached its destination.

The plaintiffs signed a special contract in each case, in which they agreed to abide by certain conditions, as follows: "Neither the Company nor their Agents will be responsible in any

case for delays or mistakes in the transmission of, nor for the non-delivery of, any telegram, from whatever cause arising, but every precaution will be taken to ensure accuracy and despatch." The defendant relies upon this contract as a sufficient protection against all liability whatsoever. They are not in the possession or control of telegraphic machinery, but intermediaries, who receive messages and undertake for their transmission by the Telegraph Companies, by a system known as "packing," which economises the expense of transmission, and is thus, an advantage to those who choose to avail themselves of their services.

The incidents of their business resemble closely those of the Telegraphic Companies, but whether those Companies be Common Carriers is a point at present not directly decided by authority.

I do not think it is necessary for me, in the present case, to decide whether the defendant's Company are strictly, and for all purposes, Common Carriers or not; as, supposing them to be so, the 6th Section of the *Carrier's Act* enables them to bind their customers by special contracts; and if they be not, they are unquestionably in a position to do so. *The Railway and Canal Traffic Act, 1854*, can have no application to Telegraphic Companies or to this Company.

In considering, therefore, the validity of the defence made, we must refer to the principles of English law applicable to special contracts made by and with Carriers previous to the passing of the *Railway and Canal Traffic Act*. The law which then prevailed, and which is, I apprehend, still in force, as to all Carriers who do not come under the provisions of the said Act, is very fully expounded by Mr. Justice Blackburn in the case of *Peck vs. North Staffordshire Railway Company*, (32 L. J., Q. B., pp. 248, 249). The cases there cited establish fully the position that a special contract, by which the sender of goods agrees that the Carrier shall not be responsible for injury or damage however caused, exonerates the latter from all liability, though the loss arise even from gross or culpable negligence of himself or servants.

The contract in the present case is precisely of this kind. The plaintiffs agreed to hold the Company free from responsibility for mistakes in the transmission, and from non-delivery from whatever cause arising. Mistakes will generally resolve themselves into negligence of a greater or less degree. And considering the nature of the service undertaken, that of conveying or procuring the conveyance of a message round the world, through a variety of Agents, I certainly see nothing unreasonable in a condition avoiding responsibility for negligence as well as other accidents. The neglect of some servant, whether of the defendant's own Company or of the Companies which they employ, might otherwise make them liable for indefinite damages. But the question of the reasonableness of the condition is by no means necessary to be decided.

I think, then, that we have here a valid and binding contract, which shields the defendant from liability for the consequences of the non-delivery of the telegram, although the same may be traced to the negligence or carelessness of himself or any of the Agents employed in the transmission; and that he cannot be held responsible for loss of profits arising from the non-transmission.

I think, however, that it would not be an unfair construction to put upon this contract if we consider that it cannot be intended to exclude the natural reparation which may be made for the non-performance of the defendant's part, by refunding the price paid for the telegrams. The defendant offered no evidence whatever of the

cause of the accident, and, for anything we know from him, he may have never taken any steps whatever to transmit the telegram. It cannot be thought that the condition was meant to meet such a case of default as that.

On this ground, I think it right to find for the plaintiff to the amount of the price paid for the two telegrams, amounting to \$95.75, with costs, which must be taxed on the lowest scale, the sum recovered being under \$200."

## AMATEUR ATHLETIC SPORTS.

### FIRST DAY.

Friday, May 1st, 1874.

THE Clerk of the Weather was in a most genial mood this morning, and had the weather been especially manufactured for the day, it could not have better suited the requirements of the occasion. Certainly, it was warm—speaking comparatively—but the athletes had brought themselves to such a fine point of training that there was really hardly any more "waste" to be made, and the spectators were so much taken up with admiring the competitors that they forgot to remember that it was warm!

There was an excellent muster of the public; the Grand Stand especially being radiant with the fair faces and brilliant toilets of the ladies of the Settlement, who were present in great numbers. A great many red-jackets were to be seen, and, outside the palings, a swarm of Japanese seemed to enjoy what they saw quite as much as their more favoured brethren within.

The first event of the day, the Half Mile Flat Race, was the second set down on the programme, owing to the starter not being provided with a pistol; which weapon did not arrive until later on in the day. Five started, the race being good throughout. Private Tarring came in a good first. The 100 yards Flat (Handicap), set down as No. 1, followed. Fourteen started, the winner of the final heat being Mr. Abbott. In the Hurdle Race, 120 yards, over 10 flights, Abbott got off with a slight lead, which he maintained throughout. Three started, A. J. Smith being the favorite, and the result excited a little surprise; he more especially as the winner, before coming on the ground, had strained the muscle of his leg. There were but two competitors in the fourth event, Throwing the Hammer, 15lb, J. P. Reid winning with 71 ft. 4 in. The One Mile Walk (Handicap) excited much interest. Three started, the favorite, Mr. Watson, at scratch. Dr. Buckle (60 sec.) was half way round the course before Watson got away; Vivanti, with a start of 5 secs. was overhauled by the favorite at the first quarter mile (one round); and the Doctor was collared in the middle of the forth lap. Watson walked splendidly, and, in spite of the great start the *medicus* had, came in a good winner. The Private Match, half-mile, resulted, virtually, in a walk over for Mr. Reid; the Doctor, being pumped out with his exertions in the previous race, giving in almost immediately after starting. The 7th event, 150 yards Flat, (Handicap) was run in three heats. This was considered by many the race of the day, the first two heats being very well contested. The first was almost a tie between Messrs. Abbott and Walker for first place. The final heat is the first item of to-morrow's programme. Throwing the Cricket Ball attracted but three competitors, it being considered in ready a gift to Mr. Abbott, who secured the prize with 94 yards 1 ft.; 7 yards more than throw by him at last meeting. The next best throw was only 82 yards.

For the Ladies' Purse, Half-mile Flat (Handicap), there were seven starters. This was an excellent race. Walker (40 yds.) soon secured a lead, which he maintained until the finish of the first round, when James collared him. A close race ensued between the two for the next (and last) quarter of a mile; Walker, however, put on a spurt just before reaching the goal, and won cleverly.

The Purse was presented by Miss Goodwin, in a pithy and exceedingly *apropos* speech, the gist of which was somewhat as follows; "I have much pleasure in presenting you with this purse. Although you are by name a Walker, you have to-day proved yourself a great runner, and I hope you will be as successful in the Great Race of Life." (Great Cheers). Mr. Walker was so much surprised at his unexpected success, and exhausted with his exertions, that he could do no more than bow his acknowledgments. The High Jump afforded much amusement to the Japs, and was won, as expected, by Mr. A. J. Smith, with 5 feet, 1 inch. The first day's amusements closed with the Final Heat for the first event on the programme, 100 yards. E. Abbott, in good company, secured the prize, in 11-1/5 seconds. It was a splendid race.

1.—HALF MILE FLAT. For Non-Commissioned Officers and Men of the Army and Navy. Entrance free. Three Prizes. Five competitors to start or no race. Entries to be made on the ground.

Tarring, R. M., .....	1
Gardner, R. M., .....	2
Coombe, R. M., .....	3
Time 2m. 22secs. Five started.	

2.—100 YARDS FLAT, HANDICAP Two Prizes. 1st prize, a Cup; presented.

First Heat:

H. B. Henley, (12 yards).....	1
J. J. Dare, (3 " ).....	2
F. S. James, (4 " ).....	3
Lieut. Sandwith, R.M. (4 " ).....	0
Time 10½ secs. Won by a yard.	

2nd Heat:

C. P. Hall, (5 yards).....	1
F. Walker, (5 " ).....	1
H. St. George, (6 " ).....	1
A. Vivanti, (8 " ).....	0
Time 11½ seconds.	

3rd Heat:

A. T. Watson (2 yards).....	1
J. Dodds (4 " ).....	2
E. F. Kilby (5 " ).....	3
W. T. Buckle (10 " ).....	0
Time 10½ seconds.	

4th Heat:

E. Abbott (Scratch).....	1
F. Vivanti (7 yards).....	0
Time 11½ seconds. Won in a canter.	

3.—HURDLE RACE. 120 Yards, over ten flights. Two Prizes.

E. Abbott.....	1
A. J. Smith.....	2
J. J. Dare.....	0
Time 20½ seconds.	

4.—THROWING THE HAMMER, 15 lbs. One Prize.

J. P. Reid.....	71 feet 4 ins.
A. J. Smith.....	63 " 10 "

5.—ONE MILE WALKING RACE, HANDICAP. Two Prizes. 1st prize, a Cup; presented by E. Abbott, Esq.

A. T. Watson, (Scratch).....	1
W. T. Buckle, (60 secs).....	2
A. Vivanti, (50 secs).....	0

Time 8 min. 20 secs. The Dr. took 9 min. 37 secs. to do the distance. Vivanti gave up after the first round.

6.—PRIVATE MATCH. Half Mile.

J. P. Reid.....	walked over.
W. T. Buckle.....	caved soon after the start.

# 7.—150 YARDS FLAT, HANDICAP. Two Prizes, 1st prize, a Cup; presented by the Hon. Sec.

## First Heat:

E. Abbott, (Scratch) .....	1
F. Walker, (8 Yards) .....	2
A. Vivanti, (12 " ) .....	0
F. Vivanti, (9 " ) .....	0

Time, 17 secs. An excellent race.

## 2nd Heat:

H. B. Henley, (18 yards) .....	1
C. P. Hall, (8 " ) .....	2
H. St. George, (9 " ) .....	3
A. T. Watson, (3 " ) .....	0

Time 16½ secs. A good race.

## 3rd Heat:

F. S. James, ..... walked over

# 8.—THROWING THE CRICKET BALL. One Prize.

E. Abbott, .....	94 yds. 1ft.
C. P. Hall, .....	82 yds.
F. Vivanti, .....	—

# 9.—LADIES' PURSE. HALF MILE FLAT, HANDICAP. No entrance fee.

F. Walker, (40 Yards) .....	1
F. S. James, (30 " ) .....	2
A. H. Dare, (Scratch) .....	3

Time, 2 min. 14 secs.

A. J. Smith (50 yds.); J. J. Dare (20 yds.); E. F. Kilby (30 yds) and F. Vivanti (40 yds.) also started.

# 10.—HIGH JUMP. One Prize.

A. J. Smith .....	5 feet 1 in.
J. J. Dare .....	4 " 11 "

# 11.—FINAL HEAT. 100 YARDS.

E. Abbott (Scratch) .....	1
A. T. Watson (2 yards) .....	2
C. P. Hall (5 " ) .....	3
H. B. Henley (12 " ) .....	0

Time 11½ seconds. A splendid race; won by 1½ yards.

The handicapping gave general satisfaction. Capt. Walsn, R.M., acted as Starter. The sports will be resumed at half-past one o'clock tomorrow afternoon.

## SECOND DAY.

Saturday, May 2nd, 1874.

THERE WAS hardly so large an attendance of spectators at the Running Ground on the concluding day of the sports, although the number present was undoubtedly larger than on the occasion of previous meetings. The weather continued beautifully fine, but the heat was trying, especially to competitors in the Steeple Chase. The band of the U. S. Flagship *Hartford* was present on the ground, and added greatly to the attractions of the day. Much interest was manifested in the various events contested, and it cannot but be said that the meeting, as a whole, was probably the most successful ever held under the auspices of the Association.

The opening event was the Final Heat for the "150 yards," which Abbott succeeded in pulling off in 16½ seconds, closely followed by James and Henley. This was a most excellent race, the three reaching the goal in a bunch. The Long Jump fell to Watson. For the Non-Residents Race, 150 yards, Flat, only two started. A. F. Jeffreys, Oxford University Athletic Club, had the race to himself, his opponent, Lee, caving in when half way home. Some excellent racing was shewn in the 440 yards, Flat, Handicap—once round. Dr. Buckle, with a start of 55 yards, kept in front until reaching for home, when he shewed signals of distress, and soon after gave in. J. J. Dare came in a good first; the other four closely following. The pace was too severe for the rest, who quietly succumbed before fetching port.

Three essayed the Pole Jump. Mitchell and Abbott both failed at 6ft. 3ins. A. J. Smith cleared 8 feet very cleanly, and landed the prize. The next event was an extra race, 100 yards Flat, Handicap, for married men. Five started. This was a very good race. A. Mit-

chell made the running for about three fourths of the distance, when he was passed by Pollard, who kept the lead to the winning post. Urquhart, who started at scratch, seemed to experience a difficulty in getting through his men, and had no show. Very good time was made in the One Mile Flat, Handicap, for which four started. Vivanti led during the first round, but was collared by Smith: Walker being about 30 yards astern. A. H. Dare, scratch, overhauled Vivanti in the third round; the positions at the end of the lap being, Smythe 1, Dare 2, Vivanti 3, Walker 4: all about 30 yards apart. In the last round Walker passed Vivanti, who immediately caved. Smythe maintained his lead, and was never caught; Dare came in about 35 yards behind; Walker was a bad third. The mile was done equal to 5 min. 18½ secs; the time at last meeting being 5 min. 34 secs. As usual, the Race for Japanese, in two heats, once round (440 yards), created much amusement. A big crowd started. The first heat resulted in a tie between Mr. Brower's bettoe and Messrs. Lane, Crawford & Co.'s jinrikisha coolie, time, 68 seconds. The second heat was won easily in 63 seconds by a jin-riki-sha man, who was successful in the final struggle. The next race was the Steeple Chase, the event of the day. The course was a very difficult one, and severely taxed the capabilities of the competitors. Four started. J. J. Dare and Kilby got well over the broad water jump, but Watson and Smythe failed to clear it. Dare maintained the lead throughout, and cleared the bush and hurdle (which Watson afterwards knocked down), and then got well over the broad water jump again, coming in an easy winner. The other "difficulties" were not got over by the rest without considerable trouble; all of them getting a ducking, and looking much the worse for their exertions when they finally reached the goal. Only two started for the Winner's Stakes, 440 yards, which fell to the lot of Abbott, who managed to secure the greatest number of prizes at the meeting. Walker got off with a slight lead, both going easily. This continued until nearing home, when each put on a spurt and a very tight race ensued Abbott winning by about a yard. The Consolation, once round, was the last event. Five started. Dodds led, but was headed by St. George, when about half way round. The latter, however, immediately succumbed. Dodds again led, until within a hundred yards of home, when Hall passed him, and came in a winner by a yard.

The presentation of the prizes to the successful competitors brought to a conclusion a most pleasant gathering. Mrs. S. D. Hepburn presented the majority of the prizes. Capt. Bridgeford's prizewas presented by Mrs. Col. Richards. Miss Dare and Miss Jaquemot handed over those given by Messrs. Dare and Reid. Cheers for the ladies brought the affair to a happy conclusion.

# 12.—FINAL HEAT, 150 YARDS, FLAT.

E. Abbott .....	1
F. S. James .....	2
H. B. Henley .....	3

Time, 16½ secs.

# 13.—LONG JUMP. One Prize.

A. T. Watson .....	15 feet 8 in.
A. J. Smith .....	15 " 3 in.
C. P. Hall .....	15 " 3 in.
S. J. Elder .....	—

# 14.—NON-RESIDENTS' RACE. 150 YARDS, FLAT. One Prize. Entrance \$2. Entries to be made on the ground.

A. F. Jeffreys .....	1
H. Lee .....	0

Time 17 seconds.

# 15.—440 YARDS FLAT, HANDICAP. Two Prizes. 1st prize, a Cup; presented by Capt. Bridgeford, R.M.A.

J. J. Dare, (20 yards) .....	1
E. F. Kilby, (30 " ) .....	2
A. T. Watson, (10 " ) .....	3
F. Vivanti, (35 " ) .....	0
C. P. Hall, (25 " ) .....	0

Time, 56 secs.

# 16.—POLE JUMP. One prize, presented by S. Home Cook, Esq.

A. J. Smith .....	8 ft.
E. Abbott .....	—
W. P. Mitchell .....	—

# EXTRA RACE, 100 YARDS FLAT, HANDICAP. For married men.

F. S. Pollard, (2 yards) .....	1
A. Mitchell, (10 yards) .....	2
W. P. Mitchell, (scratch) .....	3
A. Urquhart, (scratch) .....	0
— Reynvan, (scratch) .....	0

Time, 12½ seconds.

# 17.—ONE MILE FLAT, HANDICAP. Three Prizes. 1st prize, a Cup; presented by Phos. Jackson, Esq.

Lieut. Smythe, R.M. ... (55 yards) ...	1
A. H. Dare .....	2
F. Walker .....	3
F. Vivanti .....	0

Time, 5 min. 4½ secs.

# 18.—RACE FOR JAPANESE. Once Round. Three Prizes. Five to start or no race. Entrance free.

The final heat was won by a jin-riki-sha coolie in 67 secs.

# 19.—STEEPLE CHASE. Three Prizes. 1st prize a Cup; presented by the Honorary Treasurer.

J. J. Dare .....	1
A. T. Watson .....	2
Lieut. Smythe, R.M. ....	3
E. F. Kilby .....	0

# 20.—WINNERS' STAKES, 440 YARDS FLAT. Entrance \$2. Compulsory for all winners of running events at this meeting. One Prize, a Cup; presented by the Officers of the Royal Marine Battalion.

E. Abbott, .....	1
F. Walker, .....	0

Time, 70 secs.

# 21.—CONSOLATION. Once round. One Prize. For all who have started, but not won a prize at this meeting. No Entrance Fee.

C. P. Hall .....	1
J. Dodds .....	2
F. Vivanti .....	3
H. B. Henley .....	0
H. St. George .....	0

Time, 65 seconds.

## PRIZE LIST.

100 YARDS.—1st, A Cup, presented; 2nd, Pair Claret Jugs.

HALF-MILE (SOLDIERS).—1st, \$8; 2nd, \$5; 3rd, \$2. And three Pewters, from London.

HURDLE RACE.—1st, Cup, engraved; 2nd, Butter Dish.

THROWING THE HAMMER.—Cup, engraved.

ONE MILE WALKING.—1st, A Cup, Mr. Abbott's; 2nd, pair Claret Jugs. Not yet received. 150 YARDS.—1st, A Cup, Mr. Dare's; 2nd, Plated Inkstand. Not yet received.

THROWING THE CRICKET BALL.—Opera Glasses.

LADIES' PURSE.—The Purse.

HIGH JUMP.—Plated Tray, engraved.

LONG JUMP.—Cigar Stand, engraved.

NON-RESIDENTS.—Album.

¼ MILE.—1st, A Cup, Capt. Bridgeford's; 2nd, Clock, engraved.

POLE JUMP.—Mr. Cook's.

ONE MILE.—1st, A Cup, Mr. Jackson's; 2nd, Cake Basket; 3rd, Pewter, with Lid; not yet received.

JAPANESE.—\$4, \$2, \$1.

STEEPLE CHASE.—1st, A Cup, Mr. Reid's; 2nd, Breakfast Set; 3rd, Pewter, engraved.

WINNER'S STAKES.—A Cup, Officer's, R. M.

CONSOLATION.—Cup, engraved.

## YOKOHAMA RACE CLUB SPRING MEETING.

FIRST DAY.  
THURSDAY, 14th May, 1874.

The weather to-day—the primary consideration where the “outing” of the majority of the public is concerned—was everything that could be desired, though, from the threatening aspect of the atmosphere, even up to this forenoon, it was almost to be feared that rain would effectually (and literally) damp the ardour of race-goers: which term may be taken to embrace the majority of Yokohama residents, with its suburbs; the Japs. being evidently quite as much interested (in their way) as their more advanced European neighbours!

There was perhaps hardly so great a number of persons present as is usually the case, although opinions differ on this point; but a first day is known to be a slack one, and on to-morrow, with the additional attractions of the band of the *Hartford*, which we understand will be present, the attendance will no doubt compare favourably with former years.

The Grand Stand was well filled, a fair sprinkling of ladies being present. The general public mustered in good force, and everything seemed to pass off successfully.

### 1.—THE NEW COMER'S CUP.

Presented,—Value \$100, for China Ponies that have never won a race in Hongkong, China or Japan. Weight for inches. Entrance \$5. Once round.

Three started.

<i>Thistle</i> ... ..	1
<i>Kingcraft</i> ... ..	2

*Thistle* got a slight lead soon after the start, which was increased at the half-distance. *Kingcraft* was astern till nearing the winning post, when he passed *Heather Bell*.

Time, 2 min. 45½ sec.

### 2.—THE GRIFFIN'S PLATE.

Value \$100. For Japan Ponies that have never run at any Meeting. Weight for inches. Entrance \$5. Half-a-mile.

Seven started.

<i>Despair</i> ... ..	1
<i>Hajimete</i> ... ..	2
<i>Noir</i> ... ..	3

A false start; *Punch* going all round the course. Another false start, when *Punch* repeated his performance of going round alone, his rider not being able to hold him in. *Despair* came in a good first; *Hajimete*, a bad second; and *Noir*, a good third.

### 3.—THE CELESTIAL CUP.

Value \$100, presented by the Chinese Compradores, for China Ponies. Weight for inches. Entrance \$5. Three-quarters-of-a-mile.

<i>Heather Bell</i> ... ..	1
<i>Gamecock</i> ... ..	2
<i>Carrots</i> ... ..	3

After three false starts; a good race.

### 4.—THE NIPPON CHAMPION.

Value \$150, for Japan Ponies. Weight for inches. Entrance \$10. One Mile.

<i>Typhoon</i> ... ..	1
<i>Ma-hitotz</i> ... ..	2

After two false starts they got away, *Friar Tuck* being behind and keeping his position all round. *Ma-hitotz* led to the half distance, when *Typhoon* passed him and came in a winner.

### 5.—THE CHALLENGE CUP.

Value \$150, for China Ponies. Weight for inches. Two Ponies from opposing Stables to start or no race. Entrance \$10. Two Miles.

<i>Dixie</i> ... ..	1
<i>Lingerer</i> ... ..	2

### 6.—THE CONSULAR PLATE.

Value \$ , presented by the Consular Board, for Japan Ponies. Winners at this Meeting of one race, 4 lbs.; of two races, 7 lbs. extra. Weight for inches. Entrance \$5. Three-quarters-of-a-mile.

<i>Typhoon</i> ... ..	1
<i>Lodi</i> ... ..	2

*Rising Sun* ¼ mile behind.

### 7.—THE CLUB CUP.

Value \$100, for China Ponies. Winner of No. 5 excluded. Winners at this Meeting of one race, 4 lbs.; of two races, 7 lbs. extra. Winners of two races, at last Autumn Meeting, or the Kobe Spring Meeting, 1874, 7 lbs. extra. Penalties not accumulative. Weight for inches. Entrance \$5. One mile and a quarter.

<i>Dibs</i> ... ..	1
<i>Ivanhoe</i> ... ..	2

### 8.—THE KIOTO CUP.

Value \$75, for all Ponies not entered in any races except o. 9, 1st and 2nd Day, and Nos. 1, 3, and 4, 3rd Day, but open to ponies entered in the New Comer's Cup and Griffin's Plate. Weight: China Ponies, 11st; Japan Ponies, 10st 4lbs. Entrance \$5. One Mile.

<i>Thistle</i> ... ..	1
<i>Br. to Chanticleer</i> ... ..	2

Very close race, the two starters being close together all the way round.

### 9.—THE WELTER STAKES.

For all Ponies. Owners' p. Entrance \$5, with \$50 added from the Fund. Non-starters to pay a fine of \$5, and fines to go to second pony. Weight, 12st. Half-a-mile.

<i>Tim Whiffler</i> ... ..	1
<i>Carrots</i> ... ..	2

This was apparently *Snow Ball's* race at the start, but he was soon collared and fouled by *Tim Whiffler*, and consequently lost all chance of winning after passing the ¼ mile post.

## SECOND DAY.

FRIDAY, 15th May, 1874.

THERE WAS a larger attendance of the public than on yesterday, and more ladies on the Grand Stand. At 1 o'clock, there was a continuous line of jin-rki-shas extending from the “Coffee House” to the Course, all along the road. The fine band of the *Iron Duke* was present on the ground, and added much to the pleasure of the day. Miss Goodwin presented the “Ladies' Purse” to Mr. Mitchell, the rider of *Ma-hitotz*. As the day's sport draws to a conclusion the sky is threatening, and a repetition of last night's shower seems imminent. Otherwise, the weather has been delightfully fine, though somewhat chilly.

### 1.—THE VISTORS' CUP.

Presented,—Value \$125 for China ponies. Winner of the Challenge Cup, 7lb.; of the Club Cup, 4 lbs. extra. Weight for inches. Entrance \$5. One mile and a half.

<i>Dixie</i> ... ..	1
<i>Crusader</i> ... ..	2

Three started. This was the best race of the meeting, so far. For the first half mile *Lingerer* led by about a length; the other two abreast. At the mile, *Crusader* led, a length ahead of *Dixie*; *Lingerer* four lengths behind. The finish between *Dixie* and *Crusader* was very fine. The former won by a length and a half.

Time, 3 min. 26½ sec.

### 2.—THE AMERICAN CUP.

Presented,—Value \$130, for Japan ponies. Three ponies from opposing stables to start or no race. Winners on the previous day, of one race, 7 lbs.; of two races, 10 lbs. extra. Weight for inches. Entrance \$5. Three quarters of a mile.

<i>Tim Whiffler</i> ... ..	1
<i>Masrao</i> ... ..	2

*Noir* was first on the course, followed by *Lodi* and *Masrao*; *Tim Whiffler* was the last out. *Lodi* was out of the race from the start. This was a good race between *Tim Whiffler* and *Masrao*.

Time, 1 min. 47 sec.

### 3.—THE LEGER PLATE.

Presented,—Value \$150, for China ponies. Winners, at this Meeting, of races under a mile, 7 lbs. extra. Weight for inches. Entrance \$5. Half a mile.

<i>Gamecock</i> ... ..	1
<i>Generie</i> ... ..	2
<i>Heather Bell</i> ... ..	3

Time, 61 sec

### 4.—THE LADIES' PURSE.

Presented,—For Japan ponies. Weight for inches. Entrance \$10. Half a mile.

<i>Ma-hitotz</i> ... ..	1
<i>Despair</i> ... ..	2
<i>Tim Whiffler</i> ... ..	3

*Despair* and *Tim Whiffler* almost neck and neck at the finish.

Time, 62½ sec.

### 5.—THE DIPLOMATIC CUP.

Value \$200, presented by the Diplomatic Body, for China ponies. Winners of one race at this Meeting, 4 lbs.; of two or more races, 10 lbs. extra. Previous non-starters to carry 12st. Second pony to receive one third of entrance fees, and third pony to save his stake. Weight for inches. Entrance \$10. One Mile.

<i>Dixie</i> ... ..	1
<i>Ivanhoe</i> ... ..	2

A close race between *Dixie* and *Ivanhoe*.

### 6.—THE KANAGAWA CUP.

Presented by the Japanese Officers at Kanagawa, —Value \$200, for Japan Ponies. Winners at this Meeting of one race, 4 lbs.; of two races, 7 lbs. extra. Three ponies from opposing stables to start or no race. Second pony to receive one third of entrance fees. Weight for inches. Entrance \$5. One mile and a quarter.

<i>Typhoon</i> ... ..	1
<i>Massaki</i> ... ..	2

With a false start, *Typhoon* and *Massaki* went all round the Course. After getting fairly off, *Typhoon* led all the way; *Massaki* a long way behind. *Rising Sun* gave in half-way round.

Time, 3 min. 8 sec.

### 7.—THE MANDARIN CUP.

Value \$100, for China ponies. Winners of two races at this meeting excluded; of one race, 7 lbs. extra. Weight for inches. Entrance \$5. Three quarters of a mile.

<i>Gamecock</i> ... ..	1
<i>Dibs</i> ... ..	2
<i>Generie</i> ... ..	3

A very close race; the best contested of the day.

Time 1min. 39½ sec.

### 8.—THE TOKEI CUP.

Presented,—Value \$100, for Japan ponies. Winner of Kanagawa Cup excluded. To be handicapped by the Stewards, after the Ladies Purse has been run for. Ponies entered previously, and not running, to carry top weight. Entrance \$5. 5 Furlongs.

<i>Lodi</i> ... ..	1
<i>Rouge</i> ... ..	2
<i>Despair</i> ... ..	3

Time, 1 min. 20½ sec.

## 9.—THE SCURRY STAKES.

For all ponies. A Sweepstake of \$5, with \$50 added from the Fund. China ponies, 11st.; Japan ponies 10st. Last pony to pay second pony's entrance stakes. One quarter of a mile.

<i>Heather Bell</i> ... ..	1
<i>Gamcock</i> ... ..	2
<i>Acambi</i> ... ..	3

Time, 31½ secs. A close race.

## THIRD DAY.

SATURDAY, 16th May, 1874.

ALTHOUGH the number of spectators present on the course did not come up to that of the previous days, the races were really of a more interesting character. The weather throughout the day was threatening, and, in the morning, some apprehension was expressed that rain would put a stop to the proceedings. The Bettoes Race, an addition to the published programme, brought the legitimate sports of the Meeting to a close. Everything passed off in the most satisfactory manner.

## 1.—THE HURDLE RACE.

Value \$75, for all ponies, over six (6) flights of hurdles. China, 11st., Japan, 10st. 7 bs Entrance \$5. Once round and a distance.

<i>Snorball</i> ... ..	1
<i>Ivanhoe</i> ... ..	2
<i>Carrots</i> ... ..	3
<i>Dibs</i> ... ..	0

Six started, the whole of them getting over the hurdles. *Dibs* did not get away at once, otherwise it was a splendid start. He, however, gained on the others, and came in a good fourth.

## 2.—THE LLOYD SOUVENIR CUP.

Presented by T. THOMAS Esq.,—value \$20. A compulsory entry for all ponies, winners at this Meeting; optional to beaten ponies. Weight: China ponies, 11st.; Japan ponies, 10st. Entrance \$10. One mile and a quarter.

<i>Typhoon</i> ... ..	1
<i>Dirie</i> ... ..	2
<i>Lodi</i> ... ..	0

At the first ¼ mile, *Lodi* had a slight lead, the other two being abreast. On the rise, at the ½ mile, he was behind, and out of the race. *Typhoon* had the lead, which he maintained till the finish; coming in an easy winner, three lengths ahead of *Dirie*.

Time, 2 min. 57 sec.

## 3.—THE SOLACE CUP.

Value \$100, for all beaten Japan ponies at this Meeting. Weight for inches. Entrance \$5. One mile.

<i>Massaki</i> ... ..	1
<i>Rouge</i> ... ..	2

Seven started. After a false start, in which nearly all went a quarter-mile, they got off on good terms. *Rouge* and *Massaki* were abreast till nearing the half-mile, when the former went ahead, and his rider raised his cap, feeling confident of victory. At the three-quarter mile, *Massaki* came to the fore, and came in a winner by a length. A good race.

Time, 2 min. 27 sec.

## 4.—THE CHINA CONSOLATION.

Value \$100, for all beaten China ponies at this Meeting. Weight for inches. Entrance \$5. One mile.

<i>Crusader</i> ... ..	1
<i>Carrots</i> ... ..	2
<i>Woodcock</i> ... ..	3

A good race. *Woodcock* and *Moorcock* led for the first ¼ mile. *Crusader* came to the front at the ¾ mile post, and kept the lead to the finish. *Woodcock* slyed near the winning post, and *Carrots* came in second.

Time, 2 min. 20 sec.

## 5.—THE SAYONARA STAKES.

A Handicap for all ponies. Entrance \$10, with \$50 added from the fund; non-acceptances, half forfeit. Entries to be made to the Stewards at the close of the 2nd day's racing, and handicap published the same evening. Acceptances to be declared to the Clerk of the Course after the Hurdle Race. First pony to receive 70 per cent; second pony, 20 per cent; and third pony, 10 per cent entrance money. One mile.

<i>Ma-hitots</i> ... ..	1
<i>Dibs</i> ... ..	2

*Ma-hitots* kept a slight lead all the way to the finish, when *Dibs* came up within a nose of him. This was the best race of the meeting.

Time, 2 min. 17 sec.

## BETTOES' RACE.

Once round.

<i>Dibs</i> ... ..	1
<i>Crusader</i> ... ..	2
<i>Gamcock</i> ... ..	3
<i>Thistle</i> ... ..	0
<i>Woodcock</i> ... ..	0
<i>No Use</i> ... ..	0
<i>Snorball</i> ... ..	0
<i>Carrots</i> ... ..	0
<i>The Lamb</i> ... ..	0
<i>Genetic</i> ... ..	0
<i>Mazraa</i> ... ..	0

Time, 2 min. 25 sec.

## JINRICKISHA RACE.—¼ Mile.

There appeared to be a pre-arranged agreement amongst the runners that a certain one of their number should win, and, indeed, it amounted to no race at all. Perhaps, because the runners, who appeared in a state of nudity, were afraid of the police taking charge of them. Several constables came on the ground with that intent, but were ordered off by the Committee, the course being private property. Seven started, and the prize was divided amongst them.

## Correspondence.

To the Editor of the Japan Gazette.

DEAR SIR,

I have noticed with much pleasure your successful endeavours to put in its proper light before the community the rather questionable propriety of counsel sending to, or writing reports for, the daily papers, of legal proceedings in which they are interested.

I, with yourself, entirely disagree with Mr. Marks in respect to there being no qualified shorthand writers in Yokohama. At any rate, even if there are not, there are persons most fully qualified to take their place, as is proven by the general correctness and impartiality of the legal reports contained in most of our local papers; that is, when the said reports have been written by the newspaper reporters themselves, and not by the legal gentlemen engaged on one side or the other. A very prominent case in point has come under my notice, that will refute the charge made by the legal profession against the newspaper reports. It is the case of *Cocking & Singleton v. the P. & O. Co.*, which was tried before the late Acting Assistant Judge, Mr. Hannen, about a month ago. Both the *Gazette* and *Herald* gave very fair and sufficiently correct reports of this case, the result of which was of some importance to the commercial community, as affecting their interests. The report of the *Gazette* was particularly correct and full.

This reminds me that in connection with the same case, there is another matter similar to, and almost as mysterious as, the one you have just succeeded in clearing up; and, if anything, it has taken a more objection-

able and reprehensible form than the one you have brought to light. It is well known in the Settlement that the decision, in this case, of the late Acting Assisting Judge has caused very great surprise among commercial men, and few persons could expect anything but an appeal from this decision to a higher court.

The mystery I speak of is contained in a legal article, under the heading of *Consignees v. Shipowners*, in the *Herald* of 31st March, and in the column generally occupied by emanations from the editorial pen alone; but any one can see that the matter is treated in far too professional a manner for it to be from the pen of any layman. Of course the editor of the *Japan Herald* is perfectly at liberty to obtain his leading articles from whatever source he pleases, if he thinks himself incapable of giving an important matter justice. But this is not the question; it is, where did he go to obtain his legal article? It must have been from a professional source, as everyone who has read the article in question can see.

It is, at any time, questionable whether it is to the interests of the presumed high standing of the legal procession, that its members should engage in correspondence of any kind in the public press, in a small community like Yokohama; much less for them to write legal articles, or reports of cases in which they may be interested. In the article mentioned above, the matter has been taken up in such a one-sided manner, and so much in the interest of the defendants, who gained the case, that I may ask, Can one be surprised that the gentleman who wrote that article should have the credit (rightly or wrongly) of belonging to the profession?

If the Yokohama press is going to put on one side its honorable and high purpose of serving the ends of justice, and make itself, instead, subservient to private interests and ends, it will find it to its loss, even in Yokohama.

The editor of the *Japan Herald* should bear in mind (if he wishes to deal out impartiality) the motto of a contemporary in a distant country, which he may well remember,—“I am in the place where I am demanded of conscience to speak the truth, and therefore the truth I speak, impugn it whoso list.”

Let the *Japan Herald* strive to maintain the same impartiality and independence—and, in fact, the whole of the Yokohama press; and then it will not only be the means of placing it far higher in the estimation of the public, but also in that of its legal friends and contributors, and the profession they belong to. As was fully expected, I now learn that an appeal in the case of *Cocking & Singleton v. the P. & O. Co.* has been, or is going to be, sent forward to the higher Court in Shanghai. While the matter is thus still open, such an evidently biased article as appeared in the *Japan Herald* under the heading of “*Consignees v. Shipowners*” neither gives justice to the plaintiffs in the case nor reflects to the credit of whoever wrote the article in question.

Yours truly,  
MEROHANT.

Yokohama, 30th April 1874.

To the Editor of the Japan Gazette.  
SIR,

A letter appeared in your columns last evening, signed “MERCHANT,” to which the following may serve as an answer.

I did not write the article in the *Herald* headed “*Consignees and Shipowners*.” I do not know who wrote it, neither did I furnish any of the facts or arguments in it to anyone

connected with the *Herald*, or to any one whatsoever. Nor had my clients any more to do with the article than I had.

Finally, I should have supposed that a perusal of the article in question would have convinced anyone not being a preternaturally developed Midas that the defendants' counsel was about the last person in the world likely to have written it.

Yours, &c.,

F. V. DICKINS.

Yokohama, 1st May, 1874.

To the Editor of the *Japan Gazette*.

SIR,—My attention has been called to a paragraph in your issue of last evening, narrating what you are facetiously disposed to term a "mysterious circumstance at H.B.M.'s Court." Permit me to assure you that there is no mystery about it, save the mist in which your communicant was evidently involved. I furnished to the *Herald* the report in question, as I have furnished several other reports in cases wherein I was concerned, and which I did not wish to see hashed and full of mistakes. You are mistaken, so far as my experience goes, in assuming that reporters are necessarily excluded from Chambers on the hearing of motions. Where a motion is *ex parte*, of course reports are not usual; but I can recall many contested motions of which full reports have appeared in the local newspapers. Your statement that "it is perhaps needless to say" that Mr. Dickins did not afford the information in question, may possibly be explained by the fact that the learned gentleman was unsuccessful before the Court. Mr. Dickins' speeches are, however, wonderfully well reported, generally speaking; seeing that there are no short-hand reporters in Yokohama.

As to your sneer on my report being an impartial one, I am quite content with you to leave the matter to the public. I trust you will insert this communication.

Yours obediently,

F. W. MARKS.

Yokohama, April 29th, 1874.

YOKOHAMA, 23rd April, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

Your leaders of Saturday and Monday alluded to the present state of the Japanese Mercantile Marine; and seem to be founded on very reliable information. There is much to be said on the sins of omission, as well as of commission, of the native ship owners, officers and crews; but they are not alone to blame. Every story has two sides. The foreigners now and formerly in the employ of the native ship owners as a body are not a little the cause of the present state of affairs. Happily there are a few who work *with will* for the good of their employers; but the majority have not gone the right way to work to impress the natives with the desirability of extensively employing others than their own people.

As regards the establishment of a Marine Board to examine into the condition of ships and the competency of officers and men, the subject has been for the last three years often brought before the Naval and Financial Departments, by one who is experienced in the native shipping; and who constantly urged the matter. But the great difficulty seems to be, to find natives able to undertake the duties; and the great unwillingness to allow foreigners such great powers as Examiners would have. The class of natives in these merchant

vessels are inferior in many respects; as the better class of the seamen can obtain higher wages in ship's under foreign flags than they can in those under their own. The example of the conduct of but far too many of the foreigners, when thrown alone amongst the natives without any control or moral check, does not tend to elevate the native's idea of moral or intellectual superiority of the foreign hireling. Where they hear foreign mechanics criticizing and disparaging each other they lose confidence in the alien, and run any risk rather than pay the high wages, and incur the extra expense, of keeping up the efficient condition of affairs the competent men should insist upon.

The extensive speculation and private trading carried on by Japanese employees, to the detriment of the owners' interests, must also be kept from the knowledge of the more honest foreign servant; and he thus is precluded from obtaining information necessary to carrying out his duties in working the ship economically and to the best advantage.

Repairs advised, stores asked for, are put off trip after trip: until finally a regular break-down takes place, and then comes the grand haul. Thousands are squandered. All hands have a good time ashore; and the ship is finally once more sent to sea in a hurry—with little done beyond painting over the thick coating of dirt, and make-believe repairs to boilers and engines.

If the Ministers and Consuls of the Treaty powers succeed in having foreigners placed on a better footing, no doubt a great improvement may be made; but, at present, the foreign officer, with few exceptions, is almost completely ignored; and is merely an adviser, or some one to fall back upon when in a tight place—too frequently the scapegoat for the natives' faults and neglect.

The great difficulty is to retain good Masters and Engineers: because they do not care to submit to the annoyance and to run the risks that inferior men will, rather than give up their job. And many who worked well 'till they got a long engagement have turned out almost useless and very troublesome afterwards.

The steamers are mostly officered and manned by the Samurai of the various Daimios under whose flag the ships formerly sailed. And now that the vessels are in the hands of the hitherto inferior class—the traders—these samurai being the only men of any experience, still somewhat continue to have matters their own way, and to domineer over their nominal masters. Consequently, most of the ships are sailed really more for the pleasure, profit or convenience of the officers and crew, than for the real owners and the public. The result is that the immediate profit and *whim* are solely studied, not the future of the ship or its owners. And the foreigner most popular is the man who suits the moment—not the man who thinks of the future.

Yours truly,

F. W. H.

To the Editor of the *Japan Gazette*.

SIR,

A few days since, while discussing with several native friends the doctrine of charity, or the duty of forgiveness as taught in the Lord's prayer, one young man very stoutly insisted that no true son of a Japanese father could ever forgive a man who, in any way whatever, either intentionally or accidentally, might have caused the death of his father.

Under such circumstances, the son was bound as a matter of faithful regard for his

parent to use all means in his power, and never cease until he had revenged his father's death. And there are in the history of Japan records of numerous vendetta, amply proving the generality of the belief of Japanese in this application of the doctrine of filial piety, even from ancient times.

In vain was it suggested to our young friend that, if he could not forgive one who might, by any accident even, have been the cause of his father's death, even when the offender might come in the most sincere penitence asking pardon—if he could not forgive such an one, then he could not expect the forgiveness of his sins when arraigned at the bar of Divine Justice.

He seemed fully impressed with the firm belief that he must not only lose his own life, if need be, but his soul also, in avenging the death of a father; thus putting duty to one's parent before, and paramount to, duty to God.

In the philosophy of these people the government is also regarded as exercising parental authority, and therefore it is also put before, and paramount to, the authority of any and all divine teachings. Very many, many times have we heard from native lips the expression of a desire to become a christian; but when pressed to give a reason for their delay to fulfil so good a desire, the reply has generally been, that they could not do so because they had not yet received permission from the government. Indeed, we have often heard the assertion by natives of their belief that the day the government proclaims full religious liberty that very day half of the people would declare themselves christian.

But yet, most of the people who have become interested in christianity decide to wait for the government permission, and it seems almost a vain effort to urge that the authority of God is above that of the government, and that the salvation of the soul is more important to each individual than any consideration of duty to one's government, or of fear of any punishment they could inflict upon the body.

There are, of course, exceptions to these extreme views upon filial piety and loyalty; but this is the standard, and those who do not hold to it are not regarded as pious and loyal children and subjects.

The foregoing may have interest for some of your readers.

Yours, &c.,

GAKU-SHA.

Yokohama, 7th May, 1874.

To the Editor of the *Japan Gazette*.

SIR,

There are, of course, exceptions to the "extreme views upon filial piety and loyalty" referred to in the letter of "Gaku-sha" in your yesterday's issue; and among these exceptions, so far at least as the vendetta is concerned, is the Japanese Government, which abolished that custom by a law promulgated over a year ago.

The vanity of the effort to urge that the authority of God is above that of the Government is perhaps in some measure due to the want of an exact definition of what is meant by the term "authority of God;" and the inefficacy on the Japanese mind of the consideration of the "salvation of the soul" argument may be partly attributed to the fact that the national character has been moulded by the writings of sages who would probably have rejected, with a distinguished divine of the English Church,

a theory of morals founded on the doctrine of the paramount importance to each individual of "saving his own dirty soul!"

Yours, &c.,

MU-GAKU.

Yokohama, 8th May, 1874.

(From the *Nagasaki Express*.)

Several reasons have been given to account for the sudden determination of Japan to despatch the Formosa expedition, but the majority, if not the whole of these, are conjectures only, as the affair is kept a close secret in the hands of a select few only. The reasons given include obtaining reparation for the murder of the ship-wrecked crew of a junk; a desire on the part of Japan to colonize part of that island; while the third is that it is a political move to endeavour to secure domestic peace and unity by giving employment to the troops, and thus divert their attention from that all engrossing and troublesome question, the Korean insult, which rankles in the breast of even the most peaceful of the official class, and has formed, and still forms, the principal theme of conversation amongst them. Although the more intelligent class of the Japanese may be fully able to foresee the danger and difficulty of attempting to cope with the Koreans at present, and although this section would desire the time for doing so to be delayed, it is quite evident that few would be satisfied to see the idea altogether abandoned. The question is one that appears likely to remain uneffaced from the minds of the people throughout the Empire until it has been finally settled by force of arms. The majority, or a large number of the soldiers and the ex-samurai, are advocates for immediate action, and are consequently blind to everything except to their own interests. And these are the ones who are desirous of endeavouring to make conquests before the internal affairs of the nation are thoroughly organized or even firmly or fairly established. The temptation to long for having a chance given to them of winning a Victoria Cross, or the Japanese equivalent, in a foreign land, is great amongst a warlike race like the Japanese, but it is much to be regretted that no influence can be brought to counteract this feeling by impressing upon them the fact that barbarous lands are not the fields upon which modern warriors hope to gain great and glorious names. It may suit the inclination of the ardent warriors of the Empire to go to war, but these are only a portion of it—certainly not the most meditative portion. Their very last thoughts are the consideration of the expense that such a vainglorious war would assuredly cost the country, even though Japan were to be successful, and which could in all probability only be carried on by raising another loan in foreign countries, and by making the interest on it become a further annual burden to the people of Japan. The question is by no means a new one, as it has long been talked about; but it is not surprising that the expedition should be viewed as impolitic, and, upon these grounds, it should attract criticism, although the question was one which occupied the attention of the Embassy to Peking during their stay there some months ago. It was reported on their return here that it had been definitely settled that the Japanese were at liberty to undertake the task they have recently determined upon, so that upon the score of the Chinese being likely to object to the expedition there is but little chance, and it would even seem that complica-

tions arising with the Chinese upon the action now about to be taken by the Japanese are not anticipated.

#### The Formosa Expedition.

On Saturday last some six hundred soldiers, intended to form part of the expedition, arrived here from Kagoshima, via Mogi. They had been landed at that village, and thence marched overland to this place. On Monday afternoon the P. M. steamer *New York*, which has been chartered by the Japanese government arrived from Yokohama. She has brought down treasure and stores, and amongst the passengers who have arrived by her is Mr. Okuma, Minister of Finance, chief in command of the Formosa expedition, who is accompanied by General Le Gendre. The Japanese steamers *Yuko-maru* and *Hozui-maru* arrived here the same day from Kuremoto, (Higo). The former brought two hundred and eighty, and the latter eight hundred soldiers; these were landed at the Ohato. On the following morning, the British steamer *Yorkshire*, from Shinagawa, arrived with five hundred and eighty more soldiers, stores, &c., but this vessel was only chartered by the Japanese government to come to this place. She will leave this port, early to-morrow morning, in ballast for Saigon, and we hear that she has been engaged to convey from thence to Calcutta a full cargo of rice for the British Government. This afternoon, the Japanese steamer *Hokai-maru*, arrived from Shinagawa, with two hundred more soldiers. These troops form part of the expeditionary force. We hear that several officers will be despatched to Formosa in advance of the main body of troops about to proceed there from this place. Further detachments of troops are expected here shortly from Higo, and it is stated on excellent authority that the total number, including those already arrived at this place to join the expedition, will be about 5,000 men.

The warlike preparations which have been made here during the week have given an air of activity to this place. Both the town and harbour of Nagasaki have presented a bustling appearance not often visible, and were this activity caused solely by the progress of commerce it would indeed be a most satisfactory picture to contemplate. The harbour, which by the shipping list would appear to be a somewhat bare one, is well filled with Japanese men-of-war and transports, which are coaling and receiving supplies of stores and as this necessitates the employment of craft to convey these supplies to the vessels awaiting to receive them, the harbour has been at times literally strewn with small nativecraft of every description.

The wants of the military visitors who are billeted in the town have created a busy time for the native residents generally, and the majority of them must certainly regard times of war as being infinitely more prosperous and satisfactory to them than the dull monotony of peace. Articles of food have, we hear, increased considerably in cost, owing to the recent demand, and there is every prospect that prices will continue advancing until further supplies are received from the interior.—*Idem*.

Most of the expeditionary vessels have started on their journey, the first one, the Japanese mail steamer *Yuko-maru*, (late *Nepaul*), left this port for Amoy on Tuesday morning last, with one hundred and fifty soldiers on board, and besides these she also took a supply of ammunition, provisions,

stores, &c. We learn that she also embarked, for conveyance to Amoy, several Japanese officers, who are to form the staff at the Consulate about to be established at that port. Further detachments of troops embarked to-day, some at the Ohato, others at Sagarantz jetty, and were conveyed on board the Japanese steamers *Meiku-maru*, and *Mikuni-maru*, which have been chartered by the government, and left this port this afternoon in company with the Japanese Corvette *Nitsin-kan* and the Gun-boat *Taibokan*, but on account of the bad weather and heavy sea the four vessels have returned and anchored just inside Takaboko point, and will leave again as soon as the weather moderates. Their destination is Amoy. About three thousand five hundred soldiers in all, and the whole of the transports, are commanded by foreign officers. Over two thousand soldiers have already been despatched and the remainder will follow by the Japanese steamer *Hokai-maru*, which will leave shortly. The P. M. steamer *New York* has discharged all her stores, &c., during the week, and they have been transhipped into two chartered Japanese steamers. She is to proceed to Shanghai to-morrow, to make her regular trip.—*Nagasaki Express*, May 2nd.

The Japanese Iron-clad *Azuma-kan*, left this port during the week, but her destination has not transpired. A rumour current amongst the natives is to the effect that she has gone to Kagosima.—*Idem*.

Sanjonishi Suyetomo and Tanakayori-mochi, two important officers of Department of Religion (Kiobusho,) together with the Shinto priest of Isio and some other officers, are expected to arrive here shortly to establish a branch of the department at this port. The Chewkiyoin is to be erected in Fugiya-machi, and in it the festival of 4th chief Shinto God is to be celebrated on the 16th of May. On the following day, the 17th, services will be conducted upon a scale much larger than it has been customary to conduct the annual one, which will be performed in the Suwa temple, and the lectures on the 18th will be delivered in the new building, to be open to the native public.—*Idem*.

The four expeditionary vessels, consisting of the corvette *Nitsin-kan*, the gun boat *Taibokan*, and the two chartered Japanese steamers *Meiku-maru* and *Mikuni-maru* which were detained here by the rough weather on Saturday and Sunday last, left for Amoy on the evening of the latter day. The two latter vessels conveyed the stores, &c., and about two thousand soldiers, as mentioned in our last issue.—*Idem*.

A fatal accident occurred on board the Japanese steamer *Hosui-maru*, (late No. 1) on Sunday last. She left this port at 4 o'clock on that day, bound for Higo, with a general cargo, but soon after she had turned the point, near Papenberg, one of her boilers burst. Five Japanese firemen were in the engine room a few minutes before the accident, but at the time it took place there was but one, and he, unfortunately, was killed almost instantaneously. She was anchored until 8 o'clock p.m. and afterwards with the aid of the other biler returned to port. The accident will necessitate her cargo being discharged, in order that she may undergo repairs, which will take some six weeks to complete.—*Idem*.

# BRITISH CONSULAR TRADE REPORT FOR KANAGAWA, FOR 1873.

BRITISH CONSULATE,

Kanagawa, April 14th, 1874.

SIR,—I have the honour to furnish you with a Summary of the Trade for the year ended December 31st, 1873, accompanied with the following Returns.

Enclosure I.—Return of the Import Trade.  
Enclosure II.—Return of the Export Trade.  
Enclosure III.—Return of Shipping.  
Enclosure IV.—Return of Export and Import of Treasure.

Enclosure V.—Return of Duties Collected.

## IMPORTS AND EXPORTS.

The figures for 1873 shew as follows :

Imports ... ..	\$19,535,758
Exports ... ..	\$15,095,218

Total ... .. \$34,630,976

being \$523,040 in excess of 1872.

The following are comparative tables for the two years.

	1873.	1872.
Imports ... ..	\$19,535,758	\$20,063,125
Exports ... ..	15,095,218	14,044,811
	\$34,630,976	\$34,107,936

or, to particularize,

### IMPORTS.

	1873.	1872.
Cotton Manufactures ... ..	\$6,913,961	\$8,374,703
Woollen Manufactures ... ..	2,725,917	4,654,191
Mixed Cotton and Woollen ... ..	2,425,867	1,237,166
Arms and Ammunition ... ..	210,408	63,617
Metals ... ..	570,145	318,974
Miscellaneous, foreign ... ..	4,514,698	3,293,213
„ local ... ..	2,174,762	2,101,261
	19,535,758	20,063,125

### EXPORTS.

	1873.	1872.
Silk, Raw ... ..	\$7,050,656	\$7,178,500
Silkworm Egg Cards ... ..	3,032,360	1,920,787
Tea ... ..	3,339,941	3,061,625
Copper ... ..	206,955	443,378
Miscellaneous ... ..	1,465,306	1,440,521
	15,095,218	14,044,811
In Imports, Cotton manufactures exhibit a decrease of ... ..	\$1,460,742	
Woollens, a decrease of ... ..	1,928,274	
Mixed Cottons and Woollens, an increase of ... ..	1,188,701	
Arms and Ammunition ... ..	126,791	
Metals ... ..	251,171	
Miscellaneous, foreign ... ..	1,221,485	
„ local ... ..	73,501	
In Exports, Silk shews a decrease of ... ..	\$ 127,844	
Silkworm Egg Cards, an increase of ... ..	1,111,573	
Tea ... ..	278,316	
Copper ... ..	226,423	
Miscellaneous ... ..	24,785	

It will thus be seen that the value of the import trade for 1873 falls short of that of 1872 by \$527,367. While the export trade for 1873 is in excess of that of 1872 by \$1,050,407. Shewing, as before stated, a total increase of \$523,040 in the value of the trade for 1873 over that of 1872.

Under the heading Cotton manufactures it appears that the trade in Grey Shirtings has kept very steady.

The figures of 1873 are rather in excess of those of 1872, but this is probably only owing to the fact that T. Cloths formed a separate item in the returns for 1872, and do not so appear in the tables for 1873.

There has been a considerably increased importation in Chintzes, Velvets, Turkey Reds, Muslins and Cambrics. This, however, may be accounted for by the stocks of most of these goods having been light at the end of 1872. Shipments to this during the past year have been considerably in excess of re-

quirements, and consequently business has been of an unprofitable character.

**COTTON YARN.**—The large importation in 1872 which led to an accumulation of stock has certainly not been without its effects upon this staple, and the past year has been characterized by the supply being far in excess of the demand, leading to prices ruinous to importers.

In spite of the importation having fallen from 121,950 piculs in 1872 to 83,128 piculs in 1873, the stock is still more than ample for the requirements of the Japanese.

IN WOOLLENS there is a considerable falling off, and Camlets, once quite an important article under this heading, have now dwindled down to comparative insignificance.

FLANNEL shews an import value of \$180,130 in 1873, as compared with \$1,284,160 in 1872. The excessive importation both of this article and of cloth in 1872 were initiated by too sanguine merchants both here and at home, who conceived the idea that Japan would generally adopt European made garments. This however has proved to be a mistake, for, except at prices far below cost, the natives do not seem to be sufficiently wealthy to purchase. On such goods as these, with one exception of French Mousselines, the losses incurred have been exceedingly heavy.

Blankets shew a diminution, for although this class of the goods is much used by Japanese, competition amongst foreign merchants has rendered the trade in them unprofitable.

Under the heading Mixed Cottons and Woollens I have nothing particular to notice, except that a large increase is exhibited in Cotton and Woollen mixtures, which may be partially accounted for from the probability that a large proportion of Orleans and Alpacas, the importation of which appears from the returns to have fallen off (but such I am assured by merchants is not the case), have been entered under this denomination.

As regards Metals, I have to notice that Lead figures for a limited amount, but the trade in manufactured Iron has increased considerably, namely, from 58,891 piculs, valued at \$285,982, imported in 1872, to 88,058 piculs and some odd cases, valued at \$400,313, imported in 1873.

Pig Iron and Kentledge, on the other hand, shew a decline, the importation in 1873 only reaching 1048, piculs valued at \$1,351, against 10,381 piculs, valued at \$23,317, imported in 1872. I cannot help thinking, however, that the difference in these figures is due more to the requirements of the Railways, Lighthouse, and docks at Yokoska than to any positive expansion of the trade.

The Imports of Arms, Ammunition and Accoutrements, other than for purely departmental purposes, is still on a reduced scale.

To go through the various items *seriatim* under the heading Miscellaneous would result in no practical benefit. By far the larger part of the goods imported have left a considerable loss, and may now remain in godowns totally unsaleable.

Large importations of Kerosene oil have, at times, been made from America, and the trade, though apparently unprofitable, has largely increased.

On the whole, the past year has, I am convinced, been a most unprofitable one for all merchants engaged in the import business.

The close of 1872 skewed a considerable increase in the consumption of many kinds of goods, especially Cotton and Woollen Mixtures, which for the most part were readily saleable at a fair profit. On the supposition that this demand would not only continue

but probably increase, orders for more goods were sent home, which proved, however, to be far in excess of the requirements of the country.

The increase in the stock of French Mousselines, consequent upon the excessive importation, has been latterly a serious loss to importers.

While on this subject, I cannot help mentioning that the French and German manufacturers seem to be running English manufacturers very hard in the production of certain goods specially adapted for this market. The clever and careful way in which patterns are imitated is an example well worthy of attention. The present position of the import trade of this port is far from healthy, and were it not that there are so few channels open for the employment of capital in other directions, I feel certain that many of our merchants would be glad to relinquish this branch of the trade altogether, except on commission for others.

The keen competition here, the facilities afforded by Banks, the easy system of financing at home, the want of sufficiently large markets to take off the enormous production of Lancashire and Yorkshire, all militate against the import trade being a successful one. Moreover, by means of the telegraph, though still in imperfect working order, goods for which there is any demand, or of which the stock is small, can be sent for and laid down in three and a half to four months, thus at once counteracting any benefit which in former days might have accrued in consequence of the length of voyage attendant upon sailing ships.

Indeed, it is not necessary to go to Europe for supplies, as, on the least margin of profits being shewn, China is only too ready to supply Yokohama with any goods she may have suitable for this market; Hongkong answering any demand for Yarn, whilst Shanghai soon responds to any enquiry for Shirtings.

I proceed to deal *seriatim* with some of the principal articles of export:

### Silk.

The export for 1873 shews 11,869 piculs 48 catties, valued at \$7,050,656; against 10,252 piculs, valued at \$7,158,500, exported in 1872.

The year opened unfavourably for exporters. Highly discouraging news from the home markets, and the unwillingness of Japanese silk-dealers to accept any reduction on the high closing prices of December, almost put a stop to business. Prices were then ruling as follows:—

Maebashi and Shinshiu :	Exc. at 4s. 6d.
Extra \$850 per picul	=31s. per lb.
Best 750 to 790 pcl.	=29s. 3d. to 30s. 9d. p lb.
Medium 680 to 720 "	=26s. 9d. to 28s. 3d. "
Inferior 600 to 660 "	=23s. 9d. to 26s. 0d. "

Quotations for Oshiu, as under, were purely nominal:—

Extra \$820 p picul	=31s. 9d. p lb.
Best 770 to 790 pcl.	=30s. 1d. to 30s. 9d. p lb.
Medium 700 to 750 "	=28s. 3d. to 29s. 3d. "
Inferior 680 to 700 "	=26s. 9d. to 27s. 6d. "
Hamatzke 640 to 680 "	=25s. 3d. to 26s. 9d. "

Towards the end of February, the largest native holders commenced to consign to Europe for own account, rather than accept the lower prices offered by exporters, and consignments were continued until near the close of the season.

Prices then gave way to the extent of thirty dollars per picul, and afterwards remained steady until close upon the arrival of the new silk, when a further decline of twenty dollars per picul took place.

The opening prices of the new season's silk were:—

Maebashi and Shinshiu : Exc. at 4s. 6½d.  
Medium \$580 to 600 pcl. = 23s. 7d. to 24s. 4d. ½ lb.  
Inferior 550 " = 22s. 4d. "

but afterwards gradually fell, until the lowest point was reached in September, namely:—

Maebashi and Shinshiu : Exc. at 4s. 4d.  
Good \$600 to 640 pcl. = 23s. 2d. to 24s. 8d. ½ lb.  
Medium 550 to 580 " = 21s. 4d. to 22s. 6d. "  
Inferior 490 to 530 " = 15s. 0d. to 20s. 6d. "

Oshiu :  
Good \$550 to 600 " = 21s. 3d. to 23s. 2d. "  
Hamatzke \$480 " = 18s. 8d. "

So far, silk shipments had been fairly profitable to exporters, the new Maebashi of fine size being well liked in Europe, and freely bought by manufacturers, in place of Italian silks, at a much lower cost. Prices were soon influenced here by the favourable out-turn of early shipments, and rapidly advanced, until, in December, the highest prices were paid. Quotations at the close of the year were:—

Maebashi and Shinshiu : Exc. at 4s. 3½d.  
Extra \$710 to 740 pcl. = 27s. 4d. to 28s. 0d. ½ lb.  
Best 680 to 700 " = 25s. 10d. to 26s. 7d. "  
Good 610 to 660 " = 24s. 5d. to 25s. 2d. "  
Medium 600 to 620 " = 23s. 0d. to 23s. 8d. "  
Inferior 550 " = 21s. 3d. "

Oshiu :  
Best 680 to 700 " = 25s. 10d. to 26s. 7d. "  
Good 630 to 660 " = 24s. 1d. to 25s. 2d. "  
Medium 550 to 600 " = 21s. 2d. to 23s. 0d. "  
H'tszke 480 to 510 " = 18s. 8d. to 19s. 7d. "

Upon the whole, the business of the year must be considered as highly unsatisfactory to silk exporters; for the results of shipments made during the first half year were disastrous in the extreme, and the profits of the new silk will in no way compensate for prior losses. Heavy shipments, moreover, were made from here, at the high prices established in October and current until the end of December. These shipments reach falling markets in Europe, with a general depression of the silk trade quite without precedent.

Much has been written on the mode of preparing Japanese silk for the market, but, as the subject is an interesting one and is constantly developing new phases, I do not hesitate to devote a few lines to it. Cocoons are availed of for two purposes, that is, either for the reproduction of seed or for reeling into silk. In the case of the former, care is taken to preserve the chrysalis, and the cocoons are carefully stored in a place of safety. When it is intended to use the cocoons for silk they are dried in the sun. Two or three exposures will ensure the destruction of the chrysalis, and thus prevent the egress of either *wi* or butterfly. The mode of drying generally in use amongst the Japanese is by exposure to the sun's rays, though drying either by artificial heat or steam is not unknown. If dried in the sun, the cocoons should be left till after sunset, and until they are slightly moist with dew. If taken in when hot from the effects of the sun, it tends to make the silk brittle, and difficulties will be experienced in reeling. With a climate of pretty equable temperature, say 70 Fah, the worm takes seven or eight days to change into the grub; if the cocoons are picked off the spinning beds too soon, in fact before the change is perfectly effected, it results that when the cocoons are undergoing the drying process the feet of the silk worm are entangled in the cocoon fibre and the silk is consequently damaged. It is a mistake to keep cocoons too long after they are dried, the fresher the cocoons the better the silk; the thread, too, is more easily reeled and the silk will be heavier. About 10 days after the worm has spun its cocoon, the chrysalis has changed into a butterfly or developed an "Uji," and makes its egress by eating through

the cocoon fibre. If the cocoon is intended for silk, great care is taken to preserve it from injury of any kind. When the cocoons are eight or nine days old they are placed on baskets and laid out in the sun to dry. Two day's drying will effectually kill the chrysalis, and the cocoons are then placed where a draught can play freely on them. If it is intended to steam them, they are placed in a basket steamer, specially made for this purpose, over a cauldron of hot water. Two or three mulberry leaves are put in the basket with the cocoons and the whole is then covered with a stout wrapping-paper. So soon as the mulberry leaves have completely changed color the chrysalis may be reckoned on as killed. Another plan is to place a large box, with a series of drawers or shelves, over a fire. At the bottom of each drawer a layer of thick paper is placed, and on this the cocoons are laid. Two or three mulberry leaves are then put into each drawer. The drawer should be constantly shifted, so that each may receive the same amount of heat; when the leaves pulverize to the touch the killing process is looked upon as effected.

The water in which the cocoons are immersed prior to reeling is the best and purest that can be obtained, and, however good of its kind, is generally filtered before use. If ordinary well water, or water in the least degree tinged with mud, is used the thread is apt to lose in weight and natural gloss.

Silk is reeled either by hand or machinery. The latter has been brought to bear recently upon the industry in question, but hand-reeling is most in vogue, and has been so from time immemorial. Hand-reeling is carried out in the following fashion.

About 8½ lbs weight of cocoons are taken, and these are divided into thirty parts, one portion is put into boiling water and the thread reeled off first from five or six cocoons, increasing to seven or eight. This number will turn out the best silk; for medium and inferior silk 8, 9, to 10 or 12 cocoons are used. A small ring, made either of horse hair or human hair, is attached to the edge of the basin containing the cocoons and the hot water. The thread is run through this ring and then passed in and out of the first and second fingers of the left hand, the right hand meanwhile turning the handle of the reel. Japanese seem to think that by the hand process greater evenness of thread and an absence of impurities is obtained than by machinery. Cocoons are easily reeled at first, but the process gradually becomes a matter of difficulty, and requires a careful and expert hand.

The alleged superiority of hand-reeled silk to that turned out by machinery is combated by the fact that the latter commands a far higher price in the Yokohama market than the former, and the large outlay that has been made on the establishment at Tomioka, where silk is reeled by machinery under foreign supervision, (not to mention other establishments in Yedo and elsewhere) tends to confirm the success achieved over hand-reeling.

#### SILKWORM EGG CARDS

Exported in 1873 1,409,537 cards, valued at \$3,032,360; against 1,280,525 cards, valued at \$1,920,787, exported in 1872. I am inclined to think, however, that the valuation placed by me on the export for 1872 was too low, namely \$1.50 per card, and that \$2.40 would have been a fairer valuation; thus giving \$3,073,260 as the value of the export for that year.

The market opened later than in any previous year, the first purchases being made in the beginning of October. Although, at first, buyers were by no means prepared to pay the

high prices asked by Japanese, still, as it became known that the export would be restricted (owing to Government legislation in that direction) to about 1,250,000 to 1,300,000 cards, and as the season was very far advanced without any purchases having been effected, buyers were obliged to give in, and sellers obtained almost the prices asked.

One of the most notable features of the market was the great demand for cards from the district of Shimamura in Joshu. This seed, it seems, is not so much affected by the changes of temperature, and hatches well, even in unfavourable seasons, when the more delicate kinds from Shinshiu and Oshiu have given poor results. The quantity of Shimamura cards available for export was only 30,000, and these were immediately bought up on arrival at \$3.80 to \$4.15 per card. Cards from Yonezawa were also much in request, at \$3.30 to \$3.50.

By the end of October, settlements had reached to 950,000, the average cost of these being fully as high as that of the preceding years. Prices after the departure of the cargo for Europe at once fell 75 cents, and continued steadily to decline until the close of the season, when inferior cards were to be had at 75 cents to \$1.50. Notwithstanding the strong measures taken by the Government to prevent the sale of cards intended for home use, about 100,000 found their way to Yedo, and were bought there at from 50 cents to \$1.

It was evident from this that the quantity set apart for home use was by far in excess of requirements. These low prices brought the average cost of the season's cards down to about \$2.20, whereas the average of the previous year was, I think, higher, as above stated.

The rearing of silkworms has always received great attention at the hands of the Japanese, and has now attained to a high degree of perfection. The commencement of the season varies in the different parts of the country, according as the temperature happens to be high or low. Where the climate has a pretty equable temperature, the silkworm egg cards are taken out of store about the beginning of April and hung up in some quiet nook of the house. After the lapse of twenty-two or twenty-three days the worms will appear; they are carefully watched, and paper is wrapped round the cards, which are now placed in a basket tray. They are looked at every morning, and brushed off lightly with a feather fan on to another piece of paper. Mulberry leaves are then taken, cut very fine, and well sifted, tossed so as to get rid of leaf fibre, and then mixed with a certain proportion of millet bran. With this the worms are fed. Fresh paper is wrapped round the cards, and this course is pursued for three days, when all the worms will be out. The paper with the worms on it is then placed on clean basket trays over a layer of matting. The worms are fed about five times a day. After three days the paper is removed and the worms are transferred to matting. This stage is known as the *kami nuki*. One card will probably multiply itself sixty times, so far as the number of worms goes. As a rule, about ten days elapse before the first sleep is entered upon, but this depends upon the temperature. When the worms are observed to be preparing for the first sleep they are sprinkled with millet bran and covered with a net, mulberry leaves being placed over the net. After a couple of hours the net is raised and the worms brought away with the mulberry leaves, to which they will have attached themselves. They are then

placed in a fresh basket tray, and the one from which they have been taken is well cleaned. When the worms have roused themselves from the first sleep they are sprinkled with rice bran and covered with a net as before, after which they are shifted to a fresh basket. The same course is pursued when the worms go through the second and third sleep, but for the fourth sleep the net is not used. The period that elapses between the second, third, and fourth sleeps is from six to seven days at each stage. Much attention is paid to cleanliness, as neglect in this respect exposes the worm to disease. Mulberry leaves are given with an unsparing hand, the leaves being chopped coarser and coarser as the worms grow in size. Sieves of different sizes are used so as to meet the feeding requirements with fine or coarse leaves. As a rule, the worms are fed five times a day, but in hot weather, when the leaves are apt to get dry, they are given as often as eight or more times in a day. In cool weather the leaves are given perhaps only three times, but with no reduction in the actual quantity. The leaves are measured out with great nicety. An important feature in the rearing of silkworms is the giving the proper quantity of food, and neither overfeeding nor, on the contrary, starving the worms. After the fourth sleep the leaves are given whole. The worms have now attained full size, and soon cease feeding altogether. When they are observed to be seeking for a place to spin in, the best are picked out and placed on the *mubushi*, a contrivance made either of straw or light twigs, and intended to facilitate the spinning of the cocoons. The cocoons are spun in three days. Those selected for silk are dried in the manner before described, either in the sun or by artificial heat, or by steam. If the reproduction of eggs is desired, the cocoons are ranged in baskets. After thirteen or fourteen days, the chrysalis will have changed into a moth, and will emerge from the cocoons. The male and female moths are then mated. About 100, 120, or 130 female moths are then placed on a card, which is surrounded with a framework of oiled or varnished wood, so as to prevent the moths from escaping off the card. In a very short space of time, say about twelve hours, the card will be covered with eggs. Strings are then run through the cards, which are strung up in some quiet corner. In autumn they are stowed in boxes, and so left until the following spring.

The great thing to guard against is disease, so that careful watching of the worms day and night is most essential. If the weather is exceptionally hot, then the worms are kept cool, if, on the other hand, cold, then proper warmth is looked after.

There are several varieties of the mulberry. Exposed and open ground is generally selected for a plantation, with a stream near at hand. The ground is always well drained. With worms intended for reproduction more than ordinary care is exercised in the selection of leaves for their food. The mulberry trees known was *Ichibei* (an early kind) *Yotsu-me* and *Awo-jiku* (late kinds) are most fancied. Yonezawa in Dewa, Yanagawa in Oshiu, Uyeda in Shinshiu, and Shimamura in Jōshiu are celebrated for their silk-worms eggs. The provinces of Oshiu, Dewa, Kōshiu, Shinshiu, and Jōshiu have the best reputation for silk. Shimonita and Onama in Jōshiu have also a high name, and so, too, have Maeibashi and Takasaki in Jōshiu. According to native returns, 193,500 cards were produced in Oshiu in 1872, of which 116,680 are said to have been exported to foreign countries.

**Tea.**—Exported in 1873, 11,330,466 lbs., valued at \$3,339,041; against, exported in 1872, 11,653,333 lbs., valued at \$3,051,625. The following prices were ruling at the commencement of 1873:—

Common	...	\$23 to \$24 per picul.
Good Common	...	\$25 to \$27 "
Medium	...	\$29 to \$32 "
Good Medium	...	\$35 to \$37 "
Fine	...	\$35 to \$37 "
Finest	...	\$38 to \$40 "
Choice	...	\$42 to \$45 "

The highest prices paid for new Teas in May 1873, at the commencement of the tea season, were \$50 to \$60, and \$65 to \$75 per picul, respectively.

Tea is said to have been first introduced into Japan from China, in the year 732, but it did not come into universal use until 1193. A few words on its culture. The districts which have a reputation for the best tea are those of Uji, Dango, and Tōgino, situated in Yamashiro. Suruga in Oni takes next rank, but the shrub is very generally grown throughout the Empire. The ground best adapted for its cultivation exhibits a reddish soil, mixed with small stones, open to the south and east but shut in from the north and west. Plantations are situated in warm, but yet temperate, climates. The plant blossoms late in autumn, and the nut or seed follows the flower. These nuts, however, do not ripen until the winter of the ensuing year. When ripe the nut bursts, and the seed falls to the ground. This is known as the "Oshiko," and is reckoned the best for sowing. It is then placed in bags and stored. The seeds are sown in the course of the last month of the year. Patches of ground measuring six feet square are marked out. These are divided off in three parts, in each of which holes of little over a foot in diameter are dug. Manure is used, and after the lapse of two days a small quantity of seed is sown in each hole; about an inch of light soil is then sprinkled over the seed. The seedlings show up early in summer. In the ensuing year, the seedlings are carefully protected from the cold. In the second year liquid manure is applied, but solid manure is not used until the third year. If the plantation is a very good one the leaves are picked immediately after the third year. The time for picking depends upon the temperature of the season, but the most fitting time is when the shrub is in what is known as the three-leaf stage, and when summer has well set in. This picking makes the best tea. When four or more leaves appear they are somewhat dry in consistency and make inferior tea. Choosing a fine bright day, the women and children in the tea-growing districts get together, each with basket in hand, and set to work picking. The best leaves, forming first class tea, are plucked, and after thirty days comes the second picking for medium teas.

The leaves are taken to the houses and boiling water is got read in a range of cauldrons filled with water to 5-10ths of their capacity. About half a pound of leaves are then placed in each steamer over these cauldrons, a lid is placed on the steamer and the leaves are thus steamed for a brief period, then taken off, spread on matting, and cooled with a fan. They are removed to the firing pan, tossed and rubbed rapidly to and fro with the hands until the steam has dried off. They are then shifted on a pan placed over a light fire, where, having been left for one night, they will be found to be completely dried. The leaves are then passed through a sieve to get rid of the stalks, and a rough cleaning

process is gone through to remove conspicuous impurities, after which they are again carefully sifted. The sieves are made of different sizes, each of a successive grade, adapted to every stage of sorting from rough to fine. They are classified into 1st, 2nd and 3rd class, and an expert is employed who parcels out the leaves into good, medium and inferior. When this has been done the tea is again fired, cooled, and placed either in cedar wood boxes or packed up in matting, and is now ready for transmission to different parts of the country; or it is placed in jars, with the lids carefully secured so as to exclude all air. For storage a well ventilated place is selected, damp being very injurious to tea. When sudden changes take place in the temperature, as is not unfrequently the case at all seasons of the year, the leaves are taken out and refired, so as to ensure their retaining full colour and flavour.

"Powder tea" is esteemed a great luxury by Japanese, and although coming from the same seed as ordinary tea is cultivated in a different manner, thus developing a leaf different in consistency and flavour. This tea, of two kinds, known as "Koicha," and "Usucha" is made from very old shrubs, selected from the best grounds or plantations. These shrubs are very freely matured, some ten times in the year for "Koicha," and some six times for "Usucha." About the end of March or beginning of April, these shrubs are surrounded on all sides, in addition to being covered with a bamboo screen work, so as to protect from frost. This screen work is removed when summer is well set in. When the leaves have been picked they are steamed for about half a minute, spread out on matting, and cooled. Then follows the same process as with ordinary tea, namely, firing first over a quick and then over a slow fire, the only difference being that the leaves are turned about with a stick and not with the hand. When about half dried the leaves are placed on trays and dried gradually before a light fire, after which they are passed through bamboo sieves; finally they are spread out on sheets of paper, each leaf being picked out singly. Great care is shown in the mode of storage of this particular kind of tea. The leaves are placed in tin or white metal jars, which again are enclosed in wooden boxes and packed with a certain quantity of common leaf. This preserves the scent and flavor for a long time. When about to use for drinking a sufficient quantity is taken out of the metal jar, placed in a small hand tea-mill and slowly ground into a very fine powder. The powder is then removed with a feather and placed in an air-tight jar. Boiling water is then got ready, and when just at boiling point about one quarter of an ounce of tea powder is put into a tea cup and boiling water poured on to suit taste. The whole is then rapidly stirred with a bamboo stick especially made for the purpose, until a good froth is produced. The tea should then be drunk. Much ceremony is observed in the drinking of this particular tea.

**Tobacco.**—3,071.57 piculs, valued at \$30,840, exported in 1873; against 2,321 piculs, valued at \$22,563, exported in 1872.

According to a native authority, tobacco was introduced into Japan in the year 1555, and was first planted at Nagasaki in Hizen. It is now very generally grown throughout the country. The Japanese give the following description of its mode of culture.

In those provinces where a high degree of temperature prevails the plant lives throughout the winter, but it is nevertheless cul-

tomary to sow fresh seed in the early spring of each successive year. The plants appear in due time, and by the third month of the year have attained a height of five or six inches. In the sixth month they will have grown to some six feet, with a full round stem. The leaves are long and pointed, about one foot in length, and completely envelop the stalk. Both stem and leaf are covered with a fine hairy substance. In Autumn a great number of flowers spring from the tip of the stem. These are about an inch in length and of a pale purple tint. To these succeed small round seeds, inside of which are three small chambers containing a great number of light red seeds. The leaves differ in form in different provinces, some being round and wide, others narrow and pointed, and others thick and long. The first kind are produced in Osumi, Satsuma, Iyo, and Awa; the second in Kodzki and Satsu. The mode of cultivation also varies in the different provinces. In Osumi, Satsuma, Hinga, Iyo and Kadzusa, the seed is sown late in autumn, and transplanted in the spring of the ensuing year, while in other places the seed is sown in early spring and transplanted a little later on. The sowing and transplanting are, however, dependant on the temperature of the locality, and each place follows its own customs.

In Awa, where a great deal of tobacco is grown, the seed is sown in early spring, in fields well exposed to the sun and duly prepared for its reception. Well sifted stable manure is strewn over the field, and the seedlings appear after the lapse of about twenty days. The old manure is then swept away, and liquid manure applied from time to time. If the plants are too dense they are thinned out. The larger plants are now planted out into fields well prepared for the purpose, in rows with about eight inches space between each plant, the furrows between each row being about two feet wide. They are again well sprinkled with liquid manure, also with the lees of oil, at intervals of about seven days. A covering of wheat or millet bran is now laid over the furrows.

The bitter taste of the leaf is in a measure an effectual safeguard against the ravages of insects, but the leaves are nevertheless carefully tended to prevent damage from such cause. If the reproduction from seed is not desired, the flowers should be cut off and the stem pruned down, otherwise the leaves will lose in smell and flavour. In Osumi, exceptional attention is paid to the cultivation of the tobacco plant. The lees of oil, if liberally used, and stable manure sparsely applied, have great effect on the plant, producing a small leaf with an excellent flavour, while, if the opposite course is followed, the leaves grow to an immense size but are very inferior in taste. The manuring of tobacco differs from that of other plants, in that manure is plentifully applied both to the roots and leaves.

*Gathering the leaves.* In the height of summer, when the flowers are of a light tint, two or three of the leaves nearest the root are gathered. These are called first leaves, but produce Tobacco of second quality. After the lapse of a fortnight the leaves are gathered by twos, and from these the best tobacco is produced. Any remaining leaves are afterwards broken off along with the stem, and dried. These form the lowest quality of tobacco. After gathering, the leaves are arranged in regular layers and covered with straw matting, which is removed in a couple of days. The leaves are now of a light yellow colour. They are then fastened by the

stem, in twos and threes, to a rope slung in a smoke room, and after being so left for 14 or 15 days they are dried for two or three days in the sun, after which they are exposed for a couple of nights, in order that they may be moistened with dew. They are then smoothed out and arranged in layers, the stems being fastened together, pressed down with boards, and packed away in a dark room.

*Chopping the leaves.* Any sand adhering to the leaves is removed with a brush. The stems having been cut off, the leaves are rolled round, firmly pressed down with a thin board, and cut exactly in the centre. The two halves are then placed one on top of each other, in such manner that the edges exactly correspond, and, being in this position firmly compressed between two boards, they are cut into fine strips, the degree of fineness depending on the skill of the cutter. A machine made of hard wood, but with the vital parts of iron, is used by some persons for this purpose. This machine was devised about sixty years ago by a skilful Yedo mechanic, the idea being taken from those used in Osaka and Kiyoto for cutting thread used for weaving into silk embroidery. Since then numerous improvements have been made in it, and it is now extremely well adapted for the economization of labour. Another machine was invented about eight years since also by a Yedo mechanic. It is smaller than the first mentioned, but being very easily worked is much in use. Tobacco is sometimes cut in the following crude manner. The leaves are piled one on top of the other, tightly compressed into the consistency of a board and then cut into shavings with a carpenter's plane. This is, however, about the worst method, and even the best tobacco if treated in such fashion loses its flavor and valuable qualities.

I append the following table, shewing the provinces where the best, medium, and inferior tobaccos are grown. Dividing them into classes, they stand as follows:—

#### First-class Leaf.

Osumi, Kodzuke, Satsuma, Setsu, Musashi, Tamba, Kadzusa.

#### Second-class.

Sagami, Shinano, Nagato, Hizen, Hibashi, Shimodzu.

#### Third-class.

Awa, Tajima Bishiu, Omi, Tango, Iwaki, Iwashiro.

### Wax, Vegetable and Bee's.

The export of this from Kanagawa has never attained to any very high figure. The returns for 1873 were only:—

Vegetable Wax, 150 piculs, valued at \$1,820. Bees Wax, 8 piculs and 25 catties, valued at \$101.

In 1872 the export of Vegetable Wax was 418 piculs, valued at \$6,270, but at Kobe and Nagasaki it figures with some prominence amongst the export returns.

The trees from which wax is made are the *urushi* or lacquer tree, the *yama-urushi*, the *hage-urushi* (the last mentioned better known as the *ro-no-ki*), and the *ko-ga-no-ki*. The wax is made from the rind of the fruit. In places where wax is manufactured to any great extent the *urushi* is not availed of for its lacquer. As the trees are not cut for several years they may be seen in the wax producing districts growing to a height of 35 or 40 feet. In districts where the trees are used for their lacquer or varnish they are cut every seven

or ten years. The mode of obtaining wax from the *urushi* or lacquer tree is as follows.

Late in the autumn, the branches, heavy with fruit, are lopped off and taken into the house. The fruit is pounded up in a pestle, and then shaken in a basket-sieve so as to separate seed from rind. From this rind the wax is made. The mode of expressing it differs here and there, but in no very important particulars. The following brief description is taken from the mode as followed out in Sendai and Aidzu. Boiling water is got ready in an iron cauldron, over which a lattice works of sticks is placed, and on these some matting. The sifted rinds of the fruit are then laid out on the matting and steamed, after which they are placed in hempen bags and again steamed. The bag, with its contents, is then put in a wooden trough, wedges or blocks are inserted in the trough and driven home on to the bag with heavy blows from a mallet. An aperture at the bottom of the trough provides for the egress of the wax. The trough and wedges are made of *kaki* wood, and the mallets and blocks of wild mulberry, a very hard wood and well suited to the purpose. A small quantity of oil, in the proportion of about 1/10th, is added to the wax, to allow of its being expressed more easily. It then goes through another steaming process and is again pounded in the trough.

Wax from the *yama urushi* or wild lacquer tree is obtained thus. The fruit is collected at the latter end of summer and is at once steamed without being pounded in pestle, as is the case with the *urushi* wax. The wax is purified by melting. A large tub of cold water is taken and placed under a wooden tank having a small aperture close to the bottom. The melted wax is then poured into this tank and escapes through the aperture into the tub beneath, while doing so it is stirred rapidly with the hand, after which it is placed either in matting or shallow boxes, and dried in the open air for about 15 days.

The *hage-urushi*, from which wax is largely obtained, grows in the south-western part of the Empire. This tree was first brought from the Loochoo Islands to Sakura-jima, an island near Satsuma. Its production has so increased that there are now no less than seven different species, *Marumi*, *Yasutomi*, *Inotsune*, *Ogawa*, *Tanaka*, *Fukiange*, *Matsuyama*, the last mentioned being regarded as the best. The *hage-urushi* tree is raised from seed or from slips. *Koga* wax is made from the fruit of the *koga* tree, which differs from the *urushi* and *hage-urushi* trees. It is an ever-green, and is largely grown in Otsugon in the northern part of Nagato. It flowers in the middle of summer, the fruit ripening in autumn, when it is plucked and soaked in water for four or five days, after which it is trodden out with the feet, thus separating the outer rind. The *koga* wax contains a large proportion of natural oil, which in a measure restricts its use to cold and temperate districts. Candles made of it show a very bright light, and if some contrivance could be hit upon for extracting the oil, the consumption of this wax would be increased, as it is very cheap, compared with the other kinds. Refuse wax is used for manuring purposes.

Bee's wax is obtained in this way. After the honey has been taken from the comb the latter is put into boiling water, and allowed to simmer. It soon dissolves and floats to the surface. A wire net work with raised sides is then inserted in the boiler and pressed down, thus causing the wax to rise through and above the net, the refuse part of the comb remaining at the bottom. The wax

is taken out and placed in cold water, where it soon hardens. It is then lumped together and again melted, after which it is placed in moulds and is now ready for the market. The amount of wax obtainable from a comb is equal to about one third of the weight. Wax is also made from the combs of insects which build on the Ibôte tree. This wax is of the purest white, and is prepared in the same way as bee's wax.

### Hemp.

Japan is known to produce hemp of the finest quality, but it has, as yet, found no market out of the country. It can only be laid down in England at so high a price as to effectually shut it out from competition with Manilla hemp, the latter well answering all the purposes to which coarser hemp is applied—namely, cordage and sail cloth. Hempen cloths are freely used by the Japanese, and it is not improbable that, before long, machinery may be brought to bear upon this industry. I proceed to give a brief account of its culture and preparation in this country.

Hemp grows wild throughout Japan, but care is more especially given to its preparation in the Northern Districts, where it is made up into piece goods, known as *Echigo Chijimi*, *Echigo Jôfu*, *Yonegawa Chijimi*, etc. The plant is perennial, and attains to a growth of six feet and upwards; the stem is covered with a short hairy substance; the leaves are heart shaped with a sharp point; the surface of the leaf bluish in color and the back white; both sides are furry and rough to the touch. In the summer, small sprouts of about two or three inches in length appear at the point where the leaves join the stem. These throw out blossoms which develop into small white flowers, the female flowers being next the leaf, the male next the stalk. There are three descriptions of the plant, one called *Akagin*, a second '*Shiragin*,' and a third '*Shirappa*.' The last named has a much whiter leaf than the two former. There is no very material difference in the quality of the three plants, but such as may exist depends on the amount of care bestowed on the cultivation. The plant being a perennial there is no occasion to sow seed, propagation being carried on by means of shoots taken from the roots. The proper time for doing this is in autumn, when the shoots are planted out at a distance of three feet apart. Notwithstanding this space between the plants, the ground is completely covered in a very short time. The new plants are not fit for use until after a three year's growth. They are generally protected with a fencing, and the ground is kept free from weeds and creepers. The best plant grows very straight, with the leaves at regular intervals. The inferior kinds grow crooked, and bear a great number of leaves. The fibre is obtained in the following manner.

When the summer has set in, the plantation is fired, after which the ground is well prepared with manure and so left till the close of summer, when the shoots will have attained their full height. They are then cut and soaked in running water for about four hours. After immersion the stalks are broken in about three places, thus separating the rind from the pith. In the interstice thus made the thumb of the left hand is inserted and the stalks shredded. The shredded parts are then placed in layers. They are now laid out on a board, set up with a foot piece at one end, so as to make an inclined plane. A small edged-tool is then grasped in the

right hand, the shreds being firmly held down with the left, and the inner white coating is then scraped off. The shreds are now hung on a frame, after which they are again placed on the board and this time the outer green pith is scraped off. The fibre is now tied together in bundles and dried. This scraping or stripping of the outer green peel requires much deftness and is only done by an experienced hand. Only one day is occupied in doing the above, so that a man cuts just as much and no more than he can get through in the day's work. When the fibre has been tied together in bundles it is hung up to dry and carefully guarded from wet. This dried fibre is woven into cloth and all kinds of piece goods. The coarser kinds are also made into an inferior description of cloth, very brown in color and known as '*Akari momen*.' The outer green bark or peel is also dried, macerated, and made into paper pulp, used for the coarsest kinds of papers. It is sometimes used in its dried state by the poorer classes as a stuffing for mattresses. The best of the outer or surface fibre is also made up into material, very strong in texture and of a mouse color, known as '*Shara hagi momen*.' The pith, or what is left after obtaining the fibre, is utilized in finishing off the thatch of houses.

A man well up in the cultivation of hemp will raise 130 lbs. of hemp from a piece of ground measuring 30 tsubos (a tsubo being six feet square) but the average production is about eighty-five pounds for the same measurement of ground.

### Rice.

The prohibition on the export of rice has ceased to exist, its free export having been declared by Government order dated July 15th, 1873. The Custom House Returns for the year give the export of rice as almost nil, —one hundred and seventy one piculs, but probably no notice has been taken of the export on Government account, and further, although the prohibition against the export has been withdrawn, there has been no inducement to ship. The Chamber of Commerce Returns place the export of 1873 at 215,984 piculs, valued at \$347,832 and this export was confined entirely to the first six months of the year, and consisted probably of coast shipments. The Returns for Niogo and Osaka shew an export of 154,431 piculs, valued at \$520,678-74 shipped during the year 1873.

Rice is largely grown within this Consulate district. The plant is known under the name of '*Ine*,' the grain before the husk is removed is designed as '*momi*' (paddy), without the husk it is known as '*kore*' or rice. The hill or upland rice, which is sown on dry soil, is called *Okabo*, ordinary rice is, as is generally known grown on irrigated lands. The early kinds are small in grain and not sweet, but they meet a want when, as in the height of summer, there may be an absence of grain of any kind. The ordinary or late crops are big in grain and sweet in flavour. In Japan, as I suppose is the case in all rice-growing countries, attention is paid to what particular kind of grain thrives in a fat and what in a thin soil, also what kinds of rice are adapted to a cold and what to a warm climate. The Japanese have several kinds of rice, to which distinctive names are given, these being either universal throughout the country or confined to particular districts. I give a few of the most prominent kinds:—

*Cha-urigashi*.—Small grain, thin leaf and stalk, and brown color.

*Sando-bake*.—Exhibits a reddish husk but a white grain.

*Ama-kusa-mochi*.—Reddish husk with dark grain. This kind is largely used in making rice cakes or loaves.

*Sh'to-fushi-wase*.—Has a very dark husk and is much bearded. It throws out grain when it has attained a very short growth. In some places two crops of this kind are gathered in one year.

*Yawarata Ine*.—A long grain, without beard. *Komino*—large and long grain, short beard, and great length of stalk.

*Murasaki Nae*.—Husk, stalk and beard have a somewhat purplish tint; the grain is, however, quite white.

*Watakushi Gome*.—Of which there are two descriptions—red and white. This kind is very dry in grain and lacks sweetness; it is, however, very digestible. The rice from this grain is not obtained by the ordinary process with a flail but by a process of boiling.

*Nido Ine*.—This is sown early in spring, and reaped in summer; the second crop is then sown immediately, and reaped early in winter. This species of rice is known in Tosa as *Toya Roku*. In Hiuga there is no second sowing, but a second crop is obtained of the first seedlings.

Prior to sowing, the seed (rice grain) is always soaked in water, the length of immersion depending on whether the sowing is for early, ordinary, or late crops. The sowings are, however, generally made between the middle of February and the end of April. The rice is taken just as it is packed in bags and immersed in water, a stream, well, or pond all answering the purpose equally well. It is there left to soak for ten, fifteen or twenty days and then taken out and warm water poured over the bags, which are now covered with an additional covering of matting so as to induce warmth and force the sprouting of the grain. Another plan is to open the bags after they have been soaked and to dry the grain for two or three days, taking care to turn it about frequently. It is brought indoors about dusk and covered with matting. The rice is sown when the grain is on the point of sprouting. Exposure to the sun's rays after immersion will also force on the sprouting. In some parts of the country the rice is sown almost immediately after it has been taken out of the water, and when the husks of the grain have just burst and no more. The ground for the reception of the seedling is chosen with an eye to richness of soil and good facilities for irrigation. Towards the end of autumn it is well ploughed, and stable manure is mixed with the upturned soil. When spring comes round the soil is gone over with a spade, and all lumpy soil broken at each stroke of the spade or hoe; trefoil, young bamboo leaves or indeed green leaves of any kinds, fish manure or refuse oil, is mixed with the soil, which is manured besides and then well flooded. The water channels are well banked up all round, and care is taken to keep the ground free from weeds; further, the surface of the soil is smoothed down so as to prevent irregularities. When the water has cleared and all muddy particles sunk to the bottom the seed is sown broadcast. This work is only entrusted to experienced hands, otherwise the seed would appear in patches. After the sowing the water is drawn off; a fine day is chosen for this so that the warm rays of the sun may penetrate the soil. The soil is left dry from morning to evening, when it is again flooded and so left till morning. The water is not allowed to be more than two or three inches deep. If the weather looks like rain the water is drawn off, otherwise the rain would wash away the seedlings altogether.

ther. When the seedlings are well up, fish manure or refuse oil is scattered over them, to force them on and induce a thick growth. Transplanting takes place in from 45 to 55 days after sowing. In this work the wives and daughters of the farmers are largely employed. The seedlings are planted out in tufts, two, three, four or five plants going to the tuft, according to the practice prevailing in different localities. The tufts are planted out in lines, with a space of from one to two feet between each tuft; much dexterity is displayed in this and a knowledge of the capabilities of the soil is essential so as to know whether to plant the rice out close or far apart. So soon as the planting out is over, the proprietor goes round his lands to see with a practised eye whether any irregularities exist: whatever he notices amiss he rectifies at once. From fifteen to twenty thousand tufts are required for three hundred tsuboes of ground (a tsuboe measuring six feet square). In sowing, a little over a pint and a half of grain will suffice for thirty tsuboes of ground. After planting out, the ground is gone over with a light hand rake and hoe, and care is taken that the soil does not press too heavily at the roots of the seedlings. All foot marks are carefully erased, and the ground constantly weeded. When the plants are well forward, full in grain, the water is taken off the fields, so that the sun may penetrate the soil and thus harden the grain. When the earth has become thoroughly hard at the roots of the plants it is accepted as a sign that the grain has attained a proper consistency of hardness.

Of the *okabo* (hill or upland rice) there are both early and late kinds, but they do not differ much in leaf or grain from the ordinary paddy. The ground for this description of rice is first well manured, either with stable or liquid manure, and then laid out in furrows. About three and a half pints of seed are required for thirty tsuboes of ground. The seed is sown much in the same manner as millet or wheat. Prior to sowing, it is immersed in water for a few days, exposed to the sun, and then sown when the husks are about to burst open.

Rice crops suffer much from the depredations of birds and vermin, and all sorts of appliances are resorted to, to scare these away. Either straw ropes with clappers attached are stretched across the fields or scare-crows are placed here and there. A favorite contrivance particularly noticeable in hilly districts is—a hollowed bamboo, of a foot or so in length, in which a small stick is inserted; this is supported on a couple of props, right and left, which just keep it at a balance. It is then placed in such a position as to allow any of the small natural rivulets of water that abound to play into it, thus causing it to clatter up and down; it effectively scares away birds and the like.

*Harvesting.*—When harvest time comes round, the crops are cut with a sickle, the rice is bound in sheaves and left to dry in the sun for about five days, or it is suspended, ears down, from a bamboo frame. It is then taken into the barns and passed through a toothed instrument, which roughly separates the ears from the stalks. It is then run through a sieve and again dried in the sun. Afterwards it is winnowed, by which process the good and inferior grains are separated, the one falling to the right the other to the left of the winnowing machine; another aperture provides for the egress of dust, refuse stalk, &c. The grain is then tossed over matting and left exposed for a short time. It is then placed in a pestle and the

husk separated from the grain, after which it is again winnowed and passed through a funnel placed on an inclined plane; the best and heaviest grain finding its way down the incline, the light kind being caught in a wire-work net. The rice is now measured out and made up into bags holding from twelve to twenty-two gallons of grain. The size of a rice bag is held to be a test of the physique of the men of any particular district where rice is grown. The bigger the bag, the stronger and better built the men. The province of Owari is noted for the size of its rice bags; the smallest are those of Hizen and Dewa. I append a table of the provinces where the best kinds of rice are grown, and also a table shewing the relative produce of a good and also a bad harvest. Rice of the first quality is grown in the province of Mino, Higo, Ise, Owari, Totomi, Hizen, Hing, Yamashiro, Yamato, Suruga, Idzu, Omi and Mikawa. Second quality is grown in Harima, Tama, Tango and Tajima. Third quality in Kadzusa, Shimosa, Musashi, Kaga, Echigo and Shinano.

#### RELATIVE PRODUCE, WITH A GOOD HARVEST.

$\frac{1}{4}$ -acre of best ground produces 816 lbs. of rice, of medium ground 583 lbs., and of inferior ground 467 lbs.

#### WITH A BAD HARVEST.

$\frac{1}{4}$ -acre of best ground produces 467 lbs., of medium ground 350 lbs., and of inferior ground 289 lbs.

The above table is based on the average products of a well known rice district in Hizen.

### Shipping.

*Direct trade in British vessels from and to Great Britain and Colonies.*—In 1873, eighty-seven vessels, with a tonnage of 75,176 tons, all with cargoes, entered the port; against eighty-eight vessels with a tonnage of 59,811 tons entering in 1872. The increase in entries with cargo tonnage for the past year is 16,879 tons over 1872, but with numerically one ship less. The clearances in 1873 amounted to 36 vessels, with a tonnage of 31,419 tons; against 57 vessels, with a tonnage of 39,893 tons, clearing in 1872. All the clearances in 1872, fifty-five ships, with a tonnage of 38,475 tons, were with cargoes, the remainder clearing in ballast. There is no decrease, therefore, for the past year total, under the clearances of 21 vessels, with a tonnage of 8,474 tons, and of these with cargoes, of 9 vessels, with tonnage of 7,056 tons as compared with 1872.

*Indirect, or carrying, trade in British ships from and to other countries.*—

The total entries for 1873 gave 20 vessels, with a tonnage of 1,002 tons; the total clearances 34 vessels, with a tonnage of 25,707 tons.

The entries with cargoes were 18 vessels, with a cargo tonnage of 10,069 tons. The clearances, 25 vessels with a cargo tonnage of 20,999 tons. Comparing these figures with 1872, the total entries under the above heading for 1872 were 27 vessels, with a tonnage of 11,802 tons; the clearances 32 vessels, with a tonnage of 17,564 tons. Of the entries in 1872, 25 vessels, with a tonnage of 10,621 tons, were with cargoes, and the clearances, 23 vessels, with a cargo tonnage of 12,945 tons. The total entries for 1873 shew a decrease of 7 in the number of vessels, as compared with 1872; the tonnage, however, remains much the same. The clearances shew an increase of 2 vessels, and, in tonnage, an increase of 8,143 tons. The entries with cargoes shew a decrease of 7 in the number of vessels, with but little difference in the total cargo ton-

nage. The clearances shew a numerical increase of 2 vessels, and a cargo increase of 8,054 tons.

*Indirect, or carrying, trade in British vessels, from or to open ports in Japan.*

In the total entries there is an increase of 13 vessels, with an increase in the tonnage of 6,169 tons. In the clearances, there is an increase of 26 vessels, and an increase in the tonnage of 21,825 tons, as compared with 1872. Of the entries, all were with cargoes; against 16 vessels with a tonnage of 8,355 tons, entered with cargoes in 1872. Of the clearances, 32 vessels, with a tonnage of 24,003 tons, were with cargoes; against 29 vessels, with a tonnage of 16,419 tons cleared in 1872. There is an increase, therefore, over 1872, of entries with cargoes of 14 vessels, with a cargo tonnage of 6,419 tons, and of the clearances, an increase of 4 ships, with a cargo tonnage of 7,549 tons.

Yokohama still labours under all the disadvantages attendant on a comparatively open roadstead, and with few or no facilities for landing or shipping cargo, though the improvements recently made by the Japanese Government at the principal landing place should not be allowed to pass unnoticed.

I have heard that it is proposed to run out two stone jetties, in such shape as will form a sheltered anchorage, and at the same time admit of ships discharging and loading alongside; but the project, if indeed such exists, has not yet been made public, and I simply quote from hear-say.

I have given some attention to the subject of the purchasing power of money in this district, the wages of the artizan and agricultural classes, and the social economy, generally, of those classes of the people with whom we are almost daily in contact; but this led me into a field of research which I can scarcely bring within the scope of this report. Moreover, inquiries under these headings are met with replies so inconsistent and difficult of explanation. To instance this, I may mention that I have been credibly informed that the cost of the daily necessities of life in Yokohama is so high that Japanese find it cheaper to incur the expense of a journey by rail to Kanagawa and back, buying their supplies in that town, than to purchase them in Yokohama. At first sight this would seem to be absurd, and would probably be reckoned as a mis-statement, for, under ordinary circumstances, the difference of price of necessities at Kanagawa and Yokohama would consist only in the additional cost of conveyance from the former to the latter place, but this enhanced cost lies more, I fear, in the fact that nearly everything brought to Yokohama is so taxed, both openly and secretly, as to make prices almost ruinous to native consumers. I hesitate in saying this is so, emphatically, but from such information as I have been able to obtain it points in this direction. As is well known, a market exists in Yokohama for the supply of daily necessities both for foreign and Japanese tables, and every small retail vendor is compelled to purchase in this market. Fish, fowl, game, and all garden produce are forced into this market by order of the authorities, and a per centum tax levied. The seller has therefore not only to make his profit, but to recoup himself in the amount of his tax and the rental of his stall. Except that the market brings to a focus produce of this kind, and is thus a convenience; it would seem to be in other respects the reverse of a benefit. Apart from the tax, which may be fair enough, I have no doubt but that a system of petty extortion exists which

increases tenfold the price of all articles. If here was such an officer as "Inspector of Markets," the desirability of which, I pointed out some time since to the proper Japanese authorities, there would be less ground of complaint on this score, for the purchaser would have some guarantee of the quality of the food bought. Anyone who has seen a Japanese butcher's shop will agree with me that there is good work for an Inspector in that direction.

Looking to the position of the artisan and labourer in this district, both may be considered as well to do. Little or no distress exists amongst the agricultural classes. Their wants are few, and they are content to live on without seeking materially to improve their circumstances. Great changes have taken place of late years in the character and condition of the artisan class, and the growing taste on the part of Japanese for brick or stone faced houses has bought forward a class of men who make a speciality of this work, namely, stone masons and bricklayers. It is not many years since the former held a very inferior position in the trades, but they have now pushed themselves to the front rank, and a first class hand will earn his five *bus* a day, say five to six shillings, at piece work. The following may be taken as the average of wages ruling in this district for artisans.

Carpenters .....	1½ to 2	Bus per diem.
Plasterers .....	1½ to 2	" " "
Stonemasons .....	2½ to 3	" " "
Blacksmiths .....	1 to 3	" " "
Bricklayers .....	1 to 0	" " "
Tilers .....	1½ to 3	" " "
Paper hangers .....	1½ to 3	" " "
House Painters and		
Decorators .....	1½ to 3	" " "
Joiners .....	3 to 0	" " "

Good hands, employed in piece work, will, however, earn far in excess of the above. The lowest figure on which the above can live with anything approaching to comfort is about 11 *bus* per mensem for food. House rent may be put down at 6 *bus* a month. For the 11 *bus* a man will get three good meals a day—his breakfast of rice, bean soup and radish; his dinner of cold rice, salt fish or sweet potatoes; and his supper of rice and some little adjunct. The employer will generally find the workmen in tea (of a common kind) at their dinner, and, if the work progresses well, an occasional allowance of *sake*, or wine. Cost of clothing may be put down at 16 or 20 *bus* per annum. Boarding houses are common institutes for unmarried men, the charge being about 8 *tempos* a day, which would compute to 9 or 10 shillings a month. A comparison of earning and disbursements will shew that there is yet a good margin for petty luxuries, amusements, etc. I should doubt if the Japanese artisan, unless married, was a saving man. A married couple of this class can not live well under 28 or 30 *bus* a month. I give Yokohama rates which are extremely high. In the interior, living is probably much cheaper. There is no doubt that the rate of living in and about Yokohama, for all classes of Japanese, has increased to an unprecedented extent of late years. Ten years ago, a Japanese officer of standing, attached to any of the local Governments offices here, could live comfortably as a married man on twenty-two dollars a month. This would admit of his keeping a good table, dressing well, keep of servants and a horse. The same mode of living cannot be indulged in now under seventy-five or eighty dollars a month. In 1860, a Japanese servant would cost his master, keep and wages included, about eighteen dollars per annum. The estimated cost, now

is twenty-five dollars. I give a few instances of the rise in prices of some articles in daily use amongst the Japanese.

In 1860, *is-shô* (a certain measure) of *sake*, or wine, cost eight *tempos*. The same quantity cannot now be bought under twenty *tempos*. One *riô* (of money) would then purchase 2 to 5 *shô* (measure) of rice: the same amount will now only purchase half the quantity. Oil was five or six *tempos* per *isshô* (measurement), and now the like quantity costs thirty-two *tempos*. A certain weight of charcoal could be bought for three *tempos*. The same weight now costs eighteen. If certain commodities have become dear, the Japanese must set off, as against these, the greater cheapness of transit and locomotion as compared with former years. Japanese steamers are now conveying passengers to Kobe and Osaka, a distance of some 360 miles, for eight dollars a head, and finding them in food on the passage; a great saving both in economy of time and expenditure, as compared with the journey by road. I regret that I have been unable to obtain reliable statistics of the trade done by native steamers. No records under this heading are kept at the Custom House, and my enquiries at the agencies of the different steamship companies for information in this direction have not met with success.

I have the honour to be,

Sir,

Your most obedient,

humble, servant,

(Signed) RUSSELL ROBERTSON.

SIR HARRY PARKES, K.C.B.

### Chinese Riot in Shanghai.

The events of yesterday proved that we did not exaggerate the state of feeling among the Ningpo Chinese, in our allusion on Saturday to their anger at the roads which are being made by the French Council, alongside the Ningpo Joss-house. We cannot, tonight, enter at length into the merits of the case, but must confine ourselves to a record of the incidents of the day.

Rumours had reached the Chief of the French Police that an incendiary movement was being planned; but full credit was not given to the report. The event proved, however, that it was true. A Chinese mob assembled yesterday afternoon in the Quar of the French Settlement near the Ningpo Joss House, attacked the house of the Inspector of Roads, maltreated M. Percebois and his family, gutted and subsequently set fire to his house, and went on to burn down Mr. Charrier's stables (in the neighbourhood) and a number of adjacent Chinese houses.

Four Chinese met their death in the riot, one being shot during the first attack on Mr. Percebois, and three either shot or bayoneted later in the afternoon.

The Volunteer Force was called out at 9 p.m., and, probably, warning of their arrival induced the rioters to disperse. At any rate, the streets were nearly empty when the men reached the ground. While it lasted, the incendiaryism seems to have been of the most determined character. The rioters thrust wisps of burning straw into the premises they wished to destroy; and we hear that Mr. Penfold and Mr. Stripling succeeded in arresting two men in the act.

The affair is clearly referable to the excitement about the roads, so readers at a distance need give it no extended significance. But it remains to be seen whether, after the serious proportions it has assumed, the excitement will at once subside, or whether further trouble may ensue before it is finally quelled. It is likely that the display of force made last night will deter the rioters from further outbreak—despite their threats, loudly uttered, that they would not stop till they had burned down the Municipal Hall. It will show them that—apart from any question as to the merits of the case—foreigners of all nationalities will unite to stop lawless violence.

We proceed to give an account of the events, as much in detail as we have been able to learn them.

About two o'clock in the afternoon, a policeman on his beat at the western end of Rue du Consulat was followed by a crowd of about 200 Chinese. He was hit in the side, his sword taken hold of from behind

and pulled from the scabbard, his shako knocked off, and the man was otherwise beaten very badly. Some European passing came to the rescue, and conveyed him to the Central Station. The next thing heard at the Station was through Mr. Percebois, the Inspector of Roads, who came in with his wife and five children. Mr. Percebois showed wounds on his head, and stated that his house had been surrounded, the windows smashed in, the rooms gutted, and that the place was also being set on fire. He had been injured by stones, while his wife had been dragged by the hair along the ground. She managed to escape down the Rue Wokwei however, and three sailors from the mail steamer *Tigre*—who were also assaulted, and one of whom lost his watch—secured the safety of the children and brought them to the Station. M. Barbe, Chief de Police, sent to advise the Consul-General of the disturbance, and went with the Police at hand, under arms, to disperse the crowd. When they arrived they found a great number of Chinamen, dancing in rings, with the clothes of Mrs. Percebois parcelled out amongst them, after having gutted the house and smashed everything to minute atoms. The house was a perfect wreck from top to bottom. The police fired three or four shots, as M. Barbe states, in the air, to intimidate the mob.

M. Barbe at this time received instructions from the Consul-General advising prudence and a quiet bearing, and he accordingly prepared to retire his men, feeling that, with weapons in their hands, they might be apt to retaliate for the stones flung at them. Another reason for retiring was that a report had reached M. Barbe that the Municipal Hall, which he was compelled to leave comparatively unguarded, had been attacked by a section of the mob. While they were coming back, M. Barbe states that he heard some shots fired, but that they were not by his men. As soon as they got back, the Municipal Compound was partly surrounded, and the mob began to tear down some wooden railings and smash lamp posts. Opposite the main entrance two Europeans in a trap were stopped and compelled to go back. Sentries were then placed all round the compound, inside.

About 7 o'clock, the mob again came to the charge, and set fire to M. Percebois' house. M. Charrier's stables, exactly opposite, were also set fire to, as well as some new Chinese houses in the Rue Hué, in the same neighbourhood. The mob prevented the mafos from taking out the carriages stored at M. Charrier's, which were therefore destroyed, but the ponies got away. About this time a lieutenant of the French gun-vessel *Cmleuvre* came on the spot with twenty men, and took command of the situation. Fifteen volunteers were sent under a sergeant of police to protect the gasworks, and remained there. The police did not return to the scene of the affray.

At 9 o'clock, the East Gate Police Station, where only four men were placed, was attacked, and twenty sailors from the U. S. S. *Ashuelot* (of whom a detachment of eighty with one gun had been landed) were sent there. Forty more were temporarily stationed in the Consular Compound, and the remaining twenty at the Hotel Municipal, where they were quartered in the large hall. A hundred and fifty Chinese soldiers from Kaon-chang-mau were also sent in by the Chinese authorities, at the request of the Consul-General. The Chibisien was asked to catch ten of the leaders of the mob, in order to afford a clue to the real raisers of the disturbance, but up till 10 p.m. only three prisoners had been made. Many of the Chinese in the neighbourhood of the fires and of the Municipal Hall began to remove their effects, owing to warnings they had received from the rioters that their houses would be burnt down. M. Barbe's detectives had reported yesterday morning that an incendiary attack was being planned, but he had hoped that it only related to a mass gathering of the Ningpo men, such as had already been held.

About 6.30, M. Voisin, Chairman of the French Municipal Council, sent a request to Mr. Fearon, Chairman of the English Council, for the support of the S. V. C., to which Mr. Fearon replied that he would lose no time in taking steps to give the desired aid. Mr. Fearon did so, after consultation with the Consuls and the Commanders of the Naval forces.

The foregoing relates almost wholly to the attack on French property, but with this the mob had not stopped. Following up the attack on M. Percebois' house, they at the same time assailed the neighboring one, tenanted by Miss Maclean, late of the Union Chapel Mission. Here they knocked in the windows, and assaulted the inmates—Miss Maclean, and Messrs. D. Cranston and Weir (chief-engineer of the steamer *Gordon Castle*). Mr. Weir escaped with fortunately slight injuries, but Mr. Cranston received a severe wound on the head from a stone, as well as other injuries, which have necessitated his removal to Hospital. Miss Maclean was thrown down the stair of the house and roughly treated, but upon her calling out to the mob in Chinese that she was not French,

they desisted, and friendly hands helped her to a place of safety. The furniture of this house was then partially saved by foreigners who went to the scene after the French police had checked the mob. The appearance of a number of foreigners and the Chinese authorities—the Chehsien and Magistrate of the French Mixed Court—restored a season of quiet; but still the mass of Chinese remained on the open space between the places attacked and the Ningpo joss-house, and surged about excitedly. At this time there were probably over 5,000 Chinese on the ground. The Chehsien and his chair were the objects of hostile demonstrations, but he was ultimately allowed to pass through. One Chinaman had been shot, either by police, by Mr. Percebois, or by a friend who had been with him when the house was attacked, and around the body a dense mass of his countrymen were gathered. About 6.30, foreigners began to leave the scene under the impression that the worst had happened, but as it became dusk, the rioters returned to work. They flung stones very freely at passers-by—Mr. Fisher (of Messrs. Muller & Fisher) was cut on the temple and mouth, and had some teeth knocked in, while driving along the Rue du Consulat in his carriage with Captain Lowell; and, we believe, other cases occurred. The fire-bell again announced that incendiarianism had been resumed, and it was found that the premises mentioned in the particulars furnished us by M. Barbe had been fired. A number of (French) volunteers and firemen were stoned, and shots were fired and bayonets brought into use, with the result that at least three more of the rioters lost their lives, while one was sent to hospital dangerously wounded.

The English police lent assistance in overawing the mob and protecting the property threatened, and they arrested two of the ringleaders, as well as four foreign sailors, who were found bearing off some casks of wine.

At 8 p.m. the Chairman of the Council called out the Volunteers, who were ordered to muster immediately, at the Main Guard, where the Treaty Consuls also met in consultation. The men were formed up in the road, Rangers on the Right, and Nos. 1, 2, and 3 Rifle Companies and the Mitholongs in the order named. The news was, that the excitement was subsiding; but it was thought well to march the Force into the French Settlement, and especially round the quarters where the rioting had been most active. Even if their active services were not required, their presence would tend to deter further outbreak. Captain Cann announced that Captain Hart would command for the evening; and the Force was counter-marched to the Bund, along which they proceeded to the Rue du Consulat, and down that street to the Municipal Hall. Here a halt was called, while further measures were concerted, and seamen from the *Ashuelot* came up. The whole Force was then marched down past the scene of conflagration to the Ningpo joss-house, where it was rumoured that some of the ringleaders were shut up—as well as that a number of rioters were assembled on the Green, with the intent to stone all comers. Whether the reports were imaginative, or whether any Chinese who may have been out there decamped on hearing of the approaching Force, we cannot say. At any rate not a man was seen.

The Volunteers were then formed in column, opposite the entrance to the Joss-house (in the French Road), the Rangers patrolling the road, while the sailors proceeded—in the presence, and by the wish of, the Chehsien—to break open a side door on the Settlement side, through which the Magistrate, accompanied by the British, American, German and other Consuls at once entered. But here the result was the same—no one was found; and, after a thorough search, the Volunteers were marched back in reserved order to the Bund.

Near the Custom House, the Force was formed up in column, while Captain Hart addressed a few words of thanks to the men for the steadiness with which they had obeyed orders; and announced that in case of fresh alarm four guns would be fired from the U. S. corvette *Ashuelot*, when they were at once to muster at the Main Guard. Mr. Fearon, as Civil Commandant of the Corps, also complimented the men upon the readiness with which they had turned out, and on their steady and soldierly bearing. Fortunately, their active services had not been needed; but their conduct gave a proof of efficiency which would increase the confidence of the community in their capacity to maintain order if required. He thanked them in the name of the community. The Force was then dismissed, at about 0.30 a.m.

At a late hour last night, the ruins of the two houses first attacked, as well as of M. Charrier's stables and several native houses, were still burning; and the desolation was rendered more complete by the spoliation of the gardens attached to some of them, which had been ruthlessly laid waste.

## Correspondence.

To the Editor of the *Japan Gazette*.

Sir,

The Races are over, and for a few months the sporting members of the community will be able to indulge in speculations as to the probable winners of the "Griffin" or "Challenge" at next meeting, and whether *Dieux* is really a better pony than *Crusader*, and can or cannot beat *Typhoon*, if something or other does or does not happen. There is always an endless amount of "ifs" after every meeting, and men get wondrous wise after they have seen their pet "moke" beaten by a length. Here in Yokohama they express their opinions in language perhaps more emphatic than polite. If an owner is lucky enough to win some good race, he congratulates himself on having a *deuced good pony*; but, if by any chance he loses, its on account of "so-and-so being such an (*adjective*) *bad rider*." There may be a good deal of truth in all this; but, as one of our former Consuls used to say, it might be put in a milder form.

The racing at the Meeting was not very good, and after the first day most of the events were "over before they were started," so to speak. Its riding was fair, but not so good as we have seen before. Mr. Montgomery and Mr. Wainwright rode very well all through: Mr. William came out very strong in some of the Japan pony races, and carried off the "Ladies' Purse" and "Tokai Cup" on the second day, and the "Sayonara Stakes" on the third day, in very good style. Mr. James was more successful than he could have reasonably anticipated, but Captain Costegan appeared entirely to have lost all his old form, and was decidedly "off."

The Griffins, with the exception of *Despair*, turned out, as I predicted, a very seedy lot, and the Tartan pony won as he liked. Two other surprises at the meeting were *Ivanhoe* and *Crusader*. The former did not win a race, and the latter only succeeded in carrying off the "Consolation Plate;" but even then it must not be considered that the old pony has gone off. The time this Meeting has been better far than we have ever witnessed on this Course, and when *Crusader* was beaten the time was several seconds faster than any of his winning performances. In the "Nippon Champion" some good racing was done between *Ma-hitotz* and *Typhoon*, the first half mile being done in 62½ seconds; and the mile, by the latter pony, easily in 2 min. 14½ secs. *Tim Whiffler's* performance in the "Welter" was by no means despicable, as he was carrying considerably over weight and afterwards won the "American Cup" without being at all distressed, although running against ponies that might naturally have been expected to beat him. The "Mystery Stable" were very fortunate in winning so many events, as they had not the slightest system in the way they ran their ponies, and in many cases started the wrong ponies, as in the "Lloyd Souvenir." *Dibs* certainly had shewn himself a better animal for that distance (1½ mile) than *Dieux*, yet they ran the latter. There were some races which they could not help winning—the "Kioto Cup" for instance—but the *Brother to Quanticleer* ran *Thistle* a very hard race for it, so much so, that the latter did not again appear to the fore. The Kobé pony *Gamecock* did well for his owners, and is a pony not to be despised for next meeting. The two races he won were done in good time, and the pony was certainly in no condition for racing. Mr. Oki's China lot were a sell for every one, and I am confident that all the

sporting community sympathized with the owners for their want of success. It is certainly no use keeping such ponies to run against the late importation from Shanghai—*Glencoe*, *Pie* and *Picayune*, probably three of the finest animals that have ever yet run in China, judging from their late performances in Shanghai; certainly they are far ahead of anything we have here. I must not forget to say a word about the "Hurdle Race," which I was glad to see so well supported. For some years past, it has been a sheer farce, and had seldom more than two or three starters; but this meeting we had a field of six, and a good race from start to finish. All the ponies jumped well and *Snowball* won it in good style. *Dibs* was unfortunate in not getting away at the start, but even if he had, I don't think his superior turn of speed would have equalled the distance gained by the winner by his fine style of jumping. Taking everything into consideration, I think we had a successful meeting. The weather on the first day was very bad during the early morning, which made the Course a little too heavy to suit some people. The attendance of ladies was very limited, and must have been disappointing to the Committee of the Y. R. C., who had made the Grand Stand as comfortable as could possibly be expected under the circumstances; and had the weather been more settled I have no doubt that many of the absent ladies would have graced the stand by their presence. The Municipal Authorities, acting on my suggestion, sent a few decrepit old men to patch up the road—I presume temporarily—but cannot see why they cannot Macadamise it, as they are doing to the small road leading off to the top of the steps, a road seldom used by more than 10 people a day, if so many—but our Municipal Director does not much patronise the road to the Race Course, and one must be allowed to draw inferences when one sees what a very capital road there is leading both ways to and from the Rifle Range. We must hope for better things in him. There is room for much improvement all along the road, and the best improvement would be the abolition of that very dirty Japanese village, including even the Church of *S. Bobbery Hito*. I hope this will be done before the next training; until then I will once more say, "Sayonara."

"HAWKS EYE."

The Envoy to Peking, Yanagawara, has started on his mission, the object of his journey being the pacification of the Chinese, who are evidently looking on the Japanese expedition with a jealous eye, and an attempt at arrangement of the difficulties which have arisen in consequence of its dispatch. The latest intelligence is, that the fleet has reached Formosa, which will probably take the public somewhat by surprise, its destination on leaving Nagasaki, it was given out, being, in the first instance, Amoy. Matters appear to be coming to a point. It is hardly likely that the unruly spirits composing the expedition, having reached the promised land, will quietly sit down and wait until such times as the Chino-Japanese *diplomats* have arranged matters. The next news we may expect is, that the army having landed, business was at once proceeded with. If no arrangement has already been come to between the two governments, as one would surmise from the despatch of Yanagawara on such a mission, a collision with the large body of Chinese troops said to be posted on the island seems almost inevitable. Further news will be eagerly looked for.

OFFICIALS IN Tokei complain that the government proclamations, edicts, regulations, notices, ordinances, laws, warnings, rules, etc., are not read by the people. Notwithstanding the amount of timber used to make notice-boards, the many acres of paper spread, and the wells of ink drained to write the proclamations, edicts, etc., the people do not read them. The heads of streets are blamed for not instructing the people. We do not know whether the government furnished Chinese dictionaries gratis. If not, no ordinary native can be expected to read the mass of Chinese characters in which the edicts, etc., are written. One way to get the people not only to read but to inwardly digest the governmental proclamations is to issue a very much smaller number of them, and to write them in such characters that every one can read them.

EVERYTHING is in the same unsatisfactory state as before. Shimadzu is gazetted Sa Daijin, but it is doubted whether he has accepted the appointment. Okubo Naimukiyo left again for Nagasaki on Wednesday, as it is feared there may be trouble among the disappointed soldiery. Okuma seems to have been the head and front of the Formosan affair; and he doesn't appear anxious to hasten back to Tokei.

THE STONE BRIDGE in front of the Shimbashi station is opened. It is to be called Horai-Bashi. The former wooden one was Shiwodomé.

FROM the 20th of May, the exhibition will be opened at Hakkusan, Niigata, and continue open for 20 days. A number of things have been sent to it from Yedo.

THE DYING WORDS of Yeto Shimpei, when he was about to be beheaded, were in the form of a Japanese verse, of which this is the meaning:—"I, a strong and fearless man, weep in my sleeves, my mind being ashamed by the conduct of my lord (the Mikado)."

\* This was not the address we have formerly alluded to, which was distributed by him to his friends before his death, and is most anxiously suppressed by the government.—Ed. J. G.

ONE of fortune's freaks is related in one of the native papers. A samourai, whose name is uncertain, hired a jinrikisha, the driver of which was so weak that he excited the indignation of his fare. Added to this, he unfortunately managed to drop the shafts, and the rider was thrown out upon his head and rolled into a puddle. Full of wrath, the samourai struck him severely. The poor fellow apologised in vain. The samourai stormed at him; and, asking how he dared insult him by keeping his head covered whilst he spoke to him, he seized the blue handkerchief with which the man's head was bound, and pulled it off. No sooner had he done so, however, than he repented of his ferocity. To his surprise he discovered in the poor weak jinrikisha man his former master, who, under the Tycoonate, was a hatamoto. The samourai had long been looking for him; and, notwithstanding the awkwardness of the circumstances, he shewed great joy at the discovery. He offered him all the money he had about him, and invited him to accompany him home; and here the curtain falls, so far as the public is concerned.

THERE WAS a partial eclipse of the moon last night (1st), which lasted 3 hours 16 minutes. The first contact with the shadow took place at 11.45 P.M. The magnitude of eclipse was = 0.83, the Moon's diameter being = 1.

A MAN writes to one of the native papers and says he lately visited the Exhibition at Yama-hita, and did not know which surprised him most, the splendid collection of beautiful, strange, and costly things, or the paltry house in which these valuables were kept. Should a fire break out, all would be consumed and reduced to ashes, and irrevocably lost; which would be a cause of great regret to every one. The writer spoke to the officers about it, but they said they had only their duty to perform, and that did not extend to considering whether the building was good, bad, or indifferent.

THE metals obtained from the Sado mines during January this year, were:—Gold 13,000 momme (one momme 58 $\frac{1}{2}$  grains troy), nearly 1,580 ozs.; Silver 19,000 momme, about 2,309 ozs.; and copper 49,000 momme or 5,954 ozs. The 3 cwt. of copper is not of much account; but the gold represents, we suppose, some 25,000 dollars.

On the 28th April, the *Okada-maru*, Japanese sailing ship, anchored at Shinagawa, caught fire, and was almost totally consumed.

AMONG THE advertisements in the *Nichi-nichi Shimbun* of Tokio is one inviting contractors to send in proposals to the Do Boku Riô (Bureau of Buildings and Bridges) for the rebuilding of the Eitai Bashi, which crosses the Sumida river, north-east of Tsukiji. The old Eitai Bashi ("Bridge of the Everlasting Ages") was most libellously named, for, instead of lasting forever, it barely stood the storms and wear of a score of years. The typhoons usually played with it roughly, and used it very much as a hammock or cradle to rock in. The new bridge will be a great convenience, and will probably better deserve its name than the rickety old mass of lumber which now serves the uses of so many suicides that it might, in all fairness and truth, be called the "Bridge of Sighs."

HOWEVER MUCH merchants in Yokohama may be disposed to complain of dull times, it is evident that the thieves are having lively times and plenty of business. Especially is this the case in Tokio. Notwithstanding the thousands of clubs and yellow-striped trousers that daily perambulate the thoroughfares of that city, the burglars have rarely, of late years, reaped a richer harvest. During the last week, three robbers with swords entered a merchant's house, and threatening the lives of the inmates, left heavily laden with booty in the shape of clothes, and money. Several smaller thefts and robberies, of too little importance to be detailed, have excited the quiet people in various parts of the capital, but the last triumph of the purloiner's art has a quite a comic air about it, and shows, strange to say, that the rogues are very irreverent fellows, who fear neither gods, police, nor foxes. In front of a certain shrine of Inari Sama in Tokio, a pair of bronze foxes had lately been *tatematsuru*, respectfully offered, for the delectation of the deity and all devout worshippers resorting thither. Some thieving wretches, nothing daunted by the weight—which every one supposed would deter any one having purloining propensities—of the holy animals, actually made off with them, and nothing has yet availed to get them back again. Concerning the police in this connection, it may eloquently be said of them that they visited the scene of the exploit, and unanimously exclaimed *waruhodo*.

THURSDAY and Friday were great *fête* days with the Japanese, the occasion being the

festival of Dai-jingu-sama. The streets in the native quarters were profusely decorated with flags bearing the device of the "Blazing Sun," the national emblem, and, at night, were brilliant with lines of lanterns, similarly adorned. Last evening, great numbers of holiday-makers were to be observed at the *Miya* at Nogé-Yama, and Benten-dori and O-ta were crowded. At the latter place there were out-door theatrical exhibitions, and one well-to-do merchant cleared out his goods altogether, and fitted up his shop in honour of the *Matsuri*. It contained a life-size emblematic figure, gorgeously clad, before which were placed candles, food of various kinds, and other offerings. This attracted a great crowd of sight-seers. In Benten-Dori another merchant did likewise, the interior of the shop being lined with expensive screens, which set off to great advantage the brilliantly lighted spectacle in front, a peep at which passers-by were enabled to obtain, through the interstices of the lattice work. Mr. Takashima had his residence illuminated, the immense premises being one blaze of light. All the upper chambers were open to the public eye; and were tastefully decorated with drapery and lanterns. The whole aspect of the *fête* must have recalled to many a child of the Land of Dai-Nippon visions of splendour, in the days when the *matsuri* were religiously observed; but which now seem destined to become things of the past altogether, thanks to the march of Civilization. Doubtless, some of the older folks think it quite possible to become over-civilized.

TOO MUCH admiration can hardly be accorded to the pluck of Japanese women. So frequently is it, that when robberies are attempted the gentle beings are found equal to face the depredators. Last week, a robber entered a farm house, from whence the occupants were absent working in the fields. For some reason or other the gudewife returned, and found the fellow raising a bundle to his back, composed of things he had "got together" and was congratulating himself he was about to carry off unobserved. A rope was at hand, and in a moment the woman attempted to throw it over him, to bind him. This he avoided; and having on nothing but a loin cloth, the woman laid hold of him by this; but the man, loosening it, fled from the house in a state of nature. The plucky woman, however, saved the household property, and considering it was but a woman against a man, the deed is not unworthy of record.

YESTERDAY WEEK, a man was drowned in the river Sumida, under the following circumstances. It was the day of the festival of Bouden—to propitiate evil spirits against severe sicknesses. Many superstitious persons, clothed uniformly, wander about in boats on the rivers, brandishing red and white go-hei (the cat paper usually hung in Sinto temples to represent the Kamis, or Gods), beating drums and blowing flutes. Some very excitable ones even spring into the water with their go-hei; believing that thus they free themselves from disease and evil spirits for life. This ridiculous custom still exists, in spite of the march of intelligence, and the man whose death leads this paragraph threw himself with others into the water. He was unable to swim, and so met his death. He was a carman by occupation.

THE RAILWAY between Kobé and Osaka was opened for public traffic on Monday last, 11th, as announced by telegram. Al-

though it was an unusually stormy day, and very scant notice was given of the commencement of traffic, the receipts, we are given to understand, amounted to yen 422.16. On the day following, Tuesday, they reached yen 525.85.

ABOUT NOON, on the 2nd May, a fire broke out at Katsugamachi, in the province of Yechigo. A strong wind was blowing at the time, and drove the fire towards the eight temples of Dzui-senji, which were soon destroyed. Changing from the south to the northwest, the wind drove the fire through the neighbourhood of Fukumachi; and the conflagration was not got under until 500 houses, fully one third of which belonged to Shizoku (gentlemen), were consumed.

THE HAIL storm of 26th April destroyed all the mulberry trees in the vicinity of Mount Haruma, in Kumagai Ken. The report says that the rice is also destroyed, but seeing that it is impossible it can have been forward enough to be utterly destroyed, we hope that the evident exaggeration in that case may justify a belief that the calamity to the mulberries is over-stated.

DAIJO-KUAN has officially notified the establishment of post offices in Liu Kiu; also municipal offices and court-houses at nine different towns.

A TERRIBLE fire has destroyed 1,358 houses, in addition to 108 mud fireproof (!) buildings, in the town of Hamamatsu. It commenced in the branch of the Ono Company, (not the Bankers). Two men and a woman were burnt to death. Commencing at 9 a.m., it continued to blaze until 5 p.m. The authorities did all they could to relieve the distress of those who were thus rendered homeless. One rio was given to each by the Kencho, some of the poorer receiving two or three each. Twenty rios each were lent to such Shizoku as required it; and many wealthy people of the Ken have presented money to the Kencho, to reimburse the sums thus distributed. For two days the officers entirely fed the people with rice.

A DISASTER of a very serious nature occurred on the 5th instant at a *yose* in Hondjo. (A *yose* is a house where public entertainments, such as singing, storytelling, dancing, top-spinning, etc., go on). The performances took place on the upper story; and on this evening, when many persons were assembled, the floor suddenly gave way. Ten men were severely wounded, whilst others were scalded by boiling water, which had been on a large hibachi, on the floor. A great many persons were slightly wounded.

A NEW Shinto temple is to be built in Fukui in Echizen. It is to cost 5,000 yen, and will be paid for chiefly by the wealthy merchants. The carvings and metal work are to be done in Nagoya.

THE LAST new sensation among the natives is a passion for red-striped lilies. Rabbits having been taxed out of the market, ant-eaters being too rare to get up a profitable and extensive sensation upon, white mice being too plentiful, and monkeys being too hopelessly similar to their owners to create the slightest novelty even among those who least suspect the fellow feeling that makes it impossible to look upon a monkey as a curio, recourse is had to the vegetable kingdom. As it happens, neither native *daikon* nor foreign red cabbage

is the elect novelty, but simply lilies having red stripes on the corolla. The market is opening briskly, and, during the past week, single stalks have been sold for 20 rio a-piece.

WEDNESDAY was an excessively windy day in Tokei, the gusts having an unusually strong rotary motion which scooped up the dust and carried it high in the air, even very large particles of sand and dust striking the face as if thrown purposely against it. Many of the shopkeepers, in disgust, closed their shops and postponed all business till the next day. It is high time the Japanese learned the benefit of watering their streets in a proper manner. Hitherto the matter has been attended to in a very sporadic style. Where one man laid the dust properly with water, five were too lazy to follow the good example. In some streets the slopping process was overdone, and the mud and puddles were nearly as bad as the dust. The water generally used too was from the stagnant stuff from the filthy gutters which the natives so generally allow to collect under their noses and windows. To pass through a street in which this foul disease-breeding slime was thrown was nearly as bad as enjoying the pleasures of the lovely landscapes of Japan when the farmers are at work. Coleridge detected a certain recorded number of odors in Cologne, but had he come to Tokio, at least in some of the streets, he would have needed a table of logarithms to compute the number of smells, if indeed the analytical powers of his nasal organs had not utterly been unequal to the task. It will be pleasant to some residents to know that Tokei Fu has issued an order forbidding the wetting of the streets with stagnant or offensive water. It will probably reduce the mortality statistics for the coming summer.

A most remarkable thunder-storm passed over part of Tokio on Sunday night. The thunder was heavy, but the lightning was unusually bright, and of a peculiarly pink color. It lasted about an hour, during which floods of rain fell.

PECUNIARY BON-FIRES are still made, at intervals, in the capital. On the fourth of May, there were burned in Sakuma-machi 564,173 rio; and on the fifth of May, 982,250 rio of old *kinsatsu*.

### SADO ISLAND.

THE FIRST of the Chinese characters representing the name of this island, as written for me by one of the Japanese officials there, signifies: "to assist, a deputy, a substitute;" the second:—"to cross a stream," the third:—"a state, a people," &c., &c.

The island is situated westward from the anchorage off Niigata, a distance of about 24 miles. Its entire length is estimated at 34 miles, and greatest width 17 miles. Two parallel ranges of mountains, attaining a maximum altitude varying from 3,000 to 4,000 feet, extend through the island, from N. N. E. to S. S. W. Between these ranges there is a plain, at each extremity of which the coast line recedes and forms a commodious harbour, the one being sheltered on all sides except the north-east, and the other on all sides except the south-west. The harbour on the northeast side of the island, which we visited, is called Minato, or Minato Matz, deriving its name, probably, from the name of the town. The harbour is easy of access, and affords anchorage for a large number of ships. The scenery is beautiful.

The town stands on the beach at the head of the bay, as you enter from the sea; and contains a population of perhaps 3,000. Immediately beyond the town, in the rear, there is a picturesque lake, said to be 12 miles in circumference. The lake, or lagoon, discharges its surplus waters into the bay, through a narrow channel some two or three hundred feet in length. This channel also divides the town into two portions, each having a separate name. That part east of the stream is called Minato, the name being indicated by a Chinese character which signifies "to collect, a gathering on the water, at a regatta," &c. The other portion is called Ibesu, or Irie, and the name is represented in Chinese by a character which (omitting its other significations) means: "remote, barbarian, in the sense of the Greek *barbaroi*. Throughout both portions of the town the houses are very plainly built, and the greater part of the people are poor. There are, however, indications that a considerable amount of business is transacted in the place. Salted fish, bamboo, &c., seem to be the principal articles of export. In one of the temples we found a school, in which a placard stated that foreign books were studied.

The gold mines are distant about 12 miles from Minato. We did not, however, have an opportunity to visit them, or to see any of the foreigners employed in working them. It would appear, from what we learned on the subject, that the mines are productive; and it is thought that by the use of the machinery now introduced the yield will be much increased.—Communicated.

THE JAPANESE genius of imitation is apt to run into extremes at times, and some curious results are then seen. The prevalence of counterfeiters of foreign trade-marks and labels has been noted in several of the newspapers, and doubtless many of our readers have seen crimson or yellow labels with letters printed upside down, or spelled in a manner that would eclipse even the orthographic efforts of Mr. Samuel Weller. One of the commonest frauds is that of filling tin boxes with common white sugar, burying a little green phial of Adam's ale, vulgarly called "water," inside of it, and labelling it in green and gold "Sugar of Lemons. Warranted Pure." Another "invention" is that of a mixture of alcohol, saké and burnt sugar, called and labelled "Brandy." Such impostures do not seriously injure foreigners in pocket, stomach, or susceptibilities. The native, in making his lemonade, doubtless pronounces the Sugar of Lemons good, and the flavor excellent. The "Brandy" seems also popular with Japanese toppers or brandy-bibbers. "Where ignorance" etc. Lately, however, in Tokio, a certain shop-keeper, doubtless a descendant of the divine Jinmu, has copied and publicly displayed a shop-sign and trade-mark that utterly eclipses every other on the street, if not in Japan. It is novel enough to attract all foreigners, of every shade of religious opinion; while ritualists or high-church missionaries will doubtless rejoice over this public exhibition of the sacred monograms. The heathen Japanese does not appear to have the remotest idea of the significance of his trilateral trade-mark, which he has doubtless copied from some prayer-book, though possibly he may have been attending the English church at Yokohama. The mark we refer to consists of the three letters I. H. S., which are laid upon each other to form a monogram, as in the churches. The enterprising native has it printed in red letters on his black out-door shop-curtains; and, inside,

saunts on many a box of cheap foreign merchandise. Any one who walks up the main street in Tokio, north of Kiyo Bashi, on the western side, may enjoy a fine opportunity of studying the vagaries of modern enterprise in Japan. Can the force of imitation further go?

A COFFER-DAM is being built underneath Kiyo-Bashi, Tokei—the bridge which crosses the canal at the northern end of the new Boulevards. A side bridge for temporary use has also been made. Stone is on the ground, and in a few weeks the old-fashioned wooden bridge will be replaced by a substantial stone-arched structure, that will accord well with the new buildings on the Tori.

ELSEWHERE in our columns will be found some sensational cuttings from Nagasaki papers, announcing the departure of the Japanese fleet from Formosa-wards. The information must be taken *cum grano salis*; although, from the present critical state of affairs in the Capital, it is not at all improbable. It is almost impossible, at the present moment, to obtain any reliable intelligence of the positive state of affairs in Tokio, but matters there seem to be approaching a crisis. If the soldiers and others composing the expedition to Taiwan have really taken the law into their own hands, and those in charge have tacitly bowed to circumstances and submitted, perhaps not unwillingly, to the fulfilment of its original purpose, it will be an easy matter to prophesy the result. In sending such large bodies of troops to Formosa the Chinese evidently have a definite object in view, and mean business.

THE WHOLE of the Japanese and other police, for so long a time located at the old station, Honcho Dori, opposite the Saibansho, yesterday (7th) removed to their new quarters, a handsome 3-storied structure facing the Public Recreation Grounds on the Swamp. The accommodation provided is a great improvement on that at the former place. Gas is laid on throughout the buildings, and the rooms allotted to the constables are spacious and lofty. There is a separate suite each for the English, French and Chinese divisions of the force. The cells are somewhat larger than those at the former depot, but the number (two) might certainly have been increased with advantage. In hot weather, with a liberal supply of "drunk and incapable" on hand, we fancy the punishment of being confined in one of them for a single night ought to be considered amply sufficient for any ordinarily trivial offence. The entrance to the station is from Sakai-cho.

## Hiigata.

April 30th.

A BARBER living in this town had a very pretty but frail young wife. He seemed, however, to take no notice of her conduct, and she grew much worse. Things went so far that he at last taxed her with her infidelity, adding that he had been aware of it for some time, but had wished to hide her shame; but, even then, if she would amend her ways all would be forgiven. She indignantly denied his accusations, and went away to her parents' house, near by. The latter in vain tried to persuade her to return to her own home. The barber went on with his business, and, about one month after this occurrence, whilst walking in the Tera Machi (Temple street), saw his wife coming down a bye street. Having nothing particular to do, and being curious, he observed the house she went into, and, going to the rear, managed to look inside. There he saw his unfaithful

spouse with a young priest. The enraged husband burst into the room, knocked over the priest, and, with a pair of scissors, cut off all his wife's hair, and gave her a sound beating; then, turning to the priest, he cut off the sleeves of his clothes and turned him out. The wife at once went to her parents' house, and, hurrying upstairs, inflicted two severe stabs in her abdomen (*a la Hara Kiri*). She was found quite dead, shortly after. Her par-mour, the young priest, is now in prison, awaiting trial.

DURING the early part of this month, twelve high officers arrived from Yedo, their destination being the neighbouring island of Sado; from which they were to bring the remains of an ancestor of the Mikado, named Joontoku, who had been banished to that place in the year 1221, by the Tycoon Hojio Yoshi Toki. The remains will be conveyed to Kioto. My native informant gave me the following version of the story. At that time, 1221, the Hojio family were in power, and Joontoku, who was then second prince (?), collected an army to oppose the Tycoon, but was defeated near Osaka, and his father, himself, and brother were all exiled.

The father, Gotoba, came to the throne in 1,186, and was banished to Oki, where he died in 1,239.

One son, Tsuti, was banished to Awa, where he died 1,231, and the one above mentioned, Joontoku, died in Sado in 1,241.

THE OFFICERS deputed to the task are now en route to Kioto with the remains of Joontoku.

THERE has been an enormous take of Her-rings lately.

JUST NOW, Yokohama can hardly complain of lack of out-door amusement, and, weather permitting, the Annual Regatta, which takes place on Saturday next, promises to prove as great an attraction as were the Races and the Athletic Sports. We are requested to state that, unless the unfavourable state of the weather prevents, the affair will positively come off on the day advertised. Attention is called to Rule 9, which says: "If the weather admits of the Regatta taking place, a gun will be fired at 8 p.m. on the proposed day, from the Flag-ship. Should the weather prove unfavourable, two guns will be fired from the Flag-ship at 11 a.m., as a signal that the Regatta is postponed."

ON THE 30th ultimo, Matz'daira Yoho, late Prince of Aidzu, visited the tombs of his ancestors at Wakamatsu. The *Nichi Nichi Shim-bun* says:—"Those who sleep beneath the tomb must have felt very pyful."

ASAKURA DANZO, Shizolu of Saga Ken, who was one of those lately in insurrection, when about to leave home was passionately entreated by his wife not to join the discontented. He was firm; but so was his wife. Seeing that she had no influence to retain him, she took a silver spoon which her husband prized very highly, and drove it with such force into the breast of her little daughter, three years old, that the child died. She then completed her work by taking her own life.

A FIRE broke out on the 11th inst. on board a ship which was being repaired at Ishikajima, on the O-kawa, Tkei. It was got under, but not before much damage had been done.

THE two foxes at the temple of Yodogawa Inari, Akasaka, were stolen about a week ago. They were made of brass, and each weighed more than two hundred weight. Such a weight of metal in one scale, and the weight of the Fox God's wrath in the other—it could not remain doubtful which would kick the beam.

SANJO DAIVIN and nineteen other nobles sent 1,000 rios to the Kuwai Kuwan, with the following letter:—

To the Honorable NAKA-GO-MON:

We have considered well the Mikado's words to the Kazoku, and are grateful for them. You have already opened Kuwai Kuan, according to the resolution of the majority, and have prepared the rules for its government. As we belong to the family of nobles, we wish to contribute to its expenses, and hope that you will quickly increase in knowledge and be able to fulfil the Emperor's wishes.

6th May, 1874.

(From the Nagasaki Express.)

Several rumours have been current here during the week, to the effect that the British steamer *Crocus* had been sold, through Messrs. Alt & Co., to the Japanese Government. We believe they had their origin in the fact that Messrs. Alt & Co. received an offer of \$235,000 for her, but on behalf of the owners they declined to sell at this figure. She is now loading coals for Shanghai, and will probably leave on Monday next.

The American steamer *Shaflesbury*, which arrived here on the 7th instant, consigned to Messrs. Henry Gribble & Co., was sold to-day (May 9th) to the Japanese Government, and changed her flag this afternoon. We understand that she is to be employed for the present in the Formosa expedition.—*Idem*.

## Shipping Reports.

The Brit. str. *Madras* reports: left Hongkong at 10.35 a.m. on the 28th April, experienced light variable winds and fine weather, until off the island of St. Clair on the 2nd May. The wind then increased to a fresh gale with heavy sea and thick rainy weather. At 7.10 a.m., hove the ship to for nine hours and fifty minutes, the weather being so thick that nothing could be seen. Between two and three o'clock a.m. on the 3rd instant, a very severe thunderstorm with heavy rain occurred. Passed Chichakoff at 11.30 a.m. on the same day; thence to arrival, hard northerly gale and heavy head sea. When off the St. Clair Island passed a barque standing to the N. E. Arrived at Yokohama at 9.05 p.m. on the 5th instant.

The Brit. ship *Italy* reports: left Takow, 12th April. Rough weather with head winds most of passage.

The Brit. barq. *Catharine* reports: left Taiwanfoo 14th April. Heavy winds and rough sea most of the passage.

The Am. barq. *Arnold* reports: light winds and pleasant weather from the islands.

The German barq. *China* reports: Came up through the Formosa Channel and along the coast of China. Has experienced stormy weather, with fog and rain, and a very cross sea at times.

The Brit. str. *Messilia* reports: After leaving Hongkong met with a strong N. E. gale, and put into China Bay, remaining there till the 21st. Coming up through the Formosa Channel had thick fog, afterwards moderate and fine weather. Passed the *Menzaleh* on the 26th, about 200 miles from Chichakoff, and the *Great Republic* yesterday morning.

The *Volga* arrived at Hongkong, the last voyage, 2½ hours before the *Behar*.

The German barq. *Jan Peter* reports: strong winds on leaving; rough weather after passing through Formosa channel, and had to slow down, for some 12 hours.

The Brit. barq. *Sarah Scott* reports: Sailed from Nagasaki at 7 a.m. Monday, May 4th, 1874; with winds from N.N.E., North, and N.N.W., light to moderate breeze; midnight, light airs and calms. The south end of Kosiki bore N. E. by E., and Taka Island S.E. at 6 a.m. on the 5th. Fresh breeze from E.N.E., East, and E.S.E., plying ship to windward. Noon, Kuro Island bore south, distant about 5 miles. At midnight, Mount Horner bore N.E. about 7 miles. On the 6th, winds moderate to fresh, from East to N.E., plying ship to windward through Van Dieman Straits. On the 7th, winds and weather variable, from light airs and calms with rains, to fresh breeze increasing to strong gales with fine clear weather, wind from N.N.E. to N.N.W. This weather continued up to 10 a.m. on the 8th, when the wind moderated. On the 10th at daylight, saw Cape Idsu bearing N.E., at 5 p.m. got a Yokohama pilot on board, Rock Island bearing N.E. by E. about 4 miles. On the 11th at noon, passed Cape Sagami, and at 8 p.m. anchored in Yokohama Bay.

The German barq. *Ferdinand*, reports: first part of the passage had strong easterly winds, latter part variable winds, thick weather and rain.

The Brit. ship *Fiery Cross* is loading at Nagasaki for this port.

The Am. str. *Alaska* reports: left San Francisco April 18th, at 12.15 p.m., with 92 Passengers, 24 Bags U. S. Mails, 301 tons freight and \$474,641.54 in Treas-ure. April 19th, exchg. signals with P. M. S. S. *China*, bound in. May 5th, Lat. 36° 44' N, Lon 177° 53' 45' East, passed P. M. S. S. *Japan* bound East. Experienced strong West and Nor. West winds to May 6th, and light winds and pleasant weather balance of voyage.

H. M. ironclad *Iron Duke* reports stormy weather up to Simonosaki; fine weather since.

The British barque *Scarfell* reports: Moderate winds and the usual weather after leaving London, until reaching the Omby passage; after passing through which into the Pacific on the 4th April the ship was struck by a white squall, and thrown over on her beam ends, lying in that position for about an hour, until the crew by the Captain's orders, succeeded in cutting away the sails, everything having been set at the time. The jib-boom and both top-gallant masts were carried away, and nearly all the sails lost. The crew were occupied until the following day in clearing away the wreck, and the ship was found to have a heavy list to port, some portion of cargo having shifted—evidently some tar casks, as a quantity of tar has been coming up through the pumps ever since. Since the accident, have had light winds, calms, and fine weather.

Spoke: The British ship *Sylvia*, April 13th, Cardiff to Yokohama; French ship *KVMD*, Bordeaux to Yokohama, and the German barque *RBVQ*, Hamburg to Hongkong, April 14th.

The British ship *Southern Ocean* reports leaving Cardiff Nov. 20th, in tow of a steamer, which cast off at Lundy island—a strong breeze blowing from the N. W. Thence to the Equator had variable winds and fine weather. Crossed on 5th January, with a light breeze from the S.E. Passed the Cape February 9th; very light S.E. winds. Strong N.W. winds afterwards. Sighted St. Pauls March 3rd, wind moderate from the S.W. From March 20th till the 23rd experienced very heavy squalls, with much thunder and lightning between 16 deg. and 13 deg. south latitude and longitude 115 deg. to 120 deg. March 26th sighted Savon Island, weather cloudy with a pleasant breeze from the northward. Passed Timor March 30th, about 11 miles off, the weather clear and pleasant. Were off Borea April 4th; found a strong current setting to the S.W. Exchanged signals with the *Scarfell*, London to Japan, also the French ship *St. Aubin*, Bordeaux to Yokohama. Passed Gaby Island April 14th, equally weather and wind northerly. Thence up to the coast of Japan met with very changeable weather, the wind generally from the north to east. Sighted the land on the 12th inst., off Oosima, and had a gale from the S.W., which ran the vessel up to Rock Island, arriving in port May 15 at 6.30 p.m.

The Brit. str. *Behar* reports: after leaving Hongkong until clear off the Formosa Channel, experienced thick foggy weather and light winds; since then N. W. and westerly winds and variable weather.

The auxiliary screw Am. schr. *Hutchingson* has only called here for advices, and is not likely to remain to discharge.

#### CARGO.

Per Brit. str. *Acantha*, from Shanghai:

Treasure, ..... \$6,200.

Per Am. str. *Costa Rica*, from Shanghai.

Treasure, ..... \$140,000.

Per Am. str. *New York*, from Shanghai:

Treasure, ..... \$54,830.

Per Am. str. *Golden Age*, from Shanghai:

Treasure, ..... \$10,000.

Established 1710.

THE Managers of the SUN FIRE OFFICE have constituted and appointed the Undersigned as their Attorneys, to issue POLICIES OF INSURANCE against FIRE, on BUILDINGS, MERCHANDISE, and other property in this settlement and on SHIPS in harbour, to the extent of \$20,000 on first class Risks, and to adjust Claims which may accrue on the same.

WILKIN & ROBISON.

Yokohama, January 1st, 1872.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

WE REGRET that it is not possible to note any material improvement in the condition of the Import Market since our last, forwarded a month ago. For some descriptions of goods there is certainly a slightly improved demand; prices, however, have undergone little change. The str. *Tchihatchoff*, and Barque *Seawell*, from London, have added to our already large stocks. Exchange has gone up, and is expected to touch still higher figures.

SHIRTINGS.—Little demand.

COTTON YARN.—Business has been done in Nos. 16 to 24; no enquiry for other counts.

VELVETS.—No enquiry.

WOOLLENS.—Very quiet.

BLANKETS.—No transactions.

IRON AND METALS.—Nothing doing; continued accessions are being made to stocks before very heavy.

SUGARS.—Market depressed; no enquiry.

RAW COTTON.—Transactions nominal.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.10 to 2.15	} Very quiet.
8 " do. 45 in. ... .. "	2.45 to 2.55	
9 " do. in. ... .. "	2.80 to 2.90	
G. E. White Shirtings:—		
60 to 64 reed 40 yds. 35 in. ... .. "	2.60 to 2.85	} Exceedingly dull.
T.Cloths:—6lbs. to 7 lbs. ... .. "	1.50 to 1.95	
Handkerchiefs assorted ... .. per dozen.	0.25 to 0.80	
Brocades and Spots (White) ... .. per piece.	nominal.	} Saleable; no stocks. Not enquired for.
do. (Dyed) ... .. "		
Chintz (Assorted) 24 yds. 30 in. ... .. "		
Turkey Reds 24 yds. 30 in. ... .. per lb.	0.95 to 1.00	} Slight demand.
Velvets (Black) 35 yds. 22 in.... .. nominal. per piece.	8.25 to 9.00	
Muslins, Cambrics & Lawns 12 yds. 42 in. ... .. "	0.95 to 1.00	
Taffachelass ... .. "	2.60 to 2.65	
Cotton Yarn.		
Nos. 16 to 24 ... .. per picul.	37.00 to 39.50	} Some demand. Neglected.
" 28 to 32 ... .. "	38.00 to 39.00	
" 38 to 42 ... .. "	41.00 to 45.00	
Woollens and Woollen Mixtures.

Kerosine Oil, ... 10 Galls, per case.	3.25 to 3.30	

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Transactions in Silk have been but small during the month. Prices still have a downward tendency, but even at low figures buyers are disinclined to operate, the quality offered being far from good. Stock amounts to 800 Bales. Favourable accounts continue to reach us regarding the silkworms, which are said to be progressing satisfactorily.

**TEA.**—New teas have made their appearance on our market in considerable parcels, and our tea buyers have settled since commencement of current month about Pcls. 4,000.

The quality this season is superior in the cup, but many parcels sadly lack careful manipulation, and are ragged and unfinished in appearance.

Prices run very irregular, and, at this moment, it is impossible to accurately grade teas. The following prices are about the market: Parcels classing "Fine," \$43 @ \$46; Superior Do. to Finest, \$47 @ \$50; Finest to Choice, \$51 @ \$57; and Full Choice, \$60 @ \$65.

Stocks in first hands only moderate, but supplies coming in regularly.

The out-going steamer will take some 500 tons, or about 7,000 half-chests. The *Vancouver*, which is due here shortly, will take an equal, if not larger, quantity.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 23RD MAY TO THE 4TH JUNE, 1874.

#### MARRIAGES.

At H. B. M.'s Legation, Yokohama, on the 23rd instant, by the Rev. William W. Parry, of H. M. S. *Iron Duke*, HENRY DYER, C.E., M.A., &c., Principal of the Imperial College of Engineering, Tokei, to MARIE AQUART, eldest daughter of D. Terguson, Esq., Glasgow.

CHASTEL DE BOINVILLE—COWAN. On the 23rd instant, at the French Consulate, and afterwards at H. B. M.'s Legation, Yokohama, in the presence of Sir Harry S. Parkes, by the Revd. William W. Parry of H. M. S. *Iron Duke*, CHARLES ALFRED, eldest son of Revd. C. A. CHASTEL DE BOINVILLE of Kingston on Thames, to AGNES, youngest daughter of W. COWAN, Esq., Banker, Ayr.

At the British Legation, Yedo, on the 22nd May, by the Rev. W. B. Wright, M.A., WM. CRAIGIE, M.A., Professor of English, at the Imperial College of Engineering, Yedo, to JESSIE COWAN, second daughter of the late HENRY SYNE, Esq., Ayr.

#### DIED.

At the Yokohama General Hospital, May 20th, 1874, at 1.40 A.M., JAMES NORTH, formerly of the P. M. S. S. Co.'s service, citizen of U. S. A., aged 43 years.

May 17th, at Ohno Kobe, ELIZABETH, wife of Mr. JOHN T. YLOR, Engineer.

Died, of Bright's Disease on Friday, the 22nd May, 1874, at Grand Hotel Yokohama, Mr. THOMAS THURKELL, of London, aged 54 years.

OUR LAST Mail Summary was to the 23rd ultimo, and left this by the P. M. Steamer *Great Republic*. Mails since to hand are:—

	DUE.	ARRIVED.
French Mail,	May 27th.	May 27th.
American "	" 28th.	" 28th.
English "	June 3rd.	June 1st.

Latest telegrams from London are to the 23rd May; latest letters 17th April.

### Summary.

A JAPANESE Legation is being established in Pekin.

THE ONLY intelligence that has reached the public respecting governmental affairs at the capital since our last is the sending in by Shimadzu Saburo, on the 20th ult., his resignation of the office of Sa Daijin—recently conferred upon him. No one pretends to fathom his reasons, as every one well understood that the honour was conferred upon him, not for the purpose of obtaining the advantages of his advice in the councils of the sovereign, but to give the government itself an appearance of strength; which it sadly appeared to lack. The only significance that can be attached to his resignation (even if it be accepted) is that it shews that there is still something in which the government do not wish to yield to him, and that he is not to be cajoled into lending them the strength of his popularity, whilst they refuse to carry out his wishes.

A VERY sad piece of news has been published in another paper, which we have not yet had confirmed. It is that Kido, whose name has been much before the public lately as a member of the Japanese Ministry, has been murdered, on his return to his own country. Kido was a man of very advanced intelligence; but one of those who was most anxious that the advances made by his country should be real and stable. After the revolution, in which as a Choshin man he took a conspicuous part, he set himself heart and soul to the work of promoting the progress rendered possible by the altered principles of the government. He was the first to establish a native weekly newspaper. The *Shimbun Zosshi*, whether his own property or only aided by him, was undoubtedly the offspring of the suggestion; and, if it has never been made the vehicle of discussing political matters it has been the means of giving to Japanese readers a good deal of home and foreign news calculated to do good. Kido was one of the vice-ambassadors in the Embassy of which Iwakura was chief; and his memorandum, published first in the *Shimbun Zosshi*, and subsequently translated for the Yokohama papers, had at least this merit: that it shewed him to be a thinking man, having the good of his country at heart; and recognised the advantages of publicity. If, too, there was, in that writing of his, much that was superficial there was also much that was good, and particularly as put before

his own countrymen. He has long been ill, having had a paralytic stroke shortly after his return from Europe. But, in spite of his illness, he has not only been retained as a member of the Privy Council but has had the Ministry of Education and Home Affairs (the latter temporarily, during the absence of Okubo) on his hands. He has expressed his wish to resign repeatedly, but was not permitted; and there is not a doubt that his name has been a tower of strength in the ministry. Last week, he finally obtained deliverance from his offices, and left for his own country; where we should have expected that he would have been greeted with a warm and hearty welcome. If this intelligence that has now come prove true, we shall really begin to lose faith in the possibility of eradicating from the Japanese character that disgraceful bloodthirstiness which the whole education of samurai of old taught them to look upon as the height of virtue.

IT WAS announced last week that Okubo was on the point of leaving for Formosa, with special despatches from the Emperor. We do not learn the probable date of departure.

FROM FORMOSA, the information received is, that collisions have taken place between Japanese and aborigines, the former losing nine killed and the latter many more. No opposition at present offered by the Chinese government or troops. Bad water and malaria likely to injure the health of the troops.

MATTERS BETWEEN the Chinese and Japanese relative to the Formosan Expedition have been satisfactorily arranged. There are now no grounds for apprehension of any complications arising in consequence of its despatch; indeed, the Chinese Government have issued instructions to their subjects along the coast of the invaded country to afford the Japanese every facility and assistance possible.

ADMIRAL PENNOCK, U. S. N., arrived by the last mail from America, and at once hoisted his flag as Admiral in command of the U. S. Navy in these seas.

THE commander-in-chief of the Expedition, Saigo, has reached Formosa. The total number of troops will be about 2000.

“FOOLS rush in where angels fear to tread.” It is not our wish to call the Japanese fools; and, most certainly, equally far is it from our intention to call the western nations angels. But we may, for our purpose, translate the old poetic adage this:—the ignorant attempt what the more experienced hesitate to face.

All doubts are finally set at rest as to the actual departure of the Formosan expedition; and as to its destination being the beautiful island itself—where “all but the spirit of man is divine.” And now we must patiently wait to see—what we shall see. The dispatch of Chinese gunboats from the Peiho, and the departure of many of the Chinese mercantile residents from Formosa, both indicate that trouble is anticipated; but the embassy to Peking from the Mikado, and the caution with which the government of this country is now acting, may act favourably, and prevent evils that are undoubtedly threatened.

It is quite needless for us to say (what the public very well know) that we most heartily disapprove of this expedition. But it is to be admitted that this disapproval may possibly be founded in error. For we are so far in the same position as our neighbours, that the real reasons and objects of the government are not revealed to us. This is our principal reason for refraining from stigmatising General Le Gendre, as others have done. We know that he has been the principal foreign adviser in the business; but we must suppose that more has been laid before him than before any one else. And, recalling the fact that he has had, and still retains, the entire confidence of the government, in spite of all that has been said or written about him, we think his advice must be based on premises other than those in possession of the foreign ministers, the public, or the press.

The letter of “Matsumai” which appeared in our issue of the 27th instant points to a semi-military colonization of Yezo. The information that reaches us concerning the Formosan expedition points to a similar object in that direction. But surely the government cannot seriously intend to convert soldiers, whom it has cost them so much money to teach and discipline, into agriculturists. It seems incredible. We cannot suppose it possible. Most singularly ill-chosen, too, in both directions, north and south, are the localities of such colonies. Yezo cold and inhospitable; and the portion of Formosa selected so unfitted for such a purpose that even the Chinese, who would not have allowed it to escape them if any good could be got out of it, have, as a fact, left it to the aborigines.

But the idea of forming outposts of the empire at these two extremities is equally absurd. If Russia wants Yezo, it is no force that Japan can provide in her soldier-colonists that would prevent her taking it. It must be far other influences than that. Should North Germany, too, as some assert, desire a port in the Chinese seas, she will not seek it on such ground as the eastern shore of Formosa. Nor will she think it worth her while to provoke a quarrel with either China or Japan, in order to secure it.

Indeed, it is useless speculating. The more we hear of the expedition, the more we see what is being done, the less are we satisfied that their is any meaning in it at all: unless it be for the one sole end of keeping the minds of the soldiers and samurai engaged, and preventing their further troubling the government respecting Corea. It now remains to be seen what will be the next move. Okubo is about to depart for the scene of operations, and we shall be surprised if General Le Gendre does

not accompany him. But is Okubo the only man fit to grapple with this affair? Okuma Shigenobu is Finance Minister, and to him also has been committed the charge of the department specially established for this Formosan expedition. It is quite comprehensible that he may be required here. But Okubo is the Naimukiyo—the Home Minister. Why is he kept running backwards and forwards on business out of his Department? We ask the question because we wish to ascertain who are the leading spirits of the enterprise. It is quite evident that Okuma and Okubo are among the cleverest men in the government. Are they also, *par excellence*, the great promoters of this policy? It would be well to know. For, whatever they may think, and whatever estimates Mr. Okuma may send forth as the Budget for the year, the government is committed to an expenditure which, even as it stands, will materially lessen that pretty little surplus lately promised. Up to this time, the outlay cannot be much under one million of dollars, even if it be not considerably over; and the public may estimate for themselves the monthly cost of transport hire, wages, food, etc., for the troops, even if they are inactive—the most demoralizing thing that could happen to them. It would be well to ascertain who is responsible for this line of policy, that, whilst they fail not to get the full credit of the enterprise—should it, contrary to all expectation, turn out to their country's good—they may receive the full share of condemnation, should evil come of it.

THE Japanese Budget, as we suppose we may call it, has been published officially in the *Nissin Shinjishi*, but we were obliged by pressure on our columns to defer its publication until now. Although only signed by Sanjo Daijin on the 13th May, it is probable that it was made up some time before, as it is stated to have been sent in by Okuma, and it would hardly be so unless he had actually seen it. It was, therefore, either completed before he left for Nagasaki or it must have been sent down to him for his approval. If this be so, we are surprised to see no provision made for the Formosan Expedition; for that will cost no trifling amount that may be lightly passed over.

The document is of importance to foreigners, mainly as shewing whence revenue is derived and how it is expended. But, from the peculiar way of lumping all sums together, that are expended by the various government departments, it ceases to be really valuable. Thus, the revenue derivable from the Railway and Telegraph is specified, but the expenditure of these works is included in the item “Public Works Department.” If these estimates are presented to the new Assembly in the simple form in which they are given to the public, and the vote is merely asked on the lump sums as they appear here, the power of the “representatives of all the people,” as the regulations for the “Assembly” direct the members to consider themselves, is indeed a myth. The following is a translation of the proclamation, as published in the Official Organ.

#### “NOTIFICATION.”

TO ALL IN, SHO, SHI, FU AND KEN.

The following is an easily understood estimate of the year's income and expenditure, sent in by Okuma Shigenobu, Okura-Kiyo.

In the first table will be found the estimated income and outlay, with allowance for unexpected expenses. The second and third tables minutely subdivide them, for convenience of reading.

The whole expense of government will be estimated according to that of last year. By lessening the expenses of the Mikado's palace, those of the Navy and Army Departments will be supplemented. 500,000 yen of the levy upon the officers and samurai will supply the deficiency in these two departments; and the remainder will provide for unforeseen expenses of those departments.

In the subjoined estimate there is no mention made of the expenses of Naimusho, as it is not yet quite organised.

SANJO SANEYOSHI,

DAIJO DAJJIN.

13th May, 1874.

#### REVENUE.

Balance from last year .....	29,509,864
General Taxes :	
Land Tax .....	44,603,332

	yen 232,803.00.5

WHEN jin-riki-shas (man-wheel-machines) were invented, it was little thought how universal would be their use, nor how their adoption would impede the increase of what we will call ma-ma-riki-shas (horse-wheel-machines). Before these useful little vehicles came into use, carriages were growing rapidly into favour; and it is probable—it is more than likely—that, but for them, horse vehicles of every description would by this time have multiplied prodigiously in Tokai, Yokohama, and on all the roads about them. This, it appears, was not to be; for it is even difficult to find the coaches of the old Tokaido days, and the best public conveyances in Yedo would be a disgrace to any civilized country in any part of the world. At the Tokai terminus, such as they are they may be seen; and such is the force of competition, that if two or three are going the same way, or to see the sights of Yedo, it is as cheap to take one of these as it is to hire jin-riki-shas; and most of them are much more comfortable. But they are so terribly shabby, as a rule, and withal so dirty looking, that the majority of people prefer to take the smaller vehicle.

Considering the structure of Japanese roads, we really think a special providence must have stepped in to give the jin-riki-sha to the people. It is so inexpensive that any poor man may become possessed of one. It is so light that it can be rolled over the roads without damaging them materially, if they are made in the ordi-

nary style of the roads here; and so narrow, that they can go on many of the more important country cross-roads. They require no harness. When a man has laid out his ten to twenty rios, (according to size and quality), and become a proprietor of one, he is, in a manner, independent. He gets between the shafts and drags his fare along jauntily, his earnings being pretty certain. The investment made, he ought to turn in the original outlay at least once a month, whilst his food, clothing, lodging, and luxuries, need not cost him the half of it.

Many farmers become owners of a jin-riki-sha or two. When field operations require them, they attend to their husbandry. At other times, they can go and ply for hire, and always depend upon picking up a few spare boos. They can also employ their men with them when there is nothing particular for them to do on their small farms.

Now, a carriage costs at first, new, as much as ten or twenty jinrikishas, or more. Then there is the cost of the horses and their food, the price of the harness, the wages of the bettoes, and the constant expense occasioned by wear and tear. Besides this, there is the difficulty of keeping the whole turn-out in good order, clear and presentable. Then the roads are not suitable. The wheels are too wide, the vehicles altogether too bulky and too heavy. It soon wears holes in the roads, and in its turn is soon shaken to pieces by the roads it has made so rough and bad. If it is out of use for a few days the horses still go on "eating off their heads," as is the common term; and both carriage and harness deteriorate even from disuse, unless care is taken to keep them cleaned, oiled, and generally in order. No; there can be no doubt respecting the advantages of the jinrikisha over the horse carriage, for ordinary public traffic in this country.

But not only the ordinary horse-carriage has been supplanted, disjoined, by the man-carriage; it has also prevented the adoption of the tramway carriages we used to hear of.

Years ago, some such vehicles were imported. Whether they are still to the fore, we know not. It was the belief that the rails would be laid down by a foreigner from the railway station at Nogé to Yokohama; and it was positively stated that Takushima had received permission to lay down trams throughout Yedo. Why have these enterprises hung fire? It's all through those little jinrikishas. They "cooked the goose" of the carriages; and, as for the tramways, they prevented them from being hatched. And thus have we in Japan a practical example of little things bringing to nought the great.

The approach of the warm weather, however, whilst it increases the demand for these useful little carriages, brings with it to the drawers a great amount of suffering. The number of men who drop down between the shafts is not inconsiderable, and several die in the streets every summer. The pulmonary affections produced are also a great source of pain, trouble, and ultimate death. So that there are very considerable drawbacks to the advantages they possess.

Before we close these remarks we will relate an incident that occurred within the past month. A foreigner took a jinrikisha, went to his destination, paid and discharged the man, and went about his business. At close of day he returned to his house, made himself comfortable for the evening, and was no doubt satisfied with himself and with the world. In the course of the evening "a rap came gently to the door." On answering it, the servant said a jinrikisha man wanted to speak to the master.

On going to the door the man asked him whether he had lost anything? A kind of cold shiver came over the foreigner, to whom it occurred at once that possibly he might have lost a bundle of rios he had upon him in the morning, and which he had not had occasion to use since he put them into his pocket. At first he had replied "No" to the man's enquiry; but the latter said, "Well, its very strange, I've found something in my jinrikisha, and have been to each house where I left my fares to-day, and all say they have lost nothing. Having got your address, therefore, from the house I took you to, I've come to you." The foreigner went to his room, searched the pocket in which the money ought to have been, and, lo!—he found it not. He returned to the man, and said, "Yes, I've lost some money." "Well," said the man, "I think I've found it. If you can describe it it is yours, and I'll hand it over to you." The foreigner was able to describe it exactly, and it was returned to him. He gave the man a very handsome acknowledgment of his honesty, and offered to take him into his service. The man thanked him, and said he looked for no such favour. He was himself a farmer, and an employer of labourers—and only went out with his jinrikisha when it suited him. As to the money, of course, it was not for him to steal it; and as, from its amount, he knew the owner might be inconvenienced, he had made every effort to find him and restore it.

#### THE PACIFIC DEEP-SEA SOUNDINGS.

THE U. S. S. *Tuscarora*, Commander George E. Belknap, arrived in this port on 22nd April, after a passage of 34 days from Honolulu, via Port Lloyd, Bonin Islands.

The published accounts of her operations in the deep-sea soundings in the North Pacific have proved of very great interest to the public, and we have much pleasure in being able to lay before our readers, through the courtesy of Captain Belknap, some further particulars of her voyage hither, which cannot fail to be interesting.

The weather during the voyage was generally favorable for the delicate work in hand, and a line of soundings has been run across from San Diego to Japan, via Honolulu and the Bonin Islands.

Our readers have already been informed that the soundings are made at regular intervals. In this passage seventy-three casts were made, the deepest being in 3,287 fathoms, at which depth the patent reel of Sir William Thomson, and the piano wire (No. 22, of a strikingly small diameter), worked as admirably and satisfactorily as ever.

The time is accurately taken at each cast; so that the period occupied at every depth is noted. Apart from the scientific interest attaching to such details, there is a special one that must be felt by all. Thus, a cast in 3,232 fathoms (3½ miles,) was made in one hour, thirty-seven minutes, and thirty-nine seconds; and another in 3,009 fathoms in one hour, twenty-nine minutes, and thirty-two seconds.

It must not be supposed that all these soundings are made as easily and smoothly as they are written about. As a rule, indeed, everything is so nicely adjusted to the work to be done that skill prevents difficulties from arising very frequently; but there are occasional accidents, as if to remind those engaged that the greatest care must be taken with the apparatus and gear they have, and to shew the manufacturers who supply it, and the government officers who order it, that the utmost vigilance must be exercised, lest danger or loss occur.

It has hitherto been the opinion of scientific men that the eastern part of the Pacific is the deepest, but the line of soundings taken by the *Tuscarora* through the heart of the North Pacific proves to the contrary, as the deepest water has been found much nearer to the shores of Asia than to the North American coast.

The ocean bed proper is reached near San Diego. It gradually descends to the vicinity of the Hawaiian Islands, where a depth of 3,054 fathoms is found: from which point it slowly drops till it reaches to 3,287 fathoms, or about three and three quarters statute miles, near the Bonin Islands.

The bed of the ocean between San Diego and the Sandwich Islands is pretty regular, and the soil uniform: but thence, trending eastward, there is a range of submarine mountains extending towards the Bonin Islands, the soil of which is very varied. The tops of the mountains yielded to the specimen cups, coral, limestone, and sand, with fragments of lava. In some instances solid rock was struck. Between the mountains a kind of yellow-brown ooze was found. From the Bonin Islands to the coast of Japan, coral, sand, and lava is found, and the entire region west of the Hawaiian Islands is undoubtedly volcanic.

Six of these submarine mountains were discovered, ranging from 7,000 to 12,600 feet in height. Marcus Island, 24.16 N., 154.06 E., which rises scarcely more than thirty to sixty feet above high water mark, lies directly in their range. At about eight miles from that island a coral and lava bottom was found, at 1499 fathoms.

The ocean bed between the Bonins and Yedo Bay is irregular, as might have been supposed, from the almost continuous chain of islands lying nearly parallel to the route sounded. The deepest water found was 2,435 fathoms, and the next deepest 1,669 fathoms.

After leaving this port, the *Tuscarora* will make soundings, via the Aleutian Islands, to the shores of America, as soon as the season is far enough advanced to make the work practicable.

This work in which the *Tuscarora* is engaged is most practically useful. It is no mere idle curiosity that has to be satisfied; but the adaptability of the ocean's bed for the reception of the earth-encircling wire is proved beyond all question, the best route being shewn to avoid the ground least favourable for it. We can only add our congratulations to Capt. Belknap and his officers on the admirable manner in which they are doing their work.

REMARKS ON PORTIONS OF A PAPER ON "THE WINDS AND CURRENTS IN THE VICINITY OF THE JAPANESE ISLANDS."

(Read before the Asiatic Society of Japan, on 15th April, 1874.)

By TWO OR THREE SHELL-BACKS.

WE HAVE read Captain Brown's paper with some interest. The general impression left on our minds, however, is its incompleteness, which we observe the author acknowledges at the outset, but we disagree with his excuse, namely, that information "can only be properly procured by means of minute observations and records, taken with instruments, and from vessels especially devoted to the purpose." We should have thought that a residence of some years in the country, the great facilities

enjoyed as commander of a government steamer, access to the meteorological records of the various light stations, and much spare time in which logs of vessels entering ports in Japan might have been examined, would have allowed Captain Brown to have drawn up a much more exhaustive and valuable paper. The bulk of the material from which the benefactor Maury composed his wind and current charts was not "from vessels especially devoted to the purpose" of scientific observation. But it is not so much on this account that we find fault. For, although it is somewhat disparaging to a society aiming to be enlisted among the scientific institutions of the world to accept an incomplete or unscientific production, it is more so when it admits statements founded on want of facts. Thus, we think Captain Brown has not acted fairly towards the Society, and that the council has not been sufficiently discriminating in admitting the paper among its records.

For instance, Captain Brown lays it down as a certainty that no current sets through the Strait of Corea during winter. In contradiction of this, we find (see *Mercantile Marine Magazine*, January, 1863) Captain David Scott says the current is invariably found through the Strait and up the Sea of Japan, and he has been careful to give the number of observations on which his statement was based, which, from October to January, averaged eighty per month. This agrees with the observations of all navigators we have had opportunity of gaining information from.

Having started with the axiom of no current in the Korean Strait during winter, Captain Brown would account for those through the Straits of Tugar and La Perouse by the prevalence of north-west winds in the Sea of Japan. But, if the water is thus blown out of the Sea of Japan, by what source is that Sea kept at its level? Besides, how can the warmth of the current through the Straits be accounted for, supposing it is caused by a north-west wind? We fear the author's theory breaks down.

Again, although Captain Brown admits the existence of currents through both the above-named straits, he brings another one down the east coast of Sakhalin, along the east coast of Yezo, (we presume he means north-east coast, because Yezo has no east coast, properly speaking), through the Straits between the Kurils, and then "in a S. S. W. direction, along the coast of Nambu towards Inaboye-Saki." How, in reason, can he make one current cross two others nearly at right angles? In this case he omits a theory.

Besides, the account of the winds in the Sea of Japan is meagre in the extreme, and valueless either for science or navigation; while Captain David Scott's observations (*Mercantile Marine Magazine*, January, 1863) are carefully recorded and well summarised.

It is a pity that Captain Brown should not have confined his remarks to the southern coast of Japan, about which it is possible he might have given some valuable statistics in tabular form, which would have been of infinite service when compared with observations of others, and which some competent person might have worked into definite shape for general use to navigators. But, unfortunately, he has destroyed the value of such parts of his paper as are deduced from his own observations, by the introduction of matter which he must be unable to vouch for, and from which he has drawn erroneous conclusions supported by false theory. We, are perhaps, however, giving Captain Brown credit for too much science; if so, we trust he will take it in good part.—Communicated.

THE SETTLEMENT OF YEZO.

To the Editor of the Japan Gazette.

SIR,

It is now generally believed that the latest scheme of the Kaitakushi is one of military settlement for Yezo. That six thousand soldier-farmers, or farming-soldiers, are to arrive this spring: to be apportioned, 2,000 at Mororan, 2,000 at Saporu, and 2,000 at Otaru. Tenders have been invited for the construction of dwellings, and, for one place, a contract has been already closed. If the authorities had endeavoured to pitch upon a scheme less suited to this country they could not well have done so. But it is reported that the Kaitakushi chest was becoming light; and, having overdrawn on the Finance Department of the central government, it was necessary to frame an excuse for an additional subsidy, or the Kaitakushi could not have been able to live through another season; for which the sum of Rios 620,000 has been appropriated. If Governor-General Kuroda, in looking back at the recent history of civilized nations, could have found one solitary instance of success in military settlement, he would not have been so much to blame, and he might then have tried how it would work with a people constituted as his countrymen are; although any sensible man would have warned him against the experiment.

These military settlers it appears, are to be drawn from the samourai class. Each is to be provided with a house and outfit at the expense of the government, a suit of uniform, and a musket. He will have agricultural implements supplied him. He will be required to turn out so many days in the year for drill. He will have to be fed by the same paternal government or he will rebel. He is manufactured evidently with the idea of being a constant source of anxiety and expense to the government, and he is supposed to farm. But will he farm?—and if he does not farm, what then?

Without any intention of reflecting on the advisers of the government—for, as has been said before, (see *Japan Gazette*, 1st April, 1874) it is believed the idea originated in the minds of native officials—it may be said that the scheme of settlement so far pursued by the Kaitakushi is a complete failure. Nor could it have been imagined for a moment by anyone acquainted with the temper and habits of Japanese that it would be otherwise. To suppose that an improvident people, which has hitherto been able to supply all the wants of a low state of civilization by little labour, should make good pioneers in a wild country would have been absurd; to say nothing of a disinclination to reside under a somewhat rigorous climate. Besides, was it not to have been foreseen that such people would not of their own accord settle in the interior for agricultural purposes; or, being placed there at the expense of the government, would be likely to remain, while the coast was so sparsely peopled as to allow of full employment for them at encouraging rates of wages, or afforded them the advantage of fishing on their own account—a mode of occupation especially suited to Japanese character. It was certainly patent to all observers who stood by and watched the efforts to "colonize" Yezo during the last three years that those efforts were being made in a wrong direction; nevertheless it does not even yet seem to have struck the minds of the originators, and they cannot see that the millions spent on interior settlement have been thrown away.

The source of wealth of Yezo must be for many years to come its coast produce, and yet, towards a full development of this, the government, it would appear, is callous. The greatest ignorance is manifested by most officials as to the amount and value of these productions, and they seem at no pains to collect statistics, which would be of inestimable service. It has not even been thought necessary to appoint a commissioner of fisheries, but the government seems only to look to the collection of a revenue, excessive in some cases, yet so negligently lenient in others that it is safe to estimate the present amount as but one-half of what could, under a proper system, be collected without unduly pressing upon the profits of the producers. And it may be broadly stated that this description of revenue alone ought to be sufficient to defray the ordinary expenses of the government of the island.

A lately published preliminary report of the Geological Survey of Yezo, seems to hold out less encouraging prospects for mining enterprise than have been generally entertained regarding the country. This is an additional reason why the government should direct its attention to the development and control of other sources of wealth the existence of which they are aware of; while agricultural settlement may be fairly allowed to gradually develop itself, in those sections of the country where it may become remunerative; when it will be the province of the government to make roads, and offer such facilities to intending settlers as may encourage, but not force, such development. The opinion of the authorities as to the admittance of foreigners generally in Yezo has not been allowed to become known, but the feeling of the people seems to be favourable. In fact, it would be difficult to bring forward a single argument in opposition. It is believed that the views of the chief of the American Commission are likewise favourable; but it may be that, because such is the case, that is the very reason why the native officials do not—as has occurred in other instances—adopt them.

It is to be regretted that some former remarks, (*Japan Gazette*, 1st April, 1874) which he calls "rough handling," should have given offence to the late "Surveyor-in-Chief" of the Kaitakushi. Lieut. Wasson's responsibility for the doings of the department was not, it is certain, generally known. Not even now, altho' he has appeared (*Japan Gazette*, 14th April, 1874) as champion, can he be recognized as speaking by authority. The tone of that letter, however, would lead most readers to conclude that each foreigner in the employ of the Kaitakushi was permitted to have entire control of his special department. Such a belief would be unfair to Lieutenant Wasson's late associates, for a general idea might thus be entertained that the foreign employes were responsible for the shortcomings and misdoings of the Kaitakushi. Remarks on General Capron's unenviable position fortunately have been made in a previous communication, and it is not too much to say that these remarks are equally applicable to each individual foreigner employed in the department. At the outset, it was supposed to be understood that Governor-General Kuroda was no more than an associate of General Capron in the "Commission," and that the latter had power to veto any measure proposed by the former which was not in accordance with his judgment. It was even generally believed that such appeared in the text of the General's original contract. But anyone conversant with Japanese character, and the mode of action of the officials, might have prophesied what has happened. It would be unfair, perhaps, to explain how it was managed, but there is still an opinion that,

had all the employes supported their chief, the actual control of the Kaitakushi would now have been in foreign hands, some millions saved the Imperial government, and work of utility carried out, for developing the resources of Yezo.

The case of the Kaitakushi is unfortunately not singular among the departments of the government in which foreigners are employed; and the officials are "smart" enough to take advantage of any little difficulties, which may occur "in the best regulated families," between the foreigners in their employ, frequently turning the ambition of one in a lower position to their own ends; though, perhaps in nine cases out of ten, they ultimately disappoint the hopes of the aspirant, and he finds that in stigmatizing the acts of his superior he has gained nothing.

The letter referred to has doubtless been read by most persons who take any interest in the doings of the Kaitakushi, and they have probably judged it from different points of view, forming their opinions of the department or the individual accordingly. These had probably better be allowed to remain, since any remarks, now, would only tend, it is feared, to irritate that feeling of disappointment what must be in the breasts of members of the unfortunate Formosan Expedition.

MATSUMAI.

#### ATHLETIC SPORTS.

##### BATTALION R. M. LIGHT INFANTRY.

THE known excellence of the entertainment offered by the Battalion Royal Marines, on the occasion of their periodical athletic contests, always suffices to draw together a large assemblage of spectators, of various nationalities. Yesterday was no exception to the rule, there being a great number of persons present at the Camp. Amongst them were many ladies, and we observed several naval officers, English, American, and French, belonging to the war vessels at present in harbour. Sir Harry and Lady Parkes were on the ground until the close of the Games. The arrangements for the comfort of spectators reflected credit on the Committee, who are also to be commended for the admirable manner in which a lengthy programme was got through, to the evident satisfaction of both competitors and lookers-on. The mid-day parade of the Battalion, in honour of Her Majesty's birthday, interfered but little with the arrangements for the Sports, and shortly after one o'clock—the hour appointed for commencing—a start was made with the "Company Races." Nineteen items were set down on the programme, but in reality there were 24 events, including the Flat Race for the men of the French Garrison and the Betto's Race. No waste of time occurred between the different events, and, as a consequence, the whole was brought to a close about 6 o'clock, the presentation of the prizes to the successful competitors, by Mrs. Colonel Richards, winding up a most pleasant day's sport. The weather was everything that could be desired; hardly too warm, except, perhaps, for the runners, and a threatened thunderstorm happily passed over with only a hint in the shape of a few drops of rain. As usual, there was a great crowd of Japs on the ground, who seemed to enjoy themselves immensely, as, indeed, did everybody, civilians, Marines, blue-jackets, &c., &c. Everyone seemed to be agreed that the whole affair was most satisfactory, and one enthusiastic athlete was heard to affirm that the recently held Amateur Athletic Sports were not a patch on those of the "Jollies!" Un-

fortunately, no time was noted for the different events, otherwise it would have been interesting to have compared the relative merits of the competitors at each meeting.

The "Company Races," four in number, in which men from Nos. 1, 2, 3, and 4 respectively competed, were got through with celerity, and were well contested. In No. 2, Privates Hill and Coombes ran so closely for first place that it seemed impossible to decide as to the winner, and it was consequently declared a dead heat. The prize for the neatest running costume was awarded by Mrs. Richards to Private Burnett, who ran third in No. 2 Co. Race. The 3-legged Race created much amusement. Six pairs started, each couple being bound together above the knee and at the ankle. It was won easily by Privates Keane and Mellor, who appeared to be old hands at the business. For the N. C. Officers Handicap six started. Sergeant Carpenter, with 20 yards "law," came in ahead of Sergt. Gardner (who started at scratch) by 10 or 20 yards; ten yards less of a handicap would have made all the difference. Corpl. Broome (7 yards) closely pressed Gardner for second place. Lance-Corpl. Butt managed to "Put the Shot" (32 lb) 26 feet 9 inches beyond the toe-line, and secured the first prize. The two first in each Co. in the "Company Races" had to compete for the Championship in the 100 yards Race. Private Keane, No. 3 Co., after a very fine race, won it by little more than a nose, Sergt. Gardner, No. 1 Co., securing second place. Private Tarring, No. 3 Co., who had only come out of Hospital that morning, was close at his heels; the three came in almost in a bunch. The Long Jump, Running, followed. Private Burnett, who led with the score of 16 feet 4 inches, landed the money with 17 feet; Private Gwillam took second honours with 16 ft. 1 in. Four came to the scratch for the Marching Order Race, the competitors having the option of running or walking the distance, a mile. Private Mitchell, a veteran of 19 years service, came in a good first; time 8 minutes. The "old 'un" went off at the double, and kept it up till reaching the goal; Sergt. Carpenter, second, came in at a walk, and Private Clarke, third, was nowhere in particular; as the other starter caved at the first round, he, however, took the third prize. The prize of \$5 for the best kit, presented by Capt. Walsh, was augmented by one dollar, and equally divided amongst Mitchell, Carpenter, and Clarke, the donor being unable to decide as to who was entitled to be considered the winner. A protest was afterwards lodged against Mitchell's being adjudged the prize for the Marching Order Race, on the ground that he wore a loose frock instead of a tunic; the matter is being enquired into. Fourteen started for the Flat Race for French Marines, twice round. Two fell in the first round, and all got pretty well strung out. Another fell just at the winning post, but picked himself up and was not passed. For the Mile Race, eleven started, but several fell out during the 3rd and 4th rounds. Private Coombes got over the ground in a pretty manner, and came in well. Private Tarring was too weak, and ought not to have started; he broke down when reaching for home and had to retire. His previous performances are well known, and had he been in condition, or even in ordinary health, it was evident that the race would have been his own. The amusing trial of strength called "French and English" was the next item, the intended competitors being the Right and Left Halves of the Battalion, respectively. Some slight misunderstanding, however, arose, and the men of both halves were massed, and representatives from each appointed had to pick their men, 15 on

each side. Sides were tossed for and selected and the game was proceeded with. Private Culley's side (Left Half Battalion) twice managed to haul their competitors over the line, and were thus declared the victors. The Hurdle Race was deftly won by Private Keane; Private Clarke (No. 67) pressing Sergeant Gardner very closely for second place. Six blue-jackets started for the Half Mile Flat Race, but one caved. The rest ran remarkably well, Tucker (*Iron Duke*) winning cleverly; it was almost a dead heat between Butcher and Waghorn for second place. The veteran Mitchell again managed to pull off a first prize in the Old Soldier's Race, closely pressed by Sergeant Potts; six started. Sergt. Carpenter won the Quarter Mile Handicap with ease, coming in ahead of Private Clarke (second) by about 12 yards; eleven started. The Pole Jumping seemed to excite but little interest amongst those entering, and the jumping was poor; probably, because the competitors were exhausted with their previous exertions in running, Private Clarke took the money with 6 ft. 11 in.; he was the only man who got over at all. For the Half-mile Race six started. Private Hill came in an easy winner by about 10 yards, the same distance separating second and third. The Sack Race, which followed, was certainly the most amusing feature of the day, the mere spectacle of eight human beings, encased up to the neck in capacious sacks, and bobbing up and down like corks in a pond, sufficing to set the Japs into roars of laughter. The distance to be run, hopped, jumped, or otherwise got over, was 100 yards, up to a post 50 yards ahead, round it, and home. Of course, nearly everyone fell, but they were quickly got on their pins again, and at it they went. Private Price ran (?) well, and was in advance, but fell when near the goal. He, however, managed to scramble up without assistance, and came in winner. Private Shaw (second) hopped it; Lanahan was third, and the rest were "mixed." This race was not run in heats, as intended. Lieut. Heseltine's boy Sanko managed to secure the prize in the Bettos's Race, half-mile, for which six started. It was a hollow affair. The Steeple Chase, round the Camp, was a truly formidable task, and must have severely taxed the powers of the eight starters. It would be difficult to imagine a more difficult course. Immediately after starting, eight brush hurdles presented themselves, which all managed to get over, some cleanly, and others by dint of knocking down the obstructions. Up the bank, round behind the huts, over a vaulting bar and two more hurdles, all was well—but the steep bank immediately under the palings bounding the road presented difficulties which were not surmounted by some until others had passed the winning post. Two or three minor obstacles, to be reckoned as of "no account," safely passed, the water jump, 16 feet wide, had to be crossed. The first man to reach it was Private Clarke, who scrambled through the mud and water without an attempt to jump it; the rest got through or over as best they could, most of them being liberally be-spattered with dirt, when the goal was reached. The next and last obstacle was an erection of bamboo poles, 5-barred, and about 15 feet in height, over which it was necessary to scramble before reaching for home. Private Clarke, it was quite evident, had the race to himself, and came in a long way ahead, passing the winning post before Sergeant Gardner (who came in second,) had fairly got through his troubles at the water jump; Private Price was a bad third. Over a course such as was laid out yesterday, however, "luck is everything." The Consolation Race, for non-winners, proved a most

excellent one, Private Barnett overhauling his man at the finish, with a fine spurt, and landing the money by about a head. The blue jacket, Scott, (second,) ran remarkably well, but did not seem a likely man at all, to outward appearance; Private Smith was a fair third. The usual races for the Youngsters wound up the proceedings. Captain Walsh acted as Starter, and admirably succeeded in getting everyone off on good terms. The distribution of prizes occupied some time, and most of the spectators had left the ground when Mrs. Richards handed them over. For some unexplained reason, no band was present.

#### 1.—COMPANY RACES, 100 YARDS. The first two in each race to compete in Champion 100 yards Race.

No. 1 Co.	1st Prize, \$2; 2nd Prize, 50 cents.
No. 2 "	1st " \$2; 2nd Prize, 50 cents.
No. 3 "	1st " \$2; 2nd Prize, 50 cents.
No. 4 "	1st " \$2; 2nd Prize, 50 cents.

" Burnett	4

#### 10.—FRENCH AND ENGLISH. Right Half Battalion v. Left Half Battalion, 18 men per Company. Prize \$15.

Left Half Battalion (Private Culley) ..... 1

#### 11.—HURDLE RACE. 120 yards. 8 flights. 1st Prize, \$5; 2nd Prize, \$3; 3rd Prize, \$2.

Private Keane	1
Sergt. Gardner	2
Private Clarke (67)	3
" Lanahan	4

#### 12.—FLAT RACE. $\frac{1}{2}$ MILE. Open to Men of British Squadron. 1st Prize, \$6; 2nd Prize, \$4; 3rd Prize, \$2.

Tucker ( <i>Iron Duke</i> )	1
Butcher "	2
Waghorn "	3

#### 13.—OLD SOLDIERS' RACE. 200 yards. For men over 16 years service. 1st Prize, \$4; 2nd Prize, \$3; 3rd Prize, \$1.

Private Mitchell	1
Sergeant Potts	2
Lance-Corporal Butt	3

#### 14.— $\frac{1}{4}$ MILE HANDICAP. (Presented and Handicapped by Staff-Surgeon Caldwell). 1st Prize, \$6; 2nd Prize, \$3; 3rd Prize, \$2.

Sergeant Carpenter	1
Private Clarke	2
" Keane	3
" Hunt	4

#### 15.—POLE JUMPING. The Bar to be cleared, and Pole left on take-off side, so as not to displace it. 1st Prize, \$3; 2nd Prize, \$2; 3rd Prize, \$1.

Private Clarke ..... 6 ft. 11 in.

#### 16.— $\frac{1}{2}$ MILE RACE. Open to Garrison and Squadron. 1st Prize, \$6; 2nd Prize, \$4; 3rd Prize, \$2.

Private Hill	1
" Coombes	2
L. Corporal Broome	3

#### 17.—SACK RACE. 100 yards, round a Post. Winners of heats, \$1. Two first in each heat to run a final. 1st Prize, \$5; 2nd Prize, \$3; 3rd Prize, \$2; 4th Prize, \$1.

Private Price	1
" Shaw	2
" Lanahan	3

#### —BETTO'S RACE.—Half Mile.

Lieut. Heseltine's Betto Sanko	1
" Sandwith's " Touri	2
Mr. Schraub's " Hadgio	3

#### 18.—STEEPLE CHASE. Round the Camp. 1st Prize, \$8; 2nd Prize, \$5; 3rd Prize, \$3.

Private Clarke	1
Sergeant Gardner	2
Private Price	3

#### 19.—CONSOLATION RACE. For Non-Winners. Once round. 1st Prize, \$3; 2nd Prize, \$2; 3rd Prize, \$1.

Private Barrett	1
Scott, ( <i>Iron Duke</i> )	2
Private Smith	3

We give below the scores made by the gentlemen composing the Japan team in the Rifle match YOKOHAMA vs. HONGKONG AND SHANGHAI. Those from the China end are not yet to hand, and the result is therefore uncertain, as yet. Shortly, we hear, there is to be a match or matches amongst the Marines; it would be interesting to compare the relative scores of the Professionals and the Amateurs.

#### YOKOHAMA vs. HONGKONG AND SHANGHAI.

Yokohama:—

	400 yds.	500 yds.	600 yds.	700 yds.	800 yds.	Total.
Townley	34	34	34	35	37	174
Duncan	36	35	33	38	31	173
Barnard	37	34	31	37	30	169
Dalliston	36	37	31	28	28	160
Benson	33	31	27	33	29	153
Vivanti	35	28	23	35	24	145

Grand Total ..... 974

#### YOKOHAMA ANNUAL REGATTA.

If the amount of interest exhibited by the public on Saturday is to be taken as a criterion of the success of the Regatta, then we are compelled to set down the affair as a "fizzle." For the last few years, however, an apathy has been shewn (although it was perhaps more marked on the present occasion) which compels one to the conclusion that aquatic sports have little or no interest for the people of Yokohama. Why, it would perhaps be difficult to say. The Committee cater liberally for the amusement of the community, and although, last year and the year before, the weather was unfavourable, that objection certainly had no weight on Saturday, the day being fine; and, the entries for the various events being fairly numerous, a large attendance might reasonably have been anticipated. Thanks to the energy of the Committee (or a portion of them), however, the Sports were successfully and satisfactorily carried through, and the competitors in the various races did their best to rouse the enthusiasm which might naturally be supposed to exist in the breasts of those who are mainly interested in the business of a city which depends for its existence on the very fact of its being connected with things maritime. What was done was done well, by those who undertook to entertain the public; who, it is to be regretted, did not offer encouragement commensurate with the exertions of all concerned in the effort to amuse.

The P. & O. S.S. *Behar* did duty as Flag-Ship, and the guests, amongst whom was a number of ladies, received every attention at the hands of Captain Andrews and his officers. At noon, a cold collation was served, to which the company did full justice, a portion of the lunchers being compelled to wait for a second table. The Band of H. M. S. *Iron Duke* performed an excellent selection of operatic airs, and rendered the affair much more lively than it would otherwise have been. At 6 o'clock, the prizes were presented to the winners by Mr. Rickett, with the exception of the "Ladies Purse," for single-sculls, which Mr. A. H. Dare received at the hands of Miss Amy Cargill. The first races of the day, for Yachts over 35 feet, was got under weigh shortly after 9 A.M. We subjoin a list of the results of the various events:

#### SAILING RACES.

1.—Start at 9 A.M. Yachts over 35 feet. Round Saratoga Spit Buoy and Lightship, and finish between Flag Ship and "Tiptree." Entrance \$7. First boat \$80; 2nd, \$25. Three Yachts to race or no second prize.

Messrs. Whitfield & Dowson's cutter *Zephyr*, 45 ft., 1  
Mr. Cook's schooner *Undine*, 52 ft., ... 2  
Mr. Ewalt's cutter *White Cloud*, 35 ft., 6 in., ... 0

At starting, the *Zephyr* had the leeward position, but was well handled; and before reaching the Light Ship had weathered all her competitors. The *Zephyr* rounded the Light Ship quite 10 minutes before the *White Cloud*, and a quarter of an hour before the *Breeze*, which yacht, although not in the race, started to go round the course, but, seeing the breeze was not for her, returned. Off Saratoga Spit the wind fell, and as there was a strong tide running, the yachts drifted about for more than half an hour, until the wind freshened and they got all pretty much together. The *Zephyr* passed the Flag Boat off Kawasaki about 20 minutes ahead of the *Undine*, reaching the winning post at 8.45 p.m. The *Undine* came in nearly an hour later.

2.—Start at 9.15 A.M. Yachts over 20 and under 35 feet. Twice round Lightship and Shipping. Entrance \$5. 1st boat, \$60; 2nd, \$20. Five to start or no second prize.

Dr. Dalliston's cutter *Tantivy*, 29 ft. 4 in., ... 1  
Mr. Pagden's " *Flirt*, 21 ft., ... 0  
Mr. Haske's sloop *Emerald*, 29 ft., ... 0

The starters got away at 9.15 A.M. Throughout, the *Tantivy* had the race all her own way, and passed the winning flag at 3.12 P.M.

3.—Start at 9.30 A.M. Yachts under 20 feet. Once round Lightship and Shipping. Entrance \$3. 1st Boat \$35. 2nd, \$10; 3rd, save entrance fee. Five to start or no second prize.

At the last moment, Mr. Tripp's yawl *Sealark* was withdrawn, the only other boat on hand, Mr. Stibolt's cutter *Torment*, thus having the barren honours to herself.

4.—Start at 9.45 A.M. Open Boats. Once round Lightship and Shipping. 1st boat \$25; 2nd, \$10; 3rd, save entrance fee. Time allowance, 15 seconds per foot. Measurement taken by water-line.

Capt. Vroom's China-rig *Shoeyleen*, 26ft. ... 1  
Mr. C. J. V. Ruschenburger's sloop *Abunai*, 28ft. 6in., 2  
H. M. S. *Iron Duke's* barge *Moosemi*, 33ft. 6in. ... 3  
U. S. S. *Hartford's* China-rig *Daring*, 34ft. ... 0  
Mr. Nebb's *Emma*, 29ft. ... 0  
H. M. S. *Iron Duke's* cutter *Tortoise*, 30ft. ... 0  
" " " *Foolish Virgin*, 31ft. 6in. 0

This race excited some interest. The *Shoeyleen*, with the leeward position, soon gained on her competitors and came in first. An objection, was, however, lodged against her, which is being enquired into, and, if allowed, will disqualify her.

5.—Start at 3.40 P.M. Canoes; no entrance fee. Round Spit Buoy. 1st, \$10. Any competitor using a paddle will be disqualified.

Lieut. Smythe's (R.M.) *Kamo* ... 1  
Mr. J. J. Dare's, *Jiggy Jiggy Maru* ... 2  
Mr. Tripp's *Pom-pom Maru* ... 0  
Lieut. Drury's *Idalia* ... 0

The *Kamo* had it all her own way, the other canoes, getting jammed on the hawser at the starting point, could not get away for some time. The *Kamo* being provided with a jib managed to pay off her head, and got into the wind.

#### PULLING RACES.

1.—1 P.M. Pair-oared out-riggers. 1 Mile. 1st, \$30; 2nd, \$10.

Mr. J. J. Dare, Mr. P. G. Whittall,  
Capt. Walsh (Cox.) ... 1  
Mr. C. J. Melhuish, Mr. J. Dodds,  
C. P. Hall (Cox.) ... 2

Won easily.

2.—1.20 P.M. Men-of-war Cutters. 1½ Mile. 1st, \$25; 2nd, \$10; 3rd, save entrance fee.

U. S. S. *Hartford's* *Forget-me-not* ... 1  
" *Kearsage's* 1st Cutter ... 2

3.—1.40 P.M. Merchant Ships' Boats. 1 Mile. 1st, \$10; 2nd, save-entrance fee.

Capt. Andrews' *The Bishop* was the only boat that came to the starting point. She rowed over the course alone.

4.—2 P.M. Four-oared Outriggers. 1 Mile. Prize \$100.

1, E. F. Kilby; 2, E. B. Jones;  
3, A. Milsom; 4, J. J. Dare;  
— Thomas (Cox.) ... 1  
1, P. Whittall; 2, J. T. Henderson;  
3, H. J. H. Tripp; 4, G. Hamilton;  
J. Rickett (Cox.) ... 2  
1, C. P. Hall; 2, F. G. Davidson;  
3, J. Dodds; 4, H. O. Jeyes;  
Capt. Walsh (Cox.) ... 0

A very close race between Mr. Dare's and Mr. Hamilton's boats, which was won by the former by about half a length only.

5.—2.30 P.M. Shore Gigs and Whale-boats. 2 Miles. 1st, \$15; 2nd, \$10; 3rd, \$5.

Mr. Henry Reuter's gig *Yankee Doodle* ... 1  
Mr. H. B. Henley's whaler *The D'l* ... 2

*Yankee Doodle* got off with a good lead, followed by the *D'l*, whose Japanese crew shewed great pluck in starting at all; the build of the two boats making it almost a certainty as to which would win. The *D'l* was quite half a mile astern at the goal.

6.—3 P.M. Men-of-war Gigs. 1½ Mile. 1st, \$10; 2nd, \$5.

U. S. S. *Lackawanna's* *True Blue* ... 1  
" *Kearsage's* Gig ... 2  
French Gun-boat *Bourayne's* Gig ... 0

The *Lackawanna's* *True-blue* got away with a slight lead, and rounded the flag boat 20 seconds ahead of the *Kearsage's* gig, which was 10 seconds ahead of the *Bourayne's*. *True-blue* won easily, but it was a hard race for second honours, there being only half a length between the gigs of the *Kearsage* and *Bourayne* at the winning flag.

7.—3.20 P.M. Ladies' Purse. Presented by the Ladies of Yokohama; for single sculls. 1 Mile. Open to Subscribers to the Regatta Fund. No entrance fee. 1st, "The Purse"; 2nd, \$20.

Mr. A. H. Dare's *Koyoji* ... 1  
Mr. C. P. Hall's *Snaive* ... 2  
Lieut. Smythe's (R.M.) *Zig-Zag* ... 0  
Mr. J. J. Dare's *Tooth-pick* ... 0

This race differed from most of the others, inasmuch as it seemed to excite a little interest on the part of the spectators. The four boats got away to a good start, *Toothpick*, however, soon dropping astern. *Snaive* and *Koyoji* headed alternately; sometimes the one and sometimes the other appearing to the fore. On nearing the goal, *Snaive* led by half a length, when Mr. A. H. Dare put on a spurt and landed the "Purse."

8.—3.40 P.M. Military Race. 1 Mile. 1st, \$15; 2nd, save entrance fee.

No entries.

9.—4.00 P.M. All Shore-boats, except outriggers and Compradores' boats. Winner of No. 5 excluded. 2 Miles. 1st, \$15; 2nd, \$10; 3rd, \$5.

Mr. Brown's gig *Eureka* ... 1  
Mr. Henley's whaler *The D'l* ... 0

*Yankee Doodle* was excluded, having won the race for shore gigs and whale boats. This was again a foregone conclusion as to the winner.

10.—4.30 P.M. Four-oared Outriggers. A Cup, presented. 1½ Mile. Winner of No. 4 excluded (Crew and Boat)

1, P. Whittall; 2, J. T. Henderson;  
3, A. Dare; 4, G. Hamilton;  
J. Rickett (Cox.) ... 1

- 1, C. J. Melhuish; 2, H. F. Abell;  
3, — Estienne; 4, J. Leckie;  
— Dunnlop (Cox.) ... .. 2  
1, C. P. Hall; 2, F. G. Davidson;  
3, J. Dodds; 4, H. O. Jeyes;  
Capt. Walsh (Cox.) ... .. 0

Mr. J. J. Dare's boat was excluded, having won race No. 4. Won easily by Mr. Hamilton's boat. We must compliment the crew on their steady stroke, which elicited much admiration from pulling men.

11.—5.00 P.M. Boats of all descriptions, except Out-riggers and Compradores' boats. Round Lightship and back. 1st, \$30; 2nd, \$15; 3rd, \$10.

Mr. R. Robertson's gig <i>Cambria</i> ... ..	1
U. S. S. <i>Hartford's</i> cutter <i>Forget-me-not</i> ... ..	2
U. S. S. <i>Kearsage's</i> 1st Cutter ... ..	3
French gunboat <i>Bourayne's</i> gig ... ..	0
U. S. S. <i>Kearsage's</i> gig ... ..	0

A good start was effected. The *Cambria*, H. B. M.'s Consular gig, manned by Japs., with 7 oars, soon secured a lead, which was kept to the finish, winning by at least 100 yards. The last event set down, the Canoe Race, fell through. The sports were brought to a conclusion about 6 o'clock.

With respect to the objection laid against the *Shooy-leen* in Sailing Race No. 4, the umpire has decided against her, awarding the prize to the *Abunai*; *Moosemi* second, and *Daring* third.

"OUR AMERICAN COUSINS," with their usual enterprise, have entered the field of competition with the Japanese, in the building of *Jin-riki-shas*. We yesterday had an opportunity of inspecting a "Pull-man Car" constructed by the Kimball Manufacturing Company of San Francisco, which differs but little in appearance from those turned out by the natives. It has the advantage of embellishment in the shape of "American cloth" cushions and linings, European foot-mats, and other fancy etceteras, which add somewhat to its outward appearance, but the general construction can hardly be considered an improvement on those now in use. In view of the relative cost of labour in California and Japan, which is without doubt very considerably in favor of the latter country, the heavy export duties imposed by the U. S. government, and the necessarily heavy expense attached to the transport of such bulky freight, (to say nothing of damage and depreciation on the passage hither,) we fear our friends across the Pacific will hardly be able to compete successfully with those who have hitherto had a monopoly of the business of *jin-riki sha* facture.

THROUGH THE native newspapers, we frequently hear of cases of utter heartlessness amongst the lower class Japanese: the following is a case in point. A few days ago, off Cannon-saki, a fishing-boat, laden with spoil, was caught in a sudden gust—there being half a gale of wind blowing at the time—and turned over. The fishermen, after great exertions, managed to clamber on to the bottom of the boat, and other craft employed in the same business hastened up. Why?—to make a bargain with the unfortunates, who had lost nearly their all, for their transport to the shore! An exorbitant price was demanded (some twenty dollars) which the poor wretches was unable to pay. A Compradore boat belonging to Messrs. F. G. Woodruff & Co., which happened to be near, seeing (and hearing) the state of affairs, went to the rescue, took off the shipwrecked mariners, towed their boat ashore, and rewarded the would-be salvors (whose motto, one would imagine, was "dog eat dog") with a rubbing-down with a bamboo boat-hook, an acknowledgment of their intended services which they richly deserved.

### CRICKET.

THE SEASON opened on Saturday last with a match, Marines v. Settlement. The ground was in splendid condition, notwithstanding the rain of the preceding day. Play commenced at 1 o'clock. The Settlement won the toss, and elected to go in first. Mr. Dodds and Dr. Wheeler represented them to some purpose, as their scores below shew. None of the others made a double figure, and four returned to the tent without scoring. The bowling of the Marines was well on the wicket, not a wide being scored against them all through the day. The first innings closed with a total of 57 runs.

The Marines made but a poor stand against the bowling of Dr. Wheeler and Mr. Abbott. The innings closed with a total of 37.

In the second innings, the batting of the Settlement Eleven was better all round, and the fielding of their opponents improved and for the first match of the season may be considered very fair. The innings closed for 79, without a single duck's egg. The Marines, in their second innings, did not make much of a stand. When time was called, five wickets had fallen for 37 runs; Lieut. St. John carrying his bat out for 8.

The match was decided on the first innings in favour of the Settlement.

A FISHY story reaches us, *via* Yezo, from a native source. A small schooner, owned by natives, and employed in sea-otter hunting, was attacked by the animals hunted, who, in their turn, became the hunters. The result was that three of the four men composing the crew were either killed or severely injured, and the vessel itself was so much damaged that it shortly afterwards went down. The survivor was picked up by a foreign war steamer.

The following notification, referring to the intended withdrawal of the permission to export rice and wheat, has been forwarded us for publication:

THE whaling barque *Active*, recently disposed of by public auction for \$1,500, has been sold to Japanese for \$4,000. She will probably be employed in the same trade as heretofore, the whaling business having attained important proportions amongst Japanese as a local industry.

### NOTIFICATION.

The undersigned publishes for the information of Her Majesty's subjects the annexed note from the Foreign Minister, enclosing a notification of the Japanese Government prohibiting the export of Rice and Wheat beyond seas, from the 1st of August next.

(Signed) HARRY S. PARKES.

H. B. M.'s LEGATION,  
Yedo, June 1st, 1874.

Translation.

YEDO, May 31st, 1874.

SIR,

I have the honour to give you notice that the export of Rice beyond the seas has been prohibited, as you will see by the enclosed notification to our subjects.

I have, &c.,

(Signed,) TERASHIMA MUNENORI.

Minister for Foreign Affairs.

SIR HARRY S. PARKES, K.C.B.,  
&c., &c., &c.,

Enclosure.

NOTIFICATION No. 58.

It was made known by notification No. 246 of July last, that Rice and Wheat were allowed to be exported beyond the seas. For certain reasons this permission is now withdrawn, and the export of Rice and Wheat is hereby prohibited from the 1st day of August next.

(Signed,) SANJO SANEYOSHI,

DAIJO DALIN.

25th May, 1874.

GENEROUS GIFTS to the cause of education are from time to time chronicled. The latest is from a Japanese merchant, who offers 300 yen for ten years, to be applied to educational purposes.

AMONG THE Saga insurgents who were sentenced to hard labour for life are three young men who are well known to foreigners. One of them, Otsuka, was formerly a student in the French department of the old Nanko. The second, Yaii, went to England, and studied there for a year or more. The third, Shigio, studied in the United States. Both the latter returned to Saga soon after their return to Japan.

THE CHINESE government are making enquiries in Yokohama and Yedo relative to the Formosan affair. From what we can learn, they are quite willing to let the Japanese thrash the aborigines, but are averse to their acquiring territory on the island. The Chinese say, that for 4,000 years they have never seen anything of the interior of the island, and only care for possession of the coast! They are anxious to get the names and nationalities of all foreigners engaged in the expedition.

The following telegram has been received to-day by the Mail:

Nagasaki, 5.10 P.M., 31st May.—*Della* returned last night; four days out. Reports Japanese casualties only nine. Camp healthier, but water bad and scarce; weather very hot. Sixteen tribes out of eighteen amicable. Only Bootangs show fight. So far, only skirmishes: more general attack shortly expected. The Viceroy of Fokien did not personally visit Saigo, but sent a high mandarin in frigate. Result as telegraphed yesterday; but only after interview on second day of visit, when mutual understanding must have been made.

## ASIATIC SOCIETY OF JAPAN.

A Regular Meeting of the Society was held on the 13th of May, 1874, at the Grand Hotel; Dr. Hepburn, the President, in the Chair.

Owing to the absence of the Recording Secretary, the Minutes of the last Meeting were not read.

Printed copies of the Amended Constitution and By-Laws were laid on the table, for the use of the members. Some fossils were presented by Judge Goodwin, and a Crinoid from Inoshima by Rev. Mr. Cooper. Also, a copy of Vol. I. of "Botanical Researches in Japan," by Dr. Sabatier of Yokoska.

The names of the following gentlemen, as new members, were announced:—Messrs. C. W. Goodwin, C. W. Kinder, Herbert Cope, John J. Quin, F. Ringer, J. C. Smith, T. B. Glover, Alex. Wright, D. D. Inglis, J. J. Van der Pot, F. Heelyer, and Rev. H. Burnside.

A committee was appointed to confer with the Literary Society on the subject of a new Hall, to be occupied by the two Societies conjointly.

In the absence of the writer, C. W. Lawrence, Esq., of H. B. M.'s Legation, a paper, "Notes of a Journey in Hatachi, Shimosa and Kadsza," was read by Mr. Satow; who afterwards explained, in answer to an enquiry, that the removal of Buddhist shrines and temples, about which so much had been said recently, was to be understood—not as an endeavour to extirpate Buddhism, but only as a clearing away from Shintō ground and temples of what had been intruded there during the Shōgunate.

The Corresponding Secretary then read a paper by Captain Belknap, of the S. S. *Tuscarora*, on Deep Sea Soundings, which was followed by explanations, by Captain Belknap himself, of the apparatus employed in the soundings; and also of a diagram, an outline of the ocean bed from San Diego, in California, to the Sandwich Islands, thence to the Bonin Islands, and thence to Japan. The future line of soundings is to run along by the Aleutian Islands to Alaska.

The President tendered the thanks of the Society—afterwards confirmed by a special vote—and remarked on the exceptional value and interest of papers such as that just read.

PROF. W. E. AYRTON said:

Captain Belknap has ably described in his paper the history of deep-sea sounding apparatus. As he has said, the methods by which attempts have been made to obtain accurate results may be divided into four classes—the use of a very heavy weight to keep the line approximately vertical, which weight had to be left at the bottom at every sounding, so that the mere cost of metal thrown away was, in a long expedition like the present, considerable; next, an apparatus like a *patent log*, which recorded on a tell-tale arrangement attached to it its descent in the sea; finally, sounding by time, in which case there was attached to the weight only a very light line, the object of which was merely to determine when the weight reached the bottom, it having been proved that a body falling unimpeded through water moves through equal spaces in equal times, quite unlike the case of a falling body in air, where if the time is doubled the space is quadrupled; with this latter method of sounding, however, not only the weight but the cord was also lost. All the above methods have proved more or less unsatisfactory in deep seas where there are surfaces or under-currents. After the paper we have heard from Captain Belknap, bearing valuable testimony as it does to the sufficiency of Sir William Thompson's piano-forte wire arrangement, it is with diffidence that I am now going to say a few words regarding that system. Perhaps the fact of my having been present on the occasion when Sir William first brought his method before the notice of the public, at the Meeting of the British Association held at Brighton in 1872, now enables me to say something about the line of thought which gave birth to this invention, and may plead as an excuse for my apparently trenching on a subject Captain Belknap has made so thoroughly his own. Owing to that little hesitation naturally displayed by Mr. Style regarding the infliction on the company of the valuable technical details contained in the paper we have just heard him read, I am afraid that the points of merit of the Thompson apparatus may not have been made clear to those present. It was quite evident to Sir William that in order to have accurate deep-sea soundings fine wire and not cord must be used; the first point, therefore, was to devise a contrivance by which the paying out wheel should be automatically stopped the moment the weight reached the bottom. This he has succeeded in doing in a very ingenious way. To the end of the wire a small weight is attached; to this, one end of twenty-five fathoms of rope, to the other end of which hangs a much larger weight with a cup for bringing up specimens from the bottom. The existence of the two weights and

the very important part played by them was not, I think, grasped by many during the reading of the paper. This wire is wound on a drum, made as little massive as possible. The motion of the drum is regulated by an exceedingly simple friction break, which is so adjusted that when the lower and heavier weight has nearly reached the bottom the retarding force is a little less than the total strain on the wire, but much greater than that strain becomes when the lower weight rests on the bottom, consequently the moment the bed of the ocean is reached the paying out gear automatically stops,—the wire hangs practically vertical without slack, and the total amount run out indicates the true depth. After arranging this apparatus, one of the early difficulties experienced by Sir William was to obtain thin wire of sufficient strength. This he at last succeeded in doing, by the employment of piano-forte wire. But as the thin piano-forte wire is not that which is commonly used for sounding the deep C, considerable judgment had to be employed in the selection of wire of only the best quality. Another difficulty experienced was, that it was necessary to make the drum on which the wire was wound very slight, for unless its mass is kept small the momentum the wheel would acquire by its rapid rotation would be such as to prevent it being suddenly stopped by the friction break when the weight reached the bottom. On the first trial of this apparatus, when Sir William was making soundings in the Bay of Biscay, the accumulated strain of the wire produced on coiling in completely crushed the slight drum on which it was wound, so that it became necessary for those engaged to seize the wire with their hands to pull it up. However, although the depth of the sea there is over twelve hundred fathoms, and although there were only two or three men in the small boat from which the soundings were being made, Sir William succeeded, by aid of that indomitable energy and perseverance that has characterized all his undertakings, in bringing up specimens of the bottom, which he exhibited at that meeting of the British Association. Perhaps Captain Belknap will kindly give us the results of his experience with reference to the crushing of the drum, also whether he knows why the *Challenger* has made, (as far as I know,) no use of the wire apparatus that was supplied them.

Captain Belknap, in reply to various inquiries, stated that they had been quite successful in bringing up specimens of the bottom; that corals were found at a depth hitherto unthought of; that evidences of life were found at the greatest depths; and that he had found it necessary once and again to strengthen the drum employed in the method of Sir Wm. Thompson, with whose views he was well acquainted, and who sympathized cordially with the work now being performed by the *Tuscarora*.—*Japan Mail*.

A TELEGRAM has been received, announcing the appointment of M. Von Brandt, the North-German Minister Resident here, to Peking. It is promotion and therefore all will rejoice in it, for no man who ever came to Japan more thoroughly deserves it. But it takes from among us a gentleman whose residence here, with the exception of two holiday trips to Europe, has been constant since the making of the Prussian Treaty, now twelve years ago. And no man has had better opportunity of studying the Japanese and everything connected with their history, and no man has turned his opportunities to better account than he. Whilst, then, we cannot but congratulate him on his promotion, we keenly wish it had been possible to attain this end without taking from us so excellent a Minister and so sterling a man.

A NOTIFICATION has been published by the British Minister, to the effect that the Japanese Government again prohibit the export of Rice and Grain from Japan, after the 1st August next. The rise in price is looked upon with some seriousness by the Government, and they have not confidence in that sufficing to prevent the export, and to induce import even should it continue.

It CAN scarcely come under the head of "news" to state that foreigners sometimes treat the Japanese rudely, and even dishonestly. Riding in a jin-riki-sha and not paying the fare seems to be a favorite game with some of the representatives of Chris-

tian civilization in Japan. The native newspapers take revenge on such villains wherever practicable, by publishing their names in the paper; usually, however, the name is wholly unrecognizable in the kata-kana with which they are written.

EARLY on Sunday morning, the godown of Messrs Driscoll & Co., on Lot 61, was broken into. The thieves were evidently disturbed in their operations, as their intended plunder was left just inside the doorway. The lock was forced.

THE OFFICIALS of Niigata Ken, foreseeing that the stupid people around them would be likely to misapprehend the revised rules of government respecting the silkworm's eggs and altogether abandon the business of their production, have given orders to all the Kochos in the district to let the people understand the true object of the government.

As silkworm's eggs are the most important production of the country in the trade with foreigners, the government urges the people not to abandon it.

The proclamation says, that, when the silk producers applied for cartons and were obliged to receive fewer than they demanded, it was said that they would not plant young mulberry trees, and even destroyed old ones. This is much to be lamented. If silkworm's eggs be so plentifully cultivated as to produce all the cartons demanded, the supply would be almost unlimited, and the loss on those which remained over and above the cartons exported would be very heavy. It is therefore the benevolence of government that limits the production; that there may be no such loss. Silkworm's eggs were not an original production of this district, but only commenced some three years ago. It is very important to pay attention to the manufacture of silk, by which large profits may be made; and the cultivators of eggs must try and produce as many this year as last. Such is the encouragement the officers are to give the people, to continue the cultivation of silkworms and the planting of young mulberry trees.

EVERY ONE has either seen, or heard of, or is himself the person who searched a long time for his spectacles and found them at last on the top of his head, where he had put them, and where they had been all the time. A certain man living in Asakusa, named Kato, missed forty one articles of clothing, which he had put carefully away. Information lodged at the police station failed to bring the missing goods to hand, or to have the hypothetical robber caught. Finally, the complainant found the missing articles in his own house, exactly where he left them; while the police and people enjoy a laugh at him.

THE COMPOSITION of the journal and book descriptive of the tour of the late Embassy round the world has been finished, and the manuscript is now in the hands of the censors of the Dai-jo-kan. After passing the ordeal of inspection, it will be revised and published in Japanese.

THE ORDER issued a few days ago to all prostitutes in Tokai, to appear at designated places to pass medical examination, has excited such consternation and shame among this unfortunate class of persons that many of them have signified their intention to abandon this means of livelihood, rather than submit to the requirements of the order. The Chiji of Tokai, Okubo, is inflexible, and is determined to carry out the order at all hazards.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

BARELY A fortnight has elapsed since the despatch of our last Mail Summary, and but little change is to be noted in the condition of our Import Market, either as regards prices or the amount of business done. Quotations below will be found approximately the same as then reported.

SHIRTINGS continue dull of sale.

COTTON YARN is still in some little demand, for 16 to 24's only.

VELVETS, WOOLLENS, BLANKETS.—Nothing doing.

THE IRON AND METAL Market remains *in statu quo*.

SUGARS are in rather better demand.

RAW COTTON.—Nothing doing worthy of note.

Articles.	Price.	Remarks.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Transactions since our last have been mostly confined to very inferior qualities, the supply of good sorts being almost exhausted. Quotations below stand at former figures, and may be considered nominal. About 50 piculs of Raw have passed through from the Imperial Factory at Tomioko *in transitu* to France. Reports from the Silkworm districts continue promising.

**TEA.**—Great animation pervades our Tea Market, settlements since departure of last American Mail on 22nd ulto. rather exceeding piculs 8,000.

Supplies consist of principally full Fine @ Choice parcels, and the quality this season is considerably better average. The Cup quality of all parcels is rich and sweet, and, if in a few cases the leaf is a little rough the aforementioned excellence well compensates for it.

Dealers, in many cases, are prepared to meet buyers' views, but still really good quality commands full figures. We note below current rates.

As our New Crop shipments during the course of last month reached so considerable a figure, it has been determined for the future to consider our Tea season opened from the 1st May. This alteration will take effect from the 1st of May last, so that the cargoes of the *Great Republic* and *Vancouver* will be included in shipments for present season 1874-75, and the date of the opening of the Tea season has been agreed to by the majority of Tea shippers from this port.

## ARRIVALS.

May 21, Brit. barq. *Flying Spur*, Croote, 735, from Nagasaki, coal, to Wilkin and Robinson.  
 May 21, Am. str. *Great Republic*, Howard, 3,883, from Hongkong, general, to P. M. Co.  
 May 23, Brit. str. *Vancouver*, Shaw, 2,800, from London, via Hongkong, general, to Hudson, Malcolm & Co.  
 May 25, Am. ship *Samuel Read*, White, 652, from Boston, general, to Smith, Baker & Co.  
 May 26, German 3-masted schr., *Delphin*, Lilienthal, 225, from Takow, May 8th, Sugar, to Chinese.  
 May 27, French str. *Volga*, Flambeau, 960, from Hongkong, general, to M. M. Co.  
 May 27, Am. str. *Acantha*, Young, 658, from Shanghai, general, to P. M. Co.  
 May 28, Am. str. *China*, Cobb, 3,838, from San Francisco, general, to P. M. Co.  
 May 28, Am. str. *New York*, Furber, 2,119, from Hakodate, general, to P. M. Co.  
 May 29, Russian barq. *Wilhelmina Koch*, Koch, 320, from Takow, Sugar, to Captain.  
 June 1, Brit. brig *Georgina*, Smith, 222, from Nagasaki, May 19th, coal, to P. & O. Co.  
 June 1, Brit. barque *Adella*, W. Simpson, 364, from Taiwanfoo, May 10th, sugar, to Captain.  
 June 1, Brit. str. *Ping-On*, Mooney, 650, from Nagasaki, May 27th, general, to Fischer & Co.  
 June 1, Brit. str. *Bombay*, Davis, 1,323, from Hongkong, mails and general, to P. & O. Co.  
 June 3, Am. str. *Alaska*, Van Sice, 4,011, from Hongkong, May 27th, mails and general, to P. M. Co.  
 June 3, Am. str. *Oregonian*, Harris, 1,914, from Shanghai and Ports. May 27th, general, to P. M. Co.  
 June 4, Am. str. *Costa Rica*, Williams, 1,917, from Shanghai, &c., mails and general, to P. M. Co.  
 June 4, French str. *Montcalm*, Lespes, 340, from Nagasaki, 30th May, 10 guns.

## DEPARTURES.

May 20, Russian str. *Tekihatchoff*, P. Witt, 1,545, for Hiogo, general, despatched by Van Oordt & Co.  
 May 22, Am. str. *Great Republic*, Howard, 3,883, for San Francisco, general, despatched by P. M. Co.  
 May 22, U. S. Gun-boat *Saco*, McDougal, 418 tons, for Chefoo.  
 May 23, Am. schr. *Hutchingson*, Shinglebury, 100, for Nagasaki, general, despatched by Captain.  
 May 24, Brit. ship *Westminster*, Grose, 1,245, for Manila, ballast, despatched by Findlay, Richardson & Co.  
 May 27, Brit. str. *Behar*, Andrews, 1,685, for Hongkong, general, despatched by P. & O. Co.  
 May 27, H. M. S. *Iron Duke*, Arthur, for Yokoska.  
 May 28, Am. str. *Golden Age*, Coy, 1,870, for Shanghai, general, despatched by P. M. Co.  
 May 29, Am. str. *China*, Cobb, 3,838, for Hongkong, general, despatched by P. M. Co.  
 May 31, Brit. str. *Vancouver*, Shaw, 2,201, for San Francisco, general, despatched by Hudson, Malcolm & Co.  
 June 2, Am. str. *New York*, Furber, 2,119, for Shanghai, &c., mails and general, despatched by P. M. Co.  
 June 2, German 3-masted schr. *Delphin*, Lilienthal, 225, for Formosa ballast, despatched by Captain.  
 June 3, French str. *Volga*, Flambeau, 960, for Hongkong, mails and general, despatched by M. M. Co.  
 June 4th, Brit. barq. *Sarah Scott*, Estell, 515, for West Coast of Japan, ballast, despatched by Captain.

## PASSENGERS.

Per Am. str. *Great Republic*, from Hongkong:  
 Mr. and Mrs. R. G. Jewell, Capt. Garcia y-Garcia, Capt. Thebaud, E. Jackson and 2 children, L. S. Oscana, Miss Happer, Mrs. Laring.  
 Per Am. str. *Great Republic*, for San Francisco:  
 G. P. Ciapp, wife and child, P. J. Lackerstein, C. H. Foster, U. S. N., J. C. Burnett, Wm. Patten, J. Jump, H. Dobson, one Japanese, E. Jackson and 2 children, S. Oscana, Mrs. West, Capt. Geo. Andrews and wife, D. S. Dodge, Yung Wing, Yung Chung, Mrs. Perkins and child, A. J. Jefferys, Mrs. Somerville, B. G. Jewell and wife, McDonald Elliott.  
 FOR NEW YORK:  
 Howard Church, C. J. Beebo, Chas. Leims, Capt. Beckett, W. A. Marshall, U. S. N.  
 FOR BALTIMORE:  
 F. W. Nabor, U. S. N., G. C. Hawes, U. S. N.  
 FOR PHILADELPHIA:  
 J. L. Henssicken, U. S. N.  
 FOR BOSTON:  
 John Donnes, U. S. N.  
 FOR LIVERPOOL:  
 Mrs. W. G. Towell and 4 children.

Per Brit. str. *Vancouver*, from Hongkong:

Mrs. Keasen, 4 children and servant, Messrs. Towse, Rev. P. K. Fyson and wife, Comstock, Birt, Mr. and Mrs. Goddard, 2 children and servant, Mr. Ono, Lieut. Anderson, 80th Regt., Messrs. Dunbar, Hardman and wife.

## FOR SAN FRANCISCO:

Mrs. Nobu, two in the 2nd class, and 614 Chinese in the steerage.

Per French str. *Volga*, from Hongkong:

Col. Munier, Nakashima, Japanese Consul, Yoko, Secretary, Isugia, Alouis, Kinochita, Garceda, Mashima, Ishee, Many, Oohoe, Hetchikoff, Okada, Koga, Eugene, Konna, Amana, Gaufo and servant, Schnell, Ouriyama, Rosser, Osaki, and J. Thorburn.

Per Brit. str. *Behar*, for Hongkong:

Messrs. Alex. Ross and wife, Rennell: and 7 Chinese in the steerage.

Per Am. str. *Acantha*, from Shanghai:

Mrs. Young, 3 children and servant, H. C. Fuller, H. W. Harrison, Dr. H. P. Harrey, U. S. N., F. D. Hitch and servant, H. C. Bates, M. Eda and servant, Revd. J. H. Jumby, M. Anivet, Mr. Ota, Mr. Fukada, J. Gosch, C. Havard; 3 Chinese, and 26 Japanese in steerage.

Per P. M. S. S. *China*, from San Francisco:—

For Yokohama.—Messrs. J. Allmand, Lieut. Amory, U. S. N., M. Bazing, Mrs. Burdell, H. S. Browne, Captain De Kraft, U. S. N., A. W. Glenuie, T. W. Henchleff, M. V. Hippel, M. Harrison and wife, J. J. Keeda, J. Kodami, Jean Lemercier, Dr. Leach, U. S. N., T. Morita, Admiral Pennock, Mrs. Pennock, E. D. Percy, W. H. Rowson, Dr. Riggs, U. S. N., Mrs. Snitzer and child, Stolder, U. S. N., S. Tashiro, J. C. Wheatley, K. Yoshida, and S. Yamasawa.

For Hiogo.—Mr. Chas. Heimaun and wife.

For Shanghai.—Messrs. Walter Austin, J. De Cordova, D. McAllister, G. E. Sardinier, and J. G. Vassar.

For Hongkong.—Miss Brereton, Messrs. Fred. Koch, and J. C. Porter.

Per Am. str. *Golden Age*, for Hiogo.

R. W. Irwin, C. G. F. Bort, Mitani, J. Cruickshank, C. A. Hermann and wife, M. M. D'Arfemille, Jno. Robertson, Iwagi, H. S. Browne.

## FOR NAGASAKI.

Mr. and Mrs. Hardman, 2 servants and infant.

## FOR SHANGHAI.

W. H. Dalglish wife, 2 servants, James Wilson, J. de Corlova, H. W. Pearce, J. W. Moore, U. S. N., D. McAllister.

Per Am. str. *New York*, from Hakodate:

23 Japanese. Cargo—200 tons.

Per Brit. str. *Vancouver*, for San Francisco:

Captain Pitman, G. David, H. S. Hancock, J. E. Johnson, H. P. Buckley, E. Mayer, Mr. and Mrs. Marsh and 5 children, R. Rome; 2 in the second class; and 5 in the steerage.

Per Brit. str. *Bombay*, from Hongkong:

Mr. and Mrs. Hodges, Miss Webster, Mrs. Bryant and child, Messrs. Pinel, Scharban, Smith, Sharp, Morley, and 26 Chinese.

Per *New York*, despatched 2nd instant:

## FOR SHANGHAI.

H. Sylva, Dr. Elliott and servant, Mr. Brown, J. D. Hitch.

## FOR NAGASAKI.

Mr. and Mrs. Hodges.

Per French str. *Volga*, for Hongkong:—M. Koch.

## FOR MARSEILLES.

M. Grenet, M. and Mme. Letrotour and infant, and Mme. Huet.

Per Am. str. *Alaska*, from Hongkong:

## FOR SAN FRANCISCO

Messrs. H. P. Andrew, F. Beckh, Mrs. Knox, Mrs. L. W. Johnson; and 1,015 Chinese in the steerage.

Per Am. str. *Oregonian*, from Shanghai:

Messrs. Meignan, E. McKuay, R. G. Davenport, J. H. Cowell, R. S. Macay, W. J. Cruickshank, C. Heimann, E. C. Kirby and servant, Dr. Geo. B. Hall, Capt. Fletcher, W. S. Swaby and servant, Mrs. C. R. Harris and 2 children, Mrs. Allen, 2 children and servant Mrs. Benton, Miss De Ruyter and servant, G. Waghorn, A. J. Bandvin, A. Curtis, Damas and servant, Frank Hall, Major Clay, C. de Reschken, Master Wilson, and 81 in the steerage.

## FOR SAN FRANCISCO.

Capt. C. H. Nelson, Baron Benoist, B. Buhring, Viscount de Gony, and G. Jeannel.

Per Am. str. *Costa Rica*, from Shanghai:

Capt. C. H. Nilson, R. Harvey, and H. S. Harvey.

## REPORTS.

The Brit. barq. *Flying Spur* reports: left Nagasaki May 10, on the evening of which day encountered a strong S. E. gale. At midnight of 12th inst., passed through Van Dieman's Straits. May 14th, sighted Osima. May 15th, were met by a strong easterly gale: May 28th, passed Rock Island, and next day took a pilot off Sugaki. May 20th, anchored in Yokohama.

The Am. ship *Samuel Read* reports light wind and fine weather during the entire voyage.

The Brit. str. *Vancouver* reports: left Hongkong at 5 p.m., 16th May. Experienced moderate N. E. winds throughout the entire passage, and arrived at Yokohama on 24th instant.

The German 3-masted schooner *Delphin* reports light winds and calms during the passage, excepting one severe gale from the N. E. on the 19th instant which passed over the vessel, about 100 miles to the Eastward of Van Dieman Strait. Saw a Japanese transport passing Takow on the 6th and steering toward the south end of the island with apparently several hundred men on board; the next day an English gun-boat passed, going in the same direction.

The French str. *Volga*, reports: After passing through Van Dieman Strait, encountered some very severe weather; strong gales, with a high cross sea running.

The Am. str. *New York* reports left Hakodate, on 26th inst. at 1 p.m. arrived at 4 p.m. passage 51 hours.

The Russian barq. *Wilhelmina Koch* reports very stormy weather, with a heavy head sea, throughout the passage.

The British brig *Georgina* reports fine weather till the 28th, afterwards strong S. E. winds with heavy rain and thick weather; wind veering to the S. W. and blowing harder, with a heavy cross-sea running.

The British barque *Adella* reports: experienced light variable winds, with a heavy swell from the E. S. E., during the early part of the voyage; latter part, strong winds, with a heavy cross sea.

The British steamer *Ping On* reports: Experienced a heavy gale from the S. E. to South on the 29th, with a heavy cross sea and much rain.

The American steamer *Alaska* reports fine weather throughout.

The American steamer *Oregonian* reports: Experienced fine pleasant weather throughout the entire trip.

English " .. ..	" 17th.	" 13th.
American " .. ..	—	" 15th.
French " .. ..	" 24th.	" 21st.

Latest Telegrams from London, June 17th.

Latest letters, May 8th.

### Summary.

THE ONE subject of interest during the fortnight that has elapsed since our last has continued to be the Japanese expedition to Formosa. A telegram said to have been received by Okuma, the chief of the Department for Formosan affairs, has been published in the *Nisshin Shinjishi*:—

"From the 1st instant, our army began to invade and conquer the Boutan tribe, in three divisions."

"On the 3rd, our army having subdued the Kutsunai tribe, advanced to Boutan, and having stationed two camps, retired. Nearly all of the southern tribes surrendered; and the tribes south of Fuko-fuko (a harbour) are particularly friendly with our men."

As the victory is complete, Yanagewara Koshi (ambassador) should strongly negotiate with the Chinese Government. We hope he will delay until a messenger arrives who has been dispatched by Jimu Kiyoku (Formosan Department) to Yanagewara, with full information.

We forward this information to Yanagewara Koshi and Jimu Kiyoku in great haste.

IT AFFORDS us great satisfaction to announce that the rumoured assassination of Kido, the late Minister of Education, is altogether unfounded.

THE JAPANESE Budget, as published by us in our last Summary, contained two most egregious mistranslations, for which we thus prominently apologize. The mistakes occurred through the absence of our regular translator, who had introduced as his *locum tenens* a young gentleman quite unfitted for the task he had undertaken.

The mistakes are here rectified:—

Under the head of Revenue

For "Rabbits, &c."

read

Game licences, yen 50,400

For Taxes on Actors, Geishas, &c., &c., collected month by month—read

Taxes on Grain, &c., 2,549,198.

It is said the question respecting the residence of foreigners out of Treaty Limits is being steadily pressed, and must receive solution one way or another very shortly. The report is that either the Japanese government must permit all foreigners to reside beyond the present limits or those who already have that privilege through the circumstance of being in the Japanese employ will be obliged to come into the treaty settlements; and this would be tantamount to shutting up a number of educational establishments, besides putting a stop to surveys of mines, railways, and the country generally, now proceeding under foreign superintendence.

AN ENQUIRY is being proceeded with, before the Japanese Judicial officers, into the outrage we lately reported as having occurred at H. B. M.'s Legation in Tokei; in which a posse of Japanese police illegally entered on the ground, and after striking one of the Englishmen in charge of the works, dragged him off to the police station. The investigation, particulars of which are being published by one of our local contemporaries, is being very fairly conducted, being closely watched on behalf of the British government by some of the best linguists attached to the Legation; but the details are better kept until the case is finished.

A VERY sad accident occurred on the 15th instant, by which the eldest son of Mr. de Groote, the Minister for Belgium, a fine youth, 18 years of age, met his death. He had gone up to his room to change his dress; and, opening a drawer, he must have disturbed a loaded pistol in taking out a garment, and pulled back the trigger. A report was heard down stairs, and on a member of the family going to the room immediately, the poor lad was found on the floor, quite dead—the bullet having gone through his heart. Sympathy the most sincere has been exhibited by the whole community towards Mr. and Mrs. de Groote; and the funeral which took place on the afternoon of the 16th instant, was very largely attended.

THE YOKOHAMA Swiss Rifle Club held their fête on the 12th and 13th instant. It was eminently successful. A full report will be found in other columns.

THE EMPLOYEES of the Railway and some of their friends got up some capital athletic sports at Yedo on the 13th inst. The locality was the vacant ground within the railway reserve, about 200 yards from the station.

THE BARLEY crop is very large this year, in the three provinces of Suruga, Yenshiu, and Mikawa.

THE EXHIBITION in Aichi Ken is to remain open till the 10th June; the visitors increasing daily in number. On the two days, 23rd and 24th May, they amounted to 20,000.

WE THOROUGHLY well comprehend the reliability of the sources from whence the *Japan Mail* obtains its information on the Formosan expedition.

It was only a few weeks ago that the purest of purists, who does the crowing for that immaculate hebdomodal, implied that other papers gave news from the south, according to their wishes rather than according to facts. A very good opportunity is now afforded of retaliating upon the *Mail* in its own words. We forbear, simply because we give the editor credit for laying before his readers the intelligence that reaches him, honestly; although he has not been willing to deal so with his neighbours. If on reading this he feels more than ordinarily hot-headed, it most probably arises from the "coals of fire" we thus heap upon him.

We have already given such news as has reached us authentically on the Formosan Expedition; and the *Tokai Journal*, which devotes some columns to the subject this week, and publishes a kind of skeleton map of the southern end of the island of Formosa, (showing the position now occupied by the Japanese, and by the tribe they particularly proposed to punish) confirms our statement; quoting it in full at the close of a long paragraph, which has the appearance of being "inspired;" and only taking exception to the number stated by us to have been placed *hors de combat*. The *Mail* however, commences its "Notes of the Week" with one of those shifty paragraphs for which it is now so famous, running thus:—"Our almost daily telegrams have kept the public well informed on the subject of the Formosan expedition, and have, we hope, dispelled any illusions in relation to it which might have been gathered elsewhere."

In another part of Saturday's paper the *Mail* thinks it necessary to assure the public that the telegrams it publishes are private ones; and that from the government it has received no telegrams whatever.

From a Nagasaki correspondent, the *Mail* received a letter painting the Formosan affair in more favourable colours than the editor approves of, but giving information quite similar to that published by us, and by a Japanese newspaper which has a special correspondent at the seat of war.

Now, we fairly admit that things at this present moment do look far more favourable for Japan than we at first anticipated. We are still confident that things could not have been done in the way they have been, had any other people than the Chinese been concerned. But, as we said long ago, there is no possibility of predicting what course the Chinese will take. We only know, with tolerable certainty, how Europeans would have acted, had any of them held the same position towards Formosa that the Chinese do. Let the Japanese, for instance, begin to talk of a descent on Fiji; and they will quickly see what chance there is of a successful landing. But China has no idea of having her imperial repose disturbed by trifles. Japan has sent her troops. Her troops have landed at Sailao. No Chinese have been interfered with; and no Chinese opposition of any kind has been raised. According to the *Tokai Journal*, a number of the tribes of southern Formosa are not only friendly to, but have actually "joined the Japanese, and will help them against the Boutans." The latter, it is now known, are the people who acted so cruelly to the Japanese shipwrecked crew.

The *Tokai Journal* says:—

These tribes are the same that made a treaty with General Le Gendre in 1867. They were then under the chief Tauketok, who has since died. Tauketok's son is now chief; but being a minor, his uncle, Yee

Suk, has assumed control of affairs. In an interview between some officers of the Mission and Yee Suk, he was asked why his people had been so hostile to foreigners. Yee Suk replied that it was because of the bad treatment they had received at the hands of the Dutch, when the latter held possession of the island.

At this interview, Yee Suk was very doubtful of the intentions of the Japanese, having been told by a Chinaman that they intended to commit some act of violence when in their power. When, therefore, Capt. Cassell, Lieut. Wasson, another gentleman, and the interpreters, entered the interview tent, not a soul was to be seen; but immediately, on a signal from Yee Suk, about 500 natives sprung up all round, fully armed and equipped for action. Capt. Cassell then made a speech, setting forth the purposes of the Mission, but was met by the unsatisfactory statement that, until General Le Gendre himself appeared, he could not entirely credit their statement that they had authority to speak in his name. A visit to the Mission camp was suggested, and hostages were offered for his safety, but Yee Suk declined the offer, although he has shown a friendly disposition, and has offered the practical assistance of sixteen out of the eighteen tribes over which he rules. The Boutans and another tribe are those against whom the Mission is directing its forces. One of the ships—not a man-of-war—was despatched to another part of this island to get water, which was much wanted, but, directly the Japanese landed, the Formosans fired upon them, and, as they were only sailors and unarmed, they, of course, beat a retreat. However, at the battle which has already been reported, the Japanese completely routed the Boutans, losing, themselves, only one man killed and six wounded; the Boutans' disabled amounting to thirty.

Now, without attempting to impugn the telegrams published "elsewhere," we are inclined to the belief that, for the present, people must be content to receive the information that reaches them from whatever quarter, on this Formosan subject, and form their own conclusions. The telegrams respecting it are somewhat threatening, probably, but are mere vapour as yet; but the "illusions in relation to it" are actual facts. It is not impossible that, after all, the Japanese have not been acting so completely in the dark as we have believed them to be; or it may be that they have, but that fortune has favoured them. It matters but little. We shall only rejoice most unfeignedly, if, out of all this hubbub-bubble, order may be evolved, and Japan emerge, if not with any very bright laurels, at least with no discredit; and, as in the case with the *Maria Luz*, with the effect of putting a stop to a great evil. If, through this enterprise, the Boutans and all the Formosan aborigines are taught that any cruelties to shipwrecked crews will be immediately followed by condign punishment, those shores, hitherto so inhospitable, will cease to be regarded as they have been.

It appears from the extract given above, that a treaty was made with certain of the aboriginal tribes by General Le Gendre as long ago as 1867—not for Japan, but, we suppose, for the United States. That the people remember him, and that there was a likelihood of his being able to come to favourable terms with the same tribes for the Japanese, is evident from their expressing a doubt of the authority possessed by Lieut. Cassell and his companions, and suggesting a delay until General Le Gendre himself should appear. So that, whether the advice given by General Le Gendre to Japan has been good or bad, wise or unwise, at least there is no doubt of his having influence with the Formosans. This clears up a good deal; and, in our opinion, absolves General Le Gendre of much of the blame that has been cast upon him.

But now comes the question—what next? If the Japanese General likes, it is clear that he can bring the Boutans to terms very quickly. He might most easily have done so before this, had he wished, and have brought his troops home with flying colours. Then all doubt

would have been set at rest. The Chinese Government would have had proof that there was no hostility to China in the Expedition: the tribes would have been both punished and brought to their bearings; the mariners who trade in these seas would no longer look with apprehension on the cruelties of the savages of Formosa; the world would have had another modicum of praise for Japan; and the Japanese would have had an opportunity for great rejoicing over the wonderful bravery of their troops, and the invincibility of their arms.

But they are not coming away, it appears. Can it be that the government is afraid to bring them back, because, flushed with their small success, they might insist on being led to Corea? No doubt, as is said "elsewhere," the enterprise was "a political necessity." Is it now politically needful to keep the soldiers away from Japan? It is a most provoking riddle; and it would have been better to have gone boldly to Corea in the beginning, than to have got into such a quagmire as now surrounds them.

The expense would have been as easily borne then as now; there would have been an enthusiastic support of such an expedition throughout the country; the soldiers would have loyally offered themselves—each excelling the other in zeal; and the government would have been strong in popularity, instead of doubted and mistrusted, as it has been of late.

THOSE who imagined that we should receive but little news from the Formosan Expedition until its return were not altogether prepared for the supplies received through so many different channels. There are gleanings to be gathered from Hongkong, Foo-chow, Shanghai, and Nagasaki, besides the Government news, the private telegrams, *via* Amoy, and the letters constantly being published in native newspapers. At first, these differed somewhat, as to the prospects of the expedition, and the probabilities of a quarrel with China; but, now, most of them have come round to the opinion that, whatever may have passed between Soyeshima and the Chinese Government, the Chinese are quietly sanctioning the movement of Japan and do not look upon it as hostile to themselves. It is sufficiently proved that the Chinese are not disposed to put forth any pretensions to that small part of the southern end of Formosa where the operations of the Japanese are being conducted; and that if the Japanese can gain an ascendancy over the Boutan and Korlut tribes they at least give very deserved punishment to savages, as yet quite out of the pale of civilization.

Up to this time, no information has reached us of later fighting than that described in Saigo's letter, dated 26th May, and published in the *Gazette* yesterday. In that letter he spoke of going forward to attack the Boutans on the 2nd or 3rd of this month. It is possible that he may not find his difficulties decrease as he penetrates into their country; but we can sympathise in some degree with the enthusiasm the first little struggle has produced among the Japanese. The following is a letter received by Hayashi Kaigun-daisa from a friend in Formosa. It is taken from the *Nichi Nichi Shimbun*.

"The chiefs of seven tribes submitted; but as they were afraid to come to our headquarters they asked Saigo Totoku to appoint another place of meeting. This was acceded to, and they were invited to attend. They sat in ranks. They were much impressed with our military power and resolution, and, shedding tears of joy, requested to be allowed to lead the van against the Boutans. They were therefore supplied with flags, swords, and mofu, and en-

tertained with beer and champagne. They said, in their joy, that they would advance to attack the Boutans and then return.

At 8 A.M. on the 22nd, both the war steamers *Takasago* and *Shairo* (*Shaftesbury* and *Delta*) anchored in the harbour of Choshan. The *Moshunkan* returned into port on the same day, and we had seven of our ships at anchor here. Two Chinese men-of-war arrived and anchored near the *Takasago-maru*. The captain of H.B.M.'s ship visited Saigo Totoku, and congratulated him on his safe arrival.

Totoku landed under a salute from the *Nisshin Kan*. The reports of the guns being heard on shore, the tribes feared our military power more than ever.

Choshan is a great bay, of the shape of a new moon, the diameter from point to point being about 7 ri. Here the army landed. The encampment in the fields is seen from the bay; and the great army, amounting to several thousands, seem to occupy the whole island. The military power of our army is very bright, and has surprised the ears and eyes of all who come into this bay.

On the 23rd, the messenger from the Governor of Taiwan Fu came to head-quarters. The 19th Regiment acted as guard on the right hand and on the left. The Chinese messenger did not understand these great troops, and looked frightened. Before Totoku arrived, the messenger had demanded that the army should retire without delay, as the whole island is in the possession of China. But the meeting of this day was very quiet. The same day, the *Nisshin Kan* fired a salute of 21 guns, in honour of the Emperor of China, and the Chinese war vessels returned the salute with 21 guns. In the evening, the two Chinese ships took their departure.

The Boutan tribe at first shot our spies, which made our men very angry, and several of our military officers could hardly restrain their wrath. But Sangun knew what to do, and, on the 22nd, a fight took place.

The troops emulated each other for the honour of leading. Therefore, it was commanded to arrange it as head-quarters. It was determined that some should attack and some remain in camp. The men disregarded their lives, for their country; and our countrymen exhibited such bravery that there is no doubt we shall quiet the Boutan tribe in a few days."

We can well picture to ourselves the anxiety of the soldiers to rush upon the foe, and if this enthusiasm does not interfere with discipline it compels admiration. But there is always danger in over-confidence; and we should be inclined to fear reaction, should any severe reverse befall the Japanese force. It is amusing to read of the dread which overtakes all who see the Japanese army. Saigo himself, in one letter published in a Tokyo newspaper, says—"They think we are kijio! (devils.)"

We ought, by this time, to receive some tidings of the operations of the early part of this month; and that we do not augurs either that the Japanese were not so prepared for action on the 2nd and 3rd as they fancied they would be or that there is no great success to report. We therefore look, anxiously, for fresh tidings, from the expedition.

## BRITISH CONSULAR TRADE REPORT FOR YEDO, FOR 1874.

BRITISH VICE-CONSULATE,  
Yedo, April 8th, 1874.

SIR,

In carrying out the Consular instructions relative to annual reports on Trade, Com-

merce, and Navigation, I can only say generally that this Vice-Consular district offers little or no information in this respect which can be of any practical use either to Her Majesty's Government or to the mercantile community.

As explained in a former report, the port of Yedo not being open to foreign trade, all foreign goods for, and all exports to foreign countries from this market, have to pass through the Custom House of Yokohama, and are therefore included in the Trade Returns of the Consular district of Kanagawa. Hence, no reliable statistics of the local transactions between foreign and native merchants are obtained here. Moreover, there is no foreign trade of any consequence carried on at this place. The few foreign merchants who on the opening of the city to foreign trade tried the experiment of opening establishments here, have found it to be an unremunerative speculation, and have, with the exception of two (non-English) firms, withdrawn from this market.

The expectations that were at one time entertained that the Railway between Yedo and Yokohama would effect an improvement in the direct trade with the capital, have not been realized; on the contrary, the little trade that was done previous to the opening of the Railway has since been transferred to Yokohama. This is explained by the circumstance that, owing to the great convenience and cheapness of travelling between the two places, the native merchant of Yedo now makes all his purchases of foreign goods at Yokohama, where he finds a greater variety of articles, and probably cheaper prices, than on the spot. The consequence is that the foreign settlement of Yedo has become literally deserted.

But, while direct foreign trade has diminished, the number of foreign residents has been steadily on the increase for the last four years. A reference to the Register of the Vice-Consulate shows the number of British residents to have been 3 in 1871, 48 in 1872, and 115 in 1873; while, for this year, it already amounts to 154.

The following return shows how they are employed.

Grand total. ... 154

The aggregate number of French, German, and American residents, who are likewise mostly employed under the Japanese Government, is about equal to that of the English; and the total number of foreigners of all nationalities, including the members of the various Legations, but exclusive of married women and children, is computed at 350 individuals.

I have nothing new to report with regard to the Public Works of this district. It is

true that a small portion of the town is being rapidly transformed into a semi-European quarter, but it is not contemplated by the instructions that I should report on such matters. I should, however, have liked to furnish details respecting the movements of the Japanese steamers plying between Yedo and the principal ports along the Coast of Japan, as also about the operations of the two or three native banks that have of late been established here; but the information which a foreigner is able to obtain on all matters of commerce and industry from native sources is so incomplete and unreliable, that it would serve no good purpose were I to record the result of my inquiries on these subjects. Moreover, foreign merchants take little or no interest in such native enterprises: hitherto, Japanese steamers as well as Japanese banking-establishments are intended only for the accommodation of the natives themselves.

From the foregoing short observations it will appear that Yedo, though a considerable market for foreign imports, shows itself to be, nevertheless, after an experience of five years, a thorough failure as a place of business for foreign merchants.

I have the honour to be,

Sir,

Your most obedient, humble servant,

(Signed) MARTIN DOHMEN,  
Vice-Consul.

SIR HARRY PARKES, K. O. B.,  
&c., &c., &c.

### CRICKET.

At 10 o'clock this morning (11th inst.), the weather was so unpropitious that it almost seemed as though the return match—the second of the season—*United Services v. Settlement*, would lapse for the day. Shortly after, however, the rain cleared off, and at 11.40 A.M. a start was made. The ground was in fair order, although rather heavy, as might have been expected. There was but a small attendance of spectators, and, at the commencement, no ladies. As the day wore on, however, and the sky looked more promising, the marquee which had been erected for their accommodation was availed of by a few of the fair sex. The Band of the *Iron Duke* was not present until 5 o'clock.

The *U. S.'s* won the toss, and elected to go in first. The fielding at the commencement was very loose, but improved after tiffin, which was partaken of at about a quarter to one. The first six wickets fell very rapidly, for the small score of 19. Lieut. Carpenter and Mr. Bone (*Iron Duke*) made a stand at the wickets, and caused a change of bowling. Mr. Hamilton took the ball from Mr. Dodds, and, shortly after, Mr. Symonds relieved Dr. Wheeler. The innings closed at half-past two, for a total of 78 runs.

After an interval of 10 minutes, *The Settlement* sent in Abell and Seabrook. The latter was well caught at slip for one run. Wallace gave an easy catch to point, which was taken. Abell was beautifully caught at the wicket by Lieut. Carpenter; Capt. Hill then resigned the ball to Mr. Hughes. Lieut. Carpenter again made a clever catch, causing Mr. Hamilton to retire. Symonds was let off at Short Leg. In his first two hits, Dr. Wheeler offered two chances, which not being availed of, he carried out his bat for 20 runs. Barlow was easily caught at point, and retired without scoring. Capt. Hill then took the ball from Mr. Hughes, and after taking Mr. Murray's wicket was relieved by Private Burnett. The bowling of Private Smith was well on the

wicket throughout, though inclined to rise dangerously. The innings closed for 74.

This being a one-day's match, the victory rests with the *United Services*, by 4 runs.

In the second innings, the *United Services* soon ran up a score, and the fifth wicket fell for 63 runs. The Innings closed at 6.30 p.m., with a total of 84 runs.

#### SWISS RIFLE CLUB.

A most delightful morning ushered in the tournament of the Swiss Rifle Club, whose annual re-unions are always looked forward to by intending competitors with much interest. The hour advertised for the commencement was 9 o'clock, and, very shortly after that, the riflemen got to work, and with the exception of an hour devoted to satisfying the demands of the inner man the shooting was kept up until half past 5. The number of spectators present was but small, which is usually the case on a first day; on to-morrow, 13th instant, we hope to see a large muster.

The first Bull's-eye of the day was scored by Mr. Brennwald; the last before luncheon by Mr. Favre-Brandt and the first after by Capt. Hill, R. M., and the last of the day by Mr. Schoene. At the Point Target, Mr. Fabre heads the score, and at the "letter" targets

Mr. Muratta (Japanese) and Mr. Brennwald seem to hold the sway, so far. The former gentleman, who is well-known as a good shot with the rifle, and competed at former meetings, scored 6 Bull's-eyes in succession.

The shooting appeared to be quite up to the average of former years. The Vatterli Rifle, the Swiss military arm, seemed to be in favour, but all sorts of weapons were in use.

It is always a pleasure to have to record this heartiest and jolliest of all our Yokohama competitions; although comparatively few of our good citizens present themselves as witnesses of the days doings. At the best, a rifle match *per se* is not particularly interesting to lookers-on, unless it be to those versed in the weapons, ammunition, and difficulties presented by the various distances, targets, windage, position, and other conditions; or to those interested in the performances of the individual men engaged. It is not to be wondered at, therefore, that, comparatively speaking, only a limited number of spectators were at any one moment on the ground.

The arrangements for the Swiss "Tir" were, as they always are, excellent, and there was the same welcome for all, the same open-heartedness, which have ever characterised them. The weather was everything that could be wished by the spectators; and the wind, which pleasantly tempered the heat to them, rendered the firing so much more dependent on the good judgment of the marksmen as to prove an advantage rather than otherwise, even to them. Any one may possibly point a gun straight for a mark, but the true marksman only is able to overcome the chances of wind and weather, and other untoward circumstances.

Yokohama has a good right to be well satisfied with her riflemen, for they have sustained their credit in several contests, both among themselves, and against competitors in China; but this Swiss "Tir" is not altogether on the same principle as the ordinary contests. There are three separate kinds of competition; all the same distance, and all going on at the same time. First, there is the Target Patrie, formerly called Helvetia, for which none but Swiss can enter. Secondly, the Point Target, open to all comers. And, thirdly, the Letter Targets. For the first, the entrance to which is \$4, there were no less than 10 prizes, ranging from the value of \$5 up to \$50, and amounting in all to \$253. Each person has five shots, and those nearest the centre of the Bull's-eye win the prizes. It was gratifying to all, members and spectators alike, to see that the first prize was carried off by Mr. Brennwald, the much esteemed Consul-General for Switzerland.

The Point Target had a Bull's-eye 12 inches in diameter, counting 10 points, and inner rings, or "centres," counting, respectively, 8, 6, 4, 2 and 1. The entrance was \$3, entitling to ten shots, the prizes falling, of course, to the highest total score. The highest prize in this was taken by Mr. Favre-Brandt, one of the most active members of the Club. The prizes totalled \$196, in seven prizes, ranging from the value of \$10 up to \$50.

The Letter or Pool Targets were seven in number, lettered respectively A to G. At these the competitors might pop away all day, paying \$1 for 10 shots. \$151 was appropriated for five prizes for them, ranging from \$18 to \$45. There was also a premium of \$5 for each 25 bull's-eyes; and premia of \$5 each for the first and last bull's eyes of both morning and afternoon each day. Towards these prizes and premia, 25 per cent of the amount received for entrances was appropriated, and the balance divided equally between those who obtained bull's-eyes. In this case the bull's-eyes were 14 inches in diameter.

Nothing is more remarkable at those Fetes than the unceasing sequence of competitors at every target. One would suppose that at seven targets it would be impossible to find marksmen unceasingly for two days, but it is far otherwise. We believe that if the ground allowed of ten being placed they would all find full occupation.

On Saturday, the second day, the band of H. M. S. *Iron Duke* was in attendance and enlivened the proceedings, but the visitors were not so numerous as might have been desired. The prizes were handed over by Miss Jaquemot and the Misses Dare.

The results of both day's shooting are as follows:—

#### TARGET PATRIE.

- 1st Prize—Basket, Louis XIV. Christophle, \$30; Mr. Brennwald.
- 2nd Prize—Silver Cup, \$45; Mr. Schinne.
- 3rd Prize—Tray, Bronze Mounted, Crystal, \$23; Mr. Bornand.
- 4th Prize—Silver Cup, \$30; Mr. A. Vivanti.
- 5th Prize—Liqueur Case, \$30; Mr. Hurlmann.
- 6th Prize—Silver Cup, \$20; Mr. Blakeway.
- 7th Prize—Silver Napkin Ring, with Cameo, \$18; Mr. Favre-Brandt.
- 8th Prize—Gold and Pearl Shell Pencil, \$14; Mr. Schoene.
- 9th Prize—Gold and Ivory Shell Pencil, \$8; Mr. Baader.
- 10th Prize—Gold and Black Rubber Pencil, \$5; Mr. Sonn.

#### POINT TARGET.

- 1st Prize—Crystal Center Piece, \$50; Mr. Favre-Brandt, 59 points.
- 2nd Prize—Christophle Gilt Cup, \$10; Mr. A. Vivanti, 50 points.
- 3rd Prize—Silver Cup, \$33; Mr. Brennwald, 45 points.
- 4th Prize—Mahogany Stereoscope, with 120 views, \$30; Mr. Duncan, 40 points.
- 5th Prize—"Illustrated Japan," by A. Humbert, \$18; Mr. Baader, 33 points.
- 6th Prize—Pocket Knife, Ivory mounted, \$15; Capt. Hill, 33 points.
- 7th Prize—Gold and Black Rubber Pencil, \$10; Mr. Townley, 32 points.

Mr. Baader and Capt. Hill tied for the fifth prize. In shooting off, the first named was successful.

#### TARGETS—A, B, C, D, E, F, G.

- 1st Prize—Silver Cup, \$45; Capt. Murata, 235 bulls' eyes.
- 2nd Prize—Dressing Case, \$35; Mr. Abegg, 123 bulls' eyes.
- 3rd Prize—Silver Cup, \$33; Mr. Brennwald, 119 bulls' eyes.
- 4th Prize—Silver Cup, \$20; Mr. Baader, 103 bulls' eyes.
- 5th Prize—Pic-nic Basket, \$18; Mr. Schoene, 86 bulls' eyes.
- 6th Prize—Rifle; Mr. Favre-Brandt, 81 bulls' eyes.

The prizes for the Target Patrie were presented by Miss Jaquemot, those for the Point Target by Miss Florence Dare, and those for the Letter Targets by Miss Dare.

The first bull's-eye of the day was secured by Mr. Mottu; the last before tiffin by Mr. Brennwald; the first after tiffin by Mr. Baader, and the last of the meeting by Mr. Schoene.

#### YEDO RAILWAY SPORTS.

YEDO BEGINS to assert itself. The Consular report of Mr. Dohmen, H. B. M.'s Vice-Consul, lately published, gives the number of foreign residents as about 350, besides women and children; and being so numerous, we cannot say very much for them as a spirited community. It may be that the distances in the great city are too great allow of any frequent social intercourse between them; it may be from the nature of their general occupation:

it may be that kind of "them" and "us" and of feeling—to borrow the language of the illustrious editor of the *Japan Mail*, which divides them, and (like the "nobs and the snobs," whose disunion so nearly prevented the establishment of the great Burra Burra copper mine in South Australia) prevents any united action; but, whatever the cause may be, it is certain that as yet nothing great has come out of Yedo. There have been attempts to get up a club—all abortive for want of union to get up races—failures for want of combination; and one or two other things that have been proposed have also fallen through for the same reason. But a beginning has been made—and, by the way, a beginning that well shews the effects of working together. The athletic sports which came off on Saturday, on the vacant ground close to the Shimbashi station, and within the Railway enclosure, were the result of a subscription which has been quietly accumulating, month by month, among the foreigners and other employees of the railway, and some of their friends—who have each been contributing \$1 a month for this purpose. Most of the gentlemen connected with the Railway also contributed, and a few others; and so the little fête, which came off quite successfully on Saturday, was brought about.

The Railway authorities were very kind in giving the use of the ground, the grass of which was smoothly mown and a capital running ground made. A tent was erected, which, during the afternoon, was occupied by spectators, among whom were several ladies. The committee, we think, made a mistake in not publicly announcing the particulars of time, place, &c., by advertisement in the papers. They should also, we think, have encouraged Japanese competitors. But, doubtless, those who got up the sports know best what their intentions were in so doing; and, if it was only for a kind of half holiday among themselves, we must say they quite realized their end, and the Committee deserve every credit for the excellence of the arrangements. They have done well to make this beginning, and we trust that we shall see their example followed next year on a larger and more public scale. The list of winners appears in another column.

### THE WAR IN FORMOSA.

(From our Special Correspondent.)

#### JAPANESE CAMP,

LANGKIAOU, 21st May, 1874.

Langkiaou, where the Japanese are encamped, is a small plain, one or two square miles in extent and surrounded by hills, on the west coast of Formosa, about ten miles from the South Cape and forty miles from Takow. There are a few Chinese villages in it. Communication with the north is generally by junk, as the path through the hills is not safe from attack.

The Japanese have lately been busily occupied in changing the position of their camp. The old one was an open level plain that answered capitally till the rain began to fall, when the unfortunate soldiers found themselves sleeping literally in water. The new camp is on a line of sandhills nearer the shore, and less regular, but far more healthy and comfortable. In spite of the work and the rain a few small parties have managed to get away into the bush, to try their breech-loaders on the savages. Two or three men have thus fallen on both sides. On one occasion, such a large party of savages jumped out upon six Japanese that they had to run, leaving one of

their number on the ground. His head now decorates some savage hut. Let us hope that it will be the only trophy of the kind that the savages will gain in war. The tribe against whom proceedings are carried on are supposed to be the actual murderers of the Lew Chewans, and are called the Bawtan, or the "peony," savages.

There are two American officers here, Commodore Cassell and Colonel Wasson. Such, at least, is the rank which they bear while serving the Japanese. They seem to have had hitherto, in an unofficial way, the general direction of the expedition; and, unless they belie their reputation, they will do good service in the war. These gentlemen the other day went unattended by an escort to a neighboring savage village to see the chief. It had been agreed that they should meet in the open country; but the savages not appearing, the officers went on to the village. This was an act requiring more nerve and real courage than some dashing exploit on the battlefield. A peaceable arrangement was made, which includes all the villages south of Langkiaou, except one which is to be punished for some act of hostility.

22nd May.

This morning early, the lattersleepers among us were awakened by a salute of several guns. This announced the arrival of General Saigo, the Commander-in-Chief of the expedition. He came in the *Delta*, which also brought 1,200 troops. A Japanese gunboat came in at the same time, and, an hour or two afterwards, the *Shafesbury*, with 600 soldiers, raising the number to about 2,500. 3,000 are expected in all. The *Delta* is said to have been bought standing, with her fittings and stores, and apparently officers as well; for they are all on board, though a new captain commands her. A fine Chinese corvette, the *Yang Woo*, and a small gunboat, have also come in, bringing three Chinese Mandarins from Taiwanfoo, to visit the Japanese Commander-in-chief. With the four Japanese vessels and H.M.S. *Hornet*, which have been here for some days, there are, therefore, ten steamers anchored together in the bay.

A small party of troops bivouacked last night in the mountains, about four miles away. Early this afternoon two men were seen coming in wounded. At the same time about one hundred men hurried off to take part in the fighting. They were in irregular detachments, apparently without any officers. They went along at a half run, as eager and delighted as possible. Many of them were carrying their two-handed swords as well as rifles. The swords are awkward enough for scrambling through the bush: but the Japanese cannot bear to leave them behind, hoping that some time or other they may come up with savages. If they do there will be fearful work. It is a common sight to see men employing their leisure moments in sharpening and re-sharpening their sabres or sword bayonets. They think breech-loaders are excellent weapons for fighting at a distance, but they have a most blood-thirsty longing for hand to hand.

23rd May.

We hear this morning that the result of yesterday's fight was fifteen savages and six Japanese killed on the spot. A visit to the hospital showed ten wounded men there, one, and perhaps two, mortally hurt. The Japanese brought in all their men who were killed, and cut off and carried back the heads of the savages, which, however, were immediately buried. One of the savages killed was a chief, and in his pouch was found a quantity of percussion caps, but he was fighting with a

matchlock! The work was severe. The savages generally waited under cover, rising up suddenly and firing first, and then running away to take up a fresh position. In one place, a slight stockade was erected across a ravine, and a stand was made there. The Japanese are extremely brave. The only fault to be found with them is that they are too regardless of their own lives, preferring to rush in rather than to adopt the savage tactics and make the most of the cover.

The Chinese inhabitants are both delighted and astonished at this slaughtering of their enemies. They are on excellent terms with the Japanese, who, with equal justice and wisdom, pay well for everything they want. The Chinese do not well understand the big copper coins, but thoroughly appreciate the new silver currency.

The Chinese Mandarins came on shore to-day at noon, to see the Commander-in-chief. They were received by a guard of honour of two hundred soldiers. The visit was very short. It is not known what passed. The Mandarins were not of sufficiently high rank for the Japanese to be willing to discuss anything of importance with them; and probably not much took place beyond an interchange of compliments.

We are having a sample of Formosa weather. In the morning, though the sea was quiet, still there was a surf which rendered care necessary in landing. This afternoon, in an incredibly short space of time, such a sea has got up that the two small gunboats are rolling almost gunwales under, and communication between the shore and the ships is a matter of real difficulty. Cloudy weather, with a mixture of drizzling rain and heavy down-pour, render fever and ague a too probable contingency.

The Japanese commanders do not want to have any more fighting for two or three days, fearing to frighten the enemy away. They wish to wait till they can attack from several quarters at once, and so have a chance of preventing the escape of the savages.

The *Nepul* sails to-night for Nagasaki.—*Hongkong Daily Press.*

### Law Reports.

#### In the United States Consular Court.

Before GEO. N. MITCHELL, Esq., *Vice-Consul.*  
Saturday, June 13th, 1874.

CHIPMAN, STONE & Co., vs. J. H. HALL & Co.,

This was a claim for \$130, for one month's rent of part of premises on Lot No. 28.

Mr. G. P. Ness appeared for plaintiffs, Mr. F. V. Dickins for defendants.

N. J. Stone, representing the firm of Chipman, Stone & Co., sworn: I am a partner in the firm of Chipman, Stone & Co. On the 20th Feb., 1874, we entered into a lease with defendants for part of premises on Lot 28. Defendants took possession of the place, and stayed some time. The rent for the month of May, \$130, is still unpaid.

Cross-examined by Mr. Dickins:—The defendants in this action did sign the lease—that is to say, Mr. Gardner did so. Considered Mr. Gardner a partner in the defendants' firm at that time; he bought and sold goods for J. H. Hall & Co. Never saw any instrument authorizing Mr. Gardner to act for the firm. He (Mr. Gardner) bought goods to the amount of \$109.55 from plaintiffs. This bill defendants admitted to be correct. Mr. Gardner never

asked me to wait till Mr. Hall returned. Mr. Hall, soon after he returned, desired to cancel the lease. He said he should not be bound by it.

F. W. Gardner, sworn:—At the time the lease was entered into I was a partner in the firm of J. H. Hall & Co. Mr. Hall never asked me not to take premises. Took premises in Yedo previously to taking No. 28. The rent for the Yedo premises was always paid when one month accrued. Mr. Hall knew about my taking the premises at Yedo. Mr. Hall never repudiated the lease for the premises I took at Yedo. Had no more authority to make the Yedo lease than the one for No. 28. J. H. Hall & Co. occupied the premises at No. 28 for some time. I kept the rough books, and Cheshire & Co. the fair ones. Never let part of the premises to Mr. Brooke. The Yedo lease was made in January, 1873. Mr. Hall was not present; he was then on his way to America. I do not remember the exact date of that lease. The lease for No. 28 was signed before Hall returned. I would have signed any lease at that time that I thought necessary. There was a partnership deed drawn up, but it was a verbal agreement between myself and Mr. Hall for three years. Do not think that I said before the arbitrators between myself and Mr. Hall, that I knew of a three years' partnership document. The arbitrators considered that the three years' partnership had been established, but not the ten years' one. When I signed the lease for No. 28, I was aware that Hall was coming out to Japan. Did not wait for Hall to arrive before I signed the lease, because I expected a ship from New York with about 600 tons of goods, and had to have some place to put them into. The ship arrived in May, having taken 180 days over the passage. I had no other reason for not waiting for Hall. Mr. Chipman leased me the premises, but Mr. Stone thought that \$130 per month was too cheap. I remember the seal on the lease handed me; I said something about "my act and deed" as I signed it. I think Hall & Co. were sued for the amount because the lease was signed "J. H. Hall & Co."

Cross-examined by Mr. Ness:—After signing the lease in question, I left it at C. A. Fletcher & Co's., to be delivered to Chipman, Stone & Co. The difficulties between Hall and myself commenced immediately after the former's arrival from America, on the 27th of March last. It was after these difficulties that Hall wanted to repudiate the lease. Corresponded with Hall about taking No. 22, and he raised no objections. Hall at that time was purchasing goods in the United States and sending them here. I was selling them.

Re-examined by Mr. Dickens:—Had the first conversation about the lease with Hall on board the *Japan*, when he arrived. This conversation was held at about 1 o'clock in the morning. Do not remember where nor when, exactly, the next conversation between Hall and myself took place, in regard to the No. 23 lease; but think it was about 5 or 6 days afterwards. Hall never approved of the lease, or anything that I had done. Do not know if Hall had read the lease.

To Court:—I retired from the firm of J. H. Hall & Co. on the 15th April. Hall remained after that date on the premises, till about the latter part of April. He (Hall) had goods stored in the godown, and a desk in the office.

This closed the case for plaintiffs.

Mr. Dickens said the question before the Court was not altogether one of payment of rent for one particular month; but really as to whether his client, Mr. Hall, was to be held responsible for the deed of another person, to which he was not a party in any way. The instrument on which the action was based was not binding;

it was not executed by him, and there was nothing on the face of the deed to shew that the defendant, Mr. Hall, was responsible for the conditions of it. The whole question turned upon this particular point of law—whether or not Mr. Gardner was justified, in acting as agent for Mr. Hall, in binding him by such a lease. According to English law, an agent who executes a deed on behalf of his principal—and it did not matter whether he was a partner or not—must be specially authorised by his principal. *Storey on the Law of Agency, Chap. 6, Sec. 127.* says, "One partner, as a partner, cannot execute a deed under seal which shall bind the other partners, without their express authority." Mr. Gardner had no such authority. As soon as Mr. Hall arrived in Yokohama and saw the state of the business, he told Messrs. Chipman & Stone that he would not hold himself responsible for the lease. It is true that he had made use of the premises after that, but he simply went there to talk over business with Mr. Gardner, who had entered into the lease. It would doubtless be sufficient to leave the case, as it stood, in the hands of Court, but perhaps His Honour would like to hear what Mr. Hall had to say, and he should therefore call that gentleman in evidence. He should prove that the document was not executed by Mr. Hall; that it was not executed for Mr. Hall by Mr. Gardner; and that Mr. Hall, as soon as he arrived, objected most strongly to the lease, and that he never acknowledged any liability to Messrs. Chipman, Stone & Co.

J. H. Hall, sworn:—I am now carrying on business under the firm of J. H. Hall & Co. In July, 1872, I went to America to work up a Commission business. Mr. Gardner joined me, and was left behind to receive any consignments. I returned to Yokohama on 17th January 1873, and went back to America in the following month (February), leaving Mr. Gardner in charge. I again arrived in Yokohama on the morning of March 27th last. There was never any regular deed of co-partnership drawn up between Mr. Gardner and myself. During that time I did not consider myself as a partner with Mr. Gardner. It was our intention to enter into partnership when I had succeeded in working up a business and had returned to Japan; that intention was never carried out. The business has not been a success; I have received no profits. There were no books kept. As for the condition of business, there has been a very heavy loss, as far as the partners are concerned. I have seen the lease of the premises in Yedo, but I do not remember the date. For several days I objected to Mr. Gardner's taking the lease of the premises there, but finally I consented to his taking it for one year. I remember receiving a letter from Mr. Gardner about taking premises at No. 22. He wrote me that he had taken them. I don't remember writing him with reference to that; I thought I should return to Yokohama before he entered on the occupation of the premises. When I arrived in Yokohama on the morning of the 27th March, I had a conversation with Mr. Gardner on board the steamer. It was then that he first spoke to me about the lease. On the evening of the 27th I spoke to him about it. I asked him why he had taken the lease. He gave as his reason the expected arrival of the ship from New York. I told him that the vessel was not due until April, and that our business did not require it. I had a conversation with Messrs. Chipman and Stone very shortly after I arrived. I told them I did not consider myself responsible for the lease; that I could not pay the rent; and that they had better release me, as my business did not require it. They said they would take the matter into consideration. I never slept on the premises at No. 28.

I went there to get my books and papers. I never paid any rent, or authorized Mr. Gardner to do so. I did not consider myself a tenant of Messrs. Chipman and Stone's. During the month of May I have not in any way occupied the premises. Messrs. Chipman and Stone, I believe, have now the keys. I gave them to Mr. Wetmore. He said nothing when he received them. I sold him a safe when I left. He requested me to leave the safe, lock the door, and leave the keys.

F. R. Wetmore, sworn:—I received from Mr. Hall, on the last day of April, keys which I said belonged to the premises in question. I offered them to Mr. Stone, who refused them. I kept them until I should hear from Mr. Hall. They are still lying at my office. I am not partner with Messrs. Chipman & Stone. I purchased a safe from Mr. Hall on my own account.

J. H. Hall, (examination continued by Mr. Dickens):—I acknowledge being indebted to Messrs. Chipman & Stone, \$109.55, because I received value from them. During May, I did not in any way, occupy the premises. I asked Mr. Gardner why he did not await my return before concluding the lease. He replied, he had asked one of the firm of Chipman & Stone, and they refused to refer the matter to me. My accounts were being got into order when I arrived. The Balance Sheet presented, since, shews a loss of \$7,000 or \$8,000. When I arrived here there were 3 bbls. wine in the godown, belonging to J. H. Hall & Co. There were no other goods belonging to the firm. There were about 28 cases wine, which Mr. Gardner represented were stored on account of a friend; for which no storage was being paid.

To Mr. Ness:—I did not consider Mr. Gardner a partner of mine. I believe the arbitrators have determined that a 3 years partnership existed. I have heard one of them say so. He (Mr. Gardner) was here managing my business during my absence from the country. I paid him no salary. Nothing was said about his taking anything out of the business. I can't say that it was in the capacity of a partner that Mr. Gardner entered into the Yedo lease. Goods were sent from America by me to J. H. Hall & Co. here, to be received and sold by Mr. Gardner, as representing J. H. Hall & Co. Mr. Gardner signed cheques in Yokohama during my absence. The manner in which the profit was to be divided was to be determined when we entered into partnership. Mr. Gardner was clerk and manager. I assumed the name of J. H. Hall & Co. when I left Yokohama, and left Mr. Gardner in charge. I assumed it in anticipation of being able to work up a business and admitting Mr. Gardner as partner. I recollect the circumstances of the Yedo lease being entered into, but I objected to it for several days. Mr. Gardner came to me, and wanted to take the lease.

W. L. Clarke, sworn:—About 140 days is a fair passage from New York to Yokohama.

Mr. Dickens addressed the Court at some length, and Mr. Ness replied.

In this case His Honour gave judgment for plaintiffs, in the sum of \$239.55, with costs.

Wednesday, June 17th, 1874.

GEO. W. VAN HOVENBERGH vs. J. H. HALL.

Claim for \$700 and interest, on a Promissory Note dated March 23rd, 1871.

Mr. F. W. Marks for defendant.

Mr. Van Hovenbergh appeared in person.

Mr. Marks said, to save Mr. Van Hovenbergh trouble, he would admit that the amount claimed

is correct. Against that, however, his client had a Bill of Exchange, drawn by Mr. Van Hovenbergh in favor of Mr. Geo. W. Stephens of San Francisco, payment of which had never been made. He would call Mr. Hall, to testify to that.

J. H. Hall, sworn:—I am the defendant in this action. I held the Bill of Exchange for \$572, now exhibited, on behalf of Geo. W. Stephens of San Francisco. That Bill has not been paid by Mr. Van Hovenbergh. I claim payment of that, and set it off against Mr. Van Hovenbergh's claim. I received the Bill about the end of February, or 1st of March, last. It was handed to me by Mr. Stephens in San Francisco, to collect. Mr. Stephens had received it from Mr. Van Hovenbergh, and discounted it the usual way. When it became due it was turned to him, endorsed "No Funds," and he was called upon to make it good, which he did. He took the Bill to the Bank, in the usual way, then marked the Bill "Cancelled," and returned it to Mr. Stephens; that accounts for it being marked "Cancelled." If Mr. Van Hovenbergh had paid it, it ought to have been in his possession. Mr. Stephens handed me the Bill for collection, and I have on several occasions presented it, for payment, to Mr. Van Hovenbergh. He said it had been paid, and that he could prove it to this Court.

To Court:—Mr. Stephens gave me no Power of Attorney to collect the Bill.

G. W. Van Hovenbergh, sworn:—Mr. Stephens holds 8 or 10 notes of mine of a similar kind, all of which have been paid. I have letters to prove it. They were all drawn by me here, payable in San Francisco. Mr. Stephens endorsed them for me and was to take them up, and I afterwards sent him the money to cover the amounts.

To Mr. Marks:—I paid nearly the whole amount in question in one remittance, and sent the balance a few days after. I have Statements of Accounts from Geo. W. Stephens, shewing that they have all been paid. I can produce those statements.

Mr. Marks applied for an adjournment, that the plaintiff might produce the proofs of payment referred to.

His Honour said there was no necessity for an adjournment. It was perfectly clear to him that the Bill had been paid. In all his experience he had known no instance of a Bill being officially marked "Cancelled" unless it had been paid.

Mr. Marks asked Court to reserve judgment.

His Honour saw no reason for doing so.

Judgment for plaintiff, for \$969.50, with costs.

A LETTER from Saigo, commander-in-chief of the Japanese force in Formosa, has been published in one of the native newspapers. It is dated 26th of May:—

"As the steamer *Takasago-maru* will start to-morrow for Nagasaki, I seize the opportunity of sending this letter. I left with instructions not inconsiderately to commence a war against the Formosans. The *Nishin*, *Moshin*, and other steamers arrived at the harbour of Ronkiyo, and anchored. As the *Nishin* was surveying the coast it was fired upon from the shore and slightly damaged. Thus hostilities were hastened. On this account, I intended to remove the camp to the entrance of a valley at Shiyû, in the direction of the Boutan tribe. So, on the 18th, some spies being sent to reconnoitre, they were suddenly attacked; and on the 21st they were again attacked by an ambuscade. Next day, therefore, I sent

200 men towards the three villages in the valley, to seize all weapons and firearms kept by natives. Succeeded in taking them all before noon, and then marched about 4 or 5 *cho*, following the course of a rivulet, reconnoitring with a view to a further attack. Reaching a strong position called Sekimon, where the natives were assembled, the guards fired furiously into them. A battle ensued, which lasted two hours. At length victory declared for us, and we took 12 heads of the enemy. It was reported by a native that, among them, there was one of the chief of the Boutan tribe. It is surmised that the killed and wounded among them must be much more numerous. We had 14 killed and wounded. Since the battle, the natives shew signs of fear, and some of them have come to us with offerings of wines and fish.

On the 24th, Tasotoku, chief of the Taurare tribe, Isa, chief of the Sapane tribe, Cardai, chief of the Masutan, Hinarai, chief of the Rezvan, and Tsurai, chief of the Kachirai tribe, offered to surrender, sending us some cattle and poultry. I, with others, held a conference with them, and gave orders to each of them that they should oppose the Boutan tribe wherever they met them. At the conference they stated that 30 men of the Boutan tribe were killed at the battle of Sekimon, and that they are cast down by the death of their chief and his son. It is probable, because, among the dead, there were some who had silver rings on their arms, and badges similar to those worn by these five chiefs.

We are now intending to march against the Boutan tribe on the 2nd or 3rd day of next month; and think we can quickly subdue them.

On the 22nd instant, two Chinese men-of-war and one English gun-boat arrived in harbour. We held a conference with them on the 23rd. And they subsequently left the harbour together, firing a salute as they did so."

SAIGO.

26th May, 1874.

### THE JAPANESE EXPEDITION.

We have just received from a correspondent at Amoy, the following news of the Japan expedition:—

3 P.M., 27th May, 1874.

Capt. Smith has just arrived with a Japanese transport from the seat of war, with the following news:—About six or seven days ago, 150 or 160 Japanese were sent out to reconnoitre; when they had proceeded some distance, they saw three or four men who waved them to come on. Three of the Japanese obeyed, and went towards them, but, when they got within fifteen or twenty yards of them, the savages fired at them with matchlocks, killing one of them on the spot, and wounding another. The unwounded man, and the one wounded, beat a hasty retreat—and before the body of the reconnoitring party could get up, the savages had the head of the dead Japanese cut off, had stripped him naked, and cleared off with his arms.

The party went back and reported what had taken place, when it was at once agreed there should be war to the knife, and no quarter given. So it was settled that the village should be surrounded, which was done two nights afterwards, before daylight, by 400 or 500 Japanese soldiers; the fighting then commenced. How many were killed is not known at present. Two Japanese are stated to have lost their lives, and the soldiers brought in eleven heads, besides a large quantity of arrows, spears, and matchlocks.—*Idem*.

We hear that the *Agamemnon*, with the first teas from Hankow, has already sailed, being first steamer away.—*Idem*.

### FORMOSA.

The expedition sent by the Japanese has commenced work in downright earnest. The troops have been landed and some fighting has taken place. Captain Smith, who navigated the steamer *Meiku-maru* to Formosa, returned on Wednesday morning last, and says that the natives commenced the fighting by shooting a Japanese soldier. From this account it appears that a number of the Japanese were strolling inland a short distance when they observed three men whom they took to be Chinese. The men beckoned to them, so three left their comrades and went for the purpose of ascertaining what the presumed Chinamen wanted. On arriving close, the natives picked up some old matchlocks and fired at them, shooting one man through the body, killing him on the spot. The ear of another was shot off by a square bullet or slug, so he had a very narrow escape of his life. The other man made the best use of his legs and joined his countrymen, who were but a very short distance off. As soon as the Japanese soldier fell, the Formosans rushed forward and severed his head from his body in an instant and then retreated with it. The whole affair was executed so suddenly and took the Japanese so by surprise that the natives got away without the least difficulty. A day or so afterwards, the Japanese attacked a village, about two or three miles from the shore, and killed all the male natives they came across, but spared the women and children, which is a piece of humanity that deserves to be recognised, for the horrors of war are enhanced a hundred-fold by the slaughter of helpless women and children. The lamentations of the women for the loss of their husbands, fathers, and brothers, are represented to have been pitiable in the extreme. Capt. Smith states that when he left there were two Japanese men-of-war in the bay, and the British gun-vessel *Hornet*, and also a Chinese man-of-war. The Chinese Admiral has left word with the representatives of his country to assist the Japanese as much as possible; and the Japanese themselves are arming the Chinese with weapons taken from the natives, such as old matchlocks, bows and arrows, spears, long knives fixed on the end of long poles, &c.

The Formosans are described as being slim-built men, resembling the Chinese in appearance, and their heads are adorned with long tails. They are reported to have very extensive cities in the interior, some walled in; and Captain Smith thinks that the Japanese will proceed inland and destroy all the towns and cities they come across. With regard to the Chinese, he says they seem to be principally bent upon making dollars, as they charge most extortionate prices for the use of their boats.—Chinamen all over.

The following letter has been sent to us by a correspondent:—

FORMOSA, May 1874.

According to promise I send you a few lines relative to the state of affairs here. I left Nagasaki on the 17th of this month, in the S. S. *Takasago-maru* (late *Della*), which vessel also conveyed General Saigo. On the morning of the 22nd the *Takasago-maru* arrived at Sailio, which is situated on the southern part of Formosa, after a pleasant and safe passage of four and a half days. When we arrived in Sailio Bay we found there H. I. J. M.'s corvette *Nissin-kan*, steamers *Meiko-maru*, *Yuk*

*maru*, *Nikuni-maru*, and also an English gun-boat. About 8 a.m. on the same day the Japanese gun-boat *Mosun-kan* arrived from Amoy, and, at 10 o'clock a Chinese frigate and gun-boat came in from Taiwan-fu, and, half an hour afterwards, the steamer *Sailo-maru* (late *Shaflesbury*) put in an appearance. The country appears to be fertile, and of rather a sandy nature; very little is cultivated. The villages close to the shore consist of some 400 or 500 houses, and the natives do not appear to be so very savage and fierce; in fact they are perfectly willing to work for us for payment. The day before we arrived, 21st, the wild tribes from the mountains, who are very fierce and savage, fired upon and killed one of our spies. This was the beginning of hostilities. On the 22nd, our troops marched over the mountains a distance of about two Japanese miles, and attacked the savages, killing a large number and burning their houses, after which they retired, taking with them as trophies a quantity of fire arms, bows and arrows, spears, &c. The killed and wounded on our side were seven.—*Rising Sun*.

**VESSELS FOR FORMOSA.**—Last Wednesday, the *Yuko-maru* left Nagasaki for Formosa with stores, fire-arms, and also a quantity of fire-wood for the use of the expedition. Wood is represented to be rather a scarce commodity in that particular part of the island, it being of a very scrubby nature and not worth much. The *Takasago-maru* and *Yoriu-maru* will in all probability start to-day for the same place, taking similar cargoes, with an addition of a quantity of building material and some laborers.—*Idem*.

#### FORMOSA.

We publish, below, a translation of despatches that have passed between the General commanding the Japanese expedition to Formosa, and the Viceroy of Fokien. The tone of the former is somewhat arrogant. The latter replies calmly, asserting that the island is Chinese territory, and the inhabitants Chinese subjects, and whatever faults they have committed should be punished by Chinese and not Japanese force. His Excellency quotes Vattel in support of his arguments! We are indebted, for the despatches, to the *Shunpoa*.—*N. C. Daily News*, 10 June. *The Japanese General to Li, Viceroy of Fokien*.

The savages in Formosa have long had a bloodthirsty reputation and set at defiance the orders of your Government. They are delighted when any shipwreck occurs on their Coast. Our people have for years, when they happened to be driven on the Coast by stress of weather, been slaughtered or pillaged of everything. If they did happen to escape death, and got away into Chinese territory, they have been well cared for by the Chinese officials, and for this our Government is very grateful. But how can our paternal Government stand by and see these savages still go on murdering and injuring our people? It is for this reason that I have been sent to enter the savages' territory and invite conferences with the Chiefs, in order to procure the punishment of the notorious offenders and induce these barbarians to reform their practices. This is the sole object for which our vessels are in Chinese waters, and no opposition must be offered. We will land direct on savage territory. Fearing that popular rumour may ascribe our presence to other motives, I write this for your information.—

In a postscript, he quotes two cases, in one of which 52 Lewchewans were murdered, as those that he has specially come to require redress for. Although he has soldiers with him he does not mean to assume the offensive unless he is attacked, in which case he must fight. He then continues: There are Chinese and foreign merchants trading at the open ports of Formosa, and I am afraid that they may be disposed, seeing the steps that Japan is taking, to enter into relations with the savages and supply them with the necessaries of war. Such things will not be permitted, and any one attempting it will be arrested. I therefore expect Y. E. to issue a Proclamation throughout all the districts and coasts of the Island, warning all merchants, Chinese or foreign, not to offend in this respect. I also expect that, in the event of any savages, pursued by my soldiers, escaping to the districts presided over by your officials, you will direct the latter to hand them over to my soldiers at once.

#### Reply by the Viceroy of Fokien.

In reply to your despatch, I have to state that the whole of Formosa has for a long time been under Chinese jurisdiction. Of the aborigines some are savage, some civilized, but all alike live on the Emperor's soil and have done so for 200 years. Other provinces, as Kwangsi, Hunnan and Kweichow, have their aborigines, and these places are called the wild and lawless parts of China. Although the aborigines, living in the recesses of the hills, are monkey-like and do not understand the teaching of civilization, or are by chance beyond the reach of the orders of Government, nevertheless, inasmuch as they live on Chinese territory, they are under Chinese jurisdiction.

International Law lays down that all persons or things, moveable or immovable, being actually within the territory of any State, are subject to the municipal laws of that State, whether such persons or things were produced there or were introduced from abroad; and further, Vattel says that whatever is within a dependency of a State is on the same footing as the land in the State itself. It is also laid down that when once new territory has been acquired, whether by discovery or conquest, and other nations have acknowledged the fact, all parties resident in such territory, although ignorant of what had taken place, become amenable to the new jurisdiction, and other nations cannot claim to exercise any authority over them; also, that every State is master of its own affairs and is responsible for its own faults. That being so, and Formosa being part of Chinese territory, it follows that China alone has the right to punish these savages. With regard to what you allege as the reason for the expedition, viz., that your sailors have been murdered by these savages, such acts are punishable by Chinese law by death; but the soil being Chinese territory, it is for the Chinese Government alone to take action. Your Government, in not discussing this matter with the Tsung-li Yamen, but taking the hasty measure, instead, of sending an armed force, is guilty of a breach of International Law, and also of the 1st and 3rd Arts. of the Treaty concluded two years ago.

The writer proceeds to remark upon some inconsistencies in the letter under acknowledgement, and asserts that he has already taken steps to prevent a recurrence of the atrocities, and continues:—Lew-chew is part of the old Kingdom of Chung-shan, a dependency of China, which has for centuries been established there and has always been

respectful and obedient to China. I make no distinction between the people of such dependencies and Chinese people, and therefore I have instructed the local officials of Formosa to require the rendition of the murderers and to see justice executed upon them. But Formosa is Chinese soil, and it is for China to take steps and not for your Government. All the Foreign Envoys at Peking will, I am certain, bear me out in this.—*Rising Sun*.

THE FOLLOWING translation from the *Nishin Shinjishi* was passed over by our translator. It has since appeared in our local contemporaries, the *Advertiser* and the *Herald*:

#### TELEGRAPHIC MESSAGE.

From Taiwan, Jimu Kioku, Nagasaki. To Okuma Okurakio.

4.40 P.M., 7th June.

From the 1st instant, our army began to invade and conquer the Boutan tribe, in three divisions.

On the 3rd, our army subdued the Kutsan tribe and advanced to Motan, and, having stationed two camps, retired. Nearly all the southern tribes surrendered; and particularly the tribes south of Fukofuko (a harbor) have become friendly with our men.

As the victory is complete, Yanagawa Koshi (ambassador) should strongly negotiate with the Chinese Government. We hope to will delay until a messenger arrives, who has been dispatched to Jimukyoku (Formosa Department) and Yanagewara with full instructions.

We send this information to Yanagawa Koshi and Jimukyoku in great haste.

A telegram from Yanagewara, just received, acknowledges receipt of this message from the Japanese Consulate in Amoy.

Below will be found the results of the various events contested at the Yedo Rifle Sports, on the 13th inst. The handicapping was remarkably good throughout, and of general satisfaction. A great many spectators were present.

The Sports commenced at 3 P.M.

1. **SHOOTING.**—Prize presented by Dr. Parnell.  
Mr. Hurt, ..... 1  
Mr. Grey, ..... 2
  2. **PUTTING THE SHOT.**—16 lbs.—Prize presented by Mr. Hohnholz.  
Mr. Aberdeen ..... 1
  3. **LONG JUMP.**—Prize presented by Mr. Benjamin.  
McCance, ..... 15 ft.
  4. **THROWING THE HAMMER.**—16 lbs.—Prize presented by W. W. Cargill Esq.  
Yeo, ..... 69 ft.
  5. **100 YARDS HANDICAP.**—Prize presented by W. W. Cargill Esq.  
Wood, ..... 1  
Crocker, ..... 2
- Nine started. Mr. King led, at a rapid pace, to within a few yards of the tape, when he stumbled, and was passed by Wood and Crocker, who finished a dead heat. In the end Wood won easily.
6. **150 YARDS HANDICAP.**—Prize presented by Mr. Livingston.  
Peacock, ..... 1  
Hall, ..... 2
- Twelve ran. Peacock dashed off at the start and won by a yard.

7. **THROWING THE CRICKET BALL.**—Prize presented by J. Robertson Esq.

Hall, . . . . . 90 yds.

8. **120 YARDS HURDLE RACE.**—Prize presented by C. W. Kinder Esq.

Grant, . . . . . 1  
Hall, . . . . . 2

Five started. A splendid race between Grant and Hall, the former winning by a foot.

9. **HIGH JUMP.**—Prize presented by J. Robertson Esq.

Dillon, . . . . . 4 ft. 8 inches

10. **HEIGHT AND DISTANCE.**—Prize presented by Sabata Esq.

Hall, . . . . . 1

11. **300 YARDS HANDICAP.**—Prize presented by C. Shepherd Esq.

Aberdein, . . . . . 1  
Sandeman, . . . . . 2

Eight ran. Mr. Grey led until nearing the winning post, when he caved and was passed by Aberdein, who won the race by a few inches.

12. **POLE JUMP.**—Prize presented by Sabata Esq.

Grant, . . . . . 6 ft. 9 in.

13. **STANDING JUMP.**—

M'Cance, . . . . . 8 ft. 11 in.

14. **HOP, STEP, AND JUMP.**—Prize presented by Mrs. Mills.

Hall, . . . . . 38 ft.

15. **THREE-LEGGED RACE.**—Prize presented by Mr. Hohnholz.

This race was well contested. Lilley and Lee won by about twenty inches.

16. **CONSOLATION; 150 YARDS.**—Prize presented by Messrs. Aldrich & Smith.

St. George, . . . . . 1  
Bennett, . . . . . 2  
Woodward, . . . . . 3

Mr. St. George poached a couple of yards at the start, and won easily. Eight ran.

17. **ALL WINNERS RACE; 200 YARDS.**—Prize presented by Mr. Harold.

Grant, . . . . . 1

Three ran. Peacock led for half the distance, but was easily passed by Grant, who won by several yards.

18. **300 YARDS RACE.**—For Japanese employed on the Railway.

Kumakichi, . . . . . \$4  
Kanokichi, . . . . . \$3  
Hatsugoro, . . . . . \$2

The Starter, Mr. B. Harold, and the Judge, Mr. St. George, performed their duties in a very conscientious and satisfactory manner.

The Committee, Treasurer, and Refreshment Caterer are to be congratulated on the success of this, the first Athletic Meeting ever held by foreigners in the Capital.

It is reported that the Emperor has ordered that a foreign surgeon be engaged and sent to Formosa without delay.

Also, by His Majesty's command, as the climate of Formosa is extremely hot, an ice-making machine is to be sent for the use of the army.

From a comparison of the reports of the two steamers, *Vasco de Gama* and *Granada*, from San Francisco, it will be seen that the latter beat her opponent on the passage hither by something over five hours.

It is said that Herr Annecke, formerly German Consul here, and at present Chargé d'Affaires at Peking, will change places with Herr Von Brandt, the latter becoming Minister Resident at Peking, and Herr Annecke assuming the same position at Yeddo.—*N.-C. Daily News*.

The Japanese expedition to Formosa is exciting much interest, and I hear that an Imperial Commissioner is being sent to Taiwan, to watch over and report on events.—*Idem*.

A Chinese soldier was arrested two days ago, in company with a noted thief, in a theatre in the French Concession. He was sent back to the military authorities camped near Overweg's Bungalow, and we are informed that, as he had been absent without leave, he had one of his ears cut off and both his thighs mashed with the usual bamboo flogging. This shows a willingness on the part of the Chinese to keep order among their men; but every foreign nation will condemn the cruel punishment.—*N.-C. Daily News*.

The *Shunpao* says—Ying Fantai has come down from Soochow to interview the Japanese Ambassador about the Formosan affair; and he and the Taotai had an interview with his Excellency on the 31st. The Ambassador is reported to have said that the despatch of the army to Formosa is only with a view of their remaining a short time to overawe the aborigines, and it does not at all follow that there will be any fighting. But this has been the cue of the Japanese all along, to represent the expedition as a trifle.—*Idem*.

The Viceroy of Fuhkien has written to the Japanese Consul at Shanghai, affirming the right of China to the whole island of Formosa, without distinction of inhabitants—whether civilised or savage. Any acts of violence against passengers along the coast can be settled by reference to the Chinese Government. Only last year a Japanese shipwrecked crew was kindly treated by the aborigines and handed over to Chinese officials, by whom they were sent up and returned to their own country. What right, then, has Japan to send an army to invade the place? The Consul is requested, therefore, to ask his Government to withdraw the troops.—*Idem*.

### FOOCHOW.

A NUMBER of Chinese gun-boats are under orders for Formosa and ready to go to sea at any moment. The Viceroy has invited tenders for a large supply of gunpowder.—*Foochow Herald*.

THE Formosa tea market has been opened. Prices are reported to be in excess of last season's rates.—*Idem*.

NEW Season's Congous are coming down rather slowly. The teas are not favorably spoken of as regards quality, but the quantity arrived is not sufficient to form any sound criterion of the crop.—*Idem*.

WE are informed that an outrage was perpetrated last Saturday evening by some of the "Leekin" men in the street behind the premises of Messrs. Ruttonjee & Co.; the victim being a coolie of that firm, who was sent with six hundred dollars worth of notes, to change

for cash. The statement of this man is, we are told, that the semi-official people examined (as is their wont) his pockets, and, discovering the notes, at once confiscated them—upon which he begged them to go back to the Hong (close by) for explanation, but was then assailed from behind and severely wounded, receiving four gashes in the head and one in the neck. Dr. Beaumont was sent for, and, when the flow of blood had been stopped, the man was taken to the hospital. We hear that the affair is being energetically taken up by H. M. Consul.—*Idem*.

### TELEGRAM FROM CHINA.

FROM YANAGAWARA to Jimu Kioku, Nagasaki, (received on the 8th instant).

The negotiation with China respecting the Formosan Expedition is going on favourably.

We learn by telegram from Hongkong that the P. M. S. *Granada* arrived at that port at 8 A.M. on the 13th instant, the *Vasco de Gama* coming in at 7 P.M. on the same day. As the *Vasco de Gama* sailed from Yokohama at midnight on the 6th instant, four hours and a half before the *Granada*, the real difference in favour of the latter would appear to be 15½ hours.—*Japan Mail*.

The Japanese invasion of Formosa is an accomplished fact. About 5,000 men, with a strong force of artillery, were landed on the 12th ulto. at a place about 50 miles south of Takao. The disembarkation was not opposed by the Chinese troops; a significant circumstance, when we consider that the invasion is in itself a breach of international law—no declaration of war with the Chinese Empire having been proclaimed by the Japanese Government. However, our sympathies are with the Japanese, to whom we wish every success, believing as we do, that any Government would be preferable to the effete and corrupt administration through whose wilfulness and rapacity one of the most fertile islands on the earth has long been, and still is, virtually a *terra incognita*.—*China Mail*.

THE FUNERAL of Mr. Albert de Groote, eldest son of the Belgian Minister, took place this afternoon (16th). The service was celebrated at 5 o'clock, at the R. C. Church, Main Street, a large number of friends and sympathisers with the bereaved relatives being present. The unfortunate young man, who was only 18 years of age, met his death instantaneously, by the discharge of a revolver, about noon yesterday, whilst dressing. The loaded weapon was in a drawer which he had occasion to open, and it is surmised that the trigger thus caught in some way. He was shot through the heart, and died instantly.

At Uyeno, a grand gathering of all pious folks who still cling to old religious observances took place on the 31st day of May and the 1st of June. A great *matsuri* was announced for those days, and the natives are always ready for *matsuris*.

ON THE 10th instant, the unsold lots on the Foreign Concession, Ts'ikidji, were offered for sale, but only four obtained buyers—two being taken by the French Catholic Mission, and the other two by a Protestant Mission. In each case the price was 5 cents over the upset price. This ought to be a lesson to the Japanese officials.

SEVEN Japanese criminals underwent the extreme penalty of the law this morning (12th). The executions took place within the precincts of the Tobé gaol, the general public, native and European, being excluded, contrary to usual custom. Six were decapitated and the other was subjected to a slow system, of strangulation by means of an iron hoop, the process occupying seven minutes. Their crimes were robbery with arms and murder. The condemned men reached the Tobé prison gates at about 11 o'clock, and there was a large concourse of intending spectators assembled to receive them. With one exception, they seemed cheerful and quite prepared to meet their fate. The liberal allowance of *saké* served out on such an occasion had no doubt a great deal to do with this.

OUR thieves continue to improve each shining hour. We hear of three more robberies having been committed lately; one in the Settlement and the other two on the Bluff. The sufferer in the first case had to part with his table cutlery, and ought to consider himself lucky in getting off at that. Victim No. 2, on the Bluff, did not lose much, but that was not the fault of the thief, as he made three attempts at that house in one night to pay the expenses of his visit. In the third case, the *lorobo* managed to secure a large booty. He (or they) made a clean sweep of Dr. Brown's drawing room, carrying off, amongst other nic-nacs, about 250 dollars worth of "curios." If the Japanese could only manage to bag these burglars they would have a bigger chance of immortalizing themselves than they are likely to gain in Taiwan.

ONE of the native newspapers is responsible for the following "fish" story, which appears to have a flavour peculiar to the fore-castle. A Japanese junk, when off the coast of the province of Shima, at a place called Kaiga, caught fire, and the crew, to save their lives, leaped into the water. But this refuge was worse than the proverbial "fire under the frying-pan," for a huge *crocodile* (Japanese *wani*) tried to devour them. All of the crew would have been swallowed up, had not a steamship fortunately appeared and rescued the intended victims of the *wani*. As it was, one of the poor fellows became meat for this marine gourmand, and, doubtless, by this time, is well digested, clothes, sandals, top-knot, pipe, pouch, and all. We suspect, however, that the narrators of the story have not accurately studied zoology. We wonder whether war will be declared against the monster, and an expedition be sent against him.

A GENTLEMAN who has just returned from Formosa furnishes us with some particulars of the state of affairs in connection with the Japanese expedition against the savages of that island. A landing was made on the night of May 7th, at Leon-kow, on the south coast of Formosa, the *Nepaul* being the first vessel to arrive. She landed about 200 soldiers, with their tents and the camp equipage, and a camp was at once established; but the main body of the troops did not reach the island until five days after. On the 22nd, General Saigo arrived, with the Japanese fleet; and on the same day the Chinese fleet put in an appearance, with a Commissioner from Foh-kien. A mutual arrangement between the two governments had really been come to before, but the matter was formally ratified by their respective representatives and a salute exchanged by the flag-ships of each nation. The Chinese gave general orders to their countrymen all along the

coast, to afford the Japanese every facility and assistance that lay in their power. The Chinese fleet then took its departure for Foo-chow—whence it had come—on the 25th, at daylight.

On 22nd ulto., some of the young officers of the fleet were out walking amongst the hills, when they were attacked by the Boetang tribe and one of them was killed. Being unarmed, the rest ran to the Camp for assistance, and on their return to the spot with a few soldiers they found their comrade stripped and decapitated. Next day, two companies of foot were despatched against the savages, who received a very severe chastisement. Many Japanese were killed, and numbers are now lying in Hospital, wounded; some severely. The Formosan loss was very heavy. The Japanese are now engaged in building huts, and making preparations for a long siege. We are assured that everything connected with the expedition is progressing most satisfactorily, and the affair is, in every way, so far, a success. The attitude of the Chinese Government is of an extremely friendly nature, and, far from offering any obstruction to the objects of the invaders, they seem inclined to render them every assistance in the attempt at subjugating the cannibals, who have always proved a source of annoyance and trouble to their (nominal) rulers.

THE Installation of the W. M. of the Nippon Lodge of Freemasons, No. 1344, E. C., for the ensuing year, took place on the evening of Wednesday, the 27th ulto., at the Lodge Room, adjoining the French Hotel, Tsukiji, Tokio. Brother Past Master Mitchell officiated; Brother Freame, I. P. M. introduced Brother Weiller as the W. M. elect. The Past Masters present were Brothers Thiel, Bourne, and Rothmund, besides the W. M. of the Otentosama Lodge (Yokohama). After the Installation, the new W. M. invested his officers with the insignia of their rank: Brothers Boulet and Johnston being respectively S. W. and J. W.; Brother Singleton, Treasurer; Brother Freame, I. P. M., Secretary; Brothers Hooper and McDonald S. D. and J. D. At the conclusion of the ceremonies the brethren sat down to a capital dinner, served by M. Josef Ruel with his usual good taste, and mirth and good-fellowship prevailed until midnight.

ON WEDNESDAY afternoon, Mr. Hatakeyama, Chief Director of Kai Sei Gakko, who had secured the use of En Rio Kan (Hama Goten) for the purpose, gave an entertainment to all the foreign gentlemen and ladies connected with the Kai Sei Gakko. Dr. Murray and a number of Japanese officers of the Education Department, and two or three foreign invited guests, were present. From 4 p.m. to 5 p.m., the party, numbering ten ladies and thirty-two gentlemen, enjoyed a pleasant stroll through the grounds, and, returning, sat down to a banquet, spread out in princely style. Dinner over, toasts, speeches, and conversations followed till 8.30, when the party broke up. This is, we believe, the first dinner given at which ladies have been present. The newly renovated halls of En Rio Kan present a brilliant effect, when illuminated as on Wednesday evening.

THE GRAND matsuri and show at E Ko In, near Riogoku, still continue to attract crowds of visitors. Among other curiosities is a large image, made of shells by an artist from Tamba.

WE ARE glad to be able to state that the rumoured assassination of Kido is without foundation.

WE LEARN from the *Overland Monthly* (whose editor has been chosen U. S. Minister to China) that Professor Davidson, of the U. S. Coast Survey, is to have charge of one of the parties for observing the transit of Venus in December next. He is now in the eastern part of the country, consulting with the other American astronomers, so as to systematize the plan of operations in order to obtain uniformity in results. His observations will be made in Japan, in which country he will arrive in the coming fall.

From the above-named source we learn also that Professor Whitney, of the Geological Survey of California, is now in Europe en route for Australia, and will probably return to California via Japan.

ONE of the returned Japanese students who, when abroad, paid much attention to the really valuable and solid products of the Christian civilization, collected a good set of books, etc., made for the blind, who have to make eyes out of the ends of their fingers. He has recently had the opportunity to exhibit them in detail, and explain them fully to His Majesty the Emperor, who has expressed great interest in the suggestion that similar books be printed, and that blind asylums be erected and maintained, in Japan. As many thousands of His Majesty's subjects are blind, an asylum for such unfortunates seems a great desideratum, and we are glad to note the slightest incident that looks to the establishment of a form of charity with which no fault can possibly be found.

A COUPLE of boat accidents happened on Saturday afternoon, which fortunately did not result in serious consequences. The Compradore boats of Messrs. F. G. Woodruff & Co. and G. Domoney & Co. started from Homoco to board the *Trevelan Family*, inward bound. Both were carrying all possible sail, and Messrs. Domoney & Co.'s capsized. That of the former firm was immediately put about, and the men were rescued and the boat towed ashore. On Messrs. Woodruff & Co.'s boat reaching the *Trevelan Family*, another boat, belonging to Messrs. Stephen & Stewart, capsized, alongside that vessel. In this case, also, the men were picked up by Messrs. Woodruff's crew and the boat towed shore. Messrs. Domoney & Co.'s foreman, Mr. Haddow, went to Homoco to engage a sampan to assist in towing their boat ashore, but the Japanese fishermen, seeing why they were wanted, refused to let him have one.

A NATIVE paper has the following:—"It has already been announced that a parliament has been arranged in Japan. In a few days it will be opened. All the government business will be deliberated upon here; but much depends on the harmony of all classes. We fear that if it acts contrary to the people's wishes there will be trouble. Kanda Kohei, Kenrei of Hiogo, feeling some anxiety on this point, petitioned the Speaker that he be allowed to select some persons from those under his jurisdiction to attend with him, in order to guard against the possibility of popular disapproval. As yet no answer has been given."

The meaning of this appears to be that the Kenrei does not like the responsibility of being an officer of the government and at the same time acting as a "representative of the people." No one can doubt that the thing is an anomaly throughout and must be altered sooner or later, but we hope that the change will come from the Assembly itself, and that there will be no delay now in calling it together. If an alteration were now determined upon all the ground already gained would be lost.

MAYEDA JIU-SANMI, the former Prince of Kaga, died last month at the age of 45. The funeral took place on the 31st May, and was attended by upwards of 1,000 nobles and samourai, whose retainers were over 10,000. All these nobles and gentlemen were formerly connected with the old Han, which included the provinces of Kaga, Noto, and Yetchiu. This prince was the richest Daimio in Japan, his income being upwards of 1,020,000 kokus. Since the abolition of the Han, he has resided at Negishi, Tokei.

It was fitting that such a man should be buried with much pomp. Accordingly, the Emperor sent a noble of his court to represent him, and a large body of soldiers swelled the procession. The funeral was one of the greatest ever seen in Japan. When the van reached Higurashi, the place of sepulture, having taken the circuitous route round Ooyeno, the rear was still pouring out of the gate of the residence of the deceased noble.

As a man, either of intellect or action, there is nothing to be told of Mayeda. We all remember his "masterly inactivity" during the rebellion. But he had a big name, if not a big heart.

THE FARE for Chinese passengers between Hongkong and San Francisco by the P. M. S. S. Co.'s vessels is now \$40 per pigtail, whilst the charge on the return trip to China is only \$10. This argues a desire on the part of Californians to encourage Chinese emigration, and to discourage immigration. Now, John knows how to take care of the "dolla" as well as any man. It seems that an impression existed amongst some of the would-be emigrants to California that the charge was \$70—at least, it would appear so from the sequel—and this being rather a large sum for a poor man to disburse, the Heathen Chinese set his wits to work and hit upon a simple expedient for obtaining a cheaper passage to the Golden Land—simple enough, as far as it went, which, it turned out, was no further than Yokohama. Instead of going to the office in Hongkong and booking as usual, a number of Celestials entered into arrangements with certain subordinate officers of the *Alaska*, whereby, in consideration of the payment of the sum of \$45—a little more or a little less in some cases—a passage was promised across the Pacific. It will thus be seen that John actually outwitted himself to the extent of \$5, in trying to "do" the Company. It appears the latter have been suspicious for some time past that they were being defrauded to a large extent by some of their employes afloat, and Captain Van Sice, who is a General Agent of the Company, was despatched from New York to take charge of the *Alaska*, with instructions to afterwards transfer himself to other steamers, in order to satisfy himself as to the existing state of affairs. Upon leaving Hongkong on the present passage, the Chinese passengers were mustered, and 60 were found in the nature of stow-aways, having no passage ticket. On being questioned it transpired that they had paid certain members of the crew, (in most cases,) a larger sum than they would otherwise have had to disburse in the ordinary way, for a passage. Four of the officers were suspected and interrogated, and one admitted having received \$390, and another a sum of over \$200; which money was confiscated and the men were placed under arrest. On the vessel's arrival in Yokohama, they were brought up before the U. S. Consul, Mr. Mitchell, but, after examination, were discharged, the evidence brought forward being insufficient to convict. The 60 Celestials were sent ashore, and are now being fed and lodged by the Yokohama members

of the Chinese Guild. Captain Van Sice of course refused to take them on to California, but engaged to return them to Hongkong by first opportunity from here.

THE 60 Chinese passengers per *Alaska* from Hongkong who were detained here en route to San Francisco on account of their having paid their passage-money to certain members of the crew instead of to the Company's Agents returned to their original starting point per S. S. *Granada* on Sunday last. Altogether, they had paid over \$2,000 in the manner stated, of which about \$960 was recovered in one way or other, the four men brought up before Mr. Mitchell having been compelled to disgorge \$700. The Chinese Guild here, who fed and lodged at their Club the 60 intending emigrants during their stay in Yokohama, have the matter in hand, and if the four men referred to have not already left for Hongkong per *Granada* it is certain that they are under surveillance and will be sent on and prosecuted by the Chinese Guild there, for fraudulently obtaining money from the 60 unfortunates.

An enquiry into the circumstances of the case was held before Mr. Mitchell, the U. S. Consul, prior to the departure of the *Alaska*, but no evidence was brought forward which could lead to the substantiation of the charge laid against the suspected men, and they were consequently discharged, after being detained a couple of days in gaol. There can be no moral doubt that they are really guilty.

BETWEEN sundown last night and sunrise this morning, our thieves paid a visit to Lots 25 and 26, and, after a good deal of trouble, managed to walk off with a portion of the iron-railing fencing the compound. They had to unscrew it out of the sleepers on which it was fixed, and this must have been a work of time. However, there was no fear of their being disturbed by the Japanese police, who have a happy knack of being "not there" when they are wanted, and, of course, it is an easy matter to watch the movements of the European constable who does his nightly rounds *solus*. We commend this matter of the native police to the attention of the Japanese authorities—but perhaps it is too much to ask; we must be patient. Surely, Yokohama is the "Paradise of Thieves," as well as of banker's clerks.

THE GOVERNOR of Kanagawa, Nakajima Nobu-Yuki, and the heads of the Judicial and Customs Departments entertained the Consular Body at dinner this evening.

THE PROCESSION of *Doriu-sama* yesterday took its way back to Odawarra, with great demonstrations on the part of the pilgrims. Crowds of Japanese assembled in Homura to witness his departure, and the display of banners and emblems, if not very beautiful, was at least extensive. *Doriu-sama* put up at Fuji-sawa last night.

AN ACCIDENT occurred yesterday afternoon on board the *Iron Duke*, by which several men were injured. Whilst the steam pinnace was being lowered from in-board the after-pondant gave way, and the boat and its crew were precipitated into the water, the gear falling on them. One man had his leg broken, and another his arm, whilst a third was much hurt about the head and face. The rest were all more or less injured, though, we believe not seriously.

One of the officers jumped overboard, and rendered valuable assistance in rescuing those struggling in the water. Fortunately, none lost their lives.

THE UNFORTUNATE Kaitakushi steamer *Kuroda*, on her last trip to Yezo, got ashore again. It is but a short while since she went aground on Saratoga Spit. The want of a Mercantile Marine Examining Board for Japan shows itself badly.

THE "literary editor" of the "Daily Newspaper" in Tokei has pounced upon a certain "*Nihon Guishi Jibiki*," and found no less than three hundred mistakes in it. The book falls under the scathing condemnation of the reviewer. This newspaper seems to have set out upon a crusade against all unworthy books. The Mombusho, also, appears to have shown commendable activity lately in endeavouring to thin out the over-crowded field of weedy intellectual growths, which choke out the really good productions that are calculated to bear good fruit a hundred-fold. There is little danger of checking entirely the sproutings of authorship among the native book-makers, for, probably, there has never been a time in the history of Yedo or Tokei when block-cutters were more numerous, and when book publishers did a more flourishing business. Notwithstanding the many native newspapers, with their thousands of readers, the making and selling of books increases apace. In all department of literature, scores of books are issued monthly. Though so many are trashy and ephemeral in character and style an increasing number are of a very solid character, and belong to permanent literature. All the signs of the times in the literary heavens among the writers of Japan, and on the earth, among printers, publishers, and buyers, point to the fact that the intellectual taste of the nation is improving—a fact which is of the greatest moment to all who take an interest in the Japanese, apart from their existence as raisers of tea and buyers of flannel.

AN advertisement has appeared in the official paper for 50 girls, between the ages of 14 and 17, to learn the process of silk manufacture at Tomioka. Women who wish to learn to reel silk will be taken irrespective of age.

FROM TSURUGA Ken, during the three first months of this year, returns of robberies effected are as follows:

Money stolen - - - - -	1,132 yen.
Clothes, value - - - - -	1,206 "
Other articles, value - - - - -	277 "

There were 145 persons arrested as concerned.

A similar return from Ishikawa Ken gives:—

Money stolen - - - - -	1,068 yen.
Rice - - - - -	6½ koku.
Clothes - - - - -	1,447 yen.
Articles - - - - -	532 "

Thieves arrested, 106.

FROM SHINANO, we have this interesting piece of intelligence. There is a certain stone bridge there, on one of the centre stones of which are the seven characters *Namu Amida Butsu*. These were believed by the inhabitants to have been carved by Nichi-ren himself—the founder of the Hokki religion. They therefore took it into their heads that it is very irreverent to Nichi-ren to walk above it, and made formal application to the Kenrei that a temple might be placed over it. Of course the Kenrei laughed at them, and asked how many of all who had passed over it since it was first placed there had been punished by Nichi-ren? "This," he added, "proves that Nichi-ren is no divinity. If he were divine he would punish me for allowing it, not you for doing it." The people seemed only as those who are "convinced against their will"; but they continued to use the bridge.

## NIIGATA.

OUR EXHIBITION was opened on the 1st inst. with much rejoicing, quite a general holiday being made. It was, however, not completely arranged inside, a failing very common on such occasions, not alone confined to Japan. A procession was formed, consisting chiefly of priests and singing girls, interspersed with cars, on which were some very dirty-looking idols. One large car was drawn entirely by men, and the one following by women, each party striving to make the biggest noise; a number of showy banners, some pretty artificial flowers made of silk, and a very swell got-up fat old priest from the neighbouring town of Nottaro, who was carried with much state under a silken canopy, brought up the rear. After parading the town, all entered the exhibition, and the idols were placed in a small temple in the grounds, under the care of the old priest, who is netting a good thing from the affair, as nearly all visitors drop a small offering into his box.

The building in which the exhibition is held was formerly a large tea-house belonging to the priest of the neighbouring temple of Hakusan. It was purchased from the latter by the Kenrei because it proved a great nuisance to the school, which it stands quite near, and from which it often allured many of the students during their school hours. It has been nearly rebuilt and now contains eight good rooms with European fittings, and two long galleries have been added, giving ample space; all of which are substantially finished, as the exhibition is to be annual and at other times the place will be used as a museum; many persons having presented the things they exhibited for this purpose. On entering, the first exhibit seen was a box containing three fine lop-eared rabbits, next a European tapestry carpet, stoves, and many other European household articles of no interest to foreigners but of much to the neighbouring countrymen, who have come in in large numbers. A collection of butterflies; a native attempt at oil painting, not very successful; some Corean dresses of white silk; do. books and sword; a lot of very ugly masks; some nice porcelain jars from Kaga, one, on which was painted a car containing flowers and drawn by grass-hoppers, was much admired (this was not for sale); a stuffed fox, badger, and otter; fans painted with flowers; a skeleton set up, which called forth many expressions of fright from the rustics. What seemed one of the chief objects of attraction was a model railway on a circular track, around which the train was sent steaming every now and then; and near it another working model of a steam yacht also in motion, which gave to many their first idea of steam power. There are a great number things yet to be unpacked, and, later on, I hope to send you a further notice. The admission fee is five tempos.

A RIFLE Range is to be laid out between the sand hills near the beach, for the use of the troops.

HAKUSAN GARDEN is being much enlarged, and is a very pleasant place now.

THE CIRCUS troupe of five Europeans and one horse, that came up from Kobe here in a Junk, are not very successful, but as they are under a Japanese contract the loss will not fall on them.

THE THERMOMETER stood at 85° in the shade to-day, and the new conscripts, who are too proud of their great coats to leave them off, looked as if they were suffering.

A STATION is being built for the river steamer which, I hear, is to be brought round by the Japanese: firemen having left here last week from the S. S. *Niigata Maru* for that purpose—I do not envy them their job. It is said the P. M. S. S. asked \$1,000 to tow her here.

May 24th.

THE LATEST excitement here is the arrival of five Europeans from Hiogo by native junk, for the purpose of starting a Circus. The booth is being erected in the rear of the Custom-House. English beer has gone up in price, and is likely to become scarce.

We are looking for the little steamer built by Messrs. Whitfield and Dowson for traffic on our river. It seems the exorbitant sum of \$1500 was asked for towage of her to this port by the P. M. S. S. Co.'s steamer *New York*.

IN TOKIO there is a society called "Mai Roku Shia," whose members meet twice a month and discuss matters tending to promote education in Japan; the society has been about one year in existence. All matters discussed at the meetings are fully reported and published in book form twice a month. In one of the numbers just out is a long dissertation by Mr. Nishi, urging the adoption of Roman letters in place of the mixture of Chinese and Japanese characters now used; which he argues are most inconvenient, and says that at present it takes a man more than double the time to learn his own written language than it would if his plan were adopted, and that it is certainly quicker than the plan which is much urged by another member of expunging the Chinese letters and using Japanese only. The style of pronunciation could more easily be settled and there would not be, as now, many words written in Chinese but pronounced in Japanese. He gives several examples of Japanese words in Roman letters, showing also a number of alterations that have taken place of late years in various characters.

SOME OF THE Fukuoka Ken samourai applied to the Kencho to pay their expenses incurred in subduing the insurrection in Saga. The Kenrei told them that he had no authority to pay them, but, would apply for instructions to the government in Tokai. The samourai became very angry, and upwards of 500 of them surrounded the Kencho; but one of the officers, Tachiji, managed to persuade them not to break the peace, and, after a little rather strong talking, they retired to their homes.

FOUR THIEVES, one with a pistol, the others with drawn swords, entered a house at Asakusa a few nights ago, bound the occupants, and, securing all their money and clothes, left. This being reported to the police, they cleverly spotted one of the rogues in an eating-house close by, and through him succeeded in taking two of the others in Shin Yoshiwara on the following night. The fourth fellow is not yet captured; but the people of the district having been for some time living in constant dread of the visits of this quaternion, great relief is felt, as it is fancied the fourth will be unable to do anything without his comrades, and will shew the district a clean pair of heels.

A GUN-MAKER in Mikawa-cho, Tokio, while heating a gun-barrel which he was negligent enough not to know was loaded, was shot in the leg by the discharge of the contents. It seems a pity that such a martyr was not in Formosa. An ignoble wound rarely heals quickly.

THE *Herald* has a fierce article to-day (18th), upon "The Formosan Performance." It says "beyond Saigo Kichenosuke, the Japanese commander-in-chief, and the two or three foreign mercenaries engaged in this forlorn hope, the main body of the actors, with their host of supernumeraries, are quite unknown to fame." Saigo Kichenosuke has nothing to do with this performance. He steadily resists every attempt to induce him to take an active part in politics, until the memorial signed by his colleagues is complied with.

The general in command in Formosa is his brother, Saigo Totoku.

It is true that the Viceroy of Fohkien has written the letter to Saigo which has been recently published; but the Japanese contend that there is documentary evidence to disprove the right of China to the southern part of the Island.

The latest telegram from Formosa states, that from N. Lat. 22.9 to the South Cape the subjection of Southern Formosa is absolutely complete. Boutan villages burned and natives dispersed.

FUJI-I MUSATARO, a retainer of Kido, has written to the *Nisshin Shinjishi* to the following effect:—

"The *Herald*, Yokohama newspaper, has published that Kido, the late Sangi, was murdered in the province of I-zé. This report is quite untrue. We received a letter from Kido on the 4th instant, dated Mitsz'ke, on the Tokaido, the 2nd instant, and he had then met with nothing out of the common."

This contradiction of the rumour will be read by all who know anything of Japanese statesmen with great pleasure.

SOME DISAPPOINTMENT has been felt in consequence of the Emperor not being able to fulfil an engagement on Saturday last. A camp had been formed at Narashino, Shimosa, and the soldiers forming it were to hold a rifle competition on the 6th instant, at which his Majesty was to be present. For several days, preparations have been going on for the reception of the Mikado and his suite, and the soldiers had been most active in drill and in practice. Trees were planted on both sides of the road leading to the pontoon bridge at Sakasai, the roads were all cleared, and the people turned out in crowds to see the Imperial cortège. But they were disappointed, as His Majesty did not make his appearance. No reason has been as yet made public, but we hope that it was not illness that caused the absence of the Mikado. Arisugawa Miya was present, having gone down to the camp on the 5th instant.

THIS STORY is a portion of the aliment dished up yesterday by one of the Yedo papers for its readers. "On the 4th June, a crow was resting on the stone wall at Hatchiman. Suddenly came two sparrows and took up a position close by. The crow looked scornfully on their diminutive bodies, and took no pains to conceal his contempt. Angered by such behaviour they flew at the crow and pecked it with their bills, making it bleed and become faint. But still it looked contemptuously on them; until, feeling also irritated, it made a dart at them with his beak, which their activity enabled them to elude. Getting bolder, they flew furiously at his face and bosom, and at last the contest became general, and all fell from the wall together and soon expired." And now comes the invariable moral:—"Alas! a sage says, 'Neither scorn the small, nor fear the great.'"

A NATIVE newspaper thus pays a tribute to Captain Lane, lately the excellent and much respected Agent of the P. M. S. S. Co. in Yokohama :

"It is said that, among Christians, masses for the dead are not ordered, and that they speak lightly of Segaki (the ceremony of offering to the spirits of departed relatives in the 7th month), as performed by the Buddhist. But an American named George Iren (Lane), who lives at No. 4, Yokohama, caused Segaki for the spirits of 70 persons who died in the fire on board the mail steamer *America* to be performed on the 2nd August, 1873. He invited many bonzes at Asakasa-ji; and these performed the ceremony, placing the offerings on a Sotoba or Toba, on which his name was written. For this he felt very grateful, and gave them a thank-offering.

"There is no such example since the opening of the port. We mention it in the *Kobun Tszushi* that it may be known to the priests of the whole empire."

ON THE night of the 2nd June, two thieves entered an oil shop in Ginza, Shichomé (in the Main Street), Yedo, and with drawn swords demanded money. The whole of their booty, however, consisted of 4 yen and 16 articles of no great value; but the editor has the opportunity afforded him, and he avails himself of it, to drag in a little bit of sentiment. He writes: "Alas! A Japanese poem, which was composed by a great bandit, Ishikawa Goyemon, (who lived in the days of Taico,) when he was about to be executed, declares—"Though the sand on the shore be all gone, the seed of the robber will never be exhausted in this world."

IN KIOTO, small-pox has prevailed extensively this season, and many persons have died.

A capital plan was lately adopted by the officials to enforce the government order respecting the fashion of wearing the hair. The people generally adopted the old style of wearing the hair, known as *hitotsu bettsui*, the shape resembling a furnace. The officials did not bully the people, but adopted the clever idea of obliging all criminals to wear their hair in this style, instead of having their heads shaved, as formerly. The plan succeeded beyond their most sanguine expectations. The people, objecting to be taken for criminals, quickly adopted the desired reform.

WE FIND the following in a New York paper. Query, which of the six or seven Yokohama newspapers is it?

"There is a newspaper in Yokohama, Japan, that enjoys the specialty of fabricating falsehoods about the Japanese and the government. It has a press capable of printing 10,000 lies per hour."

THE JAPANESE Postal Bureau shows no signs of lack of energy, and it is only fair to say that letters and papers are delivered with very praiseworthy regularity. Several branch offices exist in Tokio, where stamps are for sale, and paste, scales, etc. ready for immediate use. Postal cards are coming into general use. At present, the central office is in a new but very flimsily built structure to the east of Nihon Bashi. In a few weeks, this will be removed to the substantial and handsome building now being erected at the end of the Tori near Yodzu Yo Bashi. This place, formerly called Sujikai, is finely adorned with planted trees, new pavement, the new granite bridge, etc. Few parts of the city are more attractive. With its improved location, still further improvement in the actual work of distribution may be expected.

AN OFFICE for the Dead was said this morning at the R. C. Church, Main Street, for the repose of the soul of the late Mr. Albert de Groot. Sir Harry and Lady Parkes and most of the Foreign Ministers were present, but the attendance of the general public was not large.

IN THE town of Yoshiwara, on the Tokaido, a confectioner who was in the habit of beautifying his wares by liberal daubs of Prussian Blue has caused the death of one of his customers, a small boy who died shortly after eating some of the colored messes. We have often wondered why more youngsters did not die from eating Japanese confectionery, even when not painted with Prussian Blue; but adding swift poison to slow dyspepsia seems a crime worthy of severe punishment. What with the frequent sale of diseased beef and poisoned confectionery, is it not time for the Japanese to have a food-inspector? If the Japanese are anxious to imitate the "curiosities of civilization," in the way of food-adulations, catch-penny poisons etc., they should, with equal footsteps, hasten to apply the remedy and institute the checks. It is not worth while to discuss the question whether it is more pleasant to receive Pale Death in garments dyed with Prussian Blue, or to have him come riding upon a diseased cow. We trust that the case of the boy poisoned thus will receive Government attention.

IF ANYTHING were required to induce the government to pay attention to the subject of compulsory vaccination, surely this fact, recorded in an Osaka paper, should suffice. In the district under the jurisdiction of Kioto, between October 1873 and April 1874, no less than 1240 persons died of small-pox. And last year, 386 persons died of the same malady in Osaka.

A SMALL difficulty has arisen in Shiba, between a foreigner and a troop of wrestlers. In Con-cho-in, Shiba, the wrestlers established themselves, and as usual, put up a kind of tower made of scaffolding poles, at the top of which has placed a drum, which is beaten for the purpose of attracting the notice of the people to the performance. It is bad enough for the dwellers in the neighbourhood where such an exhibition is going on, to have the noise booming in their ears all day long; but it is far worse to be awoke from slumber long before daylight with this everlasting din. Some foreigners living next door, appealed to the proprietors to refrain from beating the drum at an hour unreasonably early; but as no notice was taken of the remonstrance, and the next morning the drumming commenced between two and three o'clock (which was earlier than ever—as if for the especial benefit of the foreigners), the latter took the only course then open to them. They went to the tower, took the drum; and told the wrestlers to apply to the police for its recovery. They refuse to give up the drum to the wrestlers, unless they have a distinct promise that their rest shall not be disturbed by it, during hours when all good and true men, with quiet consciences, and reasonably good health, ought to be asleep.

THE superstitions of Japan, if one day collected and printed in a book, may fill a decent sized volume. Remembering how many there are in civilized countries, who still hold ancient superstitions, it is not for us to be too hard on the Japanese; but the religious fancies connected with them, are apparently, the most numerous. At Kumachi of Yamanashi Ken,

there is a god worshipped by the people, under the name of Shira yama Daijin. It got into the heads of his votaries that he had a great dislike to Silkworms; and they refused to cultivate them accordingly. They would not even plant mulberries. A man named Tsuchiya tried all he could to persuade them of their folly; but his advice was useless. He therefore set to work himself, to plant mulberry trees, and to rear silkworms. The people seeing that no harm befalls him, and that he makes money by his enterprise, are now beginning to perceive their folly and to follow his example. The native press call Mr. Tsuchiya a national benefactor.

ANOTHER native paper tells of a woman who became very ill. One evening she cried out so that her son went to her to enquire what was the matter; and he received the reply "An old man has appeared to me, and has been torturing me for cutting down a Shinbaku (a tree the kami are supposed to protect.) I told him I had not done it; but he replied that Hachiman was very angry and intends to destroy our family. He also added that we must atone for the crime by engaging the priests to pray for us." The priests were assembled at the temple, and proper offerings and prayers were presented; and that night, the old man returned and told her that her life was now spared in answer to the prayers. The editor says:—We hardly believe this story, but we report it as told to us by some persons from Akita Ken!

A WORK of considerable importance has just been completed at Kinokawa, Hakayawa. A harbour has been constructed at the mouth of the river. On the 6th June the opening took place with much ceremony, and in presence of an immense concourse of people—the native accounts say many thousands. A breakwater sixty feet long has been run out, and at the end of it is a lighthouse. The expense has been borne by a merchant, Kanô Sadashichi, and ten other men; and it is likely to be extremely beneficial to this district.

A TOKEI paper reports:—The tax collected in Tokei during May from dancing girls and prostitutes was 7387, yen. The number of the former is 1375, and of the latter 1709. The number increases monthly.

IN KIOTO, a factory has been established for women to learn useful occupations, such as knitting, silk-worm tending, &c., &c. In this place prostitutes and geishas may be seen "working diligently during their leisure time." It is instituted by the officials of Kioto "in order that the ignorant women may learn the arts of industry." If there be any truth in this, and we suppose there is, as it is published in a most respectable paper, the Kioto officials cannot be too highly praised; and we wish them great success in their sensible and practical efforts to supplant evil with good.

Dr. Schoenberger, a few days since engaged by the Japanese Government to proceed to Formosa as a physician, was, this afternoon, a few minutes before the departure of the steamer for Nagasaki, arrested on a warrant issued by Mr. Zappe, the German Consul. Whether the above-mentioned engagement or any other motive has been the cause for the arrest we have been unable to ascertain. —*Herald*, June 18th.

## STAPLE IMPORTS.

So little has been done in the Import Market since last issue that our remarks may be reduced to very small limits. Throughout it may be said that to a large extent business has been stagnant, and prices quoted are likely to touch still lower figures. General remarks on the various staples will be found at foot.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.00 to 2.10	} Business done to a small extent, in 9 lbs.
8 „ do. 45 in. ... .. „	2.25 to 2.40	
9 „ do. in. ... .. „	2.70 to 2.85	
G. E. White Shirtings:—		
60 to 64 reed 40 yds. 35 in. ... .. „	2.60 to 2.85	} Little enquiry. No Stocks. Very dull.
T.Cloths:—6lbs. to 7 lbs. ... .. „	1.50 to 2.00	
Handkerchiefs assorted ... .. per dozen.	0.25 to 0.80	
Brocades and Spots (White) ... .. per piece.	nominal.	} No demand. Enquired for. Little demand.
do. (Dyed) ... .. „		
Chintz (Assorted) 24 yds. 30 in. ... .. „		
Turkey Reds 24 yds. 30 in. ... .. per lb.	0.90 to 0.95	
Velvets (Black) 35 yds. 22 in. ... .. nominal. per piece.	7.50 to 8.50	
Muslins, Cambrics & Lawns 12 yds. 42 in. ... .. „	0.95 to 1.00	
Taffachelass ... .. „		
Cotton Yarn.		
Nos. 16 to 24 ... .. per picul.	36.50 to 39.00	} Small business in 16/24 and 28/32.
„ 28 to 32 ... .. „	37.00 to 39.00	
„ 38 to 42 ... .. „	41.00 to 45.00	
Woollens and Woollen Mixtures.		
Camlets SS assorted 56 to 58 yds. & 31 in. ... per piece.	18.00 to 19.00	} Neglected. No transactions.
Lastings 30 yds. 31 in. noml. ... .. „	14.00 to 15.50	
Crape Lastings do. ... .. „		
Lustres & Orleans (figared) do. ... .. „	4.50 to 5.50	
do. (plain) do. ... .. „	5.90 to 7.80

Raw Cotton (China) ... .. „	15.00 to 15.50	
Kerosine Oil, ... .. 10 Galls., per case.	8.25 to 8.35	

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—In the interval since our last, actual transactions have been almost nominal, and prices have suffered little change. The quality of that offered, as we have had occasion to point out for some time past, has been poor, and several bales of very inferior have been returned to the country. The Stock is thus lessened, with advantage to exporters we think, and now stands at less than 500 Bales, but New Silk may be shortly expected ; arrivals of which we hope to be able to report in our next.

TEA.—In our last issue we reported great excitement and an extensive business doing in this article of produce ; this activity has even rather increased than otherwise, and although supplies come in on an extensive scale stocks remain at a low ebb, and are not allowed to accumulate.

The general quality of musters now on view shews rather a falling off in freshness, and many parcels are losing their fragrance.

We hear that a more than ordinary good second crop may be looked for, musters of which we expect about the middle of August.

Our prices continue well maintained, and for really eligible parcels holders require full rates.

Export from Yokohama alone to date, including cargo of the P. M. S. S. *Granada*, to sail to-morrow, equals about 1½ million pounds.

## ARRIVALS.

June 5, Brit. str. *Vasco de Gama*, Rice, 2,200, from San Francisco, May 16th, mails and general, to Hudson, Malcolm & Co.  
 June 6, Brit. str. *Washi*, Withers, 221, from Amoy, May 29th, general, to Hudson, Malcolm & Co.  
 June 6, H. B. M. S. S. *Iron Duke*, Capt. Arthur, from Yokoska.  
 June 6, Am. str. *Granada*, Seabury, 2,572, from San Francisco, mails and general, to P. M. Co.  
 June 8, Brit. schr. *Trevelan Family*, Sutton, 299, from Taiwanfoo, May 23rd, sugar, to Netherlands Trading Co.  
 June 8, Russ. str. *Courier*, Lemaschoffsky, 460, from Hiogo, June 5th, coal and general, to Walsh, Hall & Co.  
 June 8, *Kiu Shu*, Am. S. S., De Velle, 700 tons, from Shanghai, Ballast, to E. Fischer & Co.  
 June 9, French str. *Menzaleh*, Pasqualini, 1,008, from Hongkong, June 2nd, mails and general, to P. M. Co.  
 June 9, *Mary Ann Holman*, Holman, 271, from Taiwanfoo, May 16th, sugar, to Smith, Baker & Co.  
 June 10, Am. str. *Costa Rica*, Connor, 1,917, from Shanghai, &c., mails and general, to P. M. Co.  
 June 10, Am. bark *Benefactor*, Hayden, 596, from New York, general, to Mourilyan, Heimann & Co.  
 June 10, *Pride of the Thames*, Brown, 377, from Nagasaki, June 1st, coal, to E. C. Kirby & Co.  
 June 12, Brit. ship *Chusan*, Hills, 817, from Liverpool, 2nd Feb., general, to Hudson, Malcolm & Co.  
 June 12, German str. *Bellona*, Schultz, 707, from Shanghai, 7th June, ballast, to E. Fischer & Co.  
 June 13, Brit. str. *Madras*, Bernard, 1,325, from Hongkong, June 6th, mails and general, to P. & O. Co.  
 June 15, Am. str. *Nevada*, Dearborn, 2,143, from San Francisco, May 23rd, mails and general, to P. M. Co.  
 June 16, Brit. ship *John Rennie*, Nicholson, 848, from Sydney, N.S.W., coal, to Captain.  
 June 17, Am. str. *Golden Age*, Coy, 1,870, from Shanghai, &c., mails and general, to P. M. Co.  
 June 17, Am. str. *China*, Cobb, 3,836, from Hongkong, June 10th, mails and general, to P. M. Co.  
 June 18, Russ. Corvete *Bogatyr*, Schaffroff, 800 tons, from Hakodate, June 6th.  
 June 18, Brit. str. *Washi*, Withers, 221, from Kobe, 16th June, general, to Hudson, Malcolm & Co.  
 June 19, Frch. barq. *Marianne*, Bazelaire, 468, from Wuaung, general, to Order.  
 June 21, Frch. str. *Volga*, Flambeau, 960, from Hongkong, June 14th, mails and general, to P. M. Co.  
 June 22, Am. str. *Granada*, Seabury, 2,576, from Hongkong, June 15th, mails and general, to P. M. Co.

## DEPARTURES.

June 4, Brit. barq. *Flying Spur*, Croote, 735, for Manila, ballast, despatched by Captain.  
 June 5, Am. str. *Alaska*, Van Sice, 4,011, for San Francisco, mails and general, despatched by P. M. Co.  
 June 7, Brit. str. *Vasco de Gama*, Rice, 2,200, for Hongkong, general, despatched by Hudson, Malcolm & Co.  
 June 7, Am. str. *Granada*, Seabury, 2,572, for Hongkong, general, despatched by P. M. Co.  
 June 8, U. S. frigate *Tuscarora*, G. E. Belknap, for San Francisco.  
 June 8, *Acantha*, Brit. str. Young, 653 tons, for Akita.  
 June 8, Brit. ship *Southern Ocean*, Huckstable, 1,260, for Victoria, Vancouver Island ballast, despatched by Captain.  
 June 10, Brit. str. *Nombay*, Davies, 1,325, for Hongkong, mails and general, despatched by P. & O. Co.  
 June 10, Am. str. *Oregonian*, Harris, 1,914, for Shanghai, &c., general, despatched by P. M. Co.  
 June 10, Brit. str. *Ping On*, Mooney, 695, for West Coast of Japan, ballast, despatched by Fischer & Co.  
 June 11, Brit. brig *Georgina*, Smith, 222, for Nagasaki, ballast, despatched by Captain.  
 June 12, Am. str. *Kiu Shu*, De Velle, 700, for West Coast of Japan, ballast, despatched by E. Fischer & Co.  
 June 14, German str. *Bellona*, Schultz, 707, for West Coast of Japan, ballast, despatched by E. Fischer & Co.  
 June 17, French str. *Menzaleh*, Pasqualini, 1,008, for Hongkong, mails and general, despatched by P. M. Co.  
 June 17, Brit. schr. *Trevelan Family*, Sutton, 299, for Amoy, ballast, despatched by Captain.

Willman, A. Hamonstede, Govt. C. E., Felix Goodwin, J. Harder, Lieut. W. H. Emory and servant, Baron M. von Hippel, C. de Ryschkan, J. M. Wight, H. P. Mackintosh, Geo. Ganzert, Lieut. Fred. Gossett and servant, Victor Meignan, Mrs. Swibjer and child, Mrs. Bendell, H. A. Howe, Miss F. A. Dezenett, C. G. Dunlop, W. D. Spence, Capt. F. M. Rollins, A. S. Harvey, Robert Harvey, Mrs. P. V. Veeder and servant, Miss Jeannie Veeder, and Miss Gussie Veeder.

## REPORTS.

The British steamer *Vasco de Gama* reports: Left San Francisco 15th May, 1874, at noon. Experienced heavy head seas and strong breeze during first two days of passage, thence strong southerly breezes and fine weather to Yokohama.

The P. M. S. S. *Granada*, 2,572, Capt. Seabury, left San Francisco at 0.15 p.m. 16th May, arrived 1.15 p.m. to-day.

The French gun-boat *Bourayne*, left on Saturday for Hongkong, en route to Europe.

The P. M. S. S. *Granada*, 2,572 tons, Capt. C. P. Seabury, arrived in this harbour at 1.25 p.m. on 16th inst. Reports having left San Francisco at 12.15 p.m. on 15th May. For the first two weeks experienced a succession of westerly gales, with high seas, which was followed by fine weather, with northerly and easterly winds. The whole passage was made under steam alone, the best day's run being 300 miles. This fine steamer was built at Wilmington, Delaware. She is brig-rigged, and her engines are on the compound principle, manufactured by Messrs J. & Co., of Glasgow. Her passenger accommodation is excellent, she having accommodated for 190 saloon passengers and 300 steerage, besides space for 1,800 tons of cargo, and 500 tons of mail. The cabin fittings are very handsome, and quite beyond what is usually found in ocean steamers of any class.

The Am. bark *Benefactor* left New York Feb. 1st. Experienced moderately fine weather throughout passage, light variable winds.

## STAPLE IMPORTS.

We cannot report a profitable trade in exports, but there is a decided movement, the commencement of which we announced in our last. The weather, however, has interfered to a certain extent with business, and has had a slightly depressing effect.

COTTON YARNS have had continued attention and prices are decidedly hardening; SHIRTINGS remain much as before. The heavy stocks act most oppressively. VELVETS have met with a fair demand and prices have been very firm. In WOOLLENS there is no change, but the Autumn and Winter seasons are looked forward to as giving hopes of improvement.

METALS are unchanged. SUGAR very firm, and a good business doing.

Articles.	Price.	Remarks.
Cotton Piece Goods.

# Yonohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK**—This staple has been pretty brisk since our last; buyers still acting with necessary caution. The settlements have exceeded 1,000 bales.

**SILKWORM EGGS** have come to market very slowly, not one-fifth of the quantity having arrived that had been received to the same time last year. The Government have given a distinct assurance not more than 1,300,000 cards will be offered for export this year. Purchases have as yet been limited, the prices being:—

Joshiu .....	\$3.50 to \$3.90
Bushiu .....	2.50 to 2.80
Oshiu .....	2.65

**TEA**.—In our last issue we reported the Tea market as firm, with a fair amount of business doing, which state of affairs we have now to confirm by present opportunity.

Settlements for the past fortnight are again very liberal and amount to some 4,600 piculs: included in these are several parcels of lower class Teas at from \$21 to \$24 per picul, averaging "fair Good Common"; some sizable purchases have also been made in low class fine at \$35 to \$37 per picul.

Supplies have been rather limited and we believe that the dealers in the interior have a very mistaken notion of how prices must run to promote extensive business, and thus arises the difficulty: stocks are light and mostly of lower class goods.

The *Elta Loring* had despatch from this for New York on the 29th ult., leaving the *Morro Castle* nearly loaded and the *Clausina* on the berth for same destination. Freight continues £3 to £3 5s. per ton of 40 cubic feet.

Description.		Prices per Picul.	Remarks.

Wheeler and servant, M. MacLagan and servant, V. E. Braga and servant, M. Mancini and servant, and 84 in the steerage.

## FOR SAN FRANCISCO.

Major T. W. Kinder and 3 in the steerage.

Per Brit. str. *Quang Se*, from Hongkong.

Lieut. J. Gorset, R. E., and 2 Chinese in the steerage.

## FOR SAN FRANCISCO.

95 Chinese.

## REPORTS.

The Am. str. *Relief* from Hakodate, reports light head winds during the early part of the passage. Left in Port one English and one German vessel loading for Shanghai. Passed a barque bound in about 18 mile from Hakodate on the Nambu side, and another yesterday near Cape King. The *Vanguard* from London for this Port is reported having put into Shanghai with loss of spars, sails &c.

The American steamer *Japan* reports, left San Francisco Sept. 1st, at noon, had fine weather up to the 23rd. On morning of 23rd experienced strong southerly and westerly gales with Barometer falling rapidly, stood to south for 6 hours; gale increasing fast with a very heavy sea; was obliged to lay the ship to. At 12 m. of 23rd, gale abating proceeded on our course. Experienced a very strong E. N. E. current the last 5 days.

Report of British ship *Solent*, J. Meldrum master, from London to Yokohama, 135 days:—Left the W. I. Docks May 14th and proceeded on with light winds southerly and Easterly. N. E. trades very light weather thick, passed the Equator June 8th, Long 29° 58' W. Heavy S. S. E. squalls in S. E. trades. From thence to the meridian of the Cape, (which was passed July 12th) variable winds light and fine. Usual run of Westerly and N. W. gales in running down Easting, which was done between Lats 39° and 41° South. Only 3 days S. E. trades but light Westerly winds up to Anjer Stra. which were entered August 15th Beached in Java Sea until August 20th, passed through Gaspar Straits, a large ship there three skysails set a head of us. August 23rd, had excessively heavy squalls abreast the Gulf of Siam, which continued till 25th, when it moderated, and wind set in North E. and light until passing through the Bashees on the evening of the 2nd September from thence until September 7th, had fearful heavy sea from S. E. and N. E., and squally weather but no indication of any extraordinary blow. Barometer standing 29.30 steady. On September 9th indications of bad weather, but nothing extraordinary, towards midnight blowing terrific with a cross sea, furling everything except Main Topmast Staysail reefed, and Mizzen Staysail; (Barometer 29.42) and continued blowing, the 13th, when it moderated in Lat. 29°. N., Long. 128°. 30' E. fine weather continued till the 21st, glass steady at 29.80, till 22nd when it commenced to fall down to 29.28 getting squally, with heavy rain and a heavy S. E. and N. E. sea running the same as before, commenced to shorten sail at noon and reduced the ship to Reefed Main Topmast Staysail, and Mizzen Staysail. Blowing terrific from N. N. E. and N. E. Fearful heavy seas running and ship labouring very heavily. Began to moderate on the 23rd September, wind hauling to the N. W. and finer weather, made necessary sail, glass rising steadily. Took the Pilot September 25th, at 6 p.m. N. E. winds and thick rainy weather. During the passage sprung Jib Boom and Lower Main Topsail Yard. Split Jib, Main and Fore Topmast Staysails and Mizzen Topsail.

The Brit. ship *Jason* reports; left Newport, May 26th, and crossed the Equator June 15th; had light N. E. and S. E. trades: with heavy gales running the easting down after passing the Cape, wind from the S. W. with a very heavy sea. Passed Anjer August 30th; carried a light S. W. monsoon through the China sea; cleared the Bashee Channel September 14th; met with a very heavy N. E. swell with a light westerly wind. Bar. down to 29.58 and the weather hazy, passed the Loochoos September 21st still a heavy N. E. swell. Wind light from N. N. E. made Rock Island October 1st having been set into Suruga Gulf: took Pilot on board at 10 a.m. and anchored here October 2nd, at 6 p.m. 129 days from Newport.

The Brit. str. *Maud*, has experienced very severe weather since leaving Hongkong, on the 1st. A circular storm passed over them, about 50 miles East of Van Diemen's Straits, and yesterday, the Captain reports the weather worse than anything he has seen for twenty five years. The Barometer on the 1st fell to 25.50.

The *Quang Se*, 1,778 tons, J. M. Lachlan, Commander, left Hongkong September 27th, at 3.30 p.m., with 97 Passengers, 912 tons of Freight and 5 pkgs. Mails:—Had strong E. N. E. and N. E. winds, with heavy head thick weather and rain to Ochsue Islands; thence till September 30th fresh N. E. winds and clear weather. Same day a very heavy squall from East, and afterwards from E. N. E., N. E. and North, suddenly got up, causing a very confused and turbulent sea and oscillating Barometer, with every indication of a cyclone close to; made all preparations to meet same, and set engine to let it pass. Forenoon of 2nd October, wind N. by W., force 10 and 11, and a very heavy high swell and confused irregular sea—lowest reading of Barometer, 29.38, Mercurial Track, S. W. to N. E.; and travelling slowly. No damage. Thence to port fresh and moderate N. E. winds, arriving at 3.40 p.m., October 6th.

### MAIL SUMMARY.

FROM 23RD JUNE TO THE 20TH JULY, 1874.

#### BIRTH.

On the 7th inst., at No. 39, Bluff, Yokohama, Mrs. E. B. Watson of a daughter.

#### MARRIED.

On the 24th ultimo, at No. 211, Bluff, in the presence of Geo. N. Mitchell, Esq., U. S. Vice-Consul, by the Revd. S. R. Brown, D.D., ROBERT MORRISON BROWN, of East Windsor, Connecticut, to MARY AGNES GORDON, only daughter of the late Mortimer Gordon, Esq., of New York.

On the 17th July, at the British Legation, Yokohama, by the Revd. Wm. Ball Wright, in the presence of Sir Harry Parkes, K.C.B., HERBERT WILLIAM GLENDINING PAYNE, only son of the late Capt. William Payne, R.N., to ELIZABETH AMY CATHCART, daughter of Francis Webster, Esq., Writer to the Signet, Edinburgh.

#### DEATH.

On 17th June, at Sakada, N. W. Coast of Nippon, THOMAS SMITH, Esq., of Yokohama, in his 34th year.

OUR last Mail Summary was published on the 23rd June, and despatched by P. M. S. *Granada*. We are since in receipt of the following Mails:—

	DUE.	ARRIVED.
American Mail -	—	June 24th.
English " -	July 1st.	" 29th.
American " -	—	July 7th.
French " -	July 8th.	" 9th.
English " -	" 15th.	" 10th.

Our latest telegrams are to the 4th July; letters dates are to 29th May.

### Summary.

THE GREAT subject of interest still continues to be the Japanese expedition to Formosa; its possibilities and probabilities. During the whole month, the same condition of uncertainty has prevailed, and there appears

to be no likelihood of its being immediately changed. The Japanese force in Formosa has had no human enemy to contend against since the early days of June, but has had to endure the great heat and consequent inconveniences: whilst the government of Japan are placed in a quandary, by the claims of China to the whole island of Formosa, although it is beyond a question that she has repeatedly denied a responsibility for that part of Formosa where the Japanese are. The greatest doubt exists on this point; but the reports that reach this from China point to a determination on the part of that Power to assert its claim to the whole island, and to use force to expel the Japanese unless the fair words hitherto used induce them to withdraw peaceably.

The Japanese have quite succeeded in the primary object of the Expedition, and might retire with a good grace. Indeed, they have nothing else now to do there, unless it be true that they think of colonizing; and that, to all foreigners and to many amongst themselves, appears mere folly. Nothing whatever is known as to the proceedings of the Japanese Envoy Yanagiwara, who was sent to China on this special business. It is a great pity that Soyeshima was not sent. He is the ambassador who declares that the Tsung-li-Yamen told him that aboriginal Formosa did not belong to China; and he is, moreover, a very able, resolute man. Far better would it have been to send him, than a young and not very brilliant man like Yanagiwara. There is a probability of General Le Gendre being dispatched to confer with the Chinese authorities on the matter; but whether in Formosa or at Peking is as yet doubtful.

HIS MAJESTY the Mikado has made no public appearances during the month; but a foreigner has had the honour of attending at the palace and exhibiting some very fine dissolving views in the presence of the Emperor and all the Court.

THE EMPEROR pays out of his privy purse the expense of a foreign doctor to attend the troops in Formosa. Numerous ice machines also have been sent, by his desire, for the use of the sick in that fiercely hot region.

THE GOVERNMENT recently instituted proceedings in the U. S. Consular Court, to recover from the P. M. S. S. Co. a sum of \$10,250, for an alleged breach of charter-party, in consequence of the S. S. *New York* not proceeding on her voyage to Formosa, to convey troops, stores, &c. for the government. Judgment was given for the defendants; but an appeal has since been made to the Circuit Court of California, by the Japanese Government.

THE NEW Temperance Hall was opened on 6th July; Sir Harry S. Parkes, K.C.B., occupying the chair.

THE KAISEI GAKKO, and other government schools have been lately holding their examinations, and are now in vacation until the beginning of September.

THE DELIBERATIVE ASSEMBLY commences its sittings in September.

THERE is a report, that the Japanese have left the Island of Saghalien and gone to Yeso. It has been publicly mentioned for some days, and not contradicted.

THE WOULD-BE assassins of Iwakura, lately the Japanese Ambassador to Foreign Powers, have been decapitated.

REFLECTING MEN among the better classes in Japan generally look with regret on the possibility of their country being drawn into a war with China; but if they entertain any doubts as to the success of their own arms they take care not to show it. On the contrary, they prefer fighting against any odds, to allow themselves to be bullied or coerced. Whatever China may now say as to her sovereignty over Formosa, she is not believed; and the spirit of the people is generally being roused, to uphold the honour of the country at all hazards. In warfare, much depends on the spirit with which the combatants enter upon the conflict; and the Japanese have got it into their heads that one of them is better than several Chinamen. If, therefore, China means fighting, she will find no hesitation on the part of the people, the Army, and Navy of Japan.

THE FORMOSAN Expedition has become so curiously involved that the longest headed politician must find in it a problem impossible to solve. It is, up to this point, exactly as was foreseen. The Chinese, always slow both in Council and in action, although they have known that the expedition was determined upon, almost from its initiation, have not declared themselves respecting it, either one way or the other, until the force sent by Japan is actually landed on the island of Formosa. Then, in reply to a letter from the Japanese General in command, the Viceroy of Fohkien asserts the whole of the island to belong to China; and follows it with another dispatch, addressed to the same commanding officer, reiterating the assertion, and calling for a copy of the written document (which he says there must be, if any agreement was come to between China and Japan), authorizing on the part of the Chinese Government the punishment of the Formosan savages by the Japanese.

In the absence of dates to the dispatches above alluded to, but judging from the fact stated by the *Japan Mail Daily Advertiser*, which first published the last dispatch, that it had not been published in China prior to the departure of the Mail: we think we are justified in believing that this was not even written before the Japanese had completed the punishment they wished to inflict upon the Boutan and Koolutz tribes. On the 3rd of June, according to the latest telegram published, the Japanese struck a blow at the Boutans which appears to have satiated their desire for vengeance for the present; and gives them the hope that by their success so far the hauds of the Mikado's Envoy to Peking will be greatly strengthened. But now there is another difficulty started. The Viceroy of Fohkien alludes to the circumstances which have led to the invasion of the southern portion of Formosa, in these few words:—"I have to remark that, in the case which concerns the natives of our own tributary country of Loochoo who were murdered when ship-wrecked, I myself have issued strict orders to the local authorities to take the matter into their hands, and it is therefore unnecessary that your country should trouble itself about it."

So that, it appears from this, China actually claims Loochoo as well as Formosa.

It has been perfectly well known that tribute has been paid to China as well as to Japan by Loochoo; but the Loochooans themselves have considered themselves as belonging to Japan; and, under the new arrangements, it is specially made a *han* of Japan, the only one now existing. If China put forth a claim to it, here is another bone of contention.

We cannot too highly extol the dignity and the conciliatory spirit of the Viceroy in his despatches. He demands that Japan shall withdraw her soldiers, but even this in a manner which by no means threatens to disturb amicable relations if uncomplained with; and we are quite satisfied that Japan will not comply. To us it looks as if the Viceroy of Fohkien, taking no steps whatever to prevent the force from going to Formosa, when they purposely visited Amoy, has now seen what foreigners have to say upon the subject, and has rushed in with his tardy despatches to save his own credit with his government. In like manner it seems that the American Consul at Amoy has issued the notification to U. S. citizens altogether too late. It should have been done when they were at Amoy, not when they are in the thick of the enterprise at Formosa. But this is, no doubt, done to save the United States from the appearance of sanctioning any hostilities against

Chinese territory. It ought not, however, to be forgotten how the same savages have been dealt with both by an English man-of-war, the *Cormorant*, and by Admiral Bell of the U.S.N. in 1867, on the occasion of the wreck of the American Barque *Rover*. The savages killed all who escaped from the wreck, with the exception of one Chinaman, who managed to elude them. At that time the U.S. Consul at Amoy, General Le Gendre, went to Formosa and communicated with the Chinese authorities, who promised to punish the murderers, "although the aboriginal region was without the jurisdiction of China." The whole account is given in the *Tokei Journal* of Saturday last of this affair, and it is somewhat inconsistent of those who acted as did the Americans in 1867, undoubtedly with the approbation of all foreigners, to interfere with what Japan is doing now.

The *Tokei Journal*, in giving an account of what had been done from the landing of the Japanese on the 6th May to the 27th May, says, "We shall be prepared to publish such evidence as will show that the Chinese never had any right to it (Southern Formosa), and never, until now, claimed it."

If this can be proved, of course it sets everything at rest; but we fancy that, until now, the Chinese have had, and even now have, very hazy ideas of what constitutes a claim to outlying territory. Corea pays her tribute—but China lays no claim to jurisdiction over her. A translation of an official document copied into the *Far East* of August 1st, 1871, from the *Chinese Repository*, 1845, says "The countries in the four quarters of the world which send Embassies to the Emperor of China and pay tribute are, Corea, Liuchiu, Laos, Cochin China, Siam, Sulu, Holland, Burmah, and those of the Western ocean: all other countries have only intercourse and commerce." \* \* \* "The countries of the Western Ocean (Europe) are Portugal, Italy, and England." Among these, Formosa is not mentioned; which at first sight would lead to the supposition that it is looked upon as an integral part of the Empire. But the Southern point has never been subdued by China, although like Liuchiu (and Holland and England!) the aborigines do pay some kind of tribute—not sending it by special envoy to Peking, but to the Chinese authorities at Taiwan.

Under any circumstances, Japan cannot recede now. We hope it may be proved that she is not in the wrong as regards the non-jurisdiction of China. If she be, the fault lies with China. This statement declared to have been made by the Emperor of China or his government to Soyeshima is not a mere invention newly made for the occasion. It was reported in this paper directly Soyeshima returned, and it has always been understood that sooner or later action would be taken upon it. No doubt the accident of the events in Saga hastened it; but it was resolved upon long before the insurrection in Saga was dreamt of.

The expedition will have its uses, apart from its declared object. If successful, it will once and for ever prevent any such cruelties to shipwrecked people as have been perpetrated by the Boutans occurring again. Further, it will have—it has had—the effect of occupying the minds of the soldiers and the samurai, and will most probably restore the loyalty of both. It may lead to an outcry to be led to Corea, but, at any rate, it gives the ministers breathing time, and will shew them practically the expense of such enterprises; and they will be able to form a better estimate of the cost, and to come to a conclusion whether the game

is worth the candle. But, beyond this, the officers of this expedition have already had practical proof of the necessity of far stricter discipline among the soldiers than has yet been obtained. A great deal has been made of the small affair at Sekimon; but, from private information we have received, and we have good reason to believe that similar information has been officially sent to the government, the impetuosity of the soldiers goes nigh to render nugatory the "best-laid schemes." In the *Tokei Journal* account we read, "It was a victory, but it was at the cost of a plan which must have secured the defeat, if not the annihilation, of all the Boutans. Admiral Akimaru at once ordered the withdrawal of the forces; but now that the soldiers had felt their power it was thought that it was impossible to longer postpone an attack." Every instance of conflict up to that time had arisen through the wilfulness of soldiers going out of camp, against orders. They are far from insubordinate; but as yet they do not recognise the necessity of one head directing all, and every man yielding implicit obedience. Whilst, then, the soldiers rejoice in what they fancy a victory, the commanders complain of its altogether upsetting their plans.

No doubt both the Admiral and the Commander-in-Chief now recognise the necessity of strict discipline; and this small campaign will be valuable if it leads to the introduction of a better state of things in this respect.

We would be glad if these hostilities should be the last in which Japan should have to engage, but we are of opinion that a Corean conflict is a mere question of time. Let those who think otherwise hold their opinion; we are convinced that we shall be found to be correct. It will be a great thing if, when that time comes, the naval and military forces have attained to greater perfection of obedience; and we hope that the government will not again "let loose the dogs of war" until both services approximate in some measure to the foreign models they have selected for their soldiers and their sailors.

AN ARTICLE in the *Japan Mail* of Saturday last taxes Mr. Le Gendre with misrepresenting to Mr. De Long facts, on the strength of which misrepresentation Mr. Le Gendre was endowed "with the rank of Nitokwan, or a position in the second grade of officials, the bestowal of a boundless salary, the presentation of Excalibur at the sacred hands of His Imperial Majesty, &c., &c."

Of General Le Gendre we cannot help observing, that we believe him to be in the right in refraining from noticing such diatribes as this. But we think it is altogether so unfair to attack a man in this way unless he be a very rogue, whose ill-conduct justifies whatever lashing he may receive, that we will tell what we know about the circumstances especially mentioned by the *Mail*. We took occasion for our own information and the better to understand the Formosan affair, to make minute enquiries in a quarter we know to be correctly informed; and which had no object in deceiving us and every reason for giving us correct information.

The *Mail* says, "It is idle to deny that the Formosa expedition would never have been undertaken but for the Saga insurrection, of which it is the direct offspring." We should rather put it that the Saga insurrection was the direct offspring of the refusal of the present ministers to go to war with Corea and to punish the Formosans.

Long before the Saga insurrection, the engagement of General Le Gendre was made by the Japanese government. In November, 1872

—we took care to be thus minute in our enquiries—Mr. De Long first addressed a letter to General Le Gendre, stating that the government of Japan had been making enquiries of him respecting Formosa; and asking him to defer his departure to America over one mail, that he might give the benefit of his information upon Formosa to the government. At this time, we have reason to believe, Mr. De Long and General Le Gendre had never met. General Le Gendre consented to remain, and having placed at the disposal of the government a large quantity of information, obtained after much personal experience of the island and its aborigines, he was requested to remain permanently and take service under the government. For sometime he steadily resisted, saying that he considered himself still in the U. S. service, although he had permanently left China. He also mentioned that the Japanese could hardly offer him the equivalent of what he looked forward to in America, and said that it was impossible for anyone to obtain proper respect in Japan, unless he had rank; and he would not think of entering the Japanese service for that reason, amongst others. He added that he had been nominated by the President as U. S. Minister to Buenos Ayres, although Congress adjourned without having his name presented to them. This was quite understood by the Japanese concerned. General Le Gendre remained here two months, and gave all the information he could to the government, placing at their disposal the while, an amount of information, comprised in his own voluminous notes, a variety of rare and valuable works, and original maps, which it is doubtful if they could have obtained from any other person in the East. He was then going to America by the Mail steamer, steadily refusing to receive any remuneration for the services he had rendered during his stay. It was then that Mr. De Long wrote to General Le Gendre a letter, urging and reiterating his wish that he should accept the appointment the government were so strongly desirous that he should fill; and telling him that the government had conferred upon him the second rank, Nito-kwan, on the condition that he should remain. General Le Gendre had frequently been requested to name his own terms, but always said that this was no object to him. Mr. De Long, however, in his letter, named a sum which the Japanese were willing to pay—and that sum is certainly not entitled to the term 'a boundless salary;' for it is far less than the half of the biggest salary paid by them for foreign services.

At the last moment General Le Gendre yielded to Mr. De Long's earnest representations that he wished it to strengthen the relations between Japan and America.

This much we have learnt, and are sure that in the main it is correct. And we publish it because we do not think that a man who has held the position of American Consul at Amoy for several years with such credit that the President recommends him for promotion, and whom the foreigners of all nationalities, after bidding him farewell, delight further to honour, can be all of a sudden so vile as he is painted. It may not be generally known that, after General Le Gendre's departure from Amoy, a large sum of money was sent from thence to the Chamber of Commerce of (we think) New York, with a request to purchase a service of plate for him. But we are informed that such was the fact.

TO UNDERSTAND those who do not understand themselves is a gift not possessed by most mortals; and the action of the Japanese government now is of that thoroughly

vacillating and uncertain character that "no fellow can understand."

We should like to know, first of all, whether there is a ministry at all in the country. Of course we all know that there are a certain number of Sangi, but whether they all attend to their duties is very uncertain. Rumour assigns to them great resolution one day, and extreme wavering the next; and, whether it be so or not, they get the credit of acting like so many spoilt children, resigning on the slightest pretexts, and holding their offices when a little gentle pressure that flatters their vanity is brought to bear. For instance, we do not believe that any one knows whether Okuma is Finance Minister or not; and we are not sure that he knows himself. And as to the Taiwan Kiyoku, the Department of Formosan Affairs, who is now its chief? We cannot tell.

From good sources we learn that the government, against the advice of foreigners whom they pay well to advise them, are determined to settle a colony on the south-eastern coast of Formosa. It is said that they have laid their case before certain legal functionaries, and have been advised that Japan is perfectly justified in pursuing the course she has taken; and consequently, so far from withdrawing from Formosa, they have made up their minds to establish a colony there. This is surely pure folly; for if she is willing to spend so much money, how far wiser would it be to spend it in her own boundaries. It would go twice as far in the good it would effect, the number of persons it would employ; and in developing resources which have been most loudly declared to exist, but which, now, a good many people view as very doubtful.

The lost efforts of individuals may frequently be a fair subject for sympathy. Disappointment may overtake them in spite of the most constant and persevering exertions. After years of patient striving they may find themselves brought to a stand-still for lack of means to continue. But the Japanese make splendid beginnings; and just when every one thinks that they really are in earnest, and results are likely to arise, they rein up, and the efforts that have produced the admiration of all beholders are utterly wasted and thrown away! And they do not stop for want of funds; for they scatter money freely enough in other directions. There are no less than three departments that we have in our mind's eye, which seem to have come to a standstill in this way. And we feel regret, when we hear of colonizing such a region as that which now occupies attention, while their own people might be well employed on their own soil. Dog-in-the-manger like, they equally refuse to allow foreigners to expend capital in developing their country, or to do it themselves; but they speak of colonizing far-away isles, which, even if they had more men than they knew what to do with, would be of little use to them.

The climate of Japan is exceptionally good. The soil is grateful and the subterranean treasures are abundant. And yet she sends one colony into a region which is half of the year under the snow, and another into a country which is always hot, and generally unhealthy. Were there anything to be gained by it, allowances might be made; but no good end is served by it. We may be told that one colony is to serve as a preventive against Russian occupation of the territory; but if Russia has an idea of possessing it, and the settlements of Japanese are the only obstacles, she will easily find means of surmounting that difficulty. And we may be told that Formosa will be a good outlet for her discontented Samourai, and be a safety-valve against those who would press for a Korean campaign. But if the

Government are content to spend money to keep these men quiet, the best plan would be to provide them with constant occupation.

Nothing makes men good citizens so surely as easy circumstances; and the judicious outlay of capital, or even judiciously facilitating its outlay by private persons in remunerative enterprises, would go far towards allaying the excitement that still exists among the samourai.

THE recent ease in the American Consular Court, in which a claim was made by the Government of Japan, through its Finance Department, upon the Pacific Mail Steamship Company, for breach of charter-party, was just what was wanted to give force to recent remarks made in this journal upon the unsatisfactory manner in which the government of this country is now being carried on. Who is at the head of affairs? How is the business of the Empire conducted, and by whom? Of course, we shall be told, by Daijokuan. But who are we to include in Daijokuan? The three Daijins—Daijo, U and Sa—the Sei In and the Sa In. Yes, but of the Daijins how many attend to business? And of the heads of the various departments, the Kiyo, how many attend to their duties. To a foreigner, the manner in which these things are managed here has the appearance of children at play, rather than of men (for we cannot write statesmen) governing an Empire. Okuma is the head of the Finance Department—one would suppose, the most important in the state. But he is appointed at the same time to the charge of the Formosan or Colonization Department; and has to leave his duties at the Okurasho to be done, or left undone, by another. In like manner, Okubo, the Minister for Home Affairs, was made to leave his duties at headquarters in Tokai, to go, first, to put down the Saga rebellion, and then to Nagasaki to quiet the temper of the men who determined to proceed to Formosa, whether with or without imperial orders. So do we see, everyday, men of important position having other duties assigned to them, in addition to those originally held; and often the two duties are of the most opposite character. Take the last that was mentioned, for instance. An officer is required for the judicial department, and, behold, one in the Navy Department is ordered to fulfil the duties, in addition to his former ones.

During the last eight or nine months, that is, ever since the change in the government which took place in October last, the reports of resignations among the higher officers of government have been almost incessant. Yet few real changes have taken place. Sangi have stayed away from office on the plea of illness; but the work of the government has been floundered through somehow—showing that, under certain circumstances, a head is not absolutely essential to vitality. But what a state of incertitude and unpleasantness has been engendered by all this!

The case before the U. S. Consul was in itself a most simple one. The steamer *New York* was chartered by the government to go from Yokohama to Formosa, via Nagasaki. At this last-named port, the charter was broken. Was it by the company or the government? It has been decided that the company was not to blame, and that no damages can therefore be claimed. This is what was generally foreseen. But the extraordinary fact connected with the business is, that an officer of Okurasho, and he not the Kiyo, or responsible minister, should attempt to make it appear that the company had failed in the contract, when there existed a document, said to have been signed by Sanjo Daijin, but at all events

passing through the Foreign Office, which proved the reverse. Surely this could hardly have happened had the Daijokuan been acting in unison, instead of being all in a muddle.

It was recently reported that Okuma had resigned his office of Okurakiyo. It is now said that, having had his sulk out, he has returned to his duty. For the credit of a man whose ability has been very much lauded, we hope that he had no voice in pushing this case into Court—for it is not creditable to the government. It shews at once the sorry picture of a ministry divided against itself, when one department, or a person in highest authority, takes action, and another department attempts to punish those who carry it out. How disgraceful an *exposé* of the absence of concentration of authority is it, that it was necessary to ask such questions of a Japanese witness as, whether the Colonization and Foreign Office Departments are equal in rank; and as to the relative rank of their chiefs. In other words, would the orders of the Chief of the Colonization Department over-ride those of the chief of the Foreign Office; the issue being pared down to so fine a point as to the rank of Mr. Okuma and Mr. Terashima.

We hope that, in future, we shall see no other instance of one department dragging the government through the mud in this way. It is perhaps well for the people of Japan to get a small glance behind the scenes, that they may judge for themselves of the absolute necessity that exists for some reform in the conduct of affairs. Let the Chiho Kaigi or Deliberative Assembly get to work as quickly as possible, and let them resolutely insist on the rectification of such an unfortunate state of affairs. Let them keep ministers up to the mark by shewing them that they must work together, or retire; that there be no disunion in the Imperial Councils, bringing the government into disrepute and causing natives and foreigners alike to regard it with indifference, if not with contempt.

### TREATY LIMITS.

#### A HYPOTHETICAL CASE BEFORE A MODEL CONSUL.

This was an action brought by the Japanese Government against A—B—, described as a merchant resident at this port, in the X— Consular Court, for having exceeded the limits of travel as stipulated in existing treaties between Japan and foreign nations.

Mr. C— appeared as prosecutor, on behalf of the Japanese Government, being accompanied by several officials of the Saibansho.

After taking the evidence for the prosecution from Japanese witnesses, which was clear enough as to the fact that Mr. A—B— had, on a pleasure excursion, proceeded a distance beyond the ten ri, and which, indeed, the accused did not deny, His Honour addressed the prosecutor as follows:—

You prosecute Mr. A—B— for having exceeded Treaty Limits, and he does not deny having done so; but, as there is no penalty specified in the Treaty, it will be incumbent upon you to make it clear to this Court that the Japanese Government has sustained damage by the action of the accused; for the law by which I have to judge Mr. A—B— is the law of his own country—a law which allows every freedom to those subject to it, so long as they do not trespass on private rights or offend against public morality. If you can prove to this Court that the Government of Japan has, as I have before said, sustained damage, and you can likewise prove the extent of that damage and place a money

value on it, it will be my duty to entertain your case, and I decide according to the evidence which may be brought forward on either side. But it appears to me that, forasmuch as by Treaty there are certain limits of travel allowed to foreigners, it is at the option of the Government you represent to place barriers at those limits, to prevent the passage of foreigners beyond them. But, having allowed the passage of a foreigner, the Japanese Government has only the right to arrest such transgressor and bring him before his Consul. Whether the expenses incurred in such arrest and transport would be allowed if claimed in this Court, I shall not decide, before such specific claim is brought before me.

I am aware that one honorable member of the diplomatic body has even argued that, although passing outside the limits is an infringement of the Treaty, the Japanese Government, in sending foreigners for its own purposes beyond those limits, has virtually annulled the clause. But I do not acquiesce with this view of the case, for the reason that the Treaty does not stipulate that foreigners shall not go beyond such limits, but that "within" those limits foreigners "shall be free to go"—these are the actual words. The permission, therefore, or the commands of the Japanese Government, in individual cases, does not, in my opinion, consequently concede the right to other foreigners. It would be different, indeed, had the Japanese Government made such concession to all subjects of any one nation, then the "favoured nation clause" would have conferred equal privileges on all nationalities. I have thought proper to lay before you my views on this subject, because I do not for a moment doubt but that the Government which I have the honour to serve would endorse them; and to shew you that, whatever my private feelings might be on this question, I am bound to administer justice in accordance with the engagement solemnly entered into between the Japanese and my own Government.

There is one doubt, however, in my mind, and it is one on a very serious question—namely, as to whether there is or there is not, at the present moment, any treaty in existence,—the revision having been delayed for two years. And I think it very uncertain whether my government would support me if I were to enforce any penalties under the former treaty; rather, whether—"treaty right" having been allowed on the part of the Japanese Government to become void—I should not be justified in insisting on "natural rights." You will do me a favour by bringing to the notice of the government you represent in this Court, what you well know yourself, that in civilized societies certain laws and customs are recognized as necessary to the existence of society. For instance, in a populous town, chemical works from which nauseous vapours may proceed, are prohibited; private privileges which interfere with municipal governments are broken down; in fact, individuals have to conform to regulations for the general weal of the bulk of the inhabitants. Similarly, in an advanced state of civilization, we now look on the various nations of the world as a society on the grandest scale, and naturally ask why the government of any particular country should be allowed to hedge itself round with a restrictive policy, and prevent free intercourse between its own subjects and citizens of other countries. Nations are gradually assimilating in manners, customs, and ideas, and are in many ways uniting in this grand cosmopolitan association. The mis rule of a government

over its own subjects is jealously watched by the people of other countries, and commensurate cause is made against imperious government. It would be well, therefore, for the rulers of Japan to be alive to this fact, and so remove her institutions as to keep pace with the spirit of the age. For it may otherwise happen that external pressure brought to bear on government in which its own subjects have lost confidence, and which they may have ceased to venerate, may facilitate internal dissensions, and bring about its ruin. I speak in the spirit of friendliness, as the representative in this Court, altho' in no exalted position, of a great country in the van of advancing civilization; and one that would, if it saw Japan trying to advance in the same path, only be too ready to hold out a helping hand.

With these remarks, I dismiss your case. It now stands, with the assurance, which you will please make to the government you represent, that I am ready on all occasions to listen to such representations as it may be inclined to make, either through yourself or otherwise, as may be in accordance with liberty and equity, and based on an enlightened and liberal policy. But I must distinctly say that I shall ever—and I consider it my duty to society in general—set my face against frivolous and vexatious complaints, made in the spirit of hostility which I regret to have noticed seems of late to have influenced the Japanese Government in their dealings with foreigners; and by taking such stand, if I am not greatly mistaken, I shall be doing equal service on the one side as on the other.

### OPENING OF THE NEW TEMPERANCE HALL.

THE FESTIVITIES in connection with the opening of the New Temperance Hall on Lot 56, place last evening (6th inst.), and assumed the form of a tea-meeting, followed by a public singing and musical entertainment, at which Harry Parkes, K. C. B., presided. The Hall, which presents a pleasing appearance, has been erected, under the direction of the Committee, in a very short space of time, the accommodation demanded having been greatly in excess of what was available at the old place on Creek.

Shortly after 6 o'clock last night, quite a dense crowd thronged the front in O Street, and the Lodge Room of the "G. Templars" above stairs, and the various dormitories, contained a large number of residents of the Hall and their friends.

At half past 6, the hour appointed for tea, the doors were thrown open, and the dining room, or Hall proper, was quickly filled with representatives of both Services, English and American, forming the majority of those present, although many Civilian well-wishers were present by their presence practically testified their sympathy with its objects. About 180 sat down to tea, and it was fully half past eight before all were provided for, and clearance could be made for the public meeting which was to follow. The room was brilliantly lighted, and draped with the flags of various nations, the British and American occupying the place of honour at the head of the room. Such was the crowd assembled at the hour appointed for the meeting that it was with difficulty that the audience were accommodated; indeed, many had to be content with standing room in the adjacent ante-room and passage-ways.

Sir Harry Parkes, who had kindly consented to preside, took the chair at half-past eight, and a Temperance hymn was given out and sung, to the accompaniment of a piano. The Chairman then addressed the meeting in a few felicitous remarks, and called upon the President, Rev. J. H. Arthur, to give a statement of the affairs of the Hall.

Mr. Arthur said their Temperance Society had been organised last fall with 9 members, and now they had 170 names enrolled as belonging to the Temperance Corps. Since that time, much good had been done, and more especially amongst the Marines now stationed in Yokohama. Mr. Robinson, a great Temperance advocate, and a friend of soldiers, had stated that, in England, amongst the military, only one man in 17 was a total abstainer; here, he has happy to say, they had one in every 8 or 10, amongst the Royal Marines. Their Treasurer, he regretted to say, was at present absent from Yokohama, and he was therefore unable to present their Report and statement of accounts, which would, however, be found in a sheet devoted to the cause of temperance on the East Coast, published in Nagasaki. After the reading of some statistics as to the numerical strength of their body in Yokohama amongst the seamen of the men-of-war now in harbour, the speaker alluded in eulogistic terms to the very great obligations they, as a body, and the community in general, were under, to the ladies of Yokohama, for their exertions, influence, support, and prayers on behalf of those they sought to reach; maintaining that the first step to a higher, a Christian life, was a resolution to adopt the principles they professed. The Rev. speaker concluded by tendering to the Sailors and Soldiers a hearty welcome to the new Hall, which he hoped they would always look upon as their home.

Rev. J. H. Cornell gave an exceedingly interesting account of the objects and operations of the Fraternity of Good Templars, from which it appeared that the Yokohama Lodge, started in October last by 80 Soldiers and Seamen, now numbered 187 members, who had signed the constitution of the lodge and enrolled themselves under the banner of Temperance.

The Chairman said, after hearing the eloquent remarks which had fallen from the two previous speakers, he felt a diffidence in again presenting himself before his audience: who would no doubt attribute that diffidence to the fact of his being neither a total-abstainer nor a *Good Templar* (Laughter). He most heartily agreed with what had been said that evening. Although not a man-of-war himself, circumstances had thrown him much amongst men of both branches of the Service, and he was acquainted with their sterling qualities, their generosity, their simplicity of character; and perhaps none knew better than he their peculiar liability to be led astray, and therefore he more especially could appreciate and admire the efforts that were being made to protect them when they left their ships and came ashore. In these two Societies, the Temperance and the "Good Templars," he saw a safeguard against the temptations and dangers to which the class of men he had referred to were exposed; they had his hearty approval, and it should be a future pleasure to him to examine more carefully into their principles and precepts. The number of grogshops in the community was much too great, and the manner in which they were conducted by no means reflected credit on many of those who kept them. He thought that anything that could be done to raise the moral tone amongst them was highly commendable; that the Eu-

ropean people might be creditably represented to the nation by which they were surrounded. The Institution within whose walls they were then assembled was not so much a Club as a safeguard against the temptations which were thrown in the way of the sailor and the soldier, and he would ask those present, whether total abstainers or otherwise, to give every credit and support to those disinterested men and women who had done so much, and who were doing so much, to assist those to whom all, of whatever nationality, were indebted—the soldiers and the sailors—when cast amongst the snares and temptations which beset "Jack-Ashore."

Rev. E. W. Syle briefly spoke on Church matters, and details connected with the building of the new Hall.

Rev. Mr. Arthur replied, and the Chairman gave out another Temperance hymn, which was sung to the tune of "God Save the Queen," by the audience.

This concluded the formal portion of the proceedings. Selections of vocal and instrumental music, by Messrs. Wylie, Jaquemot, Black, Capt. Fletcher, and others, followed, and were received with great applause; and encores, in most instances, had to be submitted to. Capt. Fletcher was requested by the Chairman to sing an American song, but pleaded he was a Formosan. He, however, sang, with capital effect, an English song, *Tom Bowline*, with a special view to the delectation of the many "Jack Tars" present. Mr. Wylie obtained an encore for his comical Coronation song, and gave that ancient and very pretty ballad, "The Bailiff's Daughter of Islington."

A vote of thanks to the Chair was proposed by Mr. A. J. Wilkin, seconded by Rev. E. W. Syle, and carried by unanimous assent. Three cheers for Sir Harry Parkes, three for the ladies, and three for the singers, brought a most successful evening to a close.

### THE WAR IN FORMOSA.

FROM THE CORRESPONDENCE OF MR. E. H. HOUSE.

THE following narrative of incidents connected with the first landing of the Japanese force in Formosa is from the correspondence of Mr. E. H. House with a New York journal:—

The steamship *Yuko-maru* entered Liangkiao Bay at 9 o'clock on the evening of the 6th of May, and anchored about 10. Before sunrise on the morning of the 7th, one of the Chinese interpreters went on shore, according to the instructions prepared in Yedo, to seek certain natives of some standing among their fellow-villagers, and bring them on board for a conference. In this, as in other minute details, the formal directions issued by the Japanese Government were of the most explicit character, and were so arranged as, at this stage of proceedings, to regulate every successive step in the movement with scrupulous discretion. This is important to be remembered; as the general course of affairs will show with what caution it was determined to avoid every appearance of aggression, except as a last resource.

Soon after six o'clock, the interpreter returned with the men for whom he had been sent. They were a son and near relations of the "head-man" of the village of Sialiao, who had served General Le Gendre as guides at the time of his visit in 1872. They were at once received by Lieutenant-Commander

Cassell, between whom and the oldest of their number, named Miya, a conversation of much interest ensued. The information to be conveyed to these men had been preconcerted in Yedo, and was imparted as follows:—

They were told that the government of Japan had determined to send an expedition to aboriginal Formosa, to punish the Boutans for the murder of Japanese subjects in December, 1871; that the Sovereign of that Empire was at first greatly incensed at the people of the Liangkiao valley for not having undertaken to chastise the offenders in the same manner as, in conformity with the agreement entered into with the U. S. Consul in 1867, they would have dealt with them if they had molested Americans; that later investigations had shown that the Sialiao people had really not been indifferent to the fate of the shipwrecked Liukiuns, but had aided General Le Gendre in his inquiries concerning their slaughter; in return for which, orders had been given to protect them from all annoyances that they might apprehend in consequence of the presence of a foreign force; that twenty-five thousand soldiers were ready to start for Formosa at the shortest notice, should they ever be needed, but that, if trustworthy assurance of the corporation of the Sialiao communities and the tribes of Tokitok could be obtained, only the advance body, a few thousand in number, would be brought. The native deputation, through Miya, promptly answered that they were ready to afford all the assistance in their power, and to give the troops every facility for landing and encamping. They could not speak for the savage tribes, in regard to which they had no new intelligence to give, except that of the recent death of Tokitok and the succession of his eldest son. These subjects having been disposed of for the moment, an offer was made to engage the services of Miya and one of his companions, as mediums of communication between the Japanese and their own people at the outset, and subsequently the inhabitants of Southern Formosa in general. The proposal was readily accepted, and the interview terminated as satisfactorily as could be desired. It could hardly be otherwise to the islanders, for the sum offered them was not only liberal, but was probably munificent beyond their wildest expectations. It was even a question whether such excessively open-handed treatment might not prove an inconvenient precedent, although the exact terms were laid down by the authorities in Japan.

Before returning to the land, the visitors wandered for a while about the ship, curiously examining its contents and appointments, which they were of course permitted to do as freely as they wished. They, also, were subjected to some scrutiny, but there was little about them to reward prolonged attention, although they were of the family of the chief of the village. Their dress was precisely like that of the lower classes of Amoy—a loose jacket, and wide breeches reaching a little below the knee. They wore light turbans twisted about their heads, and their only ornaments were red cords wound about their long tails, with here and there a bright coin braided in, and rude silver bracelets fastened about their wrists. Though not particularly voluble, their mouths were never inactive. The betel nut furnished continual occupation for their teeth and lips. Their cheeks were distended, to an extent which the most inordinate chewer of tobacco could not rival, by masses of red pulp, from which streams of stained saliva overflowed the gums, discolored the whole interior of the mouth with an unwholesome

pinkish hue. The nuts were sometimes so large as to protrude between the teeth, producing an effect half ghastly, half grotesque, and shedding ruddy fountains upon the cheeks and chin. Except in the persistent indulgence in this habit, there was little to distinguish these men from the Chinese of Amoy. Even their dialect was not materially different. They had a sort of openness and independence of bearing which would not be found in a crowded Chinese city; which is doubtless attributable to their freedom from oppressive authority and their self-reliant ways of life.

At eight o'clock, a few of the higher Japanese officers, with the American attachés, went on shore for the purpose of selecting a suitable site upon which to establish a camp for the expected force of three thousand men. It may be mentioned, as a further proof of the caution with which the Japanese plans were arranged, that the instructions under which Lieut. Commander Cassel acted, required him to ascertain if any objection would be made to his landing, by authority representing the Chinese government; and, in case such objections were offered, to abandon the position and proceed to a point some distance further south. Here, again, he was to make inquiries, and, in the event of a similar result, was once more to seek a remoter place of debarkation. If he should be still opposed, he was this time to effect a landing in spite of resistance, and by force, should that be necessary. This last designated spot being, beyond all question, outside of Chinese jurisdiction, no hesitation was felt as to ordering decisive action. With regard to the other two—as some kind of claim, either genuine or assumed, might possibly be put forward, it was considered both expedient and just to relinquish them, rather than risk the chances of future complication. But no indisposition to receive the troops was shown, and the work went on according to the first intention.

The boat containing the surveying party entered one of the little rivers, which is accessible only at high tide, its mouth being obstructed by a sand bar, and worked its way inland a few rods, to the village over which the father of Miya presides. The first to land was Major Fukusuma, the Japanese officer in command of the small body of marines attached to this part of the expedition. The entire settlement was found to consist of about a dozen houses, the outward appearance of which was truly extraordinary in such a place. They are of one story, and neatly built of cemented stone and fine red brick. The roofs are of compact tiles, and the spaces upon the walls beneath the ridge-lines are decorated with simple bas-reliefs. The interiors are substantial and tolerably clean, and in every conceivable way superior to the quarters of the inhabitants of Chinese coast cities. There is not, for example, a house to be found in all Amoy that can be compared in architectural pretension, convenience, or tidiness, with those of the fishing village of Sialiao. They are generally double edifices, two structures of equal size, perhaps twenty five feet square, standing one behind the other, partially separated by a court-yard of nearly the same dimensions, but connected by narrow passages on each side. In the rear are out-houses, for cooking, etc. The floors of most of the main buildings, and of the yards, are paved with large square bricks or stones. Furniture is not profuse, but what there is of it is solid and serviceable. There are arm-chairs, especially, that would not discredit a New England farm

house. Tables are abundant, but are less elaborate in form and ornamentation. The beds are generally mere shelves, set in recesses, though one or two are of quite a stately fashioning. Many of the panels in the walls are embellished with rough Chinese designs, which show that, although the political authority of China is in no way recognized here, its limited artistic influences to some extent prevail. Against the back wall of the rear house of each establishment stands a Buddhist shrine, with the appropriate tablets and images. The rude weapons of the locality are conspicuously displayed:—old matchlock guns, in as good condition as such instruments can be; short swords in curious wooden scabbards, which are so constructed as to cover only one side of the blade, the other lying exposed; bows and iron-pointed arrows, and variously fashioned spears and lances. The prevalence of these weapons shows, if not a warlike disposition on the part of the inhabitants, a sense of the necessity for familiarity with their use. There was not a native that came in sight during the whole of this first day but was fully armed and ready for hostile action.

In the enclosed spaces about the houses, pigs and chickens are gathered in great numbers. They are regular articles of food, together with fish, rice, millet, and sweet potatoes. The few streets are principally in possession of droves of "water buffaloes," small light-colored animals, with retreating horns, the points of which are in a direct line with their noses. These appear to be the most useful beasts of the neighborhood. They are employed for all sorts of draught purposes, and are not unfrequently ridden as we ride horses. The edges of the streams are filled with ducks, which are valuable for the eggs that they supply.

During this first brief visit to the houses of the chiefs, the populace clustered about in all available strength, inspecting and discussing the strangers with complete freedom from diffidence, and the easiest possible unconsciousness that their close companionship was not a boon. The costume of the better class of the men was that which I have described as belonging to Miya and his associates; that of the inferiors was a waist and loin cloth of the most abbreviated form consistent with decency. The women were clad precisely like the "head men," almost all of them wearing a silver bracelet on each wrist. Their hair was braided into long tails, and wound about with white cords. In some instances it was furthermore adorned with artificial flowers, and two females from the mountains, each of whom, by-the-by, had with her a really beautiful child, were distinguished by heavy gold ear-rings and other glittering trinkets. Few of these women were naturally disagreeable in appearance, and many would have been pleasing but for the slimy erubescence of their mouths. Children were plentiful—apparently too numerous for the supply of raiment on hand. The majority of them, up to the age of seven or eight years, had nothing on but dirt. In the whole village there was just one woman of genuine Chinese aspect, with gum-stiffened and fantastically plaited hair, and stunted feet about four inches long.

In order to obtain a favorable view of the valley, and to fix upon a proper camping ground, it was thought desirable to ascend a small hill, some three hundred feet in height, close to the shore, and overlooking the entire neighborhood. The pathway to the foot of this elevation led through fields of barley and sweet potatoes, and touched upon two or three

hamlets of greatly inferior quality to that at which we had landed. There were no brick houses to be seen amongst them, and the best of the dwellings were mud huts with coarsely-thatched roofs. The whole surface of the plain, excepting where it was under rough cultivation, seemed sterile and sandy. Sagebrush was common enough, but hardly any other kind of shrubbery. Clusters of low palm-trees, so thick as to form an almost impenetrable jungle, were abundant. It was not difficult, while passing through them, to thoroughly understand the hopelessness of any effort at abrupt invasion like that attempted by the "Hartford" expedition. Every rod of the tangled and winding foot-path afforded fresh opportunity for ambuscades, that could not be approached without a perfect knowledge of the country; and even then could not be successfully assaulted by the methods usually at the command of invading armies. The passage up the hill-side was troublesome and fatiguing. The way was narrow and abrupt, through irregular gullies, and over sharp and broken masses of rock, and the heat was excessive. The Japanese officers, who still held to the fur-trimmed jackets of the uniform in which they left Yedo, suffered extremely.

From the top of the hill, the entire Sialiao or Liangkiao valley, about fifteen square miles in extent, was visible. It is surrounded by a range which averages perhaps two thousand feet high. While we stood upon this summit, the report of a gun from below attracted our attention. A procession of twenty or thirty men and women was seen entering the plain from an opening in the hills, all with weapons which glistened in the sunlight, and preceded by a leader bearing a red flag. Three other shots were fired in swift succession, and for a moment it seemed possible that a deputation might have come in from the wild tribes, especially as a red flag was the signal of recognition agreed upon in the old convention with General Le Gendre. But this prospect of diversion from the regular order of proceedings was set aside by the intelligence that the demonstration was nothing more than the ordinary accompaniment of marriage festivals, one of which was now in progress.

After returning to the village, where it was necessary to remain quiet during the heat of noon, a proposition was made by Miya to kill a pig. Nobody wanted pig, and nobody had any sort of desire to see one killed, but, as the offer seemed to imply hospitality, we were disinclined to make any objections. It would have been a pity, all thought, to throw cold water upon the first glow of native goodwill. It turned out, in the sequel, that we need not have given ourselves any concern on this point. Miya, though on kindness bent, had yet a frugal mind. A somewhat hesitating offer of payment, when we left, was accepted without any hesitation whatever. The pig was slaughtered in full view of the visitors, a couple of chickens were arrowed out of existence, and preparations set in for a feast of generous magnitude. Everybody around was invited, or invited himself, and a merry bustle of anticipation spread over the scene which might have touched the Japanese more deeply than it did if they had known that they themselves were the responsible founders of the entertainment.

At noon the meal was served, and was duly disposed of by such as were hungry. A little later, a new tour of investigation was undertaken, with the object of examining more closely the places that had appeared eligible

for camp sites. This labour having been satisfactorily accomplished, the party returned, toward evening, to the ship, where all except the Chinese interpreter passed the night.

The following extracts are from letters of Mr. House to New York, written on the night of the disembarkation of the first troops in Formosa, May 8th.

1.—I look upon the selection of this spot upon the western coast for the base of the movement as another example of the caution and prudence with which the details of the expedition were pre-arranged at Yedo. Here, the inhabitants were known to be, not precisely friendly to strangers, but at least not positively hostile. They were not likely to oppose a landing in any violent way, whereas the people of the eastern side would probably have begun their part of the fighting at the water's edge. The result of such an encounter, even when conducted with the advantage of tactical skill on the side of the invaders, was fatal in the case of the "Hartford" expedition. It would almost certainly have been so in this instance. I do not doubt that the Japanese would have striven manfully, and it is quite possible that they might have continued the struggle until the last man could no longer lift a hand, for that was the way they fought in 1868, as plenty of witnesses can testify; but the odds would have been against them, and a repulse at the outset would have seriously disturbed the calculations of those who projected the enterprise. By landing in the Liangkiao valley several points were gained. It is a score of miles beyond Pongliao, the most southern place at which the Chinese make any attempt to exercise authority, so no conflict with the Chinese officials could reasonably be apprehended; the chances were all in favour of an easy and undisturbed transfer of men and provisions from the ships, and ample time would be afforded for the accumulation of a force the strength of which, being reported to the hostile tribes, might so impress them as to render unnecessary the resort to extremities. On the occasion of the Chinese march against the Koaluts, in 1867, the knowledge that a really powerful body was moving against them first caused the aborigines to make advances which averted the necessity for conflict.

2.—My own speculations, yesterday and to-day, have led to the very strong conviction that, in this part of the island, a stranger travelling and mixing among the natives with obviously no hostile design, would suffer no molestation; for the tribes, though half uncivilized and jealous in temper, have no traditional wrongs to avenge, and are very far from barbarous in their disposition or habits. But in the event of suspicions of injurious intention being aroused, the case would be wholly altered. If these people get it fixed in their minds that this expedition has come with aggressive purposes respecting themselves, they will be difficult to deal with, for they will be under no restraint but that of fear. I believe that the strictest orders have been given to avoid allowing them any fair ground for suspicion, but the difficulty of fulfilling such instructions is only too obvious. Under the best circumstances, the situation cannot be agreeable for the new comers. If they are especially forbearing, their lenience will not be appreciated. If they are arrogant or severe—which, however, I do not anticipate,—the islanders will assuredly retaliate in their own wild way. I look upon the establishment of any trustworthy relations between the Japanese and the Formosans of this neighbourhood as out of the question, for a long time to come; and I will

venture the rashness of a trifling prediction—namely, that, until evidence of overwhelming strength shall have been given, either by some vigorous demonstration or by the quiet planting of an irresistible force here, there will be no safety for the lives of Japanese at any distance from their own encampments.

3.—It should be understood that the piece of land selected for a camp was not forcibly taken possession of, but was occupied under a verbal agreement with the owner, who consented yesterday to surrender it temporarily for a reasonable consideration. The phrase is too elastic, and, I apprehend, may lead to inconvenience, as we have already had one or two examples of the suddenly aroused rapacity of these natives.

4.—The general demeanor of the populace, at the first stage of proceedings, this morning, indicated a genial conviction that the whole affair was a sort of pageant prepared and sent hither for their entertainment. At the outset they viewed it objectively, and as interested spectators, but gradually it occurred to them that it might not be altogether amiss to stroll in and take a hand. So they walked up to the sentries and suggested, in pantomime, that they should like to handle the rifles a little while. When this privilege was denied them, they appeared to interpret the refusal as casting a doubt upon their honesty, and proposed to offer their matchlocks, spears, and bows and arrows in exchange. Nothing, they argued in expressive gesticulation, could be fairer than this. But as the guards still declined, they became highly indignant, and remained so until they caught sight of the Gatling guns, conspicuously planted in front of the tents, when their ire gave way to the liveliest curiosity. I believe that sudden transitions from one extreme of temper to the other are characteristic of all uncultivated races, but I never before saw such frequent exhibitions of the trait. It is impossible to say whether it was the complicated mechanism or only the bright polish of the Gatlings that attracted them, but they were clearly of opinion that a few minutes might be pleasantly passed in inspecting the strange objects. So they started off in a new direction, and of course were stopped again by another set of sentinels. This was a monstrous and intolerable interference with their rights. They had been angry before, but now they were thoroughly infuriated. Why should they not go wherever they wished to go, in the Liangkiao valley? In all ages, nobody had ever questioned their privilege before. On the whole, they thought they would go, in spite of resistance. I must say that the self-restraint of the Japanese authorities, under these embarrassing circumstances, was most praiseworthy. They did not yield—that was out of the question—but they contrived to keep the mob back, without the slightest display of violence, and without allowing themselves to be disturbed for an instant from their good humor by the shrieking abuse bestowed upon them. They treated their assailants as they would have treated a parcel of angry children at home, and the result was, that the natives, finding they could make no impression upon them, withdrew from the lines and held frantic indignation meetings at short distances. One energetic fellow, with a closely-shaved head, was apparently possessed of an idea, which he communicated with immense energy to all who would listen to him. He presently won over a number of followers, whom he led away in haste to the neighbouring village. In a few minutes they all returned, most of them bringing hoes and rakes, and one or two bearing large baskets. The leader

came forward and announced, through an interpreter, that the owner of a small sweet-potato field that formed part of the camp stood by his side; that this landed proprietor had agreed to give up the use of his ground, but had not by any means surrendered his title to the potatoes, and that he insisted on being allowed to come in and gather his produce and carry it away to his own house. To this the Japanese officers replied that he might certainly enter and collect the vegetables, but that they saw no season for admitting the entire population of Southern Formosa. The bald-headed strategist was ready with the answer that such was the invariable custom of the place; when a farmer took in his crop, all the neighbours came forward to help him, and to attempt to break down a time-honored usage like this would be a flagrant outrage. The Japanese laughed and told them to do as they wished, at the same time sending an extra guard to watch over the Gatling guns. Then the whole native party advanced in a state of exultation, and dug strenuously for two minutes, after which they paused to rest, and cast longing eyes upon the unapproachable armament. One would have thought, a little later, that the choicest potatoes of the island grew in the very spot where the guns had been stationed, for they were invested, as clearly as possible, by a circle of delving Sialiaoans. When the pressure became too great, the whole question was finished by an order to wheel the instruments of destruction to another place, where no pretence of potatoes could be alleged. There upon popular disgust—the shaven strategist throwing down his tools and withdrawing, in an inflamed condition of mind; followed by the multitude, all of them alike forgetful of the "time-honored custom" which required an entire village to participate in the harvesting of each field in its vicinity.

May 23rd, 1874.—War against the aborigines is now fairly in progress. The events of the past few days have brought about the necessity for immediate action, and although the direct engagements that have taken place have been of a comparatively trifling character, they are certain to be followed, as speedily as may be, by more serious operations. It is probable that the imprudence of a few individuals, acting without responsibility, has precipitated hostilities; but it is evident, from the promptness of the natives to take advantage of their carelessness, that they were determined upon a conflict, and that no amount of discretion could have long averted one.

On the afternoon of the 17th, a body of about one hundred men was sent out to a distance of about two miles from the camp on the shore of Liangkiao Bay, for some reconnoitring purpose not clearly defined. They saw no particular risk, so long as they remained together and kept clear of the jungle; but it appears that half a dozen of them were seized with the desire to visit a little village, the roofs of which were seen over the shrubbery, less than a quarter of a mile further on. They went there unmolested, and remained awhile. On their way back, they were fired upon from a thicket, by invisible assailants. One man was wounded in the neck, and another, a sergeant of a Satsuma regiment, was shot dead. Having no means of knowing the number or the exact situation of the attacking force, they ran back to the reconnoitring party, all of whom advanced without delay to the spot. They found that the head of the murdered man had been cut off, his body stripped, and his weapons taken away. Of course no trace of the enemy could be discovered. The result

of all inquiries upon the subject showed almost a certainty—afterwards confirmed—that the work was done by members of the very Boutan tribe which slaughtered the Meiako Sima fishermen in 1871, and which the Japanese are now here to call to account.

On the 21st inst., a detachment of twelve men was sent out to the village near which their soldier was killed, to inquire into the circumstances, and discover exactly, if possible, to what tribe the unknown enemies belonged. They found the place deserted, and thought proper to push forward to the next settlement, a couple of miles beyond. When they were perhaps four miles from the camp they were suddenly confronted by a body of probably not less than fifty natives, who fired upon them, severely wounding two of their number. They returned the fire, and killed one of the enemy, whose corpse was afterwards found by the coast villagers, half concealed in the jungle; after which they retreated hastily to the shore. The alarm being given, the entire Japanese force not on guard duty, about 250 altogether, turned out and marched rapidly to the scene of the encounter. They reached it about half-past five o'clock in the afternoon, and were greeted by an irregular volley from the bushes, which they could only return at random. They advanced, however, at a double-quick, the troops in the rear showing the greatest impatience, and making every endeavour, even at the expense of discipline, to press forward to the front. But their alacrity was not equal to the speed of the natives, who, from their familiarity with the country, were enabled to retreat without injury, sending a few scattered and ineffectual discharges behind them. As it was growing dark, the Japanese abandoned the pursuit for the night, and divided their force, one half bivouacking near the foot of the mountains, to receive the enemy in case they should attempt to renew the contest, the other returning to the camp.

Both the above-mentioned incidents occurred in localities over which the Boutans exercise no control, and which lie entirely within the possession of the inhabitants of the Liangkiau valley, with all of whom the Japanese had established friendly, or at least perfectly pacific, relations. The aggression was therefore entirely on the side of the savages. There had been no intention even to approach them, for a considerable time to come. But it now seemed needful to meet these assaults in some effective way. Yesterday morning, a company of infantry was sent out to the support of those who had been left behind, and to perform certain duties of observation which did not necessarily involve a conflict on this occasion. But curiosity, or some stronger motive, induced them to push forward to the mountain pass near which the natives had been lost sight of. There, at the entrance of a narrow and precipitous pass, the enemy again rose upon them, and the first genuine engagement ensued. The Boutans were at first estimated to have been two hundred and fifty in number, but this was subsequently found to be a great exaggeration. They were perhaps seventy five—more probably only about fifty. But they had enormous advantages of position, which I shall endeavour to describe more particularly at another time. Although nearly two hundred Japanese had marched to the spot, the difficulties of the situation were such that only about thirty could be actively employed. There was no road, and the fighting was actually done in the middle of a river which runs through the rocky

gateway by which alone the Boutan country can be approached from this direction. The savages were posted behind masses of stone which they had selected beforehand, and the Japanese assumed such stations as they could best find at the moment. The exchange of shots lasted a little over an hour, at the end of which time the natives had all run away—at least such as were able—leaving not one to be seen in any direction. They took their wounded with them, and some of their dead, but sixteen bodies were left behind, the heads of most of which were cut off and brought back into camp. Six Japanese were killed, one of whom was an officer; and nearly a score were wounded, most of them very slightly. Among the Boutan's slain were Alok, the chief of the tribe, and his son. The Japanese soldiers were under the command of Colonel Sakuma, who had already won distinction in the recent contests in Saga.

General Saigo, Commander-in-chief of the expedition, arrived from Nagasaki while this last encounter was going on. Simultaneously with the entrance into harbour of the ship which brought him, two Chinese vessels-of-war sailed in—a frigate and a gunboat—with messages of sympathy and encouragement from the Peking Government. This afternoon, national salutes were exchanged between the Chinese and Japanese ships—a fact which goes further than any argument possibly could, to prove the worthlessness of the industriously circulated reports that China was hostile to the action of the Government of Japan.

The following extracts from a letter of Mr. E. H. House, dated June 5th, give the leading incidents of the march of the Japanese troops into the interior of Southern Formosa, and additional particulars of the engagement of May 22nd, at the post known as Seki Mon—or “Stone Gate”:

The expedition to Boutan and Kusukut began on the 1st June, with the departure of about 500 troops for Hongkang, a settlement some six miles to the north of our present position. The rain was still at its heaviest, and there was much doubt as to whether the full plan of operations could be carried out. The current of the swollen rivers was so violent that, at the first ford, one of the Japanese was carried away and drowned. The rest of the force reached Hongkang in the afternoon, without disaster. No encounter with the natives had been anticipated, for the shore is occupied entirely by the descendants of the Chinese colonists, who look upon the Japanese as their deliverers from the oppressions and cruelties of the savages. The “head-men” of Hongkang long ago came into camp, and urged the officers to make that place a base of operations, as well as Sialiao. Hongkang, it should be understood, is totally independent of China; the authority of which empire extends only as far south as Pongliao, some twenty-five miles distant.

During the night of the 1st, the rain gradually ceased, and the morning was as bright and clear as any we have had—too bright and clear for comfort, for the sun blazed out with an intensity which seemed likely to make rapid compensation for its long irregularities. Soon after dawn, the second party, of about three hundred, started eastward for the “Stone Gate”—the scene of the skirmish of May 22nd. The departure of their advance-guard, which took place the afternoon before, was marked by another fatal accident. A soldier was drowned in almost the same place as that of

the previous day's mishap. This detachment reached its first point at noon, and remained there, or in the neighbourhood, for a few hours.

The third column, numbering four hundred men, left the camp also on the morning of the 2nd, and marched to the south-west toward Chikisia. The general purpose of these combined advances was as follows: The headquarters of the hostile tribes were known to be Boutan and Kusukut. A few tributary settlements in their neighborhood were believed to be held by their men, and it was tolerably well ascertained that the northern roads, as far as Ninai, were in their possession. The duty assigned to the Hongkang force, under General Tani, was to proceed to Ninai, starting before sunrise on the 2nd, and descend as rapidly as possible to Boutan. The Chikisia column, under Admiral Akamatsu, was to move upon Kusukut. The central body, which was led by General Saigo, was to pass over the difficult road from the “Stone Gate” to either Kusukut or Boutan, as might be desirable. This road, which is, in fact, nothing but the roughest kind of a mountain-pass, was known to be not only full of natural impediments, but also to have been artificially obstructed by the enemy; circumstances which account for the greater length of time allowed for it to reach its destination.

For various reasons, the foreign officers attached to the expedition accompanied the last-named detachment. They went, I believe, as spectators only, with no design of sharing in the more active proceedings that might ensue. I chose that route, chiefly from a desire to examine with some closeness the scene of the conflict of the 22nd of May, which I had become familiar with from only one side. The march, from the outset, was such as I almost shrink from even attempting to describe. Before eight o'clock, the sun was at its fiercest, and the hard, stony paths were so heated that the glow could literally be felt through the soles of thick shoes. Fortunately, there were many streams to be forded, and, although they were not passed without difficulty, being at least twice their ordinary depth, they were gladly welcomed whenever encountered. Indeed, we should all have been better pleased to find more of them, for though our clothes were of course drenched through and through at each passage, they were dry and stiff before we had fairly started on our way again. This was partly owing to the utter absence of shelter. The greater part of the Liangkiau valley is destitute of trees, and it is only on approaching the mountains that the healthy vegetation is found.

Some of us speedily discovered that campaigning in a savage country has at least the negative advantage of permitting a very free disregard of personal appearance. After the first few miles, the exterior aspect of any of the trio of observation was such as would have exposed him to popular derision, if not worse, in any trans-Pacific community. I remember that, on entering the village of Sijukei, and coming into the presence of the General-in-Chief, for which meeting I had endeavored to re-adjust myself in some slight degree, I was humorously congratulated by that officer on being able to go to war in my night dress. He spoke but the fact. A suit of thin “pajamas” was all I could possibly support. This, with a straw hat, an umbrella, and a pair of straw sandals, I take to be the proper uniform for a journalist in the tropics. I had learned the value of sandals years before in Japan, but strangely enough forgot my old experience, and trusted here to shoes, with pitiable results. The alternate swelling and shrinking, from soaking and sudden drying, was intolerably

painful; in addition to which, the sharp stones of the hills tore the leather to rags long before the journey was ended. The Japanese soldiers, on excursions of this kind, wear the close-fitting leg-coverings of their own country, from the knee to the ankle, and put nothing on the feet but their thick soft sandals, extra pairs of which they carry suspended from their waists.

As we drew near the circle of hills that marks the limits of the valley, the country began to assume a more agreeable character—that is, to the eye alone. The long-continued rains had freshened the verdure, which, moreover, is of a richer development inland than on the coast. As we slowly ascended, we began to pass by patches of wholesome shrubbery, and presently had opportunities to pause and rest, at distant intervals, under Banyan trees of some magnitude. Clusters of willows were occasionally seen by the river sides; but these reliefs were infrequent, and, as a rule, the face of the country still maintained what would elsewhere be considered a rugged barrenness. The first hills that were really covered with trees were those in the neighbourhood of and just beyond the "Stone Gate," where rough and jagged outlines of the scenery are somewhat softened by warmer colors than those of dark rock and gray sand.

We passed through the gate about noon, and, as I now have had the opportunity of examining this natural fortification from all points, I feel compelled to refer once again to that engagement in which the Japanese forced the Boutans from their chosen position, and destroyed at a single blow all their hopes of ever meeting them with success. I have heretofore spoken too moderately of the spirit and courage displayed on that occasion. Not having seen the commencement of the work, and not knowing the ground which the evening occupied, I could not rightly estimate the difficulties to be overcome or the resolution required to surmount them. I am now persuaded that the taking of the "Stone Gate" by our handful of men—there were not more than forty actually employed, although about one hundred and seventy-five were near at hand—even against its unskilled defenders, was an act of gallantry which any soldiers in the world might justly be proud of. The situation held by the Boutans appears as nearly impregnable as any stronghold possibly can be. The sides of the "Stone Gate" are two rocky acclivities which rise at sharp angles, and often perpendicularly, to a height of about five hundred feet on one side and four hundred and fifty on the other. The distance between them, at the base, is about thirty feet, which is entirely filled by a rapid stream that dashes in foam over rough rocks through the greater length of the pass, and is waist deep at its only fordable point. Except under pressure of the most desperate necessity, no one would ever dream of attempting to scale these heights; and in fact no earthly power could accomplish such a task if any attempt, however feeble, were made to defend them. The crag of the right hand pillar is topped by sharp spires not unlike the needles of the Chamouni valley in form, though of course much smaller, and certainly as forbidding in their defiance to intruders. But over this barrier a score of Japanese marines did actually pass, with the view of assailing the savages from above. Before the action really began, a few shots were fired at the advancing line from a rude fortification that had been thrown up just within the right side of the gate—that is, to the left of the besiegers. Whether this was intended only as an outpost or not I cannot say, but it was hurriedly abandoned on the approach of three of the unattached volunteers of whom I have

spoken; who took possession of it and remained there for some time, quite unconscious that the enemy were lying concealed behind rocks and trees within a few yards of them. It did not suit the purposes of the Boutans to destroy them, which they might easily have done, their place being to lie in wait for a greater number of victims. In course of time, some twenty five other Japanese came into the pass,—carelessly and without precaution, as is their injudicious custom—and began looking about for the ford. When they were all exposed, and for the moment defenceless, they were fired upon from a distance of certainly not more than forty feet, and in some cases less. By this first discharge two or three of the Japanese were killed, and more than half of them were wounded. They immediately sought such concealment as they could find among the rocks which are scattered over the bed of the river. The Boutans held a tolerably regular line of boulders, which creates a sort of fall or rapid just above the ford; and thus, for several minutes, the opposing forces silently confronted each other. In previous reports I have overstated the numbers engaged, not only on our side but also on that of the enemy. Everybody knows the difficulty of reconciling conflicting statements as to the size of armed bodies, even in so slight a matter as a mountain skirmish; but, so far as I can now discover from natives and others, there were really about seventy savages present. Of course the strength of their position gave them advantages equivalent to an infinitely greater superiority of numbers. After the few inactive moments of which I have spoken, other Japanese began to enter the pass and establish themselves, and, at the same time, some of the wounded endeavoured to retire. This was the signal for a second discharge from the Boutans. But, in rising to fire, they partially uncovered their bodies, which was at once taken advantage of by the Japanese, who threw in an effective volley, under cover of which some succeeded in shifting their position to points a little nearer the enemy. This manoeuvre was several times repeated, a soldier rising purposely, in case of need, to draw the fire of the defenders. By these means all the Japanese gradually worked themselves closer, but the progress was so slow and the number of the wounded increased to such an extent that the officer in command, Colonel Sakuma, ordered the bugles to sound a recall. Nobody could misconstrue such a command, coming from Sakuma, his reputation for bravery in action having been long ago established, but as the greatest of English sailors was once blind to a signal for retreat, so these ardent pioneers were deaf to this unwelcome strain. Not to put too fine a point upon it, I suppose I must admit that they disobeyed orders; but I have not heard that anybody has since greatly blamed them for it. I afterwards heard one of these contumacious warriors, when called upon to give his reason for not returning, say that it would have been more dangerous to go back than to advance, and that mere prudence would have kept him where he was. He was reminded, however, that he had been seen to leave his place, rejoin the main body, and then return to the fighting ground; to which he answered, with some embarrassment, that it was true, but he had been compelled to do as he did, as he had a wounded comrade who had been shot, just beside him, in the arm and the stomach, to assist to the rear.

Thus irregularly, and with no directions except those suggested to their own minds by the participants, the contest went on for nearly an hour, the Japanese steadily, though very slowly, getting nearer their opponents. It might

be supposed that a sudden rush would have put an end to the business, as indeed it would have done on dry land, in anything like a fair field. But here the soldiers were up to their waists in a stream, the current of which was so powerful that they could only with great effort force their way against it. The best and only thing they could do was to watch their opportunity and creep from behind one rock to another. At length, Colonel Sakuma conceived the idea that a small body of riflemen might ascend the cliff, to his left, and assist in dislodging the savages by firing upon them from that commanding height. About twenty marines started upon this errand, and, after a severe struggle, reached the summit. By this time the Boutans were closely pressed from below. Some of the attacking party had approached so near them that their boulders no longer afforded them a secure protection. One or two had already turned and fled when the marines appeared over their heads. That sight decided the matter. They broke in a body, and made for the river-banks, leaving sixteen of their number dead behind them. Of those who escaped, fourteen were mortally wounded—among them the leader of the Boutan tribe. Of the number of less-severely wounded we have never had any account. Our own casualties were six killed and thirty wounded, all of the latter of whom will recover, including one whose case was at first considered desperate.

Such was the gallant little skirmish of "Stone Gate," a complete understanding of the difficulties of which cannot be conveyed by words. The place will presumably be photographed, and I hope that a clearer idea of its massive strength may, in due time, be thus imparted. That it was a brilliant affair for the Japanese is doubly fortunate, for they are not likely to have other opportunities of distinguishing themselves. The savages were taught enough, in that single lesson, to keep them from attempting to squarely confront their conquerors in future.

The passage of the "Stone Gate" was not without its hardships, even when no enemy was at hand to dispute the way. The ford was now somewhat hazardous, and a number of men had lost their foothold while attempting to cross, and had been swept down stream,—happily without serious consequences. This had happened before our arrival, and I was therefore surprised to see numbers of officers clambering over an improvised path among the rocks of the left side of the gate—the right as we forced up stream. It seemed the correct thing to do, and I therefore followed, as often on hand and knees as on feet, but discovered, after having gone half way, that it was certainly impracticable for me. So I returned, waded the river at one point, and pushed up to the recrossing ford. I had worked myself half way over, and was filled with self-congratulation, when my attention was attracted by a singular retrogressive movement on the part of the staff, which I paused to contemplate from my half submerged stand-point. Presently the General-in-Chief descended the hill which he had just climbed, and gave rapid orders, in consequence of which coolies came out, like skirmishers, into the river, and an officer of the quartermaster's department, wearing nothing but a most benevolent smile, planted himself in what appeared to me a uselessly uncomfortable and exposed position in the midst of the current. The whole proceeding was utterly obscure, but I saw myself beckoned and recognized the impossibility of waiting to investigate it. So I moved forward, and in three strides found myself in water so deep and so rapid that no strength of mine could stem it for an instant. Before I had time to think, I was in the arms

of a stalwart "coolie," who straightway passed me on to another, and so following until the master of transportation at last lifted me to firm ground. Then I became aware that the operation in question was one in which I was chiefly concerned, that all this stratagetic disposition of inter-fluvial pickets was to preserve me from discomfort, and that the commander of our forces had gone far out of his way to personally superintend the rescue of a stranger who had no conceivable claim upon his attention. The incident is almost too slight to be worth narrating, but I cannot look upon anything as altogether trifling that helps to illustrate the thoughtful kindness of these instinctively warm-hearted people.

Beyond "Stone Gate," the course of the river, which I take to be that which empties into Liangkiao Bay north of Sialiao, runs for nearly a mile through a narrow plain. Our road carried us over about half that distance, after which we turned to the left and began an abrupt ascent. In the level space below we had passed through several deserted villages, belonging, not to the savages, whose territory is farther inland, but to half-castes, or to people of Chinese descent. In one of these a remarkable discovery was made—nothing less than the actual graves of the very Liukians whose murder the Japanese are here to avenge. It struck me as a most surprising coincidence that here, upon the threshold of the entrance to the Boutan country, the troops should be thus strikingly reminded of the cause of their coming. It was a circumstance so totally outside of all expectation that it seemed incredible. The Meïako islanders had been cast ashore upon the opposite coast, six or seven miles away in a direct line, and probably twice as many by the mountain paths. But the inscriptions, which were explicit, left no doubt upon the subject, and abundant confirmation was obtained by subsequent inquiries. The explanation of the mystery—if the intelligence which I can get from the Liangkiao people be trustworthy—is, that the wrecked party, on falling into the hands of the Boutans, were mistaken for Chinese, and were brought across the peninsula to the nearest Chinese-speaking inhabitants, not from motives of humanity but in the hope of getting a reward: that the Chinamen did not recognise the castaways and refused to ransom them: that they were then told that unless they paid one hundred dollars the sailors should be killed on the spot; to which they answered that they did not care, and, according to one story, were ready to assist in the slaughter. It is even stated by some that they did join in the wholesale work of destruction. It is impossible to say to what extent these reports may be trusted, but they are not in themselves unreasonable, and the undoubted fact that the remains of the murdered men are on the spot in question gives a certain weight to them.

At three o'clock in the afternoon the laborious mountain climbing began. We had forded a dozen or more streams before we came to a ledge of rock which had to be scaled in genuine Alpine fashion—to walk up it would have been as impossible as to dance a fandango on a Mansart roof—and which marked the entrance to the real Boutan and Kusukut possessions. I do not know that any purpose could be served by describing in detail the fatigues of the successive ascents. An idea of their general character may be taken from the fact that a steady upward march of four hours—that is, until sundown, carried us only three miles. At five o'clock we passed over a lofty ridge, overlooking a deep valley, on the other side of which puffs of smoke were seen rising, volleys of musketry being heard at the same time. We had

no means of knowing exactly to whom to attribute these demonstrations, but it was obvious enough that some of our friends were concerned in them. Soon after this, we came upon the first of the barricades which the savages had roughly constructed—mainly by felling trees and interlacing their boughs. It was not very difficult to pass through, but if it had been defended, as I suppose there must have been at one time an intention of defending it, the advance would have become an extremely serious matter from that moment. Other obstructions, similar in kind, but far more complicated, followed it in rapid succession. Up to this point, the soldiers had marched, necessarily in single file, but with great alacrity and perseverance. Here, however, they began to slacken a little. According to all previous calculations we should have reached Boutan long before sundown, but now night was falling and we were in the midst of the mountains, surrounded by a stunted wilderness, and with no knowledge of our whereabouts, beyond the general fact that we were somewhere in the heart of Southern Formosa. Finally, close upon seven o'clock, we were confronted by a maze of barricades, compared with which those that had preceded it were like the windings of a pleasure ground. The largest trees I have seen on the island, Banyans and others, were thrown across the path, in such tangled profusion that to pierce through them was an impossible task. It was the work of almost half an hour to clamber over a single pile of trees, and one was no sooner surmounted than another rose to renew the opposition to our progress. Some efforts were made to cut a way through, but this was entirely impracticable at that hour, and so the exhausted soldiers laid themselves down on such bare spots as they could find, without food or water, to sleep in the centre of an abattis. I doubt if a stranger bivouac has ever been heard of. Most of them—probably all of them—were miserable enough, but, in spite of their discomforts, not a sound of complaint was heard from any source. If they had been surrounded by every luxury they could not have been more cheerful or in brighter humor. Here is the real discipline of the Japanese soldier—that which he himself exercises over his own temper, and which enables him,—like his countrymen generally, to show high qualities of endurance and fortitude, not alone in danger, to which he is constitutionally indifferent, but on occasions of personal distress or of grave anxiety and suspense such as few western people can meet with equanimity. He is very far from a finished soldier, according to our strict notions of routine and drill, and in times of peace he has his favorite faults, which foreigners are quick to desecry and exaggerate, but in his self-denying patience and his ready, hearty, willing spirit, he is often a hero even more than in the reckless daring of his actions.

By a curious and sufficiently vexatious fatality, it turned out that the point at which we all gave out—or gave in—was only a quarter of a mile from a village in which water was abundant, and plenty of food, in the form of sweet potatoes, could be had by digging for it. General Saigo and a few companions only reached this favored spot. About eight o'clock he passed to the head of the line, and, as he is a man of powerful frame and less sensitive to fatigue than most others, he made his way onward, supposing that the rest would follow. I do not believe that the general was wholly insensible to the hardships of the situation, for I have heard a legend to the effect that his hunger was so great that he furtively dug a sweet-potato from the field with his own hands, and devoured it raw. However, he was

in better condition than his followers, and he sat wondering why he was not joined by others, until he fell asleep. I suppose if they had known what was awaiting them, the whole body would have revived and nullified that quarter of a mile in the briefest possible time. As it was, they passed a night of mild, yet not too mild, tribulation.

The weather was fortunately clear, though the atmosphere was very chilly, as it always is here after dark. The morning was again painfully bright, threatening another oppressive day. It was still a laborious work to overcome the remaining barricades, but that being accomplished, the way was clear to the village I have mentioned. There we were at ease, at least so far as the satisfaction of our appetites was concerned. A dozen fires were kindled, and bushels of potatoes were dug, cooked, and eaten, before any questions as to where we might be were thought of. And when we found time to ask them they could not be answered. There was not a living thing in the place except a dog, a sow with a litter, and two or three chickens. Our guides from the coast settlements were completely at a loss. If they knew the region at all they were very imperfectly acquainted with it. But they seemed confident that it was neither Boutan nor Kusukut. I learned, later, that it was Amiya, said to be a small dependency of Loput, though situated at considerable distance therefrom. It lies half way between the two savage strongholds, less than a mile from each, and yet, strangely enough, is said to partake of none of the fierce characteristics of those places. I have been assured that the people of Loput and Amiya are suffered to exist among the savages in consequence of their weakness. They are not formidable enough to excite jealousy, and they are compelled to perform a great many menial services for their exacting neighbours. I have seen their chief several times. He is an amusing old fellow, and looks as harmless as a sheep. His ears are not bored, and he speaks Chinese, which facts are just a little in his favour. In all general discussions he seems to be principally occupied in remonstrating with the "head-men" of the savages, and urging a pacific policy upon them in a shrill treble. I am inclined to believe that sufferance, and not intolerance, is the badge of his tribe. If he had been at Amiya to give us a little information I should have liked him still better.

This village commands a view of the sea toward the west, through a series of clefts in the mountains. Without any positive means of estimating, I judge it to be about five miles from the western coast, in a direct line, and four miles from the eastern, and between two and three thousand feet above the ocean-level. It is a place of little importance, containing only a dozen houses, which are all constructed on one simple principle—eight posts are set in the ground, thin straw is plaited over them, and a fragile upper frame supports a thatched roof. In some of these we found packages of dried tobacco, rather neatly prepared, from which, as well as from the presence of the pigs and chickens, it is probable that the evacuation was very hasty, and perhaps was not contemplated at all by the residents, but was forced by the Boutans. In the neighboring fields there was no sign of cultivation, excepting of tobacco and sweet potatoes. The rice must be grown at some little distance.

After a hasty breakfast, two small parties, of about sixty men each, were sent out to reconnoitre in opposite directions—north and south. The first, in the course of an hour, reached a large village, consisting of forty houses built of sun-dried brick and stone, with

atched roofs, which was soon discovered to be Boutan. This place, at least, the guides had means of recognizing. It appeared to be wholly deserted, but, nevertheless, as our soldiers drew near, a number of shots was fired upon them from hills and thickets, and two or three were slightly wounded. A volley in return, though discharged at sundown, silenced the unseen assailants. The place was then burned, and the troops encamped in its immediate vicinity.

The southern detachment had not proceeded far before it was met by messengers from the column commanded by Admiral Akamatsu, which had been on the march, in various directions, during the greater part of the night. This force had reached Kusukut at two o'clock in the afternoon of the 2nd, and, on attempting to enter, it was received, as usual, by a sudden fire from an ambuscade. Three Japanese were killed and two were wounded. The savages were speedily driven from their position, but probably with little or no loss. The houses of Kusukut were destroyed, and, as the situation was untenable, being easily commanded by a circle of hills, a camp was established on an elevation about an eighth of a mile distant. At five o'clock, the bulk of the column started north with the view of joining General Saigo, but the roads soon became difficult and the guides were at odds, the result of which was, that, after travelling until the next morning, the Admiral found himself close to the "Stone Gate." From this point he turned and followed the course of the central body, arriving at Amiya about noon.

Up to this time nothing had been heard from the Hongkong party, which was to have started for the interior before dawn on the 2nd. Small squads were sent out by various northern pathways to get news of it if possible, and also to hold or burn all deserted villages that might be identified with the Boutan or Kusukut interests. The latter part of this work was carried out, but no traces of General Tani's troops were discovered. Messengers who came in from Sialiaou, in the afternoon, were equally ignorant. It was therefore determined to pass another night at Amiya, and await further developments. A partial supply of food had been brought up, and, what was more astonishing, considering the character of the roads, a few tents and a small cohorn mortar. This last was put to use for making signals to the absent column. Several shells were burst in the air, but no response was given until nightfall, when half a dozen soldiers came in, bringing a report that the long road from Ninai to Boutan was so nearly impracticable that several days might be required to force a way through. General Tani had not been able to reach Ninai until the evening of the 2nd. His men, also, had been attacked, but without serious results. They found only a woman and a child in the village, whom they detained with the intention of using them as guides the next day—but the woman escaped, and the child was too young to be of service. The General decided to send the greater part of his force directly to the "Stone Gate," there to await further orders, and to set a small body to the work of clearing the direct path to the centre of the savage region.

The night of the 3rd passed quietly, and, early on the morning of the 4th, General Tani arrived. Upon consultation, it was now determined that, all the savage villages of the interior having been seized and destroyed, and the inhabitants driven into the mountains, sufficient detachments should be left to guard the abandoned stations and to control the principal points of the roadways, while the main body should return to Sialiaou, to prepare for further operations on the eastern coast, where

the Boutans are believed to be upon terms of alliance with one or two settlements, especially with Peigu. This decision, when communicated, was received with customary acquiescence by all excepting the Satsuma men, who petitioned for the privilege of undertaking a little war of extermination on their own plan, which was, to scour the wilderness in parties of two or three, and hunt for the savages until they should be found and put an end to. This proposal not appearing to be dictated by the profoundest wisdom, was negatived, and the return march begun at 9 o'clock. Most of the heavy barricades had been cleared away by a gang of labourers, acting under Hirano, the energetic and industrious quarter-master of the expedition, and the path was comparatively free, although still full of difficulties, enough to send the majority of us into camp almost broken down with fatigue and exhaustion. The last two or three miles were as bitter as any I ever passed over, but I was happily stimulated, at the most depressing point, by a charming little trait of kindness and good feeling. Several wounded soldiers were carried by me in litters, most of them lying at full length and speechless. One, however, was sitting upright, his injuries being such as to make that position the least painful to him. His arm was shattered and the flesh of his breast was torn away. Seeing that I was limping along with an extremely awkward gait, he stopped his carriers and asked what was the matter. I told him that my feet had been bruised and cut, whereupon he insisted that I should throw away my useless shoes and take his cloth socks and sandals. "You see," he said, "I have no use for them now." This was from a man who, while suffering from two dreadful wounds, spoke in the brightest tone, and smiled as cheerfully when he spoke as if he had lain on a bed of roses. For a few moments, certainly as long as he was in sight, I strode erect, and forgot that I had ever felt a smart. This amiable solicitude for the comfort of those whom they think are less capable of enduring hardships than themselves is constantly exhibited by everybody here. I have mentioned how General Saigo conducted a little operation for my benefit, on the outward march. Coming in, he placed me under a new obligation, by offering to have a palanquin put together for me. In truth I was hardly able to stand, but I could not acknowledge myself beaten, and so declined. On the night which we passed in the middle of a barricade, Colonel Sakuma, who never gave a thought to his own hunger, took it into his generous mind that the Americans could not be expected to stand that sort of thing, and sent back to a village, a couple of miles distant, for a bundle of biscuit and some claret, which he laid before us just as we were trying in vain to get to sleep. And I can candidly say that not a day passes without evidences of a delicate courtesy and thoughtfulness on all sides such as I think are not often found in close alliance with the vigors of rough campaigning. At the same time it is all so natural with the Japanese that I dare say not one of them would exactly understand the impulse which irresistibly compels me to record it.

E. H. HOUSE.

THE continued spell of wet weather we have experienced for more than a fortnight culminated between 9 and 10 o'clock last night (10th) in one of the most violent storms of rain and wind which Yokohama has ever experienced. The rain came down in sheets, and the wind which accompanied it was something to be felt. The glass fell rapidly, and touched

a very low point. The U. S. Flagship *Hartford* was prevented proceeding outwards, partly on account of the weather, but mainly because of the inability of the officers who were ashore to get aboard; as no boat, even of considerable size, could have safely ventured on the harbour. The S. S. *Estepona*, also outward bound, had to put back. Main Street and most of those in the Settlement presented the spectacle of uninterrupted sheets of water, and locomotion, in the rare instances where it was necessary, could more easily have been performed by boat than otherwise. The native quarters in all directions around Yokohama as a rule lie very low, and considerable destruction of property must, as a consequence, have taken place. But the most dire catastrophe of the night occurred between 10 and 11 o'clock, at Ishikawa, at a spot immediately under the Bluff, mostly inhabited by very poor coolies. At about the hour named, the huge cliff, sapped and undermined above and below, gave way, and the mass of earth, gravel, rocks, and trees, to the extent of many hundreds of tons, without a moment's warning was precipitated on the hovels below, burying beneath its vast weight the sleeping inmates, who had no time to escape, and must have met, mercifully, an instant death. Gangs of labourers are to-day employed in removing the debris, for the purpose of recovering the bodies, but as yet comparatively little has been done, and we are unable to give full particulars. When our reporter left the scene of the disaster eight bodies had been recovered, but some ten or twelve are known to be missing. Fifteen or twenty houses have been covered by the falling mass. The sky at the moment of writing is serene, and the present state of the weather gives little or no indication of the turbulence of the elements so recently exhibited with such terrible effect.

THE HEAVY fall of rain of last night is now shewing its effects on the low lands between Tsurumi and Kawasaki. The Tsurumi River has risen above its banks in places, and the fields are flooded.

THERE is a rumour, which we believe to be well founded, that there is a strong probability of an arrangement being come to between China and Japan on the subject of the Formosan campaign, which will quite satisfy the *amour propre* of Japan.

THE FUNERAL of the seaman who fell from the rigging of the German frigate *Arcona* yesterday morning (8th) and was taken up dead, took place last evening about half-past 5. The *cortège* having formed at the English Hatoba, where the men landed, proceeded along Main Street to the Cemetery. The brass band of the vessel, playing a slow march, led the van, followed by officers of the vessel; then came the hearse, containing the coffin, which was beautifully decorated with flowers. Other officers in full dress uniform followed, and the comrades of deceased, marching eight abreast, brought up the rear. The services at the grave were exceedingly impressive, the singing being very fine. The smart appearance of the men excited favourable comment on their return towards the ship.

THE JAPANESE Government has appealed to the Circuit Court of California, against the recent decision of Mr. Vice-Consul Mitchell, in the United States Consular Court here, in its action against the Pacific Mail S. S. Co., to recover \$10,250 damages for alleged breach of contract.

THE Rev. Ernest J. Eitel's very interesting book-series of lectures on Buddhism, which was published in Hongkong, has been translated by a Japanese into his own tongue, and is now meeting with a good sale.

Little is to be added, respecting the catastrophe at Ishikawa, to that chronicled by us on Saturday (11th). No more than the eight bodies we spoke of have been recovered, and it is supposed that the tale of victims is complete. Only three houses are said to have been destroyed, but they were more of the nature of long sheds, and each was occupied by many families. The work of uncovering the buried premises continues, but is likely to be a work of time, the immense quantity of fallen *debris* rendering the task a tedious one. Three men (one of them a carpenter), three women, and two children were buried in the landslide. The body of an old woman was found, embracing her dead grandchild, cheek to cheek.

It is to be hoped that the coming week will see the end of "the rainy season," so called. Some persons in Japan look upon "the rainy season" as a myth, or as a sort of meteorological flea that is never present when you think you have it, but yet which you feel, to your grief, frequently and in spots. Dr. Hepburn's tables, however, show that, during the months of June and July, the number of rainy days is greater and the rainfall heavier than during any other two months of the year; though September is the single month in which the most rain falls. No period of the year is more trying to the constitutions of most residents in Japan, especially new-comers, as the month of June and the first half of July. It is the era of moisture and reeking warmth, of mould, mildew, centipedes, and all unclean, crawling creatures that revel in the general solution of all things. What crops of shiny green and snowy mould grow on boots; what a small-pox covers one's gloves; and how one's kids become like young leopards. Everything becomes glue, one's liver seems to be dissolved and floating in the blood. The furniture droops and disintegrates, especially the native-made. As for one's lacquer-work, the legs, and knobs, and partition, drop off as if they had been warranted by the curio-man to do so. One's matting becomes as damp as sheets of paper ready for the printing-press. Books are ruined, clothing is spotted, and some tempers are spoiled. Such is one of the many phases of life in Japan. Dust and wind enough in one month to blind you, choke you, and discolor your countenance, and rain enough the next month not only to wash, but to dissolve you. Grumbling foreigners are apt to think that, in Japan, everything goes by contraries. The fact that when it rains in other countries it is cool, while, in Japan, rainy weather is often hot and steaming, does not tend to dispel the prejudice. A steam bath is a good thing when it lasts only a few minutes, but one that continues for a month is tiresome, and we shall be glad when this damp and warm weather is past, and we have the dry heat.

A TEMPLE has been erected on the site of an old castle in the province of Kodzuke, where Nitta Yoshisada lived 550 years ago, and dedicated to the memory of that celebrated man. The government granted the ground freely, and workmen were engaged from Tokei, that the edifice should be worthy of the man, the fame of whose virtues has descended through so many generations.

ON TUESDAY evening last, (7th.) Mr. E. W. Clark of the Kaisei Gakko had the distinguished honour of presenting before the Emperor at the Palace those beautiful views of many countries which lately he exhibited at the Naval College for the benefit of the pupils, and, not long ago, as will be well in the memory of our readers, at the Gaiety Theatre. The stereopticon, by means of which the pictures are thrown on the screen, was illuminated by the magnesium light, and the effect was perfect. The Imperial party was very numerous, consisting of at least as many ladies as gentlemen, and there was no attempt to conceal the gratification they experienced. The room prepared for the occasion was that ordinarily used for receptions. The Imperial Marine Band was in attendance.

YESTERDAY, (9th) NINE Shizoku of Kochi Ken (Tosa samurai), were beheaded, for the dastardly attack on Iwakura at Kuichigai on the 14th January last. It will be remembered that the U-daijin was leaving the Imperial palace about 9 o'clock that evening in his carriage, when he was set upon and wounded, and one of his bettoes killed. He, himself, only escaped by falling down the embankment into the moat, where he remained a long time before he considered it safe to call for assistance. The judgment delivered by the Shihosho is very short:

"You felt very angry at the abandonment of the Korean Expedition, and formed a conspiracy to agitate the government by treacherously killing Iwakura U-daijin, whom you attacked at Kuichigai on the night of the 14th January. Your sentence is, that you be degraded from the Shizoku class, and suffer death for your crime."

THE "OPENING" of the Sumida-gawa in Tokio, which is fixed for this (Saturday) evening, (4th) promises to be an affair of great interest and brilliancy, fully equalling, if not surpassing, the shows of previous years. Last year, unfortunately, the rain spoiled the exhibition, and to-day many an anxious eye will be upcast to study the "probabilities." All the lantern-makers are in high glee, and are reaping a good harvest, while the candle-dippers are equally busy. As for the boatmen, they will modestly charge at least five times as much as usual, to scull people up the river to see the "flower-fires," or fire-works, as we call them. Should "Old Probabilities," and the Clerk of the Weather, and O'Tento Sama, and O'Tsuki Sama, and Jupiter Pluvius agree on a programme to suit the good folks of Tokio, they will have the heartiest thanks both of foreigners and natives. A programme, in which Jupiter Pluvius is left out entirely, and in which O'Tsuki Sama comes on the stage at about eleven or twelve o'clock, will be the most agreeable to all parties. The fire-works and innumerable lanterns will look best in the dark, but, after the fun is over, bright moonlight will be the best to go home by. If the weather is fine, there will be very few who will go home before morning.

THERE is a rumour current in Yedo that the Japanese inhabitants of the island of Saghalien have all left and retired to the island of Yezo; no public notification has, however, appeared relative to it.

AN EXHIBITION, or Bazaar, is now being held at the Castle of Inuyama, at Owari. It consists principally of ancient articles of *vertu*, all of which are for sale. It closes on the 9th inst.

It is estimated that there are now about eighty Germans living in Tokio.

FRIDAY last (10th), in spite of the rain, was great day at Asakusa temple. From early morning, thousands of devotees wended their way to the temple, to say their prayers and buy amulets of various sorts to protect themselves against all the ills, fancied or real, which flesh is heir to. Asakusa temple has long been known for its standard attractions in the way of good reputed to be specially gracious to suppliant and shrines from which have come the most efficacious influences. The wooden statue which has been rubbed by all true believers until nose and ears and mouth have total disappeared, still enjoys unabated public favour and patronage, but, on Friday of last week, new attractions and pious catch-pennies were offered for sale. These were charms to secure the purchasers from the dangers of thunder! The charms were three-cornered pieces of folded paper, inside which was a slip of paper printed with Sanscrit characters. On the outside were some Chinese characters in black, and some cabalistic marks in red; thousands of these were sold during the day. They are to be put over the doors of dwellings, and the protecting capacity of these bits of paper is supposed to be equivalent to a thousand lightning-rods. Indeed, it is quite possible that the majority of the simple folk who buy the charms are not at all aware that thunder neither strikes nor hurts anybody. In addition to the rich harvest of copper gathered from the sale of the anti-thunder packets, a fat revenue was derived from the coins exchanged for morsels of the rice which had been offered for the gods. Notwithstanding all the mutations of time, the work of foreign influences, and the desperate attempt of zealous Shinto propagators, the old temple of Asakusa,—judging from the dense throng of worshippers present on Friday last, has lost none of its fame or sanctity.

SOME YEARS ago, the Rev. Dr. Martin, of Peking, China, wrote a work on the Evidence of Christianity, expressly for the Chinese, meeting their objections and explaining the peculiar difficulties to the reception of the Christian system of faith which present themselves to the Chinese mind. The work was not only pronounced most excellent by foreign scholars, but has had an immense sale in China. In Japan it is well known, and is steadily. Recently, a Japanese in Tokio had it translated, and has begun the publication of it, simply as a business venture. The book is gotten up in fine Japanese style, the mixed Chinese and Japanese characters, and will be in three volumes, of which one is now out. That a Japanese merchant should think it worth while to invest in the publication of such a work seems to point to a large reading-public, to whom such works are congenial. As far as the intellectual aspects of the struggle for the introduction of Christianity into Japan go, the signs of the time point toward steady triumphs. The recent inflammatory anti-Christian book published in Tokio, part of which was translated in the *Tokei Journal*, seems to have been a sort of boomerang, which has damaged the writer's own cause by creating a recoil in the mind of the Japanese against the user of so violent abuse. It has also called the attention of hundreds to a subject about which they formerly never cared to inquire. One thing seems quite certain, that the day of settling religious questions by mere abuse and misrepresentation is over, and, hereafter, all parties must settle their question by appeal to truth, and by fair argument.

WE BRIEFLY referred, in our issue of 29th ulto., to the steps that were being taken by the Tokio friends of Dr. Wheeler for the presentation to him of a testimonial, as a token of the esteem and regard in which he was held by his numerous well-wishers in the Capital. Yesterday, a deputation waited on him, and handed over the piece of plate which had been selected for presentation. The following address accompanied the testimonial, and the Dr. replied as chronicled below :

To EDWIN WHEELER, Esq., M.D., L.R.C.P.,  
L.R.C.S. Ed.

SIR.—We have been deputed by the residents of Tokei to express to you the sincere regret which we have all felt at your removal from among us. During your stay in Tokei, your professional skill and unwearied attention to your patients have won for you the lasting gratitude of many, and the regard and esteem of all of us ; while your frank and manly disposition has made you many friends among those who have never had need of your professional services. We feel that we cannot allow you to leave us without endeavouring in some measure to mark our sense of the obligations which bind us to you, and we have therefore subscribed for the purchase of a piece of plate, which may serve to remind you of the numerous friends and well-wishers you have left behind in Tokei. We assure you that you will always be warmly remembered by us, and that you bear with you our most hearty wishes for your future happiness and prosperity.

Signed, for the residents of Tokei,

C. A. McVEAN. A. L. DOUGLAS.  
W. G. ASTON. G. F. VERBECK.  
C. SHEPHERD. H. B. JOYNER.

#### REPLY.

GENTLEMEN,—I thank you most sincerely for the kind words you have spoken of me, and for the handsome gift with which you have accompanied them. It did not require this substantial mark of your regard to occasion me pleasant memories of the time I had the good fortune to spend amongst you in Tokio. It will be impossible for me ever to forget the genuine kindnesses I have experienced and the true friendships I have had the happiness to form with you during my stay there.

To yourselves, personally, and to the many other fellow-residents in the Capital who have joined with you in the manifestation of regard, I beg to tender my warmest thanks.

EDWIN WHEELER.

67, Yokohama, July 14th, 1874.

ABOUT 3 o'clock this morning, the house occupied by Capt. Martin, No. 239, Bluff, was broken into by two Japanese burglars, and a gold watch, brooches, and other trinkets, and property of a miscellaneous character taken. Capt. Martin went after the *dorobo*, but they managed to escape through the gate of the lot owned by Mr. Bridgens, and got clear away. In jumping the fence into the next compound they dropped some of the plunder. Their footsteps were traced towards Omanoma. Complaint was laid at the Saibansho, and, *mirabile dictu*, some of the property has since been recovered. The jewelry, being portable, they managed to stick to.

FROM THE 15th to the 19th June, the photographs of the Mikado and Kogoo (Emperor and Empress) were exhibited to the public in the Custom House, Hakodate. No less than 10,822 people went to see the pictures of their Majesties during those five days.

THE FOLLOWING is an account of the Revenue and Expenditure of Kaigisho during the month of June :—

REVENUE :	
Ground-rent .. .. .	1,565.30.8
Storage of goods .. .. .	50.00.0
Rabbit tax .. .. .	393.50.0
Tax on Geyschas, &c. .. .	5,062.50.0
Repaid money from Hiyaotai } Kuwaisha .. .. .	12.54.5
Interest of deposit money to } Mitsui and Ono.. .. .	5,067.01.6
	<hr/> 12,150.86.9

EXPENDITURE :	
Bridge building .. .. .	1,000.00.0
Road repairing .. .. .	1,000.00.0
Aqueduct .. .. .	1,852.75.0
Repairs of ground .. .. .	523.06.9
Outlay on the city .. .. .	57.70.1
Gas lamps .. .. .	3,396.12.0
Repayment of money appropriated to repairs of roads } Support of the indigent .. .	5,000.00.0
Expenses .. .. .	2,090.71.9
	<hr/> 182.98.2
	<hr/> 15,103.34.1

ON THE night of the 5th inst., a samurai was looking at the fireworks from the Biogoku bridge. Feeling a man's hand in his pocket, in the act of drawing forth property which he objected to have so abstracted, he seized the fellow, and, quick as thought, threw him over into the river. He reported the matter, but to this day it remains uncertain whether the pickpocket was drowned or not.

AT BIZEN-MACHI, Tokei, a shopkeeper named Takahisa possessed a wife who was so idle and lazy that he constantly had to remonstrate with her. A few days ago, he threatened to put her away unless she altered her lazy habits. The woman surprised and horrified at the idea of his separating from her, impulsively seized a knife, and there and then stabbed herself. She died, and the man gave himself up to the police. He was examined, and was ordered to pay a fine of two rios and a half, in satisfaction for his crime !

A COOLIE, digging in the monastery of Hosenji, a few days ago, came upon a *cache* of 107 rios. The head priest, being informed of it, said that the money belonged to him, as he had buried it years ago. But the coolie did not appear to see it, and took the matter before the judicial officers, who, on hearing the case, decided that the money should be divided between the parties, the coolie getting a fair half.

FIVE MEN were digging a deep hole for some purpose in an old mulberry plantation in Tokei, on the 6th instant, when an earthquake occurred which caused the ground to slide in from the top, and they were buried. Fortunately, there were other men engaged, who at once set to work to dig vigorously and all were got out alive, but they were far gone and had a very narrow escape.

THE NUMBER of schools under the jurisdiction of Nato Ken is as follows :—		
Province.	Public Schools.	Private Schools.
Awa,	140	39
Sanoki,	250	10
Awaji,	45	10
	<hr/> 435	<hr/> 59

A WRITER in a native paper says :—" I have much leisure, and frequently stroll through the streets of Tokei. I find that there are seven "ugly" customs existing, amid all our civilization. :—

1st.—At the bridges, squares, and corners of roads, there are a number of boisterous jinrikisha coolies who ask people to ride, after following them a considerable distance, and sometimes, if unsuccessful, ending in abuse.

2.—Many fortune-tellers or physiognomists are seen in every street, dressed in a dirty mantle and loose trowsers, and wearing two swords. Some of them cover their face with a deep Japanese hat. These fellows beguile the superstitious with their false prognostications.

3.—Poems or songs are recited in the streets both of Yedo and Yokohama, speaking ill of the government and its officials.

4.—Young and old men and women sit at the side of the streets, playing on the fiddle or guitar, and begging for money.

5.—The citizens of Tokei form large processions and wander through the city, drumming, and carrying silk and paper banners.

6.—Bettoes, in an ugly dress and with naked feet, ride their masters' horses.

7.—The people have no uniformity in their head-dress or clothing.

I hope the government will issue a strict charge to change these ugly customs, which are a disgrace to our empire."

THE FOLLOWING amusing bit of "sporting intelligence" comes veritably from the Shimané Ken :

About the middle of June, a combat took place between a fox and a snake, at the foot of a maple tree, within the temple grounds of Gishshōji in Soto-naka-wara, Matsuyé. The fight began by the snake rearing its head perpendicularly, to spring at and bite the fox. The fox cunningly dodged, and made a feint for the reptile's head, thus raised. Snake repeated the manœuvre, and fox tried again. Third round, fox got snake's head in chancery ; snake wound his body tightly round fox's neck. Fox shook his neck violently and dislodged him at last. The snake would have been unable to come to time, for it lay half dead, with the bites and the shaking ; but the fox was unwilling to prolong the conflict, for, so soon as he had shaken off the snake, he didn't wait to see the effect, but ignominiously turned tail, and scampered off as fast as possible, leaving, therefore, the snake the master of the situation.

Some years ago, a young bonze belonging to this temple killed a snake ; and, shortly afterwards, the consort of the deceased (!) got an opportunity, bit the young bonze, and strangled him, by winding his body round and round the boy's neck !!!

A FIRE having, in May last, destroyed 216 houses in the village of Karewa, province of Ugo, a rich farmer named Imano has given to all the poor people who could ill afford to rebuild their houses the larger timber necessary for the purpose. The timbers numbered in all over five hundred pieces. The Naimusho, having heard of his timely generosity, have ordered him a reward.

AT THE races at Kudan, on the 5th instant, a horse took fright at some wrestlers, and very seriously injured a betto by knocking him down and trampling on his face, and also threw his rider, who was severely hurt.

THERE RESIDES at Kaniye, Owari, an old woman, 106 years old. She was a seller of tea in the reign of Iyeharu, the tenth Tokugawa Shogun. Her husband died twenty-five years ago, when she was 81 years of age. She is still cheerful and lively, walking firmly as ever, and with hardly any wrinkles on her face. Truly, a remarkable old lady.

A THEATRE has been erected at Kanasugi, Shiba, the performances in which commenced this day (11th). Of course, there are the usual tea-houses on each side of it.

THE CHUJI of Tokei-fu notifies that, from the 7th of this month, the Kaitakushi Gardens at Awoyama are open freely to the people, on their observing the rules providing for good order. They may not, however, enter the glass-houses without permission; but, on application to the proper officers, they may buy plants and vegetables.

A POOR woman in Adzuma, being sick with leprosy, and being assured that she could not recover, and feeling that her state endangered others who might come near her, put an end to her life by hanging. Her deed is highly extolled—as she died to prevent her disease spreading to her neighbours.

ON THE 5th instant, Sasaki Takayuki, Shiho Dayu, was appointed Vice-Speaker of the Deliberative Assembly.

HER HIGHNESS Sei Kan-in no Miya, aunt of the present Emperor, sister of the late Komei Tenno, and widow of Iyemitsu, the 14th Tokugawa Shogun, (the predecessor of Hitotz'-bashi) left Kiyoto on the 26th June, and travelled by the Tokaido to Kanagawa, and thence by train to Shimizu, where she arrived on the 8th instant. Thence she went in an imperial carriage to Azabu, where a new house has recently been built for her.

THE NUMBER of mountains in Japan whose sacred sides were left untrodden by the foot of man, in consequence of the deep-seated superstition of the people, is gradually decreasing. Kinuyama, lying on the boundaries of the provinces of Kōdzūke and Shimotsuke, and at the distance of four ri from Nikko, was one of these. It was known that in this mountain were many swamps, deemed holy, and called Kinu-numa. The sides are also densely covered with forest; and the wild deer and wild swine have had their solitudes to themselves.

At last, a priest summoned up courage and made an ascent. He was rewarded by finding a natural bath, which proves to be medicinal and is declared to cure all diseases—but particularly headache! The swamps of the mountain are the sources of the river Kinugawa, which runs at its foot. High up the mountain, there is a piece of table land, about thirty square cho in extent. There are no less than forty-eight swamps on this plateau, the largest of which is about 700 feet in diameter, the smallest about 30. One peculiarity is, that the water of each differs in colour from the rest. In one place called Yunosawa, there is a hot spring, which has its own special virtues. Many of the people residing in the neighbourhood are still afraid to venture upon the hill side—saying that there is a fearful snake there, whose breath, should he be met with, would be fatal. And many more have refused to ascend until after abstaining from fish, flesh, or fowl for several days.

A NOTIFICATION has been signed by Sanjo Daijin, and sent to Kaitakushi and all the Ken on the sea coast, to the effect that, H. M. S. *Sylvia* having received permission to survey the South-East Coast, no opposition must be offered.

THE FOLLOWING list of names by which representatives of the various nationalities are known to Japanese will prove of interest to students of philology and others:

	Literal names.	Vulgar names.
Englishman	Yei-jin	Igrisu-jin
Frenchman	Futso-jin	France-jin
American	Bey-jin	America-jin
Dutchman	Ran-jin	Oranda-jin
Russian	Ro-jin	Orosia-jin
Chinese	Shina-jin	Nankin-jin
German	Jitsu-jin	Doitsu-jin
Spaniard	Han-jin	Ispania-jin
Portuguese	Ho-jin	Holtogaru-jin
Prussian	Fu-(or, Hai-) jin	

The general connection between the names in common use and the Anglicised mode of pronunciation (barring the inevitable difficulty of mouthing the L and the R) will be sufficiently apparent.

*I-jin* is the name applied indiscriminately to all foreigners, whether European or American, Chinese or Negro; literally, it means foreign, or strange, man.

*To-jin* is applied to Chinese only, and took its name from the *To* dynasty of China (A.D. 600), about which time much improvement in the *belles lettres* took place in Japan, and scholars were sent to China to acquire a knowledge of the arts and sciences. If the term be really applied opprobriously, by the lower-class Japanese, to foreigners, it must be through ignorance of its true meaning. We have heard the translation of the word given as "hairy foreigner."

ON THE 10th inst., a proclamation was signed by Ito Hiro-bumi, Kobukiyo, to the effect, that, hitherto the construction of telegraphs by private persons was not allowed; but now it will be permitted for people to construct branch lines to connect with the official lines, on application being made to the Kobusho.

THE NUMBER of doctors officially reported to be in practice in Tokei is 1090. We suppose this includes all classes of practitioners in the old and the new schools.

EVERY ONE has heard of the celebrated sword Kusanagi, one of the three articles, the possession of which has been handed down from one Mikado to another for many centuries, and which are supposed to confer sovereignty on the possessor. It was originally worn by Yamato dake no Mikoto; and is now in the temple of Atsuta in Owari, where it is an object of worship. It has been notified to the people that this temple shall be held in the same respect as that of Isé, where the Mikado's ancestors are worshipped. The temple has been put in thorough repair, and a most solemn ceremony was performed at its re-dedication.

THE ISLAND of Miyake, near Ōshima, is one of those belonging to Japan attached to Ashigara Ken. On the 1st or 2nd of this month, one of its mountains broke out into eruption. Several houses have been buried and destroyed, and many persons killed. This news is brought by seamen arrived coastwise, but we have our doubts as to the extent to which their imagination may have operated.

THE ARTICLE of fans has become one of considerable export. It is mentioned in a Japanese newspaper that one maker in Horeiyéchi-Nichôme has just completed an order for 80,000, and 25,000 pieces of Santome, for one American house—the amount of the order being 1830 rios. "No prosperity without exporting our productions," says the editor; "even such small things as fans find purchasers abroad."

FLOODS ARE reported during last month in several parts of the country. At Kurumé, the Chikugo river rose more than twenty feet above its ordinary level; and not only are many farms and houses greatly damaged, but several lives have been lost. On the departure of the mail, the waters were not sufficiently abated to obtain a full report of all the damage done.

A NATIVE paper, speaking of the resources of Japan, gives the following as a list of the number of various mines in the Empire, "in proof that it is a rich country."

Gold mines .....	82
Sand Gold .....	4
Silver mines .....	118
Copper .....	300
Iron .....	22
Sand Iron .....	203
Tin .....	6
Lead mines .....	52
Blacklead .....	3
Coal .....	412
Kerosene Oil .....	182
Crystal .....	10
Crystal of purple colour .....	1
Crystal of black colour .....	1
Agate .....	2
Marble .....	10
White Stone .....	1
Spotted Stone .....	2
Flint .....	5
Arsenic .....	2
Brimstone .....	12
Sulphate of Iron (!) .....	8
Alum .....	5

YAMADA, Rikugun Chiushô, was lately appointed to discharge the office of Shiho Shogû at the same time. The first is an office in the Navy Department, the other in the Judicial.

THE OFFICIAL register of people and houses at Kobe last month was: houses, 3,846; population, 8,554. Foreign residents, 332. 67 houses are built on the Foreign Concession.

THE FOLLOWING telegram has been received, in explanation of the interruption to telegraph communication beyond Kobe.

HIROSHIMA, 12th July, 1874.

A typhoon, on evening of 9th and 10th, has stopped line. Poles washed away near Kuga, and road impassable. In some places two to five feet of water; great destruction to crops; post stopped; men in some cases had to save their lives by swimming. Expect to have repairs completed to-day or to-morrow.

The War in Formosa.

Takow, 20th June, 1874.

The Japanese have made considerable progress at Langkiaou, and now seem inclined to rest on their oars for a time. Of the eighteen tribes or villages between Langkiaou and the South Point sixteen have come to some terms, and have been given each a Japanese flag, with an inscription saying that

they are friendly and are not to be molested. The villages of the Bawtans are held by the Japanese. The Bawtans themselves have disappeared entirely, and it is not known what has become of them. The Japanese have occupied Hongkang, the next Chinese village north of Langkiaou, and distant from it about five or six miles. Hongkang is like Langkiaou, a detached village not under regular Chinese Government, and without safe land communication with the north. The inhabitants sent to ask the Japanese to come and protect them against the savages, and offered to find food for the detachment which should take care of them. A camp has been formed on the East Coast, about opposite to Langkiaou. The island is only eight or nine miles broad there, and the men marched to the spot overland. A very small Chinese village at the extreme south of the island has been occupied. The *Della* has lately returned, with a large quantity of stores, from Nagasaki, but with no more troops.

Two Chinese of rank, named Shin and Pan, with Messrs. P. Giquel and Segonzac, have just arrived at Taiwanfoo. Shin bears the rank of *Chin-chai* or Imperial Commissioner, and was formerly connected with the Arsenal at Foochow. These two Chinese officials are said to have been sent to inspect certain fortifications. It was generally understood that they were coming to treat with the Japanese, and very probably they have their credentials in their pockets, to be used as circumstances should require.

There is a general opinion that the Japanese do not intend quietly to give up the land they have occupied. This, however, is only conjecture, as they have not announced their intentions in any way. It is said that they will be willing to retire when they have settled accounts with the savages, if the Chinese will pay the expenses of the expedition. Whether the Chinese will agree to those terms or not is beyond even the limits of guessing. The Japanese ought to be delighted to get away on such conditions. The land must be perfectly worthless to them. What can the value be of a few square miles of hilly ground, with the valleys already occupied, and no decent harbour? To retire without incurring any expenses, after, would, having effected the punishment of the savages, be a most successful termination to a successful undertaking. —*Hongkong Daily Press.*

#### Formosa.

(From a Correspondent H. B. M. S. Dwarf)

Keelung, Formosa,

June 1st, 1874.

H. B. M.'s little gun-boat *Dwarf* arrived in Formosa yesterday morning, May 31st, at 8.30 a.m., after a pleasant trip from Nagasaki. There are three vessels in harbour, two British barques, the *Helda* and *Lizzie*, and the American brig *Vesta*, all of which were busily engaged loading coal.

We found three canoes here belonging to the Pelew Islands, and by what we can glean from them by signs and suchlike demonstrations, (for, as no one here is able to speak to them in their own language we are compelled to use various means for the purpose of obtaining information) they were blown away from their own country by strong winds and lost at sea, and, after a period of 64 days, found their way into Keelung harbour, where they have now been 14 days. These canoes are about 24 feet long and two feet wide, with outriggers,

similar to those used by the natives of the South Sea Islands. Each canoe contained seven men. Four canoes were blown out to sea, but one was not able to make the harbour, and is supposed to be lost, or, what is more than probable, wrecked on the coast of Formosa, and fallen into the hands of the savages; in which case they will doubtless form the concomitants for a meal.

The Pelew Islands are about 1,500 miles from Formosa, and lay about 500 miles east of the southern end of the Philippine Islands.

June 2nd.—Sailed from Keelung at 5.30 this morning and arrived in Tamsui harbour at 30 minutes past ten. Vessels in harbour—H. B. M. S. *Kestrel*, English steamer *Lailon*, a German brig, and a Dutch barque. Have seen nothing of the Japanese yet, and the various reports floating about with regard to their movements are entirely unreliable.—*Rising Sun.*

#### A Japanese on the Formosan Question.

To the Editor of the N.-C. Daily News.

SIR,—During a somewhat protracted residence here, I have been a reader of your and other foreign journals published in China, and also of the papers published in the Chinese language. In all these I have discovered evidence of misapprehension, which may perhaps form a source of mischief, as regards the relations subsisting between my country and China. I beg therefore you will allow me to make a few remarks on the Formosan question in your issue of to-morrow morning.

The Formosan savages have repeatedly inflicted injuries on my countrymen, which have lately been alluded to in your paper. For example, they slaughtered fifty-four Japanese belonging to the district of Yoyeyama, and in 1871 four shipwrecked men belonging to the district of Bitchu were robbed and maltreated, and their junk rifled of everything. Claims for their wrongs have never been investigated by the Chinese Government, although years have elapsed since the occurrence complained of, which proves that the savages were beyond Chinese influence, and over whom their authority did not extend.

I would add, moreover, that Prince Kung and other authorities of the Tsung-li-Yamen discussed this matter last year at Peking with Mr. Soyeshima, and made not the slightest objections to the punishment of the savages by the Japanese Government, leaving them entirely at the disposal of Japan.

Our Government regarded this answer to their remonstrance as decisive, and accordingly decided on the Formosan expedition, which we hold is justified on two grounds—first, the disclaimer of responsibility on the part of the Chinese Government for the conduct of the savages; and, second, their neglect of inflicting punishment. I have no doubt, therefore, that International Law admits that, when a Government demands the punishment of those who have offended its people, and punishment is not inflicted, an expedition may be rightfully fitted out to obtain redress on the spot where the offence was committed.

Besides, the Japanese in this case having first obtained the assent of the Chinese Government to their taking the matter in hand themselves, no further communication was necessary.

Mr. Yanagiwara, the Japanese ambassador to China, is now at Shanghai, and I believe that he is negotiating on the matter with Mr. Pau, a special commissioner from His Majesty the Emperor of China, (together with the Tautai), to place the question on a friendly

footing, which seems quite feasible, seeing that Prince Kung and the other Tsung-li-Yamen authorities will not deny their former acquiescence.

Very truly yours,

MAKOTO.

Shanghai, 2nd July, 1874.

#### Latest Intelligence from Formosa.

The following items have reached us privately to-day, from Taiwan:—

Things in Formosa remain *in statu quo*.

Nothing has been seen or heard of the Chinese Imperial Commissioners, said to have gone from Foochow to settle the difficulty. A Japanese gunboat from Kelung on the 21st had likewise heard nothing of the Chinese Commissioners.

The Chinese at Formosa are very friendly.

A Japanese Minister is on his way to Peking to negotiate for a settlement; and the Japanese Forces have instructions to await advices from Peking previous to leaving the Island. The Chinese Commissioners having instructions to drive the Japanese from Formosa, and missing each other, will probably cause the war each wants to prevent.

The Japanese Force in Formosa is stated to be under three thousand.—*Evening Gazette.*

The less reliance that is placed upon the various rumours which are flying about with respect to the Formosan difficulty, and which are reproduced from day to day in the columns of the press, the less likely are the public to be misled. For instance, an impression prevails that the iron-clad *Stonewall* is in harbour: whereas the truth is that the *Stonewall* is at present in Japanese waters, and the ship which is actually in harbour happens to be built of wood. In all other respects, however, this interesting piece of information is correct. But there is no doubt the Chinese are on the *qui vive*, and are hastily preparing for all emergencies. The action of the Fokien Viceroy, the sudden repairing of the Wosung forts, and, above all, the extensive preparations which we have reason to believe are going on at the Kaouchang-meau Arsenal, are sufficient evidence of this. Whether there is any truth in the report that the Chinese Government are negotiating for the purchase of iron-clads in Europe and America, through Mr. Hart, it is difficult to say. Such a statement must be taken on its merits; but whichever way that may be, it is a well-known fact that the authorities are contracting largely for fire-arms and other "munitions of war." It is, of course, uncertain when the Ambassador goes to Peking, or whether he is able to go at all.—*Idem.*

Chinese rumour states that the Chinese merchant steamer *Haiching* has been chartered by the Chinese Government to convey troops from Tientsin to Formosa. We cannot vouch for the truth of the statement.—*Idem.*

We hear that large contracts for over seven hundred tons of pig iron have been made with the Tientsin and Nankin Arsenals, and that the workmen at both places are busily engaged casting shells.—*Idem.*

AMOY, 22nd June, 1874.

An Amoy Correspondent writes:—"The savages, having apparently fraternised with the Japanese, have sent two headmen to the

Chinese, requesting the assistance of 500 Cantonese to enable them to resist the invaders. The latter are paying the half-castes to build them substantial houses, &c., on which are, in conspicuous characters, "This is Japan," or words to that effect. Six Japanese men-of-war are off the savage coast, two off Keelung, and none off Takao. The comprador says (I don't know his authority) that if the Japanese refuse to leave peaceably, the Chinese will endeavour to concert with the savages (without whose connivance they could not approach by land) a combined land and sea attack, about two months hence, when they imagine that the roughness of the sea will make their enemies sick and give them an advantage, as their vessels are to be manned by Cantonese boatmen, who won't mind a storm (N.B. he is a Cantonese). Also that the Chinese are negotiating for the purchase of a large and powerful war steamer, to be on the spot in about a month.—*China Mail*.

A rumour has been current in the Colony for the last three days, amongst the Chinese, to the effect that a telegram had been received by somebody here intimating that the earthquake of the other day had done great damage at Manila, destroying some two hundred houses. On enquiry, however, we find the report baseless, nobody having received any telegram.—*Idem*.

A report is current among the official circles here that a despatch has been received by the Viceroy of Canton, directing that, in case of war breaking out between China and Japan, Kwangtung must be prepared to contribute part of the sum necessary for the purpose. The whole war expenses are to come from three provinces, viz, Chekiang, Fokien, and Canton.—*Idem*.

The owners of the *Mantoku-maru*, a Japanese junk, brought a suit against the Postal Department to recover the value of their vessel, which was run down by the *Jekai-maru* during the night of 16th March. Though the plaintiffs said they had a light hoisted, which in fact they intended as a tribute to the deity, they knew nothing about being obliged to keep an anchor light up at night. Judgment for defendants, with costs.

The editor gives an account of the taking of a thief, red-handed, on the night of the 28th ultimo. A boatman saw the man enter a godown, and gave information to one of the Custom-house employés, which led to the man being taken on the spot. It is so unusual in our experience for one Japanese to inform upon the illegal irregularities of another, that we cannot help suspecting the existence of some peculiar circumstances in this case, and may be pardoned for venturing a query as to whether it was not a Government godown which was the scene of the capture.

Another editorial note announces the appearance of the Comet in the north-west, giving a rumour which the cloudiness of the recent weather makes it difficult to verify, that it was seen two days before; and mentioning that the Chinese report it to have been seen in Shanghai a fortnight ago.

A writer, signing himself "Osaka Merchants' Companies," complains loudly of the coolies on the native bund. They ask the highest wages, and not only do not work hard enough to earn them, but do not work at all unless asked respectfully. Kobe is a flourishing place, but this kind of thing gives much

trouble, and the writer waxes eloquent about the evils which will arise if the system is not checked by authority, with the aid of the police. Allow us to suggest to this outraged merchant a course of study in the science of political economy.

A man, having come across a parable in a Chinese classic which applies with as much force to the consuming classes in Japan as it did when written to the *litterati* of China, translates it for public information. The quotation points out that as are beams to a house, so are nobles to a country. They are essential to the stability of the fabric, and have one special point in common—that good ones of both are very scarce and only found with difficulty. The difference is, however, marked. If beams are scarce the house is not built, but if nobles of ability are wanting the State totters and falls.—*Hiogo News*.

### Hiogo.

The Formosan Expedition is surrounded with a very hazy atmosphere. There is no doubt from all accounts that the Japanese have severely punished the aboriginal tribe of Boutans and thus avenged the cruel onslaught made by those savages on their countrymen (shipwrecked sailors). But whether these doings will interrupt pacific relations between China and Japan is a problem not yet solved; but it has been elicited from correspondents at Formosa that it is the intention of Japan to colonize that part of the island occupied by the savage tribes, in which case there is very little doubt but that China will wage war with Japan, and it is rumored that the Chinese Government have offered the British Government \$2,000,000 for the iron-clad *Iron Duke*, but whether or no the offer has been taken into consideration has not as yet transpired. It is questionable whether the Chinese have at this present any territorial right of jurisdiction over this specific area of Formosa; that if they once had has it not lapsed by a surrender of right and effluxion of time?

The freedom of foreign travel throughout the length and breadth of Dai Nippon we believe to be nearly if not quite *un fait accompli*; indeed, we have it on good authority that the preliminary arrangements have been settled, and that in three months' time foreigners will be free to exercise the right.

The murderer of Dr. Yamada and family has been arrested, but no particulars have as yet transpired.

Robberies are still of frequent occurrence in the native town, but the native police are certainly more vigilant than they used to be.

The Kobe and Osaka Railway Statements are falling off; the second and third class fares (the latter especially) are too high.

The Hiogo Gas Company are now prepared with fittings for sale, so that the time is approaching when the public will be able to indulge in gas.

A comet was seen from Kobe on the evening of the 7th instant.

A Municipal Meeting was held on the 10th instant; the following is a summary of the business effected: an inexplicable letter from the Kenrei concerning the Recreation Ground; a complaint from Messrs L. Kniffler & Co., about a drain and a piece of ground fronting their compound; the Division Street Drain question is to be referred to the Consuls, with a request that they will enquire of the Kenrei if he has received any answer from Yedo concerning the same; \$2,000 have been placed on deposit at 5 per cent. interest to the credit

of the Police Fund, another \$2,000, will have accrued by the end of the year and be disposed of in like manner. Sergeant Peterson's engagement was renewed for a further term of three years; he was also highly commended.

Professor Vanek has arrived and promises to enliven our community with three entertainments only.

Office hours in the Ken have been altered from 9 a.m. to 4 p.m.; to commence from 7 a.m. to 1 p.m., this has been the case with the hour of teaching in the schools at Kioto and Osaka since the 1st of May last, and we believe the Saibansho is about to follow suit.

Business generally is still debilitated.

The weather to-day is fine, but for many days we have had very wet and squally weather.—*H. and O. Herald*.

By latest advices from Formosa, it appears that the Japanese are determined (so they say it is asserted) not only to have the satisfaction of punishing the aborigines for their barbarous conduct, but to have from the Chinese the amount of sycee necessary to defray the expenses of the expedition, and also a portion of the island ceded to them. Instructions from Peking are, to be very careful but very watchful; *id est*, not to commence hostilities for the present at least, or until further instructions arrive!—*Idem*.

### Shanghai.

We have been favoured by the Agents with some particulars regarding the loss of the *Laptek*, mentioned in our last issue. It appears that, on the 28th ulto., at 9 p.m., while the steamer was on her voyage from Swatow to Shanghai, with sugar, she struck on an unknown and sunken rock, about two miles from the shore, at a spot about eight miles from Keelung. Captain Tough, finding his vessel was settling down by the head, made for the shore, and succeeded in beaching her on a sand bed. The nature of the damage could not be ascertained, as the forehold was full of water and there were no means at hand of pumping it out. The engine-room and afterhold, however, remained dry. The weather was calm and fine in Keelung harbour, though a little foggy outside, and was favourable for making attempts to discover the nature and extent of the damage, but, from the position in which the vessel lies, grave doubts are entertained as to whether this can be accomplished. Though she has not yet been abandoned, it is believed the *Laptek* will be a total wreck. Nearly half the cargo, about 4,000 bags of sugar, has been landed in good condition, but the remainder is reported to be irretrievably damaged. From another source we are told that the steamer struck near the Double Rock, about six miles from Keelung, and that she was run into Ma-sou Bay, about 3 miles off. The *Juryen* brings 36 Chinese, who were passengers by the *Laptek*, but the crew had remained by the vessel.—*N.-China Daily News*.

### Corea.

Our correspondent, writing from Newchwang on the 30th June, says:—The Chinese are again permitted to trade with Corea under certain conditions, but the astute natives in Shanghai seem to have kept the secret long enough to enable them to denude the market of heavy grey shirtings, although a pretty good hint was given some time ago of what might be expected from the more liberal Government re-established since the downfall of the usurping Regent.—*Idem*.

## THE FORMOSAN EXPEDITION.

WE PUBLISH to-day a translation of a letter received by the Government of Japan from the Tsung Li Yamen—the Chinese Foreign Office—and this supports very much what has been written on both sides—i.e. both for and against the Japanese mission to Formosa. We use the word mission, because we perceive that this is the word made use of by the government; and it not only has a more peaceful sound than the word expedition, but according to the instructions given to the General and all who had directions from headquarters, it appears to have been intended that it should be altogether peaceful, if the natives would themselves allow it to be so.

And this was in perfect accordance with the assurance said in the letter to have been given by Soyeshima, "that the intention of Japan with regard to the Formosan savages, in sending a mission to them, was only to desire from them the good treatment of her people in the future, should they ever go to their districts, and not in any way to make war upon them."

Now, we all see plainly enough, that the intentions of government were very much interfered with by the circumstances under which the mission went. However peaceable their intentions, they were obliged to send a mission strongly defended. England and America have both had experience of attempting to land for negotiations, with an insufficient force. It was quite right, therefore, to send troops; and this is further proved by the fact that the savages actually did fire on the Japanese, the *Nisshin* was fired on by the Koalutz tribe, and all the land fighting was brought about by the hostile acts of the Boutans.

The interview which was reported at length in the *Tokei Journal*, between the chief and the Japanese, with Capt. Cassel, U.S.N., as their spokesman, most energetically stated the peaceful object of the mission, so far as all the tribes were concerned, except the actual perpetrators of the cruelty that had caused the appearance of Japanese on their territory. The Japanese took nothing by force, and were content to pay for the very land their camp was fixed on. These facts, added to the assurance given by the Japanese that they did not intend a hostile descent on the island, ought to have full weight; and this they will have with all candid reasoners.

We have proof of the impossibility of dealing with the fiercest of the tribes, except with arms in hand, in the manner in which the Chinese and half-castes have rejoiced in the power exhibited by the Japanese. They, at all events, have been well pleased to see their neighbours from the Land of the Rising Sun; and, most likely, so long as their liberal expenditure lasts they will be only too glad to make them welcome.

This letter that we publish distinctly states that "the territories inhabited by these savages are within the jurisdiction of China." But some tell us that it is the first time they have claimed the suzerainty over Southern Formosa; and the letter itself states that they have never restrained the savages, nor established any government over them. If, then, the Chinese government so distinctly acknowledge that they have neglected such obvious duties—duties the necessity of fulfilling which have repeatedly been demonstrated, it is a great stretch of "protection" to put in a protest now. She has left the savages so entirely to themselves that they have always been a terror to mariners on that coast. And it is simple nonsense now to attempt to call Japan to account for taking in hand the pun-

ishment of those who richly deserve it, and whom, by their own shewing, the Chinese have neglected to punish.

With the light thrown upon the whole affair by the narrative of the whole proceedings in Formosa, and the dispatch from the Tsung Li Yamen to the Japanese government, printed below, we come to the conclusion that the Japanese are not so much in the wrong as we at first thought them; that they have precedents (in England and America) to support them; and that the Chinese government, in adopting the non-interference system, have neglected the obligations they owe to the world, and have no right whatever to complain of the proceedings of Japan.

We are by no means authorized to state, but we have a very full assurance that no difficulty between the two governments is at all likely.

DISPATCH FROM the Tsung Li Yamen to the Government of Japan, on the subject of Formosa:

## [TRANSLATION.]

26th day, 3rd month,  
13th year of Tung Che.

To HIS EXCELLENCY

THE MINISTER OF FOREIGN AFFAIRS, JAPAN.

SIR:

Since your country concluded a treaty with China, the obligations of mutual concord and good-will have been fulfilled on both sides, and the sentiments of respect and friendship have been more and more cultivated towards each other. Last year, too, on the occasion of the mission of the Minister Soyeshima to China, we had very friendly consultations with him on several matters.

The same year, in the fifth month, Yanagisawa, an officer attached to the mission, and the interpreter Tei came to our office by special order of the Minister Soyeshima, to ask us questions about three points, the first of which was whether the island of Macao belonged to the jurisdiction of China or to that of Portugal; the second was whether Corea constituted an independent sovereignty or not; and the last related to the question of the proposal to despatch a mission to the savages of Formosa, for the purpose of inquiring into the murder of some Loo-Choo Islanders by them; and in this interview we gave him the accurate and true explanation of these points. Subsequently, it was again said on the part of the Minister Soyeshima, in the words of the interpreter Tei: first, that it being possible for Japan to trade with the island of Macao, she only desired beforehand to establish a basis for future negotiations, by ascertaining whether this island belonged to China or not; second, that, as for the affair of Corea, Japan desired to have the intervention of China to settle the dispute; and, lastly, that the intention of Japan in regard to the Formosan savages in sending a mission to them was only to desire from them the good treatment of her people in the future, should they ever go to their district, and not in any way to make war upon them. This was a token of the good relations between China and Japan; all distrust, if any, was at once cleared away on both sides. Afterwards, when, on the occasion of the Minister Soyeshima's taking leave of us, we, shaking hands, said that the two nations must always observe the provisions of the treaty, and forbear to intrude on each other's territory, he answered, that this was the very thing he most desired. Since the departure of the Minister Soyeshima there have elapsed a great number of days, but there has again been no question

put to us concerning the above said three points, nor have we ever made any admissions that could modify the provisions of the treaty; and we thought there could be no reason to apprehend any disturbing causes arising between the two governments. But, now, all the Foreign Ministers residing at Peking inform us that Japan is going to despatch an army to Formosa, to make war upon the savages of that island; and, besides, the newspapers, the intelligences from the sea coast, and the reports from our local officers, all inform us that, in the second month of the present year, a vessel-of-war belonging to your country anchored in the harbour of Amoy, demanding to make use of the drilling ground there for drilling her crew; and also that, to use the words of her commander, she came from Formosa and the Pescadores.

Formosa is an island lying far off amidst the sea, and we have never yet restrained the savages living there by any legislation, nor have we established any government over them, following in this a maxim mentioned in the *Rei Ri*: "Do not change the usages of a people, but allow them to keep their good ones." But the territories inhabited by these savages are truly within the jurisdiction of China; and this is also the case with several savage tribes inhabiting other remote provinces within the jurisdiction of China, and whom China permits to retain their own good customs. We hear now with astonishment that Japan intends to send an expeditionary corps to Formosa, but still we do not firmly believe that this is truly the case. If truly so, why did you not consult with us beforehand about it? For what purpose is the vessel destined that now lies anchored in the harbor of Amoy?

Truly hoping that Your Excellency will reconsider and examine into this matter,

We have the honor to be,

Y. E.'s obedient servants,

(The signature of Prince Kung and nine other General Commissioners of the Foreign Affairs of China, Tsung-li-Yamen).

When the expedition first landed at Liang-kiang it was received in a friendly manner by the natives, who sold some thousand of acres of land for the purpose of erecting our camp on.

The village we attacked shortly after our arrival contained somewhere about 50 savages, 30 of whom fell under the fire of our troops, and amongst that number the head of the tribe. The chief's son was wounded and died from the effects some days afterwards.

Orders were given on the last day of May to prepare for marching against the tribe called Bootans, who inhabit the mountains, and on the following morning at 7 o'clock three regiments left Fukou, the Northern part of our camp, taking with them a mortar. At 10 o'clock three regiments, infantry and artillery, started from Sekinrou, and at about 5 o'clock in the afternoon three other regiments also marched on the track of the others; and at 6 o'clock on the morning of the second two regiments marched from Ohikuska, which is the south eastern part of our camp, taking with them some field-pieces. Orders were given for the various regiments starting from the three different points, to meet at a given spot on the night of the second or morning of the third of June.

The weather during the first days march was exceedingly unpropitious, for the rain descended in torrents. So great was the rainfall that the rivers were flooded and fording

the streams was very dangerous. The difficulty did not deter our commanders from marching. At one of the rivers three of our men were carried away by the force of the current. Two were rescued, the other unfortunate was drowned. The task of carrying over the provisions, ammunition and guns, was hard and hazardous, but after great trouble all were safely landed on the other side of the stream. We were now approaching the region where the fierce tribes of Bootans and Cuscus inhabit. These tribes subsist chiefly on the flesh of wild animals, sweet potatoes and millet which they produce by cultivation. We found the country very difficult to traverse, it being so very rough and mountainous, nevertheless the troops persevered and at night succeeded in reaching the top of a mountain. Pigs and buffalo and sweet potatoes were numerous; numbers of the former were shot, and large quantities of the potatoes unearthed.

The following day our march was continued through the mountains. Some skirmishing took place with the natives, who were concealed from view by bushes and rocks from behind which they fired upon us. Three or four of our men were killed and a few wounded. The natives retreated before us as we advanced; in fact we met no multitude to offer us resistance. The Bootan territory was reached and all the villages were found to be deserted. Our men set fire to these, and captured a native girl about eleven years of age.

I append a list of the different tribes we have come across, as near as I can recollect, with their respective numbers, names of chiefs, &c., which may prove acceptable to your readers.

TABLE OF TRIBES ARRANGED ACCORDING TO THEIR POWER.

Name of Tribe.	No.	Name of Chief.	General Character.
Bootans	250	Arock	Extremely fierce
Sabarie	220	Isa	Friendly disposed
Cuscus	190	Isunemot	Wicked & barbarous
Mantits	175	Cartoy	Friendly
Kachirai	165	Foorui	Peacefully inclined
Pattotinpy	160	Ahou	—
Pakarot	155	—	—
Shaporit	142	—	—
Osnanto	130	—	—
Ropot	126	Mamot	—
Chinakia	120	—	—
Lianruan	114	Pinary	Friendly
Bica	90	Singio	Friendly
Putgekin	86	—	Savage
Turasock	74	Tohutock	Friendly
Kanton	60	Asam	Friendly
Teckisha	52	Senrin	Wicked
Kowarts	50	Puarain	do.

REMARKS.—Several of the tribes are composed of Aborigines and Chinese, while others again are natives from different tribes.

The majorities of the tribes seem to be friendly disposed, but the Bootans, Cuscus, Kowarts and others, are very wild and acknowledge no law.—*Rising Sun*.

FORMOSAN ARMS.—The Formosans, fortunately for the Japanese, are but indifferently armed. The specimen of their fire-arms has been on view at the Custom House during the week. The stock is short and roughly constructed, while the barrel is about four feet in length, with a small bore. The weapon is indeed harmless when put in comparison with the rifles of the present day. Had the Formosans good rifles the loss of life on

the side of the Japanese would be greatly increased, as they fire from under cover.—*Idem*.

FEMALE PRISONER.—Amongst other things brought by the steamer *Sailio-Maru* was a Formosan girl, captured by the troops on their march through the mountains. She is apparently about eleven years of age, with deeply set eyes, one of which is blind. Her nose is flat and cheekbones high and her general appearance has a closer resemblance to the natives of the South Seas than to the Chinese. Her place of confinement was been the Custom House at Nagasaki where she has been honoured with visitors hailing from various Climes. The beggar is equal to the prince in her eye for she takes as much notice of one as another. On Monday night she was sent to Tokio in a Japanese steamer. She was kindly treated and toys placed at her disposal, and she seemed apparently contented with the turn the wheel of fortune of war has taken in her young life. We are not aware of the intentions of the Japanese towards the little creature but presume she will be well cared for. An old woman was also captured at the same time but proved too slippery to hold as she made a bolt of it and got clean away.—*Idem*.

“UNDINE” FROM FORMOSA.—Yesterday the steamship *Undine*, arrived from Formosa with a number of sick soldiers. One of the number, an officer, died during the passage, and the vessel came into port with her flag flying half-mast high. The Captain reports things quiet when he left, and cannot tell whether any fighting is going on or not as the officials don't seem inclined to inform Europeans on the subject. The Chinese are apparently satisfied with the state of affairs. Only one Chinese gunboat was there when the *Undine* left. Fish is plentiful, and also buffalo flesh, the latter being scarcely fit for consumption.—*Idem*.

(From the *N.-C. Daily News*.)

A break occurs again in the news of the Japanese expedition. By way of Taiwanfoo, we hear that, at the 5th inst., all the Japanese vessels had left Liangkiau, and that the troops had advanced into the country in savage occupation. There were rumours at Taiwan that China intended adding considerably to her force at that place.

We have no very definite news from Formosa, except that the Japanese are clearing the sea coast of aborigines, which rather contrasts with a statement we saw lately in a Japan paper that General Le Gendre had made treaties with all the tribes except one, and that the latter would inevitably come in.—What is more important than Japanese proceedings against the savages, who can of course not stand for a moment against breech-loaders, is what the Chinese mean to do. They are undoubtedly very angry at the expedition, and would much like to expel the Japanese. The question is, whether they have pluck to try.

A Tientsin correspondent writes, under date of the 11th June:—The Japanese question is kept very quiet here, but, from a circumstance that has come to my notice, I suspect the Chinese have made up their mind to fight. As the present state of matters is entirely due to the undecided course pursued by the Chinese in the beginning, the Japanese will make a mistake if they retire from Formosa without receiving from the Chinese Go-

vernment an amount equal to the expenses of the expedition. There cannot be a doubt that, until quite recently, the Chinese disclaimed sovereignty over the eastern half of the island; so that if the Japanese were to content themselves with the reimbursement of the cost they have been at, their demand could not, by Foreign powers, be considered as otherwise than exceedingly moderate. As little can the power of the Japanese to resist be doubted, provided they make good use of their ironclads to prevent the Chinese from landing any more troops on the island.

Another correspondent writes, on the 16th. (as will be seen from our Tientsin letter) that 40,000 men of Li Hung-chang's army are under orders for Formosa. This is, as yet, only report, but it is not unlikely in the present temper of the Chinese that they may purpose hostilities. It remains to be seen whether the Japanese war-vessels would be able to prevent them landing.—In connexion with these statements, it is worth while to mention a rumour that the Chinese think of bidding \$2,000,000 for the *Iron Duke*!—*Idem*.

The barque *Eaglet*, which arrived late on Sunday, having left Taiwanfoo on the 12th, brings some news of the movements of vessels and other matters connected with the Japanese expedition. H. M. S. *Dwarf* had left for the seat of operations, Liang-kiau bay, to relieve the *Hornet*; and the *Thalia* had called on her way to Nagasaki. The *Thalia* brought news of the fight already reported, in which three stockades were taken and 28 men killed. Further encounters seem to have been rendered impossible for the time being, by the savages retiring into the fastnesses of the hill country. Between the 5th and 10th June, three Chinese war-vessels had arrived from Foochow, and the last, a corvette, brought news that the Chinese Imperial Commissioner might be expected by one which arrived just as the *Eaglet* left port. It was reported that M. Prosper Giquel, late director of the Foochow Arsenal, would accompany the Commissioner, and that the latter was empowered to request the Japanese to retire, on the understanding that the China Government would reimburse them for all the expenses of the expedition. The fact that a Tientsin correspondent, whose letter we published yesterday (June 22nd), makes the same statement, at the same time that it appears to have become rumoured in the South, is a coincidence which leads to the belief that it is well founded. The land forces at Taiwan, which had lately been despatched by the Governor of Fohkien to quell a local disturbance (as a correspondent informed us a fortnight ago), were said to be by no means eager to engage the Japanese. There can be no doubt that the China Japan question is at a critical stage. From the North we hear rumours of a large force being under orders for Formosa; and, at the open ports of the island itself, a collision is believed to be imminent.—*Idem*.

We have been favoured with the following translation of the last despatch known to have been addressed by the Viceroy of Fohkien to the Commander of the Japanese troops in Formosa prior to the departure of the last mail from China, up to which time, so far as we know, the despatch, which will be read with high interest, had not been made public in China.

A despatch addressed to the Japanese Commander of the Central Army.  
Li, the Governor-General of Fohkien and Cheb Kiang makes the following communication.

From your despatch of the other day I have learnt that you had received orders to conduct your troops to Formosa for the punishment of the wild aborigines. I had then already referred to International Laws in support of the request I made you to send back your troops and to observe the Treaty. My communication is preserved in the archives.

I have now, on the 27th of May, a report from the Military Commander and the Tantai of the Taiwanfoo stating that you had, at the head of your troops, erected a fortified camp in the neighbourhood of the fortified town of the Liangkiao belonging to our district of Fung-shan, and that you had fought with the aborigines residing there.

I had already sent Tshon Tshin Pang, the Military Commander of Anping, to instruct the Vice President of Taitang Foo-li and others to proceed in haste to the place to confer with you on the 23rd May, and to inquire from you personally if you had received my communication or not. You replied that you had received it. You therefore declared to the Military and Civil officials I had sent that your envoy Fukujima (Soyejima) had last year made arrangements with the Tsung-li-yamen about an expedition against the wild aborigines, and further that, as an Envoy had been sent to Peking on this special business, you would await an answer or until information arrived from Peking, but that you could not immediately withdraw the troops.

It has further been reported to me that I-zo the Secretary of your Consul at Amoy, K. Fukushima, had declared on the 22nd of May, during the visit he paid to before-mentioned Military Commander and the Tantai of Taiwan, that he would proceed himself to Liangkiao to see what was going on, and that it was not admissible that men-of-war of his country should seek a quarrel with Chinese subjects. When he came to pay his visit as a proof of his love of peace, the Military Commander and the Tantai asked him why this expedition was undertaken, and he replied that it was only to make an example by the punishment of the wild aborigines, and that nobody would dare to molest any Chinese settlements or inflict harm on any of them.

After all these different reports had reached me I was well informed of all the circumstances, and felt very much obliged to your Government for the faithfulness and truth with which they endeavoured through their benevolence to strengthen the relations between the two countries.

And when I finally heard that you had received the high commands (of your Emperor) and were desirous to show your good will and great benevolence, and for the sake of peace to destroy every suspicion, I felt highly rejoiced and satisfied.

It is not long ago that your country concluded a treaty with China, from which it is hoped that both countries will unceasingly maintain the most friendly relations. It is perhaps owing to accident that I have not received any instruction from the Tsung-li-yamen how to act in this matter. But when you received the order to invade at the head of your troops a territory belonging to China and to carry a military expedition to a place under my administration, you attached faith to frivolous talebearers who told you falsely that the wild aborigines were not under Chinese dominion, and the result of it is that the last acts of your Government and of yourself constitute an infraction of International Law, and of the Treaty, which must be condemned both by China and by foreign countries.

In addition, therefore, to what I stated in my former communication, I feel that I must once more explain to you more fully what proofs I have for this assertion.

There are clear proofs dating from ancient times that the persons, the property, and the sites of the village of the aborigines of Liangkiao are under the administration of China.

The eighteen villages of the 3rd Southern division of Liangkiao belong to the district of Fungshan, and pay a yearly tribute of two thousand taels, as is written in the descriptions of Taiwanfoo. This is the first proof.

At Taiwan there resides an official who is charged with the administration of the aborigines in the Southern and Northern Districts. Every year this official goes into the mountains, gives rewards to the aborigines, visits the markets, etc. This is the second proof.

At the fortified town Tshai-Tshang, called also Fuanshi, there has existed from the commencement of this dynasty a monument and temple of the Chinese Minister Fukangau. This is the 3rd proof, one which has been engraved upon a stone for many centuries.

In the third Article of our Treaty it is stated that each of the two governments shall have the sole administration of their respective territories, and that

neither shall interfere with the administration of the other. To cross the territory, is, therefore, wholly inadmissible.

The first article says clearly and distinctly that the two empires have to assist each other; and the 14th observes that certain ports have been designated in China for the Japanese to visit, and that the Japanese shall not be allowed to fight with other nations in the Chinese waters. How then can the Japanese fight on our territory?

It is therefore in opposition to the Treaty that you have without premission landed at Liangkiao, erected a camp there, and fought with the aborigines who pay taxes to us. Would not the Japanese hold responsible those who, in imitation of the example which the Japanese have set, should send, without permission, a general and an army into the Japanese Empire?

The Military Commander and the Tantai of Taiwan have reported that you and the Consul Fukujima had both said that the Japanese envoy had declared (arranged?) last year at Peking that the wild aborigines were not under the administration of China, and that you had come because this question had been settled long ago.

Now, treaties between countries are concluded by the orders of their respective sovereigns, and a special article stipulates that the Plenipotentiaries sign and seal them only provisionally. As soon as the Imperial ratification has been obtained in both countries the Treaties are published in print.

What you and your country's consul now tell me about what the envoy had arranged last year with the Tsung-li-Yamen, is it in accordance with the Chinese laws and the Treaty, or is it not? Or, if we admit the possibility of an arrangement having taken place, some official record must have been signed, or both countries must have published a notification, or despatches must have been exchanged in evidence of the transaction.

I have received no communication whatever on this subject from the Tsung-li-Yamen, but your Excellency, who, in obedience to supreme commands, has come from so far, will doubtless be acquainted with all the details of the transaction. If, at the time referred to, any written arrangement was entered into, I request you to furnish me with a copy of the original text agreed to by both parties, and I shall then, with due deference to your Excellency, act according to the agreement.

But if at the time named no written agreement was entered into, I request you to send home the troops, as, if the stipulations of the Treaty are to be observed, foreign troops cannot be allowed to remain any longer in a territory belonging to China.

I believe that it is only because the wild aborigines in the two cases mentioned killed some shipwrecked people that your Government has ordered one of their generals to enter at the head of an army into the territory of the aborigines and to punish their chiefs in order to prevent a repetition of these misdeeds.

I have to remark that in the case which concerns the natives of our own tributary country of Loohoo who were murdered when shipwrecked, I myself have issued strict orders to the local authorities to take the matter into their hands, and it is therefore unnecessary that your country should trouble itself about it.

In the other case the four shipwrecked natives from the Japanese province of Bishia, Lipa and companions were not murdered but only robbed. According to Article VIII of the Treaty, which refers to robbery, it is my duty to have the culprits traced through the local authorities, and to have them prosecuted and punished. The treaty strictly enjoins on the local authorities the duties of prosecution and punishment. I have no intention to make any difference between Chinese and Foreigners, and the powers conferred upon the local authorities are such that they will not cause any delay. There exists no necessity for you to send troops to Formosa, to cause for a long period trouble to your army and to spend large quantities of provisions.

It is out of consideration for the good relations between the two countries, which are highly appreciated, that I write to you so explicitly, and that I enter into the question of proofs and draw your attention to the Treaty.

At present the Representatives of all the Powers at the Capital above us, together with all the people of China and Foreign Countries below us, are agreed that your country is wrong on this point.

I believe that, while acting with a noble regard for the interests of your country, you will certainly be able to change your plans and to send the troops home immediately. By this course you will avoid

the condemnation of the whole world, and will also preserve eternal peace between the two Empires,—an advantage which Your Excellency will certainly keep in view. A necessary communication.—*Japan Mail.*

### AMOY.

Nothing very special or striking has occurred in connection with the Japanese expedition since I last wrote you. H. M. S. *Hornet*, which arrived here yesterday from the seat of war, reports that the Japanese have cleared the whole of the Eastern side of the island, and fairly driven the savages into the mountains. Their system has been to steadily advance in large bodies over the districts occupied by the enemy, and to destroy completely the villages that lay in their way. In this way they have cleared the whole of what may be termed the open country, and have cooped up the savages within their mountain strongholds. Though they have accomplished so much, the greater difficult part of their task still remains to be accomplished. The mountains occupied by the aborigines are exceedingly high and difficult of access. They are, moreover, of so wide an area, and contain so many places where they may shelter themselves from a pursuing enemy, that it will take the comparatively small force of the Japanese a long time to follow them into all their recesses. Still, they have unquestionably accomplished a great deal in having been able to occupy the sea-board, and in confining them to the mountains; and possibly more may follow from this than at first sight seems likely. The natives depended very much upon the sea for getting supplies from the outer world, and, it can thus be seen, an important blow has thus been struck by the Japanese, and disastrous it may in the end prove to the poor savages. On the landward side their source of supply is much more limited, owing to the chronic state of war that exists between them and the Chinese. The occupation of the eastern shore involves another danger, which may prove even still more fatal to them. It is well known that the savages are divided into a great number of tribes, nearly all mutually hostile to each other. Each of them has its own particular locality, in which it resides, and over which its chief reigns supreme. Now, the late successes of the Japanese mean, that the coast-lying tribes have been driven beyond the limits of their own district into those belonging to others, and, unless they lay aside their old animosities and combine to fight for the general safety, they are likely to perish by the hands of each other.

As I hinted in my last letter, the Chinese authorities are in a great state of excitement on account of the expedition. Some time ago, one of the Consuls in Amoy got a despatch from what purported to be a Foreign Board in Foochow. In this document, which was a very lengthy one, the whole subject was gone into very fully. It stated how the Japanese had appealed to Peking for redress in the cases of two or three vessels that had been wrecked on the East Coast of Formosa. It showed how, by landing a body of troops there, they had violated international law on this subject, and it appealed to various foreign writers on international law to sustain them in their argument. It then wound up by asking the Consul to endeavour to restrain those under his authority from selling the Japanese coals or any other materials of war, and it requested him to ask such as might be in their service to at once withdraw from it. The most amusing and most thoroughly Chinese part of the whole document, however, was where it stated that the Consul was desired to carry out the request of the Board not in an official way,

but in whatever other manner might seem in his wisdom the best. To issue a proclamation on the subject, it said, would be tantamount to declaring that a state of war existed between China and Japan. By doing so, foreigners would be prevented from supplying not only the Japanese, but the Chinese too.

There are rumours that come to us from the North, that the Chinese authorities are about to declare war against Japan. It seems to me that if both parties are left to themselves, and are not hampered by foreign interference, the Chinese would stand but a poor chance of beating the Japanese. From what we see and hear of the last, they seem to be a most determined lot, and to be most enthusiastic in their desire for a scrimmage. Last week, the Taotai, it is said, sent an officer on board a small Japanese gun-boat, at present lying in the harbour, requesting the commander to clear out, as his room was more agreeable than his company. He replied that he should do nothing of the kind, and politely requested the Taotai to come and try and put him out. He, at the same time, got his ship ready for action, and, having double-shotted his guns, waited for the coming of His Excellency. This was not mere bravado, as a Chinese gun-boat, considerably larger than his own, lay within a hundred yards of him. The Taotai has decided not to add to his laurels by the capture of the gun-boat, and, since then, the Chinese man-of-war has left for parts unknown.

We hear by a steamer just in from Hong-kong, that six Chinese gun-boats have left that port for the seat of war.—*Shanghai Evening Courier*.

At the meeting of the Yokohama Race Club, held this afternoon (June 29th,) at 4 o'clock p.m., the following members were present, viz: Messrs. Melhuish, E. Abbott, J. A. Fraser, T. Wallace, J. Davidson, J. H. Sandwith, Buckle, W. M. Strachan, E. J. Geoghegan, J. F. Pinn, F. A. Cope.

Mr. Melhuish was voted to the Chair.

Owing to the few members present at the last meeting, it had been adjourned till today. The object of the meeting was the passing of the accounts of the last half year, a statement of which was then read by the Secretary:

#### RECEIPTS.

To Balance from late Treasurer	2,778.11
„ Entries for Spring Meeting	1,455.00
„ Yearly and Half-Yearly subscriptions	590.00
„ Subscriptions for presentation cups	893.00
„ Tickets sold at Meeting	1,041.89
„ Received for Rent of Stalls and Bettoes	330.00
„ Tickets, &c.	15.00
„ Penalties	7,103.00

#### EXPENDITURE.

By paid for advertising, printing, &c.	74.09
„ Lane, Crawford & Co., balance of Store-keepers Cup, Autumn Meeting	32.80
„ Expenses of Meeting, maintenance of course, including Momban's wages...	571.45
„ Prizes	2,377.89
„ Temporary Grand Stand, Spring Meeting	271.98
Balance	3,774.79

7,103.00

Dependencies: Ground rent for 1873 and 1874.

Mr. Abbott proposed, and Dr. Buckle seconded, that the accounts as read be approved and passed. Carried.

At the last General Meeting it was stated that the Committee had tendered payment of the Ground Rent at the rate of \$1200 a year; since then there was nothing further to report, as no reply had yet been received from the Japanese government. The Secretary then read a proposal from the Committee to encourage the entries of Japanese ponies, particulars of

which will be duly advertised in the newspapers. The amount received for the sale of tickets last Meeting exceeded that of any previous meeting.

The usual vote to the Chair brought the proceedings to a close.

#### CRICKET.

THE CRICKET Match on Saturday—RESIDENTS vs. VISITORS, was brought to a premature conclusion on account of the weather.

The RESIDENTS won the toss and went in first, but, soon after, the rain came down so heavily that the stumps were drawn.

The following is the score:

#### YOKOHAMA v. UNITED SERVICES.

Play commenced shortly before 11 o'clock this morning, and Yokohama, winning the toss, sent in Messrs. Dodds and Hamilton, who made a good stand; the latter gentleman was well caught by the wicket keeper. Messrs. Wood's and Abell's scores were made by some very good play. The fielding on the part of The Services was very loose. The innings closed at 2 o'clock for a total of 125 runs.

After a short delay, The Services sent in Lieut. Hungerford and Private Burnett, to the bowling of Messrs. Abbott and Wheeler; they, however, soon retired. Mr. Humphreys was the only one who succeeded in making a stand; he played very carefully. The innings closed at 3.30 p.m. for a total of 39, thus leaving the victory with the Yokohama team, the match being decided on the first innings. The ground was in very good order.

The Services followed their Innings, and at 5.15 p.m. seven wickets had fallen for 97 Runs; Private Smith scoring 38.

The *Iron Duke's* band reached the ground at 5 o'clock. Play continues as we go to press.

#### HAKODADI.

June 28th, 1874.

(From our own Correspondent.)

A ridiculous case of puppyism occurred the other day at Awomori. The Telegraph Department steamer *Denshin-maru* and the Japanese gun-boat *Ho-sho-kan* were lying there, when the *Maetsu-maru* (late *Maple-Lauder*), commanded by Captain John Will, and bound from Hakodadi with passengers and mails, approaching that port, sighted a foreign pulling-boat, making for the same place. Captain Will, thinking they would be glad of a tow, altered the course of the steamer so as to pass close to the boat, which he then discovered was a man-of-war boat. The officer in it declined the offer, and Captain Will proceeded on his way to the anchorage.

The same evening, Captain Will was summoned from on board the *Denshin-maru*, where he was paying a visit, to the gun-boat *Ho-sho-kan*, and, when there, was informed that he had—by offering to tow the boat—insulted the officer in charge and the Japanese Naval Service. He, of course, explained what motive had induced him to make the offer; but argument could not appease offended dignity, and he was ordered to make an ample apology and money payment for the supposed insult; and in language not of the most polite kind, of course he indignantly refused to comply with these demands, but offered to refer the case to the Japanese Admiral at Hakodadi.

He, subsequently, intending to visit the *Ho-sho-kan* with Mr. Morris of the Telegraph Department, who had kindly offered to act as interpreter, was proceeding in a boat toward the starboard gangway of the gun-boat, when the boat was waved off by the sentry (acting under orders of an officer on deck) to go to the port side. Captain Will and Mr. Morris wisely decided not to do so, and returned from whence they came.

The gun-boat having to proceed to sea next day, the matter was left in the hands of the local Ken officials, with a request from the naval officers that they would not grant the *Maetsu-maru* a clearance. Owing to this she was detained the greater part of a day,—notwithstanding that the passengers and mails were ready for embarkation—until the Ken officials, having satisfied themselves that the complaint was foolish and vexatious, decided to let her leave, on the Japanese supercargo, or bante, giving a document to the effect that he would put in an appearance at any time required, to answer to any complaint against the steamer.

It appears that the officer who was in the boat, and who made the complaint, is Yamasaki Kanginori, commander of H. I. J. M. S. *Ho-sho-kan*. It is fortunate that we have been able to obtain his name and publish it in connection with this piece of coxcombry, as we are inclined to believe he must be an exception among his brother officers, and trust the higher officials of the Navy Department will not overlook this overbearing and high-flown conduct. For we may be assured that, as he acted in this way toward a vessel in command of a foreigner, he would have been still more imperious in his conduct toward Japanese.

One thing we are glad to be able to add, that this coxcomb had to make a very ample apology to the Chief Commissioner of Telegraphs, for not permitting the boat in which Mr. Morris of the Department was seated to come to the starboard gangway of his vessel.

THE TELEGRAPH lines to Sapporo and Hooku-yama are nearly completed and communication is expected to be opened this year.

At PRESENT, native trade is far from flourishing, but we look forward to better times.

MISSIONARIES from Russia have opened a place of worship according to the rites of the Greek Church, and about two hundred Japanese attend every Sunday.

ON THE 1st inst., three steamers, the *Tsukuba-maru*, the *Nishin-maru*, and the *Osaka-maru*, which were in harbour here, started together. It is reported that they were bound for Saghalien, and that the *Osaka-maru* was to convey settlers thither.

THE STEAMERS *Komio-maru* and *Meysin-maru* trade between here and Awo-mori, leaving each port daily.

### THE CAPITAL OF YEZO.

To the Editor of the *Japan Gazette*.

SIR,

At the meeting of the Geographical Society on 23rd March, Mr. R. G. Watson, late *Chargé d'Affaires*, is stated to have advocated the removal of the capital of Yezo from Hakodadi to Edomo (Mororan). It would be interesting to learn on what grounds he bases his argument. Mr. Watson must, however, have been aware that the official capital is, under the Kaitakushi régime, neither Hakodadi nor Mororan, but Sapporo. That this is the pet scheme, and that the millions spent in the last three years have been disbursed with this one idea. In fact it may be said to be the Kaitakushi "platform." Hakodadi, the natural seat of government, commerce, and defensive or offensive war, has been entirely ignored. Yet, notwithstanding, Hakodadi continues to increase very rapidly in population and trade; and it is not too much to predict that it must rise to be one of the most important places in Japan. It is true the foreign trade at present is meagre, the import portion being *nil*, but the reason of this may be plainly seen in the want of population on the island, and the coast produce being mostly of a kind which is consumed in Japan.

It is understood that the Naval Department has wisely decided on making Hakodadi their northern "station," and that they propose to apply for an appropriation for the purpose of establishing a small dock-yard there. The Kaitakushi, it is said, endeavoured to induce them to select Mororan, but the inferiority of the harbour in comparison with that of Hakodadi, together with the natural strength and strategic position of the latter place,—it being in the middle of the strait connecting the Sea of Japan with the Pacific, and all vessels passing out of one sea into the other being consequently forced to come almost under its guns,—caused them to make a fortunate selection.

The very considerable junk trade of Yezo centres at Hakodadi; it is equally distant from the West and South-East coasts, whence the great bulk of produce comes; it is the nearest port to the great rice producing districts of Tsugaru, Akita, and Echigo; while its local fisheries are by no means insignificant. Unlimited supplies of timber—the very best in Japan for ship-building purposes—within a radius of a few miles, and house-building materials in any quantity on the southern side of the strait of Tsugaru; to say nothing of the amount of available agricultural and grazing land in its immediate vicinity. These considerations, coupled with its capacious and excellent harbour accommodation, ought to be sufficient to convince anyone not wedded to an idea, that Hakodadi is the natural capital; and, do whatever the government may in forced colonization, it must always retain its superiority.

What has led to these remarks is a feeling of disappointment that a gentleman of Mr. Watson's capabilities should have committed so great a blunder, and that he should have thought proper to proclaim it to the world through so respected a channel as the Geographical Society. He may be excused on the ground of his having paid but a flying visit to Yezo, but that does not exonerate him from talking with authority about what he had not sufficiently studied. With this protest Mr. Watson may be allowed to "stand over" till his paper can be seen *in extenso*.

MATSUMAI.

14th June, 1874.

ON SATURDAY morning last, between the hours of 2 and 4 o'clock, a passenger from Marseilles to Yokohama, named Marcus Laiyon, disappeared from on board the French Mail Steamer *Volga* whilst on her passage hither from Hongkong, and the natural supposition is that he jumped or fell overboard and was drowned. Deceased, who was well-known in Yokohama, was formerly in the employ of Messrs. G. Domoney & Co. By birth he was a Russian Jew, but a passport or similar document issued by Ottoman authorities at Constantinople was found amongst his effects. Fifty-four Sovereigns, 80 Mexican, a gold watch and chain, and a quantity of clothing remain on board to be claimed by his Consul, whoever he may turn out to be. Deceased had a sunstroke in the Red Sea, but a fellow-passenger informs us that he was suffering from the effects of excessive doses of mercury, and that he was really *non compos mentis* for three or four days before the affair happened; and that the officers of the vessel were aware of this. The last that was seen of him was at 2 o'clock on the morning of the 20th, Saturday, when he went below to his berth, and then returned on deck, minus his outer garments but wearing a pair of elaborately worked slippers, evidently a present. He was missed at 4 o'clock, and it is supposed that he jumped overboard, although he was so weak that he must have had some difficulty in climbing over the rail. We are told that he spoke ten different languages.

IT HAS been rumoured that the Government intend opening the country to foreigners in three months. Upon enquiry we find that no such resolution has been arrived at, but we learn that a conference of the Japanese Ministers and the Foreign Representatives is being held to-day, with the object of discussing the opening of the country.

THE NAMES of 33 Japanese gentlemen, connected directly or indirectly with the Formosan Expedition, who have just returned from the seat of war, will be found in the passenger list of the *New York* from Nagasaki. They reached the latter port from Formosa per steamer *Undine*.

"TAKASAGO-MARU."—This steamer returned from Formosa on Saturday last, but brought no news of importance. The latest intelligence relative to the movements of the Japanese at Formosa is, that the troops are now waiting for orders from the Government, and fighting will not be resumed at present, and there is a possibility of the troops being shortly withdrawn. It is difficult to arrive at correct conclusions relative to the negotiations between the Chinese and Japanese, as the majority of the reports are entirely unreliable and conflicting.

ON SATURDAY last, one of the native papers published in Tokei, had this paragraph.

"There is no difference between the Roman Catholic and Christian (Protestant) religion, except in their style and ceremonies. The former sets up a wooden idol, and shows many magic arts. The latter shows nothing and has no idols. The old Testament says that 5868 years ago, Jehovah created heaven, earth, sun, moon, stars, grass, tree, and animals in five days, and a pair of human beings on the sixth day. We call him, therefore, the Creator or Father; and we call our father 'small father in this world.' But Shikiyo says, 'There is nothing which does not belong to the Emperor.' When we say, according to the Testament, that 'The Creator makes our bodies and gives us being,' it contradicts Kô-kiyo, which tells us, 'We receive our bodies, arms, and hair from our parents.' In a word, the Testament disregards and treats as of no consequence our lords, masters, or parents. There is no difference between lord and servant, or parent and child. By this teaching our Empire would receive a very great injury.

"There are ten commandments in the Old Testament. The first says that there is no god except Jehovah. So, the foolish and wicked people of Urakami-mura, Nagasaki, burned the charms of Tenshio Daijin, Kasuga-Hachiman, and other Kamis, or threw them into cess-pools. The 8th commandment says, 'do not take what belongs to others.' But the Christians seize and subjugate other countries on very slight pretext."

"The New Testament mentions the events which happened in the interval between Christ's birth and his death. He was very poor in his birth, and in his fifteenth year was driven from his native country. Wandered over many lands for many years, and learned the magic art; by which he did many wonderful things. Thus he gained the favour of the people. At length, he intended to seize the Kingdom of Judah, by slaying its King. But he was unfortunately discovered in his plan, and crucified as his crime deserved. But the Christians, fearing that people will not believe in him in future ages, invented a story that Christ had died in order to make satisfaction for thousands, and that he ascended to Heaven three days after his death; of course this is not true. So Europe produces no pious or faithful men, because the Europeans believe in this religion. They foolishly suppose that if they love only their God they will go to Heaven, even although they have been disobedient to their parents in this world. Among them, there is no example of obedience to parents or faithfulness to the lord or master. If this bad religion should be introduced into our Empire, our foolish people, like those of Urakami, may believe it, and they will violate the good and excellent rules of fidelity and piety. We cannot, therefore, avoid telling this story to the people of our Empire, in the hopes that they will not be deluded by that religion.

THE RIÖGOKU river (Sumida-gawa), Tokei, has been much swollen by the late rains, and should the weather continue rainy it is expected to rise much higher.

ON FRIDAY last, the little Formosan girl, lately spoken of as captured and brought to Japan, arrived in Tokei. On Saturday, she was taken to Sei In.

ONE of the Yedo bankers has offered to Tokei Fu the sum of \$1,500, towards the expenses of the stone bridge now being erected in place of the old Kaiun-bashi.

ON THE 11th June, Takeoka Toshiyoshi, a Jijiu (attendant of the Emperor), was despatched to Formosa on special business.

UMESAWA SHORY, who resides at No. 102, Nogé, has made a suggestion to Kanagawa Ken which smacks of common-sense. He points out that the Chinese characters now used in the written language of Nippon are much too numerous, and sometimes a single letter has a great variety of meanings, which renders the true one difficult to be grasped. And it is thus that the proclamations of government are so frequently misunderstood by the people. To amend this abuse, which has prevailed for many hundreds of years, it would be better, he says, to pick out from these multitudinous characters 3,000 (or so) which are in most common usage at present, and an explanatory dictionary could be afterwards published. In concluding his address to the Kencho, he remarks, "Surely, it would produce an easier way to learning, and a quicker to understanding."

THE TELEGRAPH line between Hakodate and Morimura is finished, and was opened on the 19th June. It is eleven and a half ri in length.

AN OLD lady named Nobu residing in Asakusa, a very devout disciple of the religion of Nichiren, was eager to put up two gates or Tori-i at the Minobu mountain, where is a celebrated idol. To this end she desired to raise a subscription from 10,000 persons at one rio each; and it is reported that she has actually succeeded. This gives some idea of the firmness of the Tokai people towards their old faith.

THE *Tai-o-maru*, a large Japanese steamer with hurricane deck, was totally lost during a storm on the 15th inst. She was driven ashore on the bank of the Akita River, on the West Coast, near Niigata. Of the crew, twenty-seven were lost; the passengers and the remainder of the hands managed to reach shore. There were no Europeans on board.

THERE is a temple of Rotohira on the top of a steep hill at Totigi, Kotsuke. As the place is so solitary and difficult of access, but few persons visit it. At the foot of the hill lived a gambler, upon whom Fortune frowned, and at last he was deprived of everything and became entirely destitute. So he went up to the temple and prayed, promising that if the God would grant him luck, he would rebuild the temple with great splendour. After this prayer luck changed, and he was successful every game. Thus he became very rich, but forgot what he had sworn before the temple, and did not even visit it. Wherefore, he became mad, and spent all the money he had gained and was at a loss how to subsist. Fortunately, a few friends came to his assistance, and brought him before the temple; and, kneeling down, offered some money, confessing his sins in his stead. Soon after, his sickness was miraculously cured, and he repented heartily of his wickedness and became faithful to Rotohira. Many who saw or heard of this miracle assembled and prayed at the temple that they might become rich. The tidings spread very widely, and the number of people who flocked to the temple, at last accounts, was increasing day by day. Last May, they were commencing to rebuild the temple and an arched gate.

This simple little tale, for which we are indebted to a native paper, commends itself to the notice of the impecunious of Yokohama; the moral contained in it being obvious.

A SAMOURAI of Yamaguchi-ken, Oishi Riohei, invented a machine for cleaning rice, but, as it was not quite perfect in its construction, Osaki, a samurai of Aichi-ken, improved upon it and had it brought into use. It is called Shitenki (instrument worked by one hand) because the work done on it by one pair of hands is equal to that of five men. It may be worked by the blind, the lame or the dumb (!) and as much as three koku of rice per day can be cleaned by it.

ON THE 6th June, an American Mail steamer arriving in Hakodate harbour ran into a junk, laden with rice, and sunk her. A claim was put in by the owners of the junk and her cargo for 10,000 yen; but it was decided that the fault lay entirely with the junk, as she exhibited no light.

A LETTER received from Kuwata, Surgeon attached to the troops in Formosa, has been published, and gives a few facts of interest:—

"On the 1st of June, our troops made a furious attack upon the Boutans, and had to march over steep roads and mountains. The enemy availed themselves of the inequality of the ground for shelter. They had posted every here and there some 20 or 30 huts, from which they fired upon our men, but as we advanced they retreated. They fired upon us also from the covert of the woods, but never shewed the shape of their body to us. We returned to the principal camp, leaving a small force in the neighbourhood.

Our wounded men are not numerous, nor have we many sick in hospital. All the surgeons exercise great vigilance over the food of the troops. But a kind of malignant fever has prevailed, which carries off a good many of those attacked.

The construction of camps is still incomplete, and the men live in tents. A temporary hospital, with a rush roof, was built, and is now occupied by about ninety men: of whom nine are sick, and the remainder are wounded men.

The Boutans are not much more than 300 in number. They are very vicious and cruel, and extremely active on the mountains. They carry a single sword. They go quite naked, and appear devoid of humanity. It causes one to speculate for what purpose such beings are produced in the world."

KAGA AND the adjacent provinces are suffering from the severe heat, and the thermometer constantly stands over 90° Fahr. If they have not rain soon the crops will be destroyed, as they are already suffering.

THE WIFE of a farmer at Sanoki has brought forth three male children at a birth; all strong and healthy. According to the law notified last year, five rios were given them by the Kencho.

THE LITTLE Formosan girl who was brought to Japan is being taken every care of, and will be restored to her parents as soon as it can be discovered who and where they are. We saw her yesterday at the residence of Mr. Okura, and she looked quite happy. Although many go to see her, she does not exhibit the slightest fear, shyness, or even dislike of being interviewed. She does not know one word of Japanese, nor do those who have her in charge know one word of her language: all communications are by signs. She repeats any words spoken to her, showing both quickness of hearing and intelligence.

The following note was received by Mr. Okura, in receiving her from the authorities: To Okura Kinachiro,

When the Boutan tribes were attacked, there was found a girl, who had been lost by them. She was accompanied to head-quarters of the army. But it is inconvenient to allow a female to live in a camp, even though it be but a very young girl. She will therefore be sent into our Empire, where she shall stop until her place of abode is known. She must be committed to your charge: so you will take good care for her food, and furnish her with all proper accommodation. All expenses which will be paid for her may be informed to Jimu Kiyoku, by which Formosan affairs are managed.

HANCHO JIMU KIYOKU.

27th June, 1874.

Ozawa Chiukitchi will be sent presently to arrange about her board.

The following description of the girl captured by the Japanese in Formosa is taken from the *Nisshin Shinjishi*:—

"When our troops marched against the Boutan tribes they found all their houses vacant, and met none of them save a young girl, who was hiding behind a tree, having lost her way in the general flight. She was taken to head-quarters, where she was asked her name and place of abode; but it seemed impossible to understand her speech. She remained at the Camp some days, and was sent on to Japan in charge of officers returning from the expedition. By them she handed over to Hanchi-jimu-kiyoku, which office has remitted her to the care of Okura Kinachiro, as stated in the notification. She is in her eleventh or twelfth year; her features are small, though her face is very plump. Her complexion is of a deep bronze colour, the nose flat, the cheek bones high, the eyes very sharp, and the head short. She curls her hair with linen, in which feathers are stuck, and wears two red balls in each of her ears, and a ring on each hand. She is clothed in a dress of dark blue cotton, with long sleeves, and wears also a sort of apron which covers the loins. She wears no covering for the feet. She has no rules of propriety or politeness, and is very fond of fish. In short, her countenance is very ugly, and resembles much that of our Yezo people, or the African race. But she is a very fortunate girl, because she has escaped the troubles of the battle-field, and receives our kind favours."

EVERY ONE knows the superstitions connected with cats among European sailors. It appears that similar ones are held in Japan. Yesterday, one of the papers said, "In Japan, a tom-cat of three colours (qu: tortoiseshell) called mi-ke, is highly valued by sailors, because it is believed that it lets them know of a coming storm or violent wind. Sometimes as high as twenty or thirty rios are paid for one; for they are rare in Japan. In a shop at Chiba-cho, in Shimosa, where foreign articles are sold, there is one. It is like a tiger in appearance, and has a voice like one. It never sleeps at night, but only in the day; but there is no mouse or rat in its neighbourhood. Every morning, it rouses the inmates by its cries; and it is so docile that it never eats anything belonging to the house but what is given it. It seems to watch and attend carefully, and to hear and understand all that is said."

WE LEARN that the Saibansho, Yokohama, which has hitherto been held at the Kencho, is to be removed to Yoshida Chōja-machi, where a suitable building will be erected for it.

UP NORTH, in the province of Rikuchō, after an unceasing fall of rain for three days, all the rivers and streams, especially the Kitakami river, were so swollen as to flood the low lands and do an immense deal of damage; carrying away houses, bridges, &c. No injury has been done to human beings.

NAKAYAMA, the Japanese Minister to Italy, in a letter to Gaimushō, observes:—"In Italy, the Japanese language is now being learned by many persons. There is a school at Venice where the language is taught, and Tanaka Kenzaburō has been engaged as its teacher. Many Italians and Austrians are able to speak Japanese.

THREE NAGAYASUS (long-built houses, external to the yashikis) in Asakusa, suddenly fell down on the 20th instant. Fortunately no one was hurt.

A HORSE, which was waiting at the railway station, Shinbashi, carelessly attended by a betto, got away, and running madly through the streets, nearly reached the Kaisei Gakko before he was captured. He knocked over one man at the gate of Hibiya, but otherwise the only sufferer was the unfortunate betto, who most perseveringly followed him, and ultimately caught him. The fellow will probably take a lesson; but it is a great wonder to us that accidents are not frequent from runaways, for both saddle horses and horses in traps are frequently seen waiting at the station almost entirely unwatched.

THE paragraph in the *Herald* of last evening, with regard to the rumour that China had declared war against Japan, has raised among the well-to-do Chinese of Yokohama, we are informed, an unusual state of excitement, as they apprehend the Japanese Government will order them to leave the country, in the event of war being declared.

A LETTER from Hokkaidō, in a Yedo paper, says:—"All is prosperous in Hokkaidō. More than 300 junks are anchored in Odaru harbour. Each of them is loaded rapidly with produce. The price of everything, therefore, has become very high. Much rice arrives from Noto and Yechigo.

CAN ANY one give any positive information as to the probability of the Yokohama streets being lit with gas, by the next Autumn or Winter? Is there any likelihood of the improvements in the harbour that were spoken of lately, being carried out? And is it likely that in any minor wants of the settlement which the Government may be willing to undertake, the opinions of or the convenience of the community for whom they are supposed to be made, will be considered.

The gas will, when supplied at all, be laid on in a well understood and established plan, and the householders will have to pay for it themselves. The harbour works, if ever undertaken, will be on the designs of experienced civil engineers; but the plans would be none the less likely to be useful to the public, if they were submitted for general inspection before they are commenced, and had the advantage of suggestions from those most interested. But it may be long ere it is determined to take these in hand. Well! there are some things that have been already begun, which might have been better calculated for their uses if some attention had been paid to the wishes of the foreign residents.

As one instance we mention, the bridge which we suppose is intended to replace Yato-

bashi, at a mouth of the canal. The new structure crosses the river straight from the foot of the Camp hill, and joins the road in the settlement side at right angles, where there is no road to continue it, but all vehicles must turn sharp round either to the right hand or to the left, in a manner, which, if traffic increases, as it undoubtedly will, may become very inconvenient.

It would perhaps have been less sightly, but far more convenient, if it had been built askew; from the foot of the hill to the entrance to Water Street, and it would have been no more troublesome in construction than it is now.

But why will not the authorities put a handsome iron bridge in that locality? One that would last for a century perhaps! It would be an ornament to the Settlement, and it would be no more expensive in the long run. The wooden structure now being erected may be called the fourth, (counting some very extensive repairs, at various times as one) within fifteen years. The mistake made by the Yokohama rulers in doing their public works by halves is well exemplified in that bridge, and in the embouchure of the canal. They were well warned, when they deepened the canal, that they were wasting money in merely digging out the bottom to four feet at low water, unless they went further, and dredged the bar for a long distance out. But they disregarded all remonstrances, and now what is the consequence? The entrance of the Creek has become so silted up, that it is as bad as ever it was; and in the course of another twelve-months, if it continues to fill up as it has done, there will be a bank high and dry at low water. Had they used the dredges they are said to possess, it might not have become so bad for twenty years; and if they could only be induced to keep the dredgers at work there periodically, it would never have become so bad again.

Our present governor, we look upon as the most intelligent we have had for years, and we should be glad to see him look to this matter himself. He would see at a glance the necessities of the canal traffic, and could easily obtain from Mr. Brunton (whose advice to previous governors has repeatedly been for the benefit of the municipality), practical information as to the best method of remedying the fast growing evil. It will be a feather in his cap, if when Mr. Nakayama is promoted from his present post, he is able to look back, and say that he had succeeded in doing well whatever it was his duty to do for the good of Yokohama.

A TOKAI paper says:—"During the reigns of the Shoguns there were dogs which were trained to visit Isé every few years. They were called Isé-mairi. They are now rarely seen. Money being tied on their necks, they would start off, unaccompanied, turning neither to the right or to the left among all the crowds on the Tokaidō, and without noticing the barking or the salutations of other dogs, direct to a temple in Isé, at which an ancestor of the Mikados is worshipped. On arrival, the money was taken, and in its place a charm was tied around the neck, with which the dogs trotted off, and stopped not, until they reached their destination in Yedo.

The editor says, "there are many such strange matters in Japan. We shall be glad if foreigners will let us know whether they exist elsewhere also."

CAPT. CASSEL, U.S.N., now in the service of the Japanese government, has been recalled. He had a year's leave of absence for the purpose of accepting office under Japan, but that leave has now been withdrawn.

MR. HATAKEYAMA Yoshinari, an officer of the 5th class in Sei-In, has been promoted to Shojo of Mombushō.

MR. ANDO TARO has been appointed Vice-Consul for Japan at Hongkong.

THE EXAMINATIONS at the Kaisei Gakko are now being vigorously proceeded with. They commenced on the 22nd instant, and will continue until about the 15th proximo.

THE GREAT firework exhibition on the Sumidagawa, Tokei, will take place on the 5th instant.

A BOY, aged 15, a servant of one Koraishia, in Honcho, Tokio, was entrusted with the sum of 200 yen, to be conveyed to a merchant named Shimada Sinhichiro. On arriving at the house of the latter, however, he found he was absent, and thereupon conceived the idea of annexing the money and visiting Ise and Sinano, where he had lived when "quite a youth." With this resolution, he bade adieu to the Capital and started on his journey. Reaching Kawasaki, he put up at an eating house, and spent money so profusely in dainty food that it aroused the proprietor's suspicions, and, information having been given to the police, he was arrested and relegated to his master. This occurred in April last, and, on the 11th inst., says the native paper, "the young thief was condemned to work hard for ten years." There is a fine sarcasm involved in this latter sentence; most white folk have to work hard all their lives.

AT 6.25, this morning, a slight shock of earthquake was felt in Yokohama.

WE LEARN that the negotiations between China and Japan are of a perfectly satisfactory character, and that there need be no apprehensions of any evil between the two countries arising out of the proceedings in Formosa.

THE CEREMONY of opening the shrines of Shiba-Yama-Kuwanon and Furukawa-Yakushi were celebrated at Yeko-in, Riogoku, Tokei, on the 2nd April, and the ceremonies were kept up until the 10th inst. The Sai-sen (offerings of copper cash to the temples, either cast into a huge box or on the floor) and the proceeds of the exhibition of "side shows" during the 69 days amounted to the sums stated below:—

	yen.
Sai-sen of Kuwanon-Sama .. .. .	2,150
„ „ Yakushi-Sama .. .. .	280
Kuwanon (or Canon) is a Goddess, whilst Yakushi belongs to the opposite sex; which probably accounts for the large discrepancy in the amount of cash thrown.	
Exhibitions, (from a native paper):—	
	yen. sen.
Fine work of Clams .. .. .	1,881.10
Large statue of Momotaro .. .. .	430.14
Polite accomplishments, which were shewn by a bear .. .. .	299.33
Fine pictures, which were seen through spectacles (lenses) .. .. .	290.98
Iki-ningio, or living image (wax-figures). .. .. .	265.89
Acrobatic feats of monkey .. .. .	250.14
Fine picture of Iki-ningio .. .. .	225.50
Image of Ghost .. .. .	213.95
Feats of strength or dexterity .. .. .	217.35
Feats of monkey, which imitated others .. .. .	134.54
Exhibition of beasts .. .. .	18.15
Total proceeds of the heathen show, \$6657.07. Item for evangelists.	

A MEETING has been called for Thursday, 2nd July, of the subscribers to a testimonial that is to be presented to Dr. Wheeler by his Yodo friends, to determine on the form it shall take.

AN OFFICE has been prepared at the Naimusho, called Gaikoku Joyaku-kaisei Kiyoku, especially for the consultation on the Revisions of the Treaty. Sugiura Yudzuré, the Naimu Daijō, and Sakurai Tsutome have been appointed to manage the discussions on behalf of the government.

DR. STEINBERGER, we are given to understand, left for Formosa towards the end of last week. His salary is to be paid out of the privy purse of H. M. the Mikado.

A REPORTER for one of the country native papers waxes scientific in his description of a fire which occurred recently in his Ken. He says:

"On the 1st inst., a fire broke out in the house of Kanoya, situate at Chiku-machi. San-chome, Ida, Inagori, Shinshiu, in the jurisdiction of Chikuma-ken, Shinano, (Japanese reporters are always so precise in their information) and the residents of that house were extraordinarily alarmed. They threw the furniture into the well, because they had no time to carry it out into other places. After the fire had been extinguished they desired to recover the furniture, and a man was sent down into the well for the purpose. After descending the ladder about 6 feet he became dizzy and, falling to the bottom, died immediately. Another then descended and met the same fate; a third died in a similar manner. As it was known that the three died from the effects of bad gas, vinegar was sprinkled in the well, and others then descended and recovered the dead bodies and furniture. The accident was caused by excess of carbon, the well being full of it; the oxygen was burned up for the fire. It was known from old time that vinegar was sprinkled into old wells, caves, &c., because these inclosed carbon fully; thus such accidents would not be caused, unless light was brought there.

"Take care that everyone avoids such an accident."

THE FOLLOWING amusing paragraph appears in the *Shun-pao*, a Chinese paper published in Shanghai. The Chinese have such a wholesome dread of Sir Harry that they believe him capable of any extreme of villainy. It seems "he has sent Japanese soldiers to invade Formosa." The Chinese and certain rampant Californians will now be able to join issue as to the altogether despotic power wielded by the representative of the British Lion in Japan; and it would appear that the poor Japanese have undoubtedly been driven into this impertinent venture quite against their wills. But we fancy the Chinese will not dare to do more than lie down and whine at them.

"There is an Ambassador now living in Japan, whose name is Parkes. He is very clever, and on intimate terms with the Tenuo. The Tenuo frequently consults with him, and the present Japanese war with Formosa is all Parkes's doing. It is therefore generally remarked: Why does Parkes disturb the tranquility of China?"

About ten years ago, a battle took place between Chinese and the English at Peking. Parkes was then stationed there as Interpreter, and when the war was being waged he took an official despatch to the Chinese camp; but

they caught him and inflicted deserved punishment upon him, and very nearly put him to death.

The Chinese magistrate wanting him to write a letter, Parkes wrote half in English and half in Hindostani, so that the Chinese interpreter was unable to read it, not being acquainted with Hindostani.

The Governor of the English saw this letter, and understood it well enough; and he sent soldiers who brought him back. Now, the Queen of England would not allow him to hold office any more in China; so she sent him to Japan, where he has been an Ambassador ever since. But he always hated China, and so he has sent Japanese soldiers to invade Formosa."

Captain Harris of the P.M.S.S. *Oregonian* has received from the Governor of Hiogo the following acknowledgment of his humane attempt to rescue from drowning a Japanese passenger who fell overboard on the last trip of the steamer southwards:

AGENCY OFFICE,  
PACIFIC MAIL STEAM SHIP COMPANY,  
Hiogo, June 28th, 1874.

C. R. HARRIS, Esq.,

Commanding S. S. *Oregonian*.

DEAR SIR.—It gives me great pleasure to hand you herewith a translation of a letter received from Mr. Kanda Takahira, Kami of Hiogo Ken, tendering the thanks of himself and companions to your good-self, your officers, and crew, for the kind and humane efforts made in trying to save the life and recover the body of the late Mr. Higo Mori, a passenger who fell overboard and was drowned during the last trip of your ship from Yokohama to this port.

Yours truly,

H. M. BLANCHARD,

Acting Agent.

(Translation.)

Kobe (Hiogo), 24th of 6th month, 7th year of Meiji.

GOVERNMENT OFFICE,

GENTLEMEN,—I beg to request that you will please communicate to the Captain and Officers of P. M. S. S. *Oregonian*, tendering them the sincere thanks of myself and companions of the deceased, for their kindness which were given the valuable exertions in various ways in order to take up the corpse of a Japanese named Higo Mori Yoshi, who jumped overboard and was drowned at "Kumano Ori," province of Kisin, on the 11th ultimo, during his passage from Yokohama to this port.

I remain, with due respects,

KANDA TANAHIRA,

Kami of Hiogo Ken.

To Superintendent of Pacific Mail  
Steam Ship Company.

—Mail.

THE APPEARANCE of the Comet in the northern heavens is looked upon by the Japanese as a favourable omen in connection with the war in Formosa.

To-day being the Anniversary of the Independence of the United States, the ships in harbour, without distinction of nationality, were gaily dressed with bunting, and at noon the usual salutes were exchanged. The festivities will close this evening with a ball at the U. S. Consulate.

### ROYAL MARINE BATTALION RIFLE MATCHES.

THE ANNUAL Shooting of the Battalion R. M. L. I., for prizes provided out of the Commissariat funds, commenced on the 17th inst., but owing to the heavy rain which set in after one squad only had fired it had to be postponed till the following day.

On the 18th a strong wind was blowing down the Range from the Butts, causing considerable inconvenience at the standing distances. On the 19th, also, the wind blew in the same direction; until the afternoon, when the Consolation Stakes were being shot for. On the whole, however, notwithstanding the disadvantages we have spoken of the shooting was a decided improvement on that of former years. The scores made by the Battalion take a foremost place in the annual lists officially published shewing the relative shooting of the different branches of the service.

This year, the winning scores in Classes A, B, C, and for the Sergeant's Cup, were higher than those of last year. The shooting for the Consolation Stakes was the best of the meeting, and the winning score, 25, (the same as last year) out of a possible 25, must be taken as excellent. The shooting for the second and lower prizes was much better this year than last.

The Committee, consisting of Capt. Walsh and Capt. Hill, with Lieut.-Instructor Heseltine as Umpire, are to be commended for the excellent arrangements of the Meeting. Sergt.-Instructor Saunders is also deserving of praise in view of the high character of the shooting. In the absence of Col. Richards, the prizes were presented, on the ground, by Capt. Walsh. The number of civilian spectators was not large.

The following shews the results of each event:

#### CLASS A.

200 and 400 yards; 5 rounds at each distance.

	Points.	Prizes
Pte. John Townsend .....	35	\$7
" Henry Mitchell .....	31	5
" Mark Carson .....	31	3
" John Russell .....	31	2
" Wm. Daw .....	30	2
" Joseph Culley .....	30	1
" James Cooksley .....	29	1
" Jesse Scaife .....	29	1
" Frank Gilben .....	29	1
" Henry Millingchip .....	29	1

#### CLASS B.

300, 500, and 700 yards; 5 rounds at each distance.

	Points.	Prizes
Pte. W. H. Hall .....	38	\$10
" Joseph Culley .....	35	5
" Thos. Saul .....	33	3
" Robt. Hanna .....	30	2
" Francis Counter .....	29	2
" Jesse Scaife .....	29	1
Corpl. T. D. Whiteman .....	29	1
Sergt. Robt. Carpenter .....	28	1

#### CLASS C.

400 and 500 yards, any position; 5 rounds at each distance.

	Points.	Prizes
Priv. John Russell .....	29	\$7
Sergt. Chas. Smith .....	29	4
Priv. Thos. Burnett .....	24	3
" John Bishop .....	24	2
Provost-Sergt. E. Sperring .....	24	1
Priv. T. Mapp .....	23	1

#### SERGEANT'S CUP. (PRESENTED.)

200 and 500 yards; 5 rounds at each distance.

	Points.
Sergt.-Instructor Saunders .....	25
Paymaster-Sergt. Waters .....	23

#### CONSOLATION STAKES.

200 yards, 7 rounds.

	Points.	Prizes
Sergt. F. Chester .....	25	\$5
Priv. George Foster .....	24	3
" Thos. Godfrey .....	23	2
" Edwd. Merry .....	23	2
Corpl. Thos. Causley .....	23	1
Priv. John Gibbons .....	23	1

## In the United States Consular Court.

Before GEO. N. MITCHELL, Esq., Vice-Consul.

Monday, June 22nd, 1874.

J. H. HALL v. H. W. DENISON, U. S. Marshal.

*Motion for Injunction to Restrain the sale of certain Goods.*

This was a petition that an injunction be granted by the Court, restraining the said H. W. Denison from selling 4,100 cases of kerosene oil (stored on the premises of Walsh, Hall & Co.), in order to satisfy certain judgments obtained by parties against the plaintiff in the present petition.

Mr. F. W. Marks appeared for plaintiff, and, in opening the case, said that he applied for an order restraining the sale of the oil. The oil, as it would appear in evidence, was the property of Messrs. Warden, Frew & Co., of Philadelphia, and plaintiff was only their agent for its sale on usual commission. He would produce letters showing this conclusively. After further remarks, the learned counsel called

J. H. Hall, sworn:—When in America he called on Messrs. Warden, Frew & Co., of Philadelphia. He was in America from the 21st March, 1873, until the 22nd March, 1874. When he saw Messrs. Warden, Frew & Co., he solicited a consignment from them, and they consented to make one of 6,000 cases of kerosene oil, and 250 cases of gasoline; but shipped only 194 or 191 of the latter article. The 6,000 cases of oil duly arrived in Yokohama, and when he arrived here he found the bill of lading, invoice, and the oil, in the possession of Messrs. Walsh, Hall & Co. He believed the said oil was in their possession at the present moment. He would swear that the oil did not belong to him, or any part of it; but to Messrs. Warden, Frew & Co. He simply received it as their agent, to sell it on their account on the usual commission. He had no other interest whatever in the oil than as consignee and agent. He recognised the letters from Warden, Frew & Co., handed to him by his counsel; one he received whilst in New York, the other by last mail. To the best of his knowledge and belief, the signatures were those of Warden Frew & Co.

Mr. Marks desired to hand them into Court as evidence.

Mr. Denison objected to their reception, as Mr. Hall had not proved the signature of Warden, Frew & Co.

The Court asked to see them. [Handed in.]

Mr. Marks said, in regard to Mr. Denison's objection, that it was impossible to further prove, by affidavit of Messrs. Warden, Frew & Co., the authenticity of the signature the letters bore, at a moment's notice. He called the Court's attention to the fact that they both bore the printed heading of Warden, Frew & Co., and the envelopes the U. S. postage stamps and Post Office date stamps. If that would not be considered sufficient evidence of their genuineness, he should pray the Court to perpetuate the injunction until such time as the affidavits of Warden, Frew & Co. could be obtained, as to whether the signatures of the letters in question were theirs or not.

The Court said it could not accept such letters as evidence without the present witness (J. H. Hall) would swear that the signatures were genuine.

Mr. Marks said that he then would advise witness to swear to that effect.

J. H. Hall said that he would swear that they were, as he knew them to be so without doubt.

Mr. Denison still objected to their being received, as one letter was signed Warner, Frew & Co., per a Mr. Davis.

J. H. Hall said that he had received other letters from Warner, Frew & Co.

Mr. Marks remarked that if there still remained any question as to the genuineness of the letters, Warner, Frew & Co. could be telegraphed to, and thus save the case from being adjourned so long.

The Court said it could not adjourn the case for such a length of time, and that the letter signed by Davis, per Warner, Frew & Co. could not be admitted as evidence.

J. H. Hall, examined by Mr. Marks:—He made an agreement with Warner, Frew & Co. that if they would ship 10,000 cases of oil, instead of 6,000, he would raise for them 30 per cent. of the value of oil. He saw one of the partners of the firm in Philadelphia, also Mr. Davis of the firm, about it. Had the letter signed by Davis with him at the time. Warner, Frew & Co. shipped only 6,000 cases in the end. In his letter-book there are copies of letters mentioning the oil as a consignment. The following is an extract from one of the said letters written by Mr. Gardner, as a partner of the firm of J. H. Hall & Co., to Warner, Frew & Co.:—"We will handle your oil to the best advantage, though the outlook is bad."

Cross-examined by defendant.—He was to receive the usual commission for the sale of the oil, and defray all expenses—such as freight, duty, insurance, storage, etc.—out of the proceeds. Five per cent was the commission he would have received. He had no agreement to charge that amount. He advanced \$4,000 on the oil; that was one-third of the invoice value. He borrowed money on the oil here to pay freight, duty, insurance, storage, etc. The \$4,000 was obtained from Walsh, Hall & Co. It was sent to Warner, Frew & Co. to induce them to ship 10,000 cases instead of 6,000. Walsh, Hall & Co. held the oil as security. Afterwards he tried to get more money advanced on the oil, but Walsh, Hall & Co. refused to lend it. He did not remember telling Walsh, Hall & Co. that he was agent for Warner, Frew & Co. He did not know who signed the letters (personally); knew that the signature was the genuine one of Warner, Frew & Co.

W. Cheshire sworn:—Is a public accountant in Yokohama. He had to do with J. H. Hall & Co.'s books. Has seen all their books; made certain entries in them with regard to the oil. Thought from the books and the instructions he had received that the oil belonged to Warner, Frew & Co. Thought from the books that J. H. Hall & Co. were only agents, to whom the oil was consigned. Received most of his instructions from the arbitrators in the late case between plaintiff and his partner, Mr. Gardner. He received no special instructions from Mr. Gardner. He received instructions from Mr. Hall to enter all the goods as consignments.

Mr. Marks asked the Court to grant the injunction petitioned for, till instructions could be received from Warner, Frew & Co. as to how the oil was to be disposed of, and that if the signature of the letters was doubted, to make the injunction perpetual till Warner, Frew & Co.'s affidavit could be got.

The Court decided to proceed with the case.

F. W. Gardner, sworn:—He was a partner of J. H. Hall till the 15th April last. He bought oil whilst a member of the firm. The invoice price of the oil was 23 cents per gallon. 30 per cent. was paid on it to Warner, Frew & Co. He borrowed the money of Walsh, Hall & Co. They were to store, insure, and pay freight and duty on it when it arrived here. He borrowed this

money in the name of J. H. Hall & Co. He offered to take the oil off Hall's hands, but Hall told him he wanted to "get the cream of the thing that was going to yield the most profit." The oil market about this time suddenly fell.

Cross-examined by Mr. Marks:—He did not negotiate the purchase of the oil, or sale, or consigning of it. Hall did so in America. Considered the 30 per cent. as a draft on the firm of J. H. Hall & Co. It came through the Deutsche Bank. Did not know whether one firm, in a first transaction with another, would require an advance before they consigned goods to be disposed of to the other firm. Did not know anything about business outside his own firm. He thought that 30 per cent. was a good advance for such a firm as J. H. Hall & Co. to make. Did not know if any promissory note had been given for the remaining 70 per cent. The reason that he said in the letter that they would do their best in disposing of the oil, but that the outlook was very bad, was this: the oil market suddenly fell in America to 18 cents per gallon, and that was a great difference in price from 23 cents, and by thus writing he hoped to induce Warner, Frew & Co. to make a reduction in the invoice price of their oil. He never had a claim for \$500 against Hall. The reason that he offered to take the oil off Hall's hands was that he could have made over \$1,000 on it. He thought when Hall refused to let him have it, that he (Hall) had probably thought that he could make a good thing out of it. Hall was offered \$3.25 per case for it. The invoice bore the printed heading, "Bought of Warden, Frew & Co."

John Walsh, sworn:—He made an advance to Hall, on the oil in dispute. He (Hall) said nothing about Warner, Frew & Co., at the time. Hall had the Documents with him, and a bill of lading being a negotiable document, he advanced the money on the security of the oil. It did not matter to him to whom the oil belonged. He advanced the money to meet the bill drawn from New York, through the Deutsche Bank, on the oil. He was to make a further advance as soon as the oil arrived, to pay freight and other expenses, and to finally get possession of the oil. He told Hall that, after those advances had been made, he would make no further ones. Hall came to him afterwards, and told him that he was in trouble about certain judgments which had been given against him. He refused to lend any further sums on the oil, as he had been put to sufficient trouble already about it.

Mr. Marks called the attention of the Court to the fact that the invoice did not bear the printed heading "Bought of" Warner, Frew & Co., sworn to by Mr. Gardner.

Witness resumed:—He had asked Hall about the oil. Hall had telegraphed to Warner, Frew & Co. about it (he wrote the telegram in witness' office), and Warner, Frew & Co. had telegraphed back, authorising Walsh, Hall & Co. to protect the oil, and that it was a consignment; they used the word "consignment" in their telegram.

To Court:—Do not remember Hall asking for another advance of \$1,000. A Mr. Merri-man, on behalf of Hall, came to him and wanted to sell the oil. If the oil had not been attached he might have bought it. Knew that Hall tried, through Merriman, to sell the oil to E. C. Kirby & Co. He could not remember if Hall or Merriman asked him to pay judgments on the security of the oil, or when Hall first came. Hall never said he was the agent of Warner, Frew & Co.

Cross-examined by Mr. Denison:—He understood by the word "consignment" in the telegram from Warner, Frew & Co., that the oil belonged to them. He considered all goods received from parties (when not actually purchased) as consignments, and they were sold as such.

By Court:—The present market value of the oil is about \$3.25 or \$3.30.

J. H. Hall, re-called, examined by Mr. Marks:—He calculated that if the oil had been sold he would have been able, out of his commission and the difference in exchange (which would have been in his favour), to pay off the judgments given against him.

J. Walsh, re-called:—He advanced \$9,000 on the oil.

The Court said that, from the evidence given, it could not grant the injunction. The plaintiff (J. H. Hall) had apparently obtained advances on the oil, not as the agent of Warner, Frew & Co., but simply as if he was borrowing the money for himself. The oil would be sold tomorrow.

Mr. Marks said that if the Court decided to that effect, he could, of course, only regret the fact; he would, however, give notice of appeal.

The Court asked for security to be lodged, in accordance with the Rules of Procedure.

Mr. Marks said he would offer the security of the oil.

After some discussion, the Court refused the security offered, as it was not in the possession of the Court.

Mr. Marks said that he could urge nothing more. If the Court were determined to sell property that did not belong to the defendant, he could not stop them from so doing. He had done everything in his power to protect the property of Messrs. Warner, Frew & Co., and he could do no more.

The Court said that certainly Mr. Marks had done everything that was possible.

Injunction refused.—*Herald.*

*Tuesday, June 23rd, 1874.*

H. W. DENISON *vs.* JOSIAH H. HALL.

Claim for \$100, for money lent. Defendant did not appear.

F. W. Gardner, sworn:—In the month of March I was a partner in the firm of J. H. Hall & Co. Plaintiff lent that firm \$100, in a cheque payable to their order, and endorsed by them; that money has not been repaid. It was used for firm purposes; for payment of a draft of \$200 on the firm, drawn by Mr. Hall in San Francisco.

To Court:—It was drawn through the Anglo-Californian Bank in San Francisco, sometime in March; I do not remember the exact day. To my knowledge, it has not been paid. I borrowed it in the name of the firm.

H. W. Denison, sworn:—I lent the firm of J. H. Hall & Co., on the 23rd March, 1874, the sum of \$100. I handed it to Mr. Gardner; he borrowed it in the name of the firm. I gave him a cheque, payable to the order of the firm. It has never been repaid me.

Judgment for plaintiff, by default; \$100, with costs.

*Monday, June 29th, 1874.*

FINANCE DEPARTMENT OF THE JAPANESE GOVERNMENT (OKURASHO), BY ITS AGENT,  
YOSHIDA D'JIRO,

*vs.*

P. M. S. S. COMPANY; A. CENTER,—AGENT.

Claim for \$10,250, for breach of contract.

Mr. G. W. Hill, Legal Adviser to the Saibansho, appeared to represent the Government.

Mr. F. V. Dickens for the P. M. S. S. Co.

The particulars of the claim, as contained in the petition of the Japanese Government, are as follows:—

1st.—That the above-named defendant is a corporation subject to the jurisdiction of this Court.

2nd.—That, on or about the 1st day of April, A.D. 1874, the Plaintiff and Defendant agreed by charter-party that the Defendant's ship called *New York*, then on the high seas or in the waters of China or Japan, and being shortly later than that date due at Yokohama, should, on the 14th day of April, A.D. 1874, with all convenient speed sail from the said harbor of Yokohama, in Japan, to the port of Nagasaki in Japan, and there load from the Plaintiff, any stores, troops or baggage that might there be put on board by the Government of Japan, which she should carry to the southern part of the island of Formosa, and there land the same without delay, at any one point to be designated by an officer of the Government accompanying the same, on the payment by the said Plaintiff of the sum of sixteen thousand five hundred Dollars (\$16,500.00), Mexican; one half of that amount being paid to the Defendant at the execution of said charter-party, and the balance, to wit, eight thousand two hundred and fifty Dollars (\$8,250.00) to be paid on the return of the ship to the port of Yokohama.

3rd.—That, on or about the 14th day of April, 1874, the Plaintiff and Defendant made a further agreement that the Defendant would allow the said ship to remain, if desired, at the port of Yokohama as late as 4 o'clock of the afternoon of the 17th day of April aforesaid, and that the Plaintiff would, in consideration thereof, pay to the Defendant the sum of Two thousand Dollars (\$2,000), Mexican; one half of which last-named sum should be returned to the Plaintiff if the said ship could have such dispatch as would enable her to reach Shanghai in China in time to leave that port on her voyage for Yokohama for the defendant on the 5th or the 6th day of May, 1874; and further that for each and every day of detention of the said ship at the ports of Yokohama or Nagasaki or at Formosa, beyond the time provided for in the charter-party and in said agreement of the 14th April, demurrage should be paid by the Plaintiff at the rate of Five hundred Dollars (\$500) per day.

4th.—That the Plaintiff duly performed all the conditions of the said charter-party and the said agreement on his part.

5th.—That the said ship did sail on her said voyage, and proceeded from Yokohama to Nagasaki aforesaid; but that, at the last-named port, the Defendant caused the said ship to deviate from her said voyage and abandon the same, to the Plaintiff's damage Ten thousand two hundred and fifty Dollars (\$10,250).

Wherefore the Plaintiff prays Judgment against the Defendant, for the said sum of Ten thousand, two hundred and fifty Dollars (\$10,250), and interest thereon from the dates on which the same was advanced, and for costs; and for such other and further relief as may be just.

G. W. HILL,

*Counsel for Plaintiff.*

Yokohama, May 29th, 1874.

Defendant's Counsel answered as follows, viz:

1.—The statement contained in the 1st paragraph of the plaintiff's petition is true.

2.—A written charter-party between the parties, and generally to the effect alleged and set forth in the 2nd paragraph of the said petition, was entered into on or about the date in the said paragraph mentioned, but the Defendant craves to refer to the said charter-party when produced at the hearing of this cause.

3.—A written agreement to the effect generally set forth in the 3rd paragraph of the said petition was entered into between the parties, and on or about the date in the said paragraph mentioned, But the steamer *New York*, being the vessel referred to in the said charter-party and agreement, did not arrive in Shanghai, owing to the Plaintiff's default, or that of his government or their agents, until the 6th day of May last, and could not consequently leave that port until the 8th day of the same month.

4.—The said steamer *New York* duly arrived at Nagasaki on or about the 21st April last, and was ready to continue her voyage according to the said charter-party, but the Plaintiff's government themselves stopped the further prosecution of her voyage under the said charter-party and abandoned the same, in consequence of which abandonment the Defendant's company claimed compensation from the Plaintiff or his government, and negotiations commenced between the Plaintiff and Defendant, with a view of settling the amount of the compensation so claimed: aforesaid, in the course of, and also subsequently to which negotiations the Plaintiff fully and expressly admitted the abandonment of the said charter-party by his government; and further, that the only question ever pending between his government and the Defendant's company was the question of compensation.

5.—The aforesaid negotiations resulted in an agreement, entered into on the 30th April last, between the parties to this suit, by which the party Plaintiff agreed to pay, and the party Defendant to accept, the sum of \$7,750 as the total of compensation due in respect of such abandonment of the said charter-party by the Plaintiff's government as aforesaid.

6.—Nevertheless, no part of the said sum of \$7,750 has hitherto been tendered to the Defendant or on behalf of the Plaintiff, although the latter has been requested by the defendant to pay, or cause to be paid, the said sum, in accordance with the said agreement of the 30th April last. In lieu of performing such agreement, the Plaintiff has instituted the present action.

7.—Under the circumstances hereinbefore set forth, and under the provisions contained in the regulations of this Court, the Defendant contends that the Plaintiff's petition ought to be dismissed, with costs, and prays that Judgment may be given against the Plaintiff for the said sum of \$7,750, with interest thereon from the said 30th day of April last, and that such further and other relief may be afforded to the Defendant as the premises as justice and the nature of the case may require.

F. V. DICKINS,

*Defendant's Counsel.*

Mr. Dickens said he had a preliminary objection to make to the pleading before the Court. The petition was filed by the Okurasho Department of the Government of Japan. He would like Counsel for the other side to state whether the Plaintiffs were, really, the Government of Japan, or merely a Department of it. If the latter, he must ask that the case be dismissed, as, in that event, the Court would be incompetent to try it.

Mr. Hill contended that, in the answer which had been filed, no such objection had been made, as required by the Rules of Procedure of the Court.

Mr. Dickens replied to this objection. If the Government of Japan were really the Plaintiffs, he should ask the Court that the petition be amended, and the name of the Government placed on the records as Plaintiffs in the action, instead of that of the Okurasho, as stated. Counsel for Plaintiff concurring, His Honour made an order for the amending of the petition accordingly.

Mr. Hill presented written acceptance of the rule and order of the Court in such case.

An objection was raised by Mr. Dickens that certain documentary evidence in possession of Plaintiffs, which he had called for, had not been produced.

His Honour said a portion of the evidence referred to had only been asked for on Thursday last, and there had not, consequently, been time to produce it.

Mr. Dickens did not refer to that particular evidence, but to certain documentary evidence known to be in the possession of the Japanese government which was essential to the case. They had been called upon to produce it, and had not done so.

Mr. Hill, addressing Court, stated the case. The action was one on a contract of Charter-Party, and the question at issue simply was whether the parties to it had performed their respective parts of it. The facts of the case were all stated in the petition, which he would read to Court. (Counsel here read the petition—a copy of which is given above—and the Charter-Party, the basis of the action.) The facts in both petition and answer had been sworn to by the respective Counsel, and it would be for the Assessors to weigh these statements, and decide accordingly. On the 14th (April), an additional agreement was made. (Counsel here read the second agreement, granting an extension of lay days at Yokohama, in consideration of the payment of a further sum of \$2,000, as set forth in the 3rd paragraph of the petition.) Next he would read the depositions of W. G. Furber and John Puckering, the Master and the Purser, respectively, of the *New York*, which had been sworn to and admitted by the other side. (The depositions, taken by consent, on the 25th June, on its being shewn that the deponents would be absent on trial of the cause, were here read; they were as follows), viz:—

Wm. G. Furber, sworn:—Am Master of S.S. *New York*; was in April last. I receive my orders from Agents of the Company at the various ports. Know of the Charter-party made between the Finance Department and Pacific Mail Steam Ship Co., last April. Have had Charter-Parties which involved a deviation from our route. After the Charter was made, the ship left Yokohama, Friday, 17th April, 1874. The ship was to go from Yokohama to Formosa, via Nagasaki. My orders on leaving here, from the Agent, were, to proceed in conformance with the Charter. A copy of the Charter-Party was furnished me on the ship. On referring to my log, I find I reached Nagasaki 20th April. On arrival, we anchored, awaiting orders from the Japanese. The Purser has charge of the Ship's Papers; I did not enter the ship. We usually take our orders on the ship; we received no written orders in this case. W. P. Tillman was the Agent of the Company at Nagasaki at that time. On referring to my log, I find we remained in Nagasaki until Monday, May 4th; 14 days. The Agent told me that the ship was detained there until further orders from Yokohama; this was verbal. The Agent did not shew me any orders or telegrams from Yokohama. Cannot tell the date when the Agent told me this. The Agent only mentioned this once. Impossible for me to fix the date; it may have been about one week after arrival. The Japanese were putting on and taking off the stores from the first, up to a certain time, but cannot tell when. The ship was at their disposal all the time, with exception of the officers. Can't tell who the officer was that was placed on board. Heard one was there, but never was introduced to me, nor did I see him. Do not know who had charge of the loading and unloading. Took no steps in any way after Agent told me he was awaiting orders. The Log states, "Friday, May 1st, commenced discharging Japanese Government stores." Can't say where they went. They went into small boats and lighters. Received the usual order to proceed to Shanghai, on the 4th day of May. The Japanese officers who went from Yokohama to Nagasaki with us, upon arrival at that port left us, with their effects. I came to the determination to leave port when I got orders, which I think were given verbally by Mr. Tillman on 3rd May. Can give

no reason for the change. All stores loaded at Yokohama were unloaded at Nagasaki. I am positive, while in port of Nagasaki, that I never received any writing from anyone, in regard to the movements of the ship. In port, I am under orders of the Agent; at sea, if the Charter-Party puts me under any one in the ship I am subject to his orders. Know Le Gendre. Know Okuma, by his being a passenger with me. Heard of Hiri by name. Mr. Center was Agent in Yokohama when we left port. When he gave me the Charter he gave no orders. I understood the officer who was to be placed on board was to designate some port for me to land in Formosa, after leaving Nagasaki. Know Lane's signature. My Charter-Party was a copy. Know Center's signature. I know of a contract made 14th April. Know nothing about lay days. Reached Shanghai May 6th, at 4.10 A.M. Was to leave under charter April 14th, but did not leave until 17th April. We generally remain in port 8 days, when on regular route. We were due at Shanghai April 29th. We can load the ship in 36 hours; load and discharge in 48 hours, if everything was favourable. At that time, it was mixed; the weather being not unfavourable. In the log is noticed, April 22nd, "Received on board, Japanese Government stores." Think the reason that was put down was because it was the first work of the kind since arrival. The 1st Officer is the man who supervises the loading of the ship; in this case it was Mr. Cooper.

Cross-examined:—We remained in Shanghai until Friday, 8th May, 3 o'clock A.M. That was as soon as we could get away. We generally remain six or eight days. No Japanese officer ever brought me a letter of instructions in regard to himself. No demands were made between Yokohama and Nagasaki by any officer in the Japanese service. I understood Mr. Tillman's orders came from the head office in Yokohama. Previous Charters have been made with the Japanese Government where we have deviated from our route. Our orders in port are received from the Agent, and no one else. In this case the Agent at Yokohama did not order me to disobey any Agent at other ports.

(Signed) WM. G. FURBER.

John R. Puckering, sworn:—I am Purser of the S. S. *New York*. On or about the 20th April, on arrival of that steamship at Nagasaki, I was Purser. I entered the ship and delivered the papers at the U. S. Consulate. I cleared the ship when she left. Nothing was among the ship's papers showing where the ship was intending going. It is part of my duty as Purser to enter the ship. After we commenced to discharge the Japanese freight, I went and asked the Consul what time mails were to close. I understood we were going to Shanghai. I would look to the Agent at Nagasaki for instructions to clear the ship. I understood the ship was chartered for Formosa. I heard, two days before we left for Shanghai, that we were not to go. Saw the freight taken out; don't know where it went to.

(Signed) JOHN R. PUCKERING.

Capt. W. G. Furber, recalled:—I was not called upon while in Nagasaki by any one except General Le Gendre; he came and asked me if the ship could not go on. I said it could not, as I was in the hands of the Agent.

(Signed) WM. G. FURBER.

Alexr. Center, Agent, Pacific Mail Steam Ship Company, sworn:—The contracts I have just heard read I know to be the true

contracts that were signed. Capt. Furber is at present absent from Yokohama; also Mr. Puckering. Telegrams and copies of same now produced I admit. The contract in question was for the *New York* to proceed to Nagasaki and Formosa. She only proceeded as far as Nagasaki, because she was detached by the Japanese Government, by document from the Foreign Office to the U. S. Minister, which prevented her proceeding further. The Japanese Government prevented her going any further. The Minister (U.S.) informed me that the ship had been detached by such a document from the Japanese Government. I saw a copy of that despatch, and have heard an extract from it read by the United States Minister. I then telegraphed to Nagasaki, on the 22nd, as follows: "Keep *New York* at Nagasaki until further orders; tell no one but the Captain. Answer." I do not know the precise date when it reached the Agent; I think about the 24th. (Several telegrams between Center and Tillman, the Agent at Nagasaki, were here read.) I sent a special telegram on the 26th, confirming that of the 22nd. The telegrams and replies got mixed up on the way. The *Golden Age* sailed from here on the afternoon of the 29th April. After receiving those telegrams I went to Yedo, to ask why the ship was not detached from the expedition, and why they still required her to go to sea. I was told that further orders would go by *Golden Age*, and that an officer would also go. I was told that by Mr. Bingham, after he had had an interview with the Minister for Foreign Affairs. I do not know that such orders went; I know that Mr. Okuma went. I do not know that any such orders were issued or sent. I only know that orders had been issued, from hearing the despatch read. My orders caused the ship to remain at Nagasaki after she had been detached. The owners of the *New York* were to look to the officers mentioned in the Charter-Party, whilst at sea, accompanying the ship. Mr. Hirai was one, Mr. Iwahashi was another. I signed the second contract in question; there was no money received on that occasion. I did not see or hear the purport of the orders that went forward by the *Golden Age*. When I went to Yedo, after receiving the disquieting telegrams from Mr. Tillman, I went to see the U. S. Minister; because he had informed me that the ship was detached. The information contained in the despatch referred to, respecting the detachment of the *New York*, was brought to me; I did not seek it. It was on the 22nd, at Tokei. The telegrams sent by me to Nagasaki respecting the detachment was dated 22nd, the date of the despatch. On the 21st, Mr. Bingham informed me, verbally, that the Minister for Foreign Affairs had detached the ship, and that he was going to put it in writing. It was the despatch received by Mr. Bingham on the 22nd which occasioned my sending the telegram on the 22nd. The telegram was based on the information I received on the 21st from Mr. Bingham. I was in receipt of information respecting it before that time (21st), and went to Yedo to see about it. When I received the disquieting telegrams from Nagasaki, did not go to the Minister of the Finance Department. I went there on one occasion. It was considerably later than that; say the 28th or 29th. I went to ask Mr. Yoshida what they were going to do about it. The contract was made with the Government; I had no direct relations with them; only with the Charterer. I consider the contract as between the Government and the P. M. S. S. Company. Nothing was done respecting the

Charter excepting through Mr. Yoshida. I supposed Mr. Yoshida knew the ship was detached; that was my reason for not going near him. I thought he could not help knowing that the ship was detached. There was no special reason for my not going until the 28th or 29th. I merely wanted to see if he knew what the movements of the ship were to be; whether she was likely to be detained long at Nagasaki. I considered her on demurrage under the charter. Although she did not go to Formosa she was held by the Japanese, and had stores and troops on board. No person other than an Agent (unless someone authorised by him) could clear the ship. She had 5 or 600 tons of freight on board, and until that was discharged I considered her held by them, and under demurrage. The Government were only in possession of the ship as far as the freight and passengers were concerned. On the 19th, Mr. Bingham wrote me a note, saying he would like to see me. I went to Yedo on the 20th (Monday). Government, I was told, had sent orders by steamer and telegraph, on the 21st, detaching the ship. When the *New York* left here I gave the Captain his usual sailing orders, to proceed to Nagasaki and thence to Formosa. There is a book published by the Company, intended for the direction of the Captain and officers of each ship, and its proper discipline. The purpose of it is to shew the different duties of the officers on board each ship. I received a final report from the Agent at Nagasaki, apprising me of the final unloading of the ship. I received the information from Mr. Tillman, on the 2nd May, that the *New York* was completely unloaded on the morning of the 2nd. I gave orders referring to the promises made to Mr. Yoshida in my letters to him of April 6th and 7th, respecting meals of officers, &c. It was in the Captain's sailing orders. (Letters from Center to Yoshida, respecting the non-payment of the \$2,000, and other matters, were read).

Court adjourned.

Court resumed at half-past one o'clock.

Mr. Center produced press-copy of his sailing orders to the Master of the *New York*, dated April 13th, on the voyage in question, which, at the request of Counsel, he read to Court. Through Mr. Hill, he handed in the Book of Rules and Regulations for the guidance of officers in the P. M. S. S. Co.'s service, with particular reference to the duties of Captains and Purser's.

A. Center, examination resumed:—Mr. Bingham was aware the *New York* was chartered to proceed to Formosa, but I cannot say the exact date when he became aware of it.

By Mr. Dickens:—The charter was broken by the Japanese Government, by document on the 22nd. The document was the despatch to the U. S. Minister. It emanated from the Minister for Foreign Affairs. Prior to the despatch of my telegram to Mr. Tillman, Nagasaki, Mr. Bingham informed me, on the 20th or 21st, that orders had been given by the Minister for Foreign Affairs for the detachment; and in accordance with that I gave orders to stop the ship until further orders. I think it was on the 22nd Mr. Bingham informed me that he had a written communication from the Minister for Foreign Affairs to that effect. After that, no circumstance or intimation occurred from Mr. Yoshida to lead me to suppose that he still required the Charter to be carried out. I think I only saw Mr. Yoshida once, and then I wanted to know what their object was with

relation to the movements of the ship. I don't remember, during my negotiations with Mr. Yoshida, touching on the matter of the detention of the ship. (Letter, 22nd April, from Yoshida to Center, and answer, dated 23rd, handed in.) Mr. Yoshida never objected to anything except compensation, and that was fixed prior to his letter of the 30th. Up to 22nd April, I had been willing to carry out the Charter-Party, and had carried it out. A few days before the 30th (28th or 29th) Mr. Yoshida came and wished to know the terms, in case the ship were turned over at once. On the 30th, he came again and stated that the terms were satisfactory, and were accepted; and he wished me to put them in writing. The telegraph line, about 30th, being out of order, I requested him to forward my telegram himself, as it would no doubt go quicker. I wrote the telegram, addressed to Tillman, in the office, handed it to Mr. Yoshida, read it carefully, and sent it to the office. This was on the 30th; to the effect that the *New York* was handed over. Mr. Yoshida, accompanied by our interpreter, took it to the office. The terms therein contained were reduced to writing in the form of a letter, a copy of which, in Japanese, was sent to Nagasaki by Mr. Yoshida. Since then, I have not seen or had any conversation with Mr. Yoshida on this matter. I know nothing of any despatches having been sent per *Golden Age* by Mr. Yoshida. Mr. Bingham informed me they were sent. No letter was ever sent me by the Okurasho, appointing Mr. Hirai and Mr. Kawasaki in command of the affair. Mr. Yoshida handed me, in the office, a slip of paper containing their names. I do not think there was any letter from the authorities on the subject. Mr. Hirai did not exhibit to me any formal letter defining his powers. I was introduced to him on board; he spoke English. I have not seen or heard of any written request whatever, from either of those officers, for the sending on of the vessel. I was not told which of the officers, Hirai and Kawasaki, was to act superior to the other. The *New York* missed one regular voyage down on account of the abandonment of her Charter-Party. During the whole of my negotiations with Mr. Yoshida he never, on any occasion, raised any objection to the Charter-Party; other than to my demand for compensation.

General Le Gendre, sworn:—I accompanied the *New York* on this Charter-Party, on the 1st April last. I was employed in the service of the Japanese Government. I do not exactly remember the day when we reached Nagasaki. It was about the 20th April. I was moderately conversant with the demands and requirements of the Japanese Government in connection with the *New York*. On our arrival at Nagasaki we were waiting the arrival of another ship, which had been sent from Yokohama after our departure. She arrived, I believe, on the 25th. The *New York* should have left Nagasaki on that same evening, so far as I know; General Saigo, the Chief-Commissioner of the Mission, told me so. It was decided amongst Genl. Saigo, Mr. Okuma, and myself (on the 25th) that I should go to the Agent of the P. M. S. S. Co., requesting the steamer's departure on that evening (25th). I went to the Agent and told him that it was desirable that the ship should be ready to leave that same evening. I said, as it was late, she could leave next morning. The Agent particularly asked me if I wished her to leave that evening. He appeared to be astonished, and said she couldn't leave, as he had no instructions. I asked him for an ex-

planation. He replied that he could not give me any. I at once notified Mr. Saigo, and I was informed that he would communicate with Mr. Okuma. Next morning was the 26th, and I believe both Mr. Saigo and Mr. Okuma made enquires in Nagasaki as to the probability of being able to charter other vessels. I believe Capt. Brown was instructed to endeavour to do so. Two or three days after, Capt. Brown came and told me that Mr. Saigo had chartered two vessels. On the 27th, as I was very anxious that the *New York* should go, I wrote Mr. Tillman; I did not, however, see him. (Letter produced.) I received a reply (produced, April 27th.) Nothing further official occurred between us. After writing Mr. Tillman on the 27th I had no further communication with him. The vessel for whose arrival we were waiting arrived in Nagasaki on the 25th, with Capt. Cassel. He was a passenger. General Saigo understood from me that we would have to forego the use of the *New York*, on the 27th. If Mr. Okuma could have bought the *New York* at a fair price he would have done so; so much was he in want of vessels. I do not know into what vessel the stores *et cetera* *New York* were trans-shipped. I don't think Mr. Tillman ever gave me any reason for the non-leaving of the *New York*. He said he was unable to give me any reason. The reason Mr. Okuma, Mr. Saigo, and myself were so anxious that the *New York* should proceed at once was, that the *Hokai-maru*, which should have preceded us as the pioneer ship, became disabled, and, after survey, was declared unable to proceed.

Cross-examined by Mr. Dickens:—My position in the service of the Government of Japan lies in the Department of Colonization. Any duties in that department are assigned to me. That Department has to do with any colonies of Japan; such as Yezo, Saghalien, Lew Chew. I object to particularly state what colonies are referred to as coming under the jurisdiction of the Colonization Department; and whether it deals only with colonies already established, or with those intended to be established. I was appointed to serve on the Mission sent to Formosa. I received my orders from the Prime Minister. I was authorised by the Chief of the Okurasho, Mr. Okuma, to act. I have my commission as Chief Assistant to Mr. Okuma. The *Hokai-maru* brought me a despatch from Mr. Bingham. I don't believe that any official despatches came from the Government by the *Hokai-maru*. No demand on the Agent of the *New York* was made until after the arrival of the *Hokai-maru*. The Captain understood that he was to proceed to Formosa. No orders were transmitted through Hirai or Kawasaki, the two officers mentioned in the Charter-Party, at Nagasaki. I received my orders from Mr. Saigo. I could receive no orders from any except Mr. Saigo or the head of my department. Certain powers were delegated to Mr. Okuma by the Prime Minister, to act at Nagasaki, and that is why I took instructions from him. These instructions were in writing. Mr. Okuma holds two portfolios. He is also Minister for Colonization. I am aware that the expedition was intended to redress wrongs inflicted by Formosans on Lew-Chewans. Lew-Chew belongs to Japan. I am aware that America recognised Lew-Chew as belonging to China. I had no special written authority to communicate with Mr. Tillman respecting the charter of the *New York*. I have general authority from the Government. I would not like to produce it without their authority. I am not aware that the Govern-

ment have been called upon to produce those authorities, and that they have refused to do so. Whilst in Nagasaki I received no official communication whatever from any person in Yedo or Yokohama.

Mr. Hill objected to allow the remark to pass, about the demand upon the Government of Japan to produce the authorities having been refused. Until the action of Court this morning, he represented only the Okurasho; now, it seemed, he represented the Government, and he had not been called upon to produce, on behalf of the Government, the authorities in question.

Mr. Hirai, cautioned:—I went to Nagasaki per *New York*, in the capacity of Secretary to the Mission. General Le Gendre accompanied us; he was attached to the Mission. We arrived at Nagasaki on 20th April. I do not exactly remember the date when the stores were commenced to be taken out of the *New York*. They were first put into the Custom House, and afterwards loaded on board several chartered ships; four or five. They were chartered by the Japanese Government. The reason of their being chartered was the refusal of the P. M. S. S. Co. to allow the *New York* to proceed to Formosa. It was about the 28th or 29th April when they were chartered. I do not remember the earliest date. I made no negotiations as to the non-despatch of the *New York*, but I am informed that General Le Gendre did so. General Saigo was the Commander of the Mission. He had a general power, naval and military. He is a General. I was his Secretary.

Cross-examined by Mr. Dickens:—The Mission was sent by the Japanese Government. I don't think it was a Military Mission. It was sent by the Central Government, Saigo was formerly in a Military capacity; but he was formally appointed as High Commissioner to the Mission. I understand the Constitution of the Empire of Japan. Mr. Kawasaki, who went with me in the *New York*, held equal rank with me. We might have chanced to give contrary instructions; no provision was made for that. Mr. Iwahashi had to do with money matters on board. I don't think he or any one else paid the Captain of the *New York* \$2,000. I never gave the Captain any orders to proceed to any particular port in Formosa. I could not give such orders of my own responsibility. I do not know whether Mr. Kawasaki gave such orders. Had he done so he would have informed me. My duties terminated when the *New York* refused to proceed to Formosa. I have read the Charter-Party; I don't think there is anything said about any one else obeying any orders except mine or Mr. Kawasaki's. I held no communication with the Agent of the P.M.S.S. Co. at Nagasaki. The Colonization and Foreign Office Departments are the same in rank. Terashima and Mr. Okuma are equal in rank; Mr. Okuma is the senior in rank.

W. P. Tillman, sworn:—I was Agent at Nagasaki for the P. M. S. S. Company at the time of the existence of the Charter-Party of the *New York*. The Agent of the Company has supreme control of the movements of the Company's vessel's while in Nagasaki. It is customary for the Captain to report to the Agent on the vessel's arrival. I was not placed in possession, or made aware of the existence, of the Charter-Party, prior to the arrival of the *New York*. It was shewn to me by the Captain on his arrival. In the absence of any instructions to the contrary from the Agent in Yokohama, I should have allowed the ship to go on, if telegraphic or other communication were interrupted. I received

a telegram, dated 22nd April, to detain the *New York* until further instructions. I think I received it on the 24th. She had then been there 3 days. I answered the telegram at once. I made the Captain aware of the contents of that telegram. The information contained in the telegram was conveyed by me to other than the Captain, but not to the Japanese. I cannot say whether the Japanese became aware of it. I did convey it to General Le Gendre on 1st May, after receiving another telegram from Mr. Center. I saw Mr. Mangum, the U. S. Consul, several times. He said he had received no orders about the ship, and that if I wanted her to go at any time he would not detain her. On the morning of 1st May the Japanese officers notified me that they were going to unload the ship. I know of nothing they did to retard the departure of the ship. I saw nothing in the conduct of the Japanese whilst at Nagasaki calculated to interfere with the movements of the *New York*, or the abandonment of the charter. In my negotiations with General Le Gendre, who, I understood, was one of the officers of the expedition, I never saw any authority he held; nor any of Iwahashi.

Cross-examined by Mr. Dickens:—Mr. Iwahashi, so far as I know, has never paid the \$2,000 referred to. Mr. Hirai or Mr. Kawasaki never approached me on business matters. Had her cargo been released, the *New York* would have gone on to Shanghai.

Mr. Hill said he was under the impression that the \$2,000 had been paid over by the Government, but now found it was not so. Their claim, therefore, was for \$2,000 too much, but he hoped that would not prejudice their claim with the Court.

This concluded Plaintiff's case.

D. W. Stevens, sworn:—I am Secretary to the U.S. Legation. I have a commission to produce a document from Mr. Terashima of the Okurasho to Mr. Bingham. The letter now read, dated April 20th, 1874, is the letter referred to, from Mr. Terashima to Mr. Bingham, which I produce by permission. Mr. Bingham addressed the Gaim'sho last week, asking for the production of certain documents; which were promised yesterday, but are not yet to hand.

Mr. Dickens said, with the exception of that of Mr. Stevens, he had no evidence to call. Counsel then addressed Court with a *resumé* of the facts of the case, and commented at some length on them. In conclusion, he said that, according to Sections 14 and 17, Rules of Procedure in that Court, in cases where the subject-matter was the same, a counter-claim might be included in the reply of defendant, without going anew over the evidence. That counter-claim was for \$8,250, and in addition to asking His Honour to dismiss the case against his clients, he would request him to express an opinion that the Japanese Government should be held liable for, and be called upon to pay, the amount of that counter-claim.

Mr. Hill replied.

Judgment reserved.

Tuesday, July 7th, 1874.

Judgment in this case was delivered this morning by Mr. Mitchell, supported by his co-adjutors, Messrs. G. L. Montgomery and Gustavus Farley, Jr., Assessors; as follows, viz:

This cause came on to be heard, upon the petition of the plaintiffs as amended. The answer thereto of the Defendant and the

testimony was argued by Counsel; and the Court being fully advised in the premises doth find:

1.—That the written Charter-Party and Agreement mentioned in the Plaintiff's Petition were entered into and made by the Government of Japan and the Defendant, through their respective agents, duly authorised.

2.—That the Defendant did not cause the said *S. S. New York* to deviate from her voyage and abandon the same, as charged in Plaintiff's Petition.

3.—That after said *S. S. New York* had made the voyage in pursuance of said Charter-Party and Agreement, from Yokohama to Nagasaki, and was ready to continue her voyage to Formosa according to the condition of said Charter-Party and Agreement, the said Plaintiff prevented the further prosecution by said *S. S. New York*, of her voyage under said Charter-Party and Agreement, and abandoned the same, and ordered said *S. S. New York* to be discharged of her cargo and surrendered to Defendant; and that by reason of said order of said Plaintiff said *S. S. New York* did not proceed further on said voyage.

Wherefore, it is ordered, adjudged, and decreed, that the Plaintiff has no cause of action in the premises against the Defendant; and that the Plaintiff's petition herein be, and the same is hereby, dismissed, without prejudice to any claim of the Defendant for compensation under said Charter-Party and Agreement.

Dated July 6th, 1874.

(Signed) GEO. N. MITCHELL,  
U. S. Vice-Consul.

We concur and assent to the foregoing Findings and Judgment.

(Signed) G. L. MONTGOMERY, } Assessors.  
" GUSTAVUS FARLEY, Jr. }

In H. B. M.'s Provincial Court.

Before C. W. GOODWIN, Esq., Assist. Judge,  
AND A JURY OF FIVE.

Wednesday, July 1st, 1874.

REGINA vs. ALFRED EDWIN LYNE.

Alfred Edwin Lyne, who was committed for trial on two separate charges of embezzling certain stores, the property of the Control Department of the British Government, whilst acting as Foreman of the Military Store Godowns in September 1870, was put upon his trial.

Mr. Hiram S. Wilkinson prosecuted on behalf of Government.

Mr. G. P. Ness appeared for accused.

Mr. J. C. Hall, Clerk of the Court, read the indictment, charging prisoner with having embezzled the following stores placed under his charge, the property of H. M.'s Government, viz: 60 qtr. Bbls., 20 Bags, 60,000 Cartridges; and 54 Bales, 1250 Blankets, 200 pair Socks, 50 Flannel Shirts, 50 Blue Jerseys. Prisoner pleaded not guilty.

The following gentlemen were sworn in as Jury, viz: Messrs. Robert Page, Alexr. Milne, Ernest Amaden, Frank Walker, G. M. Dare.

Mr. Wilkinson addressed the Jury, and said the case might be summed up in two charges; the first, of having embezzled a quantity of ammunition, between the 16th and 22nd September, 1870; and the second of having similarly mis-appropriated 54 Bales Blankets and other stores on the 23rd Sept., 1870. Mr.

Wilkinson explained to the Jury the full extent of the charge against prisoner, and directed them as to their duty in the finding of the verdict.

Claude John Gardner, sworn:—In the year 1870 I was employed as Control Clerk in the service of the Government. I know Alfred Lyne. He was Foreman of the Military Store Branch of the Control Department. Prisoner at the Bar is Alfred Lyne. His duties were to receive and issue the Military Stores, and to have charge of the working parties employed in the Store Godowns. Document exhibited is a copy of the Local Regulations of the Command, in force at the time. (Read extract referring to Lyne's appointment; put in.) Military equipments of various kinds, blankets, clothing, kits, &c., were stored in the Godowns under Lyne's charge. The Foreman of the Stores, Lyne at that time, had charge of the Magazine. He acted as such from March, 1868, to about 15th September, 1870. I fix on March, as that was the date of my arrival. The 15th September, as nearly as I recollect, was the last day on which I saw him in Yokohama. On that day I went away from Yokohama on leave. At that time Lyne had not resigned his appointment; had he done so I should have known of it. There was nothing to my knowledge which released him from his appointment, up to or after the 15th September. It was his duty to receive and examine the ammunition received into the Magazine; to keep its contents in order; and to see to its ventilation. Stores could only be sold by authority of the Control Officer in Charge; at that time, Commissary Buchanan. Government Stores would be sold by public auction, under the authority of the Control Officer in Charge, or by tender. The tender accepted would receive the approval of the Military Officer Commanding. If any sales had taken place about that time they would be known to me; they would be advertised. Ammunition is not saleable except by special authority of the Secretary of State for War. It would be very unusual to sell ammunition. I know of no authority arriving about that time to sell ammunition. The cartridge cases being of copper, were of some value; and an allowance was made to the men for collecting them. These were repacked, and sent on to Hongkong; with the view, I suppose, of having them refilled at some future time. It was Lyne's duty to receive those empty cartridges. I should have known had any money come into the Military Chest for stores sold. No payments were made into the Military Chest for stores of the description represented in the indictment. Lyne had to keep Store Journals, containing an account of his receipts and issues. The book now produced is the Store Official Journal, kept by the Foreman of Stores. Referring to the month of September, 1870, I find entries signed by Lyne. That is the last one in his handwriting. About the date referred to, I find entries of the issue of goods, similar to those mentioned in the indictment, to the various branches of the service, but no entries of any such goods sold. Had there been any such issued it would have been Lyne's duty to enter them. Service ammunition is contained in small packages similar to that exhibited, and packed in small barrels, such as that produced. Deputy-Commissary Oxley was above Lyne in charge of the Military Store Department at that time. It is well known to everybody connected with the Service that Lyne was not at liberty to sell such stores. The first time I think I saw Lyne after the time

referred to was in the month of January in this year, when he came here in the *Vasco de Gama*. I was not aware until after that steamer left again that he was the man. I reported the arrival of Lyne here to the Controller at Hongkong. He forwarded me instructions to confer with H. M.'s Consul, as to the steps which should be taken in the event of Lyne's re-appearance here. It was in consequence of those instructions that he was arrested.

Cross-examined by Mr. Ness:—I was examined in this case in March last, and gave evidence. I believe it was not in consequence of that evidence that Lyne was committed for trial. On the 21st March I said in this Court that about the 20th September, 1870, Lyne removed about 56 Bales of Blankets, and that he afterwards absconded. I was in the country on the date mentioned. I did not know of my own knowledge that Lyne had carried away those goods. I did not see Lyne take the goods. In Sept., 1870, only Lyne had charge of the Godowns. In addition there was one Storeman and several coolies employed. They were not always in the Godown with Lyne; he might send them elsewhere. There is always a guard at the gate leading out of the Godown; there was no other guard in 1870. There was not a sentry inside the Compound. There was a Court of Enquiry held in Sept., 1870. I was not present; it was not my duty. I believe the general result of that enquiry was to fix the blame on Lyne. I believe there has been one case of deficiency in the stores since 1870; I remember hearing of one only. The Assist. Foreman's name was Curthos; I cannot say where he is now. There are none of the coolies employed now that were there then. The packages of ammunition were packed, in 1870, similar to the one now produced. They bore no distinguishing mark. Similar cartridges are imported into Yokohama. There is no mark on the Government cartridges to distinguish them from those imported.

Re-examined by Mr. Wilkinson:—The book produced is the Transport Account, which was kept by myself. On the 15th October, 1870, I find an entry of 5 carts and coolies employed to convey 56 Bales from the English Hatoba to the Stores, with a description in brackets of the stolen goods. It is my duty to provide carriage for goods. I believe Curthos is not in Yokohama. He was a Gunner of Royal Artillery; he left with his corps. A knowledge of the marks on packages of ammunition, &c., does not pertain to my duties.

Frank Brinkley, sworn:—I am a Lieut. of Royal Artillery, and was so in 1870. I know prisoner at the Bar, Lyne. I knew him from 1868 to September, 1870. He was Foreman of Military Stores. At that date it had been made a branch of the Control Department. Lyne filled his office up to about 20th Sept., when he absconded. Until he then disappeared his duties had not closed. In Sept., 1870, I was in command of the detachment of Artillery stationed in Yokohama. As such, I had to make examination of and report upon, yearly, the condition of the ammunition. About the month of June, 1870, I made the usual inspection. There was then nothing unusual in its condition. All ammunition condemned by me was generally destroyed. Such parts of it as were serviceable were used. During 1870, I knew of no ammunition being sold on Government account. I should have known of it had there been any. After Lyne disappeared, a board of officers was assembled, by order of the Commandant, to examine

into the deficiencies that were discovered; I was a member of that board. I recognise my signature to the proceedings of the Board, now produced. It sat on the 27th September, 1870. It was afterwards adjourned, for the purpose of getting evidence as to the amount of the deficiencies. It re-assembled on the 6th March, 1871. Lyne did not appear at any of those examinations. No effort was made to procure his attendance; it was understood that he had left Yokohama. Had I considered it possible to procure his attendance I should certainly have done so. An examination of the Magazines was made in connection with the deficiencies. I was present, but not officially. A large deficiency was found; what it was I cannot distinctly remember. The barrels containing the ammunition were deficient in number. The package of cartridges handed me I recognise as a *five-simile* of those issued to the troops at that time. The barrel produced is also a *five-simile* of those then in use. The marks on the barrels and packages are marks peculiar to the Department, although they do not contain the Broad Arrow. I had nothing to do with the recovery of the goods in question from the Japanese Authorities. The first witness at the Board was Mr. Oxley, since dead. The second was Dep. Purveyor Raines. The next was Private Miller, of the 10th Regt., who is now in Singapore; Mr. Raines is now in Ireland. There were, also, Sergt. Miller, and Privates Marshall and McAdams, 10th Regt., Gunner Curtis, R. A., Sergt. Goyle, R. A., Sakiji, a Japanese, Haino, a Japanese, Chokichi, a Japanese, Purveyor Buchanan, of the Control Department, Lieut. Robertson, 10th Regt., Lieut. Brinkley, R. A. All the (Service) witnesses have left Yokohama, with the exception of myself.

Cross-examined by Mr. Ness:—All of these witnesses could have given evidence for or against, in connection with this enquiry. There was one sentry outside the Compound. I do not remember whether there was another within. I am not aware that any effort was made to bring Lyne back at that time. Certainly, it is possible for anyone to import similar cartridges into Yokohama. I have seen circulars fixing the marks of the packages produced, as Government marks. I do not remember any deficiencies occurring after Lyne left. I never suspected Lyne before this affair.

Re-examined by Mr. Wilkinson:—The witnesses examined at the Board of Enquiry are scattered over the world. They would, if here, all be able to give evidence. I recognise the barrel now produced as similar to one shewn me at my preliminary examination.

Adjourned until one o'clock.

Court resumed at 1.15 p.m.

Henry Basch, sworn:—I am a partner in the firm of Basch, Schraub & Co. The firm has been in existence from 1st September, 1870; previous to that it was carried on under my own name. I remember purchasing ammunition in 1870. In the month of July or August, Mr. Smith came to me with a sample of Snider-Boxer cartridges; he offered them for sale. I refused to buy them, it being out of the line of my business. I got about 5 or 10 cartridges. (Cartridges produced). I think it is a similar cartridge. Mr. Smith said we might get them cheap, and make a profit on them. I then told him to leave the sample and I would see what I could do with them. I gave the sample to Mr. Ahrens, of the firm of Ahrens & Co., Yedo. He tried the sample

and found it good. He then asked me how many thousands we had got. I told him I did not know, as I had to ask Mr. Smith. Mr. Smith told me that he did not know, but enquired, and said some thousands would be ready in a few days. We purchased about 60,000 altogether. The cartridges were delivered first to me in the usual business hours. Smith at that time was my servant. The packages were wooden kegs; I took no notice of the marks on the kegs. (Keg produced.) The packages were like the one produced, only they were covered with tarpauling. The money was paid to Mr. Smith. This was partly before and partly after the firm was changed to Busch, Schraub & Co. When I was alone in the business Mr. Dermer kept my books. It was a cash transaction. I kept the books myself. Mr. Schraub took charge of the books from 1st Sept., 1870. Myself, Mr. Schraub, my brother (since deceased), and Mr. Smith only knew of this transaction. Some of the cartridges came in small square packages of a few thousands each. I bought the cartridges of Smith, and paid him the money. I know the prisoner. I never saw him in connection with this affair. Some of the cartridges were bought after 1st Sept., 1870. I remember it was about 22nd or 23rd the San Francisco steamer left. I think it was seven or eight days before that that we received the last of the cartridges.

Cross-examined by Mr. Ness:—I never knew the prisoner in this matter. I frequently asked, and was told by Smith, that they were condemned cartridges. I do not know the Government marks. I could not tell to whom they belonged.

Chas. Smith, sworn:—I am in business on my own account at present. I know the prisoner. I saw him in the Military Stores when I went to collect a bill in July, 1870. I was then in the service of Mr. H. Busch. There was a change in the firm; Mr. Schraub and Mr. Busch's brother joined it about that time. I was the only assistant in the firm. The prisoner offered me the cartridges for sale, and shewed me a sample. I took the sample and shewed them to Mr. Busch. They were similar to those produced. The samples he gave me were a few loose ones. There were a lot of large chests in the store containing empty cartridges. Prisoner stated that these would have to be filled. The empty cartridges were picked up at the Butts. The samples were laid on the sample shelf; afterwards Mr. Ahrens agreed to purchase them. Coolies brought them to the store, in barrels, and a few loose ones in bags. (Barrel produced.) This is a new barrel; those that came were in very old barrels. All were sold to Messrs. Ahrens & Co. I opened none of the packages. When I purchased for Busch, Schraub & Co. I paid the money myself to prisoner. I got the money from Mr. Busch; prisoner was in a hurry to get it. I purchased no other cartridges but from Lyne. I was only a servant of Busch, Schraub & Co.'s. I believe it was the day previous to the San Francisco steamer leaving that I paid the money to prisoner. I believe it was over \$70. All the cartridges purchased were full.

Cross-examined by Mr. Ness:—It was Lyne's own proposition to sell the cartridges. I had no order for cartridges previous to seeing Lyne. (Here witness's deposition, made before this Court in June last, which was contradictory to his present statement, was read.) There must have been an error in my statement in June last. I know the Government mark, the "broad-arrow." I thought it was criminal to receive goods

bearing that mark; I never looked for the mark. Lyne closed his bargain with Mr. Busch. I have not heard Mr. Busch say he never saw Lyne. Lyne was in Busch's room at No. 44; I was there, too. The talk there was only about the price. I really cannot remember more about it. I do not well remember about it; it was four years ago. Mr. Busch offered, I think, \$7. I brought Lyne to No. 44 myself. I never mentioned Busch having met the prisoner at the preliminary examination. Mr. Busch never asked about the mark. Coolies brought the goods to the store. It was a cash transaction. I could not swear if a receipt was given. I do not remember how many payments I made to Lyne. Lyne gave me \$25 as a commission. I never received a similar payment for any other transaction. When Mr. Busch said I refused to tell him where they came from, it was a false statement. I cannot bring anyone to confirm this. A person in uniform, I believe named Oxley, could have heard the conversation. I paid Lyne about \$400.

To Mr. Wilkinson:—The man in uniform was close to us, but made no remark whatever. He may have heard all the conversation. The proposition was Lyne's own.

Emmanuel Schraub, sworn:—The firm started in 1870; I was a partner at that time. I remember the firm making purchases of cartridges through Mr. Smith; at that time in our employ. (Cartridges produced.) The cartridges were similar. A sample was forwarded to Yedo, and the cartridges were sold to H. Ahrens & Co. Yedo. There were between 22,000 and 23,000. I simply told Smith, my employee, that I would purchase at the price agreed, between \$7 and \$8. Smith undertook to deliver the cartridges. I paid the money to Smith. I have my books here. The cartridges were delivered on 16th Sept. Smith was paid \$99.50, and, on the 22nd of Sept., he received \$77; that squared the whole transaction. They were forwarded to Yedo on 15th Sept., packed in barrels. Smith named no person from whom he purchased the cartridges till he was asked; then he gave the name of Lyne.

Cross-examined by Mr. Ness:—I never heard, and do not believe, that Mr. Busch had any meeting with the prisoner, and I think Smith's evidence was entirely false. I had no idea I was dealing with Lyne before I asked the question. Of my own knowledge, I do not know the cartridges came from Lyne; I have heard so. There was nothing to lead me to believe they were naval stores. I paid, altogether, \$170.50. When Smith speaks of \$400 he must refer to transactions before I joined the firm. When I paid for those cartridges I asked in what name I should make the entry. I have not heard that Smith refused to give the name of the person who sold the goods. The goods were delivered by coolies, who brought a chit addressed to Smith; I can swear to that. I cannot say if Smith gave a receipt; I imagine he did.

To Mr. Wilkinson:—It is possible that sales were made to the amount of \$400; both after and before I joined the firm. There was nothing to attract my attention on the packages.

Mrs. Verbeck, sworn:—I think it was in September, 1870; I am not certain. I recognise the prisoner. I saw him on the 20th. He was in the cabin of the steamer, a passenger by that voyage for San Francisco. I think he was a first-class passenger. He was accompanied by a wife and two children. I saw him once in the street, in San Francisco.

Henry Ahrens, sworn:—I remember purchasing Snider-Boxer cartridges in 1870. I took delivery at No. 44, Messrs. Busch, Schraub & Co.'s store. There were, according to my books, one lot of 60,000, for which I paid \$600. They were contained in similar packages to the keg I see now. I paid the money 18th Sept., 1870. I might have received them before that date.

Naka-yama Tora-zo, cautioned to speak the truth:—I am a Boat-master. I remember the month of Sept., 1870. I was then a Boat-master. I remember the prisoner; his name is Lyne. He was constantly in the habit of coming to the Hatoba to engage boats. No boats were allowed to leave the French Hatoba without particulars being given as to where they were going; and no boats were allowed go that had not a permit or pass. I remember the San Francisco steamer going. I saw Lyne come into the Custom-House, with a written paper in his hand, on that day. Shortly after this, Lyne went on board in his own boat; but I saw the goods put on board a Yedo boat; which appeared suspicious, so I reported it. The goods were packed in linen cases; there were about 56 packages. I noticed no one looking after the goods. This was at about 4.30 p. m. Lyne went into a boat about the same time. Kata-yori is the name of the officer who was on duty that day. I was constantly in the habit of seeing the prisoner shipping goods; he generally sent them to ships-of-war. The boats on which these goods were had no flag, which I thought suspicious. I engaged a small boat and went after them. I do not know to whom the permit was ultimately presented. There was a permit when the goods were shipped from the Hatoba; Lyne received that permit. I handed the goods, after seizure, to the officer on duty; after that, had nothing to do with them.

Cross-examined by Mr. Ness:—I did not receive the permit. I saw Lyne go into the Custom House with a paper stamped with an English Government seal, and I inferred that he got a permit. I saw the application for a permit. When I landed the goods, I counted the number of packages as I handed them over to the officer of Customs. I well remember everything connected with this matter, as I was connected with it myself. I was examined on this matter on the 26th June, when my answers were all to the same purport. It was my duty to see that no other boats but those with a flag carried goods, and if I permitted it I would incur censure.

To Court:—The goods were shipped on boats belonging to Yedo, that had no right to come to the Hatoba; but on this particular day they were there.

Tsuboki-tokujiro, cautioned:—I am now living in Homura. I recognise the prisoner; he is the man I bought the goods from about four years ago. I think it was on the 28th day of the 8th month. The man who first brought the sample of blankets and woollen underclothing to my house is since dead, and I have failed to find the other one. The man who has since died said that his master had goods for sale; in consequence, I went to Lyne's place. Lyne said if I wanted to buy I must make up my mind at once; otherwise he would sell them by auction. I went to a Godown, where I saw the goods, and remarked, "It will require more money than I have; if you can wait I will see if I can get the money." I think the price was from 3 boos to 1 rio for each blanket, and 2 boos to 2½ for the shirts, each. As well as I re-

member, there were 54 or 56 bales, and from a calculation I then made it would come to about \$1,650. I paid \$400 on account, then looked for another purchaser. I saw a man from Yedo, whom I asked to join me in the bargain. He went back to Yedo for the money; he was absent one or two days. Lyne told me he must have the money by the 28th. On that day the Yedo man came back with the money, and I closed the transaction, because, being a Yedo man, my friend could not negotiate it. I took the money to the "Squeeze Office." The arrangement made with Lyne was, that the goods should be shipped from opposite the Store Godown; but the boats being too small, Lyne said it would be better to ship them at the Hatoba. Lyne undertook to ship them through, by telling a lie, that they were for an English war-ship. As the goods were being taken away, the previous witness asked where they were going. The foreigner stated they were for a man-of-war; but, on his hearing they were intended for Yedo, the goods were seized. On the next morning, early, I was sent for to be examined. I have never got possession of the goods again. I saw Lyne take the dollars; after taking them he went to No. 11, (Oriental Bank). It was the day a mail steamer sailed.

Cross-examined by Mr. Ness:—I left the *Per-centage* office between 4 and 5 o'clock. I spoke to Lyne at the Stores. In buying goods from foreigners it is only necessary to pay the squeeze. For a cash transaction there is no need of a written contract; in this case no written contract was made. I was at the Stores once before, when I paid the bargain money. I have not been suspected of this robbery myself, but I have been arrested about this matter; so has the Yedo merchant. I am under surveillance, and will be until the culprit is convicted.

To Mr. Wilkinson:—I have been in no way recompensed by the Japanese Government for the losses I have sustained.

To Jury:—I have had nothing to do with any one else but Lyne in this matter; although I have heard the name of another man, Curtis, mentioned. The goods were taken to the Hatoba by coolies. I saw some of the money handed to Curtis. Lyne paid the coolies. I know the man's name to be Curtis from subsequent enquiries. I know of no other Europeans connected with this matter. If the goods could have been shipped from the Creek they would never have gone to the Hatoba. As it was a transaction with a foreigner, I considered it all right, and had no scruples whatever about it.

Tomiso, cautioned:—I recognise prisoner; he is the man that I paid the dollars to; I paid him \$1236. This was \$14 short of amount agreed on. I saw Lyne in the store, and heard him give directions to the coolies. It was about one o'clock when directions were given, but it was close on 4 o'clock when the goods were delivered. When I paid the money, Lyne went into a Bank; then came out, saw the goods put on board, and embarked, himself, in a boat. I have never met Lyne since. I have received \$9, R. 2., Boo 1 from the Japanese Government, as compensation for my loss. I was told that this was an instalment of the money paid by me to Lyne. There were about 56 bales, consisting woollens, blankets, and shirts.

Cross-examined by Mr. Ness:—I paid Lyne at a small corner house near the Hatoba; an eating house. There were present, Lyne, the man who was in his company, and the man of the house. I do not know the

whereabouts of the man of the house. Lyne then went to the Bank, at once. After I paid Lyne, and while the money was still there, my partner came in. I am still under surveillance by the government authorities; my release depends on the conviction of the prisoner. If the money is recovered from prisoner it will be handed by the Saibansho officers to me. The house referred to has since been burnt down.

To Jury:—No money was paid to the other prisoner. The goods were sent to the Hatoba by Lyne.

William Smeaton, sworn:—I am Messenger at the Oriental Bank. I know the prisoner, Lyne, and I remember seeing him on the day the American steamer left, at the Hatoba, at a little past 3 o'clock; he was putting some things in a small boat. I think he left the Bank before that.

Cross-examined by Mr. Ness:—I recollect the day the mail left. I have often seen Lyne superintending the shipping of goods. It was about 3 o'clock. I did not see Lyne at 5 o'clock. The mail left about 4 o'clock.

To Jury:—It is customary for customers to go into the Bank after office hours on mail days.

Robt. Beattie, sworn:—I am out of employment at present. I was formerly Foreman at the Military Stores. I arrived from Hongkong in October, 1870. I remember taking stock. I remember about 100 quarter-barrels of cartridges were empty, instead of being full. A very small quantity of ball-cartridges were left in the magazine. In the stores I found a large quantity of bedding and clothing missing. 54 bales were taken into the store before my coming on duty. I took an account of them. A great number were blankets, blue shirts, blue jerseys, and some socks. These goods were required to make up the number of goods there ought to have been in the store. I succeeded Lyne, by appointment from Hongkong. I had no power to sell stores. The Senior Control Officer could authorise the sale of goods. Ammunition, or any war-like stores, are strictly prohibited to be sold under any circumstances. When I arrived here I was furnished with a new set of books. On one occasion, in 1871, the store was forcibly broken open in the night.

To Jury:—There was a Senior Control Officer here. If he gave an order for sale the goods must be sold by public auction.

Katayoshi, cautioned:—I am Inspector of Customs. I was in the same office in 1870, at the French Hatoba. I recognise prisoner; he frequently came with applications to ship stores on board English vessels-of-war. I remember the day the American mail left; I think it was the 28th day of the 8th month. About 11 A.M., Lyne came with a customary application for shipping goods on board an English ship; at about 2 P.M. a soldier came for the permit. The application was translated. The purport of it was that the stores were for ship's use, and so the permit was granted. As there were 56 bales, it took some time to get them into the boats, and I was told that Lyne was giving orders to put them on board of unauthorised boats. I went and stopped it. Lyne and another soldier persisted in saying it was all correct. I instructed the boat-master to follow the boats that had already left, and remark where they were being taken to. Torazo, observing the goods were not going to an English ship, followed, and brought the goods back, and the men in charge of them were sent to the examination office. The goods were then put in a bonded warehouse, by order of the Saibansho. The search is being prosecuted for

the permit; this was four years ago. So far as I remember, the goods were blankets and shirts. I am the only Customs Officer in Yokohama acquainted with the circumstances.

Cross-examined by Mr. Ness:—No one had official communication with Lyne. The permit came to me in the usual routine of business.

To Mr. Wilkinson:—I saw Lyne on the Hatoba when the goods were being put on board the boat.

Sergeant-Major E. J. Marlowe, R. M. sworn:—I remember January last. Prisoner came to me and spoke about the improvements at the camp. I reported having seen him to Mr. Gardner, so soon as I came to the conclusion that he was the man I thought he was. He said he did not wish his name mentioned to Mr. Gardner. He said he knew Mr. Gardner.

George Hodges, sworn:—I am Constable of the British Consulate. I went on board the *Vasco de Gama* and arrested the prisoner. I found him under the name of Alfred Floyd. I knew him previously in Yokohama.

Benj. Thos. Ford, sworn:—I formerly kept a Public House, nearly opposite the Oriental Bank in Water Street. Laving and Goldenberg formerly occupied the house.

Cross-examined by Mr. Ness:—I should not call the situation of the house "at the corner of the Hatoba."

Mr. Wilkinson then addressed the Jury, reviewing the facts of the evidence.

Mr. Ness replied on behalf of prisoner, maintaining that there was no evidence whatever criminating him.

His Honour addressed the Jury at some length, pointing out their duty as to the verdict.

The Jury retired at 6.30 P.M., and, after an absence of 5 minutes, brought in a verdict of guilty, on the second and third charges of the indictment.

Prisoner was sentenced to 2 years hard labor; the date of imprisonment to count from the time he was first incarcerated.

Before C. W. GOODWIN, Esq., Assist. Judge.

WALSH, HALL & Co. vs. J. PITMAN.

Saturday, July 4th, 1874.

Claim for \$6,300, for breach of contract, in refusing to take delivery of, and pay for, 13,000 blankets.

Defendant put in a cross claim for \$3,900, for alleged breach of warranty in respect to said blankets, and consequential damages.

Mr. G. P. Ness for plaintiffs; Mr. F. V. Dickins for defendant.

Mr. Dickins raised a preliminary objection to the amount of justification in the bond, which ought to have been at least double the amount claimed by his client (\$3,900).

His Honour, after considerable discussion, over-ruled the objection, but, at Mr. Dickins' request, agreed to make a note of it.

Mr. Dickins said there were really two cases before the Court in the present action: that of his learned friend against his client, and that of his client against Messrs. Walsh, Hall & Co., for \$3,900, for breach of warranty.

His Honour said, technically there were two cases, but practically there was but one. Plaintiffs and defendant took different views of the matter; the question was, which was right. He should treat the case as a single one; the usual way.

Mr. Ness stated the case, pointing out its leading features, and stating that defendant claimed \$3,900 on a cross action, for alleged

breach of warranty. He would call Mr. Fletcher, into whose hands the blankets in question had been put, for sale.

Chas. A. Fletcher, sworn:—I am an Auctioneer in Yokohama. About a year ago, Messrs. Walsh, Hall & Co. informed me that they had a lot of blankets, and asked me to obtain a sale on their account. They sent me samples; a great many samples. First, a broken sample, and then a bale. I negotiated with defendant for the sale of the blankets. I gave him the two first samples I received. Afterwards, I gave him other samples from a bale, lying in the Auction Room. He called, himself, at the Auction Room, and saw the sample bale. On one occasion, Mr. Pitman was present when the sample was drawn, and took it away, or sent it away. I do not know whether there was a number attached to the bale; I should say there was. That bale came from Walsh, Hall & Co.; it was the only one I had. Mr. Pitman had some 5 or 6 samples from that bale at different times. On every occasion on which he took samples from the bale he took two. I noticed the samples varied in colour. I remember suggesting to Mr. Pitman that the outside blankets only might differ in colour. I do not know whether the blankets of that bale varied in weight. Before the bargain was closed, I told Mr. Pitman that the blankets varied in weight, and that that was the reason they were sold by the piece and not by the pound. We supposed them to average 4 lbs., and that was the reason we sold them by the piece. On one occasion these blankets were put up to auction in my room. I think the bale in question was there at the time. I cannot say whether anyone bid for them on behalf of Mr. Pitman; I heard afterwards that some one did. After I had returned the bale to Walsh, Hall & Co., Mr. Pitman applied to us for samples. (Letter produced, from Mr. Pitman, asking for another muster of the blankets, and stating that he would endeavour to make another offer). I procured other samples, on 10th January, from Messrs. Walsh, Hall & Co., and sent them to Mr. Pitman. To my knowledge, no other samples were supplied before the contract was entered into. The next we heard of the matter was an offer for the blankets. (Letter produced, from Mr. Pitman, dated 16th Feby., offering to take the 13,000 blankets @ 17½ cents per lb., if he could take delivery within 30 days.) I then wrote Mr. Pitman (letter produced) on 17th Feby., saying that there were 13,000 blankets (not pairs), which they would hold for 30 days at his order, at 70 cents each. I was acting as agent for Walsh, Hall & Co. I received the offer of 17½ cents per lb. as agent for Walsh, Hall & Co. I submitted the proposition to Mr. Pitman of 17th Feby. to the latter firm before writing Mr. Pitman. I submitted Mr. Pitman's proposition of 16th February to them first; I think I saw Mr. Thos. Walsh. The conversation was to the effect that they were a mixed lot of blankets; couldn't sell by the pound; better sell by the piece, to avoid trouble. It was after that that I wrote Mr. Pitman the letter of the 17th. I received the reply, now produced, accepting my terms. In my letter of 17th, "as per muster" referred to the whole of the musters of the samples he had been receiving from time to time. This was one lot of blankets which had been put into my hands from time to time. The samples given by me from time to time were from the same lot of blankets I was to sell all along. The custom in selling blankets in Yokohama is by the lb. The

sale of a mixed lot would be entirely as directed by the owners. A good lot of blankets would not be sold by the piece. It was because these were a mixed lot of different weights that they were sold by the piece.

Cross-examined by Mr. Dickins:—To prevent any question arising, I think I should prefer to sell a mixed lot by the piece, were they my own goods. I would hardly think it necessary to inform the purchaser that they were mixed. I think the last offer was 17½ cents per lb. The average weight at that time was about 4 lbs. Four times 17½ cents would be 70 cents. I did not base the price, therefore, at 70 cents; Mr. Walsh fixed the price. The word "muster" in my letter does not refer to one muster, but to all the musters made for him during the twelve months. I have no recollection of having offered Mr. Pitman 10,000; I may have done so; they would probably be a part of 13,000. I had other lots of blankets on hand during 1873; one other lot, belonging to Messrs. Hudson, Malcolm & Co. These were very like Messrs. Walsh, Hall & Co.'s. I had none from Japanese. Until Mr. Pitman's bargain was closed, I had no other lots except those mentioned. It is possible, but very improbable, that I had other lots. I don't remember receiving any instructions in writing from Messrs. Walsh, Hall & Co. to sell the blankets. Such would have emanated from their Salesman. I sent about 20 (I will swear to 12) samples to Mr. Pitman. I don't remember how the samples went to Mr. Pitman. All the sample blankets were not taken from the bale. Four of them were received from Walsh, Hall & Co. I never weighed any of the blankets. I know the blankets were mixed; they were shewn to me by Mr. Walsh on the 17th Feby., the day before the sale was closed. I did not know that before. If Walsh, Hall & Co. were to give me a parcel of goods to sell (or any one else) that were not according to muster, I should refuse to sell them except at auction. I sold the blankets "as per muster" of the whole. I never saw but one bale opened. A bale contains about 50 blankets. I do not know whether the samples sent to me from Walsh, Hall & Co. were taken out of one bale or more. I do not know how many different kinds of blankets there are in this lot. The muster bale sent to our office, I suppose, represented the whole of the blankets. In offering to sell them, I should have represented the muster bale as being a fair sample of the whole lot of blankets. As a Public Broker I should be bound to state that the goods were a mixed lot, in offering them for sale; as an Auctioneer I should not be bound. Perhaps, during April, 1873, I sent Mr. Pitman musters of the bales. I would not like to say that musters were sent to Mr. Pitman between June and December, 1873. I have no recollection of any samples having been sent between May, 1873, and January, 1874; they may have been sent. Two samples were sent Mr. Pitman about the 10th January. I do not remember Mr. Pitman's calling my attention to one of them having a mark on it. He pointed out to me that one of them was of a different colour. I may have said that it was probably on account of its being an outside blanket. I do not remember Mr. Mout and Mr. Pitman coming to my place together. Mr. Pitman made three separate offers for the blankets. The first two blankets sent me were said to represent the whole lot.

Re-examined by Mr. Ness:—The goods were sold by sample. I should expect the buyer to judge by the sample. I have no re-

collection of having offered Mr. Pitman just 10,000; I may have done so. I was acting as agent for Messrs. Walsh, Hall & Co. I gave Mr. Pitman a fair muster of the goods. Nothing was ever said or done by me to lead Mr. Pitman to suppose that the goods were other than per muster. I never said to him, or led him to believe, that the goods were not mixed. I did not know the quality of the goods myself. The day the sale was concluded (17th Feby.) I first knew the goods were mixed; Mr. Walsh told me so. I told Mr. Pitman they varied in weight, before the bargain was closed. On one occasion I know Mr. Pitman was present in my place, as I opened the bale and gave him the sample.

Court adjourned.

Court resumed at half-past one.

Charles McGerrow, sworn:—I am assistant and nephew of last witness, Mr. Fletcher. I recollect our firm being instructed to dispose of some blankets on behalf of Messrs. Walsh, Hall & Co; I believe in Jan., 1873. A bale of samples was sent in. Other samples were sent before that; I do not know how many. The blankets were first advertised for sale by public auction. They were put up to auction. I cannot say whether any person bid for Mr. Pitman. After the auction, we held communication with Mr. Pitman relative to the blankets. Samples were, after that, given to Mr. Pitman. For seven or eight weeks he took samples every week; for 2 or 3 months after February. As a general thing he came round to us, and requested us to send them round. He had seen the bale; it was in Fletcher & Co.'s auction room. He was at times beside the bale, when he asked samples from it to be sent. He has had something under 20 samples. The blankets in that bale were of different colours and weight. Mr. Pitman was informed of this, two or three times last year, of the samples he got out of the bale. Capt. Fletcher informed him of this; I remember his doing so once. He informed him of the difference in colour and weight of the blankets which had been drawn from the bale. That bale was returned, at the end of the year, to Messrs. Walsh, Hall & Co., minus the blankets which had been given to Mr. Pitman. After that, on 10th January, another application was made, by letter, for samples. I went to Mr. Mout (Walsh, Hall & Co.) and received 2 samples from him. As he was handing me the top sample, he said I had better take the two, to point out the difference to Mr. Pitman. I took the two to Mr. Pitman's office, at No. 5. I saw Mr. Pitman, handed the blankets to him, and told him they were two different samples. I did not explain any further; I distinctly recollect having told him that. This took place on 10th January. Mr. Pitman got no other samples after that date, so far as I know, up to the date of the contract. The two samples I handed him I considered to be other samples of the same sort as I handed him before. There was only one lot placed in our hands for sale by Messrs. Walsh, Hall & Co. The samples we supplied from time to time were from one lot. I saw Mr. Pitman about three weeks after the contract was made. He spoke of the blankets; that he had received a blanket back from a man in Yedo, on account of its being rotten. He gave no other reason for its being returned. I saw him, I think, two or three days after that; about two days before the time of delivery. He pointed out to me, in his office, the blanket he referred to as being rotten, received from the Japanese in Yedo. I recognised it as being something like one which

we had sent from our office. Once after that, I saw Mr. Pitman on the subject; in his own office. I went with Mr. Pitman to see Mr. Howell. Mr. Howell asked me if I had pointed out to Mr. Pitman about the blankets being different, when I gave him the samples; I told him I had. Mr. Howell asked Mr. Pitman if he didn't think that would draw his attention to their being a mixed lot. (Four sample blankets produced.) There were more than 4 samples given; about 20 were given.

Mr. Dickins said those exhibited were all they received, excepting one; which had been sent to Tientsin.

Mr. Ness wished that statement to be taken down; about 20 samples had been given.

— I know of nothing that was done to mislead Mr. Pitman, or to lead him to believe that the blankets were other than they really were.

Cross-examined by Mr. Dickins:—I know Messrs. Walsh, Hall & Co. gave Messrs. Fletcher & Co. instructions to dispose of the blankets, by their giving me samples and messages about them to Capt. Fletcher. They were to be sold by the pound. The instructions then (January, 1873) were to dispose of them by auction. There were probably 2 or 3 samples given us at first. I think there was about 100 blankets in the bale sent us. I remember the auction sale of the blankets; no quantity was mentioned. Nothing was said then about their being mixed blankets; nor at the auction. At the time of the auction the bale was opened; I believe Capt. Fletcher opened it. When they were being sold they were handed round. Three or four were handed round. I cannot say whether they were of different weights and qualities. I don't remember weighing any of the blankets sent as samples. Generally, Mr. Pitman came and asked for the samples, and I sent a boy with them. I sent no chit with them. I have not sent samples to any one in the first half of 1873, except to Mr. Pitman. Any such that were taken by others were returned. We had one other lot of blankets in 1873, Messrs. Hudson, Malcolm & Co.'s. We had only one lot of Walsh, Hall & Co.'s. The number at that time I was not told; it was somewhere between 10 and 15,000. I was told there was only one lot. Samples of Hudson, Malcolm & Co.'s came to us. I handed them to Mr. Pitman, as being the same. I cannot remember in what month I handed Hudson, Malcolm & Co.'s sample to Mr. Pitman. I did not tell him who they were from. The bale of samples from Walsh, Hall & Co. had not been opened when sent to us. Three weeks after the contract was signed we received one more sample; this was in March. I received it from Mr. Mouat. Excepting the first two and last three, all the remaining samples for Mr. Pitman were taken out of the one bale. Mr. Pitman (on April 10) asked me for a blanket, to be sent to Mr. Davidson at No. 23. I sent it. I sent it as one of the blankets he had bought. Mr. Pitman was informed last year, by Capt. Fletcher in his office, of the difference in colour and weight. I am sure it was in 1873; I cannot remember the month. Capt. Fletcher pointed out to me the colours of the blankets which had been taken out of the bale. I heard Capt. Fletcher pointing out the difference in colour, and that they probably varied an ounce or two, or a few ounces; I don't remember which. I weighed one blanket, to see the difference between it and another I had, not out of that bale; the difference was very slight. The other blanket belonged to Hudson, Malcolm & Co. On the 10th January, when Mr.

Mouat told me to take the two samples, he told me they were of different qualities. When I took them to Mr. Pitman I told him they were two different blankets. I knew that they were of different qualities because Mr. Mouat told me so. I do not remember telling Mr. Pitman that they were a "mixed lot."

Re-examined by Mr. Ness:—When the blankets were first put into our hands, the instructions were to sell them by weight.

W. G. Howell, sworn:—I first heard from Mr. Pitman, about these blankets, some two or three months ago. On one occasion, I went to Walsh, Hall & Co., with one of the blankets spoken of; on the same day as Mr. Pitman spoke to me on the subject. I think the time had not fallen due for taking delivery. Mr. Pitman said he feared that a parcel of blankets he had bought were unsound; but he said it was a mistake of his own, for which he alone must be responsible, and the burden of which he must bear. The mistake was, that he bought, as sound, a parcel of blankets which proved to be rotten. He brought in a rotten sample, as a sample of the parcel. He certainly understood at that time that that sample represented the bulk, and hence he inferred he had fallen into a great error. When I went to Walsh, Hall & Co., I saw Mr. Thos. Walsh, and afterwards Mr. John Walsh. I spoke to Mr. Thos. Walsh, and he said he had no idea that the blankets were in such a condition, and that he had no idea of asking Mr. Pitman to take a parcel of rotten goods. I took a rotten blanket with me, as a blanket which Mr. Pitman had brought me; I presumed, of the bulk he had bought. I did not know whether he had taken delivery. Mr. John Walsh said it was quite true that that was a rotten blanket, but he had no reason to suppose they were all rotten. He brought out other samples, which were not rotten. On seeing that, I went back to Mr. Pitman and told him that I had looked at other musters of the parcel, and that they did not seem to be unsound at all; that the bulk was not fairly represented by the sample. I saw Mr. Mouat on a subsequent occasion, and had conversations on the subject of the blankets; I cannot remember what passed. On one occasion Mr. Pitman brought Mr. McGerrow to me. I asked him if he had pointed out to him the difference in the blankets, but it had only reference to the difference in colour; which was accounted for by the sample having been on the top of the bale. I remember nothing having been said about a difference of weight.

Cross-examined by Mr. Dickins:—Mr. Pitman brought in the sample to show what he believed represented the whole bulk he had bought; not as a sample on which he had bought. He spoke of other samples, which he said were in Yedo. To the best of my belief the sample now shewn me is the one referred to as rotten. He afterwards brought me the samples from Yedo; I suggested his pinning a card to them. I cannot remember his calling my attention particularly to them.

John Mouat, sworn:—I have charge of the import department of Walsh, Hall & Co.'s business. I have not seen the whole of the bulk of blankets referred to. I have seen the musters similar to those exhibited, received with the invoice. I have opened the bales, some 50 or 60, and examined them. They are called Army blankets. First of all, I sent two of the 6 samples referred to in the invoice, to Messrs. Fletcher & Co. They did not come out of any bale. The 6 represented the whole lot. I handed them to Fletcher & Co. about

the end of 1872. These samples did not come back to No. 2. I afterwards sent a bale. I afterwards gave them two other samples, about the beginning of January last. I have inspected the bulk. I have opened out 12 or 13 bales, and I have looked into 40 or 50. I have inspected the bale sent to Messrs. Fletcher & Co. The two samples sent in 1872, the bale in 1873, and the two samples in 1874, fairly represent the whole bulk. The two samples given out in January last were one of the best and one of the worst. They were handed to Mr. McGerrow by me. If anything, I think the bulk was better than the bale sent to Fletcher & Co. In my opinion, the whole of the samples fairly represented the bulk. The last lot and the bale fairly represented the bulk. I recollect Mr. Howell coming to our office a day or two before the contract expired for taking delivery. He said Mr. Pitman had asked him to come down. He brought with him a blanket which he said was rotten. He said it was a sample of what Mr. Pitman had bought, and being rotten he could not take delivery. Mr. Thos. Walsh said they had no idea of selling rotten blankets; that that was the first he had heard of their being rotten; and indeed he didn't believe they were rotten. I said I believed that was the worse blanket of the lot; the worst I had seen. He said Mr. Pitman had sold them to a Japanese, who refused to take delivery on account of its being rotten; for rottenness only. The sample was one of the 6 sent as a sample of the lot; one of the two I sent as representing one of the best and one of the worst. I gave them to Mr. McGerrow, telling him to point out to Mr. Pitman that they differed in colour, quality, and weight. Mr. Pitman came in, a few days afterwards, and brought another blanket, a very good sample, saying that was the sample he bought from. It must have been one of the two delivered on the 10th January, before the bale was sent. Mr. Pitman said he did not know they were a mixed lot. That Fletcher had not told him they were a mixed lot; that he had told him they varied in colour, and that he had got about 20 samples. Nothing was said about weight. He said the Japanese refused to take delivery on account of their being rotten. He said to me that the bulk did not correspond with sample. He never applied to see the bulk. We wrote Mr. Pitman, telling him the contract had expired, sending him a debit note, and asking him to take delivery. (Letter read, to Pitman & Co., dated March 21st.) Messrs. Pitman & Co. did not take delivery. (Letter from Pitman & Co. to Walsh, Hall & Co., dated March 24th, refusing to take delivery of the lot, described as mixed.) We have had no buyers since March 21st, the date of expiry of contract. There were buyers in February, when the blankets were sold. Blankets of that kind were then worth 70 to 80 cents each. On the 21st March they would be unsaleable; there was no market then. Had they been pushed into the market then, they would not have fetched more than 10 or 25 cents. At the time we sold them there was an enquiry for the Korean Expedition; that completely died out. We had one offer since, from a dealer. He offered 25 cents each. They have been stored in our Godowns since the day they should have been taken delivery of. Document exhibited is a note of charges and Godown rent. I have asked Mr. Reynvaan and Mr. Burchard to examine the goods, with the view of giving evidence here. I have shewn them the lot which was put into Messrs. Fletcher & Co.'s hands for sale, and also the bale put into their hands.

Cross-examined by Mr. Dickins:—I gave no notice to Mr. Pitman that I was about to ask those gentlemen to examine the blankets. I will swear that Mr. Pitman never, on any occasion, asked to see the blankets. I remember going to Mr. Fletcher's with Mr. Pitman. He said he didn't remember whether he had told Mr. Fletcher they were a mixed lot, but that he had told him the colours were different, and that Messrs. Thomas and John Walsh had told him they were mixed. I examined perhaps 100 out of the 13,000 blankets. Not one was rotten; not in the least. I am perfectly satisfied that the remainder are sound. I opened 11 bales out of the 150. I examined each bale, and took out one or two from the top and bottom, and one or two from the middle.

To Court:—If I were buying blankets myself I should be perfectly satisfied with such an examination.

— I weighed one bale; each blanket in it separately, 74 blankets. They were weighed by our godown-keeper. The average was a little over  $3\frac{1}{2}$  lb. That was the bale (or the remainder of it) sent to Fletcher & Co. (Invoice handed in, and letter of advice, advising the forwarding, May 7th, 1872, per French mail, of a sample parcel of 6 blankets, "which were to be considered a fair sample of the whole shipment.") I opened the 11 bales referred to, this morning, for the purpose of showing them to Messrs. Reynvaan & Burchard. We have had numerous offers for the blankets since receiving them; but we always thought to do better. I cannot remember whether we tried to sell them in China. From what I have seen of the musters, I think they fairly represent the bulk. I believe the blanket which Mr. Howell brought to me as rotten was one of the six sent out as samples from London. I don't think we sent Mr. Pitman a rotten blanket. I cannot swear that the blanket now produced, called by Howell "rotten," is one of those I sent him. There are others like them in Yokohama. Mr. Howell led me to believe that the blanket he brought was the muster of those Mr. Pitman bought from. I told Mr. Fletcher all along that they were a mixed lot, and that he was to sell them as a mixed lot. When I gave him the musters, I told him they were a mixed lot. I gave him to understand that he was to sell them as a mixed lot, as to colours, weights, &c. He was to tell buyers that they were a mixed lot. I gave no instructions in writing. I have had about 18 years experience in business. It is not the custom to hide the fact that goods are mixed. Customers may satisfy themselves to that effect, from the musters handed them for inspection. The six samples sent all differed slightly as to colour, weight, &c. In a lot of 15,000, these blankets are always mixed. There is always a market for blankets here. Blankets like those in question are generally bought, by or for, Government.

Re-examined by Mr. Ness:—I think the bulk is better than the 6 samples. Of the 6 Mr. Pitman got, he had of the best and of the worst. I don't recognise the torn blanket as one of the 6 samples. In examining the 11 bales this morning, I picked them out promiscuously; Nos. 1, 15, 30, 45, and so on. Had there been anything rotten about the samples when I gave them out I should have noticed it. I should certainly know from the four samples produced that they were a mixed lot. I would not need to be told that.

J. M. Reynvaan, sworn:—I am a partner in the firm of Van Oordt & Co. I have done much business in blankets. I have had

about 7 years experience in Japan. I examined some blankets at Messrs. Walsh, Hall & Co.'s one or two days ago, and some this morning. I examined every 15th bale; out of which some had been taken. The two sample blankets now shown to me fairly recognise the bulk I examined this morning. I recognise that the two are mixed. You cannot buy that class of blankets unless they are mixed. Mr. Mouat pointed out to me a bale (No. 22) which had been in the hands of Messrs. Fletcher; it fairly represented the whole. I think the bulk of the blankets are better than that bale. You cannot manufacture such blankets alike. They are not woollen, but made of shoddy. You cannot make them of uniform weight; it is impossible. That is the reason why blankets of such a low class are sold in Yokohama by the piece, and not by the lb. I do not consider the blankets rotten; the bales were all in good condition. They are better than the usual class of such goods. In purchasing such goods I should first examine the outside of the bales, and then open 15 or 20. I would not buy otherwise. I have examined a number of bales. If I were supplied with two blankets, one of the best and one of the worst, I should consider it fair; but for my own satisfaction I would open the bales before buying. Enquiries were made for blankets in consequence of the Korean expedition; but in March there was no demand. I would not buy them at all now.

Cross-examined by Mr. Dickins:—I had an enquiry for blankets in February, but I had none to sell. There is a difference in texture and a difference in colour in the two samples exhibited; the dark is the best. I would buy 13,000 blankets if two samples were given to me as the best and the worst; but I would take the precaution of opening several bales before closing.

Martin Burchard, sworn:—I am one of the firm of Messrs. Simon, Evers & Co. I have had about a dozen years experience in blankets; in Germany, England, and Japan. Such blankets as those exhibited cannot be made regular in weight or colour. That is what is called a mixed lot. These two blankets differ in colour, and in appearance on account of the colour; I cannot speak as to weight. This morning, I was shewn by Mr. Mouat 10 or 11 bales; every 15 out of 150 bales. These two blankets would fairly represent the bulk. I examined a bale (No. 22) which I was told by Mr. Mouat had been sent to Messrs. Fletcher's. I consider the bulk superior to those in that bale. I consider "one of the best and one of the worst" would be a fair test in buying a lot. In buying I should open a few bales. Good blankets are sold by the lb; mixed blankets by the piece. The Korean Expedition occasioned several enquiries for such blankets; having none I could not quote. At the end of March there was no market. They might have been worth \$1 during the Expedition, and not 15 cents after. If they were forced on the market now they would not fetch 15 cents.

Cross-examined by Mr. Dickins:—I heard of one lot having been sold in February, but I did not hear the price. The price is uncertain; if the Government wanted to buy to-morrow the price would go up. The difference in these samples is only in the colour. Such blankets are always sold by the piece; never by the lb. To a certain extent the blanket exhibited to me as rotten is deteriorated. Blankets made of mungo or shoddy, if they get damp, are liable to get tender, as the shoddy is short in texture. The blankets I saw this morning appeared to have come

from the same manufacturer. Eight per cent. is allowed amongst manufacturers as a difference in weight invoiced.

Re-examined by Mr. Ness:—It would not be necessary to tell a buyer that the weights were different; he could weigh them himself. I could see that myself, without being told.

Adjourned until 10 o'clock, Monday, 6th instant.

Monday, 6th July, 1874.

Thomas Walsh, sworn:—I am a partner in the firm of Walsh, Hall & Co. I was not in Yokohama when Messrs. Fletcher & Co. were asked to make sale of the blankets in question. I first heard of the matter when Mr. Fletcher came to Mr. Mouat and said Mr. Pitman wanted to buy the blankets. I recollect Mr. Fletcher bringing an offer directed to me or Mr. Mouat from Mr. Pitman. The offer was for  $17\frac{1}{2}$  cents per lb.; I said they had better be sold by the piece, as they were mixed in weight. They were so sold. The next I recollect of the matter is, that Mr. Howell came in, one day; about the time delivery should have been made. He brought with him a sample blanket, which he said Mr. Pitman had received from us, and proceeded to shew that it was tender. I told him we did not intend to sell rotten blankets, and that if it was rotten it must have become so after delivery had been taken. He was referred to Mr. Mouat, to know if the other samples were rotten. Mr. Mouat said they were not rotten, and that he did not believe that sample was rotten. Mr. Howell looked at those samples and saw they were not rotten, and he went back and reported to Mr. Pitman. I have since seen the bulk. I have not seen any sample which might be called rotten or even tender. They looked better than I expected. I should say the bulk was rather better than the samples. I was not present in Yokohama when the samples were received. I understood they were sent by Mr. Brent, our special agent in London. We took other samples from a bale. I have examined a bale, No. 22, which I was told was the one received from Mr. Fletcher. The bulk is rather better than the blankets in No. 22. I consider it a poor bale. In examining a large lot, I should examine a bale here and there. If I were buying blankets I should probably have examined them less carefully. Mr. Pitman has not, that I am aware of, applied to inspect the bulk; certainly not before he refused to take delivery. There has been no demand for such blankets, that I am aware of, since the end of March. I referred to Mr. Mouat, and he informed me that the best offer he had had was 25 cents.

Cross-examined by Mr. Dickins:—There are now three partners in my firm, including myself. It is a mistake inserting the name of Mr. Robert G. Walsh, in the petition.

Mr. Ness applied for an amendment in the petition, in that respect.

Mr. Dickins objected.

His Honour said the Court had ample powers of amendment, and he saw no objection to allowing the amendment, and also with respect to a further error which was pointed out.

— Mr. Mouat is not a partner in our firm. He is a clerk, under special arrangement. He receives a minimum salary, and if the profits exceed that minimum he receives a portion of those profits. We have incurred expense in the shape of rent and

insurance on the goods stored in question. We are out of pocket, because they take up the room of other goods which would otherwise pay rent. We have had to pay rent for such goods so shut out of our Godowns, and put into store-ship and other Godowns. We would be glad to get rid of the blankets now; we had tried to get rid of them to Mr. Pitman. I would not sacrifice them. We have held them, hoping to get a better price. By holding them it is yet possible that I might get a better price. If an offer of 70 cents were made me I should probably take it. If the market price were less than I were inclined to take I should probably hold. I have heard of such blankets being sold here at as much as a dollar each. If some man were to come along and offer us a dollar a blanket, we should of course make a profit through Mr. Pitman's refusing to take delivery; we have yet to find that man. (Storage and Godown books produced, to shew that quantities of goods had been stored elsewhere than in the Godown containing the blankets.) The reason we sold the blankets to Mr. Pitman was to get rid of them; and the room they occupied was part of the reason. The blankets occupied space which if they had not occupied would have been otherwise filled. I was in London when these goods were purchased by Mr. Brent; who reported to me what he was doing. If the invoice says there were 15,000 blankets, that would be correct. I do not know whether the 15,000 were a remnant of 20,000. I do not remember ever to have heard it until now. I do not know, and never heard before, that 5,000 of the best were selected by another person, out of the 20,000, and the balance bought by me. The original in once, from Messrs. John Batt & Co., I believe is not in Yokohama, to my knowledge. I cannot say whether there are more than two letters from Mr. Brent relating to the blankets. There were 6 samples of blankets, representing the different qualities. There were slight differences. They were practically of the same quality, considering the class of the goods. There was the same small variety in the 6 samples as there was in the bulk; a slight difference of weight, colour, and texture; only such as are ordinarily found in goods of the nature of army blankets. I have dealt in blankets. I do not know the ordinary allowance for waste. If I were selling 15,000 pieces of Grey Shirting, of different weights, it would depend upon the extent of variation as to whether I pointed it out to the purchaser. The understood variation is 4 or 5 ounces. Every buyer and seller knows there is such a variation. The blankets were denominated 4lb blankets; we bought them as such. They were sold by the piece and not by the weight; to prevent any dispute. I gave no instructions to sell the blankets at auction by the lb.; I was not here. I gave Mr. Fletcher instructions to sell by the piece when Mr. Pitman's offer was brought. I told him to sell them at 70 cents each, on the basis of their being 4lb blankets. I do not remember Mr. Brent advising us not to have them sorted. There was very little difference in the weight of the samples. I do not think they would differ as much as 8 ounces. If I found there was such a difference I should investigate it. I should consider it a very exceptional case. I do not remember any offers having been made in March last, after the time the blankets should have been taken delivery of. It was probably reported to me by Mr. Mount, my import manager; the man I should naturally ask. It is not a custom in my house for the compradore

to bring me every morning a list of transactions of the previous day. Since 20th March, I have heard of no settlements of blankets. I don't know how long Mr. Burchard has been here. I first met him some months ago. I have done business with Messrs. Simon, Evers & Co. for a few years. It is the custom in Yokohama to sell ordinary blankets by the lb, and blankets of the kind in question by the piece. I cannot remember hearing of any sale, other than this one, by the piece. I have been connected for 10 or 12 years with my firm. Mr. Pitman was invited to come and take delivery of the blankets; he never came. I do not know that any person in my employ ever had the opportunity of shewing the bulk of the blankets to Mr. Pitman. At any time before this action was brought Mr. Pitman was at perfect liberty to examine the bulk. I have never heard that Mr. Pitman ever requested to examine the bulk. If I were purchasing similar goods I should be likely to compare the samples with the bulk.

Re-examined by Mr. Ness:—My firm sent Mr. Pitman a letter requesting him to take delivery the day delivery was due. I know the firm of Simon, Evers & Co., but not to a greater extent than any other firm. Goods in Godowns pay storage, otherwise there were be no rent to be got out of it. I am willing for Mr. Pitman to take delivery of the blankets on paying the price and charges; either that or damages. This action is taken to enforce the contract and compel Mr. Pitman to take delivery, if possible.

Court adjourned.

Court resumed at half-past one o'clock.

Mr. Geisenheimer, sworn:—I am a partner in the house of Hecht, Lilienthal & Co. I have had experience in the blanket market. I bought a large quantity of army blankets (grey) in July, 1872, in Bradford. They are not always of one weight and colour. I ordered at Bradford rather a large quantity of gray army blankets; the price was fixed by the pair of blankets, not by the lb. At the time I made the contract I wished it to be put down that they should be all of the same colour, and exempt from burrs. This was refused me by the manufacturer, who told me that he could not make any contract, at any price, under such conditions; nor would he agree to make them of any exact weight; saying they would vary from 5 to 10 per cent. over or under what was demanded. I applied to several other manufacturers, but could not get what I demanded, and eventually I had to submit to those conditions. Army blankets always vary in colour and weight. Therefore, I think, they are sold by the piece, and not by the pair. A 6 lb. blanket I would expect to vary to the extent of some ounces, over or under.

Cross-examined by Mr. Dickens:—The blankets referred to were of fine (good) quality. I paid 8/4 per pair; not each. I was told that there was a variation of 5 to 8 or 10 per cent; probably 5 to 8 per cent. The lot in question contained 60,000 blankets. They varied very much in colour. I insisted on the gray colour, but they could not give it me. Anyone who has ever bought blankets must know that they vary much in colour. I sold the lot referred to to Japanese; they made no objection to the colour. I did not weigh them. I sold them by the pair. I decline to give the name of the manufacturer from whom I bought the blankets.

Mr. Dickens said, as the witness objected to answer his question, he would discontinue his cross-examination, and must ask that his evidence be altogether withdrawn.

At the request of Plaintiffs Counsel, witness eventually gave the name of the manufacturer.

—I had other transactions in gray blankets; two years ago. They were French blankets. I sold them by the piece. They were not uniform in colour. They were invoiced at so much each. They were not manufactured to our order. I had no particular advice as to whether they were "mixed." I do not know what variation there was as to weight. I have never seen sales of such blankets made by weight. I have only sold three or four lots in Yokohama.

Re-examined by Mr. Ness:—The Bradford blankets I spoke of were of fine quality. They were mixed; inferior blankets would be likely to be more so.

To Court:—I have heard the term "mixed" used for the first time. At an auction I should understand it to mean, different in size, quality, colour, weight, &c. It has no accepted meaning in the trade.

Mr. John G. Walsh, sworn:—I am a partner in the firm of Walsh, Hall & Co. I recollect, in the beginning of 1873, having a quantity of blankets for sale, and asking Messrs. Fletcher & Co. to obtain a buyer for them. I recollect Mr. Fletcher bringing an offer for them from Mr. Pitman. I remember telling Mr. Fletcher the blankets must be sold by the piece, as they were not even in weight. They were sold by the piece. I do not think Mr. Pitman understood anything else than that he was buying them by the piece. Nothing was done in the sale to conceal anything from Mr. Pitman, or to misrepresent their quality. Mr. Howell called, about the time the contract expired for delivery, as a friend of Mr. Pitman. On his second or third visit (certainly not the first) he produced a sample. He then said the blankets were rotten, that it was hard on Mr. Pitman, and that he had brought either a sample or the sample, of the lot he had bought. Mr. Mount and I examined that sample and another and found, although a little tender, they were perfectly sound and good. We examined other samples in our sample room, and found them good. I told him the bulk seemed to be much better than the sample. He didn't discuss the question and went away. I have since examined the bulk, and found them good. I examined the bulk and found the contents to be much better than the sample brought by Mr. Howell. I examined the sample bale brought from Messrs. Fletcher & Co.'s; I think the contents of that bale represented the bulk well enough. I do not remember the 6 samples which first came out. Since the end of March there has been almost no market. It is nearly impossible to state the value of them if they were forced on the market; it might be 10 cents; perhaps 30 or 40. There is now no demand. Mr. Pitman has never applied to inspect the bulk.

Cross-examined by Mr. Dickens:—I can't say I have examined 1% of the blankets. I don't remember whether the blankets were first offered by the lb. at auction. I have before sold blankets both by the lb. and by the piece. I think there were 15,000 blankets; the invoice correctly states the number. The other 2,000 I sold in Yokohama; I think by the piece. I did not know that the contents of the bale sent to Messrs. Fletcher & Co. were weighed. I was in Yokohama when the letter from Mr. Brent relative to the blankets arrived. I may have read them. I do not know where the blankets were manufactured. If we had a good offer to sell the blankets to-day, we would be glad to sell them. I don't think Mr. Brent advised us to have the blankets sorted. I think the 6 samples fairly represented the

bulk. A "mixed lot" might refer to differences of weights, colours, qualities &c. Shirts are made by machinery, and are always the same. I don't remember telling Mr. Fletcher, on the 17th February, that they were a mixed lot of blankets. I may have told him prior to that; I don't remember doing so. I saw all the samples.

Re-examined by Mr. Ness:—When Fletcher brought Mr. Pitman's offer of 17½ cents per lb., the conversation was with my brother. Capt. Fletcher knew perfectly well they were mixed. That is the reason they were sold by the piece.

Mr. Ness stated that that was the case for plaintiffs; he would reserve his right of calling rebutting evidence until after hearing defendant's evidence.

Mr. Dickins said: before calling his evidence, he would like to point out to Court that the action had not been brought by plaintiffs in proper form: it should have been for goods bargained and sold. According to their own allegations, the goods were now the property of his client, and the action, therefore, should have been for the price, and such damages as they could prove themselves entitled to. They were really acting in an inequitable manner, and, under other circumstances, the defence of his side would have been that the goods were virtually worth less than the price contracted for. Where there was a sale of specific goods, the law was, that the goods must pass the moment the contract was made. (Lord Tenterden's decision, *L. R.*, page 246.) *Law Journal, Common Pleas*, vol. 16 p. 181; in the cases of *Peck vs. Bley*, and *Pursons vs. Saxon*, contracts were entered into for certain specific goods, to be delivered at a future date. The decision of Judge Williams, supported by other judges, was, that the goods passed with the completion of the contract. Those cases shewed that if the allegations of the plaintiffs were true, the property passed to his client the moment the contract was signed. Another case in point was cited in the 2nd vol. of *Law Reports, C. P.*, p. 667: Defendant, through a broker, bought cotton, from samples in the broker's possession; in case it was not according to sample, fair allowance was to be made. In this case, it was also decided by all the judges that the property passed the moment the contract was entered into. In another case quoted, all the judges were of a similar opinion. The inference which arose, therefore, was, that if the allegations of the plaintiffs were true, the goods were the property of his client, and that their only action lay in his failure to pay the price.

His Honour said points of technicality might arise which might differ; he should, however, judge the case on its merits.

Mr. Dickins said, if His Honour found for plaintiffs it would be a hardship to his client, who would not even have possession of the goods. The evidence he should produce would corroborate what the plaintiffs had already proved, viz: the extraordinary nature of the statements made by his learned friend, that "the best and the worst" fairly represented the bulk of the blankets. He should then prove that his client never had more than five samples; that they were sent at long intervals of time; that between the first and second of nearly a year. That, when the second was sent, on the 10th January current, there was no bale of samples at Messrs. Fletcher and Co.'s; that it was a double one his client had asked for. He would also shew that it was not considered that there was any difference in the blankets, except that

of colour, which, it was explained to his client by McGerrow, whose evidence had been heard, was only occasioned by the sample exhibited having been taken from the top of the bale. And, further, when it was pointed out to his client the risk he had run in buying such a mixed lot, he got the five samples together, which he had received, and found they were a mixed lot. That he actually went to plaintiffs and offered to take delivery of the 13,000 blankets "as per muster," and that he was afterwards told that he was not at liberty to inspect the bulk. He would also shew, by the evidence of experts, that such goods were not sold except by weight; that they could be manufactured and bought of any colour and any weight; and that sales of such blankets had been effected in Europe and elsewhere of uniform colour, texture, and weight.

John Pitman, sworn:—I carry on business under the name of Pitman & Co. I have been in business five years, chiefly engaged in business connected with military stores and accoutrements. I have had five samples in all. I received the first in March, 1873. I had the next at the end of March, 1873; other samples were sent at different times. The first sample was sent to Messrs. Sitwell, Schoyer & Co. The second sample I forwarded to Teintsin, as a muster of 10,000 blankets. I was told this sample represented 10,000 4-lb. blankets. I received the next sample in the middle of January, 1874. Capt. Fletcher called on me and asked if I could try and sell 13,000 blankets. I told him I would do so if he would send me two musters, as I would try two different parties. Shortly afterwards, a young man in Capt. Fletcher's office brought two musters to my office; on the following day Capt. Fletcher called. I called his attention to the difference in shade of the blankets. He said it was only because they were from the outside of the bale, as might be seen by the mark of the band. (The two blankets were produced.) These are the two blankets sent me on 10th January. Capt. Fletcher said the quality of all was alike. I had no communication with Captain Fletcher since the early part of last year. My office has since been burnt down, and I have been to China. No blankets were sent to me between March 1873, and January, 1874. (Chit-book produced, to shew that no communication had been had with Fletcher & Co.) When I required samples, I sent a request for the second sample. The first sample was sent to Messrs. Sitwell, Schoyer & Co., and afterwards, at my request, to Messrs. Favre, Brandt & Co. I never sent for samples weekly. Captain Fletcher never said anything to me about the identity of the blankets. After receiving samples in January, 1873, I sent them to Yedo, and received an offer from a Government officer, who agreed to buy them. I then communicated with Captain Fletcher that I was willing to take these blankets. He then told me, for the first time, that they belonged to Walsh, Hall & Co; this was on 16th February. He asked me to put my offer in writing, of 17½ cents per lb. Capt. Fletcher on following day said he could guarantee the blankets to be 4 lbs. each; and that if I would offer 70 cents each he would accept, and close the offer; I did this. The next communication I had with Capt. Fletcher was in the middle of March, when I called and asked him to send a muster to Messrs. Davidson & Co.'s office. The clerk of Capt. Fletcher brought the muster. I asked him to take it to Messrs. Davidson & Co. (Muster produced.) As I found the time was approaching at which the blankets were to be

delivered, and as the Japanese took no steps to take delivery, I had to take steps myself. I got the muster from Messrs. Sitwell, Schoyer & Co.'s office. I found it quite rotten. (Muster produced.) I then went to Mr. Howell, knowing he was a friend of Mr. Walsh's, and said to him that, through inattention, I had bought a lot of blankets that were unsound. He said he would see Mr. Walsh on the subject. He returned, and said Mr. Walsh had no wish for me to buy unsound blankets, and recommended me to go to Yedo and recover musters. I did so, and gave them to Mr. Howell, who said he would see Mr. Walsh. The musters were good, and it appeared to be a false alarm on my part. Mr. Howell saw Mr. Walsh, and told him I was ready to take the blankets according to sample, and brought word that I was to see Mr. Mouat. I had great objections to see Mr. Mouat, or to go to Messrs. Walsh, Hall & Co.'s office. I told Mr. Mouat that I had been 5 years in Yokohama, and that I had made a resolution never to enter Walsh, Hall & Co.'s office. I saw Mr. Mouat and told him I was ready to take delivery. Mr. Mouat told me he had sold and I had bought a mixed lot of blankets, and that he had been careful in picking out one of the best and one of the worst samples; and that Messrs. Fletcher & Co. told me at the time I made the contract that it was a mixed lot, and as such only would he deliver them, and none should be worse than the torn one, and probably many would be better than the good one. I denied that Capt. Fletcher had told me they were a mixed lot. Mr. Mouat told me he heard I had a difference with Japanese. I said that it had nothing to do with it. I had arranged for an advance on them, and requested to take delivery according to musters. Mr. Mouat refused to open the bales unless I agreed that the musters should be considered as one of the best and one of the worst. He could not guarantee they were of the same quality; but that I had purchased a mixed lot. The Japanese, as the time approached for taking delivery, had gone to Saga, to take part in suppressing the rebellion. Another officer had taken the matter in hand, but there was some difficulty, as the Japanese suspected the quality of the blankets. Messrs. Walsh, Hall & Co. wrote to me, ordering me to take delivery of the blankets. I declined doing so, unless they were all according to muster. (Copy of reply read, dated 21st March.) I was willing, prepared, and ready to take delivery according to terms of my agreement. I was never led to believe by Fletcher & Co. that they were a mixed lot. I saw no bale in 1874. Capt. Fletcher never told me they varied in weight; he only said all blankets vary an ounce or so. I knew that was the case. The usual variation is 5 per cent. I was told they were 4 lb. blankets, and that I could buy at per lb. I never saw Mr. Walsh. I told Mr. Beato I should not require the advance arranged for at the French Bank, because Walsh, Hall & Co. refused to deliver the blankets; saying that I had bought according to a bad and a good muster. I had made an agreement to dispose of these blankets with Kumori-kusaburo. The contract produced was signed and sealed, and was handed to Mr. Hall, the interpreter of this Court; who said it was written very badly and indistinctly.

Mr. Dickins here stated the purport of it; which was objected to by Mr. Ness; who claimed his right to see a certified copy in English.

— The number was 13,000 of Walsh, Hall & Co.'s blankets, and 2,000 offered me by another party. Had the goods been delivered to me,

on 21st March, as per sample, I could have sold at one *rio* per blanket. I have had enquiries for similar blankets within the last two days, at 70 cents each; and I have an offer to take 15,000 at that price, by a Yedo merchant.

Cross-examined by Mr. Ness:—Some Sniders were delivered according to this contract. I never had the blankets to deliver; therefore could not do so. I paid for the Sniders when the inspection was finished by the government. I have delivered no blankets yet. The document lately produced was like all Japanese contracts; but they are very difficult to enforce.

(Document read—which said, “I undertake to do my best to induce the government to purchase, the price being very low.” The prices were, \$10 for each rifle, \$3 each for 500, 12-lb. blankets, \$2 each for 15,000 8-lb. (Two characters could not be deciphered.)

—The contract says \$2 each; Mr. Pitman says it was meant for \$2 per pair. That contract was made according to these musters. I made a contract to sell them, and on that contract I base my claim for cross-damages. I delivered about 3,500 Sniders, but have yet to deliver more. This contract was written on the afternoon before the Japanese departed for Saga. I swear I have received only five samples from Fletcher & Co. These blankets were put up to auction in February. Mr. Rangan bid; I do not know if he bid for himself or for me. He is not my agent. I gave him no instructions more than that I should be very glad to take an interest in them, if they went at 15 cents per lb. The torn blanket was sent to Sitwell, Schoyer & Co., in the first instance; I did not buy on that. I do not know whether the bulk is rotten or not; I have had no opportunity of judging. I purchased on the two samples sent me in the middle of January. I do not know if they were similar to samples previously received, of the same lot. I simply asked for another muster of those blankets; musters of which I had before. I do not know how many lots Capt. Fletcher had. I see a great difference in the blankets now produced; there is but little difference in the two received in January. I know there is a difference in weight; I weighed them. There was a difference in weight and shade. I asked for another fair sample of gray blankets, similar to those I had before. Those are at any rate those from which I purchased. (Two letters, without dates, were here read.) I sent the two to Yedo. The Yedo man never refused to purchase. If Mr. Howell told Walsh, Hall & Co. that he refused, he was in error. The contract was made on 28th February, and delivery was expected to be taken in 3 weeks or a month afterwards, or on his return. I am not aware of having written a letter refusing to take delivery. I wrote saying I was prepared to take delivery according to the musters. Kono has returned. I told him I had had a lot of trouble about the blankets, and that they were a mixed lot. I conclude they were wanted by the Government. I do not think the Korean Expedition had anything to do with the matter. So far as my information goes, the Korean Expedition was never contemplated. I do not know what the Sniders were wanted for. Kago never knew they were a mixed lot, but to-day I have had an offer to take delivery, even if they were mixed, at 70 cents. I first found they were mixed from Mr. Mouat on 17th March. I never objected to take delivery before that, as the time for doing so was not up. I know that rotten blanket came from Mr. Fletcher. Samples do not usually become rotten if kept in a sample room. Blankets are usually sold by the lb. I sold per pair, as I bought in that way.

Cross-examined by Mr. Ness:—The contract says per piece.

To Mr. Dickens:—I am not aware of there being 8-lb. military blankets made. I purchased from the dark blanket because the other was supposed to be from the outside of the bale. It was never pointed out to me that there was any difference, except in colour, until lately. I never had more than two blankets in my possession at one time. I have never had an opportunity of examining contents of any one particular bale. I only recollect seeing a packed bale with a master on the top. Nothing ever led me to believe they were other than 4 lb. blankets. In my letter, I did not refer to any specified lot. I did not know the lot I contracted for in 1874 was the same as spoken about by me in 1873. One was a 10,000 lot, and the other a 13,000 lot. It was after the letter of February that I saw Mr. Mouat. On the 17th March he told me they were mixed; I never heard that before.

To Court:—I have heard the phrase “mixed lot” before, with reference to mixed parcels. In speaking of a mixed lot of blankets I should consider the weight would vary. At sales of military stores I have heard of mixed blankets.

F. Lo Sen, sworn:—I am a member of the firm of Chipman, Stone & Co. I bought many blankets during the French war, but found only a very slight variation. I purchased about 200,000. It is possible to make blankets of a different color and weight. Orders may be executed to any color or weight, with perhaps a variation of two ounces per lb. Some would weigh more, some less; one hundred blankets should weigh 400 pounds. Blankets are usually sold per lb. I did not know till I came into Court what “a mixed lot” was; but I should understand the term to mean a variation in size and weight.

Cross-examined by Mr. Ness:—In these blankets I see a difference of color only. I cannot tell as to weight without weighing them. If I got these as two samples of the lot, I should not consider the lot to be the same. The 200,000 I purchased were all English. I purchased from Messrs. Caldecott. There was no difference in color, and only a slight difference in weight. I do not remember the weight of the blankets I speak of. I will not say that blankets never vary in colour or weight. I gave a very definite order as to colour and weight. All suited except 30,000, which were refused because they did not want them: but nominally because they were not equal to quality ordered. I should be satisfied if I examined 5 or 6 bales in 100.

To Mr. Dickens:—Caldecott's manufactory is in London. I bought at per pound.

F. Beato, sworn:—I have been in Japan a number of years, doing a considerable business with the Japanese. I know these kind of blankets. I have imported them myself; I think three different times. These blankets are usually sold per lb. They are numbered, according to the different weights. No. 5 is worth 4 francs to 4/25. No. 4, 3 fr. to 3/25. No. 3, 2/65. If I order from Europe No. 5, I get the 4½ lb. in weight. They, on an average, weigh that; although single blankets may slightly vary. The variation is about one ounce to 1½ ounce in each, but if you take 50 blankets they are all the same. I can get any colour I order. I remember getting four shades of blankets similar to these. In the same lot the colours do not vary; you get them as you order them. I weighed one or two of these blankets; there was a variation of about 8 ozs. I have never heard of a

mixed lot of blankets. I generally buy per lb. and colour; I get a sample first. It is possible to get blankets of a similar shade.

Cross-examined by Mr. Ness:—I have no more interest than you in this matter. Mr. Pitman and I have had business transactions together; we have shared profits on joint ventures. The blankets I buy like these are made in Switzerland. I have never bought from England similar blankets. Sometimes the top blanket in a bale is faded. I believe this lighter blanket has been more exposed than the other. If I bought, myself, I should not object to the bulk being of different shades like these, if the weight was the same. I know of no one having bought from Hudson, Malcolm & Co. I sell blankets; not buy.

To Mr. Dickens:—I swear I have no interest in this transaction. I have in stock blankets, very similar; the same style of wool. I have seen blankets at Messrs. Fletcher & Co.'s; they wanted 25 cents per lb. I told them I should like to sell some myself at that price. In 1868, blankets sold at very good prices. I sold at \$2.70. Mr. Pitman never told me the result of his interview with Mr. Mouat. I remember Mr. Pitman called once in my office: saying he wanted \$9,000, and asked if I could finance it. Afterwards he said, at my surprise, that he did not want the money. I do not know if it was in April or March.

To Mr. Ness:—Mr. Pitman said he did not take delivery because they were a mixed lot.

Adjourned until 2 p.m., Tuesday, July 7th.

Tuesday, July 7th, 1874.

Court resumed at 2.0 p.m.

J. P. Siehel, sworn:—I am a partner in the firm of Reiss & Co. I have had a moderate experience in blankets, both here and at home. I know grey military blankets of this kind. I have sold some in Yokohama; not a large quantity. I sold by the lb. They were, as closely as blankets can be manufactured, of even weights; they certainly were of the same shade. A variation of 5 to 6 per cent is the usual allowance in the trade. Blankets that are called 7 lb. blankets really weigh about 6 per cent less. I am acquainted with the manufacturers. I think they are principally manufactured in Devsburry. I have experienced no difficulty with the manufacturers in getting the size, shade, or weight required. I should consider blankets of various shades and weights a mixed lot, or job lot.

To Court:—A “job” is a lot somewhat defective, either by stains or quality; or perhaps an unmarketable lot, after having been held a long time. Blankets are made by machinery.

Cross-examined by Mr. Ness:—The average blanket in which my firm deals is of only two weights. The superior is 7 or 8 lbs. and the inferior 4 to 5 lbs. The colors of the inferior are, a dark grey, dark scarlet, and green. The grey is not of this shade. Our house in England sent an assorted lot of the colors named. I do not know if this lot was of English manufacture or not; they may have been Swiss. (The samples of the lot in question were here produced.) Of the lot I purchased, I do not know if they varied in shade. I did not open the bales. I would sell or purchase simply from the samples. In the two blankets I see now, there is a difference in shade; in appearance one looks better. I cannot tell as to weight. Perhaps exposure to the atmosphere has caused difference of shade. As samples, I would not take them as being of one shade. If I got these two samples as one of the best and one of the worst, with

none better or worse, I should consider the bulk represented the sample; but no man would buy without ascertaining the quantity there was of each lot. Blankets of uniform color and quality, of about 4 lbs. each, similar to these, are worth about 30 to 32½ cents each. If they were not of uniform color and quality they would be sold for less. Where samples of blankets are sent to me it would depend from whom I bought whether I should weigh them or not. I should weigh them. If I were negligent and did not weigh the sample, but bought on that sample as represented, I think both parties would be to blame, but I should be to blame most.

H. Grauert, sworn:—I carry on business as a merchant here. I remember buying blankets like these at the end of 1872. They came from Walsh, Hall & Co.: I sent them to Hakodate. I was told from Hakodate that they varied in weight, and were a mixed lot.

His Honour ruled that sort of evidence could not be received. It was merely a statement of a correspondent. If it was maintained that it was a mixed lot, very decisive evidence must be brought to prove it.

Mr. Dickins said he was under a great difficulty, in not being able to get the witnesses he expected, who were essential to prove his case.

Mr. Dickins then addressed the Court for the defence; remarking on the way in which the evidence for plaintiffs had been brought forward. The existence of the contract could not be denied. His client had agreed to buy blankets of a particular kind, 30 days being allowed, during which, at any time, he was at liberty to take delivery. Owing to the application that the petition might be amended having been disallowed, the affirmative of the question was not raised in evidence at all. Everything turned on the meaning of the words *per muster*.

(Here a witness for the defence came into Court, whose evidence Mr. Dickins claimed should be heard. Mr. Ness objected to the application, but His Honour ruled that, under the circumstances of its being a mail day, a day on which in other places the Courts of Law were usually closed, his evidence might be heard.)

Arthur Brent, sworn:—I am a partner in the firm of Hudson, Malcolm & Co. In 1872, I was acting as agent for Messrs. Walsh, Hall & Co. in London. I negotiated the purchase of 15,000 blankets for them, of this kind. It was not a uniform lot. On examining bulk at the docks I found it varied in quality and colour. I cannot swear that I informed Mr. T. Walsh of this. I sent samples to Yokohama. I cannot remember if I told them the nature of the purchase. I did not personally make up the bale of musters. The musters were intended to represent the bulk; they varied in quality. I do not remember advising my principals I had sorted them. After buying 15,000 blankets there were a few left, of which I took the best. Some were rejected by me, because they were worse than others.

Mr. Dickins resumed:—His first point was, that permission was demanded to inspect the bulk of the blankets, and that it was refused. It was hardly necessary to prove that, where goods were purchased on sample, if the purchaser was prevented from examining the bulk the contract was put an end to. If the circumstances were such that the purchaser had had no opportunity to inspect the bulk, the case was the same. (The case of *Jocelyn vs. Kingsley* was here cited, in which bulk had been examined and some actually delivered, but, as it was shewn that the bulk did not correspond with the warrantry, the purchaser was

not bound to take delivery. Counsel also cited other cases, heard before the Court of Queen's Bench, in support of his argument.) The blankets, he contended, had been bought *per muster*, and when his client pointed out the difference in colour in a sample, Capt. Fletcher said that that was only an outside blanket. Mr. Pitman declares he asked Mr. Mouat's permission to inspect those blankets, and that he was refused. When he went to take delivery, Mr. Pitman asked to do so according to the good muster; Mr. Mouat refused, saying he would deliver on both musters. This was directly asserted by Mr. Pitman, and the very fact of the dispute shewed that a demand had been made to inspect the bulk. Mr. Beato also recollected Mr. Pitman saying to him that Mr. Mouat refused to shew him the bulk. It was only natural that his client should desire to inspect the goods. It was a rule of law that goods must be merchantable or saleable, and he contended that his client had bought an uniform lot of blankets. As to the musters, *per muster* meant *per a specific muster*; not, as defendants contended, a number of musters. The negotiations of 1873 had dropped, and the case in question depended on the transactions of the 10th January, 1874. Mr. Pitman was more likely than Capt. Fletcher to remember the number of musters he had received, as the latter was constantly sending out musters. No receipt had been in any case exhibited, to prove that his client had ever received a single muster. It was true he had received some, but there was no evidence to say that he had received more than he asserted he had. He considered that his client had received five musters; were these musters to be looked upon as those on which he bought? They were not all in his possession at the same time; they were sent at long intervals, extending over a year. He maintained that it was a contract to buy according to muster; and on a single muster, which was the dark blanket. Capt. Fletcher said he did not know the blankets were mixed. The plaintiffs calculated the price per piece, as though each blanket weighed 4 lbs., preferring the offer per piece. The contract was made with Capt. Fletcher, not with Mr. Mouat. The evidence of both plaintiffs and defendant was most contradictory, as to whether blankets could be made of a desired uniform weight. The plaintiffs assert that the samples were fair samples, whilst they admit having examined only about one per cent. The survey held by plaintiffs was made without any notice being given to the defendant, and by persons chosen by the plaintiffs; it should therefore be set aside.

Mr. Ness, in his reply, submitted that, in the first place, the cross claim for damages should be thrown out. It was adduced in evidence why the question of weight was left out; the goods being sold otherwise, especially to exclude such a question. The term *muster* referred to the whole of the samples sent. It had been shewn in the evidence that delivery had been offered and refused. Mr. T. Walsh now authorised him to say that he was still willing to hand over to Mr. Pitman the goods, at the contract price, on the latter's paying all expenses since incurred on them; shewing, thus, that the plaintiffs had no wish to make, as it were, a double profit on the same goods, as alleged. The evidence went to shew that, at the end of March, the market price was about 25 cents each, a difference of 45 cents on the contract price. He would conclude by requesting that the damages sustained by his clients might be assessed upon the basis of the value of the goods contracted for on the day that contract was broken.

Judgment reserved.

Tuesday, July 14th, 1874.

WALSH, HALL & Co. vs. J. PITMAN & Co.

J. PITMAN & Co. vs. WALSH, HALL & Co.

Mr. G. P. Ness for Messrs. Walsh, Hall & Co.; Mr. F. V. Dickins for Messrs. J. Pitman & Co.

Judgment was delivered by His Honour this morning, as follows, viz:—

"The first of these actions is for the non-performance of a contract to purchase a lot of army-blankets.

The Plaintiffs, by their Agents, Messrs. Fletcher & Co., offered a lot of blankets for sale in the earlier part of the year 1873, and musters of these were furnished to the Defendants. Nothing came of this, but, on 18th January 1874, the Defendant wrote to Messrs. Fletcher & Co., thus: "Please let us have another muster of the common blankets by bearer, and we will endeavour to make you another offer." In consequence of this, two musters, varying somewhat in quality and colour, were sent. On the 16th February, the Defendant wrote to Messrs. Fletcher & Co.:—"We will take the 13,000 pairs of blankets as per muster, at 17½ cents per pound, if we can have delivery within 30 days from date." This was replied to 17th February, after some verbal negotiations, in the following terms:—"We beg to say that there are 13,000 blankets (not pairs) as per muster, which we agree to hold to your order for 30 days from date, or sooner delivery if required. It is understood that the price for the above is to be 70 cents each." The Defendant accepted this offer by letter dated 21st February.

The time for taking delivery had nearly elapsed when the Defendant discovered that one of the samples sent in the early part of 1873, and which had been transferred to other hands, was a rotten one. Assuming the bulk to be in the same condition, the Defendant sent a friend, Mr. Howell, to Walsh, Hall & Co. to represent the fact; but, from the examination of a sample bale which was at hand, it did not appear that any other blankets were rotten. The Defendant next saw Mr. Mouat, the Plaintiffs' Clerk, who conducted the transaction, and took with him, as I understand, the rotten blanket and one of those which he had received in January, 1874. It appears that a controversy arose as to which was the muster by which the bulk was to be judged. The Defendant contended that one particular good sample, which he produced, should be taken, while Mr. Mouat maintained that both must be taken together, the best and the worst; remarking that the lot was a mixed one. Mr. Mouat seems to have been under the impression at that time that the two samples produced by Defendant were the two sent on January 10th.

Subsequently, the day of delivery passed, and the Plaintiffs wrote, requesting that delivery might be taken. To this Defendant replied, saying: "We contracted to purchase blankets as per muster referred to in our letter of 16th February, but we cannot take delivery of a mixed lot, not being according to such muster."

Now, the muster referred to in this letter must mean (if it be not intentionally ambiguous) the two blankets sent on the 10th January, 1874. But what proof was there then, or is there now, that the bulk was not according to, or even better than, this muster? There is nothing absurd in a lot of articles which vary or more less in quality, a mixed lot, being tested by a plurality of speci-

mens, some better, some worse; and the evidence which has been brought on the part of the Plaintiffs shows that, in fact, the bulk, as far as examined, is, if anything, superior to the two samples of January 10th.

The real question appears to me to be—Did the Defendant ever seriously seek an opportunity of inspecting the bulk, with a view of comparing it with his two last musters; and was he denied such opportunity? And there is a certain discrepancy in the evidence—the Defendant swearing that Mr. Mouat refused to open a bale unless Defendant acceded to the principle of judging by the two specimens he then produced, viz:—one of the 10th January, 1874, and the rotten one of 1873. Mr. Mouat, on the contrary, swears distinctly that he never refused permission to the Defendant to inspect the bulk, and I think this is the more probable statement. The procedure of the Defendant was, to say the least of it, precipitate, and I cannot for a moment believe that it was out of his power to have inspected the goods previous to the day of delivery, had he been so minded.

I do not accede to the view that any one of the numerous samples which it is sworn by two witnesses the Defendant received during 1873 (although he swears that he never had more than five samples altogether) might properly be taken as musters of the lot, by which he ought to be bound. These musters might well have got rotten or deteriorated; and, besides, the correspondence of 1874 is sufficiently isolated and complete by itself to fix the muster upon which the Defendant bought to be the two blankets furnished January 10th, 1874. The evidence adduced as to the musters sent in 1873 only goes to show that the Defendant had abundant opportunity to become acquainted with the nature of the blankets, and there is no pretence for saying that the least concealment was practised by the Plaintiffs or their Agents.

I come to the conclusion that the Defendant violated the contract by refusing to take delivery without any reasonable excuse. The cross-action which he brings against the Plaintiffs falls to the ground.

Seeing the very exceptional character of the market in Japan for blankets, and the extraordinary fluctuations which take place; and taking the most liberal view of the value of the blankets in this case, I assess the damage which the Plaintiffs have sustained at \$4,000 (four thousand dollars.)

The costs of both causes will fall upon the Defendant.

who will receive Subscriptions, Advertisements, &c., for any of the above papers.

85, Yokohama, December, 1873.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

At last, we are glad to be able to report some improvement in the market for most classes of seasonable goods, and prices in some instances shew an inclination to harden. Stocks have been augmented by the arrival of the S. S. *Bengal* from London. In Exchange, there is little change to be noted for Sterling, and the market at close is drooping.

SHIRTINGS are in good demand for all weights except 8 lbs. Higher figures than we quote are offered for No. 1 quality.

COTTON YARN continues to be enquired for, and superior brands are scarcely to be had, even at advanced figures.

VELVETS are in better request.

TURKEY REDS are saleable.

IN WOOLLENS there is little doing, the season having hardly begun.

BLANKETS are stagnant.

THE METAL MARKET continues in a very depressed state, and quotations are quite nominal.

SUGARS shew a slight advance, and the market closes firm.

RAW COTTON remains at about last figures; the market is extremely dull.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

NEW SILK is to hand since our last, and settlements to the extent of about 200 Bales have been effected; the quality is far from good as yet. Prices may be quoted at the close at \$475 to \$490; although as high as \$500 was paid for first parcels. There has been little demand, except for certain sizes of Oshius, for old silk.

TEA.—The past fortnight has few features to call for special notice; business has principally been confined to "Good Medium" and "Fine" Teas, and amounts to some piculs 7,000 for the fortnight.

Supplies are coming in rather more freely, and Second Crop Teas may be expected in full supply before close of current month.

The telegraphic news from the Eastern States seems to indicate that the New York Tea Market is totally demoralised, and, as is usual on such occasions, ill-advised and unwarranted sacrifices are being made in forcing sales of the First Crop high-grade Teas. A large bulk of these have been shipped unprecedentedly early this season, and the American consumer of Choice Japan Teas towards the close of the year will find it difficult to indulge his taste in this luxury.

Our prices rule as under, but recent telegraphic advices, coupled with full arrivals of Second Crop, seem likely to demand lower rates.

## DEPARTURES.

June 22, Brit. str. *Washi*, Hesseroff, 221, for Niigata, general, despatched by Hudson, Malcolm & Co.  
 June 23, Am. str. *Granada*, Seabury, 2,576, for San Francisco, mails and general, despatched by P. M. Co.  
 June 24, Brit. str. *Madras*, Bernard, 1,325, for Hongkong, despatched by P. & O. Co.  
 June 24, Am. str. *Colorado*, Morse, 3,727, for Hongkong, mails and general, despatched by P. M. Co.  
 June 24, Brit. barq. *Seawell*, Appleby, 793, for Hiogo, general, despatched by Van Oordt & Co.  
 June 25, Am. str. *Vasco de Gama*, Rice, 2,200, for San Francisco, general, despatched by Hudson, Malcolm & Co.  
 June 26, Am. str. *New York*, Furber, 2,119, for Shanghai, &c., general, despatched by P. M. Co.

June 26, Russ. str. *Courier*, Lemarcheffsky, 460, for Petropaulovski, general, despatched by Walsh, Hall & Co.  
 June 27, Brit. barque *Adella*, Simpson, 364 tons, for West Coast of Japan, ballast, despatched by H. Grauert.  
 June 27, Brit. barq. *Pride of the Thames*, Brown, 377, for Nagasaki, ballast, despatched by E. C. Kirby & Co.  
 June 27, Brit. str. *Kiangse*, Pratt, for Hiogo, ballast, despatched by Edward Fischer & Co.  
 July 1st, Frch. str. *Folya*, Flambeau, 960, for Hongkong, mails and general, despatched by M. M. Co.  
 July 2, Am. str. *Nevada*, Coy, 2,143, for Shanghai, &c., general, despatched by P. M. Co.  
 July 3rd, U. S. corvette *Lackawanna*, McCauley, 1,200 tons, for Hiogo.  
 July 4, Am. str. *Oregonian*, Harris, 1,914 tons, for Hakodate, general, despatched by P. M. S. S. Co.  
 July 6, Russ. corvette *Bogatyr*, Schaffroff, 800, for Hakodate.  
 July 7, Am. str. *Japan*, Freeman, for Hongkong, mails and general, despatched by P. M. S. S. Co.  
 July 8, Brit. str. *Behar*, Edmonds, 1,635 tons, for Hongkong, mails and general, despatched by P. & O. Company.  
 July 8, Brit. ship, *Chusan*, Hills, 817 tons, for Hiogo and London, General, despatched by Hudson, Malcolm & Co.  
 July 8, Brit. str. *Altona*, Hore, 1,179 tons, for San Francisco, mails and general, despatched by Hudson, Malcolm & Co.  
 July 8, H. B. M. Iron-clad, *Iron Duke*, Arthur, 14 guns, for Kobe.  
 July 9, Am. str. *Golden Age*, Wise, 1,870, for Shanghai, &c., general, despatched by P. M. Co.  
 July 11, Brit. str. *Estepona*, Hubback, 700, for Hiogo, general, despatched by Hudson, Malcolm & Co.  
 July 11, H. B. M. gunboat *Sylvia*, St. John, for Hakodate.  
 July 11, H. B. M. gun-boat *Ringdove*, Singleton, 464 tons, for Kobe.  
 July 11, U. S. frigate *Hartford*, De Krafft, 2,200 tons, for Kobe.  
 July 12, Brit. str. *Bengal*, Douglas, 1,250, for Yokoska.  
 July 12, Brit. schr. *John McKean*, Taylor, 198, for Nagasaki, ballast, despatched by Hudson, Malcolm & Co.  
 July 12, Russ. str. *Courier*, Lemarcheffsky, 465, for Kamschatscha, general, despatched by Walsh, Hall & Co.  
 July 14, Ger. barq. *Talee*, Hoffman, 335, for Newchwang, ballast, despatched by Captain.  
 July 14, Ger. barq. *Hamburg*, Kroge, 300, for Shanghai, coal, despatched by Walsh, Hall & Co.  
 July 15, Frch. barq. *Marianne*, Bazelaire, 463, for Oregon, ballast, despatched by Captain.  
 July 15, Frch. str. *Tanais*, Reynier, 500, for Hongkong, mails and general, despatched by M. M. Co.  
 July 16, Am. str. *Costa Rica*, Connor, 1,917, for Shanghai, &c., general, despatched by P. M. Co.

## PASSENGERS.

Per Am. str. *New York*, from Shanghai, &c.:  
 Messrs. H. Sylva and servant, Geo. Ford, J. W. Moore, U.S.N., Capt. H. Reynell, Capt. W. F. Lewis, R. Backe, R. Kiesseig, L. McLane, Messrs. Matzuo, Okamoto, Takeuchi, Iriyama, Toyoda, Onozaki, Matsmoto, Miyida, Tsatska, Odira, Tsumori, Fukuuchi, Azumi, Matsunoura, Takeda, Towara, Iwzi, Yamada, Munacata, Katini, Hyashi, Ishikawa, Katayama, Hiyama, Hoodzu, Nakajima, Hiyata, Okura, Goto, Takiyama, Watanabe, Mooto, Kuruoka, 28 Japanese officers; and 81 in the steerage.  
 FOR SAN FRANCISCO:  
 Mr. L. W. Ingersoll.  
 Per P. M. S. S. *Granada*, for San Francisco:  
 Charles Earnshaw, Hon. O. D. Field, Mrs. Field, child, and servant, P. Kavanagh, G. W. Noye, A. Perry, A. Charker, G. E. York, and J. Griffin.  
 FOR NEW YORK:  
 F. W. Gardner.  
 FOR EUROPE:  
 W. C. Van Oordt.  
 Per Brit. str. *Vasco de Gama*, from Hongkong:  
 Mr. Sherwood; and 450 Chinese in the steerage.  
 Per Am. str. *Colorado*, from San Francisco:  
 Lieut. Commander C. E. Clark, wife and two children, Miss Gordon, Rev. P. Gulick and wife, O. H. Gulick and child, W. H. Morse, wife and child, Miss Center, Mrs. Avery, J. P. Moilison, A. Paton, Miss Gulick, R. J. Walsh, wife and 2 children, Mrs. Clark, H. J. Lambley, D. W. Ap. Jones, N. Togahama, T. Okabayashi.

## FOR SHANGHAI:

S. S. Gilbert, J. S. Fearon, S. S. Hinckley, E. N. Hooper, and N. E. H. Moore.

## FOR HONGKONG:

John Middleton and wife, Dr. G. H. Marvien and wife, Mrs. A. Dale and child.

Per Brit. str. *Madras*, for Hongkong:

Messrs. James Meldrum, V. P. Marques, M. Galt, and 2 Chinese.

Per Am. str. *Colorado*, for Hongkong:

Hon. C. C. Smith, Mrs. Smith, family, and 2 Chinese servants.

Per Am. str. *New York*, for Shanghai, &c.:

Rev. O. H. Gulick and child, Rev. P. Gulick and Mrs. Gulick, Miss Gulick, E. C. Kirby, J. Laster, zner and child, Mrs. Goertz, J. H. Boulet, Capt. Reynell, A. Helm, 4 Japanese, Paymaster Allen, Allen, 4 servants and 2 children, Mrs. Clark, 2 children, 2 Japanese, Capt. Koch, Lieut. Commander Clark, O. Steglich, A. Paton, E. M. Carty; and 2 in the steerage.

Per Brit. str. *Vasco de Gama*, for San Francisco:

P. O. L'Hote, W. F. Lewis; and 8 Chinese.

Per P. & O. Str. *Behar*, from Hongkong:

Messrs. Cocks, Andrews, Lewis, Tormita, Y. Cornock, Mrs. Shadgett, child and infant, Mr. F. Mitchell, Mr. and Mrs. Simpson; and 20 Chinese in the steerage.

Per Am. str. *Oregonian*, from Shanghai:

Messrs. J. Wilson and wife, Ramie and wife, M. Ramie, C. G. Mandvelt, H. Quilter, D. Hay, 10 servant, C. Stewart, Mrs. D. Cook, 2 infants, nurse, Mrs. T. Bush, infant and nurse, Wm. Foster, J. B. Gaskell, J. H. Boulet, 8 Japanese officers, and 141 in the steerage.

## FOR SAN FRANCISCO:

Mr. E. Auback.

Per Am. str. *Nevada*, despatched 2nd July:

## FOR KOBE.

A. Schaeffer and servant, A. Machenhaner and servant, H. Cook, Mr. and Mrs. Morse, infant and servant, Miss Center, 4 Japanese; 13 in steerage.

## FOR NAGASAKA.

W. P. Tillman, 7 Japanese; 131 in steerage.

## FOR SHANGHAI.

R. H. Boyce, Mr. and Mrs. Middleton, Mr. and Mrs. Marvin, Hon. F. W. Mitchell, D. H. Stewart, G. Osgood; 4 in steerage.

Per Am. str. *Oregonian*, for Hakodate:

Bishop Petitjean, J. N. Wilson, John Volcan, Inamoto, Lady Parkes, family and servants, and C. Harris.

Per P. M. S. S. *Japan*, from San Francisco:

W. Bube, T. Mitszi, C. Mitszi, S. Noyomi, K. Yoshoka. 10 in the steerage.

## FOR HONGKONG.

Rev. J. V. L. Talmage, wife and son, Miss K. Talmage, Miss Molly Talmage, 3 Chinese. 21 in the steerage.

Per Brit. str. *Behar*, for Hongkong:—

Messrs. Renton, T. Garrett, and J. Kite.

Per Frch. str. *Tanais*, from Hongkong:

Messrs. Watari, Sarr, Gallet, Dupissier, M. Berudoux and 2 children, F. Bosija, M. Made, S. C. Williams, Thomson, M. and Gerutier and 3 children.

Per P. M. S. S. *Golden Age*, for Hiogo:

Mr. & Mrs. C. G. Wilson, H. Cochins and servant, 10 Japanese, Mr. & Mrs. John Robertson, child and servant, Mr. & Mrs. R. M. Brown and servant, W. Clarke.

## FOR NAGASAKI.

H. Gribble and servant, 12 Japanese.

## FOR SHANGHAI.

C. A. Schultz and servant.

Per *Bombay* from Hongkong:

Messrs. J. Eccles, Morrakima, Tashima, W. Tappin, C. J. Gibson, Moloney; 4 Chinese in steerage.

Printed and published for the Proprietors by J. A. R. ANGLIN, at the "JAPAN GAZETTE" Press, Office, No. 63, Main Street, Yokohama, Japan.

### THE

## "Japan Gazette" MAIL SUMMARY.

FROM 20TH JULY TO 3RD AUGUST, 1874.

### MARRIED.

**ALSTON—GARDNER.**—March 5th, at Balmain, Sydney, N. S. Wales, by the Revd. W. E. Bourne, cousin of the bridegroom, Capt. Bernard Bourne Alston, ship *Courier*, eldest son of the Revd. N. Alston, of Spalding, Lincolnshire, to Miriam, youngest daughter of the late Charles Gardiner, Esq., of Balmain.

**MORLEY—DUKE.**—May 20th, at St. Michael's Stockwell, J. L. Morley (late of the 2nd Battn. 20th Regt., and 78th Highlanders), of Minden Lodge, Addiscombe, Surrey, to Marian, daughter of T. O. Duke, Esq., 321, Clapham-road.

On the 29th July, at the German Legation, Yedo; by His Excellency M. Von Brandt and afterwards by the Revd. E. W. Syle, at the Episcopal Church, Yokohama, **EDWARD ROTHMUND**, of Hamburg, to **MARIA SEABLE**, third daughter of the late Joseph Harris, of London.

### DIED.

On July 25th, at the International Hotel, of Liver Complaint, **HENRY J. BLUMBERG**, late Lieutenant, 5th Dragoon Guards.

OUR LAST MAIL ISSUE was despatched on the 20th instant, per P. M. S. *Colorado*. We are since in receipt of the following mails:—

	DUE.	ARRIVED.
American Mail ...	July 20th	July 20th
English " ...	" 29th	" 27th
French " ...	" 22nd	" 27th

Latest telegrams from London are to the 25th ulto., and letters to June 12th.

### Summary.

THE ONLY subject of public interest during the interval has continued to be the Formosan Expedition; and about it very little

has transpired. General Le Gendre has been despatched to China, armed with full powers to settle the affair amicably. He has been the adviser of the government in connection with the expedition from the first, and it is quite expected that his mission will be successful. He goes in the first, then to Foochow and Amoy, where he is very favourably known to the Chinese authorities.

It is more than probable that the Japanese troops will be recalled at the earliest possible opportunity; and as they have done well all that it was necessary to do with regard to the punishment of the savages, it is decidedly the best thing they can now do, to give up the colonization scheme and retire with flying colours.

NOTHING FURTHER has transpired with respect to the revision of the Treaties or the opening of the interior. And as every one who can, among the Japanese officials, shirks work during the hot weather, does so, we do not expect anything to be done until September. Meanwhile, the greatest strictness is observed in granting passes to persons desirous of travelling beyond Treaty Limits; although many of the foreigners in government employ have obtained them.

DURING THE month of June and the earlier portion of this month rain fell so abundantly throughout the whole country as to cause serious inundations and landslips. From every direction, information reaches the government of damage both to property and to human life, from these causes.

H. E. THE French Minister, to whom, as umpire, the claims of foreigners against the Japanese government, recently enquired into by a Japanese court, assisted by Mr. Hannen, late the Acting Assistant Judge of H. B. M.'s Supreme Court in Japan, were referred, has

given his decisions in all cases submitted to him; but they have not as yet transpired.

THE HALF-YEARLY examinations of the various government schools in Tokei have all finished, and the holidays, varying from a month to seven weeks, have commenced. In some of the schools, the reports of the examiners speak very highly of the progress of the pupils. There never was a half year in which so great an advance was observable.

THERE HAS been some talk of late, of His Majesty the Mikado formally and ceremoniously opening the Telegraph, which although now in operation, for some years, has not yet been so honoured. It was spoken of as His Majesty's wish that some such opening should take place, a long time ago, but the constant interruptions on the main line between Yokohama and Nagasaki have interfered it. His Majesty has been so little seen of late, that it would be very gratifying to everyone, native and foreigner alike, if he were to take part in such a ceremony.

DURING LAST week, a good deal of apprehension was engendered by the non-arrival of the French Mail steamer *Volga*, at her due time. She was nearly a week overdue when she came into harbour on the 27th instant; her detention having been occasioned by having encountered very severe weather, in which her rudder got adrift. Her screw also was broken; and before she can resume her place on the station she will have to undergo very extensive repairs. For the conveyance of the mails which ought to have gone on the 29th instant, the Messageries Maritimes Co. engaged the Pacific Mail steamer *Nevada*, which sailed with them on the 30th.

ON THE 23rd instant, we had a small change from our usual dullness, in a performance of Sacred Music in Christ Church, Yokohama. It was originally intended to charge a small sum for admission, in order to raise enough to pay off the balance of debt remaining on the building a recess for the Organ; but a gentleman came forward and paid the amount himself, and so the performance was not marred by any considerations of "lucre." It was quite successful.

THE "signs of the times" were never more obscure in Japan than they are at this time. And yet this country, though nominally the "Land of the Rising Sun," is remarkable for its political obscurity. Never since we have known it has there been any exception to the rule. The government has always used all its powers and all its influence to keep things "dark;" and we are aware that, within a few days, a letter was sent by an important department of state to the editors of native papers in Tokai, to the effect that they should refrain from publishing anything about the Formosan campaign.

But taking under notice the waifs of intelligence that appear among the native items we publish from time to time, we cannot pretend to be satisfied that the prospects for this country are as peaceful as we wish they were; or as promising for a successful issue from the existing uncertainty as some imagine.

There is much that forebodes trouble and disturbance, and little—we may say nothing—that gives us confidence in the permanent preservation of peace. We have believed that China will not move with any promptness, and that Japan might be able to shew that she had a right to operate in the particular portion of Southern Formosa at which her troops have been landed. Even should China display greater energy than is her wont, and Japan fail to make good her right, we have no fear of pitting the Japanese and Chinese soldiers against one another, man for man. But the effects upon Japan itself, of any disturbance that may arise, are what have to be considered.

It is quite true that a Formosan Expedition was determined upon long before the Saga insurrection; and it cannot be disputed that the savages who cruelly murdered Japanese subjects, and who habitually ill-treat those whose misfortune it is to be shipwrecked on their coast, deserve whatever punishment can be inflicted upon them. The indignation of all the world has repeatedly been aroused by the acts of these blood-thirsty assassins.

Still, in October last, it was understood that the expedition had been abandoned, from prudential motives; and the Saga rebellion arose from the action of the government with regard to this and the proposed Korean expedition.

Then was the government in a most painful fix. The cry of the Saga men was "To Corea!" The army so far sympathized with them that it was difficult to find regiments who would act against them; and subsequently it was stated that a promise was made to those who did fight to put down that rising, that the Formosan Expedition should go forward.

At all events, it is now evident that the government could not have so quickly quieted the samurai, even after the Saga affair was ended, had they not sent troops to Formosa. The alternative, every well-informed Japanese will declare, was internal war.

We are not now going into the subject of the rights and the wrongs of this expedition. We only point out that it had become a necessity. The best proof of this is, that when the government, under strong remonstrances from the foreign representatives, suspended it, the soldiers insisted on proceeding. The machine once in motion became impossible to stop. It was therefore necessary to direct it; and in everything done by the Japanese there has been, from the moment the government resumed its guidance, much to admire and little to condemn.

The great mistake they are making is, that of attempting to colonize the territory of the aborigines. If they would now withdraw their troops, satisfied with shewing what they

can do in case of future cruelties, and with the punishment already inflicted, all would be well. China would be satisfied, and the expedition would be a feather in the cap of the Mikado, though rather an expensive one. But is it possible? Is it safe to bring these troops, clad with their successes, into the midst of the impatient samurai, burning to resume their old trade, and to whet their swords in the blood of the enemies of Japan. It can hardly be doubted—at all events, it is our firm belief, that this is the question prompting the government to keep the Japanese troops where they are. It has been and may continue to be a safety-valve.

But should there be war with China, and should any calamity happen to the Japanese arms, there will be a feeling aroused throughout the Empire, such as no government will be able to allay. Nay, more. When it is once in the minds of the Japanese that the hostility of China has been aroused by the proddings of foreigners—which is fast becoming a settled belief with them—with what feelings will foreigners be regarded?

We do not presume to call in question the advice given by our representatives to the government of Japan, nor to the Chinese government; but we do see very clearly that there is a strong feeling in the minds of many Japanese that this has been unfriendly to Japan; and, with that feeling prevailing and increasing, we do not wonder at the indignation to which some persons give expression.

Under these circumstances, we entirely dissent from the views of the *Japan Mail* with regard to the departure of the Royal Marines. On the contrary, we consider that, at this particular moment, no step on the part of the English government would be more injudicious.

THE MUSICAL PERFORMANCE which took place last evening (23rd), under the title of an Organ Recital, was attended by a large and attentive audience, to whom, all but the first vocal solo, which was marred by the unaccountable but unmistakable nervousness of the singer, was very agreeable. The original object for which the performance was designed was to raise a sum to pay the small balance due on the building of the recess in which the organ stands: and there can be little doubt this end would have been fully attained from the proceeds of the sale of tickets, had this plan been adopted, as was at first intended. But there were some who objected to any charge being made for admission into the Church; and one gentleman generously put down the amount himself, in order to pay the debt and avoid the necessity of any charge being made. The donor wishes to remain unknown, and it is therefore not for us to attempt to discover him; but whilst we by no means agree with him, or with those who object to a charge being made for admission to a sacred concert for such a purpose in a church, yet we acknowledge his liberality, and take upon ourselves to thank him in the name of the congregation.

The Organ pieces, though admitting of difference of opinion as to their selection, admitted of none as to their execution; and the Organ, being in much better order than at the previous "Recital," was heard to far greater advantage. The opening piece, "We worship God," one of Handel's choruses, was an admirable one with which to lead off. Broad and expansive in its harmonies, yet withal melodious and attractive, it was well played and appreciated. Battiste's "Andante," the next Organ solo, was a striking contrast in every respect, and we think must have been selected simply for its difficulties, which were certainly

well surmounted by the performer: but it was the least pleasing of the selection. Meyerbeer's "Prayer and March" ended the first part with spirit, being well-known and much admired. The great performance, however, of the evening was Bach's Fugue in G minor. Like all such compositions, it is interesting only to the most cultivated musicians, and the most acute and practised ears. Few but the most earnest musical students can either comprehend or play Bach's fugues. All great musicians render homage to the master who composed them; and where such men bow, ordinary amateurs must be content to take the real merits of the compositions on trust, and listen with reverence. If the audience at large could not see what was most particularly to be admired in the fugue, it was, first, because their ears are unaccustomed to such music; and secondly, that the great difficulties of the execution had been so well got over by the performer, that they were not generally observed. They are enormous and the manner in which Mr. Durny had mastered them shewed an amount of patient study and perseverance worthy of all praise. We should like, in some sort, to briefly analyze this performance; but it would probably be useless, unless whilst it was being actually listened to; as, from its very nature, it is not calculated to dwell sufficiently in the memory for our readers to understand the passages as we allude to them. We must compliment Mr. Durny most highly on this performance. Mozart's "Arietta" was, to the popular ear, the most pleasing of the Organ solos. It was remarkably well played, and, contrary to our opinion when we first saw it mentioned in the programme, it was well chosen. The closing "March" by Borrodin was very nice; but it was not sufficiently grand or striking to occupy such a place in the programme, and it was most oddly and abruptly terminated—shewing that, though the performer had overcome the mechanical difficulties of his art, he had not considered grandeur of effect. It was a kind of anti-climax, and suffered all the more from following the grand outburst with which the preceding vocal duet, "The Lord is a man of war," winds up.

And now, a few—a very few—words as to the vocal portion of the programme. With those two lovely soprano songs, "With verdure clad," from the "Creation," and "Jerusalem," from "St. Paul," still ringing in our ears, we do not care to say much about the rest. We are supposed to be restrained by courtesy from criticism. Criticism! We do not want to criticize. We are content to have listened with delight. We were not hearing those whose wondrous strains have long ago sent us into raptures. We have heard the Lind sing both these songs. And when we went to hear her, we went with great expectations, and were not disappointed. Well! last night we went expecting to hear just what we did hear—a young lady sing with a sweet voice, in perfect tune, purely and sweetly, and with quiet, unforced feeling, those two exquisite songs. How kind! How good of that young lady, to assist in the performance. How perfectly! how unaffectedly, did she do that which she had undertaken. Criticism is indeed needless; but thanks—a thousand thanks are her due. Oh! if ladies would occasionally come forward and assist in musical programmes got up for the public, they would not only give pleasure, but they would do much real good by bringing to a great many young fellows who now rarely have the opportunity of mixing in ladies' society, the memory of happy homes and the sweet influences of the dear ones far away. Again we say to the young lady who sang so sweetly last evening, a thousand thanks.

"Blind Bartimæus" is a beautiful song by Doyme Bell, and was feelingly sung. "Man of God" the tenor recitative introducing the Bass song "It is enough," was very effectively sung—spiritedly, correctly, and appealingly—especially the charming bit of melody "The Lord thy God doth go with thee, He will not leave thee, He will not forsake thee; now begone, and bless me also." We have never heard the singer to better advantage. "It is enough," which followed, is perhaps the finest bass song in the mighty oratorio "Elijah." It requires a "*violoncello obbligato*" accompaniment, but the gentleman who accompanied last night so thoroughly entered into its spirit that the loss was not felt. In the beautiful trio from the "Creation," "On thee, each living soul awaits," the tenor was occasionally rather too loud for the other voices, but with this exception it was exceedingly good; and the duett "The Lord is a man of war" brought the vocal music to a close with great effect. There was only one thing to mar the performance throughout, and that was where few would have expected it, in the first song, as already mentioned.

And now that it is proved that we have among us several who are well calculated to interpret the higher branches of sacred music, can nothing be done to ensure us occasional performances of this kind? They must do good. It is impossible that it can be otherwise. And we earnestly hope that, in future, evenings devoted to this class of music will be more frequent among us. There is a time for all things. Let us have, by all means, moments of mirth and merriment; but let us not forget that, after all, these are not the chief ends of existence, and that the greatest and the purest enjoyment must be looked for in the cultivation of the higher attributes of our nature.

In closing these remarks, we must not omit to acknowledge the ability of the accompaniments throughout; and we beg that all engaged in this Sacred Concert will accept the thanks of all the hearers, for their really successful efforts.

MUCH has been said and written at various times since the appointment of the Gas Committee at the public meeting of January 9th, 1873, but so little has been done of a tangible nature, and so little information of a really reliable character was to be had, as to whether the Foreign Settlement was or was not likely to be lighted with gas by an extension of the facilities for so doing at present in existence, that the public at last tacitly came to understand that nothing was to be done in the way of throwing a little cheerful light into our at-all-times gloomy streets—how much more so in the long winter nights—and the very existence of the Gas Committee itself had faded out of the mind of the majority, into the limbo of things defunct and passed away. But the Committee as a body are alive, and at last we are presented—nearly a year since their report to the public on the possibilities of the question—with a draft agreement for approval; as proposed by Mr. Takashimaya Kayemon and modified by them. It is for the public to carefully consider the matter, without unnecessary delay. Winter, as the weather more than hints at present, seems far enough off, but before negotiations may be concluded and the pipes laid and lamps stationed, the autumn nights will be on us. The contrast, on a wet and dreary night, between the brilliantly-lighted native town and the wealthy Foreign Settlement is rather a humiliating one. Let it remain so for as short a space of time as possible.

THE following is the draft agreement for street lighting, proposed by Takashimaya Kayemon, and revised in accordance with the suggestions of the Gas Company:—

This Agreement, made the day of One Thousand Eight Hundred and Seventy-Four, between Takashimaya Kayemon, of Yokohama, in the Empire of Japan, Merchant, and Managing Director of the Yokohama Gas Company, hereinafter called the party of the first part, and the persons whose signatures are hereto affixed, hereinafter called the parties of the second part, witnesseth:

In consideration of this agreement, the party of the first part, for himself, his heirs, successors and assigns, hereby agrees that he, his heirs, successors or assigns, or the said Company, will perform and supply the following work and commodities, that is to say:—

First.—Will erect, fit, and make ready for lighting with gas in the streets of that part of Yokohama known as the Foreign Settlement, such number of iron gas lamps and posts, being not less than one hundred, and in such places as shall be designated by the parties of the second part to this agreement.

Second.—That the said gas lamps shall be of similar pattern and makes to those already erected in and about the native town of Yokohama, and that the same shall be erected, fitted, and made ready for lighting with gas by the party of the first part within thirty days after the completion of this agreement by delivery of the same to him.

Third.—That, on the expiration of the thirty days last aforesaid, and thence onward every day during the space of one year, that is to say, until the—day of—one thousand eight hundred and seventy-five, the said lamps shall be supplied and lighted with gas by the party of the first part, his heirs, successors, or assigns, or the said Company, during the following hours, namely, in the month of—

January .....	from	P.M. to	A.M.
February.....	"	"	"
March .....	"	"	"
April .....	"	"	"
May.....	"	"	"
June .....	"	"	"
July.....	"	"	"
August.....	"	"	"
September ..	"	"	"
October .....	"	"	"
November....	"	"	"
December ....	"	"	"

In consideration of which premises, each of the parties of the second part, for himself, his executors and administrators, hereby agrees that there shall be paid by him or them, in the manner hereinafter set forth, his proportion as hereinafter mentioned of the following sums, to be paid to the said Takashimaya Kayemon, his heirs, successors or assigns, or the said Company, on the following days, that is to say—

On the	day of	187
On the	day of	187
On the	day of	187
On the	day of	187

First.—On each gas lamp so erected as aforesaid, the sum of sixty-six cents of a Mexican dollars as interest for three calendar months in advance, at the rate of one per cent per month on twenty-two Mexican dollars, being the prime cost of each lamp.

Second.—And on each gas lamp so erected as aforesaid the further sum of thirteen Mexican dollars and thirty-five cents, as payment for three calendar months in advance, at the

rate of four Mexican dollars and forty-five cents per month, for the gas to be supplied to each lamp as aforesaid. Such payments to be made on the application of Takashimaya Kayemon, his heirs, successors, or assigns, or the said Company, to each of the parties of the second part to this agreement, in accordance with the apportionment of subscription hereinafter mentioned.

And it is hereby further mutually agreed between the parties of the first and second parts to this agreement, in consideration of the premises that the payment of the sum of the two several amounts payable as aforesaid on each lamp, namely the sum of fourteen Mexican dollars and one cent, shall be apportioned between the parties of the second part to this agreement in such manner as the said parties of the second part may determine between themselves. And the said parties of the second part agree so to determine the said apportionment between themselves, and to make known such determination in writing to the party of the first part within thirty days after the completion of this agreement by delivery thereof to the party of the first part; and the party of the first part hereby agrees to accept such determination and apportionment so to be made known to him in writing, as setting forth the sum of money per quarter for the payment of which alone each of the parties of the second part to this agreement is individually, for himself, his executors and administrators, to be responsible under this agreement. And no one of the parties hereto of the second part shall in any way be responsible to any one in any way whatever interested under these presents except for such moneys as by such apportionment as aforesaid shall be payable by him to the party of the first part. And it is hereby further expressly stipulated and agreed, that the parties of the second part to this agreement shall, notwithstanding anything to the contrary in the premises, be bound thereby only during the space of one year or such portion of one year as their respective tenancies, if any, existing at the date of the signing of this agreement, shall endure. So nevertheless and provided, that if at any time during the term of this agreement the aggregate subscriptions payable by the parties of the second part to this agreement, their executors or administrators, shall, in consequence of the expiry of tenancies, be reduced as much as ten per centum on the whole amount payable by them as aforesaid, then in such case this agreement shall, at the option of the party of the first part, his heirs, successors, or assigns, or the said Company, after consultation with the Committee representing for the time being the parties of the second part, thereupon cease to be binding on the party of the first part, his heirs, successors, or assigns, or the said Company. In Witness whereof, &c.

#### MEETING OF LICENSED VICTUALLERS.

A MEETING of British subjects engaged in business in Yokohama as Licensed Victuallers was held at the British Consulate this afternoon (21st) at 3 o'clock, to take into consideration the License system as at present conducted in Yokohama, and to initiate steps to procure protection to their trade against Japanese and others engaged in the business without having taken out licenses.

Present:—Messrs. Lyons, Purvis, H. Moss, Lewis, Crittenden, Hamill, Livingstone, Williams, Curtis, and Dutton.

Russell Robertson, Esq., H. B. M.'s Consul, presided.

A LICENSE-PAYER complained that large hotels, such as the "Grand" and the International, paid no more than smaller houses. The license fee was heavy, and he was anxious to know what it was for. The Japanese grog-shops in the Foreign Settlement were a great source of injury to the business of license payers. He could not see why they were allowed to trade. German subjects paid for a license \$12 per month; English and American \$13. The Danish Consul refused to grant or ask for any license at all. He could mention three or four Europeans and a number of Japanese who kept houses for which they paid no license, and they were not interfered with.

ANOTHER LICENSEE knew of two Saloons kept by Danes, and others by French and Russian subjects, who paid no license fees. Near Jaffray's stables, there were four or five places put up by an American, and occupied by Japanese. They certainly had European names over the door, but that was a blind. House-boats moored off the Hatobas sold grog similarly. Colored men, and others well known, similarly plied their trade, to the injury of those engaged in legitimate business, and it was a well-known fact that, at any store in Homura road, Beer, Spirits, or Champagne could be bought by the glass.

MR. H. MOSS said he had held a license for 10 or 11 years. The Japanese did not pretend to hide the fact that they were selling liquor; they simply did not know they were doing wrong, for nobody tried to prevent them.

A conversation of a desultory nature ensued, the general opinion being in favour of a yearly licensing.

A HOTEL-KEEPER thought, whilst it would be easy for some to pay down the whole amount of the yearly fee, on others it would fall heavily. They might be allowed to pay half-yearly, on the understanding that their license would be revoked in the event of failure to pay up the balance of the year's dues.

ANOTHER GENTLEMAN stated that he had called the assistance of the Japanese police, but they had refused to enter his house.

The Consul said his attention had been called to the subject by letters which had appeared in the *Gazette*. There was no doubt an abuse existed, and he should take steps to remedy it. Whatever fee was paid, he would endeavour to protect the interests of those who paid it, and he would bring to the notice of the proper authorities the fact of Japanese retailing liquor under the circumstances complained of. The understanding originally was, that the proceeds of the license fees were to be a contribution towards the expenses of police protection in the Settlement. He would give the matter his careful attention.

The meeting then separated.

THERE IS a rumour current to-day, (20th), founded on a telegram said to have been received from Nagasaki, that the Chinese have landed 20,000 troops in Formosa, and given the Japanese up to noon to-day to clear out of the Island. This information is of moment, and the verification of it will be eagerly looked for by all classes; as the changes it would involve in the routine even of our small community would be of an important nature. If the Chinese have declared war against Japan, which seems to be virtually implied, the evacuation of this country by Celestials would follow as a necessary consequence, and the results would

make themselves severely felt for a length of time. The original body of 3,000 troops sent down by the Japanese Government on the "Mission" to Formosa has received accessions to its ranks from various parts of the Empire, but, in all, the available force of fighting men in Taiwan can hardly number more than four thousand. This small contingent, against twenty thousand Chinese (although they are said to be armed only with matchlocks and other antiquated weapons) would stand but a poor show, and, however much the resources of the Japanese Government might be taxed, we fear that before they could manage to throw a sufficient body of men on the scene of warfare their opponents would have gained such a foothold as would make it a matter of difficulty to cope with them. With any sort of fair odds, the latter, with their breech-loading weapons and modern scientific appurtenances of every sort, ought to be able to "take the conceit" out of the Celestial, who sadly needs a lesson of the sort; and there can be no manner of doubt that, in pluck, dash, and uncomplaining endurance, the Japanese are far superior to their neighbours. As to discipline and the way they are both officered, we fancy that both sides will concede that things are "much of a muchness."

\*\*\* Since writing the above we have had the opportunity of learning that nothing of this was known at the Gaimu-sho, or at the Colonization Department, up to noon to-day.

THE P. M. S. S. Co.'s steamer *Colorado*, which left us yesterday (19th) for San Francisco, bore away a gentleman well known in Japan for his literary attainments, and who has been, for a length of time, employed in the service of the Government, in their Educational Department. Prof. W. E. Griffiths, to whom we refer, has latterly filled an important position in the Kai-sei Gakko, but his experience in scholastic matters extends far beyond the limits of the Capital. The information he was enabled to acquire respecting the various interesting phases of Japanese life has been turned to good account in the pages of the standard American magazines, and readers of the *Gazette* were frequently entertained with sparkling sketches, in paragraphic form, of Japanese life and manners. The many friends of Mr. Griffiths in Japan will regret to learn that it is not his present intention to return hither, but we are glad to be able to state that the pen so charmingly and untiringly used in chronicling the incidents of everyday life here and in other countries is not likely to lie idle, and that we are promised further contributions, from "beyond seas," of a similar nature to those which have already given the name of Mr. Griffiths a prominent place amongst American writers.

#### MASONIC.

The Emergency Meeting called for the purpose of installing R. W. M.'s and Officers of the Yokohama and O'tento-sama Lodges took place at the Masonic Hall on Saturday afternoon (25th) at 5 o'clock. A large number of brethren were present, including visitors from the Yedo and Kobe lodges, and officers of the men-of-war now in harbour. The following brethren were duly installed as officers for the ensuing year: YOKOHAMA LODGE:—E. J. Geoghegan, W. M.; A. Urquhart, S. W., and Treasurer; F. W. Sutton, J. W.; J. Hendry, S. D.; A. F. MacNab, J. D.; H. B. Haskell, I. G.; ———, Secretary; W. A. Miller, Tyler. O'TENTO-SAMA LODGE:—W. A. Crane, W.

M.; A. Langfeldt, S. W.; H. Moss, J. W.; E. J. D. Rothmund, Treasurer; M. H. Francis, Secretary; W. E. Clarke, S. D.; J. Laufenberg, J. D.; F. G. Woodruff, I. G.; W. A. Miller, Tyler.

The business of the meeting having been duly disposed of, about 40 brethren sat down to a most excellent repast, provided by Bro. W. Curtis, of the Japan Hotel. The usual loyal and masonic toasts were given and responded to, and "peace, love, and harmony" characterised the fraternal gathering, which separated at a late hour. In the course of the evening, Bro. E. J. D. Rothmund was presented by the Retiring Master of the O'tentosama Lodge, Bro. J. R. Black, on behalf of the Lodge, with a very handsome Past Master's Jewel, and several P. M.'s. referred, in very warm and eulogistic terms, to the indefatigable exertions of Bro. Rothmund in the cause of Masonry in Yokohama, but particularly in connection with the O'Tento-sama and Yokohama Lodges.

#### THE WAR IN FORMOSA.

FROM THE CORRESPONDENCE OF  
MR. E. H. HOUSE.

(Continued.)

THE following letter forms a part of Mr. E. H. House's correspondence to the *New York Herald*:—

CAMP, NEAR SIALIAO,

June 10th, 1874.

For the past few days the troops have rested and refreshed themselves. It is not probable that any further general movement will be necessary for some time to come. Much more has been accomplished, in a single month, than was actually laid out for the entire work of half a year. The plans agreed upon in Yedo never contemplated an advance into the interior during the present summer. In the prevailing ignorance as to the numbers and resources of the hostile tribes, it was thought prudent to occupy the first few months in establishing a fortified camp upon the coast, and forming advantageous relations with such of the aborigines as seemed well-disposed. It was also believed that the excessive heat would incapacitate the men from active operations. But these precautions, though undoubtedly judiciously devised, have all proved needless. After the first week, it became obvious that no attacks would be attempted by the savages, and the line of earthworks was left in a half-finished condition. The skirmish of May 22nd, although brought about by unexpected circumstances, showed the utter inability of the Boutan warriors to make a stand against the Japanese, and moreover produced a restless excitement that could not have been easily allayed in any other way than by sanctioning a general advance. The heat, although much greater during the day-time than in any part of Japan, was found to be not absolutely intolerable, partly owing to the relief afforded by the cool nights. The expediency of departing from the original purpose will not now be questioned. The greater part of the task of punishing the Boutans and their companions, and teaching them the penalty of murdering inoffensive castaways, is already effected. When the Chinese officials were here, three weeks ago, they expressed abundant sympathy with the purposes of the expedition, but politely doubted its efficacy. They said their own government had some time ago undertaken the subjugation of the savages, in a war which had lasted over a dozen years, and had then abandoned the enterprise as hopeless. It is clear enough that the Boutans believed themselves invincible, and all their neighbors looked

with an incredulity that was hardly disguised, upon the pretension of penetrating their hitherto inaccessible mountain wilds. But, in less than thirty days from the time of disembarking, the chief strongholds and most of the tributary villages of the aggressive tribes were in ashes, the inhabitants scattered in the hills, and their lands in possession of the enemy they had defied. It is true that none of these events would have taken place but for the haste of the savages to attack the Japanese, long before any attempt had been made to approach their territory. Apart from the original claim for retaliation—that of the slaughter of the Liu-kiu islanders,—the first and repeated provocations came from the Boutans. Then the exaction of redress became inevitable; and, since it had to be done, it was well it was done quickly. It is nevertheless true, that if they had offered any sign of repentance before the march of the first days of this month began, hostilities would have been stayed, and a pacific means of settling all the questions at issue would have been adopted. It was only necessary for them to give reasonable guarantee for their good behavior in future, and to accede to such terms as would supply a safeguard against an infraction of faith on their part, to escape the heavy indictments that have now befallen them.

A considerable amount of work yet remains to be done, in a military way, but it will be carried out by small detachments, in various localities. With a view to establishing posts on the eastern coast, and thus completely encircling the dispersed fugitives, a third conference with the "head-men" of the friendly tribes was arranged. The interpreter Johnson and the guide Miya were sent to summon them on the 6th instant. On the evening of the 8th they came to Sialiao, accompanied by about two hundred armed men—a circumstance which showed that some of them, at least, had not freed themselves from apprehension as to the intentions of the Japanese toward them. They were advised by Johnson, before our officers were notified of their arrival, to send their retinue back to the hills, which, after some hesitation, they wisely concluded to do. If they had kept them, the presence of so large a body must have become known to the soldiers generally, and it would have been difficult to explain the proximity to the camp in time to avert probable mischief. After they had gone, the "chiefs" expressed great anxiety to have their interview at once, to get it over as speedily as possible, and to start off for their homes before daylight. The preceding meeting had been held at night, and they found that an excellent and most suitable precedent to be followed forever. This was not, however, the view of the Japanese officers, who had little fancy for nocturnal excursions of the sort, and the visitors were requested to wait until morning. They did so, although with great reluctance; many of them remaining awake and keeping watch all night.

It is possible that the festivities in which the people of Sialiao were just then engaged had something to do with their wakefulness. For two or three days, the house of Miya had been (and still was) the centre of a wedding celebration of some importance. A grandson of the aged "head-man," and nephew of Miya, was the bridegroom. The bride was a daughter of one of the subjects of Issa, a native of Sawali. This custom of intermarriage between the two races—the Malay-like inhabitants of the interior and the Chinese of the coast—is not uncommon. I am told, indeed, that the women of all tribes are allowed to circulate freely in every part of the peninsula, even where no mutual intercourse is carried on among the men. If this mixture

of blood has been of long continuance, it is surprising that so much distrust and hatred exists between the opposite branches of the population, and hardly less remarkable that each should still preserve such widely different peculiarities of appearance, habits, and individual character. The savages have nothing whatever of the Chinaman in their exterior aspect, and their ways of life are totally separate. The divergence of their disposition is most strikingly shown in the contrast between the insatiable greed of the West Coast people and the indifference to gain of the mountaineers. In spite of the cruelty, ferocity, and ignorance of the latter, and notwithstanding the superior approach to civilization of the Chinese-speaking community, it is impossible not to recognise the higher average of natural qualities in the ruder race. They are open in the avowal of the enmity which the Chinese secretly and craftily cherish; and they are respectable, in the fact that their pledges are to some extent trustworthy. What they promise, they adhere to with reasonable fidelity. As regards intermarriage, I am inclined to believe that, while the coast men often seek wives in the interior, the savages prefer to mate among themselves. When they allow their daughters to form outside alliances, the fathers receive what they regard as sufficient pecuniary equivalents.

Feeling some curiosity in the matter of this wedding jubilee—which could not well be satisfied before without offending the prejudices of the natives, who do not like to have their social mysteries too closely scrutinized—I walked over to Sia Liao at an earlier hour than that fixed for the interview. The premises bore signs of a somewhat late agitation, the night before, and most of the jubilants were asleep. The street in front of Miya's house was covered by an awning, stretched from his roof to that of the building opposite, and the avenues of approach, from all directions, were guarded by little tables on which religious emblems were placed. In front of the large shrine within doors, two enormous candles of red tallow were still burning. The interior court-yard, like the street in front, was covered with canvas, and all the space usually left open was filled with tables, upon which lay the *débris* of a profuse supper. A variety of more or less musical instruments—gongs, cymbals, drums, and Chinese flutes and violins—showed that the coarser delights of the entertainment had been chastened by the refinements of art. As the banquet-halls were deserted, so, as a matter of course, were the tones of these savage-breast-soothing implements hushed. The sleeping chambers, however, were well filled, and sonorous choral strains issued from them, chiefly nasal. The visitors from the mountains were wide awake and on the alert, but most of the people of the locality were deep in dreams. In the course of half an hour they awoke in a body, one might say, and simultaneously sought breakfast, which a few of the women had prepared in the outhouses. The presence of the savage "head-men" was evidently a restraint upon them, and the venerable Miya *père* more than once took Johnson aside to enquire when the business of the day would be over and their unwelcome guests gone. I, personally, was an object of distrust and suspicion, owing to an unfounded apprehension that I was bent on seeing the bride; but when that illusion was dispelled, and the conviction gained ground that I was careless in the matter, I was urged by everybody to go in and "interview" her. So, indeed, I did, in a brief and imperfect fashion. She was in the best chamber of the house, seated upon the edge of the bed, which

was occupied by two sleeping matrons of the household. The period of undivided wedded life had not yet arrived, and the bridegroom was not suffered to approach the apartment in which his future companion was secluded. Him I saw hovering at a distance, dressed in white, and otherwise conspicuous by an excessively depressed demeanor. The young woman was also in white, with an amazing head-dress, consisting of a circle of silver, from which long tassel-like ornaments of crystal and polished metal hung down for several inches, so thickly that it was difficult to discern a feature of her countenance. Presently as I was sitting opposite her, she rose and brought me a tray containing sweetmeats, bending over, and revealing her face as she presented it. It was not startling enough in its beauty to warrant a pilgrimage to Sawali in search of kindred charms. But it was fresh and good-humored in expression, and very well suited the buxom figure to which it belonged, and was without the lines of tattooing on the cheek which are said to distinguish the majority of the Formosan fair.

The chiefs had finished their breakfast before the arrival of the Japanese officers, who had been detained by a visit from two head-men that had chosen the wise course of going independently and directly to General Saigo, with a statement which they desired to make on behalf of their people. These were the leaders of Kuchilai and Kaotan. Their purpose was to declare that no violence toward the Japanese had been meditated or executed by them, and to ask that they should be protected from molestation. They were well received, and promised that proper enquiry should be made and every consideration given to their case.

The general conference did not occupy much time. The principal business on hand was the distribution of the protecting flags that had been promised; by displaying which the natives were to guard themselves against unfriendly visitations. These were received by Issa of Sawali, Kalutoi of Mantsui, Sinjio of Pakolut, Lulin of Loput, Pinali of Linguan, Minat of Tuilasok, and a representative of the Koalut leader. The Koalut chief himself was still shy of appearing while a cloud hung over his reputation, and even his messenger was timid and reserved. The question then arose as to the temporary occupancy of a piece of land on the eastern shore, as an additional point of departure against the hostile tribes, in case they should long maintain their defiant attitude. This proposal was evidently not an agreeable one, but it was acceded to, after some discussion, without embarrassing conditions of any sort. Offers of payment were made, but the chiefs declined compensation, with the carelessness to gain which I have spoken of as characteristic of them. They were finally invited to walk over to the camp and visit the general's tent—a suggestion which almost threw them into a panic. It was plain that they placed very little confidence, up to this time, in the fair intentions of those with whom they were dealing. They endeavoured to conceal their perturbation, and gave as a reason for refusing that they had already remained over night away from their villages, which was an unprecedented abandonment of their usages, and that they were anxious to get home as soon as possible, to allay the apprehensions of their people. Hints of the presents that were awaiting them at headquarters did not affect their resolution, and it seemed impossible to move them, when suddenly Issa, stirred by what impulse I cannot imagine, unless it may have been the recollection of having made

a promise at the time of his last visit, announced that he would go. Most of the others then assented, and a hesitating, undecided, and timorous line of march was taken up toward the Japanese station. The readiest of the party was Sinjio of Pakolut, who kept well ahead, and, if he did not feel perfectly at ease, preserved the appearance of being entirely so. The gentleman from Boutan, however, was in great trepidation, and not only hung back from the start, but tried to conceal himself behind the houses and in the doorways of Sialio, and clearly believed himself in the awkwardlest scrape of his life. It required a profusion of encouraging gestures to get him into the boat to cross the river, and when he was there, although he preserved his muscular composure, his eyes rolled wildly, and the perspiration ran from him in streams. After reaching the general's tent, they all manifested the same eagerness to get away; they would wait for no refreshment, and stayed only long enough to glance at the Gatling guns, (which they begged might not be fired), and to receive a few gifts of colored cloths and pictures. The Koalut man did not enter joyously into any of the proceedings, but hovered aloof, and seemed to have a superstitious dread of putting himself within any kind of enclosure, however slightly defined. Issa, on the other hand, showed a disposition to take advantage of the situation by asking for a doctor to examine his eyes. It appears that his sight, like that of many of the islanders, is seriously impaired; a circumstance which accounts for a certain singular expression which I mentioned in an earlier letter. One of the surgeons applied a lotion to the inside of his lids, an operation which he bore with equanimity, and besought a bottle of the mixture for future use. The visit was brought to an end a little after, and the seven chiefs returned with their flags and presents, the Kuchilui and Kiofan "head-men" accompanying them, similarly equipped. Just as they went away, a regimental parade was taking place, and the regular and symmetrical movements of a thousand men—in ornamental "drill" the Japanese are perfect—made great impression on the mountaineers. But a mere display of tactics would never have brought them to the sense of helplessness which they now feel; that is all due to the successive exploits that have broken down their self-assurance—the forcing of "Stone Gate," the slaying of the Boutan chief, and the overrunning of the country which they thought could be defended against invaders to all eternity.

We give below, further extracts from the correspondence of Mr. House to the *New York Herald* :—

NISHIN BAY, NEAR TUILASOK ;

EAST COAST OF FORMOSA.

June 12th, 1874.

The arrangement for the occupation of a piece of land on the East Coast was made on the 9th instant, and on the 10th it was decided to send around a small force in the "Nishin," to a point already visited and examined from a distance. The infatigable and plucky interpreter, Johnson, was sent, with Miya, to notify the inhabitants of Tuilasok and the neighbourhood of the proposed new encampment, and, on the morning of the 11th, the "Nishin" started, with fifty marines on board. This little excursion was put in the hands of Admiral Akamatsu, assisted by Major Fukushima. The voyage is the first, I believe, that foreigners have ever taken part in, in a Japanese man-of-war. It is needless to say that

the greatest courtesy was shewn to the American guests. The officers of this ship are gentlemen of rather exceptional culture, many of them understanding several languages, and one of them, in particular, speaking English with as much purity of accent and fluency as if it were his mother tongue. The passage occupied only a few hours—from 10 in the morning until 3 in the afternoon. About twelve, the bay in which the "Rover" tragely took place was passed. This, though not more than a mile in depth, is said to be the largest inlet of the whole island. The little indentation from which I date this letter is not indicated in the charts, and is a discovery of the "Nishin," made in the trip of three weeks ago, when she was fired upon from the shore. It affords a very slight protection from gales, and, I presume, is only valuable as one of the few available points of debarkation along the coast.

As the frigate dropped anchor, a group of men was seen on the beach, with three of the flags that had been distributed two days before. This showed that they were disposed to put the pledges of good treatment to an early test. The landing was not effected without difficulty, the surf being rather high. Everybody was more or less wet, and the American Commodore was swept clean overboard. But, as I have often remarked, this is an experience which does not come amiss under the scorching sun of the tropics. We finally found our way into the mouth of a little river, not far from the bank of which were gathered Issa, Sinjio and Lulin, with a few of their followers. They had seen our approach, from a considerable distance further south, and had run along the shore, with their flags, to meet us. They had built a fire, with what earthly or unearthly design we could not then conjecture, near which they expected us to sit down, and seemed somewhat concerned at our unwillingness to subject ourselves to their artificial heat in addition to that which naturally blazed upon us. All of the natives were more carelessly attired than on their ceremonial visits to Sialio, and not only appeared without ornaments but with very little clothing of any sort. They were in much better humor than they had ever before appeared, owing, I suppose, to their freedom from all restraint, and the consciousness that their feet were on their native sage-brush. Most of them exhibited a tendency to unintelligible jocularity; Issa being the exception. He still preserved imperturbable stolidity, but the amity of his sentiments was indicated by his wearing the sword that had been given him by General Saigo. In consequence of some misunderstanding as to the place of meeting, Johnson did not promptly appear, to interpret; and meanwhile, the fifty marines were landed, together with an equal number of sailors. Little excursions were made to Tuilasok, the old house of Tokitok, and to other villages within a mile of the shore. This region is more attractive in appearance than the country round about Liangkiao, the hills rising rapidly from the water's edge, and being covered with thick and variegated verdure. On the sands there were signs of an avocation which the savages have not generally been supposed to follow. Fishing nets were stretched upon frames, and "catamarans" were propped up on edge, ready for launching. In the centre of the beach there was a suspicious looking line of elevated sand, about two feet high and thirty feet long, just at the spot whence the "Nishin" was fired upon. It had most probably been thrown up as a breast-work, from which to repel any attempt to land, at that time, and the position was well enough chosen for the purpose,

a safe way of retreat to the hills lying exactly behind it.

As the afternoon passed, numbers of the natives came in from various directions, some belonging to the fierce race which we usually speak of as aboriginal, and others of Chinese descent. The former are always easily distinguished by their distended ears, the lobe of many of which are stretched around pieces of circular metal or stone, not less in circumference than a Mexican dollar. It may hereafter become a question whether any connection can be traced between these people and the Japanese, who are known to have occupied Formosa ages ago, by means of these prodigious ears. There are in Japan innumerable pictures and bronzes representing early heroes, saints etc., in which the lower part of this feature is disproportionately large and drooping, and sometimes consists of a mere rim, which is precisely the case here. The famous statue of Dai Butsu, at Kamakura, is an example in point.

All the new-comers were heavily armed, but all were prompt in their invariable salutation of friendship, which consists in placing the hand upon the breast, to signify, they say, that the heart is good. Some of the Chinamen knew how to write, and amused themselves by tracing simple characters in the sand. A few of the savages could understand a little Chinese, but could not write or read. Their own language has no written form, so far as I can learn. Mutual communication was extremely disjointed and incoherent, until the arrival of the interpreters, when all was smooth again. The camping ground was selected and approved, the "head-man" of Tuilasok again refusing to be remunerated. Later in the day, a Koalut warrior marched in among us; who, we were assured this time, beyond a question was the chief himself. He was near his own domain, now, and, if not without reproach, was devoid of fear. He was a little man, this leader of the most blood-thirsty tribe, except the Boutans, in the Peninsula, with a rather effeminate face, large mild eyes, and a wreath of will flowers tastefully woven into his hair. One of his companions had a somewhat similar, though more extensive decoration, composed of leaves and twigs. The young inheritor of the majesty of Tuilasok was adorned with a pheasant's plume of great length. His brother, Tokitok's youngest son, was unembellished except by his fine intelligent brow and beautiful eyes. He was the only handsome savage of the lot, unless the Koalut chief might put in a claim to partial rivalry; and would hardly have a blemish to his countenance were it not for the bored ears and the lips stained with betel-nut juice.

Toward sunset, a fresh party was seen advancing over the hills, bearing tubs and baskets and packages of various shapes and dimensions. It was easy to see that a primitive feast was impending—not a stately banquet, with pig and chicken, but a neat impromptu repast on approved *al fresco* savage principles. There was rice and there were eggs, and especially there were great vessels of sweet-potato Samshu, for the last touches to the preparation of which we now saw that the fire was to be made available. It was re-heated, and then handed around with persistent, not to say oppressive, hospitality. The liquor was not particularly palatable, but was extremely potent, with a flavour not unlike very inferior Irish whiskey. Our hosts expressed much regret when we refused to join

them in every "round," but, I think, consoled themselves with the reflection that there would be more left for themselves. The process of emptying and refilling the cups was plainly pursued with what Dr. Johnson declared to be the only aim of drinking, and the consequences were speedily apparent in the growing hilarity and sudden development of affectionate tenderness. Issa himself, stern and unbending, began to make jokes. He several times distorted his face into what was meant to be a smile. When he undertook to accompany us to our boats, he kicked about the sand involuntarily, and pretended he had done it out of pure facetiousness. The last I saw of him, he was trying to walk through a fishing net that hung in his way, but of which he was as oblivious for the moment, as of the ancient feuds of his race. The astonishing thing about this transaction was the fact of its taking place—as a demonstration of thorough good feeling—on a shore which had never before been approached by strangers with impunity, and in a spot which, only twenty days ago, witnessed a murderous attempt on the part of the inhabitants against the very guests of the present moment.

#### NEW CAMP, NEAR SIALIAO.

June 16th, 1874.

The ground first occupied, between the two rivers of Liangkiao valley, having been found inconvenient, unhealthy, and generally unsuitable, a new encampment was laid out about the middle of last month, and prepared with a good deal of care, under the direction of Hirano, of the quarter-master's department. Several houses were built, for hospitals and for officers' quarters, which, considering the limited resources at hand, are downright palatial in their amplitude and comfort. At least, they seem so to persons who have been alternately stifled and half-drowned in bell-tents for a month. The hospital patients were brought over a fortnight ago, and it speaks highly for the skill of the Japanese surgeons that not one of the wounded men has died, and most of them are well on their way to recovery. The doctors of the English ships speak very handsomely of the way in which the injuries have been dressed and treated. I am glad to have such variously corroborating evidence of the cleverness of our surgeons, for they are such gallant fellows on a march that one likes to have his good opinion of them confirmed in all ways. They go forth armed, not only with the instruments of their calling, but also with swords girded and rifles in hand, ready for operations of the most divergent character, either in or out of their line. Most of the wounded men were sent to Nagasaki on the 14th instant. On the same ship General Tani returned to Japan. Admiral Akamatsu and Major Fukusima sailed in the "Nishin," this morning, for China, the bearers of a communication to the Japanese ambassador at Peking.

Two British ships-of-war, besides the "Hornet," have commenced a series of observations in this vicinity—the "Thalia" and the "Dwarf." A Chinese frigate made a brief call on the 13th, remaining only a few hours.

A messenger has just come in from the chiefs of Kuskut and Peigu, the former known, and the latter believed, to be allies of the Boutans, announcing their desire to treat for peace. They will be received in a day or two. Nothing is heard from the Boutans, further than indirect reports that they are disunited and equally desirous to make overtures, though apprehensive as to their reception.

## A JOURNEY IN NORTH-EAST JAPAN,

By CAPTAIN BLAKISTON.

*Read before the Asiatic Society of Japan,  
on the 17th June, 1874.*

Some months have elapsed since the wreck of the P. M. S. *Ariel*, on a reef off Toyoma Point, on the East coast of Japan, in Latitude 37° N.; which was the cause of the journey here recorded. When Captain Newell and myself slid down a rope from the fore chains, the vessel had sunk so far aft that the water was on the upper deck, forward of the paddle boxes, and the whole after hurricane deck was submerged. Fortunately, there was little swell, so that all the boats in the darkness of the night reached the shore, and chanced to strike parts of the beach between the reefs. The head-man of the little village of Toyoma, whom I found with the assistance of a fisherman and his paper lantern, made arrangements for the accommodation of the eighty-four shipwrecked people, and the villagers were all extremely civil.

Next morning, all that was visible of the unfortunate *Ariel* was one of her mast-heads. So after a breakfast of beef and ship-biscuit, I hired a man to carry a small leather bag, which my next cabin neighbour had luckily saved for me, and started on foot for Taira, the chief town of Iwasaki ken, or district, to which a fair path, of about three *ri* (7½ miles) in a general W.N.W. direction, leads through small valleys and over some low hills.

The town lies in a plain of some extent; in fact, the name Taira signifies "a plain." It is surrounded on most sides by hills, which, towards the north-west and west, rise into mountains of considerable elevation. The plain is entirely under rice cultivation, and crossed only by the common narrow paths of the settled districts of the country. The ruins—as I took them to be—of the former *daimio's* castle stand on a hill just over the town.

Proceeding direct to the Government office, a temporary looking building occupied by a number of officials sitting at desks, I was at once introduced to the chief. He received me civilly, inquired about the particulars of the wreck, and promised to have quarters prepared for all the people, and forward them on their way to Yedo, being the nearest foreign settlement, distance 56½ *ri* (133 miles English). When I told him, however, that, being a resident of Hakodate, I requested a passport for the purpose of proceeding thence overland, he demurred, and would convince me that my proper course was to return to Yokohama. I therefore left him and put up at a native hotel, where I ordered a horse, purchased a blanket, a Japanese pipe, and tobacco, and was nearly ready to start when Captain Newell and the rest of the people arrived. As the ship's interpreter had not yet come on, I assisted in getting them billeted.

About half-past two, an officer came to inform me that the idea of my travelling north was, as he expressed it, "mudkashi"; a word difficult of complete expression in English, but in this case meaning that the chief official would not give his permission. My mind was however made up, and I therefore informed him that, being ready to start, I should not wait even half an hour for the passport, but proceed without one. He seemed in great tribulation and went back to the government office.

I then told the man with the horse, who had already packed my scanty shew of baggage, to proceed on the northern road, and, after a few minutes, I followed on foot. Outside the town I mounted on the pack saddle, and, with the horse led by a coolie—which is invariably done in this part of Japan—I commenced my journey in earnest.

This road is known as the Hama-kaido, or coast-highway, in distinction from the Naka-kaido or inland post-road; both of which start from Yedo, and, running northwards, converge again at Sendai, one hundred *ri* from the Nippon Bashi, or great bridge of Yedo. It partakes of the character of the Tokaido—so familiar to residents and tourists in Japan, and so often described—the general principle being a roadway from twenty to forty feet in width, lined by pine trees closely planted on either side, forming an avenue. Occasional intervals occur where trees are wanting, which may be accounted for in some parts by the moisture of the subsoil being unfavourable to the growth of *conifers*, in others by want of superintendence. These intervals are in some places filled with willows and alders. A thousand species of the most picturesque group of pines, rising in straight or inclined turtle-backed stems, and branching out above in all sorts of variations of curves and twists, roofed with a dense mass of the brightest dark green foliage, might be selected, and be a study for an artist's lifetime. The Japanese have not failed, in their artistic works, to secure this feature so familiar to their own eyes, and have stamped the pine tree, one might say, as one of their natural

emblems. It is to be hoped that the unsparing and barbarous hand of an impoverished government will not be laid on the pine trees skirting the old highways of the country, and that this great feature in the scenery of Japan will not be civilised off the face of the earth. As a protection against the rays of the sun, and some mitigation of the piercing blasts of winter winds, they are of utility. Besides, they thrive best on the driest soil, and in distinction from other trees do not seem to add to the dampness of the ground; so that there is no reason why the very best road should not exist between rows or these trees. After the almost bloodless revolution which changed Japan from a feudal to a monarchical government, it should be the study of those in power to retain at least some of the time-honoured features of a state which has passed away.

From Taira, the road takes a northerly direction, but trending a little east, and before leaving the plain crosses a considerable-sized river known as Natsi-kawa, flowing eastward, probably the principal drain of this basin. After this there is another deep but smaller stream, called Nidawa, some distance beyond which the road strikes the sea coast on the village of Yotsukawa, distant three *ri* from Taira. Here I dismissed my horse and guide, and, putting my baggage on a pack horse led by a woman who was returning from market, continued on foot over some moderate hills of white sandstone, and along the sea-beach for another *ri*, reaching the village of Sta-no-hama just before dark, where I was pretty decently lodged, and ordered horses to be ready at an early hour next day.

When I awoke in the morning I was hardly surprised to find the next room to mine occupied by two *yaku ins*, who had come post haste during the night to overtake me. We made acquaintance by the usual morning salutation, after which Mr. Iton, for so the chief was named, asked me if I had a travelling permit, which I quietly answered in the negative. Nor did I appear interested about the matter, for I suspected they had been sent to get me to Taira, and abandon my projected northern journey. He then produced a Japanese document which was unintelligible to me, and said that if I was going on, he had been deputed by the chief official at Taira to accompany me. I notified him that such was my determination, and that I trusted we should travel agreeably together. We then became the best of friends, and, after we had had breakfast, the horses making their appearance, we set off together.

A general northerly direction carried us partly inland, and sometimes along the shore, under clay-rock cliffs nearly pure white. The streams we crossed contained some granite stones, indicating the probability that a range of mountains running parallel to the coast, and about 10 to 15 miles distant, was of primitive foundation. These mountains were not so much wooded as the lower hills. I observed also some coarse sandstone and conglomerate. The rollers coming in on the beach were very heavy, and forced us in one place to make a considerable detour inland instead of following the usual route along the sea beach. A good deal of the country was wild, but the valleys were cultivated with rice, cotton, tea, and beans; the farmers having good substantial houses and appearing well-to-do. Pine trees skirted a great part of the regular road.

At three *ri* we changed horses at the village of Shirino. Thence one *ri* over a broken country, for a large part pine-wooded, the road being in places cut through the clay-rock, with gutters on either side to a small place called Kido. On the beach arched in which sea water is evaporated for its salt; a wooden spout running out on the beach to high-water mark, into which the water is baled by hand. All about Taira, and throughout this part of the country, the nature of the rock admitting of easy excavation, one notices numerous caves which the farming people use as storehouses; some of them having regular doors and locks. These are said, with what truth is uncertain, to have been used as habitations by the aborigines of this part of Japan.

Soon after leaving Kido, we found a rapid-running good-sized river, having a weir set near the crossing-place for catching salmon. Thence over an uncultivated country, partly broken and hilly, and partly in plateaux, the ground being covered with green fern and brush, and sparsely wooded with pine. The road is about a mile or so back from the coast. At three *ri* it reached Tomioka, situated in a valley. Again we got fresh horses and made 3½ *ri* more over much the same kind of country, but more wooded and very little cultivated, to Sinzan; passing on the way a village called Kuwa-no-kawa, in a tolerably open valley where a good deal of mulberry is cultivated, and a rapid river runs towards the sea. I noticed that the mulberry shrubs were all pollards, and at that time of the year the branches were tied up in a bunch, the intervening ground being used for cereal and other crops. Rice was under process of being cut. From Sinzan we

took on the same horses another stage of one and a half *ri*, passing a considerable valley and several villages; then over a pine-covered ridge, descending from which into a fine valley we crossed a rapid river on its south side, where the bridge had been lately washed away, and took up our quarters for the night at the town of Namiye.

On the north side of this valley we crossed on the following morning by bridge another rapid river of considerable size. We then ascended the uplands by a good road through the finest avenue of pine trees I had yet seen. Onwards over a good deal of broken and wild ground, but wherever there happened to be a valley it was cultivated. When about a mile and a half from the sea I noticed a lagoon, about half a mile long, separated from the sea by a low neck or spit partly wooded. Passing over more broken country, of which the hills ran mostly parallel to one course, that is north and south, we came to Odaka, 2½ *ri*. Forward, we traversed much the same kind of country another 2½ *ri* to the town of Hara-nomachi, which lies in a fine plain, the south part of which is entirely clear and open and kept for horse grazing; having the appearance of a common or military exercising ground, for which it would be well adapted.

Throughout this part of the country there are many tanks formed by embankments creating dams across the heads of the narrow valleys and ravines, which are furnished with sluices for distributing water to the rice fields in the lower part of valleys. The highway, or *kaido*, often crosses the upper valleys on these embankments, which are strong and substantial. The large valleys are frequently double as it were; that is to say, a river on either side, and a village and much cultivated land in the middle. Invariably there is a small stream led down the principal street of the village, used for household purposes. I do not consider that these double valleys are natural, but imagine that the tributary streams which make up a river have been artificially confined and led down the sides of the valley; so that what might have been in former ages an extensive river bottom with large shingle and sand flat, and many waste patches subject to periodical floods and changes of the bed of the river, is now, by these artificial means, rendered valuable agricultural land.

Two *ri* more brought us to Kasima, where we halted for dinner. Thence we travelled 3 *ri* to Nakamura, the capital of the former daimiate of Soma, a place containing a good many streets, but of poor appearance. It stands in a cultivated plain extending from the sea to the mountains, say 5 to 8 miles. Having a good many trees about it, it does not appear anything of a place from outside. There is a lagoon on the coast not far south of Nakamura, and one or two to the northward. Towards evening we passed out of Iwasaki Ken near a small place called Komanaminac, two and a half *ri* northward of Nakamura, where we put up for the night within the limits of the province of Miangi Ken, in rather poor quarters.

On the 31st of October, being our fourth day, we made a start before daylight, making one *ri* over a rolling country, and changed horses. I walked on foot the next stage of two *ri*, where we had to change again. The head-land of Kinkasan, the eastern extremity of Sendai Bay, was visible, bearing about E.N.E. The next stage was five *ri*, the road keeping along the foot of some hills on our left hand and passing through a good village called Yanaasta. The whole extent of country between the road and the sea is a low-lying, dead-level flat, entirely rice-cultivated. On the upper grounds I noticed in the gardens, mulberry, beans, tobacco, *daikons*, cotton, turnips, buckwheat, and the paper-shrub. The country people seemed poor, and the houses dilapidated. I saw a good many cattle, and many houses kept numbers of tame ducks.

We passed through a long town called Watari, and thence continued on the same plain, which extends more to the east. It is entirely rice-covered, but has clumps of trees about the scattered farm houses. The hills to the west become gradually lower. At two *ri* beyond Watari, we struck the river Abukumangawa, which seems to come out of a deep valley cut through the lower hills and a mass of mountains to the westwards, having about an east course. It is at least 250 yards across where we were ferried over, but mostly shallow, there being about ten feet close to the landing-place on the left bank. We had some difficulty in crossing, as there was a gale of wind blowing which made the flat-bottomed scow somewhat unmanageable. It has fine solid embankments on either hand, some distance back from its actual banks, in order to allow for a considerable overflow during flood. On the north side the embankment is lined with fine pine and cedar trees.

Half a *ri* on the north bank of the Abukumangawa is the town of Iwanoma, which, from the number of hotels and eating houses, seems to be a

favourite stopping place for travellers. It is here that the Naka-kaido and the Hama-kaido unite, and thence only one road goes northward to the town of Sendai, distant five *ri*, and continues on through the old provinces of Sendai and Nambu; which is the way all travellers take from Yedo to Awomori and Hakodadi, and before the introduction of steamers was much used. That portion of the Kaido between Naka-mura and the Abukumangawa is a poor and badly kept road, nothing in comparison to the fine road south of that place, on most part of which, if the bridges were only practicable, one might drive a carriage and pair. This is probably to be accounted for by the fact of the Naka-kaido or inland highway having been invariably used by the northern daimios; while Soma being the northernmost daimio on the coast road had no object in keeping up his communication to the north of his capital, but only troubled himself to look after the road he used in his annual state pilgrimages to Yedo.

Hiring *jin-riki-shas* at Iwanoma, we traversed the distance of five *ri* over a fine, well-cultivated country, crossing two considerable rivers on the way, and reached the important town of Sendai after dark. We were detained some time in heavy rain awaiting the selection of an hotel, but were ultimately provided with excellent accommodation.

Sendai, distant one hundred *ri* from Yedo, is at present the chief town of Miangi Ken. It was formerly the residence of the daimio. It is a large place; in fact, from the imperfect way I was enabled to judge in the dark, I should take it to be of greater extent than any town I have been in in Japan, save Yedo and Osaka, though the population is stated at only 21,000. I noticed several good stores, principally devoted to the sale of foreign imported goods. There are many bird-fancier's shops.

I was informed that the nearest part of the coast lay at a distance of three *ri*: that Sabusawa—which is on an island, but is the nearest available port—is seven *ri*. Rice in large quantities is shipped hence to Yedo, being the bulk of the produce of the country. Hemp is largely grown, Sendai being renowned for its fishing nets. Silk, tobacco, and many of the other ordinary products of Japan are produced, so that whichever of the ports of Sabusawa, Ishibama, or Ishinomaki in Sendai Bay shall be opened to foreign trade will without doubt become an important place. Doubtless a short line of railway or tramway will be required to connect the port with the producing districts. Indeed, such feeders for ports will become necessary in many parts of Japan, for, being a mountainous country, the building of trunk lines would be ruinously expensive, and the sooner such ideas are given up by the government the better. It may answer the interests of certain persons to advocate such schemes, and may please the vanity of some of the rulers of the country, while suiting the pockets of those connected with such undertakings; but what real business would accrue from the enormous outlay is another question.

On the 1st November we made a late start—as is unavoidable at a town—making three short stages north-east and north, stopping for dinner at a large village called Yoshioka, distant 5½ *ri*. The rain during the night had fallen as snow on the mountains. At the outskirts of Sendai we passed through a collection of potteries, where are manufactured the coarser kinds of jars and pans. The Kaido—hardly deserving that name—runs for a great part over a broken country, the uplands of which are mostly scrub-covered, with pine trees dotted about. The narrow and confined valleys are rice-cultivated. The villages are poor. The country, however, improves on approaching Yoshioka, which is situated in a valley having a small river running through it. A fine mass of mountains lies away to the westward, having some detached pyramids standing out into the lower country. From an elevated position on the road I could trace these mountains stretching onwards as far as a north bearing, while some distant highland is visible about east, but the country between these points of the compass was clear of mountains. In fact, I presume it is the valley of the Kitakami, to be afterwards mentioned.

From Yoshioka, the road passes three *ri* over a rough scrub-wooded country, having a few pine trees scattered about. The form of the hills, which are nowhere of any height, has all the appearance of a confused sea, there being no prominent elevations, while the crests of all the ridges and mounds are about on a level. The road follows mostly the crest of these ridges, and its tortuous course may be traced by the lines of pine trees skirting it. Suddenly coming to the northern edge of these rugged uplands, we overlooked a great plain, stretching away north as far as we could see but bounded on the north-west and west by distant mountains. From the latter direction a large river, called Narusikawa, skirts the foot of the highlands, flowing eastward. Where the bridge crosses it in entering the village it is from 100 to 150 yards wide, but owing

to its being in flood, I could not judge of the depth. I saw, however, large-sized cargo boats on it. I was informed that it discharged into the sea at Nodai, and from what I can make out from an interior Japanese map, its mouth is a little west of that of the Kita-kami.

Sampongi is a large village on the north bank of this river. The whole valley, at least fifteen miles in width, is alluvial soil and planted with rice. There are clumps of trees about the homesteads. A little over one *ri* further north we came to Furukawa, another good-sized village, from which an outlying double-topped mountain bears about west. We took up our quarters in a comfortable inn for the night.

Salmon were at that season running up the rivers of this district, being valued at about 50 cents each. We met many drives of cattle and horses on their way from Nambu to Yedo.

In the morning, a direct course north by east, part of which we travelled before daylight, along the highway—here lined by willows and alders—crossing a river about 60 to 80 yards wide, called E-kawa, to a small village where we changed horses. In this interval of one and a half *ri*, we passed the boundary of Miangi Ken and entered the province or country of Midzusawa. Thence ascended uplands and a rolling country; the road about 24 feet wide running over low scrub-wooded hills between lines of pine trees, the valleys only being cultivated. Changed horses again at 1½ *ri*, and then 2½ *ri* more brought us to a well-to-do looking village called Sikitatae. A branch road to Shonai, on the west coast of Nippon, branches off somewhere hereabout. The distances reckoned at four days traveling to Sakata, the former capital of that daimiate.

From Sikitatae we crossed the valley in which stands, through which runs a good-sized river called o-kawa, probably a branch of the Kita-kami. The very pretty valley widens out from the mountains some ten or fifteen miles distant. The road passes through another large village on the north side of the valley, then over scrub-covered rolling uplands, and at 2½ *ri* reaches a poor village called Sawaki. The season was now so far advanced that the rice crops were for a great part cut, but still not yet carried off the paddy fields. There having been some frosty nights the leaves were beginning to fall, the autumnal colours of which appeared exceedingly brilliant when contrasted with the dark green cedars and pines. The prevailing fruit throughout the region is the persimmon, but as you proceed north they are not of large size. The people seem to take less care of their horses than in the south, and this negligence increases as you get into Nambu.

After dinner we made four and a half *ri* to Ichinosiki, in which distance we passed a good many rough brush-covered hills, higher, and with steeper slopes than hitherto. Rice is cultivated wherever possible. Ichinosiki lies in a fine valley, and is a pretty fine town, having been the capital of a small daimio called Tamura, a cadet of the house of Sendai. It said to be one day's travel from the sea. The capital of the province, from what I could understand, is Midzusawa, on the coast. The peculiarity of dialects prevails here, the word used for "yes" being "Nae." In Nambu this is changed into "Iia," pronounced very broad.

At Ichinosiki the road strikes the valley of the Kita-kami river, and thence follows up that valley to and beyond Morioka, the capital of the former province of Nambu, where the river takes its rise. Its general course is due south, through a beautiful fertile valley. It seems to break through a mountain mass near Ichinosiki. Its lower course I am unacquainted with, but it discharges into the sea at a place called Ishinomaki, in Sendai Bay, eleven *ri* from the town of Sendai. The situation of a staff light at its mouth is given in a late notification of the Lighthouse Department, as Latitude 38° 26' and Longitude 141° 15'. This river must consequently have a direct course of about 100 geographical or nautical miles. It has numerous and considerable tributaries and drains a large extent of country, the produce of which is very considerable, and for the transport of which the river furnishes ready means. Between this great valley and the Pacific coast, where are the harbours of Miako, Yamada (Nambu), Tanohama, Kamaizze, and others, lies a rugged mountainous country, crossed only by inferior mountain roads. In fact, this valley is entirely cut off from the coast, so that, although these harbours are the best on the whole east coast of Japan, they can never become available for more than quite local trade. The produce of the interior must find its way to the coast by the Kita-kami valley and river, an additional reason why a port opened in the bay of Sendai, before advocated, would be of the greatest importance. And it would be wise on the part of the Government to institute detailed surveys of the ports in Sendai bay, with a view to the selection and improvement of the most suitable for an increasing trade. There is probably no port in Japan

where a larger export of the more bulky production of the country would be drawn directly from the interior.

The 3rd of November was a very rough, cold day, with frequent squalls of rain and sleet. We started early from Ichinosiki, crossed at once a large tributary of the Kita-kami, and thence followed up the road on the western side of the main valley. A fine mountain group lies north-east of Ichinosiki, which has the appearance of a detached mass, but is really the commencement of a range of mountains on the east side of the river. Its slopes are very picturesque. The valley is well cultivated with rice, wheat, beans, and hemp, the last being made into twine used for fishing nets, the manufacture of which seems to employ a large part of the population.

Passing sometimes over spurs of the uplands, the road continues up the western side of the valley, and reaches Midzusawa at 6½ *ri*. After dinner we made a straight course up the valley, coming at two *ri* by boat to another good-sized tributary emerging from the mountains to the west. At the next station we could see no horses to go forward, and therefore employed a couple of coolies, who easily carried all the baggage belonging to the three of us. The road rises on some well-wooded uplands, from whence a fine view of the river and its valley is obtained. This view, with a background of wooded mountains having these lower slopes cultivated in patches, I enjoyed from a house situated just where the road descends again into the valley bottom. The landlord was very communicative, and informed me that the boats navigating the Kita-kami could carry 150 to 200 *koku*, say 400 to 500 piculs, as far up as Kurosawa, and 50 *koku*, say 125 piculs, even up to Morioka. Thus, from Kurosawa, the passage to the sea occupied two days, and, against the current with a fair wind, four or five, upwards. The current is strong, and some of the rapids very shoal.

Continuing on, we followed the road in the well-cultivated river bottom, passing through a small village where there are earthen banks thrown up to mark the boundary of the old province of Nambu. Posts now show that this is likewise the limit of Midzusawa Ken on the south and Iwate Ken on the north. Just beyond this is a rapid river, which, being then in flood, we only crossed with considerable difficulty in a narrow boat poled by four men. It was by this time nearly dark, but a short distance more brought us to Kurosawa, where we were comfortably lodged in a good large house. My Japanese companions seemed to think they were getting near the end of the world, the people and country being more uncivilized than anything they had been accustomed to. It was with difficulty that they made themselves understood to many of the people, and it was amusing to hear their remarks on these northern savages, as they designated them. On the contrary, I felt more at home as I proceeded, and found my imperfect knowledge of the mixed dialects of Hakodadi more and more useful.

On the 4th, we made the whole distance of thirteen *ri* from Kurosawa to Morioka, the old capital of Nambu, and now the chief town of Iwate Ken. Some of the first parts of the road was over uplands, but the greater distance on the level plain of the river valley. The land is well cultivated with rice, wheat, beans, &c., and I particularly noticed some large, long carrots. I have seldom seen a finer and better watered valley. The scenery also is very pleasing, and at that particular season, when the autumnal tints of the hardwoods on the lower slopes of the mountains were intermixed with the bright green of the pines, and the mountain tops snow-covered, it was remarkably beautiful.

Several tributary streams coming from the westward join the main river in this part, the most important one being three *ri* six *chō* north of Kurosawa. The town of Koriyama stands partly on a hill which rises in the middle of the valley and abuts on the river. From thence the pine mountain known as Nambu-fuzi is constantly in sight for the four *ri* to Morioka, from which it stands in a north-west direction. I was fortunate enough to be able this day to hire a jinrikisha, with which, by the aid of occasional walks to keep myself warm, two stout coolies managed very well to get me over the latter twenty-five miles of the road. A large new wooden bridge—lately substituted for a bridge of boats—spans the Kita-kami at Morioka, which is situated on the left bank. A tributary stream meets the main river in the town: it comes from the eastward, and up its valley runs a road to Miako on the east coast.

Morioka, though large, is a poor-looking place. It is said to contain three thousand houses, and 13,000 inhabitants. It is favourably situated, and in a beautiful country. The surrounding hills are cultivated for a considerable distance up their sides. We were lodged at the Honjin, or Government hotel.

Leaving Morioka in the morning, we travelled the whole day up the left bank of the Kita-kami, climbing, in the first part, some rather steep hills which abut upon the river. We halted at a small place called Shibutan for dinner, right abreast of Nambu-fuzi, from which point I was enabled to make a sketch of this fine mountain. Its conical form is tolerably perfect. The lip of the crater is very clearly visible. There is little or no wood except quite near the base, where the sides emerge into gently sloping grass plains, which form a beautiful middle ground in the picture. I should roughly estimate this volcano at over five thousand feet above its base, which would make it about 7,000 feet over the sea level. Its detached position gives it a very commanding aspect, so much so, that, next to Fuziyama, I think it the finest mountain I have seen in Japan.

The valley of the Kita-kami becomes much more confined above Morioka, and the river itself loses the character of a navigable stream. Its still considerable volume is more or less obstructed by rocks and boulders, and it is confined to a narrow bed. In appearance it is the perfection of a fly-fisher's river, but I understood the people to tell me that few or no salmon ascend these upper waters. Its course is pretty direct, and it has numerous small feeders. Before reaching Numakunai, what is really its largest branch is crossed coming from the eastward, but the Japanese consider the direct north branch the main river, and so venerate it as the Northern God, or Kami. As near as possible to its source they have erected a temple called Mioo-kanon, which one passes on the road four or five miles above Numakunai. There are some large cedar trees alongside this temple, but the building seems to be kept in but poor repair. As to the name of this river, the character by which it is now represented in Japanese means, I am informed, "Northern Source," but a Japanese friend of mine has discovered that it was not so written in former times, but then represented "Northern God." Discussions so frequently arise on such points that I have thought it proper to give the authority on which I base the more poetic translation of Kita-kami. Why it should have been considered as a god is, I think, not difficult of explanation, from the fact that, in ancient times, when the Ainos—now restricted to Yezo and its outlying islands—were in undisturbed possession of this part of the country, they probably venerated it as the source of their principal sustenance, fish; while, later, the Japanese being dependent on its waters for irrigating their rice fields, and as a highway of transport, would naturally adopt such a superstition. For, as I have said before, this river has a direct course from north to south of at least one hundred geographical miles, exclusive of its windings, along which whole distance its banks are thickly settled by an industrious population. It is probable, however, that the Japanese gradually invaded and settled this valley from the southward, and its source was probably for generations unknown to them. Seeing such a constant stream of water coming from where they could not tell, it was but natural, in a country like Japan, where rivers of large volume are exceptional, that they should venerate this fertilizing source.

The distance between Morioka and Numakunai is 8½ *ri*; the first part of which, after bad weather, such as when I passed, is rather bad travelling; added to the discomfort of which I was unfortunately enough on both stages we made to be accommodated with unusually small and uncomfortable pack saddles. I remarked that, in distinction from south of Morioka, the pack-horses we met were not bitted, but had simply rope halters; and instead of one man leading each horse, they were allowed to pick their own way, one driver looking after several. The horses, too, were lower and not so leggy as the Sentai animals. When the ground is likely to be pretty soft, the straw shoes which are generally used as protection to the horses' feet were neglected. Men's straw sandals are cheap enough throughout this country, being usually eight tenths of a cent to one cent per pair.

The valley is more or less cultivated all the way along. As you approach Numakunai (8½ *ri* from Morioka) the hills become moderate, and are mostly bare of wood. This village may be said to be the last in the valley, there being, above, only a few houses. The name is Aino, or rather said to have been slightly changed from Numakunai. Before reaching this I had not noticed any Aino names, but many places to the southward in Nambu are so named. It is probable that the aborigines held the country which drains towards the north and east until a comparatively recent date. I have since learned that, near the main road south of Morioka and between that and Koriyama, there is a mound in existence, where it is said by Japanese that, about twelve hundred years ago, Tamura Shōgun, the reigning Mikado's General—and by some said to be

his son—heaped up the bodies of all the Ainos killed by his troops in a great battle. The explanation of the name Yezo Mori supports this tradition, "Yezo" meaning Aino, and, in the Aino language, "Mori" signifying a mound.

There is a feature in the upper part of the valley of the Kita-kami which cannot well be passed unobserved. It is also to be seen in many river valleys on a larger or smaller scale, but is most noticeable in mountainous countries, where the courses of rivers are short and steep. I refer to *river terraces*, those comparatively horizontal steps which are sometimes on one side and sometimes on the other, and occasionally on both, and which form a series of terraces ascending the valley; frequently varying as to difference of level, but often remarkably regular in their gradations. Many persons are under the impression that these terraces are the remains of former sea beaches; that to have formed them the sea must have covered whole continents, and reached near the tops of high mountains; that the land has either risen out of the sea, or that the sea has receded. It is difficult, however, to accept such explanation. For, if it were the rising of the land, it must be assumed that the land has invariably been elevated evenly, and not on an incline; which is against all modern observations. Neither can they be accounted for on the supposition of depression of the sea; for, to form terraces in such marked and regular gradation, sudden depression and stages of rest should have occurred, which would be difficult to imagine. In the Rocky Mountains these terraces are seen in the river valleys running into the mountains from the prairies, at an elevation of four thousand feet above the sea-level, and thence upwards they are remarkable. Similar features occur in many parts of the world, and in Japan they exist in many localities. Now, as Japan is a volcanic country and has doubtless been subject to many and frequent changes of features in what are called geological epochs, upheaval and depression by such means are unlikely to have been even, but the chances are in favour of the new form of the surface being more or less contorted or inclined. Consequently, it is natural to infer that these *river terraces*, which we now observe, with little deviation, horizontal, have been formed subsequent to any great disturbances of the earth's crust. Moreover, had the sea formed these beaches and terraces, there would have been numerous marine shells found in them. Instead of which, we find them composed of stones, gravel, sand, and clay, and of course usually topped with vegetable mould the same as the surrounding country. For the mode of their formation we need not look farther than the nearest muddy gutter after heavy rain, or notice the rills of water streaming off a muddy road after a heavy shower; and compare these features with those on a great scale in the valley of a river. Imagine, then, the termination of the "Glacial period"—admitted by all modern geologists—and the enormous amounts of water from the melting snow and ice, streaming off the then unclothed mountain sides, ripping great rents in them and the lower lands, and washing down an amount of stones and earthy matter sufficient to form beds of great thickness. And thus, as the erosion goes on, so are the beds of the rivers, each season, deepening and leaving remains of their flood plains above. In our times, of course, these formations are going on more slowly, and by lesser differences of level, but still the beds of rivers in mountainous districts are, where unobstructed by solid rock, generally deepening, and eating their way more and more into the mountain sides. Consequently they leave remains of their flood-plains higher and higher above their beds.

But to resume the journey.

On the 6th of November, we started half an hour or so before daybreak. There was a full moon, with clear frosty air. I followed the north branch of the Kita-kami, here only a small brook for about three miles; we passed a fork of the road which branches off on the right hand to Hachinohe. The hills then become more wooded, till, having passing the temple Mido-kanon, at the supposed source of the river, we mounted the actual watershed. This position is, by barometrical measurements made by Mr. John Blackiston, who was one of Mr. De Long's party in 1871, about 2,000 feet above the sea level. On the top is a rolling grass-covered country, with a few deep valleys cut in it. The actual road is often avoided in favour of drier paths and better travelling, there being in bad weather many sloughs of black mud. Soon after passing a hamlet known as Nakaiyama, the road strikes the head of a deep valley with steep sides, down which a strong path leads to another hamlet, five *ri* from Numakunai, called Katsunaki. Here we changed horses, and continued for the rest of the day down this valley, sometimes having to mount the sides to clear precipitous banks. A mountain torrent gradually widens into a river, which is that which flows into the sea at Hachinohe.

on the east coast. At first there are few houses and little cultivation, but both increase as the valley is descended, until it is well cultivated and fully peopled. The road is no more than a bridle path in most places, and, where not rocky, was, when I passed, deep in mud. I noticed a great many lacquer trees. We took dinner out and a large but poor-looking village. The road here crosses from the left to the right bank of the river by a bridge. There are some remarkably pretty cascades, and the river has the most enticing appearance for an angler. Ichinohe is 8½ *ri* from Numakunai.

From Ichinohe the road passes over a considerable height, to avoid a bend in the valley. The country is of sandstone formation. At Fukuoka, another good-sized village, the valley widens out and is well cultivated with beans, *awa*, some rice, and wheat. Thence the road is better to Kinda-ichi, just before which the river is re-crossed to the left bank by a pretty good bridge. Kinda-ichi is not much of a place; it is only one *ri* below Fukuoka, the latter being 1½ *ri* from Ichinohe. The picturesque appearance of the river is increased by the sandstone cliffs, there being some very beautiful scenes.

I staid over night at Kinda-ichi, and started early in the morning in a cold thick mist which filled the valley, which the road partly follows towards San-nohe, but in two places it ascends the mountains on the left bank, rising to a considerable elevation. The second pass descends at the back of the town to a tributary stream, which comes down a long valley from the westward, and a high cedar-covered hill lying between it and the main river. On the right bank of the latter a peaked mountain rises, a very remarkable feature, which may be seen from a long distance north, even from Nobitsze Bay.

At San-nohe, which is a considerable place, we changed horses, and then took the road following the left side of the valley, which runs to Hachinohe, formerly the capital of a small daimate situated near the sea at the mouth of the river, 7½ *ri* distant in an easterly direction. One road, however, soon branched off and ascended the mountains to the northward, and thence ran along an elevated wooded ridge, from whence a very extensive view is gained, embracing the mountains near Awomori, the whole eastern section of the great gulf known as Awomori Bay, Ando-yama mountain on its north side, the Yokohama hills, and the narrow neck of low land intervening between the bay to the eastward of Nobitsze and the Pacific Ocean. All the nearer valleys and ridges run eastward. This mountain path descends into a deep valley at Asamiso, there crossing a small tributary of the Nachinohe river. Continuing over more ridges, but not nearly so high, we reached Gonohe in the middle of the day, which is a considerable place for this part of the country, and has a business-like appearance. Goods are transported on pack animals from Hachinohe, distance five *ri*.

From Gonohe, a rolling country, but little wooded, with villages in the hollows, is passed over. At Fujusima we were ferried over a river running east. Thence, a gradually rising plain extends to Sampongi, a place which has some importance as having been selected as the site of a settlement of former Aizo officials (lately known as Tonami Han) which the Government has established. In one long street there are ninety small houses built for these settlers, and at or about this place there are altogether 300 of such dwellings. To call them houses suited to the rigorous climate of northern Japan would be an error; as they are but wretched contract shanties, which have probably allured the contractors and officials to divide a handsome squeeze at the expense of the Government, in the books of which they doubtless figure very large. In fact, as far as I could learn, the Aizu settlement is something on a par with the doings of the Kaitakushi in Yezo.

In most of the villages of Nambu and northern Sendai there are stationary ladders erected in the middle of each village as fire outlooks. But I think it was near Gonohe where I noticed one on the top of a hill within sight of the town, which the people informed me had been erected in former times when the inhabitants of the neighbouring province of Tsugaru and those of Nambu did not live on the best of terms; frequent raids being made by one side into the territory of the other, and *vice versa*. A bell was hung on the top of this ladder, at the sound of which the whole village was aroused. These former feuds are now nearly forgotten, but still the people of these neighbouring provinces are quite distinct from each other. In physical appearance and hardihood the advantage is on the side of the people of Nambu.

On the 8th of November I travelled 8½ *ri* from Sampongi, via Sichinohe, to Nobitsze, on the shore of Awomori Bay. Very little of this district is under cultivation, it being mostly large stretches of prairies and open, rolling country, the roll being heavier as Nobitsze is approached. The season and weather being unfavourable, the mire in the hollows was very deep, so much so that our horses could with

difficult step from one rut into another, dragging their bellies over the intervening ridges. In dry weather, however, the travelling ought to be remarkably good. The soil is black mould, in most part of considerable thickness, underlying which is a layer of clay, and then volcanic pumice, which, in some places, comes near the surface.

I passed not far from the Yachingashira Farm, where Messrs. Lucy and McKinnon, in company with two Japanese officials, are raising stock and grain. The first-named gentleman I was fortunate enough to fall in with that evening at Nobitsze, and learned from him the present state and prospect of the establishment. They own some 200 head of cattle, 50 pigs, 8 brood mares, 1 foreign stallion and 4 foreign bulls. Their isolated situation may be imagined when I say that I was the third white man Mr. Lucy had seen for the last two years.

Nobitsze is favourably situated at the southern extremity of the eastern division of the gulf known as Awomori Bay, and from its position will undoubtedly increase in importance as communication is opened with the interior and the country becomes more peopled. Indeed, it should be the port of supply and export for a large district, but the present imperfect means of transport by pack animals tends to throw most of the trade to the very inferior port Hachinohe. There is a fine situation for a town between a portion of the present one and the by-shore.

Though the distance from Nobitsze to Awomori is but 15 geographical miles, the road between these two places is forced by a mass of mountains to make a considerable detour, which increases the distance to 11 *ri*. By sea, the distance is still much greater, as a long promontory stretches to the northward, forming the two divisions of the gulf. Leaving Nobitsze, the road follows the sea-shore for a few miles to a cove known as Shiranai. Thence it strikes inland through the town of Ko-minato, and crosses the intervening distance westward to Awomori Bay proper, and then turning southerly follows the rocky and picturesque shore to a small place called Nonai, where highlands cease and a level rice-cultivated plain and low shore extend to Awomori.

It being very cold, with snow and sleet driven by a N.-West gale, I made the greater part of this, my last day, on foot. Hitherto I had walked as little as possible, except on dry ground, as I had only one pair of thin boots, and had been unable at any place I passed through to purchase any suitable to the rough travelling. My two Japanese companions, unaccustomed to a northern climate, were nearly frozen, and looked most miserable. They did not reach the end of their journey till long after I was comfortably lodged in the house of an old acquaintance in Awomori.

A description of this place is unnecessary, as it has been visited by many foreigners. There I found Mr. George, Superintendent of the Telegraph Department, who had lately arrived for the purpose of laying out the route for a line to connect Hakodadi with the south, and Captain Will was likewise there with the steamer *Saeki-maru*, expecting my arrival, a report of the loss of the *Ariel* having reached Hakodadi. I need hardly say that I took the advantage of steam next evening for Hakodadi, which is, directly, 60 sea miles due north of Awomori. The land road from Awomori to Yedo is reckoned at 200 *ri*.

The actual distance travelled by land on this journey, as will be seen by the itinerary attached, was 144½ *ri*, equivalent to 352½ English miles; the time taken being 13 days gives an average of 27 miles per diem, which may be put down as a fair rate of travelling with Japanese pack ponies.

## Despatches re Formosa.

A Copy of a Reply addressed to Lo, Tautai at Foochow, by MR. FUKUSHIMA, H. I. Jap. M.'s Consul for Amoy.

Amoy, 17th June, 1874.

I have the honour to inform you that I returned to Amoy to-day, the 17th of the month, from Formosa, and received your letter of the 21st of the 4th moon (Chinese calendar), in which you state that you had been informed by H. E. Li, the Viceroy of Fokien, on the 18th of your 4th moon, touching the subject of H. E.'s official letter addressed to H. E. Saigo, Commander-in-chief of the Formosan expedition, and requesting me to communicate the matter to Mr. Shinagawa, Consul for Shanghai, &c. &c. I fully comprehend the position, and beg to say that I do not consider such a matter can be treated by us, but that it is a subject for the Commander alone to decide, as he sees fit, when he receives the Viceroy's despatch. From my personal experience in the Formosan territories, through which I lately travelled, and partly also from my opinion of the circumstances under which our Commander has invested the country of the savages by special instructions from His Japanese Majesty, I apprehend that there would be found some difference in the views of our Commander from those entertained by the Viceroy, as expressed in H. E.'s letter.

For instance, as regards the territories which are occupied by aborigines, and which have long been claimed to be under the control of your Government, I would remark that I put a few questions to the aborigines as to whether their territory as well as themselves had ever been subject to the sovereignty of China. They said "they had not," and substantiated their denial in an especial manner by showing that their taxes are paid only to their chief. They maintain that they have never been under the control of the Chinese Government. It seems to be their custom to quarrel and even fight furiously with each other, taking possession of ground by force, and robbing each other; up to the present time, there being no authority to execute impartial justice, or to exercise control over them.

I would here mention an instance in which they lately applied to our Commander, begging for his adjudication in a question respecting a right of property in ground which had been contested for 40 years. In disposition they seem to be amicable, though they are generally reckless, and of a morose temperament, never getting rid of a sense of injury when despoiled of their property by wicked people.

from whom they suffer on account of their having no proper court in which to make complaint.

They regarded, therefore, with extreme satisfaction the approach of our invading party. Placed as they were, it was as if they had met a light on a dark night, and they showed every kindness by helping the army to their utmost, and begging protection from us, which seems to show that they were much gratified by the entrance of the invaders within their boundary, and that they preferred them to any others.

I therefore think that our Commander confidently believes that those savages, as well as their territories, have never been under the Sovereignty of your Government, and, under the special instructions he holds from His Japanese Majesty, is daily exerting his energies towards reducing them to a proper condition. His commission, however, extends only to military affairs, and is limited to the measures necessary in reference to the savages. Consequently, I think, he could do nothing in the matter, nor even discuss with H. E. the Viceroy the question as to the jurisdiction of your Government over that territory; this being a subject which ought to be left to the decision of our respective Governments.

From my private considerations of this affair, I would express the hope that your High Commissioner or authorities will negotiate it in an impartial and amicable spirit with our Minister, and thus continue our friendly relations on a permanent footing.

I have the honour, &c., &c.

—N.-C. Daily News.

### The War in Formosa.

(From the Correspondence of the Hongkong "Daily Press.")

TAKOW, 26th June, 1874.

On the 21st a proclamation was posted in Taiwanfoo on the subject of the Japanese expedition. It was issued by the "Assistant Imperial Commissioner for arranging matters in Formosa," and the Taotai of the island. It runs something like this:—"The Japanese have come to Formosa to punish the Bawtans for the murder of certain Lewchewans. But as the Japanese have remained several months without going away, and are talking of attacking some other savages, namely those of Pelam, the Emperor has therefore sent the Two Commissioners to arrange matters. The Bawtans are certainly guilty, but still it is China's business to punish them, and not Japan's; and the Pelam savages have not only given Japan no cause for complaint, but have earned its gratitude by saving certain shipwrecked Japanese last year. The Assistant Commissioner and the Taotai are therefore going to Langkiaou to see the Japanese General, who certainly will not be allowed to touch any more tribes. The headmen of the frontier villages are ordered to tell the savages to keep quiet and mind their own business. And the Chinese Government will see that no injury is done to any one who does not deserve it."

This proclamation is of considerable interest, as it is the first public expression by the Chinese authorities of their views on the Formosan question. The line that they have taken is very much that which one thought they would adopt. That is to say, they deny the right of Japan to meddle with Formosa at all, but they show no eagerness to precipitate matters by hasty action. Evidently they will be only too glad if the Japanese can be induced to retire quietly without a collision

occurring. The plainly-spoken and authoritative statement that the Japanese will certainly not be allowed to touch any more tribes, need not be taken too literally. It is probably meant to keep up the dignity of the writers in the eyes of their own people. China will doubtless use all pacific means to induce Japan to leave the savages alone, not so much because she cares for them, as for the sake of her own prestige. But she will only fight on the more serious question of permanent occupation. The Japanese meanwhile give no sign. It would be easy for them to announce that they mean to retire as soon as they have effectually punished the savages; but they do not say so; while on the other hand they carefully abstain from declaring that they intend to stay.

A notification, issued by the United States Consul at Amoy, under instructions from the American Chargé d'Affaires at Peking, was circulated here on the 22nd ult. It ordered all citizens of the United States to withdraw from the Japanese expedition, under pain of being arrested and tried for breach of neutrality. This document appeared to us rather startling; as, in the first place, though nearer than anyone else to the scene of action, we were not aware of there being war between China and Japan; and in the second, it appeared that taking part with the Japanese was forbidden, but not assisting any body else.

I see that the *Foochow Herald* speaks of Formosa as "virtually a *terra incognita*." On behalf of the foreign residents at Takow and Tamsuy, I must protest against such a statement. If your contemporary was as well acquainted with General Legendre's map of Formosa as the bigwigs at Yedo are reported to be, it would be aware that a large part of the island is very far from being an unknown country; and even General Legendre's map does not include everything that is known.

TAKOW, 5th July, 1874.

The Japanese at Langkiaou have been for some time in a state of inaction, and apparently they do not know what step to take next. They have got possession of the Bowtan territory and the Bowtan villages, and have established inland camps in various places, but they are unable to lay hands on the savages themselves. They cannot therefore be considered to have completed their work, especially as it is not thought safe to move from one camp to another alone, or even in parties of only two or three. Stragglers have been fired at upon several occasions, but fortunately nobody has been killed.

The invaders are certainly rather awkwardly situated. They may remain as long as they like in their present position; and yet they will not have any greater hold on the savages, who have undoubtedly found a home among some of their neighbours. At the same time, there will be a touch of absurdity in retaining a couple of thousand soldiers to keep guard against a tribe of savages who, before their numbers were thinned in the various encounters, only consisted of two or three hundred men. If on the other hand the Japanese withdraw, the very next day after they weigh anchor the savages will be back in their villages; and the rebuilding of the houses, if they be destroyed, will take but little more time and trouble than their destruction did.

The Chinese Commissioner has returned from Langkiaou, after a visit of about five days. When he went to see General Saigo he was for some reason not received. But General Saigo returned the visit next day;

and an interview then took place. Neither party has made public what took place at the meeting; but I have heard two accounts, both coming from small Chinese officials who were at Langkiaou at the time. The first is that the Japanese when requested to go away said that they could not do so without orders from the Government at Yedo, to which the Chinese Commissioner replied that China would give one month, and if they were not gone in that time the result would be war. The second story says that the Japanese replied to the Chinese demand by saying that they would withdraw if the Chinese would pay the expenses of the expedition; and that the Commissioner gave some answer which was neither an assent nor a distinct refusal. These two stories are not perfectly compatible with each other, but very probably both may contain some germs of truth.

A Chinese gunboat called in here the other day on her way to Langkiaou. She had on board the Marshal of the United States Consulate at Amoy, who was going to Langkiaou to show the American citizens there a copy of the notification lately issued by their Consul, and to offer them a passage away from the place, if they wished for it. The vessel returned next day without any addition to the number of her passengers.

The gunboat *Chang-shing* has just returned after a cruise round the island. She reports everything *in statu quo*. The rumours which were flying about of the occupation by the Japanese of San-o Bay, on the North East Coast, the best harbour in the island, and of General Legendre's being somewhere in the North with a large force, are entirely without foundation.

The latest news from Formosa seems to indicate that, at all events up to a certain point, there was an understanding between Japan and China on the expedition. It seems from a proclamation which they have issued in Formosa, that upon coming somewhat nearer towards actual contact with the Japanese, the Chinese officials have considerably modified the enunciations of international law by which Prince Kung in his tardy despatch upheld the integrity of the Chinese Empire. In the despatch, the world in general and Japan in particular were informed that the action of the Japanese in sending forces to Formosa to obtain redress was a distinct violation of the territorial right of China, and was an insult which the affronted dignity of the Celestial Empire would not tolerate for a single moment. In the proclamation, however, issued in Formosa, it seems that the propriety of the Japanese punishing the actual offenders is not denied, and the only objection taken to their proceedings is that they are going a little too far, and intend to punish other tribes who, the Chinese hold, are not directly implicated. It is somewhat confirmatory of the view, that the statement by the Japanese to the effect that the Chinese Authorities at Peking had not raised any objection to their going to Formosa themselves to seek redress for the wrongs their countrymen had suffered, was correct. If such were not the fact it seems impossible not to believe that the Chinese officials would have taken up in the proclamation the much stronger ground that the Japanese were not justified in coming to Formosa at all, rather than the comparatively weak special plea which they now put forward. It seems at all events perfectly obvious that whatever high-flown fulmination the Peking officials may be ready to put forth, the Commissioners appointed to settle the matter are quite prepared to meet the Japanese in a friendly spirit, and are not desirous to push matters to any extremes.—*Hongkong Daily Press*.

## TIENTSIN.

(Correspondence of N.-C. Herald.)

You have no doubt been informed that His Excellency M. Geoffroy, the Minister for France, passed here, en route for Chefoo, on the 3rd instant. It is said the Minister has been engaged for some weeks past discussing with Prince Kung the demands recently made by the Peking Government for indemnity for the Chinese who lost their lives in the riot on the French Concession in Shanghai, in May. It has not been announced that this indemnity will be paid. Judged by the "pile" claimed, it is not difficult to suppose that perhaps Prince Kung happily bethought himself to include in this indemnity something by way of "indirect damages" against France and Great Britain, for the indignity put upon the sacred person of the Emperor at China New Year, by Messrs. Wade and Geoffroy, in their attempt at an "audience," to offer their congratulations at the foot of the throne.

"The war in Formosa" is the absorbing topic in official circles here. There is little doubt that Li Hung-chang is in favor of snuffing out the Japanese in Formosa, even if it takes telegraphs, iron-clads, and a few foreign appliances of various kinds to accomplish it. The Viceroy's recommendations will be certain to shape the course of action taken by China in the Formosan difficulty. He is unquestionably the "power behind the throne."

There has been a "labour strike," amongst the coolies who were employed to dig the canal which is being constructed from Tientsin to Peitang. These poor creatures, after enduring the miseries of a three years' flood, were taken in and done for by a fostering and paternal Government, some months ago. As they have been starving by inches for two years past, it was not deemed prudent to give them access to too much "high living" all of a sudden, so they were employed by their humane Government at *five candareens per day*, out of which they feed and clothe themselves, and support, in most instances, a wife and a host of children. It was the intention of their wise and humane employers to raise their wages by degrees, and in this way save them and their families from the ill-effects of an overfeed. But alas! poor ignorant creatures, they could not see it, so they struck. 4,000 of them, all on one day. The petty mandarins who had charge of the workmen, and who are held responsible for everything, after the Chinese fashion, have all boiled; so there is a fair prospect for some of your Shanghai merchants to sell a dredger for that canal soon.

Our rainy season has come early this year, and judging by the appearance of the Peiho at present, we will have to begin with the old story of "the flood" pretty soon again, just as we have been doing for three years past.

Speaking of the floods, we are beginning to feel the bad effect of so much water on the plains which surround us here. A large portion of the foreign residents are sick—some of them seriously—with malarial and intermittent fevers, and kindred affections. The Doctor is, or ought to be, the happiest man in the settlement. Everybody seedy, and only one physician in the place. Well, the Doctor is an obliging gentleman, and none of us grudge him his good fortune.

Many of our ladies are meditating flight to Chefoo, where we exchange our ague for salted herrings, and "shake" ourselves on "the sea beat shore."

July 6th, 1874.

The markets here are dull, but there is a brisk demand for *ironclads* amongst Chinese purchasers. His Excellency Li Hungchang, it is understood, has recommended the Peking Government to purchase, at once, two or more first-class ironclad men-of-war. The eager inquiries now being made for this class of naval architecture by the Viceroy's own underlings, seems to imply that the Government have sanctioned his recommendation. But, unhappily, ironclad vessels are not a drug in this market, and it is feared that it will be sometime before the Chinese are able to "go marching through" Formosa.

The sudden and unexpected, not to say very unwelcome, appearance in the heavens of a fiery-tailed Comet, has created great consternation here amongst all classes of Chinese. They remark, as a singular and ominous fact, that the tail of this comet points toward Formosa; while its head points in the opposite direction. This is regarded as a bad omen. A comet, at best, is regarded by the Chinese as a sure forerunner of some evil to the Empire. They speak of the one which preceded the invasion of this Province by the allied armies in 1860; and now that this one has put in its appearance, like an evil spirit, just as the gathering cloud of war begins to thicken over Formosa, no one seems to doubt that it portends great affairs of state and "moving accidents by flood and field."

This is the hottest day of the season, so far.

July 7th, 1874.

"The S. S. *Canton* is a total wreck outside Foochow; bound out." Such was the brief intimation which reached us yesterday forenoon, but (up to the time we are writing) how or under what circumstances the disaster happened we are not informed. Not even the bearer of the intelligence to Shanghai can enlighten us on this point, nor has any intimation been received by the agents. Capt. Paynter, of the steamer *Dragon*, reports that, on coming out of the Min river on the morning of Wednesday, the 8th inst., about 8.30 A.M., he discovered the captain and crew of the *Canton* in two pilot boats at Sharp Peak, 13 miles from Foochow, and was made aware of the fact that the *Canton* had been wrecked the day previous on the Min Reef. On hearing of the occurrence, Capt. Paynter steered his course for the scene of the disaster, and found the *Canton* under water with the exception of a part of the stem. She appeared to have broken off amidships. An attempt was made to approach the wreck with the view of getting on to her stem, but a heavy sea prevented this being done, and Capt. Paynter pursued his course to Shanghai. He reports that the weather was hazy at the time; but could not say whether a pilot was on board when the disaster happened; as it occurred within the pilot limits, however, it is probable that the steamer was under the care of one. Capt. Paynter fears that all hope of saving any part of the cargo must be abandoned. Up to 1 P.M. yesterday, no intelligence had been received, nor was the wreck known at Foochow, letters from that port making no mention of it. The *Canton* was a first class steamer of 1215 tons register, built by Mitchell, of Newcastle, for the Eastern line of Messrs. Watts, Millburn & Co., of London, whose agents in China are Messrs. Siemssen & Co. She left Shanghai on the 27th ult., with about 700 tons of tea and 245 bales of silk, and having completed her loading at

Foochow, started from thence on her homeward voyage on the afternoon of the 7th instant.—N.-C. Daily News.

A correspondent draws attention to the fact that, as shown by Messrs. Thorne, Rice & Co.'s Coal statistics, Shanghai has used in the six months ending 30th June last, 32,369 tons of Japan coal, and asks how, in the event of war, this is to be replaced.—*Idem*.

A correspondent, writing on the 8th from Keelung, informs us that several ineffectual attempts had been made to get the *Laptek* off. Several junks were set to work at her, and the *Fusing* (Chinese gunboat) which had been detailed to protect the wreck, lent assistance. The hull of the steamer was getting firmly imbedded in the sand, and the captain and crew were hard at work securing machinery and everything moveable. It is reported that the underwriters have taken over the wreck. Messrs. Boyd & Co.'s wrecking steamer *Leven* left Shanghai for Keelung yesterday, to see what could be done, and if her mission to the *Laptek* proves of no immediate advantage, she will continue her voyage to the wreck of the *Canton*.—*Idem*.

The Chinese gunboat *Feiyuen*, Captain Ping, arrived on Saturday from Formosa, under orders to proceed from Taiwan-foo to Tientsin. She left Taiwan on the 6th inst., and Keelung on the evening of the 8th, and, it is understood, carries despatches from the Imperial Commissioner, Shen Pao-chên, for the Chinese Government. These were entrusted to a Japanese officer and interpreter, Hidaka and Ikada, from the Japanese headquarters at Liangkian. The savages having retired out of reach, all was quiet. The number of Japanese troops disembarked is given at 5,000, and their camps are scattered all over the south end of the island. The Japanese gunboats had all left Formosa, and the impression seemed to be that the Japanese would retire when the return of their ships enabled them to do so, but that they expect compensation for giving up the expedition. A war with China is looked upon as very improbable. The *Feiyuen*, which will probably leave for Tientsin to-day, is a trim vessel of about 600 tons and 120 horse-power, and has a crew of 130 men. Her armament consist of six 40-pounder breech-loading rifled guns, and one 113-pounder Armstrong.

SUPERSTITIOUS.—Our readers have doubtless observed a Comet every evening during the last fortnight. Some of the Japanese upon seeing it at once jumped at the conclusion that some evil is about to befall them, and prognosticate a war between China and Japan.—*Idem*.

The *Takasago-maru* again arrived from Formosa yesterday. Everything is reported to be at a standstill when she left. The troops are encamped, and spending their leisure hours in idleness. Shortly after leaving Formosa the *Takasago-maru* experienced a typhoon, which did some little damage; after repairing she will again proceed, with stores, &c.—*Idem*.

FORMOSA.—We can glean but little news relative to the Formosan expedition; in fact there is but little news to be gleaned. Negotiations between the Chinese and Japanese governments are going on; and not until these are ended shall we be able to know

the precise state of affairs. We are glad to say that the sick men lately arrived from Formosa are fast recovering their health. The number of Chinese troops now at Formosa we are unable to say; that there are a considerable number we fully believe, but cannot help thinking the statements published in contemporaries relative thereto are somewhat exaggerated.—*Idem*.

WE HAD the opportunity this morning (25th) of inspecting a very beautiful and powerful steam fire engine, constructed by the Silsby Manufacturing Co., of Seneca Falls, New York. This Co. has built twenty-six of a similar kind for the city of Chicago, where they are held in much esteem. That under notice is consigned to the care of Mr. H. Comstock, their Agent here, who has just finished putting it together, and has courteously afforded us the particulars of its construction which we are enabled to give.

The outward appearance of the engine is extremely elegant, the jacket of the boiler, the tubes and cocks, the dome, and most of the machinery exposed to view being all nickel-plated by a newly-patented process. The engine is one of B. Holly's "Patent Rotary," and is a powerful and beautiful piece of mechanism. It is of 20 horse-power, and works up to 90 lbs. to the square inch (U. S. Gauge), at which limit it "blows off." With 50 lbs. of steam, however, a good fire service can be obtained. The boiler holds 60 gallons of water, and steam can be got up, with cold water, in 5 minutes. Wood is at first employed in doing so, but the fuel ordinarily used is coal; of which 500 lbs. can be carried on the stand which is fixed to the bottom of the fire-box. By the use of this stand, the engineer is enabled to travel on the engine, and can thus not only attend to the getting-up of steam in the quickest manner, but is enabled to control the powerful double brakes which are attached to the hind wheels. The whole weight of the machine, carrying 500 lbs. of coal and 60 gallons of water, is 4,800 lbs., and it can be dragged by 10 men, although the windlass or reel in front carries enough rope for 50 men to "tail on." As at present fixed, it is intended for hand-haulage, but there is a spare pole, with whipple-trees and all gear necessary for attaching a pair of horses, if thought more advisable. Two seats are erected in front, for the driver and another, and an elegant lamp caps the dome (or air chamber) in front and adds much to the appearance of the whole. The boiler is supplied with water by means of the ordinary donkey pump, but should this break down (a by no means infrequent occurrence) it can be replenished from the main pump by the ordinary hose pressure, which is 120 lbs. to the square inch. Two steam gauges and one water gauge are affixed to the engine, and there is the usual steam whistle attached. Having described the machine, it will be important to ascertain what it is capable of doing. The suction pipe is a 4-inch one and is situated in front, under the air chamber; and, by an ingenious mechanism, the elbow can be turned in various directions, according to the position of the source of supply. The suction hose, when not in use, supported in rests, runs right round the engine. There are two deliveries, one on each side, but by the use of a junction on each, technically known as a Y, four 3-inch hose may be used at the one time. Two 1½ inch streams may be thrown, or four of ¾ inch: six hundred gallons of water per minute is the throwing capacity of the machine. Two hose reels of substantial appearance accompany it,

each carrying 500 feet of "carbolised-rubber" hose, made of 4-ply cotton duck.

The engine is at present in the compound of Messrs. Chipman, Stone & Co., but a trial of its powers will be made on some day next week, as soon as the Governor of Kanagawa returns to Yokohama; it being his intention, we believe, to be present.

MUCH ANXIETY is felt at the non-arrival of the French mail steamer *Volga*, now (24th) considerably overdue. The Agent of the Messageries Maritimes Co. was advised by wire of her departure from Hongkong on the 14th instant. The delay is accounted for, by those who should be in a position to know, by the statement that before she left this port for Hongkong two blades of her screw were absent, having been broken off. We give this for what it is worth.

AS YET (25th,) there is no news of the overdue *Volga*, and considerable anxiety is felt respecting her. She is a good vessel and steams well, but it is well known that she sadly needs a general overhaul, which it was intended she should have so soon as a new vessel expected by the Company arrived to take her place for the time being. Two of our contemporaries have been running *a-mok* at us in consequence of a statement we made last night, that two of the blades of her screw were broken. We said that such was the case *when she left here*, on her last trip, and not Hongkong, as mis-constructed by the *Mail*. *L'Echo* gets foul of us, and "is authorised to state that the allegation is absolutely inexact." May be so. Perhaps it was three blades instead of two, but we had our information from a good source, and it is hardly likely that we could have "verified the fact" at the office of the Co., as suggested by *M. Le Redacteur*. Furthermore, and in conclusion, we gave the information "for what it was worth," and in no way committed ourselves to the truth of it. Pity these two censors did not read a little more carefully.

WE REJOICE that we are able to announce (27th) the arrival of the French mail steamer *Volga*, nearly a week overdue. Her arrival is a most welcome relief from all the apprehensions that had begun to be largely felt throughout the community. By the report published in another column it will be seen that she had to encounter very bad weather, and in a somewhat crippled condition. As regards the state of her screw, to which we called attention, and so most innocently drew the hornets around our devoted head, we find that three fans of her screw (out of six) are broken; and that at least one of them was so before she left on her last trip from this. This being so, we think that had our statement been met on the part of the Company's Agent here by a true statement of what was the condition of the screw when she left here, their cause would have been better served than by allowing an excitable contemporary authoritatively to contradict our statement. It was no very great crime to allow the steamer to depart with one fan of her screw out of six broken: but it was neither courteous to ourselves nor a candid or ingenuous course to adopt a quibble. We forgive the writer who, in *L'Echo du Japon*, so strangely forgot himself this morning. But we hope it will be a lesson, and prevent his making himself so ridiculous in future.

THE Agent of the M. M. Co. has favored us with the following report of the voyage of the S. S. *Volga*:—Left Hongkong, 15th July, at noon: splendid weather. On the morning of

16th, met with a very heavy fog on passing the Lamock Islands. Went at half-speed; continually sounding the alarm whistle. About 10 A.M., the fog commenced to rise, the wind coming from the N. E., increasing gradually, and the barometer inclined to fall. During the 17th, the fresh N. E. wind retarded the speed of the vessel very considerably. About 7 o'clock P.M., when rounding the island of Formosa, the heavy sea caused the ship to roll and pitch heavily; and the seas coming on board washed away all the loose gear from the deck. The awnings were stowed away quickly, to save them from being washed overboard. At 8 P.M., the barometer falling, the sea increasing, and the sky looking very threatening, with heavy rain falling, left no doubt of the approach of a cyclone. After taking all necessary precautions which the greatest prudence could devise, to meet the bad weather, the ports were all closed with wooden panels made specially for this purpose. Skylights and gangways were also battened down. At 9 P.M., the wind commenced to blow steadily from the N.E. and increased in force, barometer falling. Now there was no longer doubt that the *Volga* was threatened with a typhoon from the eastward, and found she was in the line of one. Immediately seeing the position of the vessel, steered for the west, to avoid the centre, the proximity of the North point of the island of Formosa, which still bore to the S.W., would not allow of making a course more to the southward than direct west. The course to the west was continued till 2 A.M. on the 18th, when the wind passed from the N. N. E. to the North, then to the N.W., then to the S.W., at 3 o'clock; the barometer having a tendency to rise. At half past nine, the barometer having risen very sensibly, made a good course to the N. E., profiting by the S. E. winds of the cyclone. The greatest barometrical fall at the height of the hurricane was 730 millimètres, at 4 A.M.: this dreadful weather lasted 15 hours.

On resuming the course, the ship's speed was below her general capabilities, and the engine made more revolutions than usual. After a careful examination it was discovered that three out of the six blades of the propeller were missing.

On the 20th, at 2 P.M., we entered the Sea of Japan by the Cecile Archipelago. At 10 P.M., the wind went round to the N.E., blowing with great force, the horizon very lowering.

21st.—Weather just the same; the ship being at times almost ungovernable.

22nd.—At 4 A.M., the wind increasing, heavy sea running, and the ship unmanageable, put her head to sea. The barometer was at 755 m/m, the appearance of the clouds, heavy N.E. and E. swell, and the wind at the same time increasing in force as the barometer commenced to fall, with rain in torrents, made me fear another cyclone. I took the same precautions as in the preceding one, to resist its disastrous effects.

On the 23rd, at 10 A.M., a dry N. E. wind; I still kept her head to sea. In the afternoon, the fastenings which secure the rudder to the stern-post broke, also carrying away the steering gear connecting with the bridge. Efforts were made to secure the rudder, which were successful at first, but, unfortunately, the rudder carried away, by its movements, everything which was opposed to it. We tried several times to master it, but all efforts were fruitless, and the rudder was at the mercy of the waves, which caused it to beat against the stern post, producing such shocks as to cause the greatest uneasiness. After the breaking of the rudder-fastenings the engines were stopped, and the ship put under fore-and-aft sails, so as to escape the

great force of the sea and the violence of the wind.

I gave orders to prepare all that was necessary to repair the rudder fastenings, at the same time making another rudder to serve for the time being. At noon of the 25th, succeeded in securing the rudder, notwithstanding the heavy sea running, and at 3 p.m. resumed our course for Yokohama; the rudder having been in a disalal state 42 hours, beating about on all sides, having no bolts to secure it, with the exception of the nut at the base of the stern-post.

This last cyclone held from the 21st to the 24th. The barometer fell to 740 m/m.

The sails, although stowed, were torn to shreds by the violence of the wind, and the coverings and contents of the boats were blown away. The holds remained perfectly dry, although the bridge had been constantly deluged.

Notwithstanding all these precautions it is feared there will have been much damage to the cargo, caused by the working of the vessel, and the leakages through the deck seams. The ship arrived safely at this port at 1 o'clock p.m., to-day (27th).

A TELEGRAM has been received in Yokohama to-day (25th) from Onomichi, stating that a typhoon was blowing there this morning.

It is to be hoped that telegraphic communication with Nagasaki will not be interrupted in consequence, for any length of time.

WE REGRET to state that telegrams were received in Hongkong on the 10th, to the effect that the steamer *Canton* was lost, about 70 miles from Foochow, with a full cargo of tea.

ON CALLING at the Saibansho this afternoon (21st) we found it closed, and were informed by the policeman outside, that it was closed at noon on account of the heat of the day!

AN EX-MERCHANT of Yokohama, who traded under the protection of the Stars and Stripes, and who recently gained some notoriety in Court cases in which a quantity of kerosine oil was a prominent item, managed to give everyone the slip, and got away by last French steamer. Three or four "bobbies," who were lying in wait on board the *Colorado* to prevent his anticipated departure, had their trouble for their pains, the bird having already flown.

A BOLD robbery, but of little importance, was committed yesterday, in broad daylight, and shews to what extent Japanese carry the love of theft. A chemist living in a much-frequented street had placed some packets of herbs before his window to dry in the sun. A Japanese, who doubtless perceived a good wind-fall for himself, advanced cautiously, stretched forth his hand, and committed the theft in a very clever manner. Just at the moment he turned to fly, the proprietor perceived what had taken place, and, quick as lightning, started in pursuit of the offender. The latter, fearing capture, threw away the plants, divested himself of his "Guetas" and ran in the direction of Benten. Notwithstanding the repeated calls of the chemist, the Japanese police remained spectators of the event, not making the least attempt to arrest the thief.—*L'Echo*.

THREE HUNDRED and seventy-three large timbers were lately thrown up by the waves on the Island of Oshima. It is supposed that some vessel must have been wrecked, of which they formed a portion of the cargo. The intelligence is sent from the Nirayama Kencho.

A NEW INDUSTRY is announced as likely to become localised in Japan. Last year, a man named Yamada, belonging to Yamanashi Ken, Kōshu, attempted the manufacture of wine from the mountain grape, the taste of which was very similar to wine of foreign manufacture. This year, he has made a large quantity, and is making preparations for its regular sale.

WE SEE so much in the native papers about the progress of the various provinces, that it is refreshing by way of a change to fall upon the following:—

"A few days ago, a citizen of Tokei returned from Aihimé Ken, and reports that it is in a very barbarous state, and the people adhere to their old manners and customs. There are few schools, and the people are idle and negligent; especially those of Shintani and Uwa-jima. If their parents are laid on the bed of sickness they are left to themselves, from the fear of infection. This is common in the Ken. And from this its general condition may be known."

IN TOKEI, there is one jinrikisha drawn by a woman. She is 24 years of age, and draws a cart that holds two persons, by which she is able to earn more money than her husband can.

IN SHINSHU, in 1872, 695,088 cards of silkworm's eggs were produced, of which 598,003 were exported. Last year, 1873, 906,543 were produced, and 539,776 exported.

KANAGAWA KENCHO has issued an order that a return be made of the number of fowls, dogs, and cats kept by each person. Some think that it is for the purpose of imposing a tax. Rabbits are still taxed.

AT A meeting of the members of the Asiatic Society, held on Wednesday evening (15th), the constitution of the Society was fully discussed, revised, and settled.—*Advertiser*.

A LETTER from Captain Belknap of the *Tuscarora* announces that soundings to the enormous depth of 4,658 fathoms, or 5½ miles, have been found in the Japan Stream. This is a greater depth by nearly a mile than has ever yet before been accurately sounded.—*Idem*.

JUDGMENT HAS been given in the Tokei Saibansho, in the case of the police who committed the late outrage at the British Legation, by assaulting and imprisoning William Woods, a constable of the Legation escort, on the 6th of May, of which full particulars were reported in the *Herald*. The Inspector of Police, the principal offender, who ordered the attack, has been committed to prison for one hundred days; five of the police acting under his order have been condemned to fifty days' incarceration, one of the number, Yamamoto Sakitchi, not being a *samurai* like the others,—is to be imprisoned for fifty days with hard labour.—*Herald*.

ON THE 26th ulto., a farm house at Ikimi was visited and pillaged by three robbers, who first bound the inmates with ropes. They were just getting away with their booty when a young fellow, twenty years of age, managed to free himself and, boldly pursuing the thieves, fought desperately with them and killed one of them. The others fled, leaving the stolen property. Government ordered the young fellow, whose name is Heitaro, to be rewarded with ten yen.

THE FOLLOWING is the recent news from Aichi-Ken:—

Shihan Gakko has been opened, the construction of the building having been completed. The academy and school of languages will be opened shortly. The schools built and conducted by the Ken have fallen into disuse.

The Hospital is neglected. The officers certainly continue to visit it, but seemingly only for pleasure; the doctors are all too proud for their position.

The Shinto and Buddhist preachers, for the most part, have little influence over the people. The Rei, or Governor, governs for one year but, owing to the absence of the present incumbent, the affairs of Kencho are indifferently administered. At present he is in Tokio.

Eating houses and *sake-ya* are very flourishing: thanks to the favours of school-officers and soldiers.

IN TOKIO, on the 11th inst., at 10 p.m. Matsumoto Fusajiro, an "apprentice" to the distinguished story-teller (Koshaku-shi) Tanabe Nanrio, was surrounded by three robbers at Saku-macho, on his way to Kando on business, and was robbed of five yen.

The native chronicler adds: "We think he should have brought his native eloquence to bear on his assailants in such a case; that he might persuade even as he does at his desk."

WE MENTIONED the opening of a new theatre at Shiba on the 15th instant. It was quite a festival occasion, the people being admitted gratuitously. So numerous were the visitors that they could not all be accommodated; they amounted in all throughout the entire day to 10,040 persons. Next day, the public was admitted in the ordinary way.

ONE OF the Yedo newspapers has the following semi-editorial:—

On the 21st of last month, I visited a friend who lives at Iseyama in Yokohama, and talked with him on many matters. Among others we spoke of an American missionary, named Goble, who preaches in a meeting-house at Shindekuwan every Sunday, and explains in a kind and interesting manner the doctrines of the Christian religion.

It rained heavily all that day; but we visited him at his residence, No. 75, Matsuyama, where we met him and his wife. They appeared to be pleased at our visit. As we were leaving, they gave us a book named "Tenbu Annai," which Mr. Goble had himself translated, and they told us kindly to believe and to let others know the subject of the book. We greatly admired their kind hearts, and their religious zeal. And we published the principal contents of the book without discussing whether it be right or wrong; in order to make it known throughout our empire.

WE FORMERLY suggested to our readers, in watching the daily life of the Japanese, that they should not despise the day of small things. There is something touching in the simplicity with which the following is reported:—

The villages of Nukada in Mikawa desired to have a school, but were too poor to support one. They were, however, not discouraged, and as all things are possible to the resolute, they determined to turn to account the cultivation of persimmons. On Kusakari-yama there are many of these trees; and they have commenced grafting them into many other trees, hoping by the rapid increase to be able to raise a fund for the school. We heartily agree with the editor of the native paper, who writes "We hope that the government will take great care of such persons."

A KAZOKU, Hatusuka Jinie, founded four schools (besides a medical school) in the provinces of Awa and Awaji, when he was Tokuma-Han-Chiji. After the office of Han-Chiji was abolished, the four schools became public schools, but the medical school was conducted by a society, whose resources being insufficient, the foundation decayed. Hatusuka Jinie therefore made an offer to Government to contribute five thousand yen annually to each and every school. The munificent donor, being at present abroad, his relative, Todo, has received the necessary patent.

THE MIDSUMMER Examination of the Christ Church Parsonage School was held on Friday morning, the 17th instant, with very satisfactory results.

About thirty children attend the school, and on this occasion twenty-two were present. The instruction rises from the "Infant" class, where pupils read and spell easy words of one syllable and have just begun the multiplication tables, to the highest, who are taught reading, writing, arithmetic, grammar, geography, composition, and reading music. They all acquitted themselves very creditably, and what deserves more especial mention than the proficiency is, the great progress that all the classes have made in the past year. Any one who has had anything to do with teaching will be able to appreciate the efforts of one mistress, with so many scholars of different ages, and with the assistance of only one pupil-teacher. The danger of devoting more time to those who are quick and apt and neglecting the others seems to have been most carefully avoided; and altogether the opinion of the visitors was that the school reflected great credit upon its management.

THE remarkable correlation of the superstitions of the West and the East is well shewn in the narrative of a case of alleged witchcraft, the leading actor therein being a wicked priestess in Tokei:—

"There was a very wicked priest at Honoji, Zosigaya, Tokei, whose name was Jitsu-un; and he had a wife who was like to him in wickedness.

The history of them is long, but may be condensed as follows:—Miyo Jitsu, the wife, is a native of Kaga; her former name was Mon, and she was first married to one Takewara Umekichi, a merchant of Zosigaya. But they were of different dispositions, and disagreed, so that she thought she could live better without him, and, having a lover, fled away from him: this was six years ago.

After a year had passed, she again came to Tokio, but, as she was without friends, she came to the temple to ask the priest's support. Whilst she was serving there as a maid, the priest fell in love with her and made her his wife. From that time he loved her so greatly that he forgot even to offer the daily sacrifice to Buddha, his master.

From last spring, it is said, Mon was possessed of a devil, and took the money of the ignorant, pretending that she was a superior being who could foretell everything; and she offered false prayers in every house where the people believed in her. Whilst in the temple, she employed her time in drinking *saké* and eating fish with her husband, and in playing music and singing songs.

For a time, her miracles (?) were talked of everywhere, but," says the reporter, "falsehood never prevails"—a doubtful apothegm, by the way—"and the report of her fame ceased in January this year, and she could deceive the people no longer.

A few months ago, it was spoken amongst

the neighbours that, near the temple of Kisimojin (a Buddhist goddess) the noise of hammering amongst the trees was heard every midnight; and everyone was curious as to its meaning. On the 10th, a policeman was sent to the place to clear up the matter. He hid himself, and soon the female devil (witch) appeared. After praying awhile, she struck a large nail into a tall cedar growing near by. (The midnight proceedings of Ushi-no-tokimairi—the demoniacal rites of the witches' Sabbath,—says the writer, it would be of little interest to narrate; here we disagree with him.) When a woman has any enemies, she is said to repair to such a place to curse them, and pray to the gods at midnight that evil may befall them; comporting herself with strange actions and formulae. She wears a long white mantle, and tall wooden sandals on her feet. Having lighted three candles, she places them on her head, and holds a straw doll, a hammer, and nails in her hand. The ceremony is called *Ushi-no-toki-mairi* because it is performed customarily at the "hour of the cow" (midnight). The straw doll is to represent the figure of the person she curses, and after offering her prayers at a temple situate in a solitary place hid from others, she nails the doll to the cedar tree, which is the only tree suitable for the purpose. It is said that, as soon as this is done, the person so cursed falls into a great pain or sickness, and, before long, dies."

The object of this sorceress was to extort money from her neighbours by working on their fears; or, as the writer has it, to cause disease amongst the people by her magic arts, and to get money from those who believed in her supposed powers by offering prayer for their recovery.

Unfortunately for her, it seems the eminently matter-of-fact police, who were not to be gulled by such pretences, pounced upon her and her reverend paramour, and, though they tried to escape, they were caged and are now undergoing what is spoken of as "severe examination"—which probably means torture; a favorite method of examination with Japanese officials, and one formerly resorted to in similar cases of witchcraft (so-called) in olden times in England; where a waxen doll, stuck with pins, was substituted for the straw one here spoken of.

MORE PARTICULARS have arrived respecting the volcanic eruption in Miyakeshima. They are brought by one Okiyama Yohei, owner of a junk named *Hoyé-maru*, which was lying at Akomura, in the same island. He reports:—

Early in the morning of the 3rd July I was ready to take my departure for Tokei; but about 11 a.m. on that day, an eruption took place at O-ana. It is about two cho eastward of the village of Togo. In Togo there are about forty houses, all of which were destroyed by the eruption. None of them are now to be seen, and the place is like a sandy plain. It is hoped that no lives were lost, but that all the residents had time to escape; this is, however, uncertain.

The eruption continued almost incessantly until the 7th of the month and then gradually got weaker and weaker. It is now in its normal condition.

TOSHOGU (Iyéyas) has hitherto been worshipped in many temples and monasteries. On the 17th instant, his images were conveyed from the temples of Hon-mon, Kai-an, and Yokoku, to Shiba; and in a few days his effigy at Gokokuji will be removed to Uyeno. An order has been issued that, henceforward, he is only to be worshipped at these two places—Shiba and Uyeno.

ONE OF the Mail ship companies, hearing of the sufferings of the Japanese troops in Formosa from the extreme heat, petitioned the Hanchi Jimu Kiyoku (Colonization Department) to be allowed to send thirty bath tubs to them, as a present, to enable them to keep their bodies clean and healthy, as at home.

THE FOLLOWING is a petition addressed to Katsui Awa, Kaigunkyo (Minister for the Navy) by Takashima Kayemon:—

"Japan is a large island, to the east of Asia, and in a favorable position to rise to great power and strength; like England, which stands alone in the Atlantic Ocean, not far from the continent of Europe. The fact that we do not advance towards this state arises from the inconvenience of our sea transport. To secure this progress, it is necessary to change the style of Japanese ships for the better. A Japanese vessel is small and weak, quite unable to be used for crossing the seas or ocean, compared with European ships; they are as an egg, while the latter is a stone; and it is easy to understand that it is easy to cross the sea in the former.

Notwithstanding this, the Japanese sailors boldly sail in their weak ships, over the wild sea surrounding our empire; an evidence that they are naturally fitted for a sea life. If science is introduced among them, and the style of their ships improved, they would soon be able to sail over the whole world; it could easily be accomplished. Vessels might be built with two or three masts, and the decks like a tortoise-shell, so that the water could not penetrate below.

The best plan will be for the Kaigunsho (Navy Department) to first construct such vessels, and sell them cheaply to the seafaring men, who would gladly buy them. The expense of building them is nearly the same as that of Japanese vessels.

I have already estimated the expense of the timbers required for them. There is a mountain called Wada, under the jurisdiction of Awomori, which is covered with suitable trees. I will myself transport them for the benefit of the Empire.

Thus, the foundation will be laid for facilitating maritime enterprise. And Government may issue a proclamation to the people forbidding the building of Japanese junks.

This letter is respectfully addressed to your Excellency.

TAKASHIMA KAYEMON.

July, 1874.

At Ichigai, Tokei, a little girl, about 12 or 13 years old, was playing out of doors, having an infant brother on her back. Going to a well to draw some water, she, with her burden, fell in; but happily her cries were heard, and they were rescued.

A native newspaper, in relating this, precedes it with the remark that "on the 11th instant, an extraordinary evidence of sacred influence happened at Ichigai." And concludes thus:—"Their father believes and worships the Suiten Kū (a Sinto god), and has never separated his son and daughter from its holy charm. Now he believes more firmly than ever in this divinity, and declares that they were saved from drowning by his watchful protection."

ON THE 11th of this month, during a violent thunder storm at Utsu-no-miya, a house belonging to a Shizoku named Aigawa-Jidaibu was struck by lightning, and he and his son were killed.

## NIIGATA.

JULY 11TH, 1874.

THE FALL of rain during the last few days has been very heavy. The neighbouring country is under water, the rise being higher than has been known for fifty years. The town has escaped pretty well, owing to the thorough repairs that have been made to the sluices and canals; but a little further north, and around Nagaoka, the country is described as one immense lake.

THE IRON steam launch just arrived per S. S. *Dumbarton* is to run between here and Kamida.

THE COMET has been seen very clearly from here.

THE REPAIRS to the *Volga* necessitated by her recent perilous passage hither will of course occupy some time, and it will not be possible for her to proceed to Hongkong on her regular trip. The M. M. Co., with commendable promptness, have however made arrangements to keep up the continuity of the service, and the steamer *Nevada*, Captain Coy, belonging to the P. M. S. S. Co., has been chartered, and will be despatched, in place of the *Volga*, on Thursday, the 30th inst.

THE STEAMER *Acantha* is sold to the Japanese Government.

ON Saturday (18th), an attempt was made to set fire to the premises on No. 45 at present occupied by Mr. P. Lynch, Bootmaker, and formerly known as the "Harp Saloon." A pan of lighted charcoal was introduced between the walls separating the back part of the building from the adjoining godown, but beyond the scorching of some wall-paper no damage was done. That a big fire was not the result is certainly not the fault of the incendiaries, who evidently intended to get up a good, old-fashioned conflagration, likely to consume the entire block, and so afford remunerative occupation to the gang of thieves and scoundrels who thrive on such calamities.

TWENTY-FOUR coolies employed on board the American steamer *Luzon* were this morning "had up" before the Saibansho, charged with theft on board that vessel. Various bulky articles of value, such as bags of sugar, hams, and packages of glove leather were quietly passed over the side into boats, but the thieves were detected and this morning were sentenced to various terms of imprisonment.

IN THE Public Works Department, (Kobusho) there has been started a private association for the study of law. It meets six times a month. The present members are Ito Sanji, Tamano Gondai Hanji, Gaimu Shoyu, Shioda Gaimu Daijo, Mr. Smith of the Gaimusho, Mr. Davidson of the Kobusho, Mr. Lowder of Sojerio, Messrs. Du Bousquet and Hill of the Shihesho.

A Kazoku (nobleman) is said to have been last night (24th) waylaid by five men with drawn swords near Shiba Temple gateway, and made to strip naked and deliver to them everything he had about him.

ON THE 16th instant, Tanabi Taichi, an officer of Gaimusho, was dispatched to China, on the special business of the Formosan Expedition.

ON THE 21st instant, a little girl fell into a well in the native town, Yokohama, and was drowned. There was no protection, and the grass had grown long around the well, so that the child must have walked into it, without seeing it.

A FIRE which consumed fifty houses took place on the 22nd inst., at Utsunomiya.

FROM a paragraph as the following, from a native paper, would look strange in a newspaper published out of Japan.

A daughter of Tokinagi, who lives at Hachibari, Tokei, is of a most amiable disposition and full of filial piety. When the Imperial palace was burnt down, she offered 20 yen from her private means towards rebuilding it. And besides this she has given money to the Sakamoto-gakko, a public school near her house.

A poor blind female amma (shampooer) residing at Shino-machi, Awomori, took 50 yen to the Kocho (magistrate) to aid in the building of a school in the neighbourhood.

Forty of the geishas (singing girls) at Yanada-ziku, Shimotsuke, gave 65 yen to a neighbouring school, to pay for books; and twenty prostitutes of Yagijiku gave 50 yen for the same purpose.

A jinrikisha man at Yanada-ziku, seeing the children returning from school, caught in a sudden shower of rain, suggested to his companions that there ought to be at the school some umbrellas for lending to the children. Six of them subscribed 10 yen, and presented it to the school, for this purpose.

ON THE occasion of the great floods at Shiware Ken last month, a subscription was raised, headed by Izeki, the Kenrei, and 974 yen 75 sen were distributed among the poorer of the sufferers.

A CHINAMAN contracted with a Japanese blacksmith at Chojamachi, Yokohama, for the manufacture of a flower vase, but owing to a dispute as to the price the Chinaman insulted the blacksmith, who, being enraged, struck him on the left arm with a piece of tin. The Chinaman ran away, with the intention of calling the assistance of the police, when, unfortunately for him, as it turned out, he met another of his countrymen, and they both returned to the blacksmith's shop, hoping jointly to give him a good thrashing. In this they were however deceived, and the second Chinaman was in turn severely beaten. The case was brought before the police. The blacksmith having struck the first blow was sent to goal for 40 days, and Chinaman No. 2 for 20 days.

THE little female captive from Formosa was entertained a few days ago by some gentlemen. One of them asked, through an interpreter, if there was anything she would like to have. She made them understand that she would like something red; on which a piece of red crape was sent for and given to her. She was so delighted that she rose and went and stood by the donor, taking his hand in hers, as if this simple act of kindness had completely won her heart. Poor little thing. "One touch of nature makes the whole world kin."

YOSHIDA, the Okura Shoyu, left for Osaka on the 23rd instant, accompanied by Kaneko, an eighth-class officer.

NOBUCHIKA NAMBU, hitherto Gonsanji of Niigata, is promoted to Sanji.

THE little Formosan girl who was captured in a raid by the Japanese and sent on to Tokio, was apparently an object of great solicitude when first delivered over to her appointed receivers, many despatches and notes having passed between high officials as to her disposition. The interest centred in her seems to have in no whit abated; and judging from the extravagant provision proposed to be made for her education and keep, one would almost imagine her to be a stately and refined "Princess of Thule" rather than a dirty, ugly, little cannibal, with about as much idea of the proprieties as—well, as might reasonably be expected in a Formosan. Nothing daunted, however, by the difficulties in the way of "licking her into shape" that she may be eventually turned out a creditable imitation of the polished Japanese lady, one Uyeda Hatsutaro, has made application to Okurasho, with the purpose and intention stated below. We extract from the official journal as follows:—

"The Formosan girl who has been under the care of Okura Kihachiro was charged on the 18th inst. to Uyeda Hatsutaro, No. 1, Kanachio, Tokio, by his own wish. The following is his petition to Okurasho, by whom it was at once granted.

"I desire that the Formosan girl brought over by Okura Kihachiro be placed under my charge. I shall take great care in everything relating to her; in accordance with the following rules:—

1st.—I will first endeavour to change her disposition towards the customs of our country, by teaching her its honorable ceremonies.

2nd.—I will appoint the most responsible women for her attendants; and they shall teach her the most refined language and manners; whilst she is dressing and eating, as well as in the usual hours.

3rd.—Writing and needlework shall also be taught her by the attendants.

4th.—Should she fall sick, physicians shall be procured. Of course I will communicate the fact to Okurasho.

5th.—Her rooms shall be erected separately from others, and the attendants shall never be absent from them. I, myself, will visit her every morning and evening.

6th.—The expenses of her rooms and food, and the salary of her attendants shall be paid me by Okurasho, when I shall have informed it of the costs.

7th.—In the event of her death, I will immediately give information to Okurasho, and manage the funeral under its advice and direction."

The feelings of the little savage, in view of all these (to her), inexplicable proceedings it would perhaps be difficult even to imagine. It will be observed that the solicitude of Uyeda is not wholly disinterested; there is a "little bill" attached to the transaction.

THE NOBLE Jugo-i-Date, formerly Daimio of Sendai, and possessor of an estate of 640,000 kokus, died in his house in Somai on the 12th instant, in his 50th year. Since the revolution, the Mikado promoted him to Jugo-i, and gave an income of 28,000 kokus to his son Kamésaburo.

AT THE Kaicho now being held at Yokohama Riogyoku, Tokei, the crowds of visitors daily are prodigious. Shows of all kinds abound, some of which are doing a roaring trade. One exhibition of earthenware, on the 16th inst. took 126 yen in that one day, for admission only.

## STAPLE IMPORTS.

The improvement in the Import market noted in our last has, we are glad to report, on the whole been sustained; and altogether the business aspect is of a more assuring character. Sterling rates shew a further decline, and the market is unsteady. Cargoes of steamships *Glenroy* and *Ajax*, via China, are to hand.

IN SHIRTINGS a large business has been done at improved rates. Prices at close are not quite so firm.

COTTON YARN has been much enquired for, especially first qualities, and prices last quoted are maintained.

VELVETS shew improvement, and there has been considerable demand at more encouraging prices.

TURKEY REDS continue saleable at last quotations.

WOOLLENS still remain very quiet, and prices are without alteration. There is some demand for MOUSSELINE DE LAINES, but at unremunerative figures.

BLANKETS exhibit some little animation. For top weight, 45 cents per lb. is offered.

THE METAL MARKET continues *in statu quo*; prices remaining at last quotations.

SUGARS are still in good demand, and the market continues firm.

RAW COTTON is without notable change.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.00 to 2.20	} Good business throughout.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—But little has been done in the silk market during the past fortnight, but prices have been generally sustained. Arrivals from the interior have been inconsiderable, and both buyers and sellers shew a disinclination to operate. The quality to hand shews a marked improvement, and choice parcels have commanded advanced prices. A small lot of old Taaysam has been quitted at a fair rate. Settlements during the fortnight have amounted to 200 Bales, of which 150 were Hank sorts, new. Present stocks are: New, 250 Bales: Old, 300 Bales.

**TEA.**—Business for the fortnight, since departure of last American Mail, amounts to the large total of Piculs 11,800. Arrivals of Second Crop have come in freely, and native dealers have made a concession of \$2 to \$3 per Picul on all classes. Finest and Choice goods continue comparatively dear and difficult to meet with.

## DEPARTURES.

July 19, Am. str. *Colorado*, Morse, 3,727, for San Francisco, mails and general, despatched by P. M. Co.  
 July 20, Brit. str. *Vancouver*, Shaw, 2,800, for Hongkong, general, despatched by Hudson, Malcolm & Co.  
 July 20, Brit. str. *Washi*, Hesscroff, 221, for Nagasaki, ballast, despatched by Hudson, Malcolm & Co.  
 July 21, French iron-clad *Montcalm*, Lespes, 3,400 tons, for Hiogo.  
 July 21, Am. str. *Kiangse*, Pratt, 570, for Hiogo, despatched by Edward Fischer & Co.  
 July 21, Am. str. *Great Republic*, Howard, 4,254, for Hongkong, general, despatched by P. M. Co.  
 July 21, Brit. str. *Picades*, W. Lee, 1,447, for Shanghai, general and tea, despatched by Mourilyan, Heimann & Co.  
 July 22, Brit. str. *Bombay*, Davis, 1,325, for Hongkong, mails and general, despatched by P. & O. Co.  
 July 22, Brit. str. *Bergol*, Douglas, 1,303, for Kobe, general, despatched by A. Heard & Co.  
 July 22, Brit. ship *Ambassador*, Frchin, 690, for Hiogo, general, despatched by Simon, Evers & Co.  
 July 22, Brit. str. *Ping On*, Mooney, 476, for Yokoska, despatched by E. Fischer & Co.  
 July 23, Am. str. *New York*, Furber, 2,119, for Hakodate, general, despatched by P. M. Co.  
 July 23rd, Am. str. *Oregonian*, Harris, 1,914, for Shanghai, &c., general, despatched by P. M. Co.  
 July 25, Brit. barq. *Sarah Scott*, Estall, 565, for Portland Oregon, ballast, despatched by Captain.  
 July 28, H. B. M. gunboat *Sylvia*, Capt. St. John, 887 tons, for surveying cruise.  
 July 28, Am. ship *Samuel G. Read*, White, 652, for New York, tea, despatched by Smith, Baker & Co.  
 July 29, Brit. barq. *Despauin*, Barlow, 417, for Shanghai, coal, despatched by Seabrook.  
 July 30, Am. str. *Nevada*, Coy, 2,143, for Hongkong, mails and general, despatched by P. M. Co.  
 July 30, Am. str. *Golden Age*, Wise, 1,870, for Shanghai, &c., general, despatched by P. M. Co.  
 July 31, Am. str. *Kisuhia*, Ellis, 680, for West Coast, ballast, despatched by E. Fischer & Co.  
 Aug. 1, Brit. barq. *Harrington*, McKenzie, 576, for Hiogo, general, despatched by Hudson, Malcolm & Co.  
 Aug. 1, Jap. str. *Acantha*, Young, 652, for Kobe, general, despatched by Japanese.

## PASSENGERS.

Per Brit. str. *Washi*, from Hakodate, &c.:  
 4 Japanese.  
 Per Am. str. *Costa Rica*, from Shanghai:  
 Captain Brown, Mrs. Hall, Mr. and Mrs. Ramee, Wyckoff, wife and servant, F. Braga, wife and 4 children, Mrs. Enonyé Banda, Mrs. McCarty, C. H. Gaswell Jr., Dr. Elliott, F. S. Jacobs and servant, T. C. Swift, H. Cook, Bourdechen, Bell and servant, M. de Mottell and servant, Paul Raully, 6 Japanese; and 69 in the steerage.

## FOR AMERICA:

Messrs. C. M. Jacobs and Wm. Crawford.  
 Per Am. str. *Oregonian*, from Hakodate:  
 Messrs. Morris and servant, Ichima. Dinsui, Foster, and 27 in the steerage.

Per Am. str. *New York*, from Shanghai:

Mr. and Mrs. Kuhn and 2 servants, M. J. Sloman, G. H. Pole, W. Morley, Kadanaski and servant, A. Schaeffer and servant, A. Machenhauer and servant, E. C. Kirby, Dr. Younker, Jno. Robertson, G. M. Ogilvie, W. C. Northals and servant, Capt. Fitz-George, J. H. Fisher; and 23 in the steerage.

## FOR SAN FRANCISCO.

Mr. and Mrs. Eckhard and 2 children, and C. H. Rockwell.

Per Frch. str. *Tanais*, for Hongkong:

Messrs. Darfeuille and Paul.

Per Am. str. *Costa Rica*, for Shanghai:

Mrs. H. Cook, J. Shadgett, A. E. Olarovsky, Miss Kenfield, 5 Japanese; and 72 in the steerage.

Per Brit. str. *Vancouver*, from San Francisco:

Messrs. Mitchell, Littledale, Heemskerk, Brewer, Truebb, Mr. and Mrs. Bremner; 87 Chinese in the steerage.

Per American steamer *Colorado*, from Hongkong:

## FOR YOKOHAMA:

Staff Comdr. Hewlett, R.N., Lt. P. K. Smythes, R.N., Mrs. W. H. Bell, Miss Smithers, W. H. Moore, Miss Bessie; 2 in steerage.

## FOR SHANGHAI:

Captain Quick.

## FOR SAN FRANCISCO:

Wm. Dunphy, Cheong Gong and family, 8; 819 Chinese in the steerage.

Per Am. str. *Colorado*, for San Francisco:

H. P. Lillibridge, C. H. Haswell, W. Dunphy, W. Lee, H. Quilter, M. M. Scott, Major Snow, L. W. Rickhard and family, Wm. Crawford, C. M. Jacobs, J. H. Fisher, W. E. Griffiths, Miss M. C. Griffiths, Ingersoll, W. W. Blorr, R. H. Areindale, E. Aubach, J. Jaquemot, Jr., Chung Gong, family and 5 attendants.

Per P.M.S.S. *Great Republic*, from San Francisco:

J. Mackrill Smith and son, S. F. Ringgold, John Duncan, Page Brown, E. H. Manley, Mrs. M. Jenks and in ant, Commander F. R. Lewis, U. S. N., R. E. Lewis, L. Derognat, Somerville, Miss K. Waters, Miss Josie Mansfield, E. J. Longford, Y. Hiataki, N. H. Nabushima, J. Kado, Samro Takaki, J. Tomita, Kentata Fujikma, H. Kobayashi and Servant K. Tsuboi, H. Kumbarm.

## FOR HONGKONG.

E. J. Songard.

Per Am. str. *Great Republic*, for Hongkong:

Gen. Le Gendre.

Per Brit. str. *Bombay*, for Hongkong:

Messrs. Hall and Foote.

Per Am. str. *Nevada*, from Shanghai, &c.:

## FOR YOKOHAMA:

J. Blain, J. H. Pinckross, C. H. Lavers, A. Dent, J. A. Schepel, G. C. Busgers, Dr. Willis, F. Wheeler, H. Cook, Mrs. Wolf, C. Rickerby, Mrs. W. C. Karthals and child, H. Yas, L. Von de Pilder, W. E. Clark, Dr. Geert, 5 Japanese; and 68 in steerage.

## FOR CALIFORNIA:

S. C. Bigelow;

Per *Oregonian*, for Shanghai, &c.:

## FOR HIOGO:

Yoshida Hayanari and servant, Mr. Kaneko, E. E. Muson and servant, Iwano, E. C. Kirby, E. W. Clark and servant, J. C. Ballagh, E. Vincienini, J. L. Liebermann and servant, 9 Japanese; 23 Japanese in the steerage.

## FOR NAGASAKI:

3 Japanese; and 16 in steerage.

## FOR SHANGHAI:

W. Foster, J. Duncan, T. Brewer, Mr. and Mrs. J. Wilson, J. J. Heemskerk, and 3 Japanese; 5 Japanese in steerage.

Per Brit. str. *Madras*, from Hongkong:

Messrs. C. Bate, R. Sairo, Mr. and Mrs. Canzi, Dr. A. McDonald, R.N., J. S. Cape, Miss Winsor; and 7 Chinese in the steerage.

Per Frch. str. *Volga*, from Hongkong:

Messrs. M. L. James, Martin, Vidal, A. Lon, Chung Wexo.

Per Am. str. *Golden Age*, from Shanghai:

Messrs. J. R. Cunningham, T. Olyphant, M. Minan, E. H. House, A. H. Groom, T. Lepper, W. H. Hames, W. Dillon, J. Eaton, Profos or Vanek, M. Vanek, Dr. Masaki, Capt. C. B. Ellis, J. L. Liebermann, 3 Japanese officers; and 68 in the steerage.

## FOR SAN FRANCISCO:

Mr. and Mrs. H. C. Bachelor; and 1 in steerage.

## FOR NEW YORK:

Rev. S. A. Devenport and F. W. Winn.

Per Am. str. *Nevada*, for Hongkong:

Messrs. Ford, M. Sichel, Pinto, and 1 Chinese.

## FOR POINT DE GALLE:

Captain Williams.

## FOR PORT SAID:

Madame Rosa Greenberg.

## FOR MARSEILLES:

Mr. and Madame Manhold.

Per P. M. S. *Golden Age*, for Shanghai, &c. —

## FOR HIOGO:

L. Van de Palder, W. H. Hariss, L. Markworld, M. Lepper, A. H. Groom. 25 in Steerage.

## FOR SHANGHAI:

Capt. Ville, J. J. Mathews. 10 in Steerage.

## FOR NAGASAKI:

20 in Steerage.

## REPORTS.

The British 3-masted schooner *Countess of Errol* reports very heavy weather during the passage, with strong E.N.E. winds. Were off Oosima for 6 days with a cross head-sea. Before leaving Taiwanfoo, three Japanese officers arrived there from the south end of the island. They reported that there were 40 prisoners in the hands of the Japanese. From Formosa these Japanese went to Shanghai in a Chinese gun-boat.

### THE "Japan Gazette" MAIL SUMMARY

FROM 3RD TO 13TH AUGUST, 1874.

#### BIRTH.

On the 4th August, a daughter to Mrs H. Cope.

#### Summary.

OUR last Mail Summary left this by the P. M. Steamer *Japan* on the 3rd inst. We are since in receipt of the following Mails:—

	Due.	Arrived.
American Mail.....	Augt. 2nd	Augt. 2nd
French "....."	" 5th	" 4th
English "....."	" 12th	" 10th

Telegrams from Europe are to 31st July; and letters to 26th June.

THERE IS no change in the aspect of affairs between China and Japan; but Mr. Okubo the Home Minister has left for Peking, accredited as Minister Plenipotentiary for the express purpose of settling matters. Whether he supplants Yanagiwara or merely acts with him jointly, we are not informed; and the instructions he bears with him have not been permitted to leak out in the smallest degree. He is now the man to whom the country looks to steer it clear of danger; but there is a predominant feeling, that it is better to fight China, at whatever risk, than yield in the smallest degree to menace.

THREE STEAMERS have been purchased by the Japanese within the past few days. They are the P. M. Steamer *New York*, for \$250,000, the P. & O. Steamer *Madras*, for \$90,000, and the Steamer *Acantha* for \$118,000. It is said that these have been purchased by a private company; but even if it be so, there is no doubt that it is for government purposes. Troops have been embarked

this week, whose destination is believed to be Formosa. At all events they are ready to be thrown into Formosa, if the Chinese make any hostile demonstrations in that quarter; but of this we do not see any likelihood. General Le Gendre, who left about a fortnight ago for Foochow, has full powers to settle things amicably; and Mr. Okubo, we are sure, has the same end in view. On Saturday last, a report became current in the settlement that a telegram had arrived, announcing the arrest of General Le Gendre, on his landing at Amoy. We attach no credit to the report. It would be both illegal and short-sighted—because no European is more likely than he to be able to make things pleasant with the Chinese.

Pending all this uncertainty, both sides are making vast preparations.

THIS BEING the period of the Summer vacations, a great many foreigners have received passes from the government to travel in the interior; which shews that the minds of the powerful in Japan are not exactly like those of the Medes and Persians. However rigidly they had intended to exclude foreigners from going beyond treaty limits, they have yielded the privilege not only to persons in their employ but to many others. Hakoné, in the mountain range, more than double the distance from Yokohama we are allowed by treaty to traverse, is so full of foreigners that it seems likely to become like one of the hill stations in India during the summer months. And many of the visitors are without any passes at all.

A LITTLE life was imparted among us a few days ago by a canoe sailing race. No less than nineteen canoes competed, and the sight was a very pretty one. Several upsets took place, but no serious accident. As we write, another is about starting, the canoes being handicapped, so as to give all a fair chance.

By THE last mail from San Francisco, Colonel Shepard, late U. S. Consul in Yokohama, who had been home on leave, and who during his absence, resigned his office, returned to Yokohama, to deliver over the charge to his successor, Mr. Van Buren. The latter came in the same steamer; and, on taking charge, announced himself as Consul General for Japan. Mr. Geo. N. Mitchell has acted as Consul during Colonel Shepard's absence, with great credit to himself and satisfaction to the community.

ON SUNDAY, the 9th inst., an interesting ceremony took place at the Roman Catholic Church, Yokohama; the baptism of a bell presented by the father of the late Count Daru, in memory of his son, who was drowned in Odawara Bay some two years ago. The Church was crowded by persons of all creeds. The ceremony was performed by the Bishop, assisted by many attendant priests.

Gen. Myers and Col. Lyford, U. S. A., who were specially commissioned by President Grant to bring presents, chiefly consisting of specimens of new and improved arms, from the Government of the United States to the Mikado, were presented at Court yesterday morning (11th) by Minister Bingham.

OKUBO has gone to China, as Japanese Minister-Resident and Plenipotentiary. Ito Hakubumi, Sangi, will fulfil Okubo's duties as Naimukiyo, during his absence, in addition to his own as Kobukiyo.

Jinshū Ijichi Masuharo, Gicho, is appointed Sangi.

Shoshū Yamagata Ariaki, the chief of Army Department, and Jinshū Kurodo Kiyotaka, chief of Kaitakushi, are also appointed Sangi.

THE RECEIPTS of the Telegraph Department during the month of June were 8,093 yen, 89 sen, 9 rin; and 1,996 dollars.

AN article appears in Saturday's issue (1st.) of the *Japan Mail*, under the heading "A new view of the Formosan question" (communicated). It is clearly and ably written; but it is not "a new view." It is what has been enunciated in the *Gazette* from the first; for, though we have seen and pointed out the possible consequences of the action taken by Japan, we have never doubted, nor failed to uphold, the fact of right being with the Japanese, in so far as the two ministers Kung and Soyesima are concerned; or the second very important fact that both the English and Americans had taken the same steps as the Japanese have done, and that the main difference lies simply in the Japanese having done effectually, through having a sufficient force, what their predecessors failed in through over-confidence in themselves and contempt of their foe. We are pleased to see that, to an unprejudiced mind, the view we have always and persistently taken appears the correct one; and we ask the writer of the communicated article in the *Mail* to absolve the foreign press at large from hostility to the Japanese in this expedition; as, with the exception of the *Japan Mail* and the *Japan Herald*, the foreign press in Japan seems to us to lean the other way. Almost everything that is said by the writer of the article has been said over and over again by ourselves; and the Yedo paper, the *Tokei Journal*, which has been particularly closely informed of matters connected with the Formosan expedition, has been strongly on the same side.

We do not at all find fault with the writer for reading the generally well-written articles of the *Japan Mail*, but we do warn him against attaching too much weight to the information of that journal; and imagining that it is the *foreign press*. It loves to cry aloud in the market places, "We, we alone are infallible; and all other newspapers are beneath contempt." But it must be a most singularly ill-informed reader who believes it. Only a week or two ago, it pooh-poohed the idea of China having entertained the idea of a money indemnity to the Japanese; yet, in the same paper in which the article appears on the "new view," is a translation of an official account of what had taken place at Liankiao, in which it is distinctly stated that "China sent a proposal to the effect that she would pay a sum of 500,000 taels to defray the expenses of the expedition, and therefore begged us to withdraw our troops. However, the amount of the indemnity proposed being insufficient, and moreover the Commander-in-chief not having authority to decide on such a matter on his own responsibility, the offer was refused."

It is perfectly true that there has been much said by foreigners in blame of the general acts of the present Government of Japan; and that the real cause of this apparent inimical criticism lies in the determined opposition of the present members of the Government, most of whom have received the greatest kindness and hospitality in Europe and America, to the desires of the foreigners in Japan; even although the natives are themselves convinced that their yielding would be for the benefit of the empire. But no! They put their foot down, and they have kept it immovable. The result is that they have weakened the old friendly feeling; and yet, sooner or later, they will be obliged to yield.

It is the opinion of some, that foreign Ministers have, in consequence of this antagonism of the Japanese Ministers, stirred the Chinese against the Japanese. This can hardly be so. Every one ought to know that it is the duty of a Minister of a foreign country resident at

one court, to inform the representative of his sovereign in an adjacent territory of any such proceedings as are going on there with regard to the possessions of that adjacent territory. So the foreign Ministers here naturally represented the doings of the Japanese Government in respect of Formosa, to the representatives of their various countries in China. There is nothing hostile in this; and there certainly is nothing unfriendly in letting the Minister for Foreign Affairs in Japan know their views of such an enterprise. If those views be opposed to Japan, it is far more friendly to reveal them, and explain the action they would under certain circumstances be compelled to take, than to remain silent—and take that action suddenly and at short notice, if circumstances required. We cannot for one instant believe that, however they may be annoyed with the present Japanese ministry, the foreign Ministers would do or say anything likely to injure this country; and we do not believe that there is a single foreigner in the country who, if it became necessary for him to declare for Japan or China, would not instantly draw to the side of Japan.

It is all nonsense to talk of any serious wish of the foreign community to see China attack Japan. Should such a misfortune for both countries happen, as that war should be declared, Japan will see that she has the sympathy, at least, of all foreigners on her soil. But we do not believe in the likelihood of war. The possibility—Yes! But not the probability.

Some amusement has been caused among those who have heard the "big talk" concerning the comparative chances of the Japanese and Chinese in case of war. We avow ourselves of those who think favorably of the chances of the Japanese. They are a nation of swordsmen. The sword, we shall be told, is not of much use against the rifle. No, it is not, when the rifle is in trained hands. But what was the claymore in the hands of the highlanders in 1745, as compared with the musket in the hands of trained soldiers? Let Preston-Pans, Carlisle, Falkirk, reply. Japan has enough, trained, well-equipped soldiers, to bring face to face with China's trained troops; and after them come the whole fighting population, with that terrible weapon to which the claymore is but a toy; and with a spirit not surpassed by any soldiers in the world. Let but the call be made, and Japan has in one month an army far more numerous than can possibly be required, ready to go anywhere, and to do and dare anything at the command of the Emperor. And as against Chinese troops these men and these arms will be not unfavorably pitted.

In all likelihood we shall see the Japanese troops leave Formosa, directly a guarantee is given by China against further cruelties on the part of the savages; and that arrangement will not only be a satisfactory one to both parties but it will entitle Japan to the gratitude of the whole world.

The following important Notifications have been published by the Central Government.

*From the Dajokan Nisshi, Government Gazette), No. 103, of the 25th July, 1874.*

[TRANSLATION.]

TO THE SA-IN, DEPARTMENT OF STATE, THE KAITAKUSHI, AND THOSE CITIES AND PREFECTURES WHICH ARE OPEN FOR FOREIGN COMMERCE.

On the 6th May last, a number of police entered the English Legation at Kōjimachi in this city, unlawfully arrested one of the English Escort, beat him, carried him off by force, and detained him at the Police Station. In

consequence of this, Kukimura Haruyoshi and six others, after being dismissed, have now been convicted, and have now been severally condemned, according to the law, to the punishment named in No. 126 of the *Gazette* of the Judicial Department. In addition, a humble apology has had to be offered by our Government to the British Minister for this outrageous action.

Legations are the residences of the Representatives of foreign countries, and, according to public law, not only can the rights of the country in which they reside not be exercised over them, but also should our officers act in violation of Public Law, as the dignity and good faith of the Empire are injured thereby, they shall be severely punished. Strict care must therefore be taken to treat with special respect the Ministers of Foreign Powers and the officers attached to their Legations, and to avoid treating them with discourtesy.

The above is notified.

(Signed) SANJO SANEYOSHI.

*Daijō Daijin (Prime Minister.)*

*From Gazette of Judicial Department.*

No. 126.

SENTENCES.

Kukimura Haruyoshi, Shizoku of the Kago-shima Ken:—

On the 6th May last, whilst holding office as a Sub-Inspector of Police, you heard that when a policeman named Nakayama Motonoske was about to take into custody a person named Tachikawa Chokichi who had committed a petty offence outside the English Legation, two Englishmen came out of the Legation, told him to go away, because he was a workman in their employ, and immediately returned within the Legation; upon which, you gave orders to the said Motonoske and five others, and caused them to enter the said premises without permission, and there to seize, beat, and drag away one of the Escort of the British Minister.

The offence of causing the Escort-man to be beaten is treated according to Article 90 of the Revised Code as a grave violation of a public edict, for which the punishment is one hundred days hard labour, but by the law for crimes committed by *Samurai* is commuted to one hundred days imprisonment, to which you are therefore condemned.

Kondō Yukinari, Shizoku of the Mii Ken; Tada Masanobu and Kataishi Yoshikatsu, Shizoku of the Tokei Fu; Nakayama Motonoske 4th son of Motoyoshi, also Shizoku of Tokei Fu; Ito Hajime, eldest son of Koyata, Shizoku of Tokei Fu:—

Whilst holding office as policemen, you entered without permission the premises of the English Legation. According to Article 215 of the Revised Code, this offence is treated as that of entering the gate of the Imperial residence without leave, the punishment for which is fifty days hard labour, but by the law for crimes committed by *Samurai* is commuted to fifty days imprisonment, to which you are therefore condemned.

Yamamoto Seikichi, *Heimin* (of the common people) tenant of No. 4, 1st ward of Fujimi street, 4th smaller division, 3rd large division, Tokei:—

Whilst holding office as policeman, you entered without permission the premises of the English Legation. According to Article 215 of the Revised Code, this offence is treated as that of entering the gate of the Imperial Residence without leave, and you are accordingly sentenced to fifty days hard labour.

### TRIAL OF THE "SILSBY" STEAM FIRE ENGINE.

THE PUBLIC trial of the new steam fire-engine, manufactured by the Silsby M'fg. Co., a description of which appeared in our columns a few days ago, came off this morning in front of the New Town Hall, in presence of a great concourse of people—Europeans, Japanese, and others. Amongst the spectators we noticed Mr. Nakasima Nobuyuki, Governor of Kanagawa, Mr. Santo, Vice-Governor, and other officials of the Ken; and many of our prominent citizens, naturally taking a lively interest in the important question of protection against fire, were present on the ground, and expressed themselves as highly pleased with the appearance and performance of the machine.

The engine reached the place appointed for the trial at 11.30 A.M., and was located at the edge of a fire-well (which is supplied from the native water-works), just where Honcho Dori is crossed by Asahi-machi. Mr. H. Comstock, who was sent out by the Silsby Co. as their Agent, had sole direction of the engine, and ran it, himself, during the trial. Everything being in readiness, a start was made, and sufficient steam was generated in 2½ minutes after the fire was lighted, to blow the whistle. In 8 minutes the engine started with 18 lbs. steam; and in 10 minutes, at a pressure of 25 lbs., a 1½ inch stream of water was thrown over the weather-vane of the New Town Hall spire. With 35 lbs. of steam, two 1½ in. streams were thrown quite 25 feet above the spire, notwithstanding the prevalence of a breeze which somewhat scattered the top of the jet. Taking the height of the tower at 82 feet, and that of the ironwork surmounting it at 15 feet, the total perpendicular distance thrown may be set down as about 125 feet. The hose having been then directed along the street leading to the harbour, a trial of another kind was made. With 60 lbs. of steam, two 1½ in. streams were thrown, horizontally, 165 feet, by measurement. A junction called a "Y" having been fixed to the off-side "delivery," two hose were made available from that side, and the same might have been done with the near-side delivery had the exigencies of service required it. Three 7/8 in. nozzles were then affixed to the hose, and, with a pressure of 70 lbs. of steam, fully the same distance was covered. At no time did the steam gauges, of which there are two, indicate a pressure of more than 85 lbs. of steam; at which it blew off. The pressure of water on the delivery hose, as marked by the water-gauge, shewed a maximum of 90 lbs. to the square inch. Two hundred feet of hose were in use in each "line," but the two reels which accompany the engine carry 1000 yards of patent "carbolic-rubber" hose, manufactured of 4-ply cotton duck. The suction is 4 inch. The coolies of the Yokohama Fire Brigade, under the direction of Mr. T. Davis, handled the hose, and Capt. Fletcher rendered much assistance in fulfilling the duties of *pro tem.* Fire Marshal.

The manner in which the engine worked elicited general admiration, and non-professionals, who did not pretend to understand its mechanism, were agreed as to the very powerful and efficient service which, it was plain to all, it rendered. But there were others present who were in a position to practically appreciate its admirable construction and performance, and the many engineers and engine-wrights who availed themselves of the opportunity to witness its trial seemed to be unanimous (both Americans and Europeans) that it acquitted itself, under the

able manipulation of Mr. Comstock, in an almost perfect manner. Although the wheels were not chocked or stayed in any way, it never moved a sixteenth of an inch. Such remarkable steadiness, in a high-pressure machine of 20 horse-power, with a tremendous force of water both in and out, was the theme of admiration amongst all present.

With one or two such machines in the Settlement, and a dependable supply of water brought into our midst, such as exists throughout the native town, devastation such as Yokohama has more than once witnessed from uncontrollable conflagrations ought to be altogether a thing of the past.

### ASIATIC SOCIETY OF JAPAN.

The Second Annual Meeting of this Society was held at the Grand Hotel on Wednesday evening, the 15th July, 1874.

The Chair was taken by the President, J. C. Hepburn, Esq., M. D., shortly before nine o'clock.

The Minutes of the last General Meeting having been confirmed, a Draft of Rules, submitted by the Council, was read and discussed, clause by clause. Having been amended in several points, it was finally passed as a whole, on the motion of the Rev. Dr. Brown, seconded by Sir Harry S. Parkes, and adopted, as follows:—

#### SECOND ANNUAL REPORT.

The Council of the Asiatic Society of Japan, in presenting their second Annual Report, feel much satisfaction in recapitulating the facts which prove that the organization was not uncalled for, neither has it been unappreciated.

The first number of the Society's Transactions is so much in demand that it has been found necessary to print another edition, in order to satisfy the requirements of readers at a distance. The necessity for this will be obviated, as regards the forthcoming number, by issuing a larger edition at first.

The following Papers have been read at the Regular Meetings:—

"The Warm Springs of Kusatsu," by Captain Leon Descharmes.

"Dr. Kaempfer's History of Japan;" by R. G. Watson, Esq.

"The Sword of Japan: its History and Traditions;" by T. R. D. McClatchie, Esq.

"Constructive Art in Japan;" by R. H. Brunton, Esq.

"Yezo: a Description of the Ishi-kari River, and the New Capital, Satsporo;" by Captain Bridgford, R. M. A.

"The Shintô Temples of Isé;" by E. M. Satow, Esq.

"The Games and Sports of Japanese children;" by Prof. W. E. Griffis.

"Winds and Currents in the Vicinity of the Japanese Islands;" by Capt. A. R. Brown.

"Notes of a Journey in Hitachi, Shimôsa, and Kadzusa;" by C. W. Laurence, Esq.

"Deep-sea Soundings in the Pacific;" by Captain Belknap, U. S. N.

"Has Japanese an Affinity with Aryan Languages?" by W. G. Aston, Esq.

"On the Increase of the Flora of Japan;" by Dr. Savatier.

"Meteorological Observations of Yokohama, from 1863 to 1869, inclusive;" by Dr. Hepburn.

"A Journey in North-East Japan;" by Captain Blakiston, late R. A.

The following paper has been received, and will be read next session:

"Meteorological Observations on the Station Nagasaki for 1872;" by—Geerts, Esq.

Of the interest and value of these Papers there has been ample proof, in the increased numbers of Resident Members, and of those who attend the Meetings of the Society and partake in the discussions—the substance of which, in the words of the speakers themselves, will be found incorporated in the Minutes.

Fifty-seven new Members have been added to the Society since the last Report, making the present number 168.

The Treasurer's Account shows a satisfactory balance, to the Society's credit, of \$586.22; which amount, however, is subject to an appropriation of \$300 for the increase of the Library.

A Revision of the Constitution and By-Laws has been made, and the result will be printed in conjunction with this Report.

The important subject of meteorological observations has given rise to a correspondence with the Signal Bureau at Washington, and the appointment of a committee of this Society to bring the matter to the notice of the Japanese authorities. The Council consider the plan of synchronous observations, according to the scheme of the Vienna Conference, so important, that they feel no hesitation in commending the advocacy of it to the consideration of their successors in office.

Some valuable contributions have been made to the Library and Museum; but the Council feel that, at some suitable time during the coming year, a resolute effort should be made to do something effective in regard to both these departments; also, perhaps, to provide a building suitable for the Society's business. Meanwhile, they have to acknowledge the courtesy of the Managers of the Grand Hotel in furnishing, gratuitously, convenient accommodation for the holding of periodical Meetings.

On behalf of the Council,

Ed. W. SYLIE.

Hon. Sec.

### ASIATIC SOCIETY OF JAPAN.

Receipts and Expenditure, 1st January to 30th June, 1874:

HERBERT COPE,

Hon. Treasurer, *pro tem.*

The adoption of this Report having been moved by Mr. Goodwin and seconded by Mr. Wilkin, was agreed to, and the Chairman appointed a Committee to nominate the officers for the ensuing year, whose recommendation of the following gentlemen was adopted;

*President.*—Rev. S. R. Brown, D. D.

*Vice-Presidents.*—Sir Harry S. Parkes, K.C.B., and C. W. Goodwin, Esq.

*Council.*—J. C. Hepburn, Esq. M.D., A. J. Wilkin, Esq., W. G. Howell, Esq., R. H. Brunton, Esq., and T. Walsh, Esq.

*Treasurer.*—J. Thurburn, Esq.

*Corresponding Secretary.*—Rev. E. W. Syle.

*Recording Secretary.*—G. H. Pole, Esq.

A vote of thanks having been accorded to the late Council for the successful conduct of affairs which had marked their administration, expressing at the same time regret at the retirement of Dr. Hepburn from the Presidency, the meeting terminated.—*Japan Mail.*

### THE CANOE HANDICAP SAILING RACE.

(By Our Aquatic Reporter.)

Owing to the fresh breeze blowing during the early part of the afternoon of yesterday (5th), several of the canoes which had been out for a "feeler" came back with reefs in. The consequence was, that many started under small sail, and, with the light puffs under the Bluff, were nowhere, the larger canvas'd craft getting away with the lead; Mr. Tripp's noticeably first, with a large lateen sail, rounding the P. M. S. buoy some minutes ahead of all; Mr. A. Dare's next, Mr. Smyth, Dr. Buckle and J. J. Dare, following. The rest were dodging about for some time afterwards, and but few of them got round at all.

Up to this point, there were no less than four capsize, to the amusement of lookers-on, the canoeists luckily being all good swimmers.

A fast run now took place before a south-westerly breeze, freshening as the boats drew away from the land. The next casualty was Mr. Tripp's sail giving way, just before coming up with Spit Buoy, throwing him completely out of the race, although he had hitherto had an immense lead. Mr. Alfred Dare then overhauled him, and was the first to round the Spit Buoy, followed, shortly afterwards, by Messrs. Smyth, J. J. Dare and Buckle.

It was now a closed-hauled tack in towards the P. & O. tug buoy off the Club, which was first passed by Mr. Smyth, Alfred Dare close behind him and to windward.

A series of humbugging short tacks had then to be made under the land, to reach the flag-boat, which was somewhat badly placed, close under the Bund, both leading boats having great difficulty in reaching it at all. After much dodging and fluking it resulted in Mr. Alfred Dare's winning by about 6 inches, Smyth second. Mr. Julius Dare came in third, some five minutes afterwards; Dr. Buckle and Mr. Jones, fourth and fifth, were the only others out of the nineteen starters who completed the course.

We hear that another sailing race is shortly to take place, for a presented prize; by which time it is to be hoped that more canoeists will come to the front.

### SAILING MATCH.

A MOST interesting match came off yesterday afternoon (9th), between Messrs. Whitfield and Dowson's *Zephyr* and Dr. Dalliston's *Tantivy*. The stakes were \$25 aside, and the course twice round the Lightship and shipping. It was agreed that the larger craft, the *Zephyr*, was to allow her antagonist 8 minutes, should it be blowing hard; otherwise they were to sail on even terms. As it was in

reality blowing half a gale of wind, the *Tantivy* took advantage of the concession, but unfortunately, as will be seen, without success.

Notwithstanding the stormy weather, and the ugly appearances to windward, both yachts punctually appeared at the starting post, and were under weigh at 2 p.m., sharp; the smaller craft, the *Tantivy*, getting up her sails with wonderful celerity. The *Zephyr* followed shortly afterwards, and, notwithstanding her heavy gear and great spread of canvas, she was but little behind-hand.

The *Tantivy* of course went off with the lead, but, finding the *Zephyr* rapidly coming up astern, when about abreast of the Spit Buoy somewhat unwisely shook out the reef in her mainsail and allowed the *Zephyr* to pass to windward of her. The south-westerly gale freshening up off the land gave them a sharp run out to the Light Ship, which was passed by the *Zephyr* in 16½ minutes, the *Tantivy* following 1¼ minute later; both craft dropping the peaks of their mainsails as they gybed round the Light-vessel. A very ugly squall then came out from off the land, with hard gusts and rain, in which both boats had as much as they could stagger under, the smaller one being in up to her skylights, almost all the time.

The *Zephyr*, her covering-board awash and tearing along with the lead, stood right in for Kanagawa, and then went about for the first time, laying well up along the land. At 10 min. to 3 p.m., she completed the first round, in 50 min.; very fair going, the course being about 8 miles.

The *Tantivy* also laid well up, and fetched past the starting point some 7 min. later, apparently not the least deterred by the previous hard "dusting" outside.

The second round was made in much finer weather, the squall having blown over, although the wind still held hard and gusty from the S. W. The little *Tantivy* pluckily held on after her larger antagonist, although at times completely buried in the sea and spray, and almost overpowered with her whole main-sail; in fact, the way she managed to carry it at all was a wonder, and there can be no doubt that it told much against her when she had to come up close-hauled, as she could not hold her wind like the big towering cutter, and in one of the harder gusts had to lower away her foresail.

The big cutter had the rest of the race all to herself, and rounded the Light-ship for the second time at 3.5 p.m. She carried even her gaff-topsail right up to the last turn, and finished off the race, in 1 hour and 40 min., at 20 min. to 4 p.m. A shift in the wind unluckily took place as the *Tantivy* came up, and, breaking her off, she had to pass to leeward of the buoy, 11 min. astern of the *Zephyr*. Eventually, after a tack, she passed to windward of it, at 2 min. to 4 p.m., or 18 min. astern.

Both crews deserve great credit for sailing a race in such dirty weather, and thus affording lookers-on the sight, seldom if ever seen in this bay, of racing in half a gale of wind. The way they got up their canvas and handled their boats was beyond criticism, and shewed that, although all were landmen, they had had their hands well in when afloat; and, though amateurs, they were not altogether fine-weather sailors.

### THE CLAIMS AGAINST THE HAN.

WE PUBLISH below the principal portions of the judgments delivered by M. Berthemy, acting as arbitrator in the claims presented by certain British subjects, against several of the

old Han. There were, in all, seven cases; but both Mr. Hannen and Tamano agreed that neither Mr. A. Howell nor Capt. Blakiston had any legal foundation for their claims. The other four have now been decided, and in these the Government has practically proved the same thing. We have not published the arguments by which M. Berthemy arrives at his conclusions; but we may say that they evince a careful consideration of the evidence, and have led to decisions which are just and equitable to all parties.

The following are a few comments by which M. Berthemy introduces his decisions:

By the terms of an arrangement entered into on the 12th March last, by the Department of Foreign Affairs and the Legation of Her Britannic Majesty, having for its object the definite settlement of certain claims lodged by English subjects against the late provincial administrations, represented to-day by the Central Government, I have been asked to decide, in the capacity of umpire, upon complaints, to the number of four, concerning which no agreement could be arrived at by Messrs. Tamano and Hannen, who had been designated as arbitrators by the two parties.

These complaints are those of Messrs. Scott against the Tonami Han, Kirby against the Iwasaki Han, Cabeldu against the Tonami Han, Pitman against the Hiromaye Han. Having studied the documents placed at my disposal, I am in a position to draw up my opinion. The claims I have had to examine have identically the same origin. At different periods, time-contracts have been made by British with Japanese subjects; resulting from these contracts, goods have been delivered, but they have not been paid for, or in part only. Now, the purchasers, were they, as the plaintiffs allege, proxies of certain Hans? If they had powers to act, the Central Government, which, in assuming to itself the rights of the late provincial administrations, has naturally taken upon itself the obligations of these latter, is evidently responsible. If they had no power to act, as the defence maintains, this responsibility does not exist. It might be asked, it is true, as was done at the time of the enquiry, previously made, whether, in the one case, the seller omitted to make the enquiries necessary to assure himself of the official character of the persons with whom he was dealing; whether, in the other, the precautions taken and the guarantees asked for by him, do not indicate that he had his doubts about this same character. But such considerations cannot modify the basis itself of the litigation. In reality the question is not to establish that the plaintiffs *had grounds to believe* that they were dealing with the representative of such or such Han, but in fact whether they were dealing with such representatives.

I will, then, briefly pass in review each one of these claims, leaving aside, as much as possible, the arguments which seems to me not to bear in a direct manner upon the principle which I have just stated, and refraining from recurring to the facts and figures too well-known by the two parties to necessitate the re-mention of them.

#### I.

##### SCOTT & CO. v. THE TONAMI HAN.

The prosecution alleges that the persons named Hara Genjiro, Tanaka Sanat, and Nakayama Otonoske, were authorised to buy from Scott, in the name of the Tonami Han, certain goods.

After reviewing the evidence M. Berthemy says:—

I am of opinion that the Japanese Government, substituted for the Tonami Han, is not legally responsible for the non-execution of engagements entered into in April—May, 1871, by Nakayama Otonoske, Tanaka Sanai, and Hara Genjiro, but that these latter had, by fraudulent manoeuvres, imposed upon the good faith of Scott.

Nevertheless, I do not think I am overstepping the limits of the commission which has been committed to me, in calling the attention of the Minister for Foreign Affairs to a point which has certainly not escaped his perspicuity. When, actuated by motives I am not called upon to consider, the Japanese Government consented to indemnify the American house owning the *Rising Sun* for the loss it sustained by the act of the persons mentioned above, it contracted towards Scott, — a victim of the guilty doings of these same persons, under conditions nearly identical—a moral obligation which it will fulfil, I cannot doubt, as soon as it shall have seen the question of right, in my estimation incontestable, decided in its favour. In the affair of the *Rising Sun* the indemnity was paid, I am fully aware, as a voluntary act. Legally, the injured party had no better grounds for obtaining it than has Scott in the case in hand. But the Japanese Government will not be willing to have it thought that its decisions in such matters are influenced by questions of nationality.

## II.

## CABELDU v. THE IWAZAKI HAN.

In March—April, 1871, Yoshida Zanzo, an employé of the Riu-Siu Yamasaki, for the sale of the productions of the Iwazaki Han, buys from Cabeldu goods, and pays something on account, engaging himself to complete the payment by a certain fixed time. He affixes to the contract a signature in blank, bearing the seal of the Riu-Siu, and implying the responsibility of the Han, and then disappears, after having squandered the money realized by the sale at excessively low prices of the goods he had thus procured. Now, was he authorized to make use of this blank signature in the commercial transaction in question?

Upon the evidence of Yoshida, M. Berthemy decides that he had no such authorization, and concludes:

I am of the opinion that the Japanese Government is not responsible for the loss sustained by Cabeldu.

## III.

## KIRBY &amp; Co. v. THE TONAMI HAN.

This claim, in its principal features, presents the same aspect as that of Scott. Like this latter, Kirby has been the victim of fraudulent manoeuvres, notwithstanding the care he took to make enquiries of functionaries whose competence he could not suspect.

M. Berthemy here reviews the evidence, and sums up as follows:

Referring to my conclusions upon the claim of Mr. Scott, I do not consider the Japanese Government as legally responsible for the execution of the contract signed by Nakayama, Hara, Tanaka and Akabane; but I think it morally obliged, on account of the compromise between it and the owners of the *Rising Sun*, to indemnify Kirby in the same proportion.

## IV.

## PITMAN v. THE HIROMAYE OR TSUGARU HAN.

This claim is based upon two considerations. In the first place, the contract for the goods purchased of Pitman was signed, it seems, by

Imamura Yagaro, Imamura Yukitchiro, and by Matsui Hayata, as representing the Hiromaye Han; in the second place, payment of the value of the goods was guaranteed by a mortgage upon the ship *Saturnus* (*Toyo-maru*). It seems that, through negligence, the employés of the Government allowed this vessel to leave the port of Hakodate, thereby causing the plaintiff to lose the lien by which he calculated to reimburse himself.

M. Berthemy reviews the evidence in this case at considerable length. He states that, on the 10th April (Pitman's contract bears date 19th April, 1870), the *Saturnus* was mortgaged to Siber and Brennwald for \$9,200; and that they had a prior lien on the vessel. By the custom of hypothecation then existing, the first mortgage-creditor took possession, the second reimbursing himself out of the other property of the debtor. M. Berthemy points out that the lien may produce, on sale, more than the first debt, and that, by custom, this would be retained by the first mortgage-creditor, which, M. Berthemy points out, "amounts to a denial of justice."

He therefore concludes:—

I am of opinion that the Japanese Government is not responsible towards Pitman for the non-execution of the contract signed the 30th November, 1870, by Imamura Yagaro, Imamura Yukitchiro, and Matsui Hayata; that it is not responsible for the consequences of the negligence of the authorities of Hakodate, seeing that this negligence has, in reality, caused no prejudice to Pitman: that it is not legally responsible for the ultimate consequences of the measure which gave possession to Siber and Brennwald, without reserve, of a pledge upon which Pitman had equally a lien. But at the same time I am of the opinion that, if the sale of the *Saturnus* realized more than \$9,200,—the amount of Siber and Brennwald's mortgage—the Japanese Government is morally bound to pay to Pitman a sum equal to that excess, swelled by the interest calculated at the average rate at Yokohama, and counting from the day the ship was handed over to the first mortgage-creditor.—*Tokei Journal*.

## HAKODATE.

30th July, 1874.

(From An Extra-ordinary Correspondent.)

Your Correspondent begs to convey to the *Gazette* that he has returned to Hakodate from an excellent salmon-fishing tour; during which, he has thoroughly qualified himself to represent the two classic boroughs of "Scabby" and "Pombetz" in the first Japanese Parliament; in which dual piscatorial villages his constituents have initiated him into the sacred mystery of the chopstick, which he can now wield with ease and safety. He would also intimate to the enterprising *Gazette*, that the steamer *Maggie Lauder* is now undergoing an overhaul on Messrs. Thompson and Bowick's slip; also that the schooner *Hokaido* was yesterday launched from the yard of the same firm with very great success; christened by Miss Parkes, the daughter of our respected Sir Harry. The full assemblage of Hakodate ladies was present, with the exception of the wives of certain wretched individuals who, it appears, can realize no kind of happiness but the production of long faces and perpetual psalm-singing. A platform was erected, with awning, etc., surrounded by flags, where a liberal supply of champagne, ice-cream, and so forth supplied the emergency of the hour. At seven o'clock, dinner, with the usuals, wound up the day's doings, and the event will

be looked upon as an epoch in the annals of Hakodate. The Japs. assembled to the number of three thousand. Your Correspondent was toasted by the ship-carpenters, for his many excellent qualities, when he made a forcible and telling speech, and sang the "Mistletoe Bough." He bids the officials of the *Gazette* to keep virtue as their primary model, and offers them *Benedicite*!

## Overland Jottings, between Niigata and Yokohama.

IN ANY other country but Japan, twenty years of civilization and European intercourse would afford such opportunities for gaining a knowledge of life and manners in the interior as would leave little indeed to be desired. But, here, the facilities for acquiring such information are so limited, thanks to the present obstructive policy of the government, that any little glimpses that can be obtained behind the curtain which divides the Children of the Land of the Rising Sun from the "outer barbarians" must surely prove of interest; the more especially as the Japanese seem to be straining every nerve, not only to prevent the extension of the present Treaty Limits, but to contract still more the narrow boundaries within which foreigners are confined.

The following notes are from the pen of a gentleman to whom we are already much indebted for interesting items of country news, and who enjoys opportunities for sight-seeing not usually accorded to foreigners:—

We left Niigata by boat, at 2 P.M. on the 17th ulto., crossed the Shinanogawa, and sailed up some narrow canals connecting it with the Aranokawa, which is certainly a finer river than the first-named. It is said by the boatmen to have 20 feet of water, and often more, on the bar, so that junks of any size can enter. During the last civil war, we were told, steamers came up it, with troops, for some distance. Up more canals, and, at 8 P.M., arrived at Shibata, the old capital of the Ken. It is a dirty straggling old city, containing nothing of interest. The water communication between the two towns was formerly very bad, and several portages had to be made; but, during the last year, a private Company deepened the worst places, and have been allowed to levy a tax of 1 tempo on ever boat passing through, during the next five years. The rice looked well, and had not suffered from the late floods which did so much damage around Nagaoka. There were also some fine fields of flax. The farmers were all busy gathering river weeds, which they use for manure. In the middle of one very wide canal near Niigata, there was a pretty little willow-fringed island, with a neat temple on it, and a very large carved stone slab, which had been erected to commemorate the loss of a great number of lives by flood and storm near that place, about 50 years ago. Here also we met many large timber rafts, coming down from the mountain streams.

Left Shibata at 5 A.M. on the 18th, for Akitane, distant about 9 miles. The roads were very bad and steep. The town is a long, straggling place, containing many sake breweries. A number of very fine and large dogs were noticeable, as there are but few in Niigata and Shibata. Here all goods seem to be hauled about by women, on large coolie carts with strong solid wheels. The road for quite two miles was lined on each side with fine old cedar trees, giving a very pleasant shade. Several fields of tea-plants and many mulberry trees were to be

seen. Arrived at Akitane at 11 A.M., but had to wait some time for coolies, as they were out in the fields and had to be called in. The road now became very steep and narrow. At 1 P.M. arrived at Aria. This is a nice, clean village, where all were engaged in silk culture, and the surrounding villages seemed of the same kind. On enquiry as to the cause of their unusually neat appearance, I found they had all been burnt during the civil war, and that the government, to encourage and assist the people to rebuild, quickly and well, had given them leave to cut as much wood as they required. Passing several more villages, we gradually ascended the range, and, reaching the top, halted at a small place called Suwatooge, from which the sea and the distant island of Awashima could be distinctly seen. The height of the pass, by road, as given by the villagers, is  $2\frac{1}{2}$  ri. About half a ri further on, came to Sugawa, at an elevation of 2 ri, from which place a fine view of the Wakamatsu valley is obtained. The town itself can just be made out, lying away on the extreme edge of the valley, under the mountains. The descent from here is very steep, and took a long time. It was quite late when we arrived at Sugawa, a dirty straggling village, situate at the foot of the mountain.

Next day, the road wound through the valley, which was planted with rice and flax. Halted for the night at Takaku, and next morning reached Wakamatsu, famous as being the last place which the Aidzu clan held for the Tycoon. The town was then nearly all burnt, and seems to have suffered severely from fires since. A great portion was in a very ruinous condition, and the whole place had an air of decay about it. Here we were informed that there was a nearer way to Nikko than that by the main road; and that a foreigner and his wife had gone on by it only two days previously. The post-master advised us to keep to the main road, and in the end this proved good advice, as the party mentioned arrived in Nikko one day later than ourselves, with their horses completely done up; they reported the road as very bad. After leaving Wakamatsu, the mountain roads were exceedingly steep and difficult of ascent; but they were pleasantly shaded by numbers of fine trees, chiefly cedars. A great many of the trees from which the lacquer varnish is obtained were to be seen on the adjacent hills. Flowers were also abundant and very pretty, especially large red and white lilies. Passing many small places of no interest, we reached Makenouchi, where we put up for the night. The next morning, starting early, we soon struck the main road to Hakodadi. Here we first saw the telegraph wires, running northward. At 10 A.M., came to Shirakawa, a large and well-built town. Its inhabitants are principally engaged in the silk trade. Many large houses were full of young girls engaged in silk-reeling, and each side of the streets was taken up with trays of cocoons, drying in the sun. We arrived at Otawarra that evening. Next morning, the road lay across a very large grassy plain, upon which many fine bulls and horses were feeding. At 4 P.M. arrived at Emaichi, where the direct road to Nikko commences; gradually ascending, but beautifully shaded by very tall cedars. The first part of Nikko is called Yeta-machi and seems given up to the business of dressing skins; many of which, principally deer, bear, and monkey, were exposed for sale. A little distance further on, we reached the town of Hachi-ishe, which lies at the foot of Nikko-san ("Sun-light Mountain.") It is one long street, and consists chiefly of tea-houses,

for the accommodation of the numerous pilgrims and visitors to Nikko. We stayed at the tea-house of Sussiki Kisojo, which is very conveniently situated, being near the temples. Its elevation is 1,900 feet above sea-level, and it is consequently very cool and pleasant. It had one great recommendation, the host was a pleasant man and a good guide. To make things still more pleasant there were no musquitos, and during our stay we never used nets. Early next morning, in company with an American Civil Engineer, who was making a trip through the country, and whom we met here, we started for Chusenji. The mountain guide not arriving in time, we set off without one, leaving orders for him to come after us. The principal sights we intended should be seen on that day, were the waterfalls and the lake, and the town and temple of Chusenji. Thinking that by following the river we must reach the falls, we made the attempt, but it proved no easy task, as the bed was that of a mountain torrent, choked up with immense boulders, which had fallen from the cliffs towering for a great height on each side. It turned out, eventually, that we had taken the wrong side of the river, and so got off the direct track; thus making our walk much longer, but enabling us to see what, by the tangled path, was evidently rarely visited, viz, a long row of Buddhist images, certainly more than 200, every twentieth being much larger than the rest. They were in a sitting posture, and nearly all covered with a thick coating of moss, which had the effect of adding much to their calm and placid expression of countenance. Regaining the direct path, which now ran along the side of the river, we frequently crossed and re-crossed on very shaky bridges, the deep torrent running swiftly below. After travelling about six miles we reached the bottom of the mountain, and the ascent, which had hitherto been gradual, became very steep. On the road up, there are two houses for resting, and, half way up, a tea-house, where we had a good rest, then on again. Soon we came in sight of a waterfall, but one of no great magnitude. When about three parts of the way up, a narrow path branched off to the principal fall, which is called K'gan. Not obtaining a good view from here, we scrambled down a narrow track, where the least slip would have resulted in a fall into the vortex of the whirl below. Even from here the view of the fall was not a good one, and our American friend was much annoyed that he could not get at a more suitable point from which to take the height of it. The guide-book gives it as 75 jo, or 750 feet, but this is certainly far out. The fall is very pretty, dropping sheer down without a break. Amidst the spray, crowds of swallows with their young were darting about and disporting in the sun.

Our guide had not yet turned up, and we found some difficulty in regaining the main track. Soon, through the trees, we saw the glitter of the deep blue and prettily embowered lake of Chusenji, and we quickly entered the now nearly deserted town of that name. One's feelings were very strange in walking through it, nearly all the houses being shut up and empty.

At noon, we gained the welcome shelter of the tea-house, and rested in a pretty room having a fine view of the lake and surrounding mountains. By barometrical observation the height of the lake was found to be 3,800 feet; and, high above us, towered the mountain of Mantis-san, at a distance by road to the summit of yet 3 ri 8 cho; we did not ascend it. From the top, the view is said to be very fine,

and there is also a little *miya*, or shrine, near which, on a stone altar, is placed a number of old swords. Their former owners, having committed some crime, in expiation placed them there as a part of their vow. The town of Chusenji, when full of white-robed pilgrims, must present a very pretty appearance. During the seventeen days in August when this town is open to them, their numbers often exceed six or seven thousand. After resting a little, we started downward. The lake is 1 ri wide, by 3 long. There is little to be seen, and a notice board prohibits fishing or shooting. Our American friend wished to get at some place on the way down where he could obtain a good view of the falls, from the base if possible, and our guide not having turned up, we followed the sound of the falls and entered a ravine which we hoped would lead to the foot of it; but after descending, for some time, a path presenting many difficulties, we came to a sheer cliff with a drop of more than 400 feet. There was nothing for it but to turn back and climb up again; a most difficult matter, as the gravel and stones gave way beneath our feet. "Our American cousin," however, who had seen much mountaineering, both in his own country and among the Andes, went ahead as guide and led us to a spur. After much monkey-like climbing, at last we reached the plateau once more, and soon struck the road. We reached home at 5 P.M., having spent a most enjoyable day. Here we found the travellers of whom we heard at Wakamatsu. They had come along slowly, there being a lady in the party. Their horses were much cut up, having as their betto wofully described it, only six legs amongst the three of them.

At 7 A.M., next morning, with our host as guide, we set out to visit the temples, which were quite near to the tea-house. The river runs just in front of them, and two very fine and strong bridges are thrown across it. The principal one, which is painted and gilt, is supported on immense stone pillars. Except on the 17th April, when there is a *matsuri*, it is closed, being only used now (as formerly) by the reigning family. It is called "The Serpent Bridge." After crossing the second bridge, you ascend a series of steps made of very large stones, shaded by an avenue of huge cedars, and arrive at the main gate. The first object of interest on entering is an immense stone *Tori-i*, presented by the Prince of the province of Fukuoka. Its dimensions, as measured by ourselves, were: height 32 feet; circumference of pillars 11 ft. 2 in.; length of top stone 45 ft., lower stone 39 ft. 6 in., and distance between the pillars 20 feet 1 in. The next object of interest was a five-storied pagoda, the height of which is 175 feet. The whole was lacquered, gilt, and adorned with much carving, the old Tokugawa crest predominating. There are several curiously-carved stones, one called the *Arame-ishe* ("Smooth-Seaweed Stone") and another like the top of an umbrella. On each side of the main or inner gate stand the statues of two warriors in full armour, each about 12 feet in height, very gaudily bedaubed with vermillion. At their backs stand two lions, one green and one blue and gold. The court-yard is filled with very large "candelabra." One, in the shape of a lotus flower, has 38 burners, and was a present from Corea. There is also a large and curiously-carved bell from the same place.

We observed two other very large bronze candelabra, one of which was a present from Holland and the other from Liu-Kiu. We now entered the chief temple, which is most tastefully decorated. The chief room or hall

contains 30 mats, the altar room 20, and the rooms on each side 18. That on the right-hand side is called the Hobo or Phoenix room, and was used by the Tycoons when visiting the tomb of Gongen-sama (Iyeyas). The opposite room is called the Taka or Hawk room, and was used by the Court princes in attendance. Each room is beautifully decorated with large carved panels, on which are represented in different positions the birds they are named after. There are four panels in each room, each made of a single piece of wood, measuring 5 feet 3 inches wide, by 6 feet 6 inches high. The rest of the rooms contains paintings of animals. In the Tycoon's room there is a small frame upon which are hung 16 small but sweet-sounded bells, and some small drums on stands. In the Kuges room, there is nothing of interest but a large Chinese screen. In the main hall, facing the entrance, is the mirror and paper symbols of the Shinto religion. Around the walls are hung thirty-six pictures of famous poets and authors, painted by a former Emperor. The roof of this room contains 100 panels, each painted with dragons and other mythic beasts. The altar or altar room is divided from the large entrance hall by a network of brass, with silk blinds. On entering, you descend four steps, and in front is a dais approached by five steps. Over the top of it are eight heavily-gilt elephant heads, and, on each side, large silver vases hold flowers, firs, bamboos, plum-blossoms &c., in silver and silver-gilt. The flowers are 5 feet high and the vases 2 feet. The sides of the room are masses of flowers done in lacquer, the hollyhock, the Tokugawa emblem, predominating. Every available inch of space is filled with carvings or lacquer-work.

On leaving this temple we went to visit the tomb of Iyeyas. The approach is by a long stone gallery, shaded by cedar trees. The pillars of the gallery and the framework of the balustrade on each side are cut from single stones of great size. After ascending 190 steps and winding along the moss-overgrown gallery, we came to a small but neatly decorated temple, painted in black and gold. This was closed. It contains the armour, sword, and writings of Iyeyas, and is not shown. Then a few more steps, and a temple much the same as the last. This, however, was open, and is used for prayer before visiting the shrine. In the rear, in the centre of a grove of cedars, but protected by a large stone balustrade, is the shrine of Iyeyas. The tomb is a large oval bronze urn, with a pyramidal top. In the front of it, on the right-hand side, is a bronze stork, holding a candle, in the middle a lion, and on the left a large vase of lotus flowers. The tomb is 2,300 feet above the level of the sea. The attendant priest told us that this was the first year that the large temple and tomb had been shown to the pilgrims, and that, in consequence of it now being free to all, there was an increasingly greater number of visitors every day. The anniversary of the day on which Iyeyas died, the 17th of the fourth month, is still observed here with great ceremony. Near the tomb, are two very tall and large fir trees, which the priest said were planted with the hope that they would attract the lightning from the temple and the tomb; they are certainly splendid trees. On leaving the tomb we went to the right, to a temple called Sandai Shogun, which is used by the Buddhist priest. On the way thither, we passed a handsome monument to the memory of the

priest who brought the body of Iyeyas to Nikko.

The entrance hall is very large; it contains 63 mats, and the altar room 16. In it are two very large brass and horn lanterns, presents from Corea, and a very handsome canopy of brazen work presented by the Prince of Kaga. Scattered all around, on little tables, were the priest's books, &c. The altar room was very prettily arranged. On the altar was a large vase, full of holly-hocks, and on each side of the room a pair of large vases containing cherry blossoms and flowers in silver gilt, presents from the Prince of Kishu. Next, a pair of vases of lotus flowers, presented by the Prince of Mito; a pair of storks holding candles, a present from the Prince of Bishu; and, lastly, three large lanterns, given by the Prince of Kaga. The panelling of this temple, both outside and in, is very beautiful. Outside the temples are two very large stone basins, used by pilgrims to cleanse their hands, cut from single blocks. They measure 9 feet by 4 feet, each. Amongst many other things of interest in the court-yard there is a large lamp, of Indian workmanship, and two bell towers of bronze and copper work. Some of the court-yard walls are panelled with flower-work; others with figures of birds and beasts. The length of the piazzas around the main temples is 1200 feet. Many of the roofs of the gates are covered with copper. But it would require an abler pen than mine to do justice to all the glories of Nikko. As the guide told us, on the evening previous to our visit, when questioned about the place, "everyone should see it for himself," and well will it repay the inspection. At noon we bade *adieu* to Nikko, and after travelling for 12½ *ri*, through a plateau gradually descending, we arrived at Tochiki, a large and busy town. The Kencho and office is built in the foreign style and looks well.

Here we stopped for the night, and on the following morning started for Yedo, by boat down the Uzuma-kawa. On the road between Nikko and Tochiki the farmers were all busy harvesting their flax, of which the crop was very fine. The men trimmed the leaves and dirt off the plant, and the boys and women were employed in dipping it in large baths of hot water, which they kept boiling in the village streets. We left Tochiki by boat at 8 a.m., reached Yedo at noon on the following day (26th), and arrived in Yokohama an hour later; somewhat fatigued, but much pleased with all we had seen and heard.

## THE WAR IN FORMOSA.

FROM THE CORRESPONDENCE OF  
MR. E. H. HOUSE.

Amoy, July 10th, 1874.

I have at last had a practical experience of the irresistible violence of the Formosa Channel storms at this season of the year. On the afternoon of the 6th inst., I came on board the steam-ship *Takasagu-Maru* to prepare for a final departure from the Japanese Camp in Formosa; which promises hereafter to be a scene of diplomatic tranquillity, and which, "war thoughts" having "left their places vacant," will offer little in the way of general attraction. Toward evening, a heavy westerly wind set in, which rendered landing next to impossible. On the following morning an attempt was made to send a steam-launch on shore, but the little craft soon became unmanageable and was obliged to anchor half

way between the ship and the beach. A little after noon, the *Takasagu's* anchors were found to be dragging, and the vessel driving upon the low rocks that fringe the insecure harbour. The cables were slipped, and the steamer started away as speedily as might be in the direction of the Pescadores Islands, one of which contains an excellent harbour. But as the night advanced the gale increased to such an extent that it was thought imprudent to search for this refuge, and the course was shaped for Amoy, at which port we arrived in due season, after a great deal of discomfort, but, I presume, no particular danger. The *Takasagu* was formerly the Peninsular and Oriental S. S. *Delta*, an old but serviceable vessel, which the Japanese might be glad to possess, if they wanted any of the sort at all. But they do not. She was purchased under pressure of circumstances not wholly unconnected with the U. S. Legation at Yedo. It was one of the compulsory bargains which the stoppage of the S. S. *New York*, at Nagasaki, last April, rendered inevitable.

This involuntary visit to Amoy has afforded the opportunity of examining the real state of feeling among the inhabitants, and of inquiring as to the causes that may have led to the Consul's action in issuing the notification mentioned in a previous letter. In regard to the former, it appears that the reports of a partial panic, among the lower classes, if not among some of the higher, were not without foundation. I am by no means sure that it is not, to an extent, shared by the local authorities. At any rate, no official attempt appears to have been made toward arresting it. Not a few of the populace have really gone into the interior, and it is said to be perfectly true that numbers of merchants have suspended their traffic, in anticipation of the necessity for sudden flight. A single incident will serve to show the current of popular feeling. One of the servants attached to the U. S. Consulate petitioned Mr. Henderson, a few days ago, to be allowed, so confident was he of the impending invasion, to bring his aged father and mother under the protection of the United States, and lodge them, for a time, in one of the outbuildings of the establishment. In Taiwan Fu, the principal city of Formosa, the trepidation is said to be even greater, and junk-loads of fugitives are coming over each week. If all this be as it is represented,—and much of it undoubtedly is,—the unusual preparations of the Chinese are probably the real cause. So much bustle and confusion, and so much pretence of military concentration, have not been known in this part of China for generations.

With regard to the action of the U. S. officials, I am strongly inclined to the belief that it is, on the part of those in this immediate neighborhood, purely formal, and in one sense merely nominal. I see no reason to change the opinion expressed in an earlier letter from this place, respecting Mr. Henderson's views upon the subject of the chastisement of the savages by the Japanese. And I cannot help reminding myself, although I certainly am not directly reminded by any person, that the notification before quoted was issued "by instruction from the Chargé d'Affaires at Peking." The Consul's attention was first called to the matter by a communication from the Viceroy of Fukien, the mere transmission of which shows how deeply the official mind of China is impressed by current events, inasmuch as direct epistolary intercourse between a viceroy and a foreign consul is almost, if not entirely, without precedent. The little Japanese enterprise has broken down Chinese traditions in more than one respect. As an example of the

style of this new order of correspondence, I am permitted to present a translation of the viceroy's letter, all of which is here appended, with the exception of a few opening lines of courteous greeting:—

"Now we have investigated this Formosa business, as well as the statements of the Tao-tai of Formosa and the captain of the *Yang-wu*, to the effect that this expedition to the savages of Formosa has been planned by the former Consul at Amoy, Le Gendre; also one Cassel and many others were assisting. We have also examined and found that Formosa has long belonged to China, and the savages are certainly under Chinese jurisdiction, and other nations have nothing to do with them. On this occasion, Japan has sent soldiers to punish the savages without previous consultation with the Foreign office, and the Japanese Commander-in-chief, Hiang, without awaiting a communication from me, on his own motion took soldiers and formed a camp at Liangkiao, in entire violation both of International Law and the Treaty between China and Japan. We twice sent communications to Hiang, the Commander-in-chief, requiring him to take back his soldiers, and twice sent communications to the Board of Trade to be presented to your honourable self, to be examined and acted on; all of which are on file. We have received your dispatch, in which you show your desire to carry out Treaty obligations, and, in settling matters, to preserve lasting peace and friendship, as well as your purpose to perform your duties; for all which we desire to express our hearty thanks. We have appointed Chian, second in the Board of Trade, and formerly Acting Prefect of Foo-chow to go to Amoy, and also have sent a communication to Li, Admiral at Amoy, telling him to await the coming of Chian and then with him have a consultation with the U. S. Consul, and with him concert some plan of action. And in accordance with the provisions of Art. I of the Treaty of the 1st year of Hien-fung (1858), that the two countries shall mutually assist in preserving friendly relations, we ask your honourable self to request the Commander Hiang to take his soldiers back to Japan. And if in the vessels that have gone to Formosa there are American citizens aiding the Japanese, we ask you to punish those that are acting improperly, whether on land or sea, in accordance with the 11th article of the Treaty and the laws of your country. From the time when your honourable self arrived in China, you have always managed affairs in strict accordance with right, so that the streets are full of praises of yourself by rulers and people, and ourselves are truly thankful. Now that there are affairs in Formosa, over which you are Consul, you can show your friendly feelings by acting in accordance with the Treaty, by taking measures in connection with Admiral Li and Prefect Chian. Thus can you shew friendly feeling. We have sent a communication to Admiral Li, and also one to Prefect Chian, ordering him to go to Amoy and arrange the whole affair with you, for which purpose we give them full powers. And we request you to act with these two, not only as officials but as friends. Hoping thus, with best regards, etc., etc., etc."

In the interview which followed, all these subjects were discussed with greater freedom than would naturally have been possible in a series of letters. The Chinese appeared to be firmly of the opinion that if the Americans were withdrawn from the expedition the whole affair would fall through of itself. They could not have entertained a greater delusion. With a view to their removal, they were extremely anxious that Mr. Henderson should himself visit Formosa, armed with all his authority—which

he saw no sufficient reason for doing. Their anxiety for the despatch of the warning documents was not satisfied by the assurance that copies had already gone by the way of Takao. They desired to have duplicates, or additional notifications, specially sent, and offered to supply the means of carrying them across. This was the occasion of the circumstance which at first seemed so singular,—the arrival of a U. S. Deputy Marshal, on an official errand, in a Chinese man-of-war. The Chinese gentlemen appeared to be more acutely concerned about General Le Gendre's connection with the business than about any other detail. The fact that he was formerly U. S. Consul at Amoy, in their view, would warrant Mr. Henderson in taking particularly peremptory steps in his case. Mr. Henderson endeavored to show them that General Le Gendre's present position differed in no way from that of any other citizen, similarly placed, but apparently failed to satisfy them. As regards the legal aspect of the case he did not conceal his opinion that neither the act of 1818 nor that of 1860 was applicable in this instance, no war having been declared, and no hostile action against China having yet been committed by the Japanese; while the savage inhabitants of Formosa assuredly could not come under the designation of a nation with whom the United States are at peace.

A strong point will doubtless be made, by those who blindly oppose the movements of the Japanese, of the tardy assumption of authority, on the part of China, over the whole island and people of Formosa. That this declaration was an after-thought, and a very recent after-thought, there can be no question. The proofs are too clear and numerous. That it was not an after-thought of Chinese origin, but was prompted by foreign diplomatists, is the almost universal conviction, although this belief cannot be so well established by evidence. Let me invite a comparison of the positive statements of Commissioner Shen's associate, in his interview with General Saigo, and the concurrent assertion of the Viceroy of Fukien in his letter to Mr. Henderson—"the savages are certainly under Chinese jurisdiction"—with the avowals of a letter from the Fuchao Board of Trade to the U. S. Consul, in 1867, which I find in the records here. The subject under discussion is the case of the barque *Rover*, in regard to which the Consul had endeavored to arouse the Chinese to a sense of their supposed responsibilities. The officers of the Board of Trade write (June, 1867) first to say that Chinese would undoubtedly be obliged to make reparation in all cases where outrages were committed in Chinese territory or Chinese waters, and continue as follows:—"But as in the '*Rover*' case the Americans were not murdered in Chinese territory or in Chinese Seas, but in a region occupied by the savages, relief cannot be asked for them under the Treaty. The savage territory does not come within the limits of our jurisdiction." \* \* \*

"We believe those savages to be wild animals, with whom any one would disdain to contend."

What more than this is needed to show the worthlessness of the sudden assumption of universal authority in Formosa, or to shatter the pretensions of those who are endeavouring to hold up the Japanese to obloquy as the invaders of established and acknowledged Chinese rights? If anything, then it can be found in a later despatch from the Board of Trade (January 12th, 1868) in which the officers of that institution and the Prefect of Fuchao unite in making a distinct acknowledgment of the right of foreign nations to deal with the savages directly, and with-

out Chinese intervention, and even advise the methods best to be adopted in thus dealing with them. The document is too long for transcription, but its terms are clear and unmistakeable, and apply as precisely to the present Japanese expedition as they would to any visit by ships from European or American countries. And if still further evidence were required, I am enabled to say that, as recently as the month of May, in this very year, after the departure of the first ships of the fleet, and, unless I am greatly mistaken, after the arrival of the *Yuko-maru* in Liang Kiao Bay, the Chinese Admiral at Amoy, in a conversation with the U. S. Consul, reiterated the old denial of liability, and again declared that his government admitted no accountability for the deeds of the savage inhabitants of Formosa. The newly-assumed position, therefore, dates from a period within three months of the present time. And I repeat, that there is hardly a candid observer to be found who does not believe that it was not the natural outgrowth of the established Chinese policy, but was suggested and developed by foreigners who act upon the conviction that their interest lies in fomenting discord between these two nations of the east.

#### KAME YAMA CAMP; LIANGKIAO, FORMOSA.

June 27th, 1874.

Relief from the absolute monotony of which I spoke in my last letter has appeared in an unexpected and somewhat startling, though, on the whole, by no means disagreeable way. On the evening of the 20th inst., two Chinese ships of war sailed down from the north and anchored in the large bay about two miles distant from the new camp,—the safe and usual place of debarkation. A notification was presently sent on shore to the effect that they brought certain officials of really high rank, who had been commissioned by the government of Peking especially to confer with the Japanese representative in Formosa, with a view to the adjustment of all questions concerning the present condition of affairs and establishing satisfactory arrangements for the future. Gen. Saigo answered, that he should be happy to receive them on the following morning.

At an early hour the next day, the Chinese officers landed, with their suite, and were met upon the beach by an escort of troops, whose appearance was unusually picturesque, from the fact that one-half of them—Satsuma men—were dressed for the occasion in the old national war costume, the other half being clad in their modern military garb. They proceeded at once to the village of Chasiang, about a mile north of the old camp, where they secured comfortable quarters for the term of their visit. Every consideration and respect were shown them by our soldiers, a circumstance that will not seem remarkable to those who are aware of the scrupulous punctiliousness of the Japanese, but which produced a deep effect upon the newcomers. I have good authority for saying that they were somewhat apprehensive of a different style of reception, and Mr. Giquel, a French gentleman attached to the commission, did not hesitate to declare his surprise and admiration at the fine behavior of all concerned. He was good enough to intimate that if the conditions had been reversed, he could not have answered for equal reticence and courtesy on the Chinese side; and to aver that he certainly should not count upon similar good taste and manners in case of a reception by soldiers—on and off duty—of any European nation. With as little delay as possible the visitors settled their

affairs in Chasiang, and proceeded at once to the old head-quarters, where Gen. Saigo was waiting to greet them.

After a few brief and formal salutations, inseparable from Oriental etiquette, the Chinese deputation started upon the business of their mission. They had, on their side, an official of rank equivalent, I believe, to that of Vice-Governor of a province, a second official holding the position, I was informed, of Taotai of Tai-wan Fu—i.e. Governor of Formosa, and Messrs. Giquel and de Sagensac, two French gentlemen long connected with the administration of the Fuchao arsenal, and high in the confidence of the Chinese government. On the Japanese side, Gen. Saigo was alone. The interview was interesting, though of course not decisive, being regarded only as preliminary to other negotiations. As an example of diplomatic intercourse in the East, I shall record it in somewhat minute detail, although it ought perhaps to be stated beforehand that the diplomatic formality and routine were almost exclusively on the part of the Chinese, Gen. Saigo treating the matters under discussion with a downright frankness and simplicity that led, on this and subsequent occasions, to curious episodes, the precise nature of which I do not feel at liberty to disclose. The conversation opened with the announcement that the principal Chinese delegate, Shen Pao Chen, whose rank is that of a full Governor of a province, and who was formerly director of the Arsenal at Fuchao, sent his respects from Tai-wan Fu—the Chinese capital of Formosa—to which place he had accompanied the embassy but where he was detained by illness. Not wishing to run the risks of prolonged delay, he had authorized his associate to represent and act for him in the completest way. This associate then asked if a copy of the report of an interview, held at Shanghai between Shen Pao Chen and Yanagiwara, the Japanese ambassador to Peking, had been received. Being informed that it had not, he stated that such an interview had taken place, the two officials having met accidentally at Shanghai, while Yanagiwara was on his way to the capital. He then proceeded to express his regret that a notification had not been sent to China in regard to the intention of the Japanese to visit Formosa (Taiwan) and punish the offending savages. If such warning had been given in time, the Chinese government would have supplied a force to accompany the Japanese and assist in the operations,—but the work having now been completed, it was too late for China to attempt to participate. Saigo answered that word had certainly been sent to declare and explain the purposes of his government, and, furthermore, that Soyeshima, the Japanese ambassador, had directed the whole subject to be examined, at the time of his visit, one year ago. The Chinese commissioner said it was quite true that a messenger had recently passed through China with letters from the Japanese authorities, but that the bad condition of the roads between Fuchao and Peking had made it impossible for him to deliver his news in time. Saigo remarked that it was a mistake to suppose that the work was entirely done, and that he expected to be obliged to remain yet some time, to execute all the instructions of his government and secure guarantees for the future safety of his countrymen; to which the commissioner replied that he understood and respected that view of the affair, and did not dispute the general's right to entertain it. He entirely comprehended the purposes of the Japanese and admitted the propriety of their fulfilment; but, inasmuch as the whole of Formosa with all its inhabitants, savages and others, belonged to China, it also became the duty of the Chinese

authorities to inquire as to who had been the assailants in the slaughter of the Liukiuans, in 1871, and to discover, in a more general way, who among the population were well-behaved and who were criminals: this was one of the most important parts of the service with which he was charged. The Taotai of Taiwan then observed that he had heard it was the intention of the Japanese to visit and attack the settlement of Pilam, on the eastern coast, and he wished to inquire if this was true. The question, for some reason, was not answered,—possibly because the fact of Japan having no cause whatever of complaint against Pilam rendered it unworthy of a serious reply. The commissioner next produced his own record of the interview, before alluded to, between Shen and Yanagiwara, which Saigo read and found to contain, on the part of the Japanese minister, a repetition of the frequently declared object of his government,—namely, to destroy or sufficiently punish the Boutan murderers, by means of an expedition which should furthermore take effective measures to prevent the recurrence of such outrages, and, having made this last condition certain, should return to Japan. This document having been read, the commissioner said he would like to know what plan the general had decided upon, if any, for the prevention of future misdeeds. In response, Saigo stated that he undoubtedly had a plan which seemed to him suitable and sufficient, but he did not think it desirable to reveal it, especially as his operations were still in progress. The savage tribes were not yet completely brought to terms, and his troops were scattered in various parts of Southern Formosa, and it seemed to him altogether inexpedient to communicate the details of his plan. The commissioner said that he had come to Formosa by the direction of his government, to superintend the settlement of the affairs of the entire disturbed district, in co-operation with the Japanese commander; and asked if the latter had nothing to disclose, with a view to mutually carrying out this design. Saigo answered that he also came under very distinct directions from his government, but that they related solely to the punishment of the savages and the security of safety for the future, and did not contemplate any co-operation with Chinese officials; that on his arrival he found that the Chinese-speaking people of the region were in no way under the control of China, and that the savages were utterly wild and lawless, beyond the control of everybody and requiring to be dealt with by a vigorous hand. This he had done by himself, and he had now no scheme of co-operation to propose, nor could he accept or submit to any. The commissioner—counselled, I think, by the foreign gentlemen beside him, though I must not be positive on this point—continued to press his proposal for conferences and combined action, but Saigo steadily declined, particularly as these suggestions were always accompanied by declarations that the legitimate sway of China extended over all Formosa and its people—a position which the Japanese general was not disposed to admit, conceiving that the question had already been debated and adjusted by Soyeshima in Peking, and that under any circumstances, it was not necessary for him to discuss it here. In fact, he remarked that if the commissioner desired to continue any general discussions based upon that theory, he thought it could be more appropriately done through the Japanese ambassador to the Chinese court—that it was more correctly a subject of negotiation between the two nations than between individual commissioners at a distant point. This terminated the official part of the meeting, and the conference was soon broken up, arrangements be-

ing made for a second interview, for the presentation of certain points which the Chinese held in reserve. This was fixed for the 24th inst. On the afternoon of the 22nd, Gen. Saigo visited the commissioner at his temporary residence in Chasiang—a call of courtesy merely, and not for the consideration of public business.

The next day was occupied by the Chinese, so far as I can learn, in establishing communications with some of the independent coast villages in the neighborhood, and in sending messengers, with presents, etc., to the savage tribes in the interior whom the exertions of the Japanese had rendered accessible. But for these previous exertions, it would have been impossible for the Chinese to carry through their interviews with any degree of safety. No feeling appears to be more keenly cherished by the mountaineers than their traditional hatred of all Chinese, and especially those coming from a distance, whose speech is entirely unintelligible to them. But now the visitors found little difficulty in reaching Sawali and other villages in which the peacefully-disposed "head-men" reside. Of course they made no attempt to enter the territory of the Boutan or Kusukut tribes. What the nature of their communications may have been it is impossible to say. The Japanese authorities have made no effort to discover, and they were not of a nature to cause any alteration in the behavior of the savages toward our troops—either those encamped among them or nearer head-quarters.

The last and most important conference between the Japanese general and the Commissioner began on the afternoon of the 24th and was continued through the 25th. The results arrived at will probably lead to a speedy termination of the active operations of the Japanese. They certainly will do so if the Chinese adhere in good faith to the conditions which they expressed themselves ready and empowered to fulfill. It is hardly desirable to follow minutely the course of a conversation which extended over so many hours, and in which many points were introduced, at times, which proved to be irrelevant to the final settlement. Each party conducted his side of the discussion in the way that best suited his individual or national character. The Chinese official was circumspect, deliberate, wary, and highly polished in tone and expression. General Saigo was frank and straight-forward, and, though always courteous in manner of speech, was, I presume, far too abrupt in his declarations of positive conviction to suit the circuitous smoothness of Chinese state-craft. A single instance will show the vast difference in the method of treating the questions at issue adopted by the two men. The topic of the future control of the savages was under consideration. China's representative declared the readiness of his government to give pledges that they would maintain a sufficient force to keep perfect order in future. The general replied to the effect that he did not doubt that pledges would be given, but was by no means assured that they would be sustained with fidelity. On being asked why, he intimated that the whole course of the Chinese, in the Formosa business, had been one of duplicity; that they perfectly well knew the Japanese causes of complaint two years ago, and now pretended ignorance of them up to a late period; that they disclaimed jurisdiction over the savage territory until within a few weeks, and now announced that they had always assumed it; that it had been open to them at any time since 1871 to punish the Boutans, by themselves, for the massacre of the Japanese subjects, while they now affected great regret at not having been invited to accompany the expedition for chastising them, and that, all things considered, he did

not believe they would keep the savages in subjection, even if they promised to. Whereupon Shen Pao Chen flew into a rage, not with the general, but with the interpreter, whom he accused of falsely translating what Saigo had said; avowing that it was impossible that the Japanese general could have used such language, and directing him to report to his master exactly the rebuke he had received. But it is not at all in Saigo's nature to accept a proposal for this sort of evasion, so he stated that his interpreter was not at all responsible, and repeated his conviction, but added, when the commissioner gave indications of irrepressible wrath, that if this particular subject was disagreeable, it could be abandoned for a while, and resumed at another time. Episodes like this were certainly not frequent, but their occasional occurrence served to show that the Japanese officer would not agree to any terms of settlement that should not strictly bind the Chinese to the complete fulfilment of all their obligations.

This detail is anticipatory. From the beginning, the sole desire of the Commissioner Shen seemed to be to establish the right of his government to jurisdiction over the whole of the soil of Formosa. Equally from the beginning, the Japanese general pointed out how repeatedly that claim had been waived. At the same time, he did not hesitate to assure the Chinese official that the Japanese had no purpose of attempting to wrest from China even an imaginary possession. His design was, as it had always been, to inflict a necessary punishment, and establish a state of security for the future. Gradually, the idea was brought forward, on the other side, that the difficulty might be arranged by China's assuming the task of preserving peace throughout the disturbed region hereafter. Then arose the amusing little break in the discussion which I have described above. In course of time the suggestion arose and gained favour that the Chinese might give substantial guarantees of the integrity of their intentions. This grew out of an intimation, on the part of the Japanese, that, if all this region had really been under China's control, then Japan had been doing the work that China ought to have done, but had neglected, at an expenditure which should properly have fallen upon the other party. Although merely an incidental observation, not intended as especially pertinent, this was, I think, somewhat eagerly seized upon. Suppose that the Peking Government would undertake to reimburse the Japanese for their outlay,—would that meet any of the questions in dispute? It seemed to be agreed on all sides that this would at least stand as strong evidence of good faith. And so, after many divergencies and variations of slight import, it was ultimately agreed, on the evening of the 25th, that the hostile operations of the Japanese should be suspended, pending a reference of the terms of settlement, for ratification, to the respective governments. These terms are substantially as follows:

The Chinese authorities to reimburse the Japanese for the cost of their expedition.

The Chinese to guarantee such occupation of the savage territory of Formosa as shall prevent the recurrence of outrages upon strangers.

These conditions effected, the Japanese forces to be withdrawn.

The Chinese commissioner expressed not the slightest doubt of the willingness of his government to subscribe to this agreement, and allowed it to be understood that he was acting with full authority in making it, and that the reference to Peking was solely a matter of formality. It appears much more than probable, then,

that the occupation of Southern Formosa will terminate within a few months, and that the action of the Japanese here is virtually ended. If this be so, the original aim of the promoters of the expedition will have been accomplished in a far more satisfactory way than was, or could have been, at first anticipated. The lesson given to the savage marauders has been effective and lasting. The fact has been thoroughly demonstrated that injuries to any of the subjects of Japan, at least in Asiatic waters, will not pass unredressed. The region which has for years been a terror to all Eastern navigators will hereafter, through the action of Japan, be free from peril—i.e. supposing China to hold to her compact. And all will have been done—which is a comforting practical consideration—without any exhausting drain upon a national treasury, which, at the present time, certainly needs restoration rather than depletion.

On the 26th, the Chinese party took leave. Their ships had taken unwilling leave before them, having been driven northward, from Liangkiao Bay, by a violent storm, on the 25th. They were consequently obliged to march by land to Takao, forty miles distant. They embarked, not without difficulty, at Takao or Taiwan Fu, and we learned with regret that several of the sailors of their men-of-war were drowned in the first attempts at landing.

#### The Wreck of the S. S. "Canton."

A telegram from Foochow, on the 28th inst., announced the sale of the wreck of the S. S. *Canton*, altogether, as it lay on the Min Reef, for \$1,900. It is also said that there is likely to be some difficulty in the matter of insurance, owing, as it is alleged, to the intention to have the steamer call at Foochow not being known to the Insurance Offices when they took risks on her. One consequence of this is stated to have been, that some offices in Shanghai had taken full lines on her; and when she got to Foochow the representatives of the same offices also took full lines, so that they became double weighted. The S. S. *Nanzing*, arrived from Foochow on the 21st instant, brought 50 bales of silk salvaged from the wreck of the S. S. *Canton*. The following, also salvaged from her cargo, was sold by auction at Foochow, viz:—64 chests, 204 half-chests, 188 boxes, 33 packages, and 3 bags tea; a quantity of bronzes, curios, &c., and 2 coils rope, and realised \$5,232.75. When the *Nanzing* entered Foochow she saw the wreck still high and dry on the main reef, with a strong tide and pilot boats in attendance, but the typhoon of the 18th, of which some account is given elsewhere, had driven the tug and pilot boats inside the Peak, and it was feared no more would be seen of her. The hull and machinery were bought by Messrs. Foster & Co. for \$1,900. The Pilot, Johnson, who was in charge of the *Canton* when she went on the Reef, has had his certificate suspended for twelve months. The Court of Enquiry into her loss is necessarily delayed, awaiting the arrival of one of H. M.'s vessels-of-war. A private telegram received on the 22nd instant from the purchaser of the wreck of the *Canton* states that the remains of that good ship have disappeared in six fathoms, low water, so that we fear all idea of further salvage must be abandoned.—*Hongkong Daily Press*.

We hear that the S. S. *Aden*, when on her last voyage up river, near Ngang-king, about 3.30 p.m., ran into and sunk a junk, which seemed to have a good number of people on board. Of these, 4 are said to have

been drowned. A Chinese gunboat (of the small native-built class) which was lying close to the bank, fired across the steamer's bows and brought her to. The accident took place in the 2nd mate's watch, while the captain was below. Of course, he was at once on deck, and the gunboat came alongside. The captain of the gunboat wished to detain two of the crew of the *Aden* as hostages, but to this the captain objected, and the steamer proceeded on her voyage.—*Idem*.

#### China and Japan.

To the Editor of the *H. K. Daily Press*.

SIR,—It is rumoured in town to day that a bank here has arranged to make an advance of \$600,000, at 12 per cent. interest, to the Viceroy of the Fohkien province, upon the security of the Customs Revenue. The rumour is not precise as to whether this Customs Revenue is the revenue derivable from native trade, and which is farmed by the Viceroy, or the revenue collected under Foreign Inspectorate. If the former, the security, to say the least of it, is not very desirable. If the latter, the security in ordinary times could not be greatly found fault with, but with the imminent prospect of war between China and Japan, it is a security that ought not to be accepted by *cautious and safe investors*.

It appears to be generally admitted that at the present moment Japan is more powerful at sea than China. If this is the case, Japan can blockade the Chinese ports, and the revenue derivable from the Customs duties at once ceases. What, then, becomes of the security for the loan?

The Chinese are unquestionably more wealthy than the Japanese, and, if time be given them, they may get out ironclads from Europe, but the Japanese are sufficiently astute to take care that war is declared in good time, so that they may invoke Municipal Law to prevent armed vessels from leaving neutral ports to attack a friendly power, such as Japan undoubtedly is. This consideration does not greatly benefit the prospects of the loan.

Lastly, the sympathies of the foreign community throughout China almost to a man would be in favour of the Japanese and against the obstructive Chinese.

Yours faithfully,

CAUTION.

Hongkong, 24th July, 1874.

#### THE WAR IN FORMOSA.

(From the *H. K. Daily Press Correspondent*.)

TAKAO, 15th July, 1874.

Everything is so quiet here that one would be inclined to forget altogether the presence of the Japanese in the island, were it not for the sight now and then of a steamer passing by, flying a flag with a red sun upon a white field, or for the occasional appearance here of one or two strangers who wear European clothes, but show unmistakably Eastern features. The relations between the Chinese and the Japanese are in exactly the same state as they were a fortnight ago. The Chinese authorities still content themselves with firmly and politely requesting the Japanese to leave Formosa, and assuring them that no portion of Chinese territory can possibly be ceded to a foreign power. At the same time they are making preparations in case peaceful measures should prove unsuccessful. A camp has been established in one of the Pescadore Islands where

there is a good harbour accessible in all weathers. M. Giquel is busy at Tai-wan-foo making plans and inspecting fortifications. Mr. H. O. Brown of the Chinese Customs service has just landed at Anping. As he was employed for some years by the Chinese in drilling troops at Tientsin, it is easy to guess what his employment in Formosa is likely to be. There is even some talk of laying a telegraph cable between the mainland and Tai-wan-foo. If this is really carried out, the presence of the Japanese will have quickened the wits of the Mandarins in a most astonishing degree.

The Japanese at Langkiau are keeping very still. The south camp, which has been for some time their head-quarters, is a picture of neatness and tidiness. All the troops there are lodged in comfortable wooden houses. A road has been made to the shore, and trees planted. The army seems prepared to stay any length of time, but there are no arrivals of new troops, no fortifications in course of construction. No new expeditions are being undertaken against the savages, but a few chiefs from the neighbouring villages occasionally come in, to assure the General of the friendliness of themselves and their tribes. One road at least across the island is now considered safe, as the General and suite latterly rode across without an escort to the camp on the east coast, returning the same night.

The Taotai of Taiwan arrived at Takao on Sunday last, and left the same evening for the Pescadores, where he was to change to another steamer and go on to Tamsuy, Kelung, or Sau-o Bay. It is said that he has undertaken this voyage on account of some new complication with the Japanese in the north of the island. If any such has occurred you will receive fuller and more accurate news from Tamsuy than from here.

#### The War in Formosa.

(From the Special Correspondent Hongkong Daily Press.)

Takao, 22nd July.

It may now be regarded as an accepted fact that the Japanese have offered to evacuate Langkiau on the payment of their expenses, amounting to something between a million and a million and a-half of dollars, and that the Chinese Commissioners have referred the demand to head-quarters. As, however, forty thousand foreign armed troops from the neighbourhood of Tientsin are under orders for Formosa, and many other warlike preparations, too numerous to mention here, are being made, there is very little probability that the Chinese contemplate agreeing to the Japanese terms. They have very much the appearance of trying to avail themselves of this proposition as a means of gaining time, and of delaying till they are more ready to take decided action.

Nothing new has been heard very recently from Langkiau. But a most unfortunate occurrence has happened at Hongkong, the little village north of Langkiau, whose inhabitants invited the Japanese to come and defend them against the savages. One of the villagers there has been cut down and killed by a Japanese, from whose lust he was trying to protect his wife. The Chinese inhabitants, as they have been unable to obtain any redress, have closed their market against the Japanese, and will have no dealings with them. The temper of the two parties is such as to be a serious cause for apprehension.

Pan-ta-jen, the Assistant Commissioner, arrived here late the evening before last with

Mr. H. O. Brown, and departed yesterday afternoon for Petow on his way south. A body of two thousand troops are shortly to be encamped at Takao. As there is nothing in the immediate neighbourhood of this little town but water, swamp, and hill, and there is barely room for the present population, the troops will have great difficulty in finding camping ground. They are sure to be a source of annoyance to both the native inhabitants and the foreign residents. Several of us who were looking forward with considerable pleasure to seeing a good set-to between the Chinese and the Japanese are now wishing the latter all at the bottom of the sea, or at any rate safe back in their own country.

Commercially, the presence of the Japanese and anticipations of war have not made themselves felt much. During the summer and autumn there is never any large amount of business done by the foreign houses. Rather less opium than usual has been imported; and, in consequence, those who have imported any have obtained better prices. Ready money is now always insisted on. This, however, is no bad point in a country where the Chinese seem to consider that enough money to get a wooden seal cut is all the capital that is necessary for starting a firm.

SHOWER OF ASHES.—During the last trip of the *Pride of the Thames* from Yokohama to Nagasaki, while the ship was passing a volcanic island, (we have not been able to ascertain the name, but believe it to have been Sulphur Island), a shower of black ashes fell upon the ship. The man at the wheel was almost blinded, and the deck was covered with a coating of about an inch thick. This phenomena naturally excited the wonder of the crew, and, after passing through the shower, a quantity of the ashes were carefully bottled. The ashes were of very coarse nature.—*Idem*.

The strange agglomeration of races and languages existing in Shanghai was well illustrated to-day (July 24th) in H. B. M.'s Police Court. In one case of assault, one Bengalee, speaking English, was sued by another who needed a Bengalee interpreter; while, of the witnesses called, one was a Bengalee speaking remarkable English, the other was apparently also a native of Hindostan, but the fact that he spoke French seemed to hint of Pondicherry. They had all shipped in London for the steamer *Europe*, but sailed for Cardiff. In another assault case, a German mate was sued by two Japanese; all of them belonging to a British ship. The Japanese were accompanied by an interpreter, and between their lengthened colloquies with the latter, in a low, dropping, rhyming concatenation of utterances, and the hazy English in which he gave, in six words or so, the sum of the whole, made the examination one of the most exasperating we ever listened to. In the course of it, it turned out that the owner is a Scotchman, the captain a Dane; the mate a German; the second mate a European (?), while the remainder of the "15, all told," included 4 Malays, 2 Manila men, 2 Chinese, 2 Japanese, and "another Japanese."—*Shanghai Budget*.

THERE IS AN impression abroad that the men employed in the Formosan expedition are principally Saga men. This is a mistake. In the list of killed and wounded—happily a very short one—the only Kens represented are Kagoshima (Satsuma) and Shirakawa (Hizen).

A VERY much admired actor, hitherto known as Kawarasaki Gonnoske, yesterday opened a new theatre at Shinburi-machi, Shiba, near Kanasgi Bashi. In doing so, he takes his old family name Ichikawa Donjiuro, he being the head of the ninth generation of that family. It is believed that his venture will be very prosperous. A few days ago, he distributed *hanyiri* (collars) of a new design to the Geyshas (singing girls) of the city; and they are expected to attend in great numbers, every day, to gladden and delight the audience.

UCHIDA, the Ken-rei of Ishika, in a letter dated 8th July, tells of great floods in Kaga and Noto. The rivers of Kishi, Asano, and other streams were swollen to such a height that the waters ran twelve feet above the banks. Many persons were drowned and houses and whole farmsteads swept away. At Kanazawa, the chief town of the old Kaga clan, the water was five or six feet above the ground floor in all the houses; and the desolation is very great. Fuller particulars are to follow.

THE *Nichi Nichi Shimbun* reports that, as there are many valuables formerly possessed by Toshogu (the posthumous name of Iyeyas Tokugawa) in the Temple at Nikko, which have not hitherto been allowed to be seen by the public, permission has been obtained to exhibit them at the temple during sixty days, dated from the 28th instant; the time having come during which it is necessary to expose them to sunshine, to prevent injury from insects. The report is signed NIKKOZAN SHAMU DOKORI—(Manager of Nikko Temple.)

WE mentioned on Saturday last the success attending the shows at Yekoin Kaicho, Rio-goku-bashi. The "takings" of a single day have been published, and will not be without interest to our readers. The exhibitions of

THE later rains must have been more than ordinarily heavy, for reports of floods and landslips are very numerous, and come from various directions.

As long ago as the middle of last month, these mishaps commenced. In Yeso, at Watarijima, the Postmaster writes:—It has continued to rain from the 1st to the 15th of this month during some time every day. On the 13th it rained heavily through the entire day and night. Next morning, a large landslip occurred in a hill which lies at the back of the village of Hikata, by which two women and three men were killed. Besides this all the streams so overflowed that many houses and bridges were swept away, and many persons were drowned.

Floods also occurred in Ni-iharu Ken, on the 19th ulto., doing considerable injury.

In Idzu, it began to rain on the 7th of this month and did not cease until the 11th. On

the 10th the river Karino rose most suddenly to 18 feet over its usual level. Thus the same evils resulted. Everything that could be was swept away, and several lives were lost. At Kadono-mura there was a landslip, by which eleven persons were killed, and two wounded.

In the village of O-gawa, there was also an inundation, accompanied by a landslip. Twenty persons were carried down by the force of the water, of whom fourteen were drowned. The others saved themselves by managing to lay hold of the branches of some tall trees. Three were much wounded.

The same inundation carried away a house in the village of Oksfushi, the inmates of which, six in number, perished, as did also a horse belonging to them.

A NOTIFICATION has been issued signed by Yamagata Arichika, Rikugun-Kiyo (Minister for Military Affairs), to the effect that soldiers shall be selected from the Kuazoku, Shizoku, and Heimin, (nobles, samourai and common people), after an examination of their bodies, according to the four following rules:—

- 1.—Ages from 18 to 35 years.
- 2.—Stature for artillery above 5 feet 2 inches; the other troops over 5 feet.
- 3.—Very strong and healthy bodies.
- 4.—All must be able to read and write the characters in daily use.

Those who desire to join the army must apply to the offices of their Fu or Ken. All expenses will be paid by Government.

TO-DAY, a theatre opens in Aioi-cho ichomé, Yokohama, under the title of Minatoza. At the suggestion of Takashima Kayemon, the performances will represent the succession of affairs from the decline of Tokugawa to the present time.

THE 19TH Regiment, stationed at Kumamoto, was lately ordered to proceed to Formosa, to supplement the force already there.

THE SUPERSTITIOUS people of Yedo are discussing the Comet. They say that, seventeen years ago, there was a Comet, and at the time of its appearance there was great disturbance in the country, and a visitation of Cholera. They believe, therefore, that now the Cholera will return, to scourge them as before.

THE NINE Tosa men who were executed on the 9th ulto., for the attempted assassination of Iwakura U-daijin, died calmly and fearlessly. They all went smilingly to the fatal goal, and each, before death, recited, after the manner of Japanese samourai whose lives are sacrificed for crimes by them tortuously deemed honorable, a strain or two of (what is here called) poetry. Of course, these justified and gloried in their crime, rather than expressed any kind of regret; and they are looked upon by many foolish people as young heroes, rather than as culprits.

SAYS A Tokio native paper:—

"About 10 P.M. of the 27th ulto., an Englishman named Gilbert was riding down the street Dai-ni-daiku San-shoku, without carrying a lantern, and was therefore stopped by two policemen, Ukisumi Chuji and Kobayashi Otokichi. He tried to get away, whipping the animal, but they held on to the bridles, and his efforts were vain. Then he got down and was walking off; but they followed him and took his

card, which they sent to the station with the horse."

The editor adds: "Foreigners are utterly without regard for our country's laws, and become more so day by day. Yet none of our people think it strange or become uneasy. Policemen treat them gently, or, rather, are afraid of them; this was shewn very clearly on the occasion of the last races here. If any Japanese were to ride without a lantern at night, he would never be let off on merely giving his card. It is very fortunate that the "ex-territoriality right" was not bestowed upon them (the foreigners), as it might have produced much harm. Yet I am sorry too, that it was not accepted; because the authority of our country is inferior to theirs. But the weak policemen are not blameable; rather those, their leaders, who set them an example in cowardice."

"One story is good until another is heard." Mr. Gilbert's version of the affair differs considerably; but, as the matter has been referred to Mr. M. Dohmen, H. B. M.'s Consul in Yedo, and is now in the hands of Sir Harry Parkes, we opine that the true facts of the case will probably be elicited. We may say, however, that Mr. Gilbert did not give his card at all: that the night was illumined by a bright moon; that his horse was detained and taken to the station; and that the superior officials, feeling that they had gone too far, have been pestering Mr. Gilbert for several days, to receive back the horse and presumably "cry quits." It reads rather funnily, that the two "minions of the law" who led the horse after Mr. Gilbert had dismounted, carried no lighted lantern, and were facetiously chaffed about it by the man they had arrested for a like offence!

ON THE 2nd instant, Ijichi, Yamagata and Kuroda were appointed Sanji; all retaining their former offices, and, we would add, all well worthy of their present advancement.

MONS. OSCAR COLLEAU, who has filled the office of French Consul at Yokohama during the past four years, with credit to himself and satisfaction to the French community, was a passenger per *Japan* for San Francisco yesterday (4th), en route to France. A number of his fellow-countrymen and friends of other nationalities assembled on the English Hatoba, to bid him *bon voyage*.

ON WEDNESDAY (5th), we reproduced from the *Army and Navy Gazette* a paragraph to the effect that the Battalion of Royal Marine Light Infantry stationed here would be conveyed home by the transport *Adventure*, which is expected in Yokohama about the end of the year. Although the officer in command of the battalion has not, we believe, received any official communication to that effect from the Admiralty, we understand that the statement may be taken as correct. Should anything occur between now and then likely to render necessary a continuance of the services of our excellent friends and protectors, it rests, of course, with H. B. M.'s Minister to delay their departure until such times as the situation promises permanent tranquility.

THE BRONZE image of Dai-butzu which stood for a length of time in front of the Yokohama Furniture Depot was removed on Saturday by Mr. J. L. Liebermann.

Some disconsolate admirer of the "pup idol," missing the familiar figure, yesterday erected a tablet on the site formerly occupied by it, with the touching inscription, in lachrymose-looking characters of white-wash, "Image Doko?"

General Thos. B. Van Buren took over the duties of the office of United States Consul this afternoon (5th,) from the hands of Mr. George N. Mitchell, who has most ably and efficiently administered them since the departure of Col. Shepard, nearly a year ago. Mr. Mitchell continues to exercise his functions as Vice-Consul.

IN REFERRING, last night (5th,) to the induction into office of General van Buren, we ought to have said that he had assumed the duties of *U. S. Consul-General*, instead of those of *Consul*; which office, it appears, was altogether abolished by the U. S. Government in July last, a fact of which we (and probably the general public) were hitherto unaware. An advertisement in another column calls attention to the appointment of Gen. van Buren.

A SMART shock of earthquake was experienced at 3.35 A.M., to-day (6th.)

OKURO TOSHI-MICHI departed per *P. M. S. S. Costa Rica* for Shanghai this evening (6th.) as Envoy-Extraordinary to the Court of China. The Kanagawa forts fired a salute, which was responded to by *H. M. S. Thalia* and the other foreign war-vessels in harbour.

WE ARE informed to-day (8th,) by telegram, that General Le Gendre, who left here for Hongkong in the *Great Republic*, with full powers as High Commissioner to treat with the Chinese authorities, has been arrested at Amoy by the United States authorities, and thereby prevented accomplishing the object of his mission. This will probably lead to fresh complications.

A VERY SERIOUS accident occurred at the base of Fuji-yama, on Friday afternoon (9th,) to a gentleman named Wheeler, who, a short time ago, came to Yokohama from Shanghai in the hope of recuperating his health. It appears that, on the evening in question, he, accompanied by a friend, had accomplished the ascent of the mountain, and was in the act of descending, perhaps too rapidly for safety, when he tripped and fell, and, after rolling for some time, must have struck his head against a stone. The attention of his friend, who was ahead, was called to the accident by the cries of the unfortunate gentleman, and of course he was instantly attended to. With infinite difficulty, he was removed to Kiga, which was reached only on Saturday evening. Mr. Stewart, of the firm of W. Watson & Co., received a telegram announcing the accident at half-past 11 on Saturday night, and immediately started off in one of Messrs. Cobb & Co's traps. Mr. Wheeler was at once attended by Dr. Macdonald, who went over from Hakone, and a German physician who happened to be in the vicinity, and is, we are informed, doing reasonably well; although at the time our informant saw him he was in rather a precarious state, and appeared to be severely stunned. The doctors say that, with quiet and the attention which he is receiving at the hands of some European "Good Samaritans" now sojourning at Kiga, he will manage to pull through.

Mr. Stewart accomplished the journey to Kiga and back, nearly 100 miles, within the twenty-four hours.

A NOTIFICATION, signed by Sanjo Daijin, and dated 27th July, has been issued, allowing all merchants to buy or sell guns and ammunition freely; but apprising the Military Department of their operations.

A LETTER from Formosa thus speaks of the Mission from China to Saigo:—"When the Mission from China came to the camp at Lian-kiao, to confer with Saigo Totoku, a company of Chinese soldiers escorted the commissioner. Their condition was laughable. Under their broad-brimmed hats, their hair hung down their backs, their clothes being of white cotton, with wide pantaloons. They were extremely dirty, and their feet for the most part, bare. Many of them are tall men. Their arms are not uniform—some carrying breech-loaders and some muzzle-loaders of different kinds. While the conference was going on, they took no care to dress their ranks, but chewed sugar-cane and betel-nut, and laughed and talked loudly. The man who seemed to be their commander was very tired. He came to our camp kitchen and stood there stupefied. A sailor gave him some daikon (salted radish) which he ate with a relish, and asked for more. After the conference, dinner was provided for the Chinese troops; who fell upon it like ants, pouncing upon it with greediness. Although they are trained in the English style, they are accompanied by drums and gongs. They looked so contemptible that some of our fellows proposed to go for them and disperse them. If all the Chinese were like these we should have no fear of them, whatever their number."

JUST BEFORE the departure of the P. M. S. S. Co's. Str. *Japan* for San Francisco, to-day (3rd) the fellow-officers of Mr. Sumner Hill, Purser of the vessel, waited upon him in the saloon, and presented him with an elegant trinket, as a token of their esteem and regard, on the occasion of his retirement from the duties of his office to assume the purveyorship of the Co's. Agency at this port. The presentation was made by one of the officers in a few neat remarks, expressive of their regret at his departure and their hearty good wishes for his future success in his new sphere. Mr. Hill replied in appropriate terms, and bade adieu to his brother officers and ship.

WE ARE enabled to state that, although the Treaty Limits question has been by no means finally settled, certain concessions have been made which will do something towards redeeming the character of the Japanese Government in the eyes of those who have utterly given it over as a "bad job," so far as the ceding of further privileges connected with residence and travel in the interior are concerned. It almost seemed, a little while ago, that the Government, far from affording foreigners any extension of privileges for inland travel, were inclined to close in on them and hem them in still further, and we heard, quite recently, of gentlemen engaged in Japanese schools and colleges being detained for some days (and their little vacation term by so much shortened) in consequence of the obstructions thrown in the way of their procuring permits. Even to-day (3rd), we were told by a gentleman engaged in the service of the Government that he had been called upon to deliver up his pass and take out a new one; for what reason he did not know. But, we are informed, concessions have been made, and of a liberal nature too, and foreigners will be permitted to travel in any part of the Empire, without reference to distance, for purposes of science, or in pursuit of health, under the protection of passes which will be issued by the respective Ministers. Of course, to those having the object of trade in view, such permits will not at present be available and cannot be issued. The usual medical certificate will suffice for visits to Hakoni, Atami, &c., and we fancy no trouble

or annoyance in that respect need be anticipated by visitors thitherwards.

A TELEGRAM received this morning (3rd) from Fukuoka, in Kiu Siu, and near to the straits of Simonoseki, gives information of a typhoon occurring in that neighbourhood on 31st ulto., lasting for twenty-four hours; with very heavy rain, inundating many parts of the country.

BY TELEGRAM, we learn that a fire broke out at Kobikicho, Kobé, at about 11.35 last night (2nd.) It was got under this morning at 4 o'clock, after twenty houses had been consumed.

A PRELIMINARY enquiry was yesterday 30th ulto. held at the New Town Hall, Honcho Dori, before Mr. Nakashima Nobuyuki, Governor of Kanagawa, touching the circumstances attending an alleged assault on, and arrest of Mr. James Davison, of No. 28, Yokohama, at the Japanese Police Station, Sakai-cho, on Sunday evening, 26th July.

Russell Robertson, Esq., H.B.M.'s Consul, was present to watch the proceedings; and Mr. Nomura, of the Gaimusho, Yedo, attended on behalf of the Japanese Government, to whom complaint had been made through H. B. M.'s Minister.

Mr. Santo, Gon-Rei of Kanagawa, and Mr. Matsumoto Moto'sko, Chief-of-Police, were in attendance.

Mr. Davison was also present.

The evidence of a Police Inspector, an interpreter, a European constable, and several Japanese police was heard, but no decision was arrived at; the matter being referred to the Minister for Foreign Affairs, Tokei, and H. B. M.'s Minister, for adjustment.

Should the complaint be considered sufficient well founded, a public trial will take place.

A DECISION has been arrived at in the case recently heard at the Town Hall, before the Kenrei, Mr. Nakasima, and H. B. M.'s Consul, in which Mr. James Davison, of No. 28, complained of forcible detention and maltreatment at the Japanese police station. It was stated, when we made mention of the enquiry which had been held, that the matter would be referred to the Japanese Foreign Minister and H. B. M.'s Minister for decision. Mr. Nakashima Nobuyuki, by virtue of the powers in him vested as Governor of Kanagawa, has, however, settled the matter off-hand, with a promptness and acumen which does him infinite credit. His decision is, after having carefully gone over the somewhat lengthy evidence on both sides, that the Inspector of Police, Odagiri Hidekugu, in giving orders for the detention of Mr. Davison, exceeded his duty, and the punishment decreed is his summary dismissal from the service.

The hearing of the case was only finished at 6 o'clock on Thursday evening 30th ulto., and by the following morning the decision of the Kenrei had been communicated to H.B.M.'s Consul, and the offender mainly responsible had ceased to hold the office, the powers of which it was proved he had abused. Such promptitude as has been shewn by Mr. Nakasima, in the handling of a very difficult and delicate question, is worthy of more than a passing notice, and it gives us much pleasure to thus prominently refer to the ready action on the part of at least one Japanese official, as a set-off against the oft-repeated charges of wilful delay and deliberate obstructiveness which are directed—and, we are compelled to say, generally with truth—against the class to which the gentleman referred to belongs.

## Local Correspondence.

To the Editor of the *Japan Gazette*.

SIR,

In your journal of the 3rd inst., you are pleased to notice with approbation my article on the Formosan Question, in last Saturday's *Japan Mail*. "But," you say, "it is not a 'new view.' It is what has been enunciated in the *Gazette* from the first." I have a particular object in proving it to be a 'new view,' and am therefore obliged to trouble you with the following quotations from your own back numbers:—

"It (the expedition) had long been talked of, but we had always believed that there were none among the council of the Empire who would seriously propose it, and that, if anyone should be so insane, none would be found to support it. . . . But the greatest danger lies in the fact that Formosa is a Chinese possession. It is a *foo* under the authority of the Viceroy of Fohkien and Chekiang. It is a mere waste of money, a vast expense for a most inadequate result. . . . A frittering away of the national resources. . . . Instead of reflecting credit on Japan, it makes her appear ridiculous in the eyes of the whole world."—*Japan Gazette*, April 4th.

"It is quite needless for us to say (what the public very well know) that we most heartily disapprove of this expedition. But it is to be admitted that this disapproval may possibly be founded in error. . . . The more we hear of this expedition, the more we see what is being done, the less are we satisfied that there is any meaning in it at all, unless it be for the one sole end of keeping the misads of the soldiers and *Samurai* engaged. . . . It would be well to ascertain who is responsible for this line of policy, that, while they fail not to get the full credit of the enterprise, should it, contrary to all expectation, turn out to their country's good, they may receive their full share of condemnation should evil come of it."—*Japan Gazette*, May 29th.

"Call you that backing of your friends? A plague upon such backing!" These are your early utterances, and I think, Sir, their repudiation will induce you to qualify your assertion, that my defence of Japan 'all along the line' is the same view of the dispute which 'the *Gazette* had enunciated from the first.' Latterly, after the expedition was known to have succeeded, your hearty disapproval has not been so marked.

"Under any circumstances, Japan cannot recede now. We hope it may be proved that she is not in the wrong as regards the non-jurisdiction of China."—*Japan Gazette*, June 22nd.

On June 25th, you publish the Tsung-li Yamen dispatch, and comment on it in a leading article, in which I certainly cannot find a trace of my "new view." You say of it:—

"It supports very much what has been written on both sides—i.e., both for and against the Japanese mission to Formosa. We use the word 'mission' because we perceive that this is the word made use of by the Government; and it not only has a more peaceful sound than the word 'expedition'—but, according to the instructions given to the General, and all who had directions from head-quarters, it appears to have been intended that it should be altogether peaceful, if the natives would themselves allow it to be so. . . . However peaceful their intentions, they were obliged to send a mission strongly defended. England and America have both had experience of attempting to land for negotiation (!) with an inefficient force. It was quite right, therefore,

to send troops. . . . . We come to the conclusion that the Japanese are not so much in the wrong as we at first thought them."—*Japan Gazette*, June 25th.

Nor do I find, in the following, any anticipation of my 'new view' of the conduct of the Treaty Powers:—

"We do not presume to call in question the advice given by our representatives to the Government of Japan, nor to the Chinese Government."—*Japan Gazette*, July 21st.

I fail to find in these extracts anything to support your statement of August 3rd that "almost everything that is said by the writer of the article has been said over and over again by ourselves"; nor do I find the same identity of either decided sentiment or distinct expression anywhere else in your leaders on the Formosan Question, the whole of which I read before I sat down to write. I think, Sir, that your accusation of wholesale plagiarism requires some slight modification, and in the hope that you will see fit to make it,

I remain,

Your obedient servant,

#### THE AUTHOR OF THE 'NEW VIEW.'

[We insert the above letter at once, though for the moment we merely reply by giving this extract from our article:—

'It is what has been enunciated in the *Gazette* from the first; for though we have seen and pointed out the possible consequences of the action taken by Japan, we have never doubted, nor failed to uphold, the fact of right being with the Japanese, in so far as the two ministers Kung and Soyeshima are concerned; or the second very important fact that both the English and Americans had taken the same steps as the Japanese have done, and that the main difference lies simply in the Japanese having done effectually, through having a sufficient force, what their predecessors failed in, through over-confidence in themselves and contempt of their foe. We are pleased to see that, to an unprejudiced mind, the view we have always and persistently taken appears the correct one.'

Let not our correspondent, however, imagine that we had any intention of making offensive allusions to his article in the *Japan Mail*, nor to himself as a plagiarist. We recognised the author, and welcomed him as a fair and unbiassed critic of the existing state of things between China and Japan.—ED. J. G.]

WE HAVE received the following for publication, from a correspondent in Venice:—

To the Editor of the *Japan Gazette*.

SIR,

Full of hope that your paper will receive with pleasure news from this city, which was the ancient harbour of Europe for the Extreme East, and which is now to take again its position, I beg leave to send you a correspondence in regard only to Japanese concerns.

In the beginning of last year, a General Japanese Consulate was instituted in Venice, probably the first in Europe, and entrusted to three distinguished personages, Mr. G. O. Nakayama, Consul-General, Mr. Nakasima, Vice-Consul, and Mr. Mima, Chancellor. They were all endowed with the greatest intelligence, good manners, and a great will for working.

They were assisted in their office by an Italian, Cavalier Berchet, to whom they had been recommended by the Minister from Italy, Count Fé d'Ostiani. It is really difficult to believe how much they did in Venice, in learning not only the Italian tongue but the laws of the country, as well as its civil, political, and commercial habits.

They were received by the authorities and the citizens of the best class in the most exquisite manner, and in order to exchange the kindness of the Japanese Government for hav-

ing established in Venice the Consulate-General, the Municipality of Venice instituted a special school of the Japanese tongue, giving the professorship, with a splendid allowance, to a Japanese, Mr. Yoshida, who was interpreter at the Italian Legation in Japan. He teaches with great skill, and about forty (40) pupils are frequenting his lessons, with great assiduity and profit.

Last year, Venice was visited by many Japanese; as, for instance, the great embassy of Iwakura, that stopped eight days, visited the principal monuments, the manufactories, the arsenal, and the harbour; and admired, in the General Archives, some ancient documents of other embassies that visited Venice in 1585 and 1615. These documents will be collected and illustrated by Cavalier Berchet.

The Minister, Sano Tsuetami, president of the commission for the Japan exhibition in Vienna, and Minister accredited at the Court of the King of Italy, arrived in Venice the very day in which the new school for the Japanese tongue was inaugurated. He assisted, in consequence, at the ceremony, together with the Italian Minister to Japan, Count Fé. He visited all the monuments and manufactories of Venice, and had the happy idea of making purchase of several objects of art, particularly glass-ware, specialties of Venice; sending them to the exhibition, I believe, of Kioto, with their price. If that should be useful for the exchange of industrial productions between Venice and Japan, the Minister Sano has indeed contributed in a great degree to the good and prosperity of this branch of industry.

Minister Sano had another good plan, and it was, to have Mr. Moser, a distinguished photographer whom he conducted with him, instructed in the manner of executing photographs by moon-light. There is no country in Europe where the photographic art is brought to such perfection as in Venice; and, in particular, photographs by moon-light have here a splendid result. Mr. Moser assisted for more than a month at Naja's establishment, learning there the art to perfection, and he will now produce these *Moon-lights* in Japan, which will really please.

In the meantime, Venice was almost daily visited by many Japanese, and it conceived the idea of beginning again the ancient commercial relations with the Extreme East. By the cutting of the Isthmus of Suez and the opening of the Brennea railway, Venice is returned the best harbour for Indo-European commerce. Here is a proof. From the statistics that the *Camera Commercio* (Chamber of Commerce) is going to publish, we perceive that, in the year 1868, the commerce of Venice with the Indies, China, and Japan was about a million. It increased in such a manner that in the year 1872 it was fifty millions, in the year 1873 a hundred millions, and during the first months of the present year it has given such amounts which leads us to believe and hope that at the end of the year it will be nearly 150 millions! Many commercial houses intend to import productions from Japan. As for the seed silkworms, we can say that one half arrives in Venice by the Peninsular and Oriental Company and the other half by the Messageries Maritimes. Many Venetian houses put themselves in direct and regular correspondence with Japan, and, this year, we had the direct importation of Japanese *Cartoons* from the respectable firm of Kioya Ishibei of Yokohama. In a word, such is the development of business between Venice and Japan that we have reason to hope every prosperity for the future.

But the Japanese Government, considering that the centre of silk commerce is Milan, has

ordered that the Consulate-General should pass from Venice to Milan, to the great sorrow of the Venetians. But the sorrow is alleviated by the fact that there remains in Venice a consular representation, intrusted to Cavalier Berchet, who acted in the Consulate-General, and it is to be hoped that the aforesaid representation may be of long duration; nay, completely established, in a city which is, without any doubt, the first port of Italy for Japanese commerce.

VENICE, 16th May, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

We hear much about the rapid advance of Japan in the march of civilization, and it is not altogether incorrect perhaps to regard them as just now the most promising of Oriental peoples. But, in some things, they are now quite as illiberal towards foreigners as they were twenty one years ago, when they vainly tried to drive Commodore Perry and his fleet from their shores. In making this assertion I am not referring at all to obstructions in trade that still exist, nor yet to the desired opening of the whole country to foreign intercourse, but only intend to speak of the difficulty of getting any little concession of privilege within the old treaty limits. Japanese abroad in western countries are fêted and lionized, *ad libitum*, (I had almost written *ad nauseam*). Governments appropriating money to pay their expenses; railway and steamboat companies giving them free excursion tickets; all public institutions being more freely opened to them than to our own people. They were permitted to go where they pleased, and take lodgings, buy land or houses etc., without the least restriction from any Government official whatever.

Not so here. The whole policy of the Japanese Government towards foreigners is just the opposite to that received by the people abroad.

We can scarcely buy a hamper of charcoal or coolie-load of firewood, or fish enough for a breakfast, outside the cordon of the settlement. But what seems harder still, we saw the other day a case where a feeble invalid, too weak to travel to the mountains, was recommended by the medical adviser to get lodgings for a week or two on the sea-beach under the shade of the trees at Treaty Point. The cool shade, the refreshing breezes, and the sea bath, were all that was required to recuperate the languid sufferer; and with high hopes of quick relief, application was made to the owner of the little hut at the landing for a room. This would have been readily granted, but the Kenrei of Kanagawa forbade it, and no amount of persuasion could get over this difficulty. In vain \$100 per mensem was offered for the one little room; in vain was it represented that it might be a case of life or death to the sufferer. No amount of argument could change the fiat of the powers that be. Not even a reference to the kindness experienced by their own people abroad could move them half an inch. How long shall this blindly ungenerous spirit continue to disgrace a people and nation that in many other respects has so much to be admired?

With a hope that there may be in the heart of some native of this Rising Sun Land either a sense of shame or of gratitude; and that this may be read by such an one, I beg, sir, that you will give it a place in your columns.

Yours faithfully,  
PIONEER.

August 4th, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

It is with feelings of great pleasure that I learn the United States Consul has taken steps to close a certain gambling hell which has been the source of ruin to many persons. I cannot but appreciate his conduct in the matter, and I sincerely trust that the representatives of the various nationalities here will follow in his footsteps, as it is well known that a French gambling house, in one of our main thoroughfares, which has been established for some length of time, has caused great injury to hundreds of young men who come to this Settlement; and, much to my regret, I learn that the proprietor has recently erected a new building, which, under the cloak of an "Hotel," is almost exclusively devoted to games of chance.

I remain,

Yours etc.,

JUSTICE.

### Law Reports.

#### In the U. S. Consular-General Court.

Before GEO. N. MITCHELL, Esq., *Vice-Consul*.

*Saturday, August 1st, 1874.*

Morris Blass was charged with threatening to beat and kill one Isaac Bush, at No. 71, on the 30th ulto. He pleaded not guilty.

Isaac Bush, sworn:—On the afternoon of the 30th, at 2 o'clock, I returned to the store from the Bank, bringing with me a sum of \$125, the interest for 6 months on a certain sum of money. I placed it in the money drawer, and requested defendant to take it, with the other money in the drawer, and deposit it in the bank. He refused, saying that half the money belonged to his father. He approached me, and squaring up at me, called me a coward, a cheat, a robber, and threatened to knock me down. I referred him to parties who knew the circumstances connected with the division of the money. He went to Mr. Grauert and found he was wrong, and that I was to get 65 per cent and he 35 per cent. We have had several rows before, but I always forgave him. Once he caught hold of me, and wrestled with me, straining my back so that I had to go to Dr. Dalliston. He never actually threatened to kill me.

To Accused:—You did not strike me. You made the attempt; you "shaped."

A little boy, a son of complainant, having satisfied Court that he knew the nature of a lie, and would speak the truth, deposed that accused had struck him, and said he would strike his father.

In defence, accused, being duly sworn, said:—About two months ago, Messrs. Grosser and Grauert decided that my father was to receive 35 per cent. of the money in question, and Mr. Bush 65 per cent. At that time, my father read to me that he was to get 50 per cent. of the amount of interest, payable on 31st July. On that date, Mr. Bush brought in the \$125 and put it in the money drawer, telling me to put it in the bank. He said I was to have 35 per cent. of it, but I told him I was entitled to 50 per cent. of the interest and 35 per cent. of the principal. After the dispute, I went to Mr. Grauert, who told me I was wrong. On my return I confessed my mistake to Mr. Bush.

To Court:—I don't recollect threatening Mr. Bush, or putting up my fists. In the warrant,

Mr. Bush says I threatened to kill him. This is untrue. I had no weapon, and did not even strike him. I apologised to Mr. Bush, and was very much surprised to find he had summoned me. On the occasion referred to by Mr. Bush, I caught hold of him, but had no intention of hurting him. He says he went to Dr. Dalliston and got some medicine, but I cannot say whether he did or not.

His Honour said such disgraceful conduct could not be tolerated. Complaints between the parties were coming before him so often that it was time some arrangement were come to between them, that they might be put at end to. Accused had no right even to menace complainant, as it was quite evident he had done. It was tantamount to an assault, and he should require accused to procure a bond of \$100, in two sureties of \$50 each, to keep the peace towards the people of the U. S., and Mr. Bush in particular. He would also have to pay the costs of the case.

#### In H. B. M.'s Provincial Court.

Before RUSSELL ROBERTSON, Esq., *Consul*.

*Monday, August 3rd, 1874.*

John Gallagher, Chief Officer of the *S. S. Ping On*, was charged, on the information of the Master, with being drunk, absenting himself from duty, and using abusive language towards the captain and officers.

Joseph Mooney, Master, sworn:—On the morning of the 30th July, I left the ship at 10 minutes to 10. I got back to Yokoska at 6.25 p.m. Met accused, and told him to take the stores out of the boat. He followed me into the cabin to make a complaint against the chief-engineer. He had been drinking, he was so talkative. After dinner he pestered me a great deal. I was told that he had absented himself from duty during my absence. At half-past ten I heard him going out of the ship. He returned the next morning at 6 o'clock; he appeared the worse for liquor. Shortly afterwards, a Japanese prostitute came on board and asked him for money. He said he had been to get a mosquito curtain. Subsequently he squared up to me and conducted himself very violently. At 3.30 he again absconded from the ship. He threatened to fight all the men in the ship. He returned at 10 p.m. on 31st. He again went away and returned at 5.30 the next morning, and went to his cabin. Altogether his conduct has been very outrageous.

To Accused:—You were the worse for liquor when I returned to Yokoska. Yesterday morning, I referred you to the contents of my letter. You annoyed me on Saturday evening.

Charles Williams, Third Engineer, sworn:—On Saturday, the 1st, at 1 in the afternoon, I was about to go to the engine-room, when I was stopped by accused and abused. He used abusive language and threatened me. Accused was out of the ship several times; whether with or without leave I do not know.

To Complainant:—I heard accused threatening the second-mate.

To Accused:—I did not tell you to go to h—l.

Ah Sun, Boatswain, cautioned to speak the truth:—On Sunday morning the mate struck me. On Saturday he was drunk.

Accused made a general denial of the statements.

The Court was of opinion that the matter should be referred to a Naval Court. Prisoner was remanded accordingly.

### Naval Court of Enquiry.

HELD AT H. B. M.'s CONSULATE,

Before RUSSELL ROBERTSON, Esq., *H. B. M.'s Consul, President*; Lieut. FREDK. A. MOYSEY, R.N., *H.M.S. Thalia*; and JOHN MCGILL, Esq., Master, Br. Ship *Cathaya*.

*Friday, 8th August, 1874.*

John Gallagher, Chief Officer of the British Steamer *Ping On*, was charged on the information of Jos. Mooney, Master of that vessel, with drunkenness, absenting himself from his duty without leave, and using abusive and threatening language towards the Master and Officers of said vessel.

Accused, through his Counsel, Mr. F. W. Marks, pleaded not guilty of all the charges.

Jos. Mooney, Master of the *Ping On*, sworn:—On Thursday, 8th July, I left the ship to come to Yokohama, leaving the Chief Officer in full charge. I cautioned him to take care of the ship, as she was lying outside of the dock, and gave him the necessary instructions for the carrying on of the work during my absence. On my return about 6.30 p.m., I met the mate on the wharf. I told him to look after some stores which were in the boat, and left and went on board. I went into the cabin and he followed me in. He mentioned some trivial thing that the Chief Engineer had refused to do for him. I paid no attention to him. I then observed he was under the influence of liquor. I took no notice of this. He then came to his dinner. Dinner finished, he kept running about, making himself very officious. The ship being in dock, and it being dark, there was no occasion for it. Between 9.30 and 10 a.m., I laid down, when he came to tell me he had been under the ship's bottom, and what he had seen. I thanked him, and told him I would see to it myself in the morning. At 10.30 p.m. I heard a foot leaving the ship's deck, going over the gangway, and was told by the quartermaster, it was the Chief Officer. Next morning, we went on with the work as usual, but did not see anything of him until 6 a.m., when I perceived him coming round the angle of the dock. He came aboard, and without saying a word to me, passed me and went to his cabin. He was the worse for drink. I went down the dock, and came on top of the deck-gate, about 7 a.m. I then saw him in his shirt sleeves leaning over a Chinese fireman, who had fallen into the dock the previous night; he was tumbling him over, making a noise, asking him how he felt, &c. I sang out for the Chief Engineer to send him away, and not let him pester the Chinaman. I turned round to come on board, when a Japanese woman passed me on the gangway, went on board, and tapped him on the shoulder. She spoke to him in Japanese and appeared to be wanting money. I sang out to the Quartermaster to put her ashore, which he did. After that I went and had him sent for. I asked him what he meant by such conduct. I then told him of his absence from the ship during my absence in Yokohama. I asked him why he did it, after giving him the caution I did. He merely laughed, and treated the matter very cavalierly—saying he had only gone to tiffin with a friend. I told him it was the first time I had left him in charge, and that it would be the last; as I could have no more confidence in him. I asked him what he thought of his conduct in leaving the ship at night, and bringing that woman on board. He said he was sorry for it; he didn't expect the woman would follow him. I asked him if he was going to continue such conduct. He replied, no, he wished to go on with his duty. I told him he wasn't fit for that then; that he had better go and keep quiet in his cabin to get sober; that I would carry on

the work. He went out on deck, and kept meddling with the men at their work. I went into the wheel-house, which is before my cabin, and he was then talking loudly to the second officer. The particular words I caught were, that he had known him before—this was uttered in a tone of intimidation. He was telling the 2nd mate his capabilities; how he could drive his hand through a man's skull. I left the wheel-house, and went out on deck. He left the deck, as I came round, and met the Chief-Engineer on the plank leading to the dock-side. When I saw that, I went back to my cabin. I was washing, and looking out of the wheel-house. I saw him coming on board again. He came right up to me, saying he wanted to ask me a question. I asked him what it was. He said, "Did the Chief-Engineer tell you I was out of the ship, while you were away?" I told him I declined to answer that question. He made use of the words, "By God, if I knew it was him, I would put a head on him; I have just been talking to him." We then went to breakfast. He made some noise, asking the man for his comb and brush. He could not find them, and he said he would come in as he was. He came in with his hair disordered, and his shirt open. I told him, in presence of the Second Mate and Chief-Engineer, that it was a very bad precedent to set, to come in in that state, and for the future if he could only come in in that state, he had better not come at all. He told me not to talk, he was bound to come in anyway. I told him it was my table, not to talk, but to be respectful and eat his breakfast, which he did. After breakfast, he went about the deck, meddling. I went out to check him, and stopped the work, I was so annoyed, to avoid the noise and disorder. He then came up to me, shaking his fist, and hauling out his elbow as if to strike; saying, that he would be Chief Officer, would stop with me and go to Nagasaki. I left him then, quiet for the time, and proceeded with the work again. About 2.30 P.M., on the 31st, he absented himself again without permission. I saw no more of him until about half-past 5, next morning. He was reported as having being on board, the night before, with a friend, at about 10 o'clock. When he returned in the morning, he went to his cabin as before, without any apology. The first I heard of him was about 10 minutes past 8. He was yelling out to the butler to know why he didn't get breakfast. Our usual hour being 8.30 or 9 A.M., I went out. I asked him if he was really trying to excite me, to have trouble, which I didn't want. I told him that if he put me to it I should have to apply to the Consul, and have him taken out of the ship. He said he didn't care for the Consul, or me either, or all the policemen I could bring. We got our breakfast at the usual time. After breakfast, he was, as usual, boisterous and noisy about the deck; and threatened the second officer and crew, as before, if they did not carry out his orders. Some time elapsed, perhaps two hours, when I walked along the side of the deck where his cabin is. The door was open, and I looked in as I passed. He was lying on his cabin floor, in a most beastly state. I went round the deck and found the second-engineer, working in the engine room. I wished him to go and see the condition the mate was in, that I might have him as evidence. He went to his cabin and said the mate was sick. I heard no more of him until 5.30. He had been awakened by the second officer. He abused me in the most disgraceful manner, and said I ought not to have called the second engineer to see him. I told him his conduct had been so bad for the last few days, that he seemed to be quite careless what he did with himself. At 6 o'clock, I had to leave the dinner table; I couldn't stand it. On Saturday

night, the 1st inst., he absented himself again. On Sunday morning, at 8 o'clock, I knocked the men off for breakfast. He went forward, down into the foc'stle, and asked the men who the h—l knocked them off. The Bo'sun said the Captain did, and he assaulted him. At half-past 10, I had to leave the breakfast-table again, telling him I was going right to the Consul, as I couldn't stand it any longer. He told me I could go to the devil if I liked. I went to the Consul and brought a constable down on Monday morning, and gave him in charge. I forgot to mention that on Sunday he was absent again without leave.

Accused, to Court:—I have a Board of Trade second-mate's certificate. It is in Shanghai. I told the Captain it was there.

To Mr. Marks:—I engaged Mr. Gallagher as Chief-Officer, knowing he had only a second-mate's certificate. The vessel was in dry-dock at Yokoska, undergoing repairs. The "trivial order" which Mr. Gallagher said the engineer had refused him, was to get the ship upright. She was perfectly upright. The mate is not the man to dock the ship. It would be a very serious matter if the ship were not upright. I left him in charge when I went to Yokohama. I have seen him under the influence of liquor at Nagasaki, and have therefore had the opportunity of judging as to his condition, when I hear his talk and actions. My ship is a temperance ship; it is down in the articles. I knew the Chinese fireman referred to was very severely hurt the night before. The mate was shaking the man and making him sing out. He was lying just abreast of the foremast. I will not swear that the Japanese woman I took for a prostitute or a keeper of prostitutes was not a store-keeper, from whom he had bought goods. During the first two or three days at Yokoska I had given the mate no liberty whatever. He told me several times that he could drive his fist through any man's skull in the ship, if he liked. I was in the ship, and therefore he included me. Since the trial of Mr. Gallagher on Monday, I have never agreed to let the matter drop. He asked me on the dock to do so. (Letter produced, from Capt. Mooney to H. B. M.'s Consul, agreeing to abide by the latter's decision and offering to condone matters, rather than delay the ship.)

Mr. Marks applied that accused might be heard under oath, which he believed was customary in a Naval Court.

Mr. Robertson said it was rather irregular, but he saw no objection to his being sworn.

Mr. Marks then applied that his client might be allowed to take his discharge, and the matter permitted to drop. There could be no doubt there were some charges substantiated against Mr. Gallagher, but they were not of a grave nature, and he thought there could be no objection to do so, with Capt. Mooney's approval.

Mr. Robertson, at some length, gave his reasons why the case should be continued, the Court being a Naval one. After consultation with the other gentlemen composing the Court, he announced that it was their decision that the enquiry should be proceeded with.

George Derrick, sworn:—I am Chief-Engineer on board the *Ping-On*. I recollect the vessel going into dock at Yokoska, on Thursday, 30th July, and the Captain's going to Yokohama that day. We hauled into dock about 6 o'clock. I was aware of the mate having been absent from the ship on that day, at different times from half-past 12. At 6.20 P.M. he wanted the ship trimmed. She did not require it. I was under the opinion that he was the worse of liquor. I did not refuse to trim the ship; I requested a written order, as I thought I might be committing an error by doing what he told me. It was about 3 A.M.

when the Chinaman fell into the dock. Next morning, at 6 o'clock, the mate went to the sick Chinaman, and handled him roughly, so that he sang out. Whilst there, I saw a Japanese woman came to the ship, to speak to Mr. Gallagher. I heard the Captain tell her to leave the ship. The mate came to me, and asked me if I had told the Captain he was away during his absence. I told him I didn't do such mean actions. On Friday evening, he came to me again, and said he had just a mind to give the Third Engineer a clout on the head. I advised him not to do so, as the Third Engineer was a big man. Next morning, the latter came to me and said the mate wanted to fight him. I told him to have nothing to do with him, and to keep peace in the ship. I have heard Mr. Gallagher use abusive language at the table. He also threatened to punch the Third Engineer's head. On the Friday and Saturday afternoons, 31st July and August 1st, he was unfit for duty, asleep in his room.

Cross-examined by Mr. Marks:—I don't know what the mate's duties are; I am not supposed to know. He was drunk when he spoke to me at the gangway at 1.30 P.M.

Court adjourned.

Court resumed at 2 o'clock.

John W. Stitt, sworn:—I am Second Mate of the *Ping On*. I recollect the vessel being at Yokoska. I was on deck when the ship was docked. While the Captain was absent in Yokohama the mate was on board but walked off; he returned on board on Friday morning at 10 minutes after 6. I remember his reprimanding him at the table; and that he had to leave the table. I don't recollect his expression. Mr. Gallagher used intimidating language towards me; he said he could split anyone's skull in. He was ashore on Sunday. I noticed him talking on that day. His demeanour towards the Captain was very unbecoming. On Friday, Saturday, and Sunday he was not in a fit state to carry out his duties.

Cross-examined by Mr. Marks:—There was nothing in his duties requiring skill, the vessel being in dock. When I saw him, he was not downright drunk. The Captain and Mate sometimes had growls. I cannot remember the Captain being intoxicated after we left Nagasaki; I heard that he had been.

To Court:—I have had no trouble with Capt. Mooney, except that I was once knocked off duty for striking one of the men. (Letter read from Capt. Mooney to the Consul, complaining of the mate, and saying that the second-mate was not much better.)

Capt. Mooney, to Court:—I mean by that, that he prevaricates, and is hand, and, glove with the mate. I can place no confidence in him.

—Henderson, sworn:—I am Second Engineer on board the *Ping On*. I recollect the ship being docked at Yokoska on Thursday, July 30th. When the Captain called me to look at the mate in his cabin on the Friday, I couldn't judge whether he was sober or not. He may have been sleeping. During a conversation between the Captain, mate, and second mate, the mate held up his hands as though he were going to strike. From what I saw of the mate's conduct I should say he was mad.

Cross-examined by Mr. Marks:—I am neither friendly with the mate, nor otherwise. I have had no quarrel with him.

To Court:—I have been in the ship 3 months, since she left Shanghai. I never saw the Captain intoxicated, that I could swear to. I have seen him "strange," at Nagasaki. I know that while we were at Yokoska the mate left the ship three or four times; remaining away sometimes half a

day, sometimes 3 or 4 hours. I cannot say whether he went on duty or pleasure. The mate challenged the Captain to fight, in consequence of the letter the latter had addressed to him, complaining of his conduct.

Charles Williams, sworn:—I am Third-Engineer on board the *Ping On*. I remember her being docked. As to Friday, 31st July, I can say nothing about the mate. On Saturday, August 1st, at 1 P.M., I was about to go to my work in the engine-room, when I was accosted by the chief mate, who said that I was a G——d——d big man, but he didn't care about me. I replied, "nobody said you did," and asked him what he meant by his insults. About a week or 8 days previous, he asked me about my insulting him, when he came alongside the ship. I denied it. With that he got dancing about the ship, and was going to strike me. I told him he had been quarrelling with other parties, but I did not wish to quarrel with him. He was using a good deal of abusive language, but I left him and went to my duty in the engine-room. At 7 A.M., on Sunday morning, 2nd, as I was sitting at my room-door, he commenced to abuse me again—saying that he could do this and that at fighting, and how he could put his fist through an inch plank. I told him then that I didn't wish to have any quarrel with him. He again lifted his fist, and, using a blasphemous oath, said he would send it into my skull an inch and a half. Both times he accosted me on board he was in liquor; I cannot say whether he was fit for duty or not. On Saturday evening, I heard a conversation between the Chief and 2nd mates and the Captain, with reference to the former's threatening to give the 2nd mate a clout. I did not hear the Captain give him a caution. I heard the mate replying, to the effect that he didn't care for the Consul.

Mr. Marks, before calling upon the defendant to give his evidence, would submit that there was really nothing to substantiate the grave charges which had been brought against his client. It seemed to him that there had been a great amount of bickering and quarrelling amongst all the officers on board, which was certainly not creditable to any of them. He would ask the Court to dismiss the charge against his client, which would in effect amount to a nonsuit.

Mr. Robertson pointed out that Counsel was placing the Court in an embarrassing position in asking for a dismissal. The Court was a Naval Court, and all the evidence taken down had to be submitted to the Board of Trade.

Mr. Marks elected to go on with the examination of this client.

John Gallagher, sworn:—Up to this date, I have been Acting 1st Mate of the S. S. *Ping On*. I hold a 2nd Officer's certificate. I have acted before as chief and second officer for 4 or 5 years, as per certificates produced. I sometimes take a glass of beer or wine. I have not been drunk for four months at least. The damage to my nose occurred through ponies bolting in a trap in which I was returning from the races at Shanghai. I have been absent from the ship twice without leave. The first time, the Captain was not present; and the second, I had leave at half-past 7, and returned on board at half-past 9, and went away again. There was nothing special for me to do then; the quartermaster was keeping watch. The Captain told me not to interfere; as, if I did so, with the men employed by the Dock Company, they would all "knock off." I remember perfectly well what was going on when the Captain accused me of being drunk; until I fell asleep. I was not drunk. I had been piling copper until 12 o'clock, and was very tired and hot, and fell asleep. It was hot,

very hot, about 88° in my cabin. I did not make use of my cabin as a urinal, as stated by the Captain. Since joining the steamer I have had a very unpleasant time. I have had occasion to expostulate with the Captain. I remember doing so, three or four hours before we left Nagasaki, when the charterer was coming on board. The Captain came and spoke in a very loud manner to me. If he was not drunk he was very near it. I went into my room to get away from him. I was obliged to do so, to get rid of his abusive language. He called me "useless," and everything that was bad. We have had one other altercation since. I have been on friendly terms with the officers. I remember boasting that I could put my fist an inch and a half into anyone's skull. It was to a man who is now third engineer; in retaliation, as he had used very unbecoming language towards me on another occasion. The Japanese woman referred to is the wife of a store-keeper at Yokoska. She came for 3½ boos for some paper, sardines, &c. I had bought from her. This is the first time a charge of this sort has been brought against me. I am anxious to quit the ship. There is about 3 months' wages due me, at \$65 per month, less about \$27 advance.

To Capt. Mooney:—On the occasion referred to at Nagasaki, you found fault with me because there was no light at the gangway when the charterer was coming on board. You used abusive language to me, and told me to go away. When you engaged me in Shanghai, I would not promise you to abstain altogether from drink; I said I would drink a glass of beer or porter. You are, as you say, a very restless man at sea; constantly running about on deck, I do hold a bill for \$6.40 for beer and wine purchased at Yokoska.

To Mr. Marks:—When I saw the Chinese fireman who was injured lying on deck, I went up to him, merely to feel if any bones of his legs were broken.

To Court:—I was left in charge of the ship on Thursday, 30th July, when Capt. Mooney went to Yokohama. I absented myself to take tiffin with the Captain of a vessel lying alongside. I left the *Ping On* at 10 minutes past 12 and returned at a quarter to 1. I went ashore again, with leave, at 7.30 P.M. and returned at 9.30 P.M. I went ashore on the Friday without leave, when the second mate told me what the Captain said about my lying down in my cabin; I returned in the evening. I was not ashore on Saturday. On Sunday I was absent on leave from 3.30 in the afternoon until half past 5 on Monday morning.

Mr. Marks said that was his case. He repeated, there had been really nothing brought forward to substantiate the charges against his client, as set down on the charge sheet. It was simply a quarrel between him and the Captain. There was nothing to shew that his client was drunk. He would urge on the hon. gentlemen of the Court that the ship was not at sea when the acts alleged against his client were committed. Had she been so, of course it would have been a very serious thing, and the charges brought forward would have been of a proportionately grave character. The vessel was lying securely in dock, undergoing repairs, and there really was nothing required of his client demanding skill,—in fact, there was nothing for him to do. The Captain told him that if he attempted to interfere with the men employed on board they would all knock off work. It was evident that he had been absent without leave, but, he would submit, it was under circumstances which would admit of extenuation. He certainly had no right to absent himself, but the Captain had acted most unfairly towards him, in bringing a

man to look at him when he was lying down in his cabin. There was great provocation, and he hoped the Court would look upon the defalcation with leniency. "Going ashore" admitted of different constructions. In the case under consideration it was merely the walking along a plank and stepping ashore; it would be very different if the vessel were lying at anchor, some distance off shore, and left to take care of herself. He would ask the Court to express an opinion that the wording of the charge was somewhat in excess of what had actually been brought home to his client; that he should be discharged from the ship; and that he should be paid the wages due him to date. His client had most excellent testimonials, which had been read in Court. That was the first charge of the sort which had ever been brought against him, and it was a most serious charge. On his good character he depended entirely for his means of livelihood, and if that were taken away it would be a most unfortunate thing for him. He would again ask the Court to express an opinion that the charges were not sustained, and dismiss the case.

Capt. Mooney briefly replied, combating some of the arguments of learned counsel. Accused had never had a moment's leave given him. He was most turbulent and disorderly, and a source of very great trouble and annoyance to all on board.

Court adjourned to consider its decision.

After an absence of 20 minutes, the President (Russell Robertson, Esq.) read the following

#### FINDING:

John Gallagher, First Officer of the British Steamer *Ping On*, and holding a second-mate's certificate, you have been charged before this Court with having been guilty of acts of drunkenness, of absence without leave, and of using abusive and threatening language towards the master and officers of the said vessel, and the Court finds these charges proven against you.

'The judgment of the Court is, that you be imprisoned for the term of four weeks, and that you be discharged from the *Ping On*, receiving your wages in full up to date.

The costs of this Court will be borne by both parties in equal proportions.

(Signed) RUSSELL ROBERTSON,

H. M.'s Consul.

" FREDK. A. MOYSEY,

Lieut. R. N.

" JOHN MCGILL,

Master, Br. Ship *Cathaya*.

Yokohama, August 8th, 1874.

Mr. Robertson added, that the Court was inclined to entertain a merciful view of the case, the charges having been made in a somewhat exaggerated form. The general condition of affairs on board the vessel was certainly far from creditable, and it was a question with the Court whether it was not deserving of censure. The case might have been settled without the necessity for bringing it before such a Court, had it not been that Capt. Mooney had pressed the charge. And, owing to that, it had been decided that the costs of Court should be halved between the complainant and the defendant; an apparently incongruous course, which required that explanation. The sentence of imprisonment would be without hard labour.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

Our last advices bore date 3rd inst. During the interval, business has not altogether been of such a character as dealers would have wished. For some classes of staple goods a fair demand continues, but, although higher prices are quoted in one or two instances, the general tendency of the market is downward. The *Coulmakyle*, from London, and *Cathaya*, from Liverpool, are to hand with general cargoes; and, via China, the cargoes of the steamers *Priam* and *Gange* have been received.

EXCHANGE:—Sterling has slightly stiffened; little is doing, however.

SHIRTINGS have not been in so much request, and prices are not so hard.

COTTON YARNS are very quiet, and transactions have been limited.

VELVETS continue in demand, at improved rates.

TURKEY REDS are still enquired for.

WOOLLENS:—There is a slightly improved tone to be noted in the Woollen Market; MOUSSELINEs are still in request; MILITARY CLOTH has been dealt in, and there is likely to be more demand for it.

BLANKETS are saleable, at fair rates.

IN METALS we have little or no change to note. There has been a small transaction in NAIL-ROD IRON.

KEROSENE Oil is quiet, at about last quotations.

THE SUGAR MARKET is also quiet, but prices remain firm.

RAW COTTON is without change.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.00 to 2.17½	} Fair business ; although at lower rates.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

IN SILK, the business done since our last has been very limited, total settlements amounting to only 150 Bales of New, Hanks sorts. About 400 Bales have been received, but dealers remain firm, and shew a disinclination to submit to lower rates, and, in the face of depressing advices from home, buyers refuse to operate except at a concession in prices; which, at the close, shew an inclination to weaken. The Stock consists of 500 Bales New and about 300 Bales of Old.

TEA.—A well supported demand has continued since our last issue, Settlements in the interior amounting to piculs 9,600, while arrivals do not exceed piculs 4,700. The immediate effect of this has been to establish a rise in Medium and Good Medium grades, (the classes in fullest supply and most asked for) of fully \$2 per picul. Choice parcels are scarce and firmly held. The few low grade musters shown are very common and dear; a limited business for the Pacific Coast has been done in these at \$27 to \$31 per picul.

The *Benefactor* is full, and will have speedy despatch; leaving the *Ambassador* the only sailing craft on the berth for New York, at £3. 5s. per 40 cubic feet.

 Aug. 12, Brit. ship *John Rennie*, Nicholson, 848, for San Francisco, general, despatched by Gilman & Co.

## PASSENGERS.

Per Am. str. *Colima*, from San Francisco:

Messrs. W. Nuttall, C. O. Shepherd, Chas. Fiske, J. Towel, M. Shea, Paymaster J. A. Barton, U.S.N., General Van Buren and son, Comte de Vigne, Albert Gibson, R. Rousseau, J. Megata, Col. S. C. Lyford, General W. Myas.

## FOR SHANGHAI:

A. H. Macomber, and R. D. Spedding in steerage.

## FOR HONGKONG:

12 in the cabin, and 227 in the steerage.

Per Am. str. *New York*, from Hakodate:

Mr. Edgar George and servant, Mr. Yet Chow, wife and child; and 21 Japanese in steerage.

Per Am. str. *Colima*, for Hongkong:

Captain Lewis and son.

Per Am. str. *Japan*, for San Francisco:

Jno. Pinnell, Miss E. Seymour, Mrs. Davidson, Mrs. E. Barclay and infant, E. H. Hooper, J. Barnandos, A. Dent, E. R. Anderson, Mrs. Anderson, E. Bourdanchon, O. Collean, S. Brush, J. R. Cunningham, J. J. Bissett, Dr. Hall, Frank Hall, H. W. Livingstone, Jr., J. H. Pinckross, J. Blain, C. S. Stewart, Mrs. Liebermann.

Per Frch. str. *Tanais*, from Hongkong:

Mr. Sata, Grenbery, Boule, Ballmis, Lorard Boisi, Ouborey, Mr. Rondinean, and 10 Mariners of French Navy.

Per Brit. str. *Orissa*, for Hongkong:

Mr. Dillon, Captain Bernard and officers of the *Madras*, 1 European; and 3 Chinese.

Per Am. str. *Costa Rica*, from Shanghai:

Mrs. E. Fay, J. C. Von Franquimont, P. Lunan, F. Upton; and 61 Japanese in the steerage.

Per P. M. S. S. *Costa Rica*, for Shanghai:—

Mr. & Mrs. Aldrich, servant, and child, Paul Roulez, M. M. Gregor, H. A. Stevens and servant, A. Center; and six Japanese.

## FOR NAGASAKI:

H. E. Okubo and servant, Yochinan and servant, Kawai and servant, C. G. Van Manvelt and servant, Dr. Geerts; and 21 Japanese.

## FOR SHANGHAI:

T. Olyphant, J. Sloman, Capt. Quirk and servant.

Per Brit. ship *Bothwell Castle*, from Newcastle:

Misses Cocking and Singleton.

Per Brit. str. *Behar*, from Hongkong:

Mr. Gunnarson; 1 Japanese, and 1 Chinese.

Per Am. str. *Great Republic*, from Hongkong:

## FOR YOKOHAMA:

Lieut. H. W. Hubbuck, R.N., and Mr. J. R. Hodgkins.

## FOR SAN FRANCISCO:

Professor C. Heep, W. Monaghan, David Mackie, Mrs. Hopwood, Chun Wan, wife and Chinese servant; 460 Chinese in the steerage.

Per Frch. str. *Tanais*, for Hongkong:

M. M. Williams, Ducrot, Fitz George, Capt. Pruhn, and Laplante.

Per Am. str. *Oregonian*, from Shanghai, &c.:

## FOR YOKOHAMA:

Messrs. Hadley, E. C. Kirby and servant, F. Von Fischer, W. Mourilyan, A. Center, W. P. Tillman, six Japanese Officers, W. Henriques, Smith; 29 in the steerage.

## FOR SAN FRANCISCO:

Messrs. W. Mitchell, J. S. Barley, G. Dixon; and Messrs. S. M. Dent, G. A. Marx and D. McKenzie in the steerage.

## REPORTS.

The British steamer *Madras* reports: Left Hongkong on the 19th July at 10.30 a.m. Experienced light and variable winds, with easterly swell, until the 23rd instant; when the barometer fell considerably, and the weather became dark and threatening, with fresh northerly wind and high confused sea. Eased engines at 8 p.m., and stood to S.W. until 4 a.m. Passed Chichakoff at 3 p.m. on the 24th; had thick weather with rain through Van Dieman Straits, the wind gradually increasing and veering from N. to W. and S.W., barometer 29° 30'; at 11 p.m. blowing a hard gale, with mountainous sea, wind south; at 11.40 p.m. hove-to, with ship's head to the S.E. At 4 a.m. on the 25th, wind and sea moderating and barometer rising; thence to arrival moderate and light winds and fine weather. Arrived at Yokohama on the 27th at 6.30 a.m. On the 20th July, at 6 p.m., in Lat. 24° 46' N., Long. 119° 25' E., passed the French steamer bound South; and on the 21st, at 5 a.m., in Lat. 25° 48' N., Long. 121° 57' E., passed the ship *Thermopylae*, standing S.W.

The American steamer *Colima* reports: Having exchanged signals with an English steamer bound to San Francisco on the 15th July; on the 17th, signalled an American ship bound East. Weather mild for the greater part of the voyage, strong head winds at times. Passage: 17 days and 12 hours.

The American steamer *New York* reports: Fine weather. Spoke Brit. barq. *Adella* of Hongkong, off Cape Inaboye on the 2nd August showing 2nd distinguishing Pendant No. 6,730 standing to the Southward.

The British steamer *Orissa* reports: Very severe weather during the passage.

The British steamer *Behar* reports: Left Hongkong on 2nd August, experienced light and moderate southerly winds; on the 5th, about 30 miles to the eastward of Yokosima, it commenced to blow from E.S.E., increasing to a typhoon, blowing with inconceivable fury and with a very heavy sea. On the 9th, weather moderate, and wind hauling to the southward and westward, proceeded on course. Passed two steamers, supposed to be *Ping On* and *Kuen-tze* Off Rock Island at 5 p.m. on the 10th, and arrived at Yokohama on the same day at 10.40 p.m.

The American steamer *Great Republic* reports: Left Hongkong on the 5th August, at 3.10 p.m.; on the 7th, had light winds from S.W. and fine weather; on the 10th, fresh gales from S.W., with heavy confused sea; thence to port experienced light variable winds and smooth sea. Arrived at Yokohama on the 12th at 4 a.m.

## NOTICE.

THE undersigned hereby gives notice that, from and after this date, he will not be liable for any debt or debts contracted in his name; by anyone whatsoever, except an Agent holding his Power of Attorney.

J. L. LIEBERMANN.

Yokohama, Aug. 4th, 1874.

## MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per P. M. S. "Colorado."

TOKEI AND YOKOHAMA, FRIDAY, SEPTEMBER 11TH, 1874.

Single Copy,.....25 cents.  
Four Copies...\$1.00  
Ten Copies,...\$2.00

### THE

## "Japan Gazette" MAIL SUMMARY

FROM 13TH AUGUST TO 11TH SEPT., 1874

### BIRTH.

At Oakland, Cal., August 12th, the wife of the Hon. C. E. DE LONG, of a son.

### DIED.

At Kobe, on the 17th inst., R. E. PRICE, aged 33.

At Harlem, Holland, on the 16th July, at the residence of his mother, R. JASKI CARST, aged 37 years, head partner of the late firm of Carst, Lela & Co., of Yokohama.

OUR last summary for the Mail left this in the P. M. S. S. *Great Republic* on the 14th ultimo. We are since in receipt of the following mails:—

	Due.	Arrived.
American Mail (C. T.-P. S.S.)	Aug. 19th	Aug. 14th
French " " "	" 26th	" 19th
English " " "	" "	" 20th
American " " "	" "	" 21st
French " " "	Sept. 2nd	" 31st
English " " "	" 9th	Sept. 6th
American " " "	" "	" 7th

Latest telegrams are to 25th August; and letter dates to 13th August.

### Summary.

THE interval that has elapsed since our last has been full of rumours as to the probabilities of war, but, until the past three or four days, without any tidings that could be relied upon of the actual condition of affairs between China and this country. All persons who wish well to both empires have resisted the belief that negotiations for peace would fail; but it has now become very certain that they have been unsuccessful; and that, having been broken off with Yanagiwara, the first ambassador sent by the Mikado, Okubo, who was more recently accredited with a special mission, has been unable to re-open

them. His reception has been refused. Li Hung Chang and others have been altogether discourteous, and small hope now exists of the avoidance of war. If declared, it will be carried on under the firebrand mentioned above, on the part of China; and his ability and utterly unscrupulousness are well known.

The Japanese, therefore, equally with the Chinese, are making preparations. It is not possible for them to retire from Formosa—the sole course that will satisfy the Chinese—without creating such dissatisfaction among their own people as will inevitably lead to internal trouble. The government considers a war with China the lesser of the two evils; and if they have the "sinews of war" they are right; for they have plenty of men who love fighting for its own sake, and they are able to arm and equip them well. Man for man, therefore, we should have little anxiety for Japan in a contest with China; but the latter has the good sense to make greater use of foreigners than Japan is disposed to do; and this, and a possible tightness of the Japanese money chest, may give the Celestials the advantage. Seeing the course events have taken, there are few men in the country so unpopular as Iwakura and the colleagues who, after their return from Europe, joined him and supported his policy in the government.

The assassination of Mr. Haber, the acting North German Consul at Hakodate, having been thoroughly investigated; and it being perfectly clear that the murderer, who gave himself up to the police immediately after perpetrating his crime, had no accomplices: but that the act was one to be dealt with according to the ordinary course of law, a sentence of death has been pronounced upon him.

The Mikado has expressed to Mr. Von Brandt, the North German Minister, his personal regret at the occurrence, and His Excellency has notified the Government that,

although under the circumstances he presses for no monetary compensation, he demands that an imperial notification be issued forbidding the wearing of swords within a certain distance of the foreign settlements.

GREAT anxiety is exhibited among the Chinese at all the open ports, respecting the course that will be adopted towards them should war be declared. It is supposed they will all have orders to leave the country within a few days, and they are making preparations accordingly.

THE typhoon which visited the southern part of Japan on the 20th August was more destructive at Nagasaki than any foreigners now residing there can remember to have experienced at that port. The *Rising Sun* newspaper says that "from 11 o'clock on Thursday night, the 20th, until 2 o'clock on Friday evening, the fierceness of the gale was unparalleled. The str. *Ping On* and *Sooloo*, and the German barque *Hamburg*, were thrown on the rocks; the (late P. & O.) str. *Madras* was also driven ashore, but not much injured. The ironclad ram *Stonewall*, on which so much reliance was placed for the coming struggle, was carried by the waves either right over the rocks off Akenura, or, as the newspaper says, "she forced a passage through them. She sank, the water just washing her decks. It was thought that she would be virtually lost, but we believe she has been floated, and got out of her apparent imprisonment. Hundreds of Japanese junks were wrecked in the typhoon, and fully 200 lives were lost at Nagasaki alone. The Governor's new offices, the Kencho, only just completed in foreign style, were reduced to a mass of ruins, and native houses were overthrown by scores.

KOBE suffered also from the same storm, but not to the same extent. All along the coasts of the Inland Sea, the damage done is great; and we do not believe we exaggerate when we say that, altogether, the junks destroyed by that storm were not less than 1,000 in number.

We fear the crops were also considerably damaged; and the telegraph between Nagasaki and Simonoseki was so injured that there could be no communication by it for several days.

THAT the Japanese Government is making great preparations, so as to be ready to meet China arms in hand if peaceful negotiations fail, is clear; and we are glad to see it. Under any circumstances, she will be able to make better terms with China if it is seen that she is strong, and ready to fight. In the present state of things, therefore, we do not blame them,—on the contrary, we commend them, for expending money in making a strong appearance.

But one question constantly arises in our minds. Supposing the Japanese be strong enough to fight the Chinese alone, are they able to do so when the latter are led by European officers? This is probably a question that ought not to require any answer; because, if it be illegal for foreigners to assist one side, it must be so for them to help the other; but in fact we see that the Chinese have been attended by foreigners to Formosa, although protests have been made by China against the employment of Americans by Japan. Messrs. Griquet and Segonzac have no more right to be employed by the Chinese Government to assist their emissaries to Taiwan, than have General Le Gendre and other Americans to serve Japan. It seems a very one-sided arrangement, and we do not understand it.

We suppose that it is hazardous for us to utter an opinion that the arrest of General Le Gendre (if true) is illegal, for who knows what is or what is not legal, when a Minister Plenipotentiary issues peremptory orders? Our sole hope respecting it is, that the telegram may have been inaccurate. We know that Mr. Bingham had nothing to do with it. But the present appearance of things is that the Chinese Government will be allowed to make use of foreign officers, as advisers of her commissioners or directors of her forces, but that Japan shall be deprived of that privilege. This it is that makes us consider as to the strength of Japan under her own leaders, as against China assisted by foreigners.

If this question be put to an ordinary Japanese, he will reply, "What do we want with foreign leaders? Our own officers are capable of commanding, and our soldiers will go wherever they lead." But a less excitable and better informed Japanese will say, "Alas! our officers are brave as lions, but they have not had experience in modern warfare; and our soldiers will rush unflinchingly on the foe, but they know not yet how to obey. They are impatient and beyond the restraint of officers, on whom they look as no further advanced in the science of military tactics than themselves.

Should, unhappily, a war break out, we shall, of course, see the usual notifications, enjoining upon all foreigners the observance of strict neutrality; and should the war be of short duration, this may be attended to in part. But will the Japanese and Chinese be content to dismiss all the foreign officers from their ships? And will these officers be willing to leave their employment in accordance with the notifications? And should the war be prolonged, will China decline the assistance of foreigners, which she is sure to have offered to her; knowing, as she well does, how well her troops fight under the command of efficient foreign officers? Our belief is, that there will be plenty of able men willing to take service with either side; and that, earlier or later in the strife, China will avail herself of their services. But we are not so sure that Japan would place her soldiers under foreign command. And if she did not, then and in that case, we think China would have a great advantage over her. So long as

both sides are alone, we should have as much confidence in Japan as in China; but if the latter appoints foreigners in her armies, the scale is turned at once.

This is, however, all speculation. The circumstances ought not to arise. For, before the last resource is adopted, arbitration is possible, and if, among the foreign ministers who have had the disagreeable duty of giving their opinions to either government so far, there be any who would prove themselves true friends of both the disputants, we should hope that this course will be recommended, before any declaration of war is made.

In the meanwhile, we wish every success to the mission of General Le Gendre in the south, and of Okubo in the north.

The following is from a Tokei newspaper:

"France is a wealthy and powerful nation on the continent of Europe. Some years ago, Napoleon the 3rd succeeded to his grandfather's (*sic*) throne, and by his great ability and wisdom raised his country to a high pitch of power and influence. But France and Prussia hated each other. At this time, the latter was not powerful like France, but was the head of a confederacy of several states. At last, a war broke out between France and Prussia, and the latter gained a complete victory. Before the war, the other European nations and America considered it was like a quarrel between a wolf and a dog. \* \* \* \* \* The war arose about the throne of Portugal (*sic*). The Prussians having determined to fight the French, forced their way into the French territory irresistibly, and everywhere waved their flag triumphantly. Since their success, their power and wealth have increased, and they are spread all over France.

Our empire and China are now just like Prussia and France; and Formosa is like Portugal, which raised the question between the two empires.

Now, China is a great empire—but not so powerful as France. Japan is much smaller; but surpasses former Prussia in power. If anything unusual happens, we shall float our men-of-war on the Yellow Sea, and give our flag to the winds in Peking.

But the two empires have long been very intimate. Therefore Okubo has been sent to China by the Mikado. It is not known what his orders are; but it is supposed that it is to make known its faults to the Chinese government; and that we, after getting a proper indemnification from it, shall continue as intimate as before. If it (China) opposes his (Okubo's) words, he will soon be succeeded by our forces.

Mr. Okubo is the pillar of our empire; and its safety or danger depends only on him. Now, we ask all patriotic men—shall we carry arms against each other like Prussia and France? Or, shall we be intimate as before? Which of these will Mr. Okubo prefer?"

WE HAVE a profound desire to think well and to speak well of the Japanese government; but verily it is at times difficult. The indecision constantly exhibited is so clearly the outcome of minds only half-formed, and which act almost entirely on impulse and not on reason, that it is not surprising that foreigners who are accustomed to see all state affairs well weighed and the decisions come to resolutely carried out should look with a kind of pitying contempt on the tergiversations of the Japanese ministers. It was a bad day for Japan when Soyeshima, Goto, Yeto, and Itakura resigned, and let in the men who succeeded them. The former had become well inured

to office, and displayed some qualities approaching to statesmanship. Soyeshima, at the head of the Foreign Office, had at least this virtue—that he could make up his mind; and that he knew the value of his word. Goto, to considerable reasoning powers and an indefatigable attention to his duties, added a remarkable degree of firmness and tenacity. This, with an intense love of freedom and boldness guided by prudence, made him a most valuable minister. Yeto, impulsive and rash as he proved himself when out of office, had exercised his functions as Minister of Justice with much ability, and introduced the important reforms which are still going on; and Itakura, to an ardent patriotism, united many excellent qualities.

These men, with Okuma, were the moving spirits of the ministry up to October of 1873. They had restrained the samurai who were crying out for war with Corea and the punishment of the Formosans, for a long time. But in October, it seemed to them that the time had come for making preparations, and yielding to the warlike wishes of the people. Itakura stepped forward and opposed them, and they resigned. And what has been the result? Most unhappy differences between the Foreign Ministers and Foreign Office. Alienation of feeling as between foreigners and Japan. An insurrection, which, small as it was, taxed the government to the utmost to quell it. An expedition which, if undertaken spontaneously, and in a more cool and regular manner, would have reflected credit on Japan; but which, forced upon the government under peculiar circumstances, has thrown China and Japan into opposition, and is now compelling this country to make preparations in anticipation of a war with China, the cost of which had far better have been incurred for a Corea war. Had the former ministry remained in power, the Formosan difficulty would never have arisen. They would have punished the savages, obtained guarantees for the future, and left the country, without a thought of colonization. But the present government, in their notion of getting rid of troublesome samurai by letting them occupy the land they have fought upon, has fallen among thorns.

So much for vacillation. That which, if properly and prudently undertaken would have commanded universal sympathy and approbation, has placed the country in a condition of danger and uncertainty which all its well-wishers must regret. And the extraordinary muddle in which foreign relations have been since Terashima came into office has had the effect of inducing the best friends of Japan to criticize her doings unfavourably.

And now there is more wavering, more uncertainty. The Parliament, or House of Assembly, or Deliberative Council, or whatever the new institution for discussing public affairs is called, which, after many delays, was to have met early in September, has again been postponed: and the members have been instructed that their presence is not yet required. Now, can anything be more unwise than this? Far better had the Mikado opened it, and after a few days, a prorogation taken place, with a definite reason, and an understanding when it would be necessary for the members to meet again, than thus to postpone the first meeting. It has a very bad appearance. Some think that the reason is, that the government proceedings of the past six months will be too freely handled, and that they are afraid to meet the criticisms of their policy and its effects. This may not be the true reason; but it is the most natural one, and ministers must expect it to be the most prominent and prevailing one.

THE petition presented to Kaigunkiyo by Mr. Takashima is one that possesses great importance to the whole Empire of Japan. The allusion to England's prosperity, as due to her insular position and proximity to the European continent, and to her mercantile marine, is legitimate enough, although we hardly think that Japan can expect ever to become in the East such a *dépôt* as England has in the West.

However this may be, it is more than evident to every one that, in recommending the government to encourage the building of ships on the foreign model, Takashima is right. Beyond this, however, his scheme does not appear to us well-conceived. He recommends that ship-building be undertaken by the government, and that the ships be sold to those who make the owning of ships their business. He tells the Navy Department that there is plenty of wood fit for ship-building in the North, and offers to bring it down to Yedo, that it may be put to its proper use.

Now, we think that if the government adopted this plan it would be very unwise. Far better were it if the Navy Department would establish a yard for its own purposes (that is, to supply the navy with such ships as may be deemed necessary), either in Awamori Bay or Hakodate. There they have the wood; and they ought to be able to find faithful and honest officers who would carry on the duties of the yard, the purchasing of the wood, and the general business connected with the ship-building, without any very great amount of robbery. Beyond this, we do not think the Navy Department need trouble itself; and if it is considered useless to build wooden ships for naval purposes, then we believe it were better that the Kaigunsho should not undertake any building of wooden ships at all; as it is now quite unnecessary to interfere with the legitimate business of the people.

The one thing that the government should do is, to grant the people permission to build ships; to employ foreigners, if requisite, to design them; and to superintend their construction. Beyond this, nothing is necessary. Private enterprise will suffice. Already Messrs. Thompson & Bewick have built at Hakodate a schooner of about 250 tons burthen, and as Mr. Thompson is a practical shipwright, and the firm is not wanting in spirit, if it is found that a good demand arises for foreign-built vessels, there will soon be no lack of supply. The ships will quickly be forthcoming.

There is, however, a duty that the government ought to charge itself with—viz., the supervision of the ships—to see that they are faithfully built and fit for going to sea with passengers and cargo; and, further, that the officers in charge of them are capable of navigating them.

Considering that we live in days when the words "progress" and "civilization" are in everyone's mouth, it does seem wonderful that even in the Japanese navy itself there is but little discipline, whilst in the mercantile steamers there is none. It is disgraceful to the proprietors of the steamers, and it is disgraceful to the government, that nothing is done to mark the difference between an educated and accomplished officer and a common fellow, whom it would be too much of a compliment to call a sailor. But, in reality, a man may be as incompetent as a coolie for any duty on board a ship, and yet may find an appointment to any berth that may be vacant; it doesn't much matter whether it be captain, or mate, or engineer, or stoker, or sailor. Often it happens that the

engineer of to-day is the captain of to-morrow, the fitness for one being about equal to the capability for the other.

Superintendence of quality is about the most needful thing the Japanese require, whether in respect of ship-building or ship-sailing. And until there is a board of examination for officers, there can be but little confidence in the safety of the ship, however well-built and strong she may be.

To return, then, to Mr. Takashima's petition:—We recommend the Government to encourage ship-building, by all means; but to do so by removing all obstructions to private enterprise. Let Mr. Takashima, if he thinks well of it, bring the wood down here, by all means. If it is better than the wood ordinarily obtained here, and reasonable in price, there will soon arise a market for it. Or let Mr. Takashima, who has done already very much in leading his countrymen in enterprising works, himself undertake the building of ships and selling them to his countrymen. But we think he would find it more to his profit to build the ships on the harbours of the district where the wood actually grows.

### THE DEVELOPMENT OF YEZO.

(Communicated.)

Your widely-read journal having, by means of correspondence and translations from native papers, discussed more than any other the question I now take up, permit me, through the medium of its columns, to offer a few remarks on a subject of some importance to the Government of Japan, both in a political and pecuniary way; premising that a late visit to the north has afforded me facilities for personal observation, and information of a reliable nature.

The origin of the late attempts to "colonize" Yezo is to be traced to a sense of insecurity felt by the Japanese Government as to their northern dominions, a sense which has been constantly kept acute by not altogether disinterested cautions voluntarily given by certain foreign representatives, regarding the possible encroachments of Russia. Suddenly becoming impressed with this fear, the government went to work in their usual headlong way. First of all—I confine myself, of course, to a time subsequent to the fall of the power of the Tycoon—they sent settlers and officials in numbers to Sakhalin, directly under government management and broke up the northern daimios' protectorates in the various districts of Yezo. Following up this—after the rebel occupation had been broken up—they sent a Governor-General, with the rank of Cho-quan, to reside at a central position in Yezo, and ordered southern daimios to settle and govern districts of Yezo created under a new arrangement. They moreover appointed a Lieutenant-Governor, or Ji-quan, especially for Sakhalin; but the Governor never went to Sakhalin, and the Governor-General did not succeed in getting farther north than Hakodadi. Some settlers were thrown on the coast of Yezo late in the autumn of 1869. The daimios made a great shew of "colonization," but they really did little more than collect the coast fishery duties, which paid them far more than all the expense they had been at. Some of the local governors resigned, being averse to living in a wilderness, others were removed, and the Governor-General was sent with the late Embassy to America and Europe.

Then it was that General Kuroda stepped forward—for, although nominally Governor of Sakhalin and second in rank in the Kaitakushi

Department, he had been keeping in the background in Yedo—and offered to undertake the colonization of Sakhalin and Yezo with foreign assistance. It is well known how, under certain foreign advice, he proceeded to Washington, and secured, as a personal favor from the President, those eminent gentlemen who reached this country during the latter part of the summer of 1871, under the style and title of the Scientific Commission. From this point commenced that extraordinary lavish expenditure which has marked the doings of the Kaitakushi. Not content with giving *carte blanche* orders for steamers, machinery, instruments, and implements, and finding the members of the commission in all necessary supplies and even luxuries, Governor-General Kuroda must needs seek about among the former officials of the old Tycoonate, and even the rebel companions of Enomoto, for men used to approved methods of speculation, whom he placed in the most responsible positions. He, the Governor-General, remained at Yedo, and the moderate sum of over six millions "went" in less than two years. And what is the result? But no, I withdraw the question, for your correspondent "Matsumai" asked "Forty Questions" (see *Japan Gazette*, Jan. 14th, 1874,) and I have not seen that any have yet been satisfactorily answered; indeed it appears an impossibility for the Kaitakushi Department to do so.

It is therefore a question for the Central Government what course they should now pursue in regard to Sakhalin and Yezo, and the means best suited for carrying out such policy. With due deference to any higher opinion, I believe that, in the first place, they must give up the system of going the round of the foreign Ministers, getting their opinions and advice, jumbling the whole up together, and getting out a miserable compromise. That they require foreign disinterested advice no one will deny; nor that foreign energy and straightforward action would not be of the greatest assistance to them. But they can only obtain such by securing the services of a competent man—without regard to his nationality—giving him rank and power, and making it an object to him to serve them faithfully; not simply for pecuniary reward, but for the status he would thus hold both among Japanese and foreigners. Such an adviser, counsellor, commissioner, director, supervisor, comptroller, lieutenant-governor, or whatever he might be called, would of necessity have to be a man of experience in the world, as well as of experience in Japan. One also of a decided character, and who would not fear to enforce his opinions when necessary. If such an one was a man of independent means it would be a great advantage; for, by giving him certain facility for investing in property, he would cast a stake in the country, and be bound to its interests; which, together with education and self-respect, would place him on a level with foreign representatives with whom he would be likely to be brought in contact, and raise him above connivance at such underhand practices as are so frequently resorted to by even the higher classes of officials in the country.

That a position of this kind would be acceptable to many persons now holding official positions under foreign governments in Japan is tolerably certain. But there are perhaps but few who are fit, from the fact that most are dependent on the service they belong to for their livelihood—the greater part are young and inexperienced, except perhaps in diplomacy, not always the best of schools,—which

few are practical men of the world; and hardly any would be able to entirely disconnect themselves from influences of a national character. The government would be forced, consequently, to look among the mercantile or professional classes, and select some one of sufficient social standing, fulfilling the requirements above-stated, and willing to give up his present business for such a position; taking care in their selection to avoid pitching upon a man likely to be averse to occasional rough travelling and hard fare, as he would be likely to meet with in making personal inspection of a wild and unsettled country like Yezo.

Having made a fortunate selection in a foreign director and adviser and remodelled their Kaitakushi staff, two points will present themselves, namely, the abandonment or retention of Sakhalin, and the mode of developing the resources of Yezo. The first of these may be said to be purely political, and it will be for the rulers of Japan to weigh in the scale their semi-title and conjoint Russian occupation (entailing a most certain future complication) against a good round sum of money, with retention of fishing right but abdication of sovereignty. And I think the pros and cons of this are fairly stated in a letter, also signed "Matsumai," which appeared in the *Japan Gazette* some time in January last, and has, as I understand, been translated in one or more native newspapers.

The other point, Yezo, is simply a question of how to people the island. The suitability of the country for settlement cannot be gainsaid. The productiveness of its fisheries, its great national resources, the importance of one or more points in it in a defensive way with regard to the remainder of Japan, are now generally recognized; and it is only for the government and their advisers to devise means more effective and less expensive than the schemes which have been hitherto tried. On this point I have no intention of entering into details, but it may be broadly stated that "interior" settlement cannot thrive before the coast is pretty completely occupied. That the national capital, as must strike anyone who has visited the country, is Hakodadi. That a constant and cheap means of communication with the main island of Nipon is essential. That proper regulation and encouragement of the fisheries is a matter of the first importance. That the defense of the port of Hakodadi is a military necessity. That roads and bridges have to be built by government. That steam communication with the marts for Yezo produce, which would be quickly established on the slightest encouragement, would cheapen necessary articles of import and stimulate production. That a moderate and unchangeable scale of duties and honest collection of revenue would give settlers a feeling of security and tend to their increase; while a good system of government hospitals and schools would probably draw the better classes to the country. And the free admission of foreigners, besides introducing capital, would set examples in enterprise and industry which, particularly in farming and cattle "ranching," could not fail to produce the very best effect.

If these remarks should induce the government to study the subject, before taking another fresh start and running full-headed in the face of impossibilities, on schemes propounded by ignorant or avaricious adventurers, I shall consider myself, as a well-wisher of the country, amply rewarded.

For the time being, I sign,

ME-TSZKE.

THE letter of "Me-tszke," which gave particular interest to our columns last evening, calls attention once more to a subject which deserves to be kept constantly before the government and the public. Without committing ourselves to all the views expressed by the writer, and especially taking exception to such terms as "ignorant and avaricious adventurers," we attach great weight to much that he says. He is likely to be thoroughly well-informed on the subject he treats of, having at one time been a resident of Hakodate, and having within the present year paid a visit to Yezo and examined as closely as he could, for himself, the work of colonization as at present carried on there under the Kaitakushi.

What has been done there has such a bearing on the policy of the government as it seemed, until lately, likely to develop itself elsewhere, that it is worthy of particular notice.

Our correspondent says, "The origin of the late attempt to colonize Yezo is to be traced to a sense of insecurity felt by the Japanese government as to their northern dominions." \* \* \* "Suddenly becoming impressed with this fear, the government went to work in their usual headlong way." \* \* \* "They sent settlers and officials to Sakhalin, directly under government management."

The idea of the propounders of the colonization scheme can hardly have been that the settlers would be able to protect themselves from the assaults of neighbours covetous of their land; nor that they could elbow those neighbours from the territory already in their possession. It may probably have been, that they supposed the actual lodgment on the land would prevent any further encroachments; and that it would define arbitrarily what was Russian and what was Japanese. The actual effect has been to produce more frequent complaints than formerly of the annoyance the Russians subject the Japanese to.

The letters of "Matsumai," which have from time to time been published in the *Gazette*, and which, as our present correspondent truly says, were translated and inserted in the principal Japanese newspapers, were much discussed by the Japanese at the time of their appearance. One of these dwelt at length upon the advisability of Japan relieving herself altogether of the Island of Saghalien (Sakhalin); and, pointing out that it was an element of weakness rather than of strength to the Empire, recommended the acceptance by Japan of a pecuniary equivalent, which Russia was believed to be willing to pay.

Now, we admit that, *prima facie*, it does seem hard for a nation to part with any of its possessions, merely because another power desires them. But it is for Japan to weigh calmly the peculiar circumstances in which she is placed. Her long isolation and the consequent ignorance of international obligations has placed her in a dilemma at both extremities of her empire. Everything she did was so loosely done that her own neglect has made it possible for claimants to assert their right to territory that she supposed she enjoyed an absolute and indisputable title to. Russia, however, found an easy pretext for disputing Japan's exclusive right to Saghalien, and, having quietly appropriated one half of the island and planted a kind of semi-military, semi-convict station there, now desires the whole. China also has begun to talk of her own rights to Loochoo, being induced thereto by the scheme

of Formosan colonization. This notion, therefore, of colonization being a panacea for all evils—whether they take the shape of Russian encroachment as in the north, or popular discontent as in the south—has actually led them into the danger of seeing their empire partly dismembered. And it is for them to consider whether, instead of obstinately attempting to hold what they conceive to be their own, and defying both Russia and China, they had not better make the best terms they can with both. In neither case will the bravery of the Japanese soldiers be disputed; but discretion is the better part of valour, and it is possible now to make such terms with Russia as will dispense with the necessity of raising the question; and, as to China, we hope to see things so arranged as to avoid any appeal to arms, and any humiliation being passed upon Japan; but we feel that this cannot be without the abandonment of the Formosan colonization scheme.

Returning to our correspondent's letter, we should like to see the question of ceding Saghalien to Russia, "for an equivalent," fully discussed. But it is not unlikely that, long ere this, Enomoto, the Japanese ambassador to St. Petersburg, will have ascertained the Russian views respecting it, and that we shall hear of some arrangement, we hope satisfactory to both countries, being arrived at.

As for Yezo, the colonization scheme, intelligently carried out, is far more reasonable and commendable. But it has not been intelligently carried out. We cannot go with those who heap wholesale censure on the foreign employés; although, being public servants, their conduct is legitimately a theme for public discussion, and we have considered ourselves called upon to publish opinions thereon, either as sent directly to ourselves or which have been publicly expressed elsewhere.

In all public works in which foreigners are engaged, we have had repeated opportunities of observing that the advice of those foreigners, though asked and obtained, is often shunted aside and the very opposite course followed. Men who are paid high salaries, ostensibly that the departments may have the benefit of their advice, are every day subjected to the annoyance of seeing the officials go and enquire of persons absolutely ignorant of the matter in hand, or of the advice already given; and such persons, either flattered by the compliment paid them, or undesirous of shewing their want of knowledge, pour into the ear of the Yakunins a lot of recommendations which appear to jump with their own inclinations; and this advice is taken and the other rejected. It were well, if this were all, but with that graceful generosity, so characteristic of foreigners in the eyes of Japanese, the worthless advice is frequently accompanied by damaging statements as to the ability of those foreigners whose skill and character are all they have to depend upon—but whose skill and character are thus at once rendered contemptible, most unjustly, in the eyes of their employers.

How much of the failure of the colonization efforts of the Kaitakushi, or how little is attributable to the foreigners employed, the Japanese ought themselves to know best. We are quite sure that, even supposing General Capron recommended the formation of a capital at Satsporo, had it been put to him that the road to it would cost one half of the sum it has cost, he would have said it was madness to make it. In like manner, we cannot for a moment suppose that a number of gentlemen of scientific acquirements, so

lected with reference to special capabilities for the work they are expected to perform, should, directly they land in Japan, be converted into so many rogues, whose sole end is, while not enriching themselves, to injure the government that feeds them. We cannot believe it; and we are compelled to look to other quarters for the recipients of the absurdly excessive expenditure that has taken place in the department.

But our space requires that we defer our further remarks on this subject for another occasion.

CONTINUING our remarks on the subject of the communication from "Me-tszke" which appeared in the *Japan Gazette* on the 24th instant, we take up our theme from the establishment of the Kaitakushi.

Whoever was the originator of the plans that led to the establishment of this department, he could never have sat down and counted its inevitable cost. Kuroda, when he took it in hand, had no means of estimating the expenditure; but, in seeking foreign assistance, he really did not know what he was committing the government to. The expense of the employment of such a staff as the "Scientific Commission" was composed of did not end with the payment of their salaries; and anyone might know that men of their calibre would not come out here and be content to receive their salaries for doing nothing. So soon, therefore, as they arrived, they set to work; and we shall be told that, simultaneously with their doing so, the lavish expenditure commenced.

Well, so it did. But are they blameable for this? What says Me-tszke? "Not content with giving *carte blanche* orders for steamers, machinery, instruments, and implements, and finding the members of the Commission in all necessary supplies and even luxuries, Governor-General Kuroda must needs seek about among the former officials of the old Tycoonate, and even the rebel companions of Enomoto, for men accustomed to approved methods of peculation, whom he placed in the most responsible positions." Allowing for the colouring, there is at least this fact to support this charge, that "the Governor-General remained at Yedo, and the moderate sum of over six millions 'went' in less than two years."

Now, our opinion is, that this expenditure is out of all proportion to the work done; and that "Me-tszke" is near the mark when he attributes it to the peculation of the Japanese employés. The colonization of Yezo, honestly carried out, under foreign supervision and advice, might and doubtless would have been a very good and excellent scheme. But it has been strangled by the officials, who have "squeezed" too tightly.

Me-tszke may be better informed than we are—but we doubt the suggestion that the central government applies for advice to the foreign ministers on the subject. That it may from time to time come upon the *tapis* in course of conversation between individuals connected with the government and those belonging to foreign legations is likely enough; as it often forms the theme between Japanese officials and foreign private gentlemen. But we conceive that there are none out of the department, and even very few in it, who know sufficient of the business of the Department to give advice of any value.

The government has to consider the question as a very simple one. Has the Department shewn any of the benefits expected from

it? Have they been of such a character as to lead to the belief that they are likely to increase, and become extensive enough to justify the heavy expenditure already endured and requisite to be borne? We hear of the expenditure in round numbers, but we do not know anything of the receipts. We know that the cost alleged to have been paid for that so-called road to Satsuporo can never "pay." But we may expect that the steamers at least have yielded some returns; and we ought to hear that some of the fruits of mining enterprise, for which, we presume, the instruments and machinery have been mainly required, are about to be reaped. In a word, it can hardly be that all the money spent has been actually thrown away. On the contrary, we believe that if the Government had only been called upon to pay the actual cost, without "squeezes," the Kaitakushi would have been a credit to the country.

Me-tszke thinks that what is now required is the assistance of "a competent man, to whom rank and power should be given, as an object to serve faithfully, not simply for pecuniary reward." This portion of our correspondent's letter is too long for reproduction, but is worthy of consideration. We agree that if it were possible to control the peculation of the Japanese, it were easy to find men capable of holding the position recommended. But we contend that, as yet, this is impossible. Every high official, from Sanjo Daijin downwards, knows that this cancer exists, and they are one and all afraid to make an attempt to eradicate it. It is the one difficulty. It permeates every department. Has the railway been free of it? The Telegraphs? The Lighthouses? Is ever anything undertaken in this country without everyone whose hands have to touch it expecting their palms to be tickled? It matters not whether it be but a trifling job a koskai is told by his master to get done, or a purchase by the state, say of a fine steamer, amounting to over a quarter of a million of dollars, a good *per centage* must be clandestinely, dishonestly, appropriated. And all foreigners who see these things, these robberies passing under their very eyes, declare that it is impossible to stop them.

This is the reason that everything attempted for the public good in Japan has to be stopped almost in its inception. There are men here who would undertake to contract for all kinds of public works, at prices similar to those paid at home, but will the Government make the contracts? No! They dare not. The works must be committed to the charge of their own people, and these must have the opportunity of squeezing somehow. It is an Augean stable, but where is the Hercules to cleanse it?

The appointment of a foreigner, however pure, however able, to the management of the Kaitakushi, or any other department of the Government, will never be of any use, until this purification has taken place; and we recommend this fact to the consideration of our good friends Matsumai, Me-tszke, and the public generally.

OUR CORRESPONDENT "Nameless" may have the satisfaction of learning that his letter which appeared in the *Japan Gazette* on the 27th instant has not escaped notice, nor has it been read with indifference. Several persons have assumed it to be the production of a foreigner, and the *Japan Mail* throws out a hint to the same effect. One writer, who has addressed a letter to us (but not for publication), denies "it"—we suppose he means the letter,

and warns us of consequences; but of those we have no fear.

All we have to say is this. We are delighted to find that there are those among the foreigners to whom the questions might possibly apply, who are not willing to remain for one instant under the stigma of being supposed to benefit by the business done for the Japanese, beyond the legitimate terms and conditions of such transactions. So much so, that one indignantly and without a day's delay writes to us as mentioned above.

We could not refuse insertion to our correspondent's letter in common fairness, considering that it was elicited by our article of the previous day, which was hard upon his own countrymen. And here we may take the opportunity of assuring our readers who attribute the letter to this or that foreigner, that no foreigner (but the editor of this paper, in whose presence it was written, after a long conversation with the writer on the subject of the previous day's article) saw or knew anything about the letter until it was given in to the printer. And further, the Japanese who wrote it is not one generally known to foreigners, as he is totally unconnected with trade. Foreigners who are acquainted with him are well aware that he is hardly inferior in his acquaintance with foreign languages, literature, and modes of thought, to themselves.

We should not care to say even as much as we have in the preceding remarks, were it not that we wish to point out the difference between Japanese and foreigners in one important particular. On Thursday evening the letter of "Nameless" appeared, on Friday forenoon we received the letter spoken of; thus shewing how dear to the foreigner is his integrity. We have also had proofs that other persons to whom the questions might apply have been earnest in their wish to clear themselves of the implied charge. But we do not see any such anxiety, on the part of the Japanese, to remove the imputations under which they rest. If, for instance, there be no truth in the scandal connected with the sale of the *New York* it is not creditable that no denial of it is given. As it is, there are some Japanese officials whose characters greatly suffer in public estimation, in connection with that transaction.

For ourselves, we need only say that our articles in answer to the letter of "Me-tszke" had but one object in view, to point out that peculation is at the root of all the failures in Japanese public undertakings; and that this peculation must be put a stop to, before any real good can be effected by foreigners, however able, who are placed in charge of various departments.

Further, we contend that "Nameless" was perfectly justified in writing as he did, applying the same questions, as to foreigners, as we had applied to Japanese. But, to such of the foreigners as have denied the charge, we say, in the language of one of old:—"Though I made you sorry with a letter, I do not repent, for \* \* \* behold what carefulness it wrought in you; yea, what clearing of yourselves: yea, what indignation. \* \* \* In all, ye have approved yourselves to be clear in this matter."

We now look for the Japanese heads of departments to endeavour to root out this evil from all their departments. If they do not, they simply kill the goose that lays the golden eggs. For instance, the Railway, if constructed even at European prices, would have brought in so handsome a return to the government from the very first opening

they would have hastened to extend it, thereby employing thousands of men who are now not employed, by reason of the tremendous expenses already incurred. The goose is killed. The works are all but stopped, and by the men who tried to get all the golden eggs at once out of the first portion. There ought to be a public enquiry into this particular department. It would then be seen, as we long ago said, that the foreigners engaged are not responsible for the excessive expenditure, but that it occurred in matters, contracts, and payments, over which they had no control.

And there is yet this to be said. The government may find it impossible to avoid war with China; and should such a misfortune occur, will require large sums of money to enable them to carry it on. Had the foreign loans already obtained been judiciously expended, the credit of Japanese abroad would have been far higher than it is. It is true that the prices quoted for Japanese stock still remain good on the London Stock Exchange; but that may be because the total amount is small, and it is in few hands. Put a war-loan on the market, and a difference will be seen. The men who charge government ten per cent beyond the price paid to foreigners for articles purchased, and who make a railway in this land where labour is cheapest at a cost more than double what it would be in England and America, where it is dearest, are responsible for any lack of credit the country may now suffer; and it becomes the duty of the foreign press of this country to impress such facts upon both government and people.

WE are not aware whether the Japanese, in what English-speaking people call "Acts," whether of Parliament or Congress, embody a definite system, with definite fundamental rules, for their Naval, Military, or any other Departments. Nor do we know, with any approach to exactness, their process of making laws and building up their Constitution. All we do know is, that every now and then there are notifications issued by various Departments; and it is expected that these notifications be obeyed. It is well understood that the Departments are armed with Imperial authority; but whether this is in the shape of a general *carte blanche* from the Mikado, for the chiefs to make laws, rules, and regulations, and to issue orders for their Departments, or whether general rules have been laid down, as a basis on which everything must be done, we are ignorant. All we do know is, that, constantly, notifications are issued; and that, so far as possible, the people obey them.

The whole population of the empire is greatly exercised by the action of the authorities, with regard to raising men for the army and navy. Young men, however distant from their homes they may be, receive orders—mere messages—perhaps through members of their family, perhaps through a friend,—to go to their village or native place, to be measured as to whether they are five feet high, or over or under; and it is understood that all able-bodied men between the ages of 20 and 26, with the exception of eldest sons or only sons of widows, who are of the height of five feet, must be enrolled for service, either in the army or navy.

Now, it is quite admitted that this is a legitimate way of raising the national forces. It is not for us to find fault with it, even if we disapproved—which we do not. But we should like to know, as a matter of information, in what way this became the law of the land; and all the provisions in connection with it. Was it by simple order of the Mikado,

after consultation with the Sangi? Or was it regularly passed through Daijokuan—i.e. first Sa In, then Se In or the Imperial Council, and finally sanctioned by the Emperor? And whichever way it was, is there any kind of "Act" detailing the provisions of enrolment and government?

All this, however, is "by the way." The time has come when the enrolment is to take place; and hardly any of our neighbours who have servants between the ages of 20 and 26 have escaped the annoyance of seeing them called upon for examination as to their fitness, as a preliminary to their probable enrolment.

The question arises as to whether the government can call upon natives in foreign service. It is an important Article of the Treaties that we shall be permitted to employ Japanese without restriction; and the Treaties being between two parties, one of them has no power to upset them without consent of the other. They have all the force of law, and continue unchangeable, whatever laws may be subsequently made by either party for the government of its own subjects, until both parties are willing to make an alteration. This is one of the strong points of General Le Gendre; that, by Treaty, the Japanese are entitled to hire foreigners for their service, whether scientific, military, naval, artisans, or mariners; and that a law passed by America alone since the Treaty was ratified cannot interfere with the provisions of the Treaty.

Under these circumstances, we believe that foreigners might be justified, in law, in refusing to allow their servants to be taken from them.

Still, we would remind them that, except in the case of very valuable and indispensable servants, it were undesirable to enforce their right, if it exist. The country must be protected—must be defended; and the present is a period of danger and uncertainty. None can tell how the Peking negotiations will terminate; and, if war be declared, Japan will require all the strength she can muster. It is not for foreigners, who avail themselves of her shores for their own purposes and their own enrichment, to throw any, even the smallest, obstacle in the way of her government, at a period of national difficulty. It is not for foreigners to discuss the wisdom or otherwise of the adoption of the conscript system. Neither for us is it to call in question the propriety of taking men from the industrial pursuits in which they are adepts, to make them combatants, for which few of them are by their former habits fitted; and refusing men as soldiers, whose sole creed is fighting, honour, and glory; and who are incapacitated by their former habits for peaceful labour.

We must take things as they are, and do all in our power to help the government. We have grumbled at what we have considered their follies; and because no heaven-born statesman has arisen in Japan to make it the earthly paradise each foreigner fancies he could make it, if only he had the direction of its affairs for a few days. But, now, we should lay aside our minor differences of opinion with the government, until we see the country safe.

We are inclined to think that, with many who have been eager spreaders of the rumours lately abroad, of war having been declared, the wish was in some degree the father to the thought. For ourselves, we look upon the actual outbreak of hostilities between China and Japan as likely to produce little good and much evil—by whichever side the final victory may be gained.

Still, taking our stand by Japan, our sympathies are entirely with her; and we hope

that all foreigners will think with us, and throw no unnecessary difficulty in the way of government, whether it be as to their conscription or anything else.

WHEN THE Yato-Bashi—the bridge over the Creek nearest the harbour—broke down last December, we counselled the erection of a substantial iron structure, in place of patching up the old one or building another wooden affair. The iron bridge has not yet been built, although we hear it is the intention of the authorities to set about the work, but another of wood has been thrown across the canal, close to the old one. The relative difference between the old and new bridges is this: if your ponies should bolt in crossing the former, Bluffwards, you may anticipate a disastrous bump against the wall of the French barracks; but, in similar case, should the run-away be down-hill, you have a clear run across the new bridge,—that is, if it be wide enough for a trap, which remains to be seen,—and may, by a dexterous feat of steeple-chasing, land yourself in the midst of a spacious compound on the thither side. If the Municipal authorities really intend building a substantial iron bridge—and we think residents of the Bluff have a right to demand it—we would recommend its being thrown obliquely across the stream, from the end of Water Street to the foot of the Hill road. The advisability of so constructing it would suggest itself to anyone possessed of any but the most crude ideas of the art of bridge-construction; the Japanese possess exceedingly crude ideas on the subject, and—we despair of seeing it erected otherwise than in the old-time style, and indeed shall be surprised if we see any iron bridge there at all. The new wooden affair we have spoken of was finished some three weeks ago, but each approach is barricaded by a fence of bamboo saplings, and guarded by a Japanese policeman. Why is it not thrown open? We have it! The authorities are waiting until a flood or a typhoon comes along to sweep away the old one!

## HAKODADI.

### List of Vessels in Harbour.

August 24th, 1874.

- Russ. Corvette *Askold*, from Vladivostock, (with Admiral.)
- Jap. str. *Komi-maru*, from Awamori.
- " schr. *Torajima-maru*, from Midzuiz.
- " " *Winyo maru*, from Yedo.
- " " *Gembu-maru* from Olanunai.
- " " *Raiden-maru*, from Karatto.
- " Gunboat *Hosho Kan*, from Iturup Island (dismasted.).
- Ger. barq. *Hans*, from Vladivostock.
- H. M. S. *Iron Duke*, from Vladivostock, (with Admiral).
- H. M. S. *Midge*, from do.
- H. M. S. *Frelie*, from do.
- H. M. S. *Rindore*, from do.
- Ger. Corv. *Elizabeth*, from Yokohama.

Mr. Kempermann arrived by the *Elizabeth*, to inquire into the murder of Mr. Consul Habar.

A RUMOUR has been prevalent this afternoon (3rd), that war has been actually declared between China and Japan; and that, although the telegraph is in perfect order, the government have forbidden it to be used. We do not credit the rumour; and we are quite convinced that the line is disconnected. It is

impossible it can be otherwise, considering the heavy damage done to it in the late typhoon. It must be remembered that the force of the storm was such as to tear up trees by the roots; and telegraph poles would not be likely to escape where such destruction occurred. Our belief is that at the departure of the last mail from Shanghai, everything was in exactly the same state of uncertainty as before. Two Chinese newspapers announced that there was a prospect of a mutually satisfactory arrangement being arrived at. The foreign newspapers did not confirm this—and there is no doubt whatever of very vigorous preparations going on in China. Similar vigour is exhibited here, and we are of opinion that the rumour mentioned above has arisen, either from witnessing the energy on both sides or by the invariable tendency of rumour to gather as it goes. As to the government forbidding telegrams to be forwarded, it is absurd. If they wished to stop communications, they surely know how to effect it without such a flagrantly foolish order. There is very little likelihood of our receiving any definite information touching peace or war until the next steamer arrives from Shanghai or Nagasaki, and we advise our friends to be undisturbed by any mere rumours.

**MORE ROBBERIES.**—During last night (2d), the Revd. J. Goble's church, on Lot No. 224, Bluff, was broken into by thieves, who made off with all the lamps. They gained ingress by knocking out a pane of glass.

Last night, an attempt was made to enter the premises of Messrs. J. Curnow & Co., No. 83, but without success. A pane of glass was taken clean out, but the bars across the window prevented entry. The thief had evidently reached in as far as he could, as several boxes of matches are missing, and a case of whiskey has been tampered with.

As TEA is one of the principle, and, also of the most valuable, exports of Japan, care should be taken to prevent fraud in its preparation for market. The *Nisshin Shinjishi* gives an account of the shipment of fifty boxes of tea from Shidzuoka-ken, which was made of the coarsest leaves, and dyed with ink to give it a good appearance. It is believed that the originators of this fraud have been discovered. For the credit of the country it is fortunate they did not succeed in palming off this ink-dyed material.

The same paper says that on account of the unsettled weather this year the production of the silk-worms at Yamagata-ken and Akita-ken has been very poor; but at Miyagi-ken, and further south, at Fukushima-ken the production would have been very satisfactory but for one thing. In compliance with a request from the people engaged in the trade, the Fukushima Kencho granted a license allowing them to use "patent" papers for the depositing silkworms' eggs; but some fellow infringed the patent and manufactured a lot of papers on his own account, exactly resembling the genuine ones. When the Kencho heard of this the license was recalled, and the trade is therefore in considerable confusion.

NOGUCHI CHUZO, a manufacturer of *saké* at Shiga-ken, is building a brewery at Tokio for the manufacture of foreign *saké* (*Quere beer*), and has sent in to government a petition for a patent, of which the following is the substance:—"Though there are many kinds of *saké* in Japan, they are all too strong and violent, and are consequently hurtful to one's health, and, moreover, the *Seishi*, which is

most commonly used, is a medicine which drives one mad when one takes any quantity; but still the manufacture of it increases. Now, the good *saké* of the foreigners is very different, and the taste very agreeable. It purifies the blood, produces quiet sleep, and acts beneficially to one's health; but it is a matter of impossibility for the poor to get it, on account of the price, and this is why I am grieved. I will make foreign *saké* in Tokio, and sell it cheap, which will be advantageous to the country and preserve the peoples' health."

We have not heard whether the petitioner has been successful in obtaining the required permission. For the sake of both Japanese and Europeans we hope not; if the samples of Chinese-manufactured "tangle-foot" vended in "Sailor-town" are to be taken as criterion of Far East production in that line.

A native paper says:—

IT WILL be remembered that, last March, the French mail S. S. *Nil* was wrecked upon the coast of Ashigara-ken. The inhabitants treated the crew very kindly, helping them to land, and rendering them other assistance. At the request of the Agent of the M. M. S. S. Co., a letter has been written to the Governor of Ashigara-ken, thanking him, in the name of the Company, for the kindness shewn on that sad occasion.

BURGLARS SEEM to have full sway in Tokei, as will appear from the following. During the forenoon of the 18th inst., the house of a wood and charcoal merchant, in Kanya-cho, was broken into by several men, armed with drawn swords, who bound the servant and escaped with all the valuables, before assistance could be brought. About noon of the same day, the gang entered the house of a fishmonger in Yanegawa-cho, and stole two hundred and forty two riyos. There is no word of any of the thieves having been captured. People may well cry—"Where are the police?"

DURING THE night of the 25th instant, the office of Capt. Martin, at No. 108, was entered, and a valuable aneroid barometer, a clock, and an overcoat stolen. Thieves obtained an entrance by removing one of the laths of the venetian shutter, and then opening the window, which was not fastened. There is every reason to suppose that the robbers are Japanese, as there were several valuable things that a European thief would have taken before the articles actually stolen; such as copper, &c. Nothing has yet been heard of the rascals, who seem to have a *penchant* for clocks, for, within the last few days, two houses in the same compound have been entered, and clocks taken from them both.

AN AMERICAN humourist compares robbers to rain, inasmuch as they recognise no distinction of persons in their descent. Last night (3rd), the Yokohama "crib-crackers" paid us a visit, and took away sundry loot; lamps, boots, knives, a revolver, &c. &c. An attempt was also made to effect an entrance into Messrs. E. C. Kirby & Co.'s godown, at the rear of our office, but the heavy padlock on the door resisted their efforts, whilst that on ours, though apparently equally strong, was forced. In reply to a complaint made by us to-day to the Municipal Director, we have a communication stating that the matter would be laid before the Kenrei, and that increased vigilance on the part of the Japanese police would be urged.

The foreign police, it is added, are too limited in number to effectively patrol the Settle-

ment. This we have repeatedly insisted upon. The point being conceded, why not take steps to increase the strength of the force? If every foreigner who has lately been despoiled by the burglars were to imitate the example of ourselves and lay complaint before the Municipal authorities, perhaps the Kenrei might be stirred up to take the matter into serious consideration—which he can hardly be credited with having done as yet, notwithstanding that robberies of almost daily occurrence have been brought under his notice, through the medium of the European journals of Yokohama, which are sent to the Kencho, and, we happen to know, read.

It was discovered, whilst the *Alaska* was in dock at Hongkong, being re-copp'ed, that her shaft was cracked. This will prevent her coming on to Yokohama to take away the next San Francisco mail, but in order to preserve the continuity of the line the Agent of the Company here has arranged that the *Colorado*, now due here from the East, shall, instead of proceeding on to Hongkong as usual, turn round and take on the mail instead of the *Alaska*, leaving here on the 10th inst. at daylight. The Shanghai mail will be dispatched 24 hours after the *Colorado's* arrival. The *Costa Rica* will go on to Hongkong in place of the latter. The *Colorado* will take away the largest cargo, with one exception, ever sent across the Pacific from Yokohama. In the summer of 1871, the *Alaska* took 3,350 tons of freight; the *Colorado's* complement will not fall far short of this. The Company are to be congratulated on having a "live" man at the head of affairs at this port. The sale of the *New York* necessitated the withdrawal of other steamers from their regular lines; this, with the despatch of others to northern ports, must have somewhat taxed the resources of the Company to provide vessels for the trade. Mr. Hart seems, however, quite equal to the task allotted him, as shewn in the arrangements he has made for meeting the emergency which has arisen through the *Alaska* being prevented from proceeding on her appointed voyage.

As two native policemen, Nakao Masaki and Kamada Yasakata, belonging to Kaitakushi at Karafuto, were walking along the beach at Kusudani, on duty, they met a Russian soldier, carrying a cask of *saké*. They stopped him, but the Russian resisted and fired his gun. Chuhanagan, Haisabe Tatsutara, complained to a Russian officer, who promised to investigate the matter.

On the 20th and 21st of last month, Saga-ken came in for a share of the typhoon which passed over the country at that time. A native paper states that six thousand houses were destroyed, and ninety-nine lives lost; the damage done amongst the plantations and cattle was almost beyond belief.

The typhoon visited Mitsuma-ken the same days, blowing from the east, with heavy rain, and continued with unabated violence for 24 hours. The damage to property was considerable, but more from the waves than from the force of the wind.

A LETTER addressed to the editor of a native paper complains that the art of wrestling, which was instituted as an exercise, is abused by men who, patronised by noblemen, live in idleness, strut about the streets like so many peacocks, and spend their time and money in gambling. The correspondent adds that, in this age of progressive civilization, it is a shame that such persons are tolerated; requests the government to make them turn their hands to

farming or trade, so as to have some ostensible occupation; and concludes by expressing his surprise that people high in office should encourage such a mode of living.

So much excitement naturally prevails amongst us all respecting the issue of the negotiations now pending between the representatives of China and Japan, that it was pardonable to suppose that the tremendous "bobbery" which was made at half-past two o'clock this morning (5th) by the discharge of heavy guns could have reference only to that important question—which, for the nonce, occupies men's minds to the exclusion of other topics of minor importance. Some, thus rudely awakened from sound slumber at an unrighteous hour, perhaps had a confused idea that—the Government having "stopped telegraphic communication"—war had already been declared by China against Japan, and that the Celestials, taking time by the forelock, had sent along their dummy fleet and commenced to pummel the Japs. Others were of opinion that the *Rio-jo-kan* had arrived, with Yanigawara and Okubo, bringing the good news that a peaceful settlement of the difficulties had been effected, or, *vice versa*, that war had been declared; for it would hardly be safe to wager which of these events the Japanese would take it into their heads to rejoice at. Speculation was altogether at fault, however—"the mountain laboured." The "bobbery" was only raised to inform sleepers that the Russian corvette *Askold*, with the Rear-Admiral on board, and the German frigate *Elizabeth*, both from Hakodadi, had arrived. The salutes were responded to by the forts and the men-of-war in harbour this morning at 8 o'clock. The only news the *Elizabeth* brings, with reference to the assassination of Mr. Haber, is that the murderer is to be sent on to Tokio for trial.

IN THE small hours, this morning (5th), Mr. F. G. Woodruff, of No. 26, was aroused from slumber by the sound of pebbles being cautiously thrown on the floor of his bed-chamber, from without; probably for the purpose of "taking soundings." Thinking something was amiss, he directed his attention to the window, and his suspicions were confirmed by the sight of a Japanese head and shoulders (presumably attached to a Japanese body) which appeared thereat. Raising his revolver, he exclaimed *Daré?*—whereupon the proprietor of the body disappeared, but was followed by Mr. Woodruff (clad as nearly as possible in *puris naturalibus*), who chased him, pistol in hand, up the street where the butchery stands, and along Main Street, as far as the vicinity of the C. & J. Trading Co.'s premises, where the burglar disappeared down an alley-way.

The police were, as usual, not visible to the unassisted vision.

IN THE island of Karafuto there is a cod-fishing station, called Nayebechi, in Sakayegahama, belonging to two merchants, Date Rinyemon and Suwara Koyemon, of Fukushima, at Tsugarugori, Yezo. On the 15th of July last, some Russian soldiers, by command of their chief officer, Shintaratuskii, ordered these merchants to remove all their fishing nets, as they impeded the Russian fisheries. The owners of the nets tried to explain that that fishing ground belonged to them, but the soldiers would not listen to their arguments and took away the nets themselves, whereupon the merchants complained to Chuhanagan, Haseba Tatsu-tsura, who held a consultation with the Russian officer concerning the matter. The latter promised to repair all damage, and return the nets.

A NOTIFICATION has been issued by the government, setting forth the rules to be observed by persons intending to construct telegraph lines, the making of which has hitherto been a monopoly of government. People of any rank will be allowed to construct them, but, where possible, they must be connected with those of government; and must not be carried from or to any place where they would interfere with those already constructed. The Telegraph Department will provide posts, &c. and appoint managers, at the expense of the concerned. All the rules of the Department must be observed by the constructors, and the government will fix the charges for telegrams, according to the length of the lines. One-third of all monies taken by companies is to be paid to government. At any place where such lines are connected with those now existing, telegrams will be charged for at the place whence they are sent, and division made in accordance with the regulations.

DURING CANNON PRACTICE, at Tsukudajima, Tokei, on the 29th ulto., one of the guns burst, the fragments flying in all directions. The house of Watanabe Kiujiro, at No. 41, was considerably damaged, and his daughter Kame, a little girl 6 years old, fainted, and has been ill ever since.

LAST MONTH, a hail-storm passed over Nikko, Yonezawa, and the neighbouring country, and several people were hurt by the hail-stones. An old man, between 70 and 80 years of age, said he had never seen such large ones; some of them measured 6 or 7 inches in circumference. Several persons who put up native umbrellas against the storm had them broken to pieces.

YESTERDAY AFTERNOON (4th), a child fell into the creek and was drowned. The body was taken out and conveyed to the police-station, where it was recognised as that of a son of Daniel Roberts, generally known as "Ice Cream Bob," who, a few days ago, was sentenced to be deported. The child was buried to-day.

THE *Luzon* has been chartered by the P. M. S. S. Co. to take on the Shanghai mail, on the arrival of the *Colorado*.

A PERSON who styles himself "Biyobi-dojin" writes a letter to a native paper, to the following effect:—"When the term of peace is broken, and war declared between our country and China, how shall the Government treat the Chinese who are at every port in Japan? This is an important question, as some of the exports of Japan, such as dried fish, vegetables, and medicines, are mostly sent to China. Some aver that when war is declared, all Chinese must leave the country, and others say that there are many of their spies amongst us, so that in China they have a thorough knowledge of the state of Japan. Thus, the narrow-minded patriots argue that the first step towards war must be to drive them all out. They are quite right to state their opinions, but it is nothing more than a statement when put on paper, because, by the treaty, our government cannot do that, and if they did it, it would cause nothing but mischief. The Chinese came to this country as servants to Europeans, at the opening of the ports; but their independence in trade was known before the treaty was made. If they hear that our Government intend to send them away, they will immediately assume the name of servants to Europeans and thus foil the efforts of the Government in that direction. The spies, no doubt, came here at the time of the Formosan expedition, and I

iapplaud their motives. They are patriots, and if you drive them out Europeans will take their place in the service of China, and how will you be able to detect them? Even by the newspapers, published every day at Yokohama, the Chinese may know all about our affairs (the foreigners are superior to Japanese in describing the true state of the country); therefore I say it is useless to drive them out. To put war and trade apart and treat them as kindly as at the time of peace, is the prevailing civilized custom. Besides, if we let the enemy clearly see our condition, our men would be more careful, so that there would be no danger. That was clearly shown in the Franco-Prussian war, when French people lived in Germany, carrying on their business through the whole war. Now, when it is necessary to go to war, you cannot expect victory with such narrow minds, fearing spies. Therefore, I say it is not necessary to drive the Chinese out of our land."

#### NIIGATA.

August 31st, 1874.

A JAPANESE barque which was loading rice at Takasaki, near here, was driven on shore by the late typhoon, and it is doubtful if she can be got afloat again.

THE CIRCUS troupe has also come to grief. Their place of entertainment has been flattened, the men are at present doing nothing, and the Director is making an engagement with some Japanese to manufacture Claret and other wines.

JINRIKISHAS HAVE come into general use, and very neat ones are made here.

THE LITTLE steamer has not yet arrived; great fears are expressed for her safety.

THE FARMERS near the river banks who own the numerous pear gardens which stretch for miles along each side will be great losers, as their trees have been stripped of both leaves and fruit. The value of pears exported from here last year was \$70,000.

R. V. BOYLE, Esq. has arrived from Hiogo, and goes on to Yokohama, via the Mikune route. He is taking numerous observations, the object of his trip being to report on the advisability of constructing railways between Tokio, Osaka, and this place, at some future date.

WE HAVE had numerous visits this year from gentlemen out on their vacation trip. One left Tokio for Nikko, then travelled north up the East Coast to Sendai, thence to Awomori Bay and down the West Coast to Akita, visiting the copper mines there; then on to this town, and from here to Fusi-yama and back to Tokio. He reports the roads and scenery on the East Coast as being flat, but beautifully shaded; whilst on the West Coast it is very mountainous, but the scenery is very grand and varied. The islands of Mats-shima, off Sendai he says are well worth a visit.

WE HAVE had frequent showers of rain, and the rice looks well. The S. S. *Dumbarton* is here, and will load rice for Yedo. It is said she will come back for one more cargo this year.

THERE IS much sickness around, chiefly fever and ague and measles; the latter of a virulent type, often attacking adults.

DURING the typhoon at Niigata on 21st ult. eleven persons were killed.

## MASONIC.

## FIRST GENERAL COMMUNICATION, DISTRICT GRAND LODGE OF JAPAN, E. C.—INSTALLATION OF D. D. G. M. AND G. OFFICERS.

What may be held as probably the most important event in the Masonic history of Japan since the establishment of the first lodge on its soil some years ago, occurred on Saturday evening last—the inaugural “communication” of the District Grand Lodge of Japan, holding of the English Constitution. It will be within the recollection of masonic readers that, some months ago, an application from the brethren composing the lodges under the English Constitution in Japan was laid before the Grand Master of England, for the foundation of a District Grand Lodge; that this prayer was favourably received and finally granted, and that Bro. Chas. H. Dallas, whilst on a visit to the mother country, was installed then and there as the first District Grand Master.

The first General Communication of the newly-constituted District Grand Lodge was convened for 4 o'clock, p.m., on Saturday, the 15th inst., for the purpose of formally receiving the District Grand Master, and installing the D. D. G. M. and Grand Officers Designate, and for other business of a routine character. About fifty brethren were present, amongst whom we observed visitors from lodges in other parts of Japan, China, Germany, United States, Australia, &c. The Grand Lodge having been duly opened by Past Master A. Mitchell, *G. T. of the Lodge*, Bro. J. R. Black, P. M. *G. T. of the Lodge*, D. G. Director of Ceremonies, presented the Warrant of the Grand Lodge of England, received from the hands of the D. G. M. This having been read in open Lodge, the D. G. M. was conducted into Lodge by three P. M.'s, received with Grand Honours, and inducted into the Chair. The D. G. M., after the usual impressive ceremonies attending the installation of the Deputy D. G. M. and Officers, declared the District Grand Lodge of Japan duly opened, and proceeded to deliver a masterly inaugural address on the duties and obligations of the brethren, to the Grand Lodge, to their mother Lodges, to the Craft generally, and to the world at large. The address concluded with some pertinent remarks on the grave responsibility placed in the hands of brethren in the use of the ballot.

The District Grand Lodge of Japan, under the Constitution of the United Grand Lodge of England and Wales, is composed and holds precedence as follows:—

R. W. District Grand Master,.....	Chas. H. Dallas,
W. Deputy " " " " " " " " " "	Wm. Bourne,
W. District Grand Senior Warden, Major T. W. Kinder,	
" " " " " " " " " "	Junior A. Mitchell,
" " " " " " " " " "	Treasurer, E. J. D. Rothmund,
" " " " " " " " " "	Registrar, W. H. Freame,
" " " " " " " " " "	President of the District, Wm. A. Crane,
" " " " " " " " " "	Board of General Purposes, F. Pittman,
District Grand Secretary,.....	E. Wheeler, M.D.
" " " " " " " " " "	Deacons, Drummond-Hay,
" " " " " " " " " "	Superintendent of Works, C. A. McVean,
" " " " " " " " " "	Grand Director of Ceremonies, J. R. Black,
" " " " " " " " " "	Grand Organist, C. Heimann,
" " " " " " " " " "	Pursuivant, T. Wallace,

Bros. Sands, of the *Rising Sun* Lodge, Kobe, and A. Weiller of the *Nippon* Lodge, Tokio, were elected Vice-Presidents of the District Board of General Purposes. The Grand Stewards have yet to be appointed, from the names to be sent in by the various lodges of the district.

The passing of the Bye-laws, with certain exceptions, was then proceeded with, and a vote

of thanks to Brothers Bourne and Crane, for their services in framing them, having been unanimously carried, the Lodge was closed in due and ancient form at half-past 6 o'clock. Punctually at half past seven, between 40 and 50 brethren sat down to a substantial cold collation, furnished by Bro. W. Curtis, of the Japan Hotel, to which full justice was done. After the business of refreshing the inner man had been duly attended to,

The R. W. D. G. M. called upon the brethren to charge their glasses and do honour to the first toast of the evening, “The Queen and the Craft.” It was a toast which every brother, of whatever nationality, might respond to; and he would take the opportunity of correcting a popular error. It was not *because* the Queen was the daughter of a mason and the mother of a mason that they drank the toast. She is the mother of several masons; but they drank her health because she is *THE QUEEN* of that country from which they obtained their charter of constitution. When they coupled the toasts, “the Queen and the Craft,” they drank to her honour as a great and good woman, and in so doing did honour to the Craft to which they belonged.

Received enthusiastically. Air—“God save the Queen,” followed by three cheers.

R. W. Bro. Dallas said the next toast he had to propose had quite changed its character within the last few years. Then it was purely a loyal toast: now, he was happy to say, it had a significance which gave it additional interest to all masons. He would call upon them to drink the health of “the Prince of Wales and the rest of the Royal Family.” Some years ago, the Prince of Wales received from the hands of the King of Sweden the secrets of a Master Mason, and since that time he had been a most efficient and indefatigable worker in the cause of masonry. He had persevered in his efforts to qualify himself for the highest offices of the Craft, and at this time occupied the position of W. M. of a Craft lodge. A short time ago, he had had the opportunity of examining a statement which had been drawn up, shewing the large number of members of the House of Lords, and their sons, belonging to the craft, and that about 300 members of the House of Commons were enrolled among them as brethren. At no time had Freemasonry held such a high position as at present, and he hoped that everyone present would be an active working mason, and emulate the example of the brother whose health they were about to drink, in their endeavours to qualify themselves for office, in the respective lodges to which they belonged. Prince Arthur and Prince Leopold were also masons. There were three leading members of the Royal Family connected with the Craft, and that fact changed the toast from a loyal to a masonic one. He would therefore call upon all masons, of whatever nationality, to join with him in drinking the health of the “Prince of Wales and the rest of the Royal Family.”

The toast was duly honoured. Song—Bro. Black, “The Prince's Day.”

Bro. Piltz, Concordia Lodge, Altona, said, after the toast which had just been received, so very appropriately, he would propose the health of the Emperor and Empress of Germany. He felt sure that they would all take them to their hearts; so much the more, because the wife of the Crown Prince of Prussia was the daughter of Queen Victoria, whose health they had drunk. (Cheers). From the hearty way in which their healths had been received he was sure that none of the company could object to the toast. The Emperor of Germany was the Past Grand Master of all the

lodges in Germany, and the Crown Prince was the present Grand Master. The members of the craft out here should embrace the members of all nationalities, and unite with them in promoting the good of masonry.

The R. W. D. G. M. then called upon the brethren to drink the health of their Grand Master, the Marquis of Ripon. As they met there, although members of different nationalities, as masons, he had much pleasure in drinking the health that had been proposed by his German brother; for, from German brethren they had always received the greatest assistance. Having drunk to the health of the Grand Master of Germany, they would drink to the health of their own Grand Master. He was a young Grand Master, although he had acted for a length of time as Deputy Grand Master. Since their late Grand Master, the Earl of Zetland, had retired from the active duties of his office, full of years and of honours, their present Grand Master had worked hard and done much for masonry. In two years he had done enough to make a perceptible difference in the craft. He had raised the tone of English masonry, and it now occupied a higher position than it had ever held. He called upon them to drink the health of the Marquis of Ripon, Grand Master of England.

Received with the honours.

The next toast the R. W. D. G. M. had to propose was “the United Grand Lodge of England and Wales.” In proposing the health of a corporate body he had rather a difficult duty to perform. There were something like 1,400 or 1,500 lodges now enrolled under the Grand Lodge of England, and the masters and wardens of each and every lodge were included in the toast. Until some quicker mode of conveyance than that of the P. & O. or P. M. steamers was invented, they could not all take their seats in the Grand Lodge of England, and in drinking the health of the Grand Lodge of England they would be exonerated from the charge of drinking the healths of their “noble selves.” He had, on his left, a member of the District Grand Lodge of China, and it afforded him the utmost pleasure to see him amongst them. In proposing the health of the Grand Lodge of England, he would include that of the D. G. Lodge of China, coupled with the name of Bro. J. Hodgkins, of Hongkong.

Brother J. Hodgkins said the opportunity of addressing the brethren amongst whom he found himself was most unexpected, and he was not prepared with any speech. It had been his good fortune to be present at the proceedings in the earlier part of the day, and he had witnessed with much pleasure the seed of the Japan Grand Lodge sown, and he trusted the tree and its branches will flourish. Those who had not had the opportunity of sitting in Grand Lodge could not properly appreciate the privilege and advantage of doing so. By-and-bye, they would find that the annual “communications” were very interesting, and became more and more so every year. The Grand Lodge of England would be anxiously looking for the report of to-day's proceedings and the District Grand Master's address. He would, on his return to China, be the willing bearer of the Bye-laws and of the D. G. M.'s speech, which ought to be printed and circulated amongst the brethren. In China, they made a point of preserving such speeches, and it would do them good to look over the record of the speeches there preserved, as by so doing they could see how Masonry progressed year by year. Although young, he had been a mason a considerable time. He was a Royal Arch Mason and a Knight Templar, in fact,

he was an enthusiast in all that related to Freemasonry; it was almost his religion. He would firmly and fearlessly say that the principles of Freemasonry were good, and that the man who was a good mason was a good man. Although agreeing with the principal parts of the D. G. Master's speech, which of course must have taken up a great deal of time and thought, he did not altogether agree with what had fallen from the D. G. M. as to the use of the black-ball. A great authority was vested in its use, but he felt assured that no true mason would abuse the privileges so reposed in him. He would like to point out the danger of hastily judging and perhaps taking objection to a proposed candidate; but time and place did not admit. Sudden friendships and sudden dislikes were equally to be avoided, and he would ask his brethren to remember that masonry was to make good men better. He thanked R. W. Bro. Dallas for the kindly remarks concerning himself, and the honour conferred upon him by having his name coupled with such a toast.

The R. W. D. G. M. said the next toast was one expected to be drunk by English masons—"The other Grand Lodges of the Universe." In Germany there were three Grand Lodges. Then there was France, Sweden, Italy, &c., &c., and, on crossing the Atlantic, they found, he believed, 37 States and 10 Territories, each with a separate Grand Lodge. Here they worked not as English masons, but as Masons. The legal qualifications they recognised were, that a candidate should be free-born and of good report, and that he should believe in the Great Architect of the Universe. There were members of a great many different nationalities present in the Hall. He did not know how many Grand Lodges were represented, but he saw before him the representatives of a German Grand Lodge and a Scotch Grand Lodge, and he would ask the brethren to charge their glasses and drink to the other Grand Lodges of the Universe, coupled with the healths of Bro. Heimann, Deputy Master of the Kobe Lodge, working under the Scotch constitution, and Bro. Piltz of the German Grand Lodge.

Bro. C. Heimann, of Kobe Lodge, returned thanks, and regretted that no mason of higher rank than himself was present to respond. In reference to what had fallen from the R. W. D. G. M. with respect to the relations existing between the English and Scotch Lodges in Kobe, he was glad to be able to say that they worked together in the most perfect harmony and good-fellowship. He thanked them for the kind manner in which his health had been drunk.

Brother Piltz returned thanks on behalf of Germany. He recognised no German masons, no English masons; he knew only *masons*. When he met a mason at the table he recognised him as a brother, and he drank his health.

Brother P. M., J. R. Black said the toast it was his great pleasure to have to propose he felt sure would come as a cordial to all hearts. The toast was that of his old friend and brother, the R. W. D. G. M., Bro. Dallas. He had been thinking, that evening, of what masonry had been in Yokohama since he had been in it. In 1864, a petition was sent home for a warrant. It was not granted, in consequence of some informalities; but in the large silk room of Messrs. George Barnett & Co., No. 72, meetings were held, which were perhaps not masonically legal. Now, it was different, and he would say that for the present state of things amongst them, they were largely indebted to Brother Dallas, whom he might call the father of Freemasonry as now existent in Yokohama. The meetings for the purpose of

deciding on renewing the application for a "warrant" were held in his (the speaker's) own house. Of course, there were difficulties to contend against at first, but Bro. Dallas was an enthusiastic young mason, who thought that masonry ought to be established in Yokohama, and he made everyone enthusiastic around him; so the thing was done. He might remind some of those present how masonry had at first flourished, and of the many pleasant evenings they spent. Brother Dallas having been elected the second master of the lodge, had to return to England, but fortunately they had a gentleman attached to the 9th Regt. who worked with ardour in his stead; and Bro. Dallas in England obtained for them many privileges. He had frequently had occasion to mention in terms of eulogy the name of Bro. Dallas, during his absence. He would dare to say that he had been one of the principal props of masonry here, and he was proud to be able to say it in his presence. He agreed with the brother from Hongkong as to the use of the black-ball, but he would wish them to bear in mind what Bro. Dallas had said—"use the black-ball, but use it as *masons*." He would call upon them to drink the health of the R. W. D. G. M., Brother Chas. H. Dallas, with three times three.

The R. W. D. G. M. rose to return thanks. The few moments he should keep them would hardly be enough to enable him to express all he would like to say. Brother Black's speech had aroused many old and pleasant memories. He thanked them very much for the kind manner in which they had drunk his health. However much some of the brethren present, nay, in Japan, might differ from him in opinion, he believed they would all do him the credit of saying that whatever his views were, he held them conscientiously. Brother Black would bear him witness that in the old days, when there were no *jiurikishas*, and there was considerable difficulty in getting together the members necessary to sign the petition for a warrant to the lodge, he had to run about hither and thither, to find the 7th man, whom he had got at last, and whom he then saw present—Bro. Crane. And how he got hold of a 32<sup>d</sup> man, who had all the honours of Freemasonry, and didn't want to be bothered: how at last he had agreed to become W. M., if a lodge could be got together. The names of those pioneers would be found in the old, weather-beaten warrant in the next room: a roll of honour indeed. Now, they had four lodges and a District Grand Lodge. He had worked for masonry 10 years and in masonry 9 years. What he had said about it was after due consideration, and he would ask them to remember that the remarks he had made were those of the individual they had selected to preside over the District Grand Lodge. The black-ball—referring to what had been said by Bro. Black and the brother on his left—was a valuable privilege, but one only to be used after due consideration, and as a last resource. He returned them his most hearty thanks, and hoped that under his direction the District would flourish. It must and would flourish if they *all* helped him, but it would not if two-thirds of them did not work with him. He would ask every Entered Apprentice to remember that he, as an individual, could do much to make or mar the fortunes of Freemasonry in the land. He, himself, could not do it, his officers could not do it. They, all, as masons, could do it, and he relied upon them for that assistance which would enable them to raise the District Grand Lodge of Japan into the position it ought to occupy. Without sitting down, he would ask them to honour a toast—one, to himself, of very great self-congratulation—the

D. G. Officers of Japan. He felt sure that all would congratulate him on the selection of such an efficient staff as it was plain he had secured: and that all would unite with cordiality in drinking the health of "the District Grand Officers." (Received with cheers.)

Bro. W. Bourne, W. D. D. G. M., in a few brief and happily-expressed words, returned his thanks for the kind manner in which they had received the toast. As time was short, he would not trespass upon their patience, but leave the subject in abler hands.

Brother A. Mitchell, W. G. J. W., said he was prepared to make a speech, directly after hearing what Brother Bourne had to say. It was in three words: "Them's my sentiments." He would have liked very much to have seen the D. G. S. W., Major Kinder, of the Kobe Lodge, but, as he was not present, he devolved upon him to return thanks on his behalf. It was a great honour to be a member of the District Grand Lodge. On the night he was made a mason, he determined that he would never halt or falter in his progress through masonry until he had attained to the highest degree he could reach. Of course they could not all be Grand Masters, but they might strive to reach such lower eminences as were attainable by all, equally honourable to their degree. He assured them he would do all in his power to do justice to the confidence reposed in him in appointing him District Grand Junior Warden. He thanked them heartily for the manner in which the toast had been received.

The R. W. D. G. M. said:—"Good words, needs no bush," and no apology was required for introducing the toast he was about to propose—"The Four W. M.'s and Officers of the Lodges under the jurisdiction of the District Grand Lodge of Japan";—Bros. Geoghegan, Yokohama Lodge; Crane, O'Tentosama Lodge; Weiller, Nippon Lodge, Yedo; and Sands, Rising Sun Lodge, Kobe; and their respective officers. He would call upon Bro. Geoghegan, the W. M. of the senior lodge of Japan, whose hospitality they were enjoying that evening—the Hall being owned by them—to respond on behalf of his brother officers.

W. M., E. J. Geoghegan replied in the name of all the Lodges, and particularly of Yokohama Lodge. Especially he would express his satisfaction for the great advantage and convenience they enjoyed through the establishment of the District Grand Lodge; at whose disposal that Hall was most cordially placed, for Communion or other business.

W. M., W. A. Crane joined in the sentiment expressed by W. M. Geoghegan, and, on behalf of O'Tentosama Lodge, expressed a readiness to do all that was possible to extend the influence and power of the District Grand Lodge.

Bro. J. H. Boulet on behalf of Nippon Lodge, (in the absence of the W. M., E. Weiller, who was then in the country), said they would do all they could to assist the District Grand Lodge, which might at all times reckon on their good offices, for the promotion of its well-being.

Bro. J. Drummond-Hay spoke on behalf of Kobe Lodge. He only wished there were more Kobe people present to witness the way they appreciated the lodge. Although a young lodge it had the honour of enrolling amongst its members many old masons. Their first W. M. had been an old master, with very much experience. He referred to Major Kinder, whom he mentioned his name particularly because the R. W. D. G. M. had done him the honour of appointing him District Grand Senior Warden. Although Kobe Lodge was one of the smallest in Japan, it represented masonry

masonry should be represented. They would welcome all masons whom business or pleasure called to Kobé, and shew them the very handsome temple they had. There was then present a mason to whom they were much indebted in Kobé. He referred to Bro. Heimann, whom they had to thank for the erection of the beautiful building in which the Kobé masons met.

The R. W. D. G. M. would forego the pleasure, and call upon the District Grand Junior Warden to propose the health of "The Visitors."

Bro. A. Mitchell said he would do so; if someone else would propose their health, he would ask them to drink. After a humorous speech, Bro. Mitchell called upon all present to drink the health of "The Visitors," coupled with the names of W. P. M., F. A. Thiel.

P. M. Thiel replied in suitable terms. He had travelled in various parts of the world and visited many lodges: particularly in Australia and New Zealand, where he had seen much of the working of many different lodges. He was a staunch supporter of Freemasonry, and a great admirer of its principles. On a future day, he hoped to meet "Japanese" members in some other country.

At the request of the R. W. D. G. M., Bro. C. Heimann performed an excellent selection of music on the piano-forte, and Bro. Black sang a Scotch melody.

The R. W. D. G. M. requested Bro. J. H. Boulet to propose the health of "The Ladies"; which he did in a pithy and humorous speech.

Glee:—"Here's a health to all good lasses"; followed by three hearty cheers.

Bro. J. Hodgkins, of Hongkong, responded. He hoped to see a masonic ball in Yokohama; a thing, he believed, as yet unheard-of. After referring to the great success of the last held in Hongkong, in January last, at which 108 ladies were present, he proposed, as a parting toast—it being Saturday night—"Sweethearts and wives." Received and responded to with enthusiasm.

The R. W. D. G. M. gave "The Tyler's Toast," which was honoured in the accustomed manner.

The proceedings were brought to a close "in love, peace, and harmony," by the singing of "Auld Land Syne," in which the whole of the company joined.

THE funeral of Mr. Xavier Maillot, Professor of Chemistry at the Imperial College of Tokio, who died at Yokohama after a long and painful illness which from the first resisted all efforts of skill and science, took place on Saturday, at 6 p.m. A considerable number of residents were present, amongst whom were nearly all the French Professors in Tokio. A deputation of Japanese Professors also came to pay a last tribute to the memory of their colleague. Two discourses were delivered at the grave, one by M. Fontaine, in the name of the professors, and the other by Dr. Massais, in the name of the Free Masons.

In accordance with the wish expressed by the deceased upon his death-bed, the ceremony was of a purely civil character.—*L'Echo*.

[We may add that, in consequence of the sitting of the District Grand Lodge, R. W. Bro. Chas. H. Dallas, D. G. M., and Officers of the D. G. Lodge were prevented being present at the grave. The following brethren, belonging to *Nippon* Lodge, to which the deceased gentleman belonged, were despatched from the D. G. Lodge by the R. W. D. G. M., to attend the obsequies of the deceased brother: Brothers, Massais, M. D., Boulet, Singleton, and Johnston.—Ed. J. G.]

By the *Colima*, Capt. Brown, of the Japanese service, late in command of H. I. J. M. Light-house Tender *Thabor*, leaves for San Francisco, en route to England; his mission being to bring out one of the ships built or being built for the Government. So many of those employed by Government complain of the cavalier treatment they receive, that it is satisfactory to find one who, having undoubtedly served them well for many years, is well appreciated by them. A dinner was given to Captain Brown on the 19th instant at the Okurasho, Yokohama, and Okuma Sangi came down especially to honour the occasion. More than this, the Government lately presented Capt. Brown with a substantial mark of their regard, in the shape of 3,000 rios, the best kind of thanks for good and faithful performance of duty. We wish Capt. Brown a pleasant trip home, a happy meeting with his family and friends, and a speedy and safe return.

### Despatches in re Formosa.

(*N. C. Daily News*.)

A despatch addressed by the Chinese Imperial Commissioner Shen, to Saigo, the Commander-in-chief of the Japanese forces:

The territory inhabited by the savages has been under Chinese dominion for over 200 years, and the people, ignorant and stupid though they be, are nature's children, and therefore the Government cannot bear to impose upon them all at once a rigid system of laws, but rather seeks to humanise and educate them by degrees, so that from being utter barbarians they may be brought within the pale of civilization and in due time become ordinary citizens, with an external appearance of decorum and with humanity and affection in their hearts. As regards the crime of murder, however, the laws are explicit; that cannot be passed over, although they are savages, but then it is for China to inflict the punishment. It is not right that other nations should be put to the trouble and expense of bringing troops for that purpose. When it was reported that your country was suddenly landing soldiers at Lang Chiao, a place not open to trade, everybody in Formosa was surprised, not knowing what offence they had committed that could have given occasion to such a disregard of treaty rights. The several Treaty Powers were no less surprised at the news, and it was on reading your despatch to the Viceroy of Fukién that we learned that the cause was that the Mutan savage tribe had murdered some distressed Loocheuwans.

Now, not to mention that the Loocheuwans, though not a very strong nation, are quite able to complain for themselves, if your country must, out of compassion, take up the cause of their neighbours, what was to prevent them from first representing the matter to the Tsungli Yamen, for consultation. If China had in that case screened the savages, and refused redress, or if she had requested your assistance, you would have had something to say, but you did not even wait the few days that would have been required, though the matter was one of years' standing. It must be apparent to you who is right and who is wrong in the matter. But even now, when the Mutan savages have been punished, you continue your raid against the Kaoszeling (?) and other innocent tribes, and how does this agree with the statement in your letter that your only object was to punish the chief perpetrators of the crime.

The Assistant Commissioner Pan, when passing through Shanghai, had an interview with your country's ambassador, and obtained from him a promise that the troops

would be withdrawn. This was not mere empty words, and yet you have established a camp in the Mutan territory, and it is rumoured that you intend to attack the Peinan tribe—a tribe which differs widely from the former, in that they saved your countrymen while the Mutans murdered them—and yet you would turn their merit into a ground of complaint.

In your letter to the Viceroy, you state, indeed, that these Peinan savages plundered some of your countrymen, but this assertion is without proof; and it is not likely that people barely rescued from the water would have much to plunder. Besides, where on earth would people be found who would first plunder, and then feed and support their victims for several months for nothing? A bare statement is no sufficient proof; and, moreover, there is your own Government's letter of thanks, in which there is not a word about the plundering. You also conferred a reward on Ch'en An-sheng, who is the Chief of the Peinan tribe; and the man whom you then rewarded is now deemed worthy of punishment. I cannot think this is your country's principle of government.

It is also said that your nation, in its anxiety to display its military prowess, fears not heaven and regards not man, but it will be no great display to send able troops long drilled on approved methods against ignorant savages. Though you may always be victorious, some will fall on both sides; and however regardless of the savages you may be, have you no sympathy for your own people? If again your object is not to punish, as some argue it is not, from your continued aggression against other tribes, then not to mention that we will not dare to part with a foot or an inch of Chinese soil, even foreign nations who trade with us will not submit to see you acquire this advantage.

In a few days we shall have the southerly monsoon, which renders the landing of provisions and necessaries difficult; and as we have made with you a lasting treaty of peace and friendship, I am concerned for your condition and therefore speak out my mind. A fool may sometimes make a wise suggestion. Begging your attentive consideration to my remarks,

I have the honor, &c.

### THE WAR IN FORMOSA.

(*From the China Mail's Special Correspondent*.)

AMOY, 1st August, 1874.

After a passage of two days, I arrived safely at Amoy. The gun-boat which was to have been waiting for us had gone away, to bring the Admiral here to go with us over to Formosa. She will be here in two or three days. I cannot say that I admire the streets of Amoy, and, for my own part, don't care how soon we leave. Our party is lodged in the largest tea-house in the place, where we are tolerably comfortable.

I hear from a reliable source that the Japanese will not evacuate the island, except on receipt of an indemnity for the expenses of their expedition. On the other hand, the Chinese laugh at the demand, and have sent an ultimatum to the Japanese to leave within 100 days from the 21st June. The Japanese have cut a road from Lingkian in a direct line to the eastern coast, and have occupied the coast this side (west) to the north of the new road. Such being the case, a war is almost inevitable, and China is making every preparation for such a contingency. They

have contracted, it is said, to have a cable laid from Taiwanfoo to Amoy, at a cost of \$800,000. Whether this amount is correct or not it is impossible to say. The Chinese are concentrating their troops in Formosa, and every town in the island is to be strongly garrisoned. At Taiwanfoo alone, they have about 10,000 soldiers. Some 7000 or 8000 of Li Hung Chang's disciplined troops are coming down; 5000 or 6000 from Canton, and about the same number from Chang Chowfoo. The last-mentioned force will be despatched to Takow in a few days. Large guns have been bought, and Amoy is to be strongly fortified.

A Japanese transport is now in port undergoing some repairs to her machinery. Some of the Japanese officers have been inspecting the dock minutely. Amoy cannot be too strongly fortified, as it will be very convenient to either power in case of war.

China is evidently determined to have it out, and is shewing altogether a very strong front. She has one paramount advantage over Japan, and that is her great wealth. Her credit is ten times better than that of Japan, and, in moderate warfare, money will, to a great extent carry the day, one would think; for what can a country with an impoverished exchequer, and with her credit shaken, do? It is foolhardy on the part of Japan to plunge into a war with China. In her eagerness to bring herself into the comity of nations, she has gone mad, and the Formosan expedition is a clear illustration. She is going headlong to work, without remembering that a nation is not to be made in one day. She would have done far better in looking after her internal affairs, than meddling with other people's business. Let her rule her people properly first, before she aspires to colonise other people's territory. Let the rebellious spirit of the Samonrai be put down first, before she seeks to civilize the savage living within the dominion of a friendly power.

The Japanese seem to dispute the Chinese right to the whole island, but there is no question about it. Take the example of Australia and New Zealand. Is it to be contended that the aborigines of Australia and the Maoris of New Zealand are not within British jurisdiction? Could France or Germany make war upon either of those dependencies of Great Britain without making war upon the mother country, and that on the mere pretence that the natives had committed some outrage? Or is it to be disputed that the mountains inhabited by the wild Indians of America form part of the United States' territory? On the whole, the Japanese action in the present matter is very high-handed and should be put down. She deserves a good licking, and a licking she will get. It is a wonder that she doesn't see the folly of her action and withdraw her troops. Supposing the two countries are on equal footing in regard to fighting power, she lacks the wealth of China, and this is a disadvantage of no little moment. By the way, it is reported that a Japanese man-of-war was wrecked, while surveying the eastern coast of Formosa, but whether she is totally lost or partially damaged is not known.

#### CHINA.

A rumour has been in circulation at Tientsin that another massacre of foreigners was to take place at that port on Saturday last, the 8th instant. While quite believing that nothing will have come of it, and that even Chinese presumption on our pacific tendencies will hardly go the length of running a second

risk of war with the European powers—just at present—the fact of such a rumour being circulated, and, in a half-and-half sort of way, credited in native circles, admonishes us how insecure is the footing we as yet hold in native affections. If there were any cordial appreciation of, or liking for, foreigners amongst the “great unwashed” of the open ports, such rumours would not be circulated, and we much fear that the conduct of those responsible for the failure to suppress the recent riots in the French settlement at Shanghai has materially contributed to fan the smouldering embers of anti-foreign feeling. It has now been definitely ascertained, for the second time, that it is safe to ill-treat Frenchwomen—safe, that is, in proportion to the satisfaction that would be exacted from any other semi-civilized nation; and the moral is, to the mind of the Chinese rough, perfectly plain. We by no means include all Chinese under this designation. It may safely be said that very few indeed admire foreigners, and fewer still like them. But it would be unjust to ignore the existence of a very large, and, we hope, increasing, class who like us well enough to do business with, and would rather see uninterrupted peace than the most glorious triumph over the obnoxious and irrepressible foreigner. Behind them, however, are two parties, high and low—the anti-foreign officials and their hangers-on, who foment disturbances against foreigners for political ends, and the mob, who have, to some extent, a genuine belief in the assertions as to our using children's eyes for photographic purposes, and other abominable acts. These last-named sections may not, and, it is to be hoped, will not, have the opportunity of precipitating a collision. But all these rumours as to intended massacres, etc., are their work, and circumstances have unhappily justified their belief that we dare not take very severe notice of any outrages. Why do not the foreign ministers insist upon the promulgation of an edict, once and for all, defining the position of foreigners vis-a-vis the Government? *We have only ourselves to thank, as yet, for the absurd misconception of our rights and position now prevalent amongst the masses of China.*—*China Mail.*

We learn that General Le Gendre, who has been concerned in assisting the Japanese in connection with the Formosa affair, has been arrested by the U. S. Consul at Amoy. He at first refused to yield to the arrest of the Marshal, and armed force had to be called in. Upon giving sufficient bail he was liberated.—*Idem.*

The steamer *Killarney* reports that, at Keelung, a rumour was current that a portion of the Japanese troops were leaving the island, and that they could scarcely obtain coolie labour to assist in taking in coals for their ships' consumption, on account of these being drafted to fight the savages, being tempted by a high bounty and liberal pay for a limited period. The body of another of the *Kestrel's* crew, drowned at the wreck of the *Laptek*, has been washed ashore, but in so decomposed a state that identification was impossible.—*N. C. Daily News.*

The evident intention of the Chinese to assume an offensive attitude, should it become necessary in the present position of affairs with Japan, and their preparations for the embarkation of a large number of troops for Formosa, do not seem to excite the people of the aggressive island empire very much. The

surmise has been hazarded that, if war ensue, the Japanese, with their usual acuteness, may leave their small army in Formosa, securely posted by this time no doubt, to divert the celestial hosts, and turn their attention to the mainland, the coasts of which will have been drained of effective soldiery!—*Idem.*

About 10,000 Chinese troops are reported to have reached Singa-pu, above Yangchow, on their way, via the Grand Canal, to Chinkiang, where it is expected part of them will embark on board the transports now lying there, and proceed to Formosa.—*Idem.*

#### AMOY.

(*China Mail Correspondence.*)

AMOY, 7th August, 1874—3 P.M.

Referring to my report of yesterday, *pe. Hailong*, the preliminary hearing in the case of the United States *v.* General Le Gendre was held at the Consulate at 10.30 this morning, when he was required to give bonds in \$25,000 for his future appearance to answer, five responsible gentlemen qualifying therefor.

What the tangible charges are against this gentleman, who declared in Court that he was on a mission of peace, does not yet appear. Meantime, it seems, there is no lack of bondsmen among the respectable merchants of the port—gentlemen conversant with his meritorious career here as Consul of the United States.

Considering all the facts as presented from this advantageous point of view, although as yet without special knowledge of the real present purposes of the Government of Japan, I must declare my own opinion as justifying it in measures of a disciplinary character against aboriginal Formosa, whose independence of China has always been successfully maintained and not less practically acknowledged by China herself.

Apart from the fact that, if not Japan herself, yet her dependency Loo Choo had a colony on the east coast of Formosa long prior to the acquirement of territorial rights by China on its west coast, the Government of Japan is but applying the principles imposed upon itself by that of the United States in the treaties of Commodore Perry and Hon. Townsend Harris. In opening up aboriginal Formosa by coercion, and in exacting compensation for performing the duties which contiguity alone might properly impose upon China, as a condition of the relinquishment of conquests thus righteously required, Japan cannot rightly be stigmatised as the party evincing a hostile spirit. On the other hand, the nations of Christendom may reproach themselves for a tardiness in dealing effectively with aboriginal Formosa, which has been fatal to many of their own citizens and the natives of all contiguous countries.

(*Extract from a Private Letter.*)

As the steamer *Shantung* was passing the N. E. Shantung Promontory, on the 31st July, signals from the shore were made to her for assistance, by the party working at the Light-house. The *Shantung* made for shore, and, on nearing, she was boarded by a sampan having a European on board, who reported there was a row on shore, in which some men had been shot. A despatch was sent to the Engineer-in-Chief. Mr. Hughes, the Acting-Commissioner at Chefoo, reported the matter to the Taotai, and, at 9 p.m. of the 31st August, the *Feihoo* left Chefoo for the promontory, having

on board a mandarin delegated to enquire into the matter. No further news is as yet to hand.

(From the Hongkong Times' Correspondent.)

August 8th, 1874.

The proceedings in the Consular Court of the United States at Amoy yesterday were somewhat unusually interesting. General Le Gendre, having been arrested the day previous, came into Court at 10.30 a.m., with his bondsmen, Messrs. Stevens and Middleton. The following is a memorandum of the remarks made by the Court to the prisoner.

By the Court:—"Mr. Le Gendre, yesterday, upon official complaint by Chinese provincial authorities, together with public information, facts within my own knowledge and others, which I have good reason to believe to be true, but finally, and above all, acting under instructions from the United States Legation at Peking, I caused you to be apprehended on a charge of advising, aiding, and abetting an expedition in hostility to the Government of China, to wit: the Japanese armed expedition, now operating in the island of Formosa, in violation of the laws of the United States and their treaty obligations with China, and the peace resting on those laws and obligation. It is claimed that the island of Formosa is a part of the dominion of the Emperor of China; and in the landing of an armed force upon that island and making war upon its inhabitants constitutes the offence, the commission of which you are charged with aiding and abetting.

In proof that this expedition is hostile to China, we have the official declaration of her Government. The violation of the laws of the United States and their treaties with China will for the present be presumed to follow. The charge of your connection with the enterprise is based upon the items of evidence I have recounted as justifying your arrest.

Some of the articles of the Treaty and provisions of law bearing upon the case are the following: (vide Art. I, Treaty of '58) in the broadest language establishing the peace between the two nations \* \* (see Art. II, id.). This article defines offences in the most comprehensive language—the phrase "or commit any other improper act in China" is particularly so—(see Sec. 1, Law of U. S., April 20, 1818), (see Sec. 7, Law of U. S., June 22, 1860). The terms employed in this section are somewhat indefinite, but most comprehensive; "the Consul may, upon facts within his own knowledge, or which he has good reason to believe to be true, etc., issue his warrant for the arrest of any citizen of the United States charged with committing in the country an offence against law \* \* (see Sec. 20, idem). This section authorized the Minister or Consul "to do and perform whatever is necessary to carry the provisions of the Treaty into full effect (see also Sec. 24, idem).

The step which has been taken, with what must follow, involves considerations of great importance, not only to yourself, but also to the Government of China, the United States, and probably the Japanese Government and the expedition you are charged with assisting. It is therefore obvious that nothing relating to so grave a matter should be done without due consideration and preparation. In view of the present imperfect knowledge of the Court and the peculiar and extraordinary character of circumstances, it is impracticable to proceed with the investigation at this time, and I can only hold you subject to the further order of the Court dependent on the receipt of instruc-

tions from Peking. Every effort will meantime be made to bring the case to a hearing as soon as possible.

I will remark that, out of the respect I feel for your character and position, past and present, it is my disposition to treat you considerately; it is for the first importance, however, that you do not depart the Court.

The circumstances—the probable value of your services to the expedition you are charged with serving—demand that you give a heavy bond, and, since you are not among strangers, it will not be difficult for you to obtain ample security for your attendance at Court. Therefore it is offered that you be held subject to the further order of the Court, and your bail will be fixed at \$25,000, your bond to be executed in compliance with the rules of the Court. In default you will be committed."

Le Gendre filed a paper, purporting to be a protest against his arrest, which is too lengthy to embody in this, and which I will send to you another time.

Le Gendre made an oral application to be sent to Shanghai, because he was unable to procure Counsel at Amoy.

He claims to be a Special Commissioner of the Japanese to China, but he says he entered the service of Japan before the trouble began.

August 9th, 1874.

As the *Yesso* is still in port, I send you herewith a copy of the protest filed in the U. S. Consular Court at Amoy by Mr. Le Gendre.

*Protest entered in the Consular Court of Amoy on the occasion of my Arrest by the Judge of said Court, on the 6th day of August, 1874.*

Selected by the Government of Japan to come to Southern China and represent it here on a mission of peace as its Special Commissioner, I solemnly protest against the violence used towards me by the authorities of the United States at Amoy, in depriving me of my liberty and, forcibly and against my will, bringing me before them, in virtue of a warrant, in which, in violation of all principles of law, no mention of the offence or crime of which I must necessarily be accused is made.

My quality as United States Citizen, and my connection as such with the Japanese Government, while the latter is engaged in carrying out a scheme of pacification within the boundaries of aboriginal Formosa, cannot be invoked (as it may ultimately be) by the United States Authorities in justification of their act. For the very nature of the duties which I have come here to perform entitles me to certain privileges and immunities which both China and Western Powers are bound to respect; and by depriving me of my liberty while thus vested with this character, this Court has committed towards Japan an unfriendly act which that country cannot fail to resent, and which, in the course of time, the United States, in their well-known policy of justice, will certainly regret.

While, as a public officer of Japan, I turn my eyes towards the United States and protest against the wrong which I am now made to suffer, and for which I claim redress, as a citizen of these same United States I feel deeply grieved for the error which I believe has been committed here by this Court. This error is the more apparent when we come to consider the different circumstances under which the American authorities might have been placed in their relations with me, in my double capacity as Japanese officer and United States citizen; I will suppose the worse case, that is, that the late action of Japan in aboriginal

Formosa constituted an act of war against China, or, as some have called it, a war without declaration.

It must be remembered that I was engaged by the Japanese Government long before the Formosa mission started. Now, the treaty of 1838 between the United States and Japan says that Japan shall have the right to enter in the United States \* \* \* naval and military war \* \* \* to engage its service \* \* \* provided "that such persons shall not be engaged to act in a naval or military capacity while Japan shall be at war with any power in amity with the United States," and I do not think that this proviso prohibits Japan from employing American citizens to act in a naval or military capacity, who have been engaged before Japan went to war. Neither does the Act of Congress passed April 20, 1818, commonly called the "Neutrality Law;" for, when I accepted my present task under the Japanese Government, I was without the jurisdiction of the United States.

Now we come to the Act of 1860. In passing this Act, the object of Congress was to arm the Ministers and Consuls of the United States in China, Japan, and Siam with certain powers that would enable them to carry into effect the treaties with those powers for which purpose previous jurisdiction was insufficient. It provides that "it shall be competent for each of the said Ministers to issue all manner of writs to prevent the citizens of the United States from enlisting in the Military or Naval Service of either of the said countries to make war upon any power with whom the United States are at peace; or in the service of one portion of the people, against any other portion of the same people; and he may carry out this power by a resort to such force as may at the time be within his reach belonging to the United States."

However stringent this law may appear at first sight, it can have but little bearing upon the case at issue. It is, it is true, a law of the United States, binding, so far as it goes, upon all American citizens. But the treaty of 1858, between Japan and the United States, is also a law of the United States. Mr. Wheaton says: Under the Constitution of the United States, by which treaties made and ratified by the President, with the advice and consent of the Senate, are declared to be the *Supreme Law of the Land*, it seems to be understood that Congress is bound to redeem the national faith thus pledged, and to pass the laws necessary to carry the law into effect." (Wheaton's International Law, Sec. 224, page 349). Now, we have seen that, by the terms of the Treaty of 1858 between Japan and the United States, persons who retain the character of citizens of the United States, and are in the service of Japan, may, without blame to themselves or Japan, service that country in a war begun after their entering the service. If so, how could Congress, which was bound under the constitution to legislate for the purpose of carrying into effect the terms of the treaty, pass a law that would virtually set at naught the provisions of this same treaty. In vain would we agree that the law of 1860 applies to United States citizens and not to Japan. It is beyond question that Japan can claim certain privileges from the United States, under the terms of the Treaty of 1858. If, by depriving United States citizens of a certain proportion of their liberty in their relations with Japan and her people, either or both are debarred from enjoying these privileges, and if the enactment of the law of 1860 is the means of doing this, I say that the law of 1860 never could have been understood by the framers thereof to apply to Japan, and that it was never intended

that it should. Now, we must not forget that the law of 1860 was framed chiefly because some American adventurers, notably Ward and Burgevine, had taken an active part in the troubles between the Chinese Government and the Tai Ping Rebels, Burgevine having given his aid in turn to both sides. Congress was anxious to prevent by legislation the recurrence of such proceedings, not only in China, but in all the countries where it was likely they might again take place; and to prevent all possible transgression of the law, this body extended the prohibition from enlisting in the service of contending parties in cases of civil wars among those nations to entering the army or navy of either of those countries while at war with some power with whom the United States have treaties of peace and amity. In what relates to China or Siam, neither of which has such a clause in her treaty as the one referred to above, this law can be carried out; but it cannot be legally enforced in the case of Japan. It could be, however, were the law to be embodied in a new treaty; but it has not been so embodied; and until it has been, it cannot affect or modify the treaty of 1858, without the express consent of Japan in every case. In the present instance, we must infer that this consent has not been given, from the fact that, contrary to the stipulations of the law of 1860, but in accordance with the terms of the treaty of 1858, an American was engaged by the Government of Japan to serve in connection with the Formosa mission previous to a declaration of war against either the aborigines of the island or the Chinese Empire; and the provisions of this same treaty can be invoked by both Japan and the citizens of the United States in justification of their acts in all the Courts where the laws of the United States are enforced.

(Signed) CHAS. W. LE GENDRE.  
Amoy, August 7th, 1874.

The news about the Formosa Difficulty has for the last day or two been curiously contradictory. On the one hand we are told that the voice of the Chinese is "still for war." It is stated as a fact to-day, that a sale was made to parties acting for the Chinese of a complete battery of Gatling guns, and 40,000 foreign disciplined troops armed with the most approved foreign weapons are said to be ready for transport to Formosa from Tientsin by the steamers of the C. M. S. N. Co.—and whatever other suitable conveyance offers. It is positively asserted that the business of the three Chinese gun-boats and transports that have recently gone up river is to bring down 2,500 troops, foreign-disciplined and armed, for service in Formosa. And as—never more emphatically than now, or in China,—money is the "sinews of war," coherence is given to all this statement of warlike equipment, movement and expense, by the statement that to-day there has been effected in Shanghai, through the agency of a leading bank and a leading American firm, a loan to the Chinese Government of seven millions of taels, for ten years, at 9 per cent! So for our bellicose informants. On the other hand, the tone of the Japan papers received last night is decidedly small and quiet; we hear of no more warlike levies in Japan; and, to crown all, we learn on what we take to be good authority, that the officer Tanabi, who arrived per P. M. S. last night with despatches for the Japanese minister, brings from Japan a proposal to renounce her claim for indemnity, and to withdraw for ever from the island, on China assuming, for the future, responsibility for any ill-treatment Japanese seamen may receive in Formosa—terms which China can

hardly refuse; unless indeed, the knowledge that that energetic eagle (French or American?) has been caged may tempt China to raise her demands.—*Shanghai Evening Courier*, August 7th.

A LETTER from a Japanese in China, says:—"The rumours of the Formosa Expedition affect those Japanese who are established in Shanghai and Amoy. The Chinese take us to be spies, and dislike holding any intercourse with us. Their excitement is similar to ours when the four American ships arrived in the Bay of Uraga in 1853. They have no reliable information, but fancy that 100,000 Japanese troops have invaded Formosa from the southwest, and another 100,000 from the opposite direction; that Saigo has surrounded the whole island with a large fleet of three ironclads and ten steam men-of-war. Such rumours are spread everywhere through China. In some places they say the Japanese are aiming to become the sole rulers of the island, and that next they will seize Corea, after the example of Toyotomi Hideyoshi (Taico-sama). And whilst they were full of these fears, an incident occurred which worked greatly on their superstitious minds. A comet appeared in the north; and by this their alarm was greatly increased, and they strongly believed that war would ensue. It looks as if they supposed that a large army of ours had actually invaded the Empire.

Others, however, not so foolish, say that the Chinese will drive our force out of Formosa with great slaughter. Of course all these must be mere falsities. It does not appear that the Chinese Government has any intention to take the field against us."

THE FORMER Prince of Awa, Hachis'ka, after a sojourn of four years in England, where he has been studying, has provided a considerable sum of money towards the expenses of some of his countrymen who accompanied him, and whose education he is anxious should be properly completed. Even during his absence, he has been supporting both schools and hospitals in his old dominions, appropriating to each of them annually the sum of 5000 rios.

THE EXHIBITION in Aichi Ken is wonderfully successful. No less than 256,000 tickets have already been disposed of. This beats anything known in Tokei.

A NUMBER of warlike trophies, captured from the natives of Formosa, are being exhibited in Tokei. They consist chiefly of guns, coverings for guns, arrows, quivers, spear-blades, swords, powder and balls, &c., &c.

AS THE inhabitants of Sapporo, Yezo, are increasing in number and are now able to earn their own livelihood, all money advances hitherto made by the Kaitakushi Department will be discontinued from 31st July. All sums that have been so advanced will have to be returned to the Government, according to the terms of agreement made.

THE VICISSITUDES of fortune are exhibited in Japan as elsewhere. In Adamura, in Omi, resides a merchant who has long carried on business under the title of Matajū. He was formerly very wealthy, owning many vessels and doing a large coasting trade. During the Tokugawa régime he lent large sums to daimios, and he himself lived almost like a daimio; but when the Shogunate fell he lost everything and became very poor. He was not a man,

however, to sit down and despond. He set to work to rebuild his ruined fortunes, and it is said that he has been so eminently successful that, last year alone, he made 700,000 yen.

REPORTS of the effects of the heavy rain and storms still continue to reach Tokei. At Okitama, it is written that, on the 7th of this month, "thunder fell in seven places," and two persons were killed.

ON THE 11th July, a farmer named Kamaga Matsutaro, of Awomori Ken, was working in the fields with five other men, when a dreadful thunder-storm came on. The men worked busily in the rain, until Matsutaro was suddenly struck down and killed by the lightning. His body presented a horrible spectacle.

IN H. B. M.'s Provincial Court this morning (21st), before Russell Robertson, Esq., Consul, a native of Singapore was brought up, on the information of a Japanese woman, charged, as it afterwards appeared, with beating her. An intelligent lad, also from the Straits, explained that accused, who had just been paid off from a British ship, had invested \$20, out of \$54 paid him as wages, in the engagement of complainant for one month, but that, her husband appearing on the scene, she made two or three attempts to bolt from her new protector, and endeavoured, on the last occasion, to carry off all his clothes; whereupon, resenting this, he struck her two or three blows with his hand. Complainant, her husband, and a native constable were examined in Japanese by a native interpreter (whose manner seems invariably to impress his fellow-countrymen with the idea, that he is the judge) and by him their evidence was communicated to the Consul, in Japanese, although probably of a purer character than that made use of by the witness. Our reporter was unable to gather any particulars, other than from the evidence of the Singapore lad. The case was dismissed. The woman left the Court accompanied by the Japanese constable, and will probably in turn be taken in hand by the Saibansho and punished.

WE HAVE received information of a robbery from the European Cemetery. Some time since, three native labourers, named Fukuda Umekichi, Rinzo, and Tomekichi, entered the sanctuary during the night, and took therefrom a marble stand, belonging to a monument erected in memory of an English child, which they deposited, for a time, with one Hashimoto Hachirobei. The first-named robber, Fukuda Umekichi, afterwards sold the stand for 2 yen. He appears to have been the ringleader in the affair. For some days the marauders were undiscovered, but, on the 12th inst., they were apprehended, and sentenced. Fukuda Umekichi to sixty, and the other two to fifty days imprisonment, with hard labour.

THE FOLLOWING is a letter addressed to the editor of a native paper:—"Although I do not exactly know the reason why Government prohibits the sale of the Mikado's photograph, I suppose it is because they think the people would cease to revere him as they ought, and if his likeness were hung in a shop amongst actors and low characters, anyone who looked at it would be struck blind. My humble opinion is, that now, when His Majesty's merit, excellence and praise are resounding through the whole country, his subjects would bow with reverence before the face of Heaven (Mikado), so that the act of the Government is contrary to the wishes of the people. Is it not right, is it not natural, that men and women who have been born in his dominions, and who

are governed by his laws, should wish to see his face, even though on paper? I have been told that in Western countries it is the custom to imprint the likeness of the sovereign upon all coins, and their photographs can be had at any photographer's shop in Europe. When they look upon the countenances of such men as Washington and Napoleon it is enough to make them think of their glorious careers. How much more would we, whose government is so different, feel thankful for being able to view our sovereign's face. I earnestly hope the prohibition will be cancelled. When we may hang his image on our walls and bow down before it night and morn, he will be more honoured and respected. If sale is ever made of his photograph, it ought not to be kept amongst other likenesses, but put aside and sold separately; and then there will be no danger of profaning his holy honour. I offer these opinions with all respect."

GREAT HAS been the controversy amongst those interested in shipping, as to the price paid the Pacific Mail Co. for the *New York*, recently sold to the Japanese. Rumour has it that the figure was \$280,000, out of which certain Japanese officials who had the making of the bargain managed to exact no less a "squeeze" than thirty thousand dollars. We have reason to believe that, for once in a way, rumour tells no more than the truth. The actual sum paid the Co. was just the quarter-million dollars, which we think is a very good price.

What Japan wants more than "western civilization," about which we hear so much, is just a nice assortment of patriots. We could hardly recommend their selection "per muster" of such gentlemen as those who negotiated the purchase of the *New York*, however.

A REPORT was current to-day (22nd) that a tidal wave swept over a part of Kobe last night about 12 or 1 o'clock. As the telegraph is down, as usual, we are unable to confirm this, and are at a loss to know how the information could have reached Yokohama.

There can be no doubt that a typhoon has visited Kobe; the tail-end of which made itself felt here yesterday.

ABOUT 11 o'clock in the forenoon of the 3rd ultimo the populace around Nanahiroyama, near Kamitsukimura, in Miyakesima, were alarmed by loud subterraneous noises, and upon looking towards the mountain, beheld a sight which somewhat discomposed them, and they fled in panic to Izamura. The volcano was vomiting forth fire and smoke, from a part of the mount called Oana, with a roar like thunder, sending down flash after flash, more resembling lightning than anything else, upon the valley beneath, and covering the whole country round with a dense black cloud. The mass of burning matter, which was sent high in the air, descended in a shower of sand and ashes, burying one hundred and eight houses in Kamitsukimura. Forty others narrowly escaped the same fate, and the rice and vegetable fields were laid waste.

And now we have to relate the most wonderful incident of this eruption. In the place where Kazhaya and Omori, two hamlets to the eastward of Kamitsukimura, had stood, three hills, one of them covering an area of  $2\frac{1}{2}$  square miles, and 1,800 feet high, suddenly made their appearance; and, on the northern shore, a tract of land was formed, extending 1,800 yards from east to west, and 480 yards from north to south. For a period of ten days the discharge of ashes continued with unabated

fury, when it gradually diminished. The officers, who were sent from the Kencho to relieve the poor inhabitants, inquired if there had been any premonitory signs of the calamity, and were informed that, in January last, the cherry-trees "bloomed very beautifully," and that now they looked upon that as intended as a warning of the impending disaster.

AT THE last meeting of the Committee of the Yokohama Athletic Association, a provisional programme was drawn up for the Sports in October next, which it is intended to make especially attractive and amusing. In addition to the usual events, there will be races requiring none of the hard training indulged in by enthusiasts amongst athletes, and, considering the amount of fresh blood imported into Yokohama since last meeting, we expect to see large fields meet to compete for the different prizes. We would advise all who have not done so to send in their names, without delay, to the Honorary Secretary, J. J. Dare Esq., No. 5. We are given to understand that the prizes will be numerous and valuable; in fact, such as will give to all competitors a chance of winning something as a memento of their prowess.

IN H. B. M.'s Provincial Court this morning (18th), before Russell Robertson, Esq., Consul, one Nakawo Kisaburo sued J. W. Sutherland (Cobb & Co.), for \$10, for damage to a *jinrikisha* and its drawer, alleged to have been caused through the negligence and carelessness of defendants' driver. Mr. Farmer appeared for Cobb & Co., denying any carelessness or default on the part of their *employé*, and imputing blame to the *jinrikisha* man himself, who, he affirmed, placed the property of his firm and the limbs—and possibly the lives—of the public in danger, through wilfully running under the heads of the horses driven by his coachman, after having been fully warned by the betto to keep out of danger. Three Japanese witnesses were heard, from whose evidence it appeared that the *jinrikisha* had been completely smashed and the hauler had fainted. For the other side, Mr. Farmer and Mackay, the driver, (a man well-known on the Odawarra line as extremely carefully) distinctly stated that the *jinrikisha* was in fault, it appearing from the deposition of Mackay that he was on the proper side of the road, while the *jinrikisha* was on the right; and that the latter persisted in crossing the street and getting under the horses' noses, so causing them to bolt. It seems that, immediately after the occurrence in question, Messrs. Cobb & Co. addressed a letter of complaint to H. B. M.'s Consul, who laid the case before the Kenrei; who, in his turn, complained on behalf of the *jinrikisha*. It was considered advisable to grant a summons against Messrs. Cobb & Co., that the matter might be fairly tried. The case came off this morning, and, after a careful hearing of both sides of the question, Mr. Robertson dismissed it. Whilst altogether absolving defendants from any liability to make good the damage, he said he would leave the question in their hands, as to whether they would make complainant any recompense for the destruction of the *jinrikisha*. Mr. Farmer intimated that if plaintiff would call at the office of Messrs. Cobb & Co., some restitution would be made. In the course of the examination it was stated that *jinrikishas* recognised a rule of the road, keeping invariably to the left whilst in motion. Commenting on this, Mr. Robertson said his experience taught him differently, as he had had frequent occasion to know the difficulty, whilst driving, of keeping clear of *jinrikishas*, flying about, hither and thither, in all directions.

Those who are in the habit of handling the ribbons will be ready to corroborate the Consul's statement.

THE furnace-like weather we have of late experienced has not failed, as might have been expected, to produce disastrous effects. Several cases of sun-stroke are reported, amongst both Europeans and Japanese; and one at least has terminated fatally. On Sunday afternoon (16th), at about 3 o'clock, a Marine employed at the British Camp as cook to the Sergeant's mess succumbed to the extreme heat and had to be conveyed to the Hospital, where he died in the course of the evening. Another Marine, who occupied the position of bar-tender at the Canteen, where his hours were very long, gave way and is now in Hospital. It is hoped that his case will not terminate fatally. Three of our compositors are absent from the office, similarly affected, two of them in Hospital, and we hear of other cases amongst *bettoes* and *jinrikishas* of a serious nature. Several gentlemen, perhaps more susceptible to heat than others, have narrowly escaped sun-stroke; the tendency to which may be in a measure avoided by the use of suitable head-coverings and umbrellas.

THERE was a rumour current to-day (18th) that the withdrawal of the *Tokio-Maru* (*New York*) from her intended trip to Shanghai was due to a telegram received from China, that the Japanese, under conditions, had agreed to evacuate Formosa.

The real facts of the case are, we believe, that she is intended to convey a large body of troops hence to Kumamoto, Higo.

The S. S. *Kiang-se*, which arrived on Sunday last from Formosa, via Nagasaki, is said to have brought to the latter port as many as 300 invalids from the expedition.

MORE than a fortnight ago, we were authorised to announce that certain liberal concessions had been made by the Japanese Government to foreigners desirous of traveling in the interior. One of our contemporaries (not of Yokohama, however) undertook to gainsay this, but as the weakly in question is altogether taken up with an endeavour to thrust itself into notoriety—rather by vilifying its neighbours than by attempting to gather news—it certainly is to be excused for its "know-nothing" character and reputation. The following translation of an official notification—somewhat obscurely expressed—confirms what we were enabled to make public quite two weeks since:—

#### NOTIFICATION.

(*Tokai Nichi-nichi Shimbun*.)

No. 50b. TO THE CITIES AND PREFECTURES.

It has been hitherto the practice when foreign Ministers and Consuls have applied for leave to be given to their countrymen to travel in the interior, for cultivating the knowledge of science and the arts, or for the amelioration of their health, etc., to give notice on each occasion to the Cities and Prefectures situated on the road which they take, for their guidance. In future, however, notice as hitherto will only be given in cases of persons of rank and position; but, in the case of persons in public or private service and ordinary individuals, such notice will not be given. Of course, they will be provided with the passports issued to them by the Foreign Office, to which you will give due recognition, and you will allow them to pass without obstacle.

This is notified beforehand.

10th August, 1874.

INTELLIGENCE reached Yokohama yesterday (25th), that General Le Gendre had been unconditionally released, by order of the American Minister at Peking. This news will be received by all interested in the welfare of Japan with pleasurable feelings, but it is to be hoped that the delay which has occurred through the intervention of the U. S. authorities will not render futile the mission of peace which took General Le Gendre to China.

A CORRESPONDENT calls attention to two nuisances at present existing in the streets of Yokohama. The first complaint he makes is, that coolies, at late hours, go about singing, or rather yelling, immoral songs, and songs insulting to Europeans and Chinese. This offence, he says, if not stopped by the police, is likely to lead to a breach of the peace. Again, *Komban-was* are just as lively and numerous as ever. He affirms that "it is incumbent upon the Saibansho, which is in charge of the municipality of the Settlement, to get rid of these nuisances." We agree with him, and trust that, as the evils have been pointed out, the authorities will take means to do away with them.

A TELEGRAM received yesterday (25th) reports that the troops at Nanking have mutinied, and refuse to leave China for Formosa. The trained gunners from the Chinese fleet are deserting.—*Mail.*

"WONDERS WILL never cease!" The *Nishin-Shinjishi* relates a strange occurrence, the particulars of which we give in its own words. During the night of the 31st ultimo, the inhabitants of Aichi Ken were attracted by the appearance of a "luminous body" on the surface of the sea of Atsuta, but the attraction was quickly turned to fright. The phenomenon was observed to approach the land, at Shibata Shinden, accompanied by a deluge of rain, whence it proceeded through Sadai to Kamana-mura, destroying houses, trees, and vegetables in its passage. Many houses were totally destroyed, one man and a child were killed, and a number of other persons were more or less injured. The "luminous body" ended its destructive course amongst the hills of Kamana-mura, where it vanished. Persons visiting the regions in question may see, at various distances between Shibata Shinden and Yobemura, hills and ponds in places where once was level ground.

ABOUT 3 o'clock in the morning of the 8th instant, a ruffian whose name is Shimano Tatsujiro, and who professes to be a carpenter, entered the house of Miroto Matsugoro, a merchant of Kumagaya-ken, armed with a sword, and, after killing the master of the house, decamped with all the coin he could lay his hands upon. The bereaved family gave information to the police authorities at Tokai, and the scoundrel was apprehended at his own home. Upon being charged with the crime he strenuously denied having any knowledge of Matsugoro. The officers thereupon searched his premises and found a sword covered with blood, which they shewed their prisoner, threatening torture if he did not tell the truth. This so frightened the rascal that he confessed both the murder and the robbery. He will doubtless receive his deserts.

A NATIVE of Japan, now on a visit to London, writes home, giving some of his impressions of European civilization. He seems to think that men show too much deference to women, expresses surprise that a man does not smoke in the company of ladies, and remarks,

with evident consternation, that, in a crowded omnibus, or railway carriage, a gentleman will rise immediately, should a lady enter the vehicle. He concludes with an intimation that he regards some of our civilized customs as so many nuisances.

THE *Nishin-Shinjishi* says the Kazoku have made a proposal to Government, offering their aid towards the settlement of the Formosan difficulty.

ON THE 16th instant, a man, name unknown, committed suicide by jumping off the Riyogoku bridge into the Sumida-gawa, Tokio. A native policeman, who was on duty near the bridge, heard the splash and ran to the spot, but deceased had sunk. After an hour's search he was picked up, and carried to the police office, where some medicine was poured down his throat, but, according to a native paper, "he died." It would have been rather extraordinary if he had lived, after an hour's immersion, but the natives seem to be very tenacious of life. It was only the other day that we heard of a child who had been immersed in the water for nearly two hours and then recovered.

The same day, an old man, about sixty years of age, while walking on the edge of the river near the Ohashi, slipped and fell into the water. A sailor, named Yatsutaro, immediately ran to his assistance and pulled him out, but he expired almost immediately. Rather extraordinary this, for a Japanese, but perhaps it was on account of his age.

WE HAVE just received information of a hurricane which passed over Kokura, in Buzen, on the 7th inst. It began at 5 o'clock A.M., and blew with almost unparalleled fury for two hours. A native paper reports that a tract of earth between forty and fifty feet in circumference was torn up by the wind, which veered from south-east to south-west at 6 o'clock.

A PROCLAMATION has been issued by the Government, promising clemency towards those who took part in the rebellion of 1868-9. It appears that many, who have since died, have been buried without any religious ceremony, as their friends were afraid of the Government. Local officers have been appointed to see that this does not occur for the future.

A PIECE of ground, on the banks of the small river which flows past the north end of the Shinto Temple, at Kiyoto, has been granted by Government, for the purpose of forming a public garden. Plum, cherry, maple and willow trees have already been planted, and several restaurants and tea-houses erected. The Gardens were opened on the 23rd of last month.

IN THE report from Hamamatsu Ken to Naimusho, we read that the province of Totomi, on the 9th instant, experienced a severe storm. About 9 o'clock in the forenoon the rain began to fall in torrents, and continued to descend in one uninterrupted shower for 24 hours, when it ceased. The rivers, swollen by the rain, broke through their embankments, inundated the surrounding country, and destroyed several fields of rice and vegetables. Deaths were numerous, but the exact amount of casualty is not yet known.

SIR HARRY PARKES, K.C.B., left for Hakodadi per H. M.'s corvette *Thalia* on Saturday (22nd), to join Lady Parkes and family, who have been on a visit to Yezo for some little time. Sir Harry's stay in the north will be brief.

THE JAPANESE Steamer *Sakura* has arrived from Hakodadi, which she left on the 20th instant. A private letter to a mercantile firm says the assassin of Mr. Haber has refused to make any further statement. He has been examined by the surgeon of a Russian man-of-war at Hakodadi, and pronounced perfectly sound in mind. This was done in consequence of the Japanese having affirmed that he was insane at the time he committed the murder.

A CORRESPONDENT calls attention to the disgracefully dilapidated and tumble-down condition of the fence surrounding the English Church, and offers to head a subscription list with \$5, towards the erection of a neat railing of iron. There can be no doubt the fence needs renewing; it is now in such a state that a very mild earthquake indeed would suffice to level it with the ground.

A NOBLEMAN (Kazoku) of the second rank, Asano, has established a manufactory of European paper, at his residence, Kakigara-cho, San-cho-me, Tokio; having received his patent from the government. He has engaged an Englishman to superintend operations, at a liberal salary.

NOT CONTENT with exacting a "squeeze" of (we believe) 16 sen on every carton of silkworm eggs, the authorities have imposed an additional tax of 5 sen each, to take effect on the 15th inst. Until then, the cards cannot receive the additional stamp, and anyone found disposing of cards not bearing both stamps—the original one and that now ordered—will forfeit each so deficient, and will be maled in the sum of one ryo for the offence.

TWO DISCIPLES of Mr. Nicolai, named Miyamoto and Kageto, have devoted themselves to the spreading of the doctrines of the Christian religion and opened a preaching-place at Minami-Nakanacho, in Owari, in the month of February last. Recently, they preached to a congregation of twelve hundred people who believed. Amongst these were thirty persons who had been priests of the Nichi-ren sect, one of the eight sects of the Buddhist religion. They have abandoned the office of priest and embraced the Christian belief. It is intended to extend the field of operations and open other preaching-places in the surrounding districts.

WE UNDERSTAND that a notification was issued yesterday (19th), calling for recruits for the army. The opinion of the Japanese is, that it has reference to the war with China.

FROM SHANGHAI, we learn that the decision of N. J. Hannen, Esq., Acting Judge, in the case of Cocking and Singleton v. J. Rickett, Agent P. & O. Co., which was heard here some three months ago, has been reversed by Judge Hornby.

THE S. S. *Bombay* arrived here (20th) this afternoon, with London dates to 10th July. The mails have come through in 40 days and 18 hours, the quickest time on record.

THIS morning (20th), about nine o'clock, a severe shock of earthquake was felt in Yokohama.

LAST NIGHT, (19th) about 8.30, a fire broke out in the premises of Ino-Moye Hichinobei, at Zaiuno Kuchio. After destroying about 50 houses it was extinguished, an hour after it commenced.

A NATIVE of Gifu-ken informs us that, until lately, street musicians were very prevalent, but, as education increased, they gradually vanished, the public not seeming inclined to support them; having something to occupy their minds superior to that of standing amongst a crowd listening to the latest Japanese comic songs. He states, however, that in Tokei, although it is the capital of Japan, they are rather behind the provinces in this respect. In the Mugiya (a kind of native refreshment booth) of that place, they invite these musicians to attend, and, in consequence, have often a crowded house. Our informant adds, that singing in the streets is strictly prohibited; and it is to be hoped that this class of people will soon disappear altogether, and the public cease to be entertained by such trifles.

DURING last night, (24th) a tumble-down shed on No. 143, abutting on the Swamp, collapsed altogether, and resolved itself into a mass of rubbish. We have made enquiries in the neighbourhood, but without being able to ascertain that anyone was hurt.

ON THE 17th instant, a boy, named Manzo, the son of Sakakura Heihachi, met his death by drowning. It appears that deceased, in company with some others, went to bathe in the river at T'skidji, Tokei. When the lads were returning home Manzo was missing; search was made, and a police officer shortly afterwards took his dead body out of the river.

AT DAY-BREAK on the 15th inst., a house situated in Kitashin-bori, Tokei, was entered by two rascals, armed with swords, who bound the occupants and decamped with all the valuables upon which they could lay their hands. As yet, we have not heard whether or not the thieves were captured.

ABOUT 8 P.M. of the 16th inst., a fire broke out in a store-room belonging to Konjé Shi Chibei, a wheelwright, situated in Hon Zuimo Kucho, Ni-chome, Tokei. The flames spread rapidly, and in a short time upwards of 100 houses were in a blaze. It was ten o'clock before the fire was extinguished.

WE HEAR that Yamagata, a Shizoku of Yamaguchi Ken, who resided with Suruki Hanbei, No. 5, Koisikawa, Sui-do-cho, Tokei, has committed suicide. It appears that, on the 13th inst., deceased went to Yoshiwara, Tokei, and deliberately cut his bowels open. His reason for doing this is not known.

A NATIVE paper reports the following:—In the afternoon of the 15th ulto., a child, aged 3 years, was playing on the edge of the canal in the jurisdiction of Akita Ken, when it fell into the water. It was two hours before the child was taken from the canal and removed to hospital. Although such a length of time had elapsed, and the body was quite cold and pulseless, the surgeon restored life, and next morning the child was in its usual health.

THE MEASLES are very prevalent in Tsuguru and Homori, in Oshiu, where they have been raging for some weeks, but deaths are few.

A FEW days ago, some labourers were digging in the cemetery of a Buddhist temple called Bandzuin, Shitaya, when one of them suddenly uttered a sharp cry and fell to the bottom of the hole. He expired in a few minutes. It is supposed that he must have inhaled a poisonous gas.

THE *Hochi Shimbun's* reporter has been enjoying himself in the mountains, and gets quite poetic in describing the delights of the country. He says, "The regions of Sagami and Izu are exceedingly beautiful, and have the additional attraction of hot medicinal springs. In former times the only travellers thither were poets, writers, and lovers of bright scenery, but, since last autumn, when the Mikado halted there on his journey, the hills and rivers have shone out with new light, and now the whole district has become as it were one flourishing town. There, young gentlemen on horseback, accompanied by female attendants, and rich folk, leading beautiful girls, walk amongst the green hills and by the margin of white seas. Are not these the merriest days of this peaceful age? Those regions are verily the paradise of the present world!"

Well! we have heard, from another who has just returned from the springs, that, at present, though many have already left, Naraya Heiji at Miyanoshita and Kameya Shintaro at Kiga are filled with guests; and, there being no room for more, men had to be sent out to apprise travellers who intended to take up their lodging in those houses of the state of affairs. Fukuzumi Kikeiji at Tonosawa is nearly as crowded, and Tsutaya Heizayemon at Sokukura contains hardly less few. At Yumoto, Dogashima, and Ashinoyu there are hardly any vacant rooms to be had. The houses Imai and Watanabe at Atsumi are filled with officials and foreigners, and a three-storied house in the European style, Sagamiya, and another house Fujiya, with those in Taki-noyu and Kawayayu, are flourishing exceedingly."

THE WEEKLY journal which hails from Tokei bears, we believe, a character so immaculate that we really hesitate to lay any accusation at its door. The more so, because, young as it is, it has already taken occasion to accuse, indirectly, one of its contemporaries of Yokohama of plagiarism. And this charge so nearly resembles that of which we have to accuse the Tokei weekly that we approach the subject with fear and trembling. With fear, lest we may, in some fashion, be wrong in making the accusation; and with trembling, for the consequences which may ensue through our temerity. Our complaint is this: On Friday last, 21st inst., we published a detailed account of the circumstances connected with the assassination of the unfortunate Mr. Haber in Hakodate, and, next day, most curiously, the metropolitan weekly in question comes out with a paragraph of "further particulars," which is, *verbatim et literatim*, a copy of a report of the affair specially forwarded us by a gentleman in Hakodadi. Now, we don't object to having our items made use of by the Tokei weekly, even when they are so nicely dished up in the form of a *haricot* that their origin is rendered obscure, because our contemporaries are served in similar style; but we would point out to that journal that in transferring, holus bolus, important matter from the columns of another paper, it is usual to credit it. We mention this, because the *Tokei Weekly*, being as yet in its infancy, may be unacquainted with the laws of courtesy as practised amongst journalists. At the same time, we shall be sorry if what we have said should cause its conductors to empty the vials of their wrath upon us.

WE ARE informed that, on the 23th of the present month, there will be horse-races and a grand display of fireworks at Shokon-Sha, in honour of those who were killed in the insurrection of Sago.

THOSE OF our contemporaries who copied the paragraph from the Tokei paper affirming that the mission of Capt. Brown to England was for the purpose of bringing out an ironclad, have been led into error. The object of that gentleman's journey is to bring out a twin-screw steamer, of 900 or 1000 tons register, which is now being built on the Clyde by Messrs. Napier, to the order of the Japanese Government. She is intended for a Lighthouse tender.

BY THE arrival of the Japanese steamer *Urio-maru* (*Undine*), we learn that the gale from the south we experienced on Friday made itself felt to about the same extent at Kobé. The sea-wall was damaged, several native craft were injured, and some *senjoes* are reported drowned. The European shipping escaped scathless. Telegrams from Nagasaki received at Kobé report a very heavy typhoon there, doing much damage.

SINCE WRITING the above, we have been placed in possession of the following particulars of casualties reported, and rumoured, as having occurred to vessels in which Yokohama is interested.

Per telegram, we are informed that the *Costa Rica* left Shanghai on the 19th inst., and, having experienced very heavy weather, reached Kobé 24 hours behind time. She left again for Yokohama at noon to-day, and may be expected to-morrow evening.

Rumour says that the Japanese steamer *Madras*, and the *Stonewall* (ironclad ram), together with about 50 Japanese junks, are ashore at Nagasaki, and that several seamen have been drowned. The S. S. *Ping-On*, hence for Nagasaki, is reported missing, and the new P. & O. steamer *Mirzapore* is said to be ashore there. The latter report, however, we are not inclined to credit, as she was bound to Shanghai.

We append the following, just issued as an extra to the *Japan Mail*, which, in the main, corroborates the above. The *Bombay*, however, is safe in our harbour. Probably the *Madras* is meant:

"Nineteenth, dreadful typhoon; nearly everything level with ground; new Government House a mass of ruins. Vessels *Stonewall Jackson*, *Bombay*, *Mirzapore*, *Ping-On*, barque *Hamburgh*, all on shore. 100 junks foundered; about 200 men drowned. Bund quite gone. All wires, south of Kobe, appear to be badly damaged by typhoon."

A COLORED desperado named Lewis, at present undergoing a term of two years imprisonment in the gaol of the American Consulate-General, for stabbing, managed to effect his escape on Sunday afternoon (23rd) and got away. This morning (25th), about half-past 7 o'clock, as European police constable Robt. C. Clow was in the vicinity of the Railway station, near Nogé, he espied the runaway leisurely crossing a bridge in the direction of the gas-works. Jumping out of his *jinrikisha*, he followed his man, and, being in plain clothes, was enabled to approach him without arousing suspicion. The culprit was quietly arrested, and again deposited in durance vile, where he is now ruminating on the mutability of things human, clad, in addition to his usual costume, in an ingeniously fashioned pair of bracelets of the newest construction. He had made an attempt at escape on the night previous (Saturday) which was so far successful that, with the collusion of an officer of the *Benefactor*, who had been "chums" with him in gaol on a charge of shooting, he managed to "stow

away" in the chain locker of that vessel, where he was found on Sunday morning and taken on shore; but, on the afternoon of the same day, he again got off, as chronicled. We believe he managed to escape by getting hold of a saw, with which he took out a board from the floor of his cell, underneath his bed. He is a most determined ruffian, and, some few months ago, overpowered his gaoler and nearly succeeded in drawing his revolver. Fortunately, assistance arrived, and he was secured.

WE HAVE received from Messrs. Lane, Crawford & Co. a copy of a new work entitled "A First Japanese Book for English Students," by John O'Neill, who dates his Introduction from the War Office. It professes to be a book written by a student for students, and, to quote the preface, consists of a Japanese text cut on wood and printed in Japan, interleaved by a transcription in English letters and accompanied by a literal translation, with interlinear glosses, running, clause by clause, sentence by sentence, and line by line, with the Japanese; explanatory notes at the foot of each page, and a full vocabulary of nearly a thousand words. Tables of the *hiragana* and *katakana* characters are also added. The Japanese text is a sermon, or *Do-wa*, of the preacher Kiu-O; one sufficiently interesting in itself to tempt the advanced student of the Japanese language to its perusal. A superficial examination of the contents of the book leads us to fear that it is a little beyond the capacity of beginners, and that therefore the title, "A First Japanese Book," hardly expresses its true character. The construction is nevertheless novel, and to those who are already somewhat conversant with the structure of the language we recommend its perusal.

WE HAVE received an account of an honest *jinrikisha* man, whose acts we are glad to make public. It appears that, a few days ago, the individual in question took a gentleman from Kaminari-mon, Asakusa, to Honjo, and then returned home. Upon looking into the vehicle he found a packet, containing one hundred and fifty riyos. He enquired for the owner at Honjo, and, not finding him, gave up the packet to the authorities. The owner shortly afterwards recovered his money, and presented one half the amount to the finder.

WE EXTRACT the following from the *Nishin-shinjiishi*.

According to a census taken last month, the number of *geyshas* in Tokei was one thousand five hundred and ninety-three; and the tax paid by them exceeded three thousand one hundred and eighty six yen. The editor adds, "These women are employed to trick money from visitors, and entice them to drink, thereby causing them to neglect their business. They are of no advantage, but a source of loss in every sense, and every respectable man ought to shun their society."

GHOST STORIES are getting uncommon nowadays, but we have one to relate which may almost rank with any published in romance. Last June, a farmer, named Sugamara Soyemon, residing at Yamoto-jiku in Miyagi-ken, died, and, in accordance with the general sequence of events, was buried. Shortly afterwards, his family were entertaining some friends, when the figure of the deceased was seen to enter the room and take his usual seat, "but his countenance was pale, and his eyes somewhat melancholy." After sitting in silence for some minutes, he began to talk just

as usual, which so alarmed the company that they immediately rose, and huddled together in great trepidation. Some young men, who were possessed of rather more courage than the rest, tried to seize the ghost, but they clasped nothing—their hands passing through the figure, as through a void. But they heard a hissing noise, which frightened them so much that they gave up the attempt and took to praying and offering sacrifice. All this was in vain—the ghost was immovable. At last, one of the young men said that the apparition was caused by foxes and badgers, and recommended that they should hunt those animals. A party at once set forth, and, in a short time, captured three old badgers, whereupon the spectre vanished, and has never since troubled the neighbourhood.

BURGLARIES in and around the Settlement have of late been of such frequent occurrence that they have ceased to be looked upon other than as matters of course. There was another case last night (11th) of the usual type. The venetians were opened, a bedroom visited, and various articles of clothing, &c., abstracted from No. 79, Main Street. Some slight disturbance aroused the inmates of the burgled premises—which lie in the heart of the Settlement—and the thieves decamped. The despoiled has a dose of "physic" prepared for the next visitor on a similar errand.

ONE OF the results of the meeting of licensed victuallers held at H. B. M.'s Consulate a month ago has been that the whole of the British subjects then present have "shut down" and refused to pay the current month's license fee. Three French hotel-keepers and two Americans have followed their example, and it remains to be seen whether the Municipal authorities will undertake to enforce the payment of a tax which can hardly be said to be equitable, and for which there is no adequate *quid pro quo*. Members of other nationalities, Danes, Russians, &c., look on the matter with total unconcern, not being called upon to take out any license. The question arises, why this invidious discrimination? All engaged in the business should be subjected to the same imposts, and, until this is so, we think those now refusing to pay quite right in kicking against the existing arrangement.

Nothing seems to have been done yet in the matter of Japanese grog-sellers plying their trade within the bounds of the Settlement.

THE TOKIO *Nichi-Nichi Shimbun*, an enterprising little paper, the proprietors of which sent down a special reporter to Formosa with the Expedition, has lately been publishing a series of articles descriptive of that country and its people, their manners and customs. They are embellished with woodcuts, very fairly executed, of the scenery of that portion of the island visited by the Japanese, portraits of typical Formosans, &c.

In to-day's (11th) issue there is a spirited little caricature, representing a Japanese soldier, in new-style uniform and with his sword dangling between his legs, engaged in stirring up the bush with a long pole; from which issues a serpent with a big head, having the likeness of a Chinaman, the pigtail forming the body of the animal. The soldier seems rather astonished, as the inscription over his head intimates, "I did not think there would come out so large a serpent."

TANE, RIKUGUN SHOSHU, an officer lately returned from Formosa, reports;—"On the 21st June, the Tautai of the city of Taiwan, with several officers from Amoy, arrived in the Bay of Liankiao, with two ships of war and troops, the Chinese ensign, the yellow dragon, waving in the wind. Next day, the Chinese mission landed, and had an interview with Saigo Tokoku, our Commander-in-chief, at the headquarters at Keesan. Conferences also took place on the 25th and 26th. The Chinese government required that, as the whole island of Formosa is now tranquilized, the Japanese should immediately retire, delivering it up to the Chinese. Saigo replied that he could not move one inch at the command of the Chinese government, but only at that of the Emperor of Japan. The Chinese then offered to pay \$500,000 as indemnity if he would withdraw. But Saigo said he had no power to settle whether the troops should remain or depart. Since then, several discussions have taken place. Admiral Akamatsu and Fukushima, Japanese Consul at Amoy, went to consult with Yanagihara, Japanese Ambassador in China, but nothing could be settled until after an interview with the Chinese government.

Sixty thousand Chinese soldiers are assembled at Taiwan; who affect to despise our small army, and act insolently towards them. But our men feel no fear of them."

THE LITTLE steamer built in May last, by Messrs. Whitfield and Dowson, for river traffic at Niigata, started some time ago on her perilous passage round the coast towards the latter port, and, we hear, has safely reached Akita, on the west coast. The most dangerous part of her voyage may thus be considered accomplished.

A FEW days ago, a seller of wooden shoes in Tokio, whilst entertaining some friends at his house, found a "cash" in the middle of the egg he was eating.

The Sennin—a mythic being, who is said to reside in lonely places, and to practice magical arts—when playfully inclined, takes a horse from out a bottle, or blows a man out of his mouth. The friends of the shoe-seller, who believe in Sennin, are exercised as to whether the goblin was guilty of the egg trick, or whether it was merely a little deception on the part of their entertainer.

ONE NAGAOKA recently left Saikai (Kioto) to settle in Tokei, and, being an ingenious man, contrived an instrument for cleaning rice which enables a strong man to dress 20 *koku* daily, and a woman 10 *koku*. He has, in consequence, accumulated considerable wealth, but, as he keeps the construction of the machine a secret, and shows it to none, his neighbours speak evil of him and accuse him of narrow-mindedness and selfishness, in thus refusing to allow others to participate in the advantages which are derived from its use.

The editor of the *Nichi-Nichi Shimbun*, however, disagrees with the carping neighbours, who, it seems, have been venting their spleen in the columns of that journal. "To invent anything of worth," says he, "the whole thought must be concentrated in one groove, and much time and money must necessarily be expended. If the inventor, therefore, exhibits to others his handiwork thus produced, they will imitate it, and his great labour will be without profit to him. He is therefore justified in concealing his invention from other eyes. In order to encourage such men to the prosecution of inventions likely to increase the riches of the nation, the Government should institute a Patent Office."

MR. R. H. BRUNTON, Chief Engineer of the Lighthouse Department, accompanied by several officials, leaves to-morrow morning (20th) at daylight, in the Government steamer *Thabor*, on a visit of inspection to the various light-houses on the coast.

THE CHARMING little sketches of Japanese every-day life and manners which have for some time past appeared in the columns of the *Japan Mail*, under the heading of "Our Neighbourhood," have been gathered together, and are now presented to the public in book form. The author, who modestly endeavours to hide his identity behind the initials T. A. P. will be recognised by not a few. He is a graceful writer, and contrives to throw into his pleasant, gossip little chapters an amount of interest such as the table of contents would hardly seem to promise. Holiday-makers, in the mountains or by the sea, will find this little book just the thing to take up for half an hour, when tired of strolling over the hills or along the beach.

FOR THE sake of our readers, who must by this time have become so accustomed to their usual dish of "burglary in Yokohama" as to feel the want of the item announcing the despoiling of some unfortunate foreigner in the Settlement or on the Bluff, we are glad to be able to announce the following; and, as the "smashing" was, in this case, unaccompanied by any loss to the smashed, we are enabled to gratify both parties.

On the night of the 28th inst., the Independent Order of Burglars, taking advantage of the absence of the occupant, who was then sojourning at Nikko, effected an entrance into the premises numbered 210, on the Bluff, the residence of Dr. W. St. George Elliott, with the expectation and intention of making a good haul. But, alas! Science had a hand in the game, and, as usual, a good one. The "Electric Burglar Alarm" promptly rang out, the inmates were aroused, and the thieves had to make off, minus the expected booty. *Mon:* To make enquiry as to the facilities for procuring the "Electric Burglar Alarm." Electric-Burglars beware!

ACCORDING TO A Tokio paper, a large number of Japanese *samurai* are to be seen in the streets of the Capital, armed with two swords.

The height of Fuji-yama, the highest and most famous mountain in the Empire of Japan, has just been accurately determined for perhaps the first time, by direct measurements taken from the sea to the summit. During a few weeks leave of absence, and while travelling in that district, Mr. R. Stewart, of the Survey Department (Sokuryo), assisted by Mr. H. Pote and Mr. J. Christison, completed this undertaking on the 6th August, and the result of the calculations following upon the observations shews the height to be 12,365 feet (English) above high-water level of ordinary spring-tides. In Japanese measurement this is 12,294 feet, or 34 cho 9 ken.

A MAN named Kozama Kumejiro recently took up a revolver in the house of a friend, and, not understanding that it was loaded or how it was used, in his meddling he pulled the trigger and it went off, shot one friend dead, and wounded another. As it was accidental, he was fined 44 rios—40 to the friends of the deceased, and 4 to the wounded. The owner of the pistol had also to pay a fine of—25 cents!

### MORE BURGLARIES.

ON SATURDAY night (29th), as some workmen were engaged at the New Circus Tent, on Lot 200, a European approached and, after loitering about for some time, made off with several coats &c., which the men had thrown on the ground whilst engaged in the erection of the tent. The rascal got off clear, and nothing has since been heard of him.

On the same night, the store belonging to the Yokohama Dispensary, at No. 61, was entered by thieves, who, after ransacking everything, and strewing the floor with various chemicals, got away with 12 lbs. of Cyanide of Potassium. It is remarkable that, when they could have stolen so many valuable drugs, they should take a fancy to an article comparatively cheap; it is to be hoped that, for the benefit of the community, they may be tempted to taste it. The thieves gained an entrance by drawing a staple; after some vain attempts to break the patent padlock (Chubb's). It will be remembered that, some three weeks ago, Mr. North's premises at No. 79 were entered, and several articles stolen. Next time they may be successful—in getting a bullet.

Between Saturday night and Monday morning, the premises of Messrs. J. Hartley & Co., No. 24, Water Street, were broken into, and the following articles stolen: one American clock; 2 leather dressing-cases; one glass-stoppered bottle; one frieze morning coat and one dozen felt hats (samples). There is no clue as to how the burglars gained an entrance, as everything seemed in perfect order this morning, with the exception of a window which was wide open; but neither the shutters nor bolts appeared to have been tampered with. It is supposed that some rascal must have been hidden upon the premises, and, when all was quiet, have let in his comrades.

On the 24th inst., a farmer, named Shigeki Kinjiro, was taken into custody for approaching the Mikado's coach, as it was passing Kojimachi home, Tokio, with a document which he wanted to present to His Majesty.

ABOUT one o'clock in the morning of the 2nd inst., a fire broke out in a house in Azumayokocho, Motomachi-dori Ichome, Kobe, and lasted nearly two hours, consuming about twenty four houses, including a kind of low theatre.

THE following fable, which we take from a Tokio paper, is intended for the eyes of the *Kazoku*, to whom the moral is supposed to be applicable:—

"One summer night, I was aroused from slumber by a sound resembling that of persons engaged in high altercation, and, listening for a while, found that a flea, apparently jealous of three mosquitoes who had been troubling me a good deal, was trying to convince them that, by cutting off their wings, they would be able to suck more blood, as those appurtenances made enough noise to awake any reasonable sleeper, and therefore rendered them liable not only to lose their repast, but, very likely, to meet a violent death at the hands of their prey. He concluded his argument with the words, "why not cut off your wings entirely, and imitate my mode of crawling under the bed-clothes, where I can suck blood without interruption." This seemed to have so much weight with the mosquitoes that one of them immediately took off his wings and attacked me under the covering-cloth; another determined to return home, and, after ridding himself of the impediments referred to, renew operations on the ensuing

night, according to the instructions of the flea; and the third, not wishing to lose both wings, cut one of them off, thinking that would lessen the noise sufficiently to enable him to feast quietly. Now, let us contemplate the sad fate of those poor mosquitoes. The first, who was so eager to suck the blood of man that he amputated both of those members by the aid of which alone he could hope to feast, and whose body was not defended with an armour like the flea's, was crushed to death as I turned over on my back; No. 2, the next evening, set out for my couch, but, as he was deprived of wings, and had not the facility of jumping like a flea, he was trodden upon by some one, and crushed to death; No. 3, who found that he was no better off with one wing than with two, started for home in despair, narrowly escaping a similar fate to No. 2 on the way, and eventually died of starvation. Take warning, O *Kazoku*, from this fable! "Don't cut your wings off, on any account."

THE WHOLE of this coast seems to have suffered, more or less, from the recent gales. News from Niigata says that, on the evening of the 20th inst., the wind suddenly rose from E., about 6 o'clock, gradually veering to the southward, and blowing a perfect hurricane. At 8 p.m. the wind was S. and the barometer 29° 10. The damage done seems to have been something almost unparalleled in so short a time, for the typhoon did not last 4 hours, winding up with a strong gale from N. W. about 9.30. Nearly all the inhabitants have suffered more or less in regard to property, but the public gardens appear to have received the worst "cutting up." Many of the fine old cedar and fir trees have been broken off, or torn up by the roots. A small temple, which stood on an artificial mound, has been completely blown over into the lotus pond; and the large temple has suffered severely, as also the new Exhibition building. In Tera-machi (Temple street), a large temple has lost a fine bronze urn which stood on the roof, but that the typhoon took it our correspondent does not say. Five junks and one river-boat have been wrecked, but only one death is reported. The following day (21st) being very fine, all were engaged in clearing up and repairing.

YESTERDAY (27th Aug.), cries of distress were heard proceeding from the house of a man named Mandonsa, a lodging-house keeper and agent for shipping Manila and Chinese sailors. Four negroes rushed out, with knives covered with blood, and three of them were quickly surrounded by the crowd which assembled, and disarmed by a Japanese policeman, who was then obliged to go to the police-station for more help. We are not aware if any serious wounds were inflicted in this disgraceful fray, although it is quite probable. It is greatly to be desired that this quarter of the town, which bears an ill-repute, should be an object of special surveillance, as the Japanese police dare not venture near such scenes, which occur frequently, to the great discomfort of the neighbourhood.—*L'Echo*.

AT THE yearly examination of the pupils of the Kaisei-Gakko, Tokei, which took place a short time ago, the students seem to have progressed beyond all anticipation, and the order preserved during the examination was particularly commendable. At present the number of those studying for the law is 26, there are 48 students of general philosophy, 56 of engineering, 63 of the fine arts, and about 55 of mining, making no less than 248 scholars studying these five branches alone. The build-

ing has every accommodation, including bath-rooms, gymnasium &c. A native paper furnishes this intelligence.

THE KING of the Cannibal Islands—we mean, the Sandwich Islands—has lately written to the Mikado, informing him of the death of the ex-King, and of his accession to the throne. He tells His Majesty that he has appointed his brother his prospective successor, and expresses the hope that the present intimate relations existing between Hawaii and Japan may continue.

The Mikado answered the letter, expressing regret for the decease of the late King, and congratulating the present sovereign on his accession and on his choice of a successor. He concludes with an echo of the Hawaiian monarch's good wishes respecting the intercourse between the two countries.

THE *Herald* learns 1st that the *Adzuma Kan* (*Stonewall*) has been safely floated off the rocks at Nagasaki, and appears to have received but little damage.

A NATIVE paper speaks of a new religious sect which has sprung up in Daigodaiku and Daihichidaiku, promulgated by a farmer of Noritamura, Kanagawa Ken; who appears to have "bewitched" the people of Kurokamamura so much that, through his teaching, husbands drive away their wives and neglect their work. This sect, which already numbers fifteen hundred followers, has a particular hatred of foreigners, and, in a short time, intends to exterminate all Europeans in Yokohama.

A LEADING firm of Yokohama purchased on Saturday (29th ulto.), from Japanese, 1,000 piculs of lead for export; its destination is not stated.

ON Sunday evening (30th ulto.), about 7 o'clock, two Japanese, armed with swords, stopped a third, and having denuded him of all his clothing, kindly allowed him to depart without further molestation. There were numerous onlookers—of neutral proclivities, and firm believers in the truth of the adage anent "discretion."

THE THIEVES who visited Messrs. J. Hartley & Co.'s premises on lot No. 24 on Sunday night probably had to leave in a hurry, and left behind them some plunder. They repeated their friendly call this morning (1st), and eased Messrs. Hartley of as much property as on the previous occasion. Yesterday morning, Mr. Hartley found his gold spectacles on the floor—he left them on his desk on Saturday night; last night he left them in the same place, and this morning found them—missing. Somewhat alarmed at Sunday night's work, the place was watched until 1 a.m. this morning, at which hour all was secure. No police seem to have been near, as the robbery was not discovered until the place was opened for business this morning, when the front window was found to be broken and the bar of the shutter lying on the ground. The interior presented a scene of confusion, a small piece of candle was found on the floor, and several grease spots dotted the matting. It was evident that the thieves were more "enlightened" on this latter occasion, as, on their previous visit, they had apparently only used matches.

THE BURGLAR Question is really becoming one of grave importance, and one which imperatively demands prompt and decided action. Last night our columns contained reports of no less than four daring robberies: one on a firm which had similarly suffered some three weeks ago, and another committed on the premises of a mercantile firm at No. 24. To-night it is our duty to record the consummation of the last-named piece of villainy, in which the burglars repeated their visit and carried off articles they had before been unable to get away with. The question, "Where are the police," has been asked *ad nauseam*. We know where the European police are to be found, as it seems a constable is allowed to patrol the Settlement *solus*, just at the very hours when burglars are in the thick of work. This we have before pointed out, but where are the Japanese police? *Arimasen*. Perhaps eating, perhaps sleeping, peradventure on a journey. Anywhere, except where they ought to be. As Pat said of the "lively flea," put your finger on him, and he is not there. We believe the number of Japanese police on active duty in and about Yokohama is something near four or five hundred. Now, if they could manage to catch just one burglar (even by a fluke) we should begin to be satisfied. As things are, what is the police force? A bye-word, a farce. But the men composing the force are hardly to be blamed. If soldiers or seamen were not properly supervised "shirking" would most assuredly be the order of the day. Those in charge of the police department are to be held responsible, and as representing public sentiment in this matter we do hold them responsible. We put this plain question to the Municipal authorities, and we demand an answer—Are the persons composing this community entitled to the protection they look for, and are they to have it?

#### ASSASSINATION OF MR. HABER.

MOST SERIOUS news has just reached us by telegram. It is, that Mr. L. Haber, Acting German Consul at Hakodadi, was cut down by a *samurai* of Aki-Ken (? Akita) on the 11th. The assassin at once gave himself up to the police and admitted being the murderer. A messenger bearing full particulars is expected to reach Yokohama to-night 20th ulto. The German corvette *Elizabeth* leaves for Hakodadi at daylight to-morrow, to investigate the affair.

AN esteemed correspondent, writing from Hakodadi, sends us the following details of the murder of Mr. Haber, from which it appears that the assassin had no personal animus against his victim, but committed the crime in obedience to the promptings of a supposed demon. This makes the matter worse, as it is hardly to be supposed that he is the only fanatic amongst the *samurai*, and the force of example in this case may prove too great to be resisted by his discontented compatriots of the *Shizoku* class. The cutting-down took place on the 11th inst. and the remains were interred on the following day. The examination of the assassin was appointed to take place on the same day, 12th inst.

The following are the particulars of the tragedy:

I beg to convey to you the melancholy intelligence of a most atrocious murder, committed by a Japanese on the person of Mr. L. Haber, German Consul and Merchant of this port. The dreadful event took place last evening (Tuesday, 11th Aug.), between six and seven o'clock, as the deceased was taking a walk,

hardly clear of the town. He was assailed by the ruffian with a sword, and cut in the most fearful manner; one of the poor fellow's legs merely hanging to the body by a piece of skin.

The body was conveyed to the Saibansho, together with the person of the murderer, who gave himself up, acknowledging his guilt and voluntarily making the following statement: That he was from Akita, on the western coast of Nippon; that he had formerly been a *Samourai*; that some God had appeared to him in a dream, and told him to take the life of a foreigner, as they were the primary cause of the change of Japanese government. That he had brought from Akita 13 yen, which he had expended in the Yoshiwara of Hakodate, where he had been four days, as money would be of no further use to him. That he had no malice against Mr. Haber, except that he was the first who caught his eye, when ready for the deed.

The body of the unfortunate gentleman was conveyed, at eleven o'clock last evening, from the Saibansho to the Hospital, to be sewn together (so fearful were the gashes) before the interment, which will take place this evening.

We were fellow-guests at Capt. Blakiston's yesterday, and sat at the dinner table side by side.

The further examination of the prisoner, with the enquiry into all matters attached to the dreadful event takes place this morning.

THE FOLLOWING additional particulars have been kindly forwarded us by a resident of Hakodadi. They comprise all that was known of the sad affair up to the hour the messenger left:—

HAKODADI, August 12th, 1874.

Yesterday evening, between the hours of six and seven o'clock, word was brought into town that Mr. L. Haber, German Consul at this port, had been murdered, and his watch stolen. A party of foreigners immediately started for the scene of the murder, which occurred at Yadingasura, a pretty valley about a mile from town, much frequented by foreigners in their walks.

In a garden, on an onion bed, lay the body of Mr. Haber, who was dead when first discovered. It was placed on a door and brought to the Saibansho, from whence it was taken to the hospital, there to be dressed and placed in a coffin and then removed to the house of Capt. Blakiston, where the deceased gentleman had been stopping. The funeral is expected to take place to-morrow, though no notice has as yet been given.

The murderer is a Japanese from Akita, who came to this port three days ago. On arriving here, he states, he saw a vision, in which the great God of Japan appeared to him, 9 feet high, and commanded him to kill foreigners, who were overthrowing the government. He then prayed *O Kami Sama* to show him the name and nationality of the person, but received no answer to his prayer at that time. Yesterday afternoon, he took a *jirikisha* and went to a tea-house at Yadingasura. While there, he saw somebody coming, a long distance off. He thought it was a foreigner, and prayed to *O Kami Sama*. He then left the tea-house and walked toward the foreigner. Mr. Haber looked at him and he at Mr. Haber. The Japanese then threw his umbrella in Mr. Haber's face. Mr. Haber said something, what, the Japanese could not understand.

The latter then drew his sword, which was a short one, about two feet long, and Mr. Haber ran. The Japanese pursued and cut him in the head, splitting it wide open, and then proceeded to hack the body into pieces.

The unfortunate man received four fearful cuts on the head, and both his arms were nearly cut off, evidently in trying to defend himself. There were several cuts on the body, and one leg was cut almost entirely off. I counted thirteen cuts, and could only see part of the body.

The murderer gave himself up, and was examined at the Saibansho last night; from which examination these facts were gathered.

After committing the deed, the murderer told a farmer to go and wash the body, but the latter refused, whereupon the savage threatened to kill him also; he then changed his mind. The assassin told the farmer to take his victim's watch as a trophy for the God, while he himself took the hat.

A further examination will be held to-day, when more particulars will be learned.

The Government will send a steamer this morning to Awomori and from there despatch a special messenger, to run day and night, to Yedo, to carry despatches concerning this sad case.

Intense excitement prevails. Foreigners are all carrying revolvers, not knowing when another Japanese may dream his little dream.

Mr. Haber was in the habit of taking the same road every evening, in going for a bathe in the surf.

It is with difficulty that I can get this letter sent by the messenger, as it is a Government affair, and I am very much hurried.

I transmit these few facts, and you can form your own opinions of this strange affair.

THE FOLLOWING is a translation of a document found on the person of the murderer of Mr. Haber, the German Consul at Hakodate:—

Minamoto no Asomi Tasaki Hidechika, reverently and with profound awe, in God's country of Isé, worships the most honourable gods of the two temples (there situated); the great gods of the three temples in the Eastern Country (of Japan) and in Izumo, the great god of the Kitsuki temple, and the tutelary gods of his native province of Akita, and the tutelary gods of his native town, and the gods of Heaven, and the gods of earth, the eight million gods that dwell in all parts of the world. (This meaning innumerable). To these gods, with great care and watchfulness, and with deepest veneration, he prays. I, Hidechika, although fearful in myself, yet belong to the male sex, and should therefore be manly.

Through the guidance and instruction received from a certain Shinto priest called Fuji-wara no Yasusuki, ministering in the provincial temple, and four others, and through the perusal of certain books which treat of God's world at the time when heaven and earth spring into existence, I discovered that all things in the world were the work of the Great God, and that there was no imperfection or omission in anything that he did. The now-existing god (Mikado), the next in rank to the sun in the heaven, (sits) on his high and honourable throne in the whole of the world. Japan is the most highly-favoured and tranquil country. The distinction between, and the relation to each, of master and servant, and the courses of conduct to be pursued by subjects, are admirably perfect. She is an active and prosperous country and has become full of glory.

When residing in Hakodate, seeing that the foreigners, mad robbers, contemplated holding a conference for the purpose of overthrowing the Mikado; before they, and certain Japanese in conjunction with them, met

for deliberation, I was commanded to kill them. This the most ancient god called Kan Yamato Iwarehiko Sumera-mikoto the night before last revealed to me in a dream; although I was unworthy (of such a favour) yet I hailed such a high and honorable revelation with great joy, and assented to it with profound awe. From this time, being in search of the mad robbers, I pray that they may be shown to me, and that in case I meet with them I may be quietly informed that they are the ones I seek. A previous Mikado said, after the manner of his heart, "cause the foreigners to be killed, that the pure light of this empire may shine in all countries." Therefore, this action is the best that can be taken.

If I see the foreigners and cannot kill them, then quickly punish Hidechika's body, and cause his departure from the world. I thus speak to you because the work I have undertaken is terribly severe. Do you cause it to be brought to pass, and bless my pure and patriotic heart, and the truth which is in me, and rejoice. I pray that God may so rejoice. Thus, with profound awe, I speak to him.

TAZAKI HADECHIKA, the assassin of Mr. Haber, has retracted his original "confession", in which he stated that he committed the murder in obedience to the commands of the Kami, who appeared to him in a dream. A Tokei paper says—"The truth was found out on his trial before Shiho Gonshohau-ji Inouye Yoshitake, who persuaded him to confess the truth, after blows were given him. He confessed that, on the occasion of the late revolution (in Saga), he did not go to fight, pretending to be sick, although duty was imposed upon him. In consequence, he was constantly taunted by his companions, who failed not to remind him of his cowardice. To get rid of the remembrance of his shame, he began the study of the Shinto doctrine, but, in June last, the government having done away with the facilities which before existed for acquiring such learning, he became enraged, and his anger was increased by seeing the progress of European ideas and teachings, and the promulgation of the doctrines of Christianity in the country. He resolved, therefore, to kill at least one foreigner, to shew his patriotic heart and cleanse himself of his disgrace. He admits that he had no companions, and is alone responsible for the deed. This he confessed on the 17th inst., in presence of the foreign Consuls and the people assembled to witness his trial.

The judge, notwithstanding this confession, is having him closely watched, in order to ascertain whether there be any others accessory to the murder."

(AFTER THE "JAPAN MAIL.")

SATURDAY, 29th Aug., 1874.

Ladies and Gentlemen: Please to pity the poor samourai. Though he cut down a harmless man, without provocation, it was misdirected zeal, the exuberant over-growth of a noble nature.

Let us not call him a murderous scoundrel—his great heart was big with lofty thoughts, and he longed to go forth to carve himself a name on History's pedestal, as I believe Shakespeare does not say. Walking through verdant meadows, and pondering (who knows?) over the flora of Japan, or, let us say, the cuneiform inscriptions of Nineveh, he met a Biped! a Human Being! a German! a Thing that perhaps drank beer and made clumsy

jokes! How could he tell whether the Biped had read FORD or been at Venice?

Not even a married clergyman was at hand to post him.

Observe the instantaneous *Zusammen-ver-ein-gesellschaft* of his mind. He decided promptly that this Biped must be discontinued, so, drawing his gleaming Excalibur, he rushed on to victory! Victory the more certain because there was so mighty little chance on the other side. He came, he saw, he conquered, and, throwing his blood-stained sword in thunder down, he peacefully awaits decapitation.

But let no ignorant or prejudiced Englishman be severe on him; his virtues were all his own, his defects—(but we know the old quotation).

The following is a translation of the Imperial Notification respecting the murder of Mr. Haber at Hakodate:

TO SHI, FU, AND KEN.

Tasaki Hidechika, a Shizoku of Akita Ken, was apprehended on his own confession, at the police station (junsha tamurojo), Hakodate, of having murdered the German Acting Consul at that place.

The frequent wicked attacks on foreigners since we have entered into intercourse with foreign countries grieves the Emperor, and endangers that intercourse. It is indeed very wrong that, notwithstanding the orders in previous notifications, such wicked acts are still performed at the present day, in disobedience to the Imperial commands, and contrary to friendship with foreign powers. The local officers must warn all the people, that they act up to His Majesty's commands.

27th August, 1874.

## SECOND CANOE SAILING RACE.

THE SECOND of the canoe sailing races of the season came off yesterday evening (12th ulto.), and, so far as the wishes of the donor of the prizes were concerned, we are sure no more propitiatory circumstances could have arisen. A calm sea, a pleasant S. W. ly breeze, and a cool evening tempted a number of people on to the Bund, and no less than 17 competitors appeared punctually at the post in their canoes. We were glad to notice several parties of ladies on the water, and considering the great exodus to the Hakoné lake district, we were pleased to find that some were yet left to give encouragement to the aquatic portion of our community.

After a lot of drilling on the part of the energetic starter, Lieut. St. John, the craft were all got into their places and into very fair line, and an excellent start was effected at 13 minutes past 5 p.m. A noticeable improvement had taken place amongst the canoeists with regard to the handling of their sails and attendant gear, which we well know have a most provoking way of becoming entangled around one's arms, legs, and head, more particularly in moments of emergency, and we were much gratified to see all underweigh so rapidly and without any fouling or mishaps.

An excellent run, with the wind free, was made out to the flagboat, Mr. Dare's yacht *Breeze*, which was anchored about a mile out. Mr. G. M. Dare, Mr. Jones, and Mr. Kilby got off with the lead, but were collared by Mr. Tripp, who again took the lead with his big lateen sail and was the first to round the *Breeze*, closely followed by Mr. G. M. Dare; when, owing to Mr. Tripp having to shift his sail each time he wore, the others all came up and passed him; Mr. G. M. Dare being off with a long lead on the close-hauled tack back to the starter's boat, followed by Mr. Jones, and Messrs. Alfred

and J. J. Dare, close together. The latter two soon passed Mr. Jones, and, before tacking to clear the starter's boat, were well to windward of all; most of the others having drifted considerably to leeward, the wind having unluckily veered to off the land, and thus in a measure spoilt the object of the race as originally intended, i.e., a fair wind both ways and no tacking, so as to give all a fair chance. With the wind off shore, the whole fleet were sent straggling in all directions, a few of the cracks only holding their own in the manoeuvring to windward. The first round was completed thus:

Mr. Alfred Dare, .....	5.47 P.M.
„ J. J. Dare, .....	5.54 „
„ Davidson, .....	5.59 „
„ Tripp, .....	6.01 „
„ G. M. Dare: who had apparently been on a cruise on his own account.	
„ Jones, .....	6.07 P.M.
„ Kilby, .....	6.08 „
„ Dousebes, .....	6.14 „
„ Hodgson, .....	6.17 „
„ Hamilton, .....	6.25 „
Lieut. Drury, .....	6.35 „

The others were scattered about the harbour and were not in the rest of the race that we could see.

Messrs. Alfred and J. J. Dare and Mr. Davidson, the first setting a balloon jib, ran away out, to again round the yacht, long ahead of the rest. Mr. Alfred Dare had a long lead but was rapidly caught up by Mr. J. J. Dare, both in the run out and tack back, no alteration taking place in their positions until close up to the winning point, when Mr. J. J. Dare, who had very carefully sailed his boat, managed to weather on his brother, and cut in and passed the stake boat first, at 6.30 p.m. Mr. Alfred Dare came in second, 3 minutes astern; Mr. Jones, who very pluckily held on, came in 10 minutes later and took the third prize. Mr. Kilby made a good fourth, and Mr. Dousebes was fifth.

As it was getting late, and there was no prospect of any of the others saving their time, the stake-boat was withdrawn, and thus ended a very pleasant and harmless two-hours evening's amusement on our bay.

Great credit is due to the starter for the capital handling of his flotilla at the start: no easy matter with 17 restive and impatient competitors, all eager to be off; and we must also be allowed to congratulate the majority of the canoeists on the improved handling of their craft. Not a single hitch or mishap occurred during the whole race, and, notwithstanding the temptation to a swim these warm summer evenings, not a single capsize took place, which, we must say, was exceedingly forbearing on the part of these "sons of the briny;" a temptation some were not able to withstand on the last occasion of the kind we had the pleasant office of recording.

### CANOE RACE.

The third canoe race of the season took place on 27th ulto., and was in all respects most successful. Nine competitors appeared at the post, and a good start was effected, punctually at the time appointed. Paddling with mast and sails down, all kept well together, except Dr. Buckle, who had such a quantity of sail on deck that his movements seemed to be somewhat impeded. Off the Creek Messrs. Tripp and Davidson drew ahead, the former arriving first at the turning boat; but, making some what of a wide turn, he allowed the latter to get inside and ahead of him. They were followed very closely by five other

competitors, the rest, except Messrs. Kilby and Smith, who were the last to arrive, being not far behind. Then commenced the work of setting sail, which, with one or two exceptions, was cleverly done. Mr. Tripp was the first to get away, with Mr. Davidson close behind, and Messrs. Jones, Smyth, Longford, Buckle, and Hodgson almost together. Messrs. Jones and Smyth soon drew away from the ruck, and, overhauling Mr. Davidson, appeared at one time as if they were going to give Mr. Tripp the go-by; but a stern chase is proverbially a long one, and the latter eventually came in a winner, with but little to spare. Messrs. Jones and Smyth were, respectively, a very good second and third, and Dr. Buckle was fourth; the latter, under sail, picked up considerably on the leaders.

We must really enter our protest against the behaviour of certain gigs and house-boats which accompanied the race. It is so easy for them to keep out of the way, and yet, we noticed, they continually interfered with the competitors. Two most palpable instances came under our observation. One gig pulled close to Mr. Tripp and, giving him the wash of its oars, almost stopped his way for half a minute; the other, a large house-boat, kept carefully astern of Mr. Smyth, and took all the wind out of his sails for some distance. On the occasion of the next contest, which, we hear, is to come off shortly, for a presented cup, we trust the lookers-on will take our remarks in good part and "clear the course."

### CHIARINI'S ROYAL ITALIAN CIRCUS.

Great was the assemblage of pleasure-seekers at the opening performance of Chiarini's Circus, last evening (31st ulto.), and as well-deserved as generous was the amount of applause bestowed upon the performers, both human and equine. At nine o'clock, the private boxes, each containing four chairs, were nearly all occupied; the first-class seats were filled—and more than filled, for some were unable to obtain seats; the second seats were crammed, and the third-class, intended for the million, were passably well filled, principally by Japanese, who were not to be deterred by the (to them) comparatively high price, fifty cents, they had to pay for admission.

The general arrangements for the comfort of the vast audience were most admirable. Gas pipes had been laid from the native town, and a large central chandelier, with sufficient side-lights, gave a brilliant appearance to the interior of the spacious marquee, to the ventilation of which consideration had wisely been given. As a consequence, notwithstanding the closeness of the evening, the atmosphere of the interior was cool and pleasant.

Of the performance itself it will be unnecessary to speak at length, and, as everyone in and around the Settlement is sure to pay the Company at least one visit before they leave, we will not mar the pleasure of anticipation by enlarging on what we saw last night. In every way, the performance was most excellent; the horses are splendid creatures, and marvels of precision in the various difficult feats in which they are exercised, and the *artistes*, male and female, are the cleverest of the clever in their respective lines. Senorito Belen Cuba well deserves the appellation of "The Queen of the Arena," and her feats, and those of her brother, Theodoro, on bare-back steeds, must literally be seen to be believed. Senorita Adeleide Palomini

shews to great advantage on the beautifully-trained animal she directs, and last night obtained a well-deserved encore. Madame Herbert Leon, in her Principal Equestrian Act, executed some difficult feats, in a graceful manner, which were received with applause. The gymnastic and acrobatic performances by Messrs. H. Wallace, W. O. Stevens, and L. Camargo were above the ordinary standard of such things, and the graceful manner in which they accomplished some very difficult manoeuvres elicited great admiration. Mons. A. Herbert appeared in an Equestrian Act, and Signor Chiarini exhibited the performances of two intelligent and beautiful horses, "Prince and Duke." "Arlequin," a Mexican pony, and "Mosca," a diminutive specimen of the genus, with a well-developed talent for kicking, created much amusement. Of the clowns perhaps it would be unfair to say much of a critical nature, the company having lately been deprived of the services of one almost inimitable in his line. The band was the weakest feature of the entertainment; but we believe it is the best—being the only one—which Yokohama affords. The performers are good, but the strains of a violin, a piccolo, an harmonium, and a big drum are hardly up to the requirements of such an entertainment. The performance is altogether so good that we can cordially recommend our readers to pay the circus a visit.

— — —  
To the Editor of the *Japan Gazette*.

SIR,—As a Japanese, many years resident abroad, I have read the letter of your correspondent Me-tzke, and your own articles upon it, on the subject of the Kaitakushi, with much pain. I can assure you, sir, that, when I returned to Japan, after visiting other countries, and making a very lengthened stay in some, my feelings of patriotism received many a rude shock. I saw far more plainly than I had done in Europe and America how far my country was behind in many respects. I need not gratify the self-love of foreigners nor hurt the feelings of my own countrymen by detailing in your columns the various things that disappointed me; but one thing vexed me more than anything else, and that was, that whilst in their own countries foreigners shewed me so much kindness for the sake of my nationality that I can never forget it or cease to be grateful for it, when I returned I found the foreign residents in Japan full of complaints, and with rarely a good word for our government or our people.

Sir, I have a very great respect for foreigners, and particularly for the foreign press. I have seen the wonderful power of the press in all the countries I have visited. Whether its influences are exerted for good or evil, there is nothing so powerful; and, perhaps you will smile when I acknowledge that, on several occasions, when I have been enabled, by writing a few lines to an editor, to correct some error, or give some information respecting my country, I have felt an inward pride at seeing my letters or my information printed, and considering that they would be circulated and read far and near.

When abroad, I was not surprised to see many misstatements respecting a country so little known as Japan. Indeed, I often thought that if the foreigners knew us better they might not be so anxious to shew us such extreme favour. Yet I used to reason with myself, that all the kindness a Japanese everywhere received must arise from the favourable reports of us sent home by foreigners already in Japan. The accounts, too, of our

progress, as given in the Yokohama newspapers, led me to believe that the changes in my native land had really been so vast as to entitle our people to the consideration we received. But now, how are my eyes opened? I see around me, everywhere, the changes and their effects; but where are the improvements? I was proud to see a railway. I was proud to see telegraphs. I was proud, long before my eyes beheld my native shores, to hear the captain of the steamer praising our government for the increased safety to navigators in our seas by the lighthouses with which they had so liberally marked our most dangerous and prominent headlands; and if, in common with foreigners, I was not favourably impressed with the style of dress adopted by many of my countrymen in their attempts to "improve" by copying foreigners, I was glad to see in many cases better houses and better roads in all directions.

But I found the press constantly, never ceasingly, and by no means tenderly, lashing our faults and foibles. Judging by some of the writers, we have no virtues, and every kind of vice. Even the *Japan Gazette*, which we generally look upon as the most candid and the least prejudiced of the foreign newspapers, often admits strictures on us, to which, so far as I have seen, no reply has ever been made. But your article of last evening is harder upon us than usual. And harder still, because it is not possible to deny or disprove the charges brought against our officials.

But is all the blame attributed to them exclusively due to them? Are all the foreigners connected with our public works absolutely immaculate? For instance, when orders go home for supplies of any kind, to whom do the trade discounts and allowances go? Do the departments get the benefit of them, the agents only taking their commission? Or, do they go to enrich the agents, in addition to the regular commission?

We, Japanese, have our own opinions on this subject. We have not the means of obtaining accurate information on such subjects as foreigners have; and particular enquiries would only subject us to suspicion and annoyance, without helping us to any of the facts. Believe me, Sir, we do not find fault with the foreign press for aiding us, by their watchfulness and their plain-speaking, in rooting out the dishonesty we know does exist in some places; but we do ask that Justice may hold the scales fairly and without favour. You and your correspondents have often assailed us. Now, I desire you to put the questions asked in your article of yesterday with reference to the speculation of Japanese, with the same plainness with reference to foreigners. You ask "Has the Railway been free of it" (peculation)? "The Telegraphs? The Lighthouses?" Well, I wish you to repeat the question with reference to the foreigners who have the ordering of goods for these and other departments, from abroad.

As I write this letter to you in perfect good faith, without any *animus*, or having any particular foreigner or transaction in my mind, and only with the view of eliciting the truth, and discovering whether, supposing my countrymen to be as black as they are generally painted, there are not some who hold their heads high among foreigners who are, to use a common simile, tarred with the same brush, I respectfully ask you to publish it. You will add to the obligation if you will first correct any inaccuracies in my

English, and render plain what I may have not written so intelligibly as is requisite. I enclose my card, but hope you will not unnecessarily divulge the personality of a Japanese, who for the present prefers to be.

NAMELESS.

Tokai, 27th August, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

I see that *L'Echo du Japon's* correspondent doubts the correctness of your statement in regard to the increase of duty or tax upon Silk-worm Egg cartons.

He says that the notification of April last still holds good, and that the cartons, according to that notification, were furnished by the Government, to the producers of eggs, at 15 cents each; you had it, at 16 cents each. I will not dispute with him about the one cent difference, although I believe 16 cents is correct. Be it 15 or 16 cents, I agree with the gentleman who states in your French contemporary that that regulation stands good, and that all who desired to make cartons this year were compelled by that law to purchase cards from the government bearing the official stamp, and were allowed none other; and that they all paid the fixed price as stated above for those government stamped cards.

But now comes a new regulation, as a rider to the former one, forbidding any dealer to bring any of these cards, with the eggs upon them, into the foreign market, until they have received a second government stamp, for which 5 cents additional duty is charged; and any cards without the second stamp found in the foreign market are to be confiscated, and a fine of 1 *rio* per card so defaulting is to be collected from the dealer who shall so offend.

The correspondent of *L'Echo du Japon* is quite correct as to the former regulation remaining unchanged; but he seems to be ignorant that it has been supplemented by a second, and herein lies his mistake. I have my information from several independent sources among the native dealers, and believe it to be correct.

Is not this second stamp-duty an afterthought, to help to pay the expenses of the Taiwan Expedition?

I think this double internal-revenue tax, in addition to the export duty paid at the custom-house, is rather more than the trade can well bear; and to me it seems, I confess, rather too much like killing the goose that lays the golden eggs.

Yours faithfully,

OBSERVER.

Yokohama, 19th Aug., 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

*L'Echo du Japon* seems yet to be in a cloud in regard to the question of taxes upon cartons. If your contemporary will but refer to my former letter he will see that I did not admit that 15c. was nearer correct than 16c., as originally charged for the blank cartons.

Our friend challenges me to produce the date and number of government orders, etc., but if he had ever seen the government order for this tax he would have found that the tax was charged in *momme*, not in *sen* or cents, and therefore it is a question of the daily fluctuation of exchange, and so may be 17, or 16, or even sometimes as low as fifteen cents; but I believe 16c. is as near the average as need be.

As to reference to Government documents, I would ask our polite friend if he thinks that Government papers always speak the exact truth? For example, how about the sale of the *New York* the other day? What do they show with regard to the \$30,000 extra paid for her? Again, let me ask our kind friend of dates and numbers has he searched the archives of the Home Office, scanning every page of each book and every folded paper, and, still further, has he put all the officers and clerks upon their oath to testify that no second tax has been levied.

I am in the *carton* business, and native dealers tell me that a second stamp is required, and this being not yet extant the cartons are kept waiting in the interior under a penalty of 1 *rio* per card, together with the forfeiture of all cards offered without it. They tell me also, that not only is the extra 5 cents duty demanded, but that, besides the lawful duty publicly ordered on the first and on the second stamp, they are compelled to pay a secret bribe whenever they get blank cards; as well as when they are presented for the second stamp.

One man yesterday informed me that his blank cards cost him 1½ *boos*, and he did not yet know how much bribe or squeeze he would be compelled to pay when getting the second stamp. All this must be counted, together with the expense of raising the worms and depositing the eggs upon the card, and then, after all this, when the goods are transferred to the foreign buyer, he must still take his Report Book and go to the *Machi-gai-sho*, and there pay a small *advallorem* tax, just the same as all native shopmen and merchants do upon their goods sold to foreigners. So we see that, when all demands have been paid, the native *graineur* pays a tax of nearer 50 cents than 15 cents for each *carton* he sells.

In sort of justice, it is said that those unsold may be returned to the government and the taxes then will be refunded. But will all the secret squeezes be refunded? And will there be no squeeze required upon the refunding of taxes upon returned cartons?

If our dear friend of *L'Echo* does not yet begin to see some streaks of light I must pronounce him a hopeless case, beyond the skill of modern optic science, and so bid him a sad adieu.

Yours faithfully,

OBSERVER.

Yokohama, 26th August, 1874.

To the Editor of the *Japan Gazette*.

SIR,

The curious observer will notice that the blind men who go about here whistle more by night than by day. There does not seem a very clear season for it, as the streets are comparatively empty, and it is simply a hideous nuisance. Is it no one's business to stop it? A bucket of water and a squirt are very efficacious at times, and, if you will print this so that the blind men can read it, perhaps they will take the hint!

Yours obediently,

PEACE AND QUIET.

Yokohama, 26th August, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

I hear that there is a prospect of trouble in the interior of Japan, on account of the decree lately published by the Government enrolling all men between the ages of 18 and

30, of the common people, either in the Army or in the Navy! According to the most reliable native accounts, this seems to be a movement instituted for the purpose of displacing the dangerous *samurai* by a more manageable class of people, as soldiers in the public service. Indeed, we all know that the government has reason to fear the uncontrollable spirit of the old *samurai* class, especially if these alone are to hold arms in their hands as the nation's military force. They have been tried and have been found to be too eccentric and wild for the new *regime* of law, order and civilization. The kind of material required for military use under the old feudal system and that required by a more advanced state of civilization are quite different from each other. In ancient times, personal valour, prowess, courage, were the great qualifications for a soldier. Now, order, discipline, obedience to command, are the chief qualities in demand for the marshaling of vast armies, whose triumph or defeat depends mainly on their movements being promptly executed in strict obedience to one commander.

The defense and capture of *Rock Gate* in Formosa by the aid of modern implements of warfare was quite a different affair and was conducted in quite a different manner from that of the famous struggle of *Thermopylae*, where Leonidas with his three hundred Spartans so bravely contended to the death with the myriad hosts of Xerxes.

Many a passage in the ancient history of the valourous *Samurai* of Japan may well remind one of the lines written by Simonides, and placed over the tomb of Leonidas and his brave band—which have been translated by some one as follows:

"Go tell the Spartans thou that passes by,  
That here obedient to their laws we lie."

Still, however much we may admire the old Spartan spirit, whether found in ancient Grecian history or in the annals of Old Japan, we cannot be blind to the fact that the age of Leonidas and of his power has passed away. A mere stripling, with no claim to either the courage of a Spartan's heart or to the physical force of a Spartan's arm, might with one of our modern needle-guns have laid Leonidas low, without incurring the least danger from his doughty spear or his keen flashing sword. War has come to be a matter of scientific skill and unquestioning discipline, instead of personal prowess. Therefore, the Japanese Government, being well aware of this, is now trying to recruit its armies from the more pliant material of the common people, and so hope to attain to a better state of discipline than can be instituted while their old Spartan cohorts of *Samurai* remain in the government service.

But this movement is like to be attended with considerable difficulty, in consequence of the distaste of the unmilitary classes for military life, and their consternation at the sweeping demands of the government for the enrolment at once of *all* the flower of their young men!

It is said that Yokohama, Yedo, and other ports in the immediate vicinity of foreigners are left out of this all-devouring conscription, in order not to attract too much foreign criticism, but that it is pressed vigorously in all other parts, and that strong opposition is being secretly organized among the people! Will the Spartan spirit of the old *Samurai* remain dormant through all this? We wait to see!

Yours truly,

OBSERVER.

## Law Reports.

### In H. B. M.'s Provincial Court.

Saturday, August 22nd, 1874.

Before C. W. GOODWIN, Esq., Assist. Judge.

THEO. THISTEDT vs. WM. WYLDE.

In this case, plaintiff brought an action to compel defendant to deliver up certain furniture and trade tools belonging to him, and to render a statement of accounts between them in an alleged partnership.

Defendant denied the existence of any partnership whatever, "by deed, word, or action."

Plaintiff maintained that a partnership had really existed between himself and Mr. Wylde since Christmas last, although no deed of partnership had been drawn up. There was an understanding that they were to share profits equally. He claimed the working tools which he brought into the business at Christmas.

Theodore Thistedt, sworn:—At the beginning of this year I went to Mr. Wylde's place. There was an understanding between us that an agreement of partnership would be drawn up; this was not done. We agreed to divide profits after paying house expenses. I have continued to work with defendant, up to within 3 weeks and 6 days ago. Mr. Wylde always kept a book of account of work done. There has never been any regular settlement of profits between us. I have had money from him. When I collected any monies I paid them over to defendant. I cannot say how much money I have received from him. I claim certain tools, now in his house, which I took there when I went into business with him. I went to ask him for my things on Monday, but he would not let me have them. There is one bill of \$35 or \$40 due me. Defendant has been sick most of the time, and I have done most of the work.

To Defendant:—It is 3 weeks and 6 days since I left you.

His Honour said, as far as he could make out, there had been a species of partnership, and therefore he would make an order that defendant should produce his books and give an account of all monies received between January 1st and July 20th; and that he produce an account of all furniture and tools in his possession belonging to plaintiff.

Adjourned accordingly, until Monday next.

F. Beato was charged by James Davison with assaulting and beating him, on the 19th inst., and also with forcibly entering his premises at No. 28-A, on the 20th inst. He pleaded not guilty.

James Davison, sworn:—I am a Commission Agent, doing business at No. 28-A. Mr. Beato has a considerable quantity of goods in my godown, under mortgage to the Bank, who have placed them in my charge as Agent for their sale. For convenience of sale, I have permitted Mr. Beato the use of my offices on the upper story as muster rooms, since the beginning of June last. He pays me no rent, and is there merely out of courtesy. He had occupied the rooms before. Up to that time, the sale of the goods had been under my direction. On the 19th instant, Mr. Englehardt, who is a clerk with Mr. Beato in the offices upstairs, at the request of Mr. Beato came down into my office to look through some boxes with me, for a book which had been mislaid. We found it in an iron box which I had not before searched, and I handed it to Mr. Englehardt, with whom I then had

some general conversation. I heard some one coming downstairs. He stopped and told a boy to call Mr. Englehardt. Mr. Englehardt lingered a little with me and then Mr. Beato appeared in person at the office door, and, referring to a Sale's Book belonging to my office, said he would have it, that it belonged to him. I replied, it was in my safe, that I would not give it up; but that if he wished for any information from the book he could have it. Mr. Beato began to get excited and I went out from the Clerk's office, where I was, into my own private office, and sat down. Thereupon he came within the door of my private office, very much excited, and gesturing greatly. He spoke sometimes in French, and said he would give me blows. He looked round for a weapon and found a carriage whip. I ordered him out of my office, as he had no right there. He went out, and upstairs. I could hear him making use of abusive language in French, calling me thief, &c. He had put down the whip. After this was over, I wrote him a letter. (Letter produced, requesting him to vacate the offices, and remove his furniture, &c.) The letter was delivered that evening, and the chit-book signed by Mr. Beato. After the business of the day was over, I went over his offices with my comrade, to see that the windows were secured, and then locked the doors and put the keys in my pocket. Next morning, when I came to the office, I found that the door had been broken open and that Mr. Beato was in possession of the offices on the first floor. I then took out a summons for the assault. This is a most unpleasant affair, and I merely bring the case to prevent a repetition of it, as we are continually crossing and re-crossing each other.

In defence, accused said he had not laid a hand on Mr. Davison. He merely went to his office and asked for a book which belonged to him. Mr. Davison replied that it was in his safe, and that he would not deliver it up. That his conduct was disgraceful, and that it had been so for some time. His Honour said he should call upon accused to find security in his own recognisances in \$200 to keep the peace towards Mr. Davison and all Her Majesty's subjects.

Before RUSSELL ROBERTSON, Esq., Consul.

Thursday, August 27th, 1874.

James Denny, an employé of the Railway Department, appeared in answer to a summons charging him with having assaulted one Yatsugoro.

Yatsugoro, cautioned:—I am engaged in drawing water at the Railway Station, and on the 19th inst., about half-past 7, was carrying some water to wash the floor, when defendant told me to give him a drink. Upon tasting the water he said, "Do you think I am going to drink water like that," and struck me a violent blow on the breast, which knocked me down. Whilst I was on the ground he struck me several times with the pole that I use for carrying water.

Tokichi, cautioned:—I am employed in the same capacity as the previous witness. On the morning in question, about half-past 7 o'clock, I saw plaintiff carrying water. He was about 18 feet from me. A foreigner, named Johnson, likewise an employé of the Railway department, went and tasted the water, and then spat it out, addressing some words to Yatsugoro to the effect that it was not proper water for drinking. Denny then came up, and said he "would kill him if he gave water like that to drink," and struck him on the breast. He then took hold of a pole, with which Yatsugoro

was carrying water, and struck him on the arm. After complainant was down, defendant struck and kicked him several times. A man, named Shokichi, who was some distance off, ran to the Railway Office to complain about the matter. That was all I saw.

In answer to Court:—I am not blind, but a little shortsighted. I can see very well a matter of 12 feet off.

Shokichi and Yokichi, after being cautioned, gave corroborative evidence.

Geo. Cripps, on behalf of defendant, sworn:—I am in the employ of the Railway Department. I am the person referred to as Johnson. On the 19th instant, about half-past seven in the morning, the coolie (he who is pretending to be sick) was carrying water to the cook-house. He had brought some before which was salt, and I watched him to see if he would bring any more like it. I tasted some of the next lot and it was like the first. Denny then capsize the pails, and the coolie fell over one of them and knocked his head. There was not another coolie present for 10 minutes after it occurred. The tea we had that morning was quite salt. Complainant was not struck. I was standing close by and saw all that passed. The coolie got up once, and then lay down again. After lying for half an hour, he rose, and walked a couple of yards, and then the two coolies who gave evidence helped him away.

E. Wheeler, M. D., sworn:—On the day in question, about 8 o'clock in the morning, I happened to be at the Railway Station, when Mr. Smith asked me to look at a coolie who had been hurt. I found plaintiff lying in a shed. He said a man had struck him on the right shoulder, and complained of inability to move the arm. There were no bones broken. I considered he was hurt badly enough to require a few days rest. There was a contusion on the right elbow which might have been caused by a fall. The other mark on the shoulder was scarcely perceptible. I saw him two days afterwards, when he complained of stiffness.

Accused, in defence, said:—I did not strike complainant. He was bringing water to the cook-house; I twisted the stick round and he fell over the buckets, and that was all that occurred. There was a large stone near, but whether or not he struck it I could not tell.

Mr. J. R. Smith, who watched the case on behalf of the Railway authorities, said defendant was a steady man, but had no business to strike the coolie. If he had anything to complain about he should have reported it to the authorities.

His Honour said he had no doubt that the case had been trumped up a good deal. The foreigner's evidence, which was very creditably given, said that no blows were struck. He thought he should meet the ends of justice by fining defendant \$1 and costs.

Mr. Smith asked that damages might be allowed.

His Honour said that, in a criminal case, he could not allow damages, and that, if he had believed all that the Japanese witnesses had said, he should have sent Mr. Denny to prison for a fortnight.

Before RUSSELL ROBERTSON, Esq., Consul.

Wednesday, September 2nd, 1874.

Robert G. Apsley, assistant on board the store-ship *Ellen Hood*, appeared in answer to a summons charging him with having, on the 18th day of August, assaulted one Nakagawa Iskei, a coolie, who was led into Court with his head and breast covered with bandages.

Complainant, cautioned:—My breast is so painful that I do not remember anything. The prisoner struck me.

Juban no Kisitchi, cautioned:—I am a coolie agent for a foreigner. On the 18th of last month I got 127 coolies to load the steamer *Vancouver*, by order of a Chinaman at No. 73. It was a very large cargo and we got finished about half-past five that day. The Captain ordered the coolies to leave the ship. Got on board a lighter with the intention of getting on board the *Ellen Hood*. As the lighter was about to put off, prisoner told complainant to go and fetch some planks that he (prisoner) had forgotten to take out of the steamer. Complainant refused to do so, and prisoner struck him and kicked him several times violently. I pulled prisoner and told him to desist. Complainant was then senseless and I went on shore to complain to the authorities. Prisoner struck complainant with a belying pin and laid his head open.

To Prisoner:—The coolies could have killed you, there were so many of them.

Prisoner, in defence, said:—I ordered the coolies to go on board the steamer and get some dunnage planks that were there. The coolies went aft and got over the steamer's side, and I struck complainant with my open hand in the face, and his nose bled. Some coolie shied a belying pin at me and it hit complainant; who then took it up and beat me with it. The other coolies then chased me round the ship, and tore my clothes. (Clothes torn to pieces produced in Court.) I received great provocation before I struck the first blow.

Henry Battle, sworn:—I am master of the *Ellen Hood*. On the day that the *Vancouver* left, I was on board the *Ellen Hood*; the two vessels were lashed together. The carpenter of the *Vancouver* came and told me to take certain dunnage planks out of the *Vancouver*. I was standing on the quarter-deck of the *Ellen Hood*, and the coolies from the *Vancouver* were rushing along the deck of the *Ellen Hood*. Prisoner was told to stop them, and make them fetch the dunnage planks out of the steamer. He gave complainant a slap on the face, and the latter turned round on him, commenced tearing prisoner's clothes, and dragged him about. Three or four other coolies helped complainant to do this. The belying pin was thrown past me, aimed at the prisoner. I assisted to get prisoner from the coolies. Complainant had the belying pin in his hand at this time, and was using it on the prisoner. The coolies again surrounded prisoner, armed with iron bars, sticks &c. Several Europeans who saw this from the *Vancouver* came on board the *Ellen Hood*, and assisted to get prisoner from the coolies. I sent prisoner on board of the steamer *Washi*, as I was anxious for his safety. The coolies chased me along the deck of the *Ellen Hood*. Complainant was not struck senseless by the blow on the nose from prisoner; he was rushing about the deck more than an hour afterwards.

Mr. Hall, interpreter to the Court, said, that, on the 12th of last month, complainant sued the second-mate of the steamer *Duna*, under a different name, and upon a precisely similar charge.

His Honour and Mr. Hall examined complainant's breast, but, after removing a quantity of extremely dirty rags and plaster, found no marks.

His Honour said prisoner was in fault by striking the first blow, and he should have to fine him. These people were very hot-blooded and probably the bloodshed excited the coolies to hit prisoner. Englishmen must understand that they must not strike even coolies. Prisoner had no business to give the first blow,

which caused all the trouble; he would therefore fine him \$10 and costs.

Complainant claimed doctor's fees, but as there had been no medical evidence produced, and the injuries on the breast were fictitious, His Honour would not allow them.

In H. B. M.'s Supreme Court for China and Japan, at Shanghai.

JULY 30, 1874.

ON APPEAL FROM H.B.M.'s COURT AT KANAGAWA.

S. COCKING and THEO. ALEX. SINGLETON, carrying on business as COCKING & SINGLETON, Plaintiffs and Appellants; and JOHN RICKETT, Acting Agent of the P. & O. Co., Defendant and Respondent.

In the above case, Chief-Judge Hornby gave the following

#### JUDGMENT:

In this case, which comes before me on appeal from a judgment of the Acting Assistant Judge at Yokohama, I fully agree with the learned Judge in his view and statement of the law with respect to voluntary and involuntary bailees, and also as regards gratuitous bailees; but I do not see that the case turns upon any question involving the application of this branch of the law.

As the case presents itself to me on the evidence, the only question is—Have the defendants, in following the course they did follow with regard to the missing case, so conducted themselves as to avail themselves of the clauses in their bills of lading, exempting them from liability? Framed as these documents are, exclusively in the interest of the shipowner, and in such a manner as almost to free them from all possible liability for anything happening to the goods they contract to carry and deliver, I am not inclined to extend their meaning, but, on the contrary, think they ought to be construed, as against the shipowner, strictly. Now, what did the P. & O. Co. contract to do? They contracted to deliver to order, in the like good order and condition, at the port of Yokohama, a case of goods upon, amongst others, this condition: "Consignees, or their assigns, must be ready to take delivery of their goods as soon as the ship is ready to discharge them, otherwise the Company shall be at liberty to land and warehouse, or discharge them into a storeship, at the merchant's risk and expense, and shall have a lien thereon for such expense."

Provided, then, the Company act in conformity with these self-imposed conditions, they avoid liability; but if they travel out of them, then they assume all such liability as attaches under the bill of lading, as if these conditions were non-existent.

It is clear, from the evidence, they did not land and warehouse the missing goods, nor discharge them into a storeship at the merchant's risk and expense; but they put them on board their coal hulk, the *Tiptree*, which, according to the evidence of their agent at Yokohama, is not a storeship, nor is it even a cargo hulk, the Company having merely a special permission from the Customs to use her "only as a medium of transit" from ship to shore, to enable steamers carrying the mails to leave at their appointed time.

It seems to me, therefore, that the *Tiptree* was not a proper place, under the bill of lading, in which to place the property of the plaintiffs. The latter had a right to expect that their goods would be landed and warehoused, or discharged into a "storeship" at their risk

and expense, in which case they would have had a right against the warehouseman or the owner of the "storeship" for any negligence by which they suffered loss.

The Company are, therefore, in this position—either their contract of carriage is not completed by delivery of the article to be carried, or, being completed, they have, instead of acting in conformity with the conditions of the bill of lading, placed the goods in a place from which they have been stolen or lost.

Of course, if they have not completed their contract by delivering the article, for which so-called freight was duly paid in England, they are liable.

Are they then liable for the loss which has been sustained by the plaintiffs, by reason of the goods being placed on board the *Tiptree* instead of being warehoused on shore, or put on board a storeship? If they had been warehoused on shore, or put on board a storeship, the plaintiffs would have had, it seems to me, under the facts detailed in the evidence, a right to recover as against the warehouseman or owner of the storeship for such a loss as is shown to have been sustained by them in consequence of the loss of these goods, for it would have been occasioned by such negligence as parties in positions of either warehousemen or storeship-keepers would have been liable for.

The defendants having then chosen to put them on board the *Tiptree*, must they not be held to have assumed by such a course of conduct all the obligations which warehousemen and owners of storeships would have been fixed with?—for they have certainly no right by any deviation from the conditions of their bill of lading to place the plaintiffs in a worse position than they would have been in, had they strictly followed the course provided for by the bill of lading.

It may, however, be said that the *Tiptree* is a storeship within the bill of lading; but I think this is disposed of by the evidence of the agent of the defendants. But even if it was such a storeship as was meant in the bill of lading,—that is, a ship dedicated to the storage of goods, in ordinary mercantile parlance,—then inasmuch as the owners of it would have been entitled to rent, and might have exacted it by retaining a lien on the goods, they were bound, as the consideration for such rent, to afford special convenience and special protection; and the mere statement that they were not in the habit of exacting rent, or did not intend in this instance to demand rent, will not relieve them from the obligations which their right to rent entails. If, therefore, the *Tiptree* is to be considered as a storeship, it must be considered as one which holds out facilities in the way of safe custody and protection; and if an ordinary storeship, entitled to receive rent for the storage of goods, would be liable—and I think there can be little doubt, that, upon the evidence adduced in this case, it would be so liable—the Company must be considered as having for their own convenience used the *Tiptree* as a storeship, and therefore thrown around it all the attributes of protection and liability which is by the law, custom, or otherwise, thrown around an ordinary storeship. I may here mention, these goods were not merely kept on board the *Tiptree* "only as a medium of transit from ship to shore," but were kept as stored for delivery to the consignee when he should present himself.

On the whole, I am of opinion, although the case is not by any means free from doubt, that the judgment of the Court below should be reversed, and the verdict be entered for the plaintiffs, with costs.

(Signed) EDMUND HORNBY.  
Chief Judge.

### Seizure of the Steamer "Spark" by Pirates.

We regret to have to record a sad and terrible tragedy, which took place on board the steamer *Spark*, which plies between Canton and Macao, on Saturday evening, on her passage to the latter place. It appears that some scoundrels of pirates had embarked on board among the passengers, and that, when near the Bocca Tigris, when the Captain and a passenger were at tiffin, some noise was heard forward, and on Captain Brady going to ascertain what was the matter he was seized and his throat cut from ear to ear. The whole of the crew were also more or less wounded, and Mr. W. W. Mundy, the passenger before-named, was also dangerously stabbed in the right side. The Chief Mate and Purser have not been found, and it is reported that they jumped over the side of the vessel when the attack commenced, but it is possible also that they were killed and thrown overboard. The pirates, having possessed themselves of the valuables on board, then made away in a junk, and, on finding all quiet again, a fireman and a few who had concealed themselves came out of their hiding places, and, after backing the steamer off the shore, on to which she had been run, proceeded to Macao, where they arrived about midnight. The news soon spread through that Colony, causing no little consternation, and the Governor at once rendered every assistance in his power, sending the gun-boat *Camoens* to search the river, and also despatched Captain Benary in a steam-launch to this port with the news. The boat arrived yesterday morning, and those on her describe a painful and sickening scene on board the *Spark*. The Agents of the Company, on receiving the news, despatched the *White Cloud* at once to Macao, and Mr. G. Heard, Capt. Sands, Mr. Bay, and an officer sent by Commodore Parish, to whom they communicated the intelligence, went with that vessel, and orders were given for the gunboat *Elk* to proceed at once to render assistance.

We learn that the service between Canton and Macao will not be interrupted, as the *White Cloud* will replace the *Spark* until she can run again. After her arrival at Macao, she was placed by Captain Carroll temporarily in the hands of his chief officer, and he communicated the intelligence of the sad catastrophe to the Agents here.

Sincere regret is felt for the loss of Captain Brady, who has been long in command of the steamer, and was well-known and generally respected.—*Hongkong Daily Press*, Aug. 24th.

### Latest Particulars.

You have doubtless already heard of the attack made upon the steamer *Spark*, on Saturday, and I hasten to forward you all the particulars I have been able to gather.

The vessel arrived here on Saturday about midnight, and as soon as the news was heard the greatest excitement prevailed throughout the Colony.

The vessel itself, which I visited early the next morning, presented the most ghastly appearance. The decks were drenched with blood, and every part of the lockers and other places wrenched asunder, the marauders having evidently slashed pell-mell in their eager hunt after plunder.

From the accounts given by the survivors, which agree in the main particulars, I am able to give the following details of the occurrence.

It appears that the affair was most carefully planned, and that the time for the attack was arranged to be after passing the *Kinshan* on her way up to Canton and the *Kukiang* coming down.

The Captain was in the saloon at tiffin at the outbreak, and, hearing a disturbance, sent his boy down to enquire what was the matter. The boy shortly after returned and reported that some serious fighting was going on among the passengers, and that they would not desist on his representations. Captain Brady upon this went down himself, it is said, with a revolver in his pocket; and it appears that while he was endeavouring to separate two men whom he found fighting, a rush was made at him by a large number of the confederates. He attempted to fire his pistol, but it snapped three times and would not go off, and on his finding it impossible to face the numbers arrayed against him, he attempted to go up, and while doing so was mercilessly prodded by the ruffians in the legs, and they also chopped his hands as he put them forward to lift himself up; and, while he was down, one of the men inflicted the gash in his neck either with a spear or a knife. The pilot at last managed to pull him up, and, seeing that he was beyond help, left him and went aft; and it seems that he managed to get to his room, where he fell down and did not again move.

Mr. Mundy, the passenger, was meantime in the saloon, and the first thing he knew of the affair was by the entry of two men, who made a blow at him. He knocked them down one after another, and rushing out of the saloon, came across the Captain lying prostrate from his wounds, and was then stabbed in the side by a sharp weapon and shortly after fell down exhausted. While in his state, the pirates came to him, and said if he would not take his rings off his fingers they would cut them off. He mustered sufficient strength to comply with their request, and the brutes had no sooner obtained the booty than one of them struck him a blow on the head and left him, supposing him to be dead.

The last that Mr. Mundy saw of the Purser he was endeavouring to hold on to the side, but having a frightful wound which had almost disembowelled him. The Purser was the only man that Mr. Mundy saw.

The Mate and Boatswain, a Manilaman, on the disturbance arising, rushed into his room, but the pirates, seeing where he had gone, forced an entrance. He, however, managed, as they entered, to jump through the window into the sea, and as he is a professional diver and a good swimmer it is hoped that he may have been saved.

The Compradore of the steamer, on the rising taking place, had the shrewdness quietly to place himself among the passengers, and to his being mistaken for some of them he no doubt owed his life. He was not recognised, and it is reported that another man, who was taken for him, was killed.

The pirates took possession of the engine-room and kept guard over it, making the engines go dead slow.

When the attack was over, it appeared that they had overrun the distance and that the junk was not in sight. They accordingly deliberately ordered the vessel to be turned back until they met the junk, upon which they seized everything they could lay their hands upon, breaking open the iron safe, the passengers' boxes, and everything where there was the slightest chance of plunder; though, curiously enough, they overlooked sixty dollars in notes and some silver which were in the Captain's desk. They opened letters, and it is said that they even abstracted some cheques. Before leaving, they seem to have crowned their deed by a diabolical feast amidst the scene of blood and devastation which they had created, as the deck was found strewn with the debris of food, and the skins of liches and other fruit.

The Compradore states that, after the plundering and murdering had ceased, the pirates had a terrible altercation among themselves with regard to the division of the plunder, the noise being so severe that he thought at one time before the quarrel was over they would end in killing one another. This continued till about half-past six o'clock, when they came upon the junk, ran alongside of her, and decamped. The pilot and the Chinese fireman then brought the steamer to Macao Roads.

The sufferers from the attack, as far as known, up to the present, are:—Captain Brady killed, Mr. Mundy, passenger, badly wounded, and the purser and mate gone; and four Chinese seamen severely wounded, three of whom are not expected to live. The latter have been sent to the Government Hospital here. The statements as to whether any of the passengers were killed are various, but if any were made victims it is hoped that not more than one or two suffered. The total number of passengers on board was one hundred and eighty-six; and it is estimated that the pirates numbered about twenty-two.—*Macao Corres., H. K. D. Press.*

### KOBE.

Kobe was visited on the 21st inst. by one of the most severe gales which has visited the port for some time past. It reached its height, too, just about the time of high water, and had there been a spring-tide instead of (as there was) a neap, we should not improbably have had a repetition of the disaster of the 6th of July, 1871. As it was, the amount of damage done was comparatively trifling. We observed the barometer to be falling at 1.30 a.m., when there was but a scarcely perceptible breeze from somewhere about N. E., but immediately after daylight the wind was blowing strong from the southward. It increased, bringing up a sea with it as the tide rose, and blew its hardest between 11 and 12, after which both wind and tide rapidly fell. At one time the wind had some points of West in it, and, after it had expended its force, it got round during the afternoon to nearly due West. The water rose no higher than to fill the mouth of the drain in Division Street, and (probably owing to the few hours the gale lasted) we have seen a swell raise nearly as heavy a surf with scarcely a breath of wind at all; if, however, the tide had been sufficiently high to have allowed the breakers to be carried clear of the sea-wall, the damage to property would have been great. Writing immediately after the event, we are of course not in a position to record all the accidents which have happened, but we notice that the sea-wall has suffered considerably behind the Bonded Warehouse and near the Harbor Master's Time Gun, many piles being also uprooted along its whole length, and the American Hatoba being now little more than a pile of loose stones. Two or three junks also went to pieces in front of the premises of the China and Japan Trading Company, and the house-boat of the P. M. S. S. Co. broke away from her moorings in front of the American Hatoba and was thrown on to its bottom upwards, sustaining considerably damage. Of three sendos who were on board of her, two stepped on shore unhurt at the instant of reaching the hatoba, but the third, who was not so nimble, was knocked down by her and injured as she overturned. At Kobe Point the diving board of the K. R. & A. C. of course suffered, as did also several boats which were hauled up close to it on the sand, but the injuries in both cases were caused almost entirely by a quantity of loose timber which was washed by the surf out of a neigh-

boring yard and strewn over the beach. On the whole, Kobe may be congratulated on a very lucky and very narrow escape. The lowest point at which we observed the barometer was 29.57—representing a fall of about half an inch from the previous night, but the needle was very unsteady throughout the worst of the gale.—*Hiojo News.*

From Chinkiang, we learn by private letters that the troops gathered there for embarkation to the south have flatly refused to go. No reason has been assigned for the refusal, but it is thought that, as a great number of the men were rebels during the Taiping revolt, they are waiting for the more lucrative employment of civil war, in preference to fighting the Japanese.—*Rising Sun & Nagasaki Express, August 22nd.*

There is a rumour among the Chinese that hostilities have already commenced in Formosa; but we do not suppose they know much about it.—*Idem.*

We hear on good authority that of the 7 Chinese steamers mentioned by a Chinkiang correspondent in last night's issue, as assembled in that port awaiting troops, two were to leave last night fully loaded with soldiers, foreign-drilled and with foreign arms. We presume their intended destination is Formosa, but it is not so stated. It is added that the *Yang-ching*, which left here on Saturday morning, bound up-river with cargo, on her arrival at Chinkiang had her cargo transhipped to another steamer, and was detained to take part in the transport of troops. If these statements prove true, as we have every reason to believe they will, they should go far to convince our doubting Thomases of the "rising port" that the Chinese are in earnest—for once at least.—*Idem, August 18th.*

A correspondent at Chinkiang writes that when the S. S. *Aden* arrived there she found three Chinese transports from Foochow waiting for troops; and a Chinese gunboat, with a high mandarin on board, had arrived the day before. No troops had yet reached Chinkiang, but notice was sent on board that the *Aden* was to be ready to sail on Sunday, the 16th instant, with 600 to 700 troops and 12 horses.—*Idem.*

The steamer *Nanzing* sails for Yokohama to-day (Aug. 15th), to be transferred, it is said, to the Japanese Government, for the purpose of being employed in their transport service.—*Idem.*

### NAGASAKI.

(From the *Rising Sun and Nagasaki Express, August 28th.*)

On the ninth of this month, Nagasaki was visited with a typhoon such as few recollect experiencing for many years previous, and the loss of property on that occasion was something considerable. But the typhoon of the ninth was but a squall in comparison with the hurricane which passed over this part of Japan on the night of the 20th inst. The barometer began to give indications of a storm at two o'clock in the afternoon, and from that time it fell rapidly, being at half-past (?) in the evening as low as 40. It had been raining for some hours and the wind gradually increased in fierceness till ten o'clock, when the hands of the glass pointed to 38.20. It was

by this time blowing a furious gale, the wind veering about from one point of the compass to another, and every precaution had been taken on land and water to preserve life and property from the destructive elements.

At about eleven, the storm began its work of destruction in earnest. We had, fortunately, just completed the publication of our last issue, when the tiles began to fly off the roof, the house shook and swayed about violently, so much so that we anticipated its complete annihilation, and our fears were not in the least abated by the chimney coming down with a crash on the roof, followed immediately by a rush of water into the upper rooms which soon found its way through the ceiling into the lower storey, where everything immediately became saturated. Every watertight article was soon brought into requisition, to catch the rain and prevent us from being flooded out.

By this time the hurricane was at its height, and the barometer down to 28.10; and as the type-room was the only dry spot in the house, we were compelled to take refuge there.

About two o'clock, the violence of the hurricane had abated considerably. Daylight was anxiously waited for, and, when it came, such a scene of destruction and desolation as met our gaze we hope never to witness again. Sagarimatz Creek was one mass of floating timber, which told a terrible tale of the work of destruction that had been going on in the portion of the native town through which the creek runs. From a back window we observed the premises lately occupied by ourselves, with the roof completely gone. A little to the right lay the tea-firing premises of Messrs. Maltby & Co., one mass of ruins, not a stick standing upon another; and further to the right were the tea-firing premises of Messrs. Holme, Ringer & Co., in a similar condition; a more complete wreck could not well be imagined. To the left of these lay the remains of the new additions, which were nearly completed before the storm, to the Eureka Hotel; whilst the streets were strewn with tiles and pieces of wood.

Passing out on to the balcony, we got a view of the harbour, and a pitiable sight it presented. On the rocks, and fast aground, lay two of the finest steamers in the harbour, the *Ping On* and the *Madras*; and on looking for the Japanese Ram we missed her from her accustomed place, and a more minute inspection brought a dark mass in view, close under the land at Akunora, which proved to be the unfortunate vessel, she having parted both her cables in the storm, forced a passage through the rocks, and lay aground. About a hundred yards distant lay the German barque *Hamburg*, high up on the rocks, and, a short way off, the *Sooloo* on the rocks also. The *Bertha* was dismasted; the master it seems had cut the rigging and let the masts go overboard with the wind.

Upon proceeding to the Bund and taking a cursory glance towards the Custom's shed, it seemed as if some fearful earthquake had been committing its ravages. The huge stones of the Bund wall were strewn over the whole width of the road, and a heap of ruins was all that could be seen of the shed. Casting our eyes across the water, the scarcity of junks looked ominous, and on asking a bystander what had become of them, he replied, "Junks? oh they're all at the bottom, or over at Akunora on the rocks, smashed up." It turned out to be too true; scarcely a junk was visible on the water, and as for sampans, cutters, yachts, lighters, and craft of a si-

milar kind, not one was to be seen, with the exception of a few that had been preserved in the creek; all had sunk or were blown on the opposite shore, where the majority became total wrecks. Taking one of the sampans—the owner of which demanded a half-dollar before he would budge—we proceeded across to the *Madras*, and found her stern-on to the land within a dozen yards of the rocks, whilst at the back of her, crushed up, lay three or four junks. Higher up the stream several junks, wrecked, were discernable. From the position of the *Madras* it was evident that with the assistance of a tug she would get off pretty comfortably.

A short distance from the steamer lay a large lighter, apparently not much the worse for her involuntary trip across the harbour; and, not far off, the masts of two junks were visible above the water.

Proceeding to the old *Stonewall* we found her in a very bad position and in a very bad condition. After parting her cables the wind and waves carried her over the rocks with great violence, and they evidently did considerable damage to her bottom, for, although fast aground and two pumps kept going, besides baling with buckets, the water could not be reduced. The officers seemed hopeful, and gave their opinion to the effect that the water would soon be got under and the leak stopped; but even when that no inconsiderable task was accomplished it was plainly to be seen that great difficulty would be experienced in getting her back over the rocks. Passing on to the *Hamburg*, we found her high on the rocks, leaning over to starboard, with about two feet of water under her. The Captain stated that while the vessel was drifting a huge wave came and lifted her fair on the rocks, where it left her. Passing by the *Sooloo*, which had her stern on the rocks, we made for the unfortunate steamer *Ping On*. Truly she is an unfortunate vessel, for no sooner does she get off one lot of rocks than she runs on shore somewhere, and has to go into dock in Yokohama; after leaving dock she comes down to Nagasaki in the nick of time to be blown on the rocks once more. She lay in a bight at Inasa, broadside-on, leaning over to port. She made no water, and the Captain considered the extent of the damage but trifling, and thought she would be got off in a few days.

From the deck of the *Ping On* a sad spectacle presented itself to view. Junks lying broken up on the shore, pieces of wreck floating about, men-of-war boats (many of which had broken away from their respective ships) lay wrecked upon the beach; and in a little nook lay the Press boat in a most lamentable condition. At the bows of the *Ping On* a large junk had broken up during the gale, out of which 20 men were rescued from a watery grave by the efforts of those on board of the steamer.

The *Ariel* lay not far from the *Ping On*, and several of the men-of-war lay in such close proximity to the land that it was evident, had the storm lasted much longer, the casualties on the water would have been more serious than they were.

It was generally thought, shortly after the storm, that about 60 junks had been wrecked and 200 lives lost. The loss of junks and life has, however, turned out to be considerably more. It is now computed that between 200 and 250 junks were lost, and about 300 persons drowned. A large number have been washed up on the shore, and doubtless there are many bodies still at the bottom.

On shore, the scene of destruction was un-

paralleled. Not a house or bungalow but what was damaged. Along the Bund, walls and fences were down, gates smashed, and the goods-shed of the Custom House broken up. In front of the Danish Consulate lay the flagstaff; two-thirds of the bridge crossing to Desima was washed away, and the remainder left in a tottering state ready for the next typhoon to finish. Some portions of the native town suffered most severely. Hundreds of families were rendered houseless; and the majority of the buildings suffered more or less.

The Governor's new Kencho, which from its height and exposed position must have caught the full force of the hurricane, was one complete heap of ruins. In fact, it was hard to realize that where the heap of debris lay on Friday a large and handsome building had stood the previous day. Entering a gate on the northern side, a confused heap of boards, tiles, pillars, broken lamps, stones, &c., &c., met the visitor's eye. Climbing over the obstacles a busy scene presented itself. Numbers of men of various grades, from H. E. to the coolie, dressed in a variety of costumes, some in foreign dress, some native, others half-and-half, and so forth, were gathered on the spot. Not a few were turning up the rubbish with a view of getting at books and papers, some of which were fished up in a most unsightly condition, and other documents were, apparently, but little worse for being buried.

The east end of Desima, which caught the full force of the storm, suffered severely, and Messrs. Boeddinghaus, Dittmer & Co., and Messrs. L. Kniffer & Co. must have been heavy losers. Some buildings were levelled entirely to the ground, and cases and bales of goods were observable protruding through the heap of ruins, whilst the skeletons of others were all that was left, the bamboo and plaster not being proof against the heavy rain.

Every house in Oura and Sagarimat was injured to a large or small extent by the storm, and there is scarcely a papered wall in the whole settlement. The flagstaffs of the Russian and American Consulates were blown down. The big trees broken in pieces everywhere. The estimated loss to the mercantile community of Nagasaki is about \$100,000, but it is at present very difficult to tell the actual amount of damage sustained; and we presume the figure is merely a conjecture, and not the result of laborious calculations. However, the amount mentioned is not at all exaggerated, if we may believe our eyes. It is asserted that such a hurricane as that which passed over Nagasaki on Thursday night, the 20th of August, has never been experienced in any part of Japan for the last 70 years, if ever before.

#### SINCE THE STORM.

Friday was tolerably fine, and those who had lost boats, &c., were busily engaged hunting for them amongst the wrecks. Few coolies could be got, and those few were taken up by the merchants for the purpose of saving some of the tea, tobacco, bales of cloth, &c., which lay buried amongst the ruins of the buildings that had been blown down during the night. On the water, preparations were made for getting off the stranded vessels, but as neither boats nor coolies were available but little could be done. About 2 o'clock, however, the little str. *Border Chief* went to the relief of the *Ariel*, and succeeded in towing her opposite Messrs. J. F. Mitchell & Co.'s yard, where she cast anchor. In the native town, those who had suffered by the storm were busily engaged endeavoring to restore

the houses, from whose delapidated condition it was self-evident the inmates were anything but comfortable.

Saturday was wet, and little could be done in the shape of repairs, or getting the vessels off the rocks; but the following day being fine repairs were pushed forward as quickly as possible, and the steamer *Nanzing* went to the assistance of the *Madras*. A heavy hawser was attached and the vessel shifted some distance, when, unfortunately, the hawser broke. Some time was spent in repairing it and getting up the steamer's anchors, she having about 90 fathoms of cable out. Eventually the *Nanzing* succeeded in getting her off and towing her into deep water. Many of the injured boats were brought across from Akunora and Inasa; and, on shore, efforts were made to dry the houses, nearly all of which had received a thorough soaking. It remained fine until about midnight, when it commenced to rain again and continued pouring down without intermission for upwards of 17 hours; after which it fell in showers during the remainder of the day and night. This rain did considerable harm to the already damaged buildings, some of which were washed down entirely. Wednesday and Thursday were fine, and repairs were pushed forward rapidly, the coolies laboring with great zeal until sun-down.

#### AT FUKAHORI,

a village on the coast, some 12 miles below here, the typhoon appears to have been disastrous to junks then at anchor. The proportion of houses demolished was much greater than at Nagasaki.

#### INLAND,

the ravages committed by the storm has been immense. Mogi and Simabara were almost destroyed. It is reported that upwards of 1,000 houses were destroyed, and many lives lost. The unfortunate telegraph line also came in for its share of destruction, miles of it being reported as blown or washed down.

Our correspondent at

#### HIROSHIMA

sends us word to the effect that the typhoon commenced there at 5 a.m. on Friday. Many hundreds of houses have been altogether or partially destroyed, and several lives have been lost, and the cotton in that neighbourhood, which promised an excellent yield, has received very serious damage. The gale lasted about six hours, and in that short space of time more damage was done than will be repaired during the next six months. The Hiroshimites say such a storm has not passed over their town for the last 70 years, which is the same statement as made by the natives here.

As for the little coal island,

#### TAKASIMA,

the extent of the damage done is something fearful to contemplate. Like Nagasaki, large numbers of the houses were totally destroyed, whilst others, though left standing, were in a perfectly wrecked condition. The number of lives lost there we have not been able to ascertain, but hear that a large number met with a watery grave. Nearly every junk and sampan were either swamped or broken up, and hundreds of families were thereby deprived of the means of obtaining a livelihood. Who is man, or what are the works of his hand, when the Lord of Hosts puts forth His hand to destroy?

**EFFECTS OF THE TYPHOON ON THE CROPS.** We learn that the effects of the recent storm on the rice crops have been most disastrous, and that the price of that article is piddly on the rise. We have not yet ascertained the extent of the damage far inland, but our says it is prodigious.—*Idem.*

**FORMOSA.**—It seems that, notwithstanding the formidable army despatched to Formosa by the Chinese, the Japanese have apparently a little notion of retiring from the island yet, as they are (evidently making preparations for a winter's campaign at all rents) building strong and roomy houses.—*Idem.*

In a very interesting article on the past career of China and Japan, the *Celestial Empire* states that Japan has as much as 50,000,000 ready for defraying the expenses of a war. If this is true it would be much better if the Government were to spend it in developing the resources of the country, than in waging war with their neighbors. Money spent in powder ends in smoke, but money bestowed in advancing peaceful operations always increases the wealth of a country.—*Idem.*

We hear that, on Thursday night, a forger and his wife at Takasima, having lost their house by the furious gale which prevailed, had to seek refuge under the lee side of a friendly tree for the remainder of the night. Not a very pleasant situation to be in, and we should scarcely imagine a safe one either. Their position must have been anything but comfortable or enviable; better to be in a house with the rain streaming through than underneath the dripping branches of a tree, with the wind whistling through the top, threatening to bring it up by the roots and crush the refugees beneath it.—*Idem.*

The Japanese frigate *Rio-jio-kan* left Woosung early on Saturday for Tientsin, having on board H. E. Mr. Okubo and suite.—*N.-C. Daily News.*

The S. S. *Haiching* has left for Chinkiang, to embark troops for the Formosan rendezvous. The *Haiching*, we hear, has 43 cases of Chassepot rifles, for distribution among the troops.—*Idem.*

Information has reached us to the effect that five thousand soldiers have been added to the number under the instruction of Colonel Cooke and Major Watson at Ningpo.—*Celestial Empire.*

We are informed that the desertions by the men from the Chinese frigate lying at Woosung are something beyond belief, there not being nearly sufficient remaining on board to do the duty of keeping the vessel clean. Are the natives utterly demoralised at the approach of the impending war?—*Ibid.*

Opinions are very freely expressed, and pretty generally believed, by the Chinese, to the effect that Li Hung-chang will not take any active measures in the present difficulty until he is aware that war with Japan is an accomplished fact. In this event he will organise his own force (supposed rebels), and make the government of China the price of his conquering the Japanese. It is further believed amongst them, that he is absorbing all the specie in

the interior, thus causing discontent among the Imperial soldiery. If this be true, it is indeed a very subtle move on his part, as, when the proper time arrives, he will pay the discontented and moneyless soldiers, and so strengthen the belief that he is all-powerful. There are foreigners who still believe in him and in his power, though they cannot possibly have any regard for the man if they remember his treachery and duplicity to Colonel Gordon, when, having promised not to behead the rebel Wangs at Soochow, he immediately put them to death on their surrender; and that, too, after finding an excuse to remove Colonel Gordon from the spot during the massacre.—*Ibid.*

Confirmatory advices have reached us of the continued refusal of many of the troops at Chinkiang to embark in the transports at that port; and as Chinkiang is the very hot-bed of disaffection, it appears that the iron will of Li Hung-chang will have to be called into requisition to reduce the rebellious troops to order, before they can be brought to go to the seat of the impending war. We have, however, heard more recently that the steamer *Hankow* passed seven transports at 5.30 a.m. on Thursday morning, between Chinkiang and Shanghai, bound down; so it is possible that some of the troops have embarked for their destination, wherever that may be.—*Ibid.*

Both the Chinese newspapers of yesterday contained a statement, coming from a Chinese official source, we understand, that the negotiations at Peking in regard to the Formosa difficulty had resulted in an arrangement which would not compromise the dignity of either nation. Upon enquiry at the Japanese Consulate, however, we were obligingly informed that Peking despatches received on Sunday make no mention of such a result, and that the statement referred to is believed to be a mistake.—*N.-C. Daily News.*

#### Despatch of Troops from Chinkiang to Formosa.

A Chinkiang correspondent, under date the 19th August, says that the Transport left that port on that day at 9 a.m. The *Yung-ching* followed shortly afterwards, but was, apparently, quite empty, which makes it probable that her quota awaits her at some station farther down river. Early on the morning of the 20th, seven steamers bearing the flag of the Chinese Imperial Navy were observed passing Woosung. The S. S. *Aden*, was doing duty as flag-ship, bearing the Admiral's pennant at the fore, and the Commander-of-chief's banner at the mizen. All the orders were given by signalling, and the steamers appeared to be handled in seaman-like style. There thus seems no doubt that the Yangtze contingent of some 4,000 men and 450 horses have made good their departure for the Pescadores, a group of small islands lying near the centre of the southern end of the Formosa Channel, about midway between the island and the mainland, which appears to have been fixed on as a base of operations. But it is asserted by parties who seem well informed, that little more than a tenth of the troops shipped from the Yangtze are at all up to their foreign drill, or, indeed, to drill of any kind. The fact seems to be that the military officers have been in the habit of sending in pay-lists to the Exchequer for a certain number of men, for whom they regularly drew pay. But when they received

orders to hold each his quota in readiness for active service they were at their wits' end how to make up the number for which their pay lists made them responsible, and every nerve has been strained, and every means used, from bounties and bribes to threats and violence, to induce a number of coolies sufficient to fill up the hiatus to shoulder the little-loved musket. In this effort they seem to have been fairly successful, but how the *soldiers* (?) may comport themselves when they are fairly in sight of the foe is still a point on which opinions differ.—*Shanghai Budget and Weekly News-Letter.*

#### Current Topics.

We do not feel at all sure about the rightfulness of the arrest and holding to bail of General Le Gendre at Amoy. The proclamation recently issued by the American Consul at that port could only have effect in the event of a formal declaration of war between China and Japan, in which case any aid, comfort, &c., given by neutrals to the one party must of necessity constitute hostile action towards the other. Whatever, however, the actual state of affairs in Formosa, there is nothing as yet to authorize any one's assuming that, for international purposes, war has been declared. Nor indeed is it even held by the Chinese that the Japanese expedition does in itself constitute a *casus belli*. The complaint is *not* that the former have invaded Formosa and punished the aborigines, but that, having done so, they refuse to go away except on certain terms. Meanwhile, both sides profess to be "negotiating," and so long as matters are in this state it is obviously impossible to prevent any foreigner from giving what aid he likes to either side.

But more than this, what are foreign governments prepared to do if war is declared? Will the British Government, for instance, insist that every Englishman shall leave Chinese employ?—for such must be the logical result of any neutrality proclamation. H. M.'s Consul at Shanghai is said to have shewn immense good sense in declaring that he would not interfere with anybody not engaged in overt acts of war—i.e., we presume, actually fighting on the Chinese side. But will he be supported? We are just beginning to find out another of the many inconveniences caused by the diplomatic "fraud"—we use the word in its slang sense—bolstered up at Peking. We are, forsooth, to treat China as a "sovereign power." How will it end?—*China Mail.*

#### The War in Formosa.

Takoa, 13th Aug., 1874.

Nothing whatever is going on at Lang-kiaou. Such at least is all that the corvettes and gun-vessels—British, Russian, and Chinese—that have been running up and down the coast and haunting the Pescadores, can learn. The weather here, indeed, for some time past, has not been fit for operations of any kind, and would have put a stop to anything that might have been intended. The Chinese have not done much more than the Japanese. They have armed a fort at An-ping with a few old eighteen-pounders, and have landed a large battery of Krupp guns, which they have stored away in Taiwanfoo. There is no sign yet of the soldiers from the mainland. I am glad to say that those destined for Takoa will only be brought down here if it becomes necessary to defend the port. Till then they are to be stationed about three miles inland, where they will

have a little more room to breathe. A camp is already being prepared for them, under the superintendence of Mr. H. O. Brown.

A party of savage chiefs from Pelam, a place or tract on the East Coast, have been disporting themselves at Taiwanfoo. They have come, or have been brought, for the purpose of acknowledging in some way their allegiance to China. And I believe that they have given most satisfactory assurances of their loyalty and fidelity. Ever since the first arrival of the Japanese, whether from fear or from hope of receiving presents, the savages seem one and all, with the exception of the Bawtans, to have been only too anxious to ko-tow to, swear obedience to, or join in alliance with, anyone who asked them. But I should think that there was equally little chance of their professions being sincere, or their promises lasting. The Pelam chiefs wore a mixture of Chinese and savage dress, and were resplendent with barbaric ornaments, Leopard skins, scarlet embroidery, and the like. One or two of them even had infantine pigtailed under cultivation at the back of their heads, appearing incongruous enough by the side of their savage finery.

The correspondent of one of the Shanghai papers, writing from Takao, says that when the Japanese first landed in Formosa the Chinese here were glad of it. I think that anyone who saw the faces of the crowd here that hurried up the hill to the signal station and stood round the flag-staff, when the *Nepaul* (the first Japanese steamer) was signalled as making direct for the port, or who saw the boxes of Chinese treasure on board the *Hailoong*, and the wives and families of Mandarins and other well-to-do Chinamen leaving by junk or by steamer, and a little later the very graves made to give up their dead for transportation to the mainland—would have formed a different opinion as to the feelings of the Chinese. To be sure, they have now got beyond any state of agitation or excitement. They have become used to the presence of the Japanese in the island, and trust that sooner or later the invading army will vanish quietly without giving any trouble to any one. The difficulty that I mentioned in my last letter as having arisen between the Japanese and the neighbouring villagers seems to have passed away.—*Hongkong Daily Press*.

A correspondent, writing under date Canton, 28th August, 1874, says:—I see by your issue of yesterday, with extracts from your Shanghai contemporaries' columns, that, down to the 22nd instant, they knew nothing of the settlement which on or before the 6th instant had been effected at Peking between the Chinese and Japanese authorities.

Consequently I deem it right to inform you that I received, on the 26th instant, direct from Peking, distinct and reliable information of the arrangement whereby the Japanese Government agrees to withdrawn from Formosa; but the conditions of the abandonment of its positions there are as yet—no doubt wisely—withheld from the public, the Yamen's communication omitting any statement upon the point.—*China Mail*.

#### THE "SPARK" TRAGEDY.

To a gentleman at Canton, well-informed on official subjects, we are indebted for the following particulars, received this afternoon.

The Viceroy of the Two Kwangs has given the most peremptory orders to hunt for the murderers, and had proclaimed to the various villages that a sum of Tls. 2,000 had been

promised to whoever would denounce the abominable bandits. His Excellency has promised to send copies of this proclamation to the Governors of Hongkong and Macao.

Excellent measures are further promised to be taken for the protection of vessels travelling between Macao, Hongkong, and Canton.

It is hoped that the authorities are on the track of the individual who took on board the *Spark*, at the time of her departure, the box containing the arms with which the pirates made their attack. This box was brought on board so late that the Customs' officer had no time to examine its contents.

A gentleman in Canton has lost through this robbery a cheque for a large amount, which might possibly furnish, ultimately, a clue to some of the assassins and robbers.

It is rumored that on board the *Spark*, during her disastrous passage, was the notorious Kwok Asing, though what he could possibly be doing there at such a time it is hard to imagine.

We have it on the best authority that the French Consul was an intending passenger in the *Spark* from Canton to Macao on Saturday last, and that an unforeseen circumstance alone prevented his taking on that occasion a journey which must have proved his last.—*China Mail*.

We learn that there is no truth in the statement that some of the crew had volunteered information about the *Spark* pirates. The only fact is that two gunboats have left Macao with, as they believe, a clue.—*China Mail*.

#### HA-KO-DADI.

##### List of Vessels in Harbour.

September 2nd, 1874.

*Quaizen-Maru*, Jap. Str., from Nemoro, (left to-day for Otarunai.)

*Osaka-Kan*, Jap. Str., from Iturup.

*Komi-Maru*, Jap. Str., from Awomori, (left to-day for Awomori.)

*Tasula-Maru*, Jap. Barque, from Yedo.

*Tsuso-Maru*, Jap. Brigantine, from Akita.

*Sackai-Maru*, Jap. Str., from Awomori.

*Torafsa-Maru*, Jap. Schooner, from Midzuis.

*Wiyo-Maru*, Jap. Str., from Yedo.

*Han*, German Barque, from Vladivostock, bound for Shanghai.

*Hosho-Kan*, Jap. Str., from Iturup.

*Iron Duke*, H.M.S., from Vladivostock.

*Ringdove*, H.M.S., from Vladivostock.

*Frolic*, H.M.S., from Vladivostock.

*Elizabeth*, Ger. Corv., from Yokohama, (left to-day for Yokohama.)

*Snowdrop*, Am. Schr., from Iturup.

*Oersted*, Dan. Str., and *Denshin-Maru*, Jap. Str., from Yokohama, (left, for telegraph cable, to-day.)

*Askold*, Russ. Corv., from Vladivostock, (left to-day for Yokohama.)

*Thalia*, H.M.S., from Yokohama, (left to-day for Yokohama.)

*Pisaduk*, Russ. Corv., Vladivostock, (left to-day for Yokohama.)

AN ITALIAN graineur, whilst on a journey to Koebori (a village north of Yedo), has been robbed of watch, jewelry, and money to the amount of \$2,000, whilst passing the night in a tea-house.

WE RECEIVED the following interesting telegram on Saturday evening, but too late for publication in last issue:

"Satsuma *samurai* have offered to equip and send to the war (*Quere China*), and support eighteen thousand (18,000) troops, at their own expense."

THE P. M. S. *Nevada* having met with heavy weather between Shanghai and Nagasaki, on her passage hither, will not reach us as early as was expected, and the *Colorado's* departure is therefore delayed until daylight of the 12th, Saturday.

The Agent of the Company, Mr. Hart, received a lengthy telegram to-day, from New York, conveying the intelligence that the Company's new steamer *City of Peking* sailed from the latter port for San Francisco on the 5th inst., having on board 4,500 tons of dead-weight freight. She passes through the Straits of Magellan. On her trial trip, which took place just before she finally started on her voyage, the U. S. government officials on board who were watching her performances, declared her the fastest ship in the world. (We believe she made 14½ knots per hour.)

The Company have now made such arrangements as will enable them to issue Through Bills of Lading, via the trans-continental route, to the Central and Eastern States and Europe.

A most determined suicide took place at the International Hotel this morning. About half-past ten o'clock, Mr. R. M. Bevell, a guest of the hotel, was found lying in his bedroom, with no less than 37 wounds on the left breast, inflicted by a small penknife. He had also taken a dose of morphia. A doctor was immediately sent for, but the unfortunate gentleman expired in less than an hour from the time he was discovered by the servants. The inquest was held at 5 o'clock this evening, a full report of which will appear to-morrow.

#### TO-DAY'S BURGLARIES.

DURING last night, The Burglars entered the premises of Mr. J. H. Weintraub, No. 145, and carried off 3 candlesticks, 15 scarves and a number of head-dresses, all used for religious purposes, and belonging to the Jewish Synagogue. At 4 o'clock A.M., the robbers returned and attempted to force the store door, a servant who was sleeping within however heard the noise, and, becoming alarmed, the thieves decamped. It seems they had also endeavoured to gain an entrance by attempting to break through the wall, as a number of stones are displaced near the ground.

BETWEEN 9 and 10 o'clock last night, a gentleman who was passing No. 65, Main Street, opposite our office, observed a bag thrown over the wall of the compound, to a coolie who was in waiting to receive it. The coolie decamped and our informant took charge of the bag—which contained about 25 pounds of tea—and left it at the "Oriental" Hotel until this morning, when it was handed over to the owners, Messrs. Cornes & Co.

WE LEARN that M. Verny, the honourable director of the Arsenal at Yokoska, embarked last night for Cape Idzu, for the purpose of taking the necessary steps for raising, upon the place where they were buried, a monument to the memory of the unfortunate victims of the wreck of the *Nil*.—*L'Echo*.

WE EXTRACT the following ghost story from native paper:—A fishmonger, named Miyaki Kichigoro, at Sakaicho, Tokei, was lately left a widower, with two children—the one a little girl of 7 years, and the other a baby, 3 months old. Shortly after the funeral, the ghost of the dead wife presented itself to Kichigoro, saying she was very anxious about her baby and would take it away with her. She then seemed to vanish with the child, which at that moment uttered a loud cry. The father flew to its side but found it had fainted, and, though it was placed under a physician's care, it died almost immediately.

AUDACIOUS, 14, double screw-ship, armoured: The alterations and repairs to this vessel so as to fit her for a flag-ship on the China station were to be completed on the 30th August. The alterations ordered were very extensive, as accommodation will have to be provided for a larger number of officers and men than has hitherto formed her crew, besides having to provide suitable quarters for the Admiral in charge of the station and those attached to his staff.

DURING LAST evening, whilst the inmates of No. 160 were variously engaged—some seated on the verandah—and no less than five servants were about, thieves entered the premises and succeeded in making off with a clock "and several small things."

### Local Correspondence.

To the Editor of the *Japan Gazette*.

DEAR SIR,

Your oft-repeated enquiry, "Where are the Police", may well be reiterated with regard to other matters as well as to daily and nightly robberies and burglaries. When we pass along a thronged and narrow thoroughfare like Main Street, at No. 77, and, looking up to a scaffold some 30 feet in height, see workmen engaged in dressing and lifting heavy stones upon a platform of only two planks, with an open space between; when we have seen, and felt, large chips of stone falling even to the middle of the road, we have felt that we ought to thank Providence more than the Yokohama Police that we were able to pass the elevated battery without having our craniums crushed by one of those chips, or that even a large block had not fallen to crush both head and body into one undistinguishable mass. Such a danger would not be allowed for an hour in any country where the police force is a living reality. Again, we are often reminded of the patent inquiry for the police when we see the street and side-walks obstructed by *jinrikishas* and fruit and candy pedlars; with perhaps a solitary policeman standing in their midst, gazing in admiration at the peaceful stoppage of traffic.

The other day, I counted in the short distance between the gate of the Chartered Mercantile Bank and Lane, Crawford's & Co's. store no less than twenty *jinrikishas* and some six fruit dealers, on the side-walk of the shady side of the street! This being one of the narrow parts of the street, the whole way was blocked, so that even a pedestrian could only pass by carefully picking his way. Much the same state of things often prevails in front of No. 73, and all along Main Street the shady side is sure to be occupied by crowds of lounging coolies, *jinrikishas*, and pedlars; and I often also see horses standing directly across the

walk, and the betto holding the bridle leaning against the wall. Also, in my walks about town I constantly encounter coolies carrying those well-known long buckets of "night soil", the municipal ordinance to the contrary notwithstanding. I might go on enumerating similar nuisances and irregularities; and at each item I might exclaim, "Where are the Police"?—or, "Of what earthly use are they"? Sometimes I have hunted down Main Street and up Water Street from end to end, and could not find one of their number on duty! At other times I have succeeded in finding one or two! This will serve to show why so many robberies are safely consummated. And if any one will take the trouble to question one of these men as he may meet them (few and far between), as I have done, he will find that they are quite innocent of any proper orders or instructions in regard to their duty! From all I can see and learn, I believe the officials at the Ken-cho do systematically and intentionally neglect the proper provision of any adequate and sufficient police force to preserve order and safety in the foreign settlement of Yokohama; and that it would be highly proper for property-holders to petition their Consuls for a cessation of all land taxes, until the requisite and proper provision is made both in town and on the Bluff. Nothing but this will bring us the needed relief.

Yours faithfully,

CENSOR.

To the Editor of the *Japan Gazette*.

DEAR SIR,

The Japanese police prove themselves worse than useless, as is shewn by the burglaries nightly committed in the Foreign Concession, where bolts, bars, padlocks, &c., of the best construction form no sort of obstacle, the nocturnal visitors doing as they please; having both time afforded them to *carry on* their work and the free run of the road to *carry off* their plunder, without let or hindrance in any shape whatever. Two burglaries again last night. No one knows whose turn will come next. Dear Mr. Editor, cannot you suggest a practical remedy, as it is really getting very serious?

I am,

Sir,

ARGUS.

To the Editor of the *Japan Gazette*.

DEAR SIR,

"Practice makes perfect" is an old adage, but one as true to-day as ever. I, for one, was not surprised to hear this morning of another robbery, in which more than one man must have taken part, from the fact that large articles were taken which could not be concealed under any wearing apparel. In European and American cities, if a man is seen carrying articles after business hours he is required to give an account of himself; how is it that these thieves can carry away heavy loads without meeting any policeman? Is it that the policemen are aiders or abettors? If they are not, then let them, or their superiors, who, we suppose, are responsible for policemen's acts, answer. I, for one, can only say that we cannot have our goods stolen, and demand proper protection; and as it seems we cannot get it, why, every foreigner, I trust, will take the matter in his own hands, and shoot any thieves he may catch on his premises.

Yours, &c.,

A SUFFERING FOREIGNER.

### YEZO GOVERNMENT.

To the Editor of the *Japan Gazette*.

SIR,

The hopelessness of being able to make Sapporo the capital of Yezo, or rather Hokaido, which includes Sakhalin and the Japanese Kurils, and re-christening that place with the high-sounding name of "Hokio," seems now to be dawning on the minds of the authorities of the Kaitakushi. Late information from the "model settlements" describes a number of lightly-built wooden houses, quite unsuited to a rigorous climate, with some two or three edifices after foreign models, and a three-storied "capitol" surmounted by a green cupola. The "city" seems less than half-peopled, and the residents ready to pack up their traps and "get," just as soon as the government may cease to employ them on public works. A canal scheme would appear to have fallen through—or the banks of the canal fallen in—through the want of engineering skill to determine beforehand the rate at which waters on a certain incline would travel. The road to connect Sapporo with the nearest sea-port has been heaped with boulders, so that the track keeps off it as much as possible. A large proportion of the bridges on the main road to Hakodadi are broken down, and it would be impossible, at the present time, to drive any description of wheel-carriage along it. Two diminutive propellers on the route across Volcano Bay, between Mori and Mororan, run only at uncertain times, when they are not in the normal state of native steamers. The stage coaches out of Hakodadi ceased to run last winter, when it became impossible to drag them through the mud on the new road, and the attempt has not been since renewed. In fact, so far as Sapporo and its communications, everything seems in that unhappy state which occurs after much money has been almost uselessly expended, and none remains to keep alive what little in the way of good had been commenced.

Under these circumstances, the article on the "Development of Yezo" which appeared in the *Japan Gazette* of 24th August was well timed. All its recommendations are well worth the consideration of the government, and certainly one should be adopted without loss of time, namely, the transfer of the seat of government to Hakodadi, if for no other reason than that of economy. Three years of exploration has now expired, and the report of the various scientific gentlemen in their several departments should be sufficient for deducing a very fair estimate of the capabilities of the country and its requirements. General Capron has lately returned to Yedo, where doubtless his report will meet the attention it should merit; Messrs. Lyman and Munroe are employed on geological and mining researches; Lieut. Day is conducting the commencement of a comprehensive scheme of triangulation, projected by the late Surveyor-in-chief; and Mr. Holt has charge of the steam and water power machinery erected at Sapporo. Dr. Eldridge holds the same semi-independent position at the hospital in Hakodadi; while Mr. Baumer is detached from his garden at Yedo, and is now employed in making a botanical collection in Yezo. The combined salaries and allowances of these members of the commission (those on the farm at Yedo being omitted), exclusive of actual travelling expenses, is about four thousand dollars in gold per month, or, say, in round numbers, fifty thousand dollars annually. This is a

very small drop in the expenses of the department, and could hardly be said to be mis-spent, did the officials avail themselves of the services, and make some use of the valuable information collected by these gentlemen. The farm in Yedo—although it may be well for the Governor-General to have something at the capital which he can show to the higher officials of the government as a specimen of what they may suppose to be going on in the north—is of course useless for Yezo, and might well be handed over to the local government. Such an arrangement would release a number of idle officials, and withdraw the excuse for keeping up a Kaitakushi staff at Yedo.

The article in the *Japan Gazette* of 24th August recommends the appointment of a foreign adviser or director for the Kaitakushi, but it must be remembered that the engagement of the present chief is not broken, and the government has some time before it to look round, even if General Capron should decline a fresh contract. However, if the officials should propose to use a successor in the same manner as they have treated him, it is not likely they could secure the services of a competent and honest man; nor indeed, without actual authority, could any foreigner correct the abuses of a department hitherto managed as the Kaitakushi has been.

There seems to be more in the suggestion to remodel the Kaitakushi staff, and it is doubtful if the government would be far wrong in commencing at the top of the tree, and dispensing with the services of a Governor-General who, residing at the capital, seems to devote his energies more to affairs of state, than his guaranteed (so-called) colonization, and apparently overlooks the mismanagement and speculation carried on wholesale by his subordinates. There seems, however, to be some influence which has kept General Kuroda in the independent position he holds, but which it is to be hoped, for the good of the country, may be speedily broken down.

MATSUMAI.

2nd September, 1874.

**MORE BREACHES OF INTERNATIONAL LAW.**—The *Courier* of the 22nd ultimo says:—We learn, on what we take to be good authority, that two old and tried employes of the Foreign Customs' Service of China have been engaged, on the suggestion of M. Giquel, at handsome salaries, to proceed to the Pescadores to drill, into as much efficiency as circumstances permit, the raw material of soldiers that is being rapidly massed there. There must be something very indeterminate, or very elastic, in international law, when it can be so modified or adapted by national statute that, while some men are deprived of their personal liberty on the mere suspicion of giving advice—whether for the prosecution of war, or the bringing about of peace—others, who openly assist in warlike operations, are allowed to earn both increased honour and emolument by so doing.

By the last accounts from Macao Mr. Mundy was, we are glad to learn, progressing favourably. We hear that there are some hopes entertained of catching the culprits, and that, on some information received, the *Cumoiens* and two Chinese gunboats left Macao for the scene of the catastrophe on the morning of the 25th August at 3 o'clock. Among the passengers on board the steamer was the wife of an expectant Taoutai, and it is to be hoped

that her having been despoiled of her jewels will form an incentive to activity on the part of the Chinese Authorities.—*Hongkong Daily Press*.

### News of the Fortnight.

HONGKONG.

Considerable excitement was caused in the Colony by the arrival of the news that the steamer *Spark* belonging to the Hongkong, Canton and Macao Steamboat Company had been seized on the night of Saturday, 22nd Aug., by pirates, when on the way from Canton to Macao, and the captain, purser and boatswain killed, and a European passenger badly wounded. Details of this sad affair, so far as it has been possible to ascertain them, are given further on. Up to the present, the whereabouts of the culprits has not been discovered, but hopes are entertained that the efforts which are being made with that object may yet prove successful.

The native cruisers in the waters around the Colony have latterly become increasingly bold. A mandarin junk, on the 19th instant, fired upon a fishing station on Lama Island. Three men were wounded, and taken to the Civil Hospital—one of them being injured dangerously. The story told, is, that the mandarin junk came to the station and demanded a squeeze, on the ground that the fishermen ought to have a license from Canton, and on the money being refused, went away and fired, as already, stated. A curious question has been raised as to whether Lama Island belongs to the Colony. It is probable the subject will be brought forward at the Legislative Council.

A meeting of the shareholders in the Hongkong City Hall took place on the 26th instant, James Whittall, Esq., in the chair. The accounts showed a deficit of \$298; but it was hoped that the subscription being raised among the public, for altering the theatre, would leave a surplus which would go a long way towards reducing this amount.

Attention has been called to the fact that a very large quantity of gunpowder is stowed at Stone 'Cutters' Island, and it is urged that there is not sufficient protection against explosion. Admitting that every precaution is taken, it is urged that the principle, upon which arrangements should be made for stowing powder in large quantities, is, that not only should every precaution be taken to prevent an accident arising, but, as all experience proves that the most careful precautions may fail at times, the arrangements should be such that, if an accident, by any unforeseen contingency, should arise, its effects will be confined to the locality of the powder, at the utmost. There may be nine hundred and ninety-nine chances out of a thousand that an accident will not occur, but as there must be, even with the utmost caution, still some possibility of such a contingency, people ought to be protected against its effects, by the powder being placed in a receiving ship as formerly, in such a position that the town and shipping will be safe, even if the hulk explode and blow those on board it and near it into atoms, as happened in this harbour in 1867.—*China Overland Trade Report*.

It is asserted positively that the man who was lately executed in a barbarous manner, at Foochow, as a former Taiping rebel, had never been a rebel, but was an unfortunate Chinaman who, having been many years in Japan, became naturalised there and got some official employment. He was, it is said, attached to the Formosa expedition, and when

he was seized at Amoy, was on a mission with despatches from the Japanese Commander, Saigo. It is further alleged that he went to Amoy by a Chinese gun-boat, in the utmost good faith, but that the Chinese officials were indignant at his being selected to bear despatches, (he was probably chosen on account of his knowledge of Chinese), and were further enraged because he refused to *kotow*. A memorial from the Viceroy of Fohkien, referred to in the Peking Gazette of 4th August, announces the capture of the man as a former noted leader among the Taiping rebels, and gives his name as Yang Fuh-t'ing. If the new version of the story prove to be true, and it is so consistent with the Chinese way of doing things that we are disposed to credit it, the Japanese will no doubt make the matter another cause of complaint against China.—*News*.

Very severe weather was felt on the coast of Formosa during the end of last week. A letter from Amoy, dated the 15th ulto., says—“Bad news has just come to hand from Takow. A British barque, the *Caroline Hutchings*, went ashore between Apes Hill and the entrance of the harbour; all hands were lost. I have not heard the particulars, as the intelligence has been brought over by a junk, but, from what I do know, I think she must have dragged across the bar from the outside where she had been at anchor, during the gale. The weather there has been very severe ever since the 13th.”—*Ibid*.

An outrage, of a nature calculated to give rise to a question of much importance, has been perpetrated by a Chinese mandarin junk at Lamma Island. This vessel, it appears, fired upon a fishing junk, and wounded three of its crew, who are now in the Civil Hospital; and as the shots were fired in British territory (Lamma lying within the boundaries of Hongkong and its dependencies, according to the Latitude and Longitude laid down in the charter of the Colony) it will become a question whether it will not be the duty of the Government to enforce satisfaction. We shall doubtless hear more of the matter, and meantime those of a geographical turn of mind may possibly make some interesting discoveries as to the intrusion of blockade vessels into British territory, as formally defined by H. M. Government.—*Overland China Mail*.

85, Yokohama, December, 1873.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

We have little change to report in the market for Imports since our last, and prices, it will be seen, have undergone no material alteration. The preparations being made by the Government in anticipation of trouble with China have caused some animation in goods required for Army use, and Blankets, Cloths, Drills, &c., are in fair demand. The *Jessica*, from Liverpool, and the *Remus*, from London, have arrived with full cargoes of general merchandise, and goods per steamers *Tigre* and *Hector* have been received via China. STERLING EXCHANGE shews a considerable decline, and is expected to go still lower.

GREY SHIRTINGS have not improved; business done has been almost nominal, at a decline from last quotations.

COTTON YARNS are extremely dull of sale, at lower figures.

VELVETS continue in request, and prices are maintained.

TURKEY REDS are still saleable.

WOOLLENS AND WOOLLEN MIXTURES are very lively, and considerable business has been done in most sorts at fair rates.

BLANKETS continue saleable at last quotations.

IN METALS there is a slightly improved tone to be noted. A fair business has been done, and the previously heavy stock has been somewhat reduced.

KEROSENE OIL fetches less money, and the demand is dull.

SUGARS are steady, at slightly lower figures.

RAW COTTON suffers little change.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$1.95 to 2.15	} Exceedingly dull of sale.

Kerosine Oil, ... .. 10 Galls., per case.	3.00 to 3.05	

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Considerable animation has pervaded this market since the issue of our last (13th ulto.), and settlements have totaled fully 1,000 bales. Prices, however, have undergone little or no change, and dealers, who, we then pointed out, shewed a disinclination to submit to a reduction in rates, still adhere to that determination, although desirous of reducing stocks, which now amount to 800 bales of old and new. A small parcel of Kakuda Oshiu, Best, fetched \$570 per picul.

**TEA.**—In spite of dull and rather adverse advices from the United States, buyers continue to support our Tea market, and for the past fortnight a fairly extensive business has been transacted.

Settlements amount to nearly Piculs 10,000, comprising all grades, but the Medium classes have received the most attention.

Our market closes rather weak, but dealers are not inclined to force sales, and a slight cessation of business may in consequence ensue.

The *Ambassador* is the only vessel at present on the berth for New York, at £3. 5s. per 40 cubic feet, and will have despatch about the 20th instant.

 Sept. 9, Frch. str. *Tanais*, Reynier, 1,110, for Hongkong, mails and general, despatched by M. M. Co.

## PASSENGERS.

Per Am. str. *Oregonian*, for Shanghai, &c.:  
 C. Lunan and servant, F. Upton, H. W. Hagart; and 8 Japanese.  
 FOR HIOGO:  
 S. R. Bonnelle, A. G. A. Coops and servant, J. A. Schepl and servant, Mrs. Craven, Jourdan and servant, Lebon and servant, Munier and servant, Mrs. D. B. Harmony; and 19 Japanese.  
 FOR SHANGHAI:  
 R. Bock and servant, R. Kiersten; and 1 Japanese.  
 Per Brit. str. *Vasco de Gama*, from San Francisco:  
 Messrs. Gilroy, Spinney, Morse, Clarke, and Takawa, Mr. and Mrs. Res, 3 children and servant; 4 Europeans and 116 Chinese in the steerage.  
 Per Am. str. *Great Republic*, for San Francisco:  
 Walton Beebe, Mrs. Martin Cohen and child, Capt. R. S. Corning, Edward Fischer, Iwashita, Natugata, Shinozo, W. P. Tillmann, A. Dieckstahle, N. Gunnarson, W. Mitchell, G. Dixon, J. S. Barley.  
 Per Am. str. *Washi*, from Nagasaki:  
 Captain Smith  
 Per Brit. str. *Vancouver*, from Hongkong:  
 Mr. and Mrs. Haylar; 2 in the third; 219 Chinese and 13 children in the steerage.  
 Per Brit. str. *Vancouver*, for San Francisco:  
 Mrs. Patterson and brother.  
 Per Brit. str. *Behar*, for Hongkong:  
 Dr. McDonald, R. N., Captain Maloney, M. von Franquemont, J. Watson, and Miss M. Cecil.

Per Frch. str. *Menzaleh*, from Hongkong:  
 FROM MARSEILLES:

Mr. and Mrs. Goriach and child, Mons. Nigano, Mr. Osawa, Mr. Okuda, Mr. Shindo, Mr. Kawasa, Mr. Yamaguchi, Mr. Kanda, Mr. Miyagi, Eokudo, Mr. Kunobe, Mr. Aumu, Cakimato, Matsura, Mr. Shibata.

FROM NAPLES:

Mr. P. Mazrouchi, Mr. Butta, Mr. Prato, Mr. Bisi, Mr. Nicolas.

FROM SINGAPORE:

Mr. Hoguet.

Per Am. str. *Golden Age*, from Shanghai, &c.:

Mrs. A. E. Luce and servant, Mr. G. Bradfield and servant, A. Sheangold and servant, Governor Kanda, of Hiogo, Mr. Wittkauskey and servant, H. E. Fushimi no Miya and servant, Mr. H. W. McGregor, Dr. Cochins and servant, Mr. E. Venisenne, 12 Japanese officers; and 85 in the steerage.

FOR SAN FRANCISCO:

Mr. Wm. Hesse.

Per Am. str. *Nevada*, from Hongkong:

Mrs. Coy, and Mrs. Harman.

Per Brit. str. *Bombay*, from Hongkong:

Mr. Heineman, Mr. Woodland, Mr. S. Mitsda, S. Akamatz, Signor Sala, Signor Ghiradotti; and 3 Chinese.

Per Am. str. *Colima*, from Hongkong:

FOR YOKOHAMA:

A. Hayward and wife, Miss Emma Hayward, Miss Delia McConnell, Miss Inga Johnson, Mrs. Beaman, W. J. Osborne and servant, Mrs. Henry Hart, daughter and 2 servants, G. W. Baffey, D. Nowrojee and servant, S. B. Bhabha and servant; and 2 Chinese in the steerage.

FOR HIOGO:

J. Hunt.

FOR SAN FRANCISCO:

1 European and 62 Chinese in the steerage.

Per Am. str. *Alaska*, from San Francisco:

FOR YOKOHAMA:

Mrs. M. Young, H. A. Trowbridge, Ascherman, Hongman, Yashikatore Enonye.

FOR SHANGHAI:

F. F. Ellinwood, D. D., and wife, E. A. Wyeth and wife.

FOR NAGASAKI:

Prof. J. C. Watson, "Michigan University," Mrs. J. C. Watson, Prof. A. Hall, "National Observatory," Wash., D. C., Prof. C. A. Young, "Dartmouth College," W. F. Gardner, P. F., O. B. Wheeler, F. M. Lacey, G. J. Rockwell, J. S. Tappan, D. R. Clark, E. Watson, Thos. Woodward, W. V. Ranger, B. J. Conrad. (Transit of Venus party.)

FOR HONGKONG:

Miss Susie D. Grimstead, Miss Manin L. Carr, Dr. M. A. Check; and 324 Chinese.

Per P. M. str. *Nevada*, for Shanghai, &c.:

FOR SHANGHAI:

Lieut. H. N. J. Hulbeck, H. B. Merse, W. T. Spinney, C. C. Clark, M. de Tappelle, A. B. Gilray, J. G. Dunn, J. Pitman, General Meyers, Col. Lyford, and 2 Japanese; 3 in steerage.

FOR HIOGO:

E. C. Kirby, W. Sangster, W. Henriques and servant, W. Moorigan and servant, 6 Japanese, J. Hunt, and A. Duncan; 29 in steerage.

FOR NAGASAKI:

One Japanese woman, and servant, Dr. Willis and servant, 6 Japanese, one Japanese and wife; 7 in steerage.

Per Am. str. *Colima*, for San Francisco:

H. Dunham, Mrs. A. C. Hall, Mrs. Hilderbrand, J. Van Volken, G. M. Ogilvie, Mrs. A. E. Luce, A. B. Brown, Chas. Fiske, A. Center, C. P. Low, S. Fisher, A. N. Shillingford, A. Cepeland, J. Thomas, wife and two children, E. P. Cressy; and 2 Japanese in the steerage.

Per Am. str. *Alaska*, for Hongkong:

Mrs. E. W. Dumont, Staff Com. Hewlett, R.N., W. H. Moore, H. Fielding, Lieut. P. R. Smythies, R.N.  
 Per Brit. str. *Washi*, for Hakodate:  
 Messrs. W. R. Mitchell and S. G. Littledale.

### Summary.

THE WAR prospects as between China and Japan still continue to be very uncertain. From China the accounts received through the most recent papers are rather more peaceful than was expected; but in Yedo the preparations for war are going on with great activity. As time progresses, and the chances of peace appear to diminish, the spirit of the people rises, and whatever doubts exist in the minds of foreigners as to the issue of a conflict, there seem to be none among the Japanese. The better informed classes recognise the difference, both in point of population and resources, between China and Japan; but they rely on the unity of the Japanese as opposed to the disaffection and disunion of the Chinese soldiers; and they have got it into their heads that the issue will be decided before numbers and money can make themselves felt. Further, they are confident of such early successes, as will enable them to make the Chinese pay the expenses.

This spirit may of itself do much for them. We believe that they fully realize the advantage of promptness; whilst the Chinese are doing all in their power to delay. The Mikado has held the largest review of his

soldiers that has ever taken place under the new régime; and it was far from a mere march past. The soldiers are actuated by the most loyal and patriotic spirit, and declare themselves ready to do or dare whatever is required of them.

An appointment has been made which we are surprised to find is rather highly approved of by the people. It is that of Commander-in-Chief—which has been conferred upon Higashi Fushimi no Miya. This is the young uncle of the Mikado who was lately in England; and a thoroughly excellent young man he is. But he has had no military experience worth speaking of; and can hardly be expected (unless he be a heaven-born soldier) to understand the movements of an army in the field.

From China we hear of appointments of foreigners in great numbers as drill instructors; and there is no doubt many will be engaged to lead the Chinese regiments into battle should war be declared. As yet nothing of this kind has taken place in Japan; and we do not think that foreign officers will be appointed. Within the course of the next two outgoing mails, all will be most likely determined. The shipment of troops to the south, *en route* to Formosa or China, is going on rapidly.

NEVER since the opening of the ports have there been so many midnight robberies in Yokohama as during the past month. It has at last come to such a pitch that a numerous signed memorial has been presented to the Board of Consuls on the subject; and a public meeting has been also held.

THE RIVALRY between the Pacific Mail S. S. Company and the China Trans-Pacific S. S. Company, has been closed by the former chartering the ships of the latter, doubtless with an ultimate purchase of them in view. It is an arrangement generally approved of; as, though competition is unquestionably

good for trade, the P. M. S. Co. has always shewn an earnest wish to meet the public in the fairest spirit. The two fine boats of the China Trans-Pacific S. S. Company, have shewn what can be done in point of speed, and passages of less than twenty days duration, will be far more frequent than heretofore.

UYENO KAGENORI is appointed Japanese Minister to England; Yoshida Kijomari going in a like capacity to Washington. Awo-ki Sengo will also be accredited to Berlin. Sameshima, the present minister to London and Paris is recalled.

THE CABLES have been successfully laid between Yezo and the mainland.

THE HEIGHT of Fusi-yama has again been measured, and found to be pretty nearly as reported by Mr. Stewart in our last summary. Mr. Stewart's measurement was 12,365 feet, and Mr. Fenton has since calculated it, by barometrical readings, to be 12,374.8 feet.

YOKOHAMA HAS challenged Hongkong and Shanghai to a third trial of skill with the Rifle. Shanghai declines; but Hongkong has accepted, and the shooting will take place as soon as all preliminaries are arranged.

MR. SHEPARD, late U. S. Consul at Yokohama has been spoken of as adviser to the Japanese Legation at Washington. The Japanese appear to be always willing to pay for advice, but very slow to follow it.

AS HARVEST time approaches, expectations of a fair average crop are universal. In the home districts they are likely to exceed the average.

CHIARINI'S CIRCUS still continues to attract good houses. We do not yet hear of any arrangements being completed for performances in Yedo; but it were a pity that such a company should pass on without the citizens of the capital having the opportunity of seeing them. It would be something if they could only see the magnificent horses, apart from the performance, that they might learn what this noble animal is in perfection.

THINGS have come to a pretty pass when a newspaper in a small place like Yokohama keeps a permanent heading "To-day's Burglaries," and always has several such depredations to record under it. Only a few months ago, we were praising the efficiency of the Yokohama police force; and such was its excellence, that even that of Yedo was formed on its model. We heard few complaints; and believed that, at last, the settlement really had a vigilant and crime-preventing corps. But how is it all changed? Never a night passes—never one by any chance—during which no attempts at burglary are made; and, never by any chance, is a thief or a would-be thief captured.

But things seem to be going from bad to worse. If the story of the *momban* at No. 28, as reported last evening, be true, what are we to expect? He speaks of three men armed with swords, who, unable to obtain entrance to the house or godowns, took from him all that he had, "to pay their jinrikisha hire." It becomes a desperate game when men carry swords to aid in their burglarious work; and the knowledge or even apprehension of their doing so may lead to a great deal hastier use of the revolver than has hitherto been common. We have heard of one man stating that he had placed a revolver in charge of his *momban*, with instructions to use it, in case of necessity; but we strongly disapprove of it, for the reason that these men are easily alarmed, and might use the fatal weapon before ascertaining the character or the purpose of any one who approached. A case in point occurred a few evenings ago; when a gentleman, accompanied by three friends, went round, after the Circus, to see that all was safe at his employers' premises. Next morning, the *momban* reported that four men, evidently foreigners, had attempted to break in, but, on his speaking, they made off as fast as they could. Now, the man did speak, and the gentlemen replied; but evidently the former had not the power of discriminating friend from foe. Surely it would not be well to intrust such a man with a revolver, and to tell him to use it if necessary.

No—the revolver must be kept in our own hands, and only used in cases of certainty. The proper remedy for the state of things is with the police; and, by some means or other, we must insist upon increased efficiency on their part. For a long time before we had a good police force in Yokohama, we urged upon the authorities the necessity of adopting the system of "beats;" and though one of our contemporaries opposed us, the plan was tried with complete success. But, lately, the force has been so reduced that if "beats" are still maintained they must be so large that one man cannot properly patrol and guard them. If the "beats" are very large, it stands to reason that the thieves will watch for the policeman passing, and then calculate on plenty of time to carry on their operations before he can get round again. It is requisite, therefore, that they be of such size as can be visited rapidly, from end to end and through and through.

Some rule also ought to be adopted, by which persons carrying loads or bundles of any kind, at night, should be subject to police surveillance. It is not likely that the nocturnal depredators are never seen by the police. But it is certain that they are never caught.

The time has come when something must be done to put an end to these burglaries and burglarious attempts. We find that it is useless attempting to shame the authorities into doing their duty; and it is useless appealing to the Municipal Director. Stronger steps must be taken; and, to that end, a public

meeting should be called, and the weight of public remonstrance brought to bear on the officials. It will never do to allow the Settlement to remain under the reign of terror (to call little things by big names) that now exists, and the sooner a meeting is called the more it will look like earnest determination on the part of the public to have things righted. As to the proper person to call the meeting, we would suggest that a request be made to our most excellent English Consul, signed by those who have themselves already suffered from the thieves, and by others. It is a matter that affects us all—for no one knows whose premises will be next visited. We are sure that Mr. Robertson would not only consent to call the meeting, but would lend the Consular Court Room for it, and preside on the occasion. At the same time, it would be understood that it is no mere English question—but all nationalities are equally interested, and we should hope that all nationalities would be represented at the meeting.

#### THE CASE OF GEN. LE GENDRE.

WE HAVE received, from Shanghai, fuller and more complete details than any hitherto published of the arrest of Gen. Le Gendre at Amoy, and of the subsequent proceedings connected with the case. The various documents throw a new light upon the origin of the action, and place the responsibility in an unexpected quarter. As nothing beyond the merest outline of the affair has yet been made public, it may be interesting to relate the circumstances, as they occurred, from the beginning.

Gen. Le Gendre, having been the confidential adviser of the Japanese in all the business relating to Formosa, was sent to Hongkong in the latter part of July, with instructions to proceed northward to Fu-chao, and there enter upon peaceful negotiations with the Viceroy of Fu-kien; having concluded which he was to go on to Peking, to assist in the deliberations that were taking place respecting the agreement entered into last June, between Gen. Saigo and Commissioner Shen, in the Japanese camp at Liang-kiao. His mission was purely in the interests of peace, and no action on his part could have tended to any other result. To reach Fu-chao, it was necessary for him to pass through Amoy, on landing at which place he was forcibly arrested by the Marshal of the U. S. Consulate, assisted by officers and marines of the U. S. S. *Yantic*. This occurred on the 6th of August. On the following morning, accompanied by four bondsmen, Messrs. N. C. Stevens, John Middleton, J. C. Wardlaw and Randall H. Pye, he went into court, and, in the course of a slight delay before the opening of proceedings, asked for the reasons of his arrest. He was informed that it was needless for him to inquire; that it had been decided by the Court to hold him for trial, and that no explanation could be given him for the present. The Consul, Mr. J. J. Henderson, then delivered the address which was published in the *Gazette* of August 20th, and which is doubtless fresh in the memory of readers.

Notwithstanding the fact that Consul Henderson declared his action to be "above all, under instruction from Peking," there were many points in his statement that excited much surprise. He was known to have been, at least until recently, quite opposed to the Chinese side of the general controversy, and to have issued certain former admonitory documents to Americans in Formosa, solely in consequence of orders from Mr. Williams, the U. S. Chargé d'Affaires. The few attempts at legal justification, in this instance, were there-

fore unexpected. A word or two of remark concerning them will not be out of place. The allusion to "complaint by Chinese authorities" was based upon the letter sent by the Viceroy of Fukien to Mr. Henderson, which has already been published, and in which the writer says:—"If in the vessels that are gone to Formosa there are American citizens aiding the Japanese, we ask you to punish those that are acting improperly, whether on land or sea." Gen. Le Gendre, however, had not been in one of the vessels that went to Formosa, nor had he been in the island since 1872. He was not even purposing to go there; if he had been, he could have sailed in one of the Japanese men-of-war that left Amoy on the day of his arrival, before his arrest had taken place. It was perfectly well known that his destination was Fu-chao and Shanghai, and that a transport was in waiting, in Amoy harbour, to take him to those places. Moreover, he was ready to prove his intentions by showing his official credentials and instructions, but this, the Consul informed him, he could not be allowed to do. Consul Henderson's charge of violation of the peace resting on the "laws and obligations" between the U. S. and China is disposed of by the fact that no war existed, or even yet exists, between any powers with which the United States are at peace; and an ample recognition of this fact happened to be afforded on the very day of the arrest, by the circumstance that the Japanese Consul at Amoy breakfasted, by invitation, with the Chinese Admiral, Li. The Consul quoted from the treaty to prove that among possible offences was the commission of any "improper act in China." The only act that Gen. Le Gendre had committed was that of landing from the British ship *Kwan Tung*. The formal asseveration by the Consul that, because China has declared the Formosa expedition to be hostile, Gen. Le Gendre's "violation of the laws of the U. S. and their treaties will be presumed to follow," really needs no comment. Its enormity is too apparent.

At the close of Mr. Henderson's remarks Gen. Le Gendre commenced to speak, but was interrupted, told that this was unnecessary, and assured that all he could say for the present to secure his release would be of no avail. He replied that he had no desire to argue the case, but simply to enter protest, which he was allowed to do. This document, also, was published in the *Gazette* of the 20th ult.

Gen. Le Gendre concluded by urging that he should be sent to Shanghai, where he should at least have the benefit of counsel. This, as we are aware, was subsequently done. But, immediately upon his arrival there, the case assumed a new aspect. The accused was immediately discharged. This, at first, was a greater surprise than the original seizure, but it now needed only a few inquiries to fully elucidate the whole mystery. It was found that, some time previous to Gen. Le Gendre's appearance at Amoy, Mr. Henderson had written to Mr. Williams, at Peking, asking how he should proceed, in the event of having to deal directly with the visitor. Before the Chargé had had time to send his answer, or rather, before the answer could reach its destination, Gen. Le Gendre had landed; hearing which, Consul-General Seward telegraphed from Shanghai, on his own responsibility, so far as is known—"Arrest Le Gendre, provided you can do so without conflicting with Japanese authorities." It must be remembered that although telegraphic communication exists between Shanghai and Amoy, there is no quicker transit between Peking and the south than that afforded by steamboats. Mr. Henderson being

under the impression that Mr. Seward acted by order of the Chargé, took proceedings as above narrated. While Gen. Le Gendre was on the way to Shanghai, Mr. Williams's reply to the original inquiries reached that place. It stated, if we are correctly informed, that Gen. Le Gendre was not to be arrested at all. Learning this, Mr. Seward sent a marshal to the prisoner—for such he must, in fact, be considered—to say that he was released, by order of the minister, and that there would be no occasion to try him. From that moment, until the departure of Gen. Le Gendre for Peking, on the 29th of August, the Consul-General never alluded to the affair, although the two gentlemen met and held conversation on other subjects. Possibly, under the circumstances, it was Mr. Seward's best policy to preserve an absolute silence, inasmuch as, in the present aspect of the case, no justification, or even extenuation of his course could be put forward.

The next mail from China is expected to bring further intelligence upon the subject, with a clear explanation of the position occupied by the U. S. Chargé, Mr. Williams.

**WHAT** with burglaries and the dispute between China and Japan, the local newspapers have done little more than ring the charges on these subjects for a long time past.

The announcement that we made last evening respecting the arrangement between the Pacific Mail Steamship Company and the China Trans-Pacific S. S. Co., calls for special notice. The arrangement is that, practically, the P. M. S. S. Co. have bought their young rivals out of the field: and by absorbing their fine steamers among those of the long established fleet, have got rid of all competition, and will have the line to itself as before.

We believe that this is really the best thing that could be done, under present circumstances; for what chance could the new company have with one so heavily subsidized as the P. M. S. S. Co.? But we have much to thank the China Trans-Pacific Company for; inasmuch as, without their competition, we should not have had so speedy an improvement in the time occupied in crossing the Pacific Ocean. It is probable also, that we should not have had such boats built for the service as those we are expecting to see in our waters. The *City of Tokio* and the *City of Peking*. The Company therefore has done us essential service, and we wish that it could have competed successfully with its rival—both taking a fair share of the business, and both realizing profits. But wishes are useless. We all know what the P. M. S. S. Co. did in running a rival off the line on the American coast; and with its subsidy, it can afford to repeat the operation on this branch. Far better is it that the matter be settled in the way it has been, before that red hot and ruinous competition commenced.

But how will it affect the public? This is the question that properly comes within our province to consider. In days gone by, the P. M. S. S. Co. was always looked upon with exceptional favour, by the public of Japan. It was ever, from its very start, the most liberal institution in the country. So popular was it that it rendered every one connected with it popular; indeed the company and its employees mutually reflected on each other. We have no reason to doubt that the new staff will conduct the business of the company equally to the satisfaction of the community; and they will have the advantage of better ships and better material to work with. The company is not one that has to learn its business. Its

history suffices to assure us that it is quite awake to the necessity of doing the best it can for those to whom it looks for support; and that, even though it is alone and has the field to itself, its interest is in considering the interests of its customers. In this age of keen rivalry, when every one is anxious to push business, and profits are cut down to the utmost in order to obtain a share of it, the difference between a high and a moderate rate of freight is an important item of consideration; and this the P. M. S. S. Co. know just as well as the traders themselves. To encourage business and to extend the company's operations is an object with the company; and for this reason, we believe that no apprehension need be entertained of any injury to the public, through lack of competition.

And truly there is one view in which the removal of the competing line may be an advantage. Lately we have been a thoroughly mail-ridden community. Two English, two French, and four American steamers a month, was almost too much of a good thing. We shall now have our regular weekly mails *via* Egypt, and fortnightly *via* America, and this will be sufficient for all purposes.

On the whole, then, we are disposed to think that the new arrangement will prove to be beneficial for all parties—the public no less than the two companies.

**I**N FORMER days there was an ever-existent theme for popular animadversion in the creek on the Western side of the settlement of Yokohama. It was a nasty, malarious boundary, useful at high water, but, during the half of every day, a nuisance and a source of danger to the community. By a certain convention between the Japanese governments and Treaty Powers, the former agreed to deepen it to an uniform depth of four feet at low water; and after a delay of four or five years they actually did set to work upon the promised improvement. With the Creek, which may now fairly be designated the Canal, there is now but little fault to find; but that little arises from the incompleteness with which the former work was done. The mouth of the Creek always had a bar, over which, at almost all times, there was a disagreeable roll of the sea, and which, during several hours each day, prevented either entrance or exit, except for the very lightest and shallowest of Japanese boats. This, before the improvements, had become an intolerable annoyance and obstruction to the business of the shipwrights, engineers, and others who occupied the water frontage, and had selected it for the facilities it was supposed to afford.

We perceive that now the same annoyance is daily increasing. Hardly any day passes without boats being grounded on the bar, which has again silted up, and any boats of over two or three feet draught are imprisoned in the Canal, or unable to enter during the hour on each side of low water.

We do not pretend that this is altogether of so great consequence as formerly; for the traffic is probably not so great, and far better regulated than it was. But every day it is becoming worse; and the Japanese authorities, if they are wise, should order the mouth of the Canal to be deepened, before it becomes absolutely impassable.

Japanese methods are not based on the principle of doing the largest amount of work in the shortest time; nor do they ordinarily consider the convenience of those who are more immediately affected by any work they have in hand. We should be sorry to suggest anything that should lead to the Canal being closed

and dammed as it was during the progress of the original improvements. There are two ways of accomplishing what is now required—viz., either bringing one of the steam dredges into action, or employing a number of coolies, every day at low water, to dig away the sand, as they did before. The latter plan is slow, and will only allow of very imperfect work. Still it is in accordance with the national prejudices. But the use of the steam dredge would do the work well and enable all the bank to be cut through, so that a good channel might be made, and a strong flow of water secured, which would do much towards keeping a fair-way open. If the work is worth doing, it is better to do it well at once, and so save an infinity of expense in the end; and this must have been proved by the experience derived from the Canal itself, its sea walls, and its bridges.

In the present state of the country, it is hardly reasonable to expect any extensive works to be commenced in Yokohama. Already a notification has been published, which calls upon all the Kenrei to undertake no buildings, but to return the money allowed for them to the Treasury. At the same time great economy is called for in the completion of those buildings already commenced. We are therefore not disposed to bother the authorities unduly about projected works in Yokohama. At the same time we hope that the day is not distant that will see the commencement of the harbour improvements, which will be invaluable both to business and to those who seek their pleasures afloat.

**“FOR** WAYS that are dark and tricks that are vain” we must not look to the “Heathen Chinese” alone. They may be found in almost every station and avocation of life, and we discover, on glancing at the files of American newspapers received by the last mail, that they even penetrate the lofty atmosphere of New York Journalism. *The World*, a sheet of apparently ambitious pretensions, devotes considerable space to what it calls special despatches from its “own correspondent” in Formosa. It happens to fall within our knowledge that the *New York World* had no “own correspondent” with the Japanese expedition, yet the various letters are dated from Liankiao with a precision of dates and names of places which are certainly well intended, if not well contrived, to deceive. They carry with them abundant evidence of having been manufactured in New York, and a few of their extraordinary statements are worth reproducing, to shew the amazing facility with which history may be invented, and chronology and geography alike readjusted to suit the exigencies of journalistic competition. The supposititious correspondent announces his arrival in Formosa, “with 3,000 dusky warriors” on the 6th of June, when in fact the landing did not take place until the 8th. He describes Liankiao as a valley “two square miles in extent,” it being really about seven or eight. He states that General Saigo “is really acting under the direction of Commodore Cassel and Col. Wasson;”—a monstrous and ludicrous fabrication, which nobody would be quicker to deny than the American gentlemen in question. General Saigo is, moreover, spoken of as directing all the military movements from the time of the first landing, and especially those of May 22nd; whereas he did not reach Formosa until after that date. The village of “Sekimon” is said to have been “utterly destroyed.” There is no such village; “Sekimon” is a rocky pass between two mountains. In one skirmish, in which 75 Boutangs

at the outside limit, were engaged, 15 are stated to have been killed and 100 wounded. The "Kubsunai" (Kusukut?) tribe is spoken of as having been subdued on the 3rd of June, "after a short but very decisive engagement." There never was but one "engagement" of any kind, and that occurred on the 22nd of May, with Boutans.

These will serve as illustrations of the accuracy of the alleged events in Formosa itself. The diplomatic and political revelations of the correspondence are not less wonderful. The expedition is proclaimed the sole work of Iwakura, — "Iwakura who is really the Mikado." "A Chinese province has been invaded." "The Mikado dare not bring his army home from Formosa." And an infinite deal more of the same quality. Perhaps the following extract, relating to the connection of Sir Harry Parkes with the enterprise, is the most entertaining of all. We give it in all its length of absurdity and breadth of mendacity.

"There is an inside history to this Formosan expedition which has never been told, and which I learned from a prominent American officer in the Chinese navy. Sir Harry Parkes is one of the English ambassadors at the Japanese Court. He is a very clever man, and on intimate terms with the Tenno. It was principally through his influence, and certainly upon his advice, that Iwakura decided upon sending the Samourai to Formosa. Now, Sir Harry Parkes has an old spite against China. Some ten years ago he was rather roughly handled by the Government here. At that time he was acting in the capacity of an interpreter at Peking. A war arose between the English and the Chinese, and Parkes was induced to carry an official despatch to the Chinese camp. He was detected in this, carried before the Commander-in-Chief, and nearly tortured to death to extract a confession implicating his countrymen. The Chinese magistrate then ordered him to write a decoy letter to the English Governor. He wrote it half in English and half in Hindostani, so that the interpreter was unable to read it. The English Governor who received the letter read it, and at once sent a large detachment of soldiers, who succeeded in recapturing Parkes. Queen Victoria then sent him to Japan, as his life was in danger in China. It is natural that he should not have any very great love for the Emperor's Government after this experience, and indeed time has only served to intensify his hatred to China. Now it is said that he has encouraged this Formosan expedition for the express purpose of creating a war between China and Japan."

It is not to be supposed that all New York newspapers resort to such wretched devices as this, but the single circumstance will go far to throw suspicion upon the authenticity of all letters purporting to be written from the East. In this case the falsehood is bare and undisguised. That every word uttered is fraudulent, nobody can fail to perceive; yet the fictitious correspondent has the dazzling effrontery to say: "Now I am with the Japanese army. I am not afraid to speak the whole truth." In the face of such a declaration, we are tempted to inquire, in the words of one who might have been a valuable contributor to sensational journalism, if he had lived in modern days, — "What is truth?"

WHEN the empire of Japan maintained its isolation from the rest of the world, it was like forbidden fruit—an object of desire to all nations. Great was the philanthropic regret that she steadily refused all the advantages to be derived from international intercourse; and many were the attempts to induce her to join the comity of nations.

Well, when the fulness of time was come she opened her doors. The civilized foreigner entered, and the long secluded native went abroad. Each now can say "Veni, Vidi"—but what next? Have all the benefits foretold been reaped by Japan? Have foreigners found all that they had looked for? We fancy that if each is called upon to give a simple reply to these questions, it will be in

the negative. And thus it is—"the good we look for often proves our bane."

Fifteen years have elapsed since foreigners first availed themselves of the permission to reside and trade at the open ports of Japan. A retrospect of those years is anything but calculated to assure us that the march of civilization has been the march of improvement in the sense of happiness of the people. In fact from the time of Commodore Perry's arrival with the President's letter, Japan has lived a kind of artificial life of excitement and *malaise*. Discontent has taken possession of her, and changes have taken place in manners and habits without a corresponding change in feelings and opinions. Their own civilization, which if not of the same type as that of foreign nations, was in many respects of a high standard, is giving place to a kind of hybrid, distasteful both to their own people and to foreigners.

We admit everything that can be urged as to the advantages of modern education, and the superiority of the new form of government—theoretically—over the old. But had Japan remained secluded, her own measure and method of education sufficed for her; and the government suited the idiosyncracies of the people. We do not argue that the Japanese were better or happier than other people; though, on the surface, they certainly appeared to the first comers to be so. But we do assert that foreigners introduced into the country influences which were the means of stirring up the elements of discord and unhappiness that exist in all races of humanity, and which had lain dormant for many generations.

In this nineteenth century, arguments in favour of allowing any nation to refrain from intercourse with the rest of the world will be received with disfavour. We do not uphold the doctrine of seclusion; and even if we did, we should bow to established fact. Japan is actually, at her open ports, free to all the world. But we do argue that disappointment both to foreigners and to Japanese has followed in the wake of the treaties. It must not be supposed that either has the sole right or cause to complain of the other. On the contrary, on both sides it is necessary to bear and forbear.

And this is the object of our remarks. To induce both parties to a more just appreciation of each other than is usually shewn. We frequently hear each speaking of the other in terms which show how deep is the disappointment on both sides. But to foreigners we would call to mind all that the country has passed through since the opening of the ports, and ask how it is possible that there should be no heart-burnings in the generation which has witnessed all that has occurred? Does a revolution leave no traces of feeling behind? Does the overthrow of a dynasty go for nothing? Is the severance of the ties between chieftains and clansmen a thing of indifference? Is the enhanced cost of all articles of food and clothing of no consequence? All these things the Japanese have seen during the last fifteen years, and far, far more. Two of their most important chiefs have had to encounter the hostile attacks of foreign armaments; a civil war has ravaged some of the finest provinces; and now—well, now the empire is on the eve of war with her near neighbour; which is tantamount to saying that her finances will be crippled, and her people pinched and squeezed for money in a way never before experienced.

Japan has much to complain of, and little, as yet, to be thankful for, as the result of her intercourse with the outer world.

But to the Japanese themselves we would say that they should consider that foreigners also have disappointments to irritate them. They meet with so much obstruction and interference from the government; they are subjected to the action of monopolies; the unreliable administration of the law by the Japanese judges; the never-ending delays in all transactions with Japanese; the disregard of truth and the commonest principles of honesty, on the part of many who enter upon business with them; that there is much indeed to complain of. Besides these, which are not matters of opinion but of fact, there is the unwillingness of the government, purely on the principle of opposition, to open the country to beneficial mutual operations of Japanese and foreigners. And there are many other matters which rankle in the minds of foreigners.

We would, therefore, that between the natives of Japan and those who select the country as their home and centre of business, the morbid feelings of distrust and dislike should disappear. Each may find in the other much to admire and approve; and a candid weighing of the merits against the demerits of each, would, we hope and believe, lead to a far better feeling that is ordinarily exhibited.

#### CANOE SAILING RACE.

A NICE fresh breeze coming across the Bay, and the consequent little "joggle on," gave us a little canoeing under far more lively circumstances than on the previous three occasions; the course, moreover, was an excellently well-chosen one. The first flag-boat, just off Mr. Dare's house about a mile down the Bay, gave a capital test of the reaching qualities of the tiny craft, then a beat half a mile to windward, finishing with a run almost "dead before" it, gave all a chance of bringing out the respective qualities of their boats.

At 5.17 p.m., with the firing of the gun, twelve competitors got away very fairly together; Julius Dare's boat, with a prettily cut set of China sails, getting off with a lead of some lengths; followed by G. M. Dare, whose *Ringleader*, with a large lug and jib, managed, however, to overhaul and pass him in the run down to the first flag, both in turn, being collared and passed by Lieut. Smyth in his "little ship," with a large suit of bran new racing sails, which she carried beautifully, and with his "Nautilus" build, went clean away from everything, taking the seas like a duck; whilst the rest, mostly of the *Ringleader* class, were diving and dipping into it considerably. Messrs. Hamilton and Tripp led the rest of the fleet, who all kept well up. Lieut. Smyth was the first to pass the first flag, G. M. Dare next, J. J. Dare third; the rest all getting past in very fair time from the start. Lieut. Smyth then went away with a great lead, but did not hold so good a wind as Julius Dare, whose China-rig now began to tell in the beat to windward, he tacking long before the rest, who all had to make a "long leg" down the bay before venturing to put their boat's noses round for flag-boat No. 2.

Messrs. Hamilton and G. M. Dare were dodging alongside each other for some time, the former overhauling the other several times, but, with the freshening breeze, Mr. Dare got clear, and tacked soon after Mr. Smyth. The rest were considerably to leeward forming a very pretty sight, with their white sails standing out against the dark sea and threatening sky, the breeze having freshened up considerably.

Mr. Smyth was again first round the next (No. 2) flag-boat, closely followed by Julius Dare, and, after a considerable interval, by G. M. Dare; Messrs. Tripp and Alfred Dare next, neck and neck, followed one by one, by the rest of the fleet. Mr. Alfred Smith had apparently got off on a cruise on his own account, off Homoco. In the run in, Lieut. Smyth again ran away from the China-rig, but who managed to get in three minutes astern. Mr. G. M. Dare, in the run in, also picked up considerably, making a fair third, followed, in a string, by Messrs. Tripp, Alfred Dare, Hamilton, Buckle, Dousdebbs, Drury, Kilby, and Hodgson; the latter two however, saving their time, and thus ranking fifth and sixth, making in all a well-sailed and capital race.

Lieut. Smyth got over the course by 6h. 2m., some four miles in three-quarters of an hour. This, with the boat to windward and nasty tumble of a sea, is remarkably good work. Moreover, to the credit of Yokohama canoeists may it be said, that, notwithstanding the fresh breeze and sea, not a single mishap of any sort occurred, either with sails, fouling, or capsizing, which shews the benefit of the frequent cruising in company, and that the energy displayed by the Commodore and Vice-Commodore, in keeping together the canoe fleet, has not been thrown away. This is more particularly shewn by the good nature displayed by many of the members of the fleet, who invariably muster when "anything is up," and go round the course although they know that they have but little chance of winning; thus proving that unselfishness, at any rate, forms a pleasing characteristic of many of our canoeists.—*J. G.*, Sept, 12th.

ANOTHER canoe race, of a novel character, is arranged for next Friday (18th) at 5 P.M. The conditions, which are rather "sensational," are as follows:—

First prize, a cup, presented by J. Rickett, jun., Esq. To start together from a position off the Y. U. Club, paddle to a stake-boat in front of the Grand Hotel, round it, jump overboard, and swim, towing or pushing canoe 100 yards to another stake-boat in shore, get in, and paddle back to starting point. Second prize, \$5 to second canoe, to be contributed by the two last canoes in, the last to pay \$3, and the last but one \$2. No handicap, and no intentional fouling allowed. Competitors to wear flannel trousers and jerseys, and winner to come up for the prize immediately after the race, to be presented on board the umpire's boat. Mr. A. W. Glennie will act as umpire, starter, judge, and referee, and his decision on all points will be final. Entries to be sent in to Mr. Glennie by noon on Thursday.—*J. G.*, Sept. 14th.

### SAILING RACE.

A race, for \$100, came off, on Saturday, between the *Tantivy* and the *Invincible*. The former is well known here—the latter is a Nagasaki boat of great reputation as a "light wind" boat; she is, in fact, a sailing machine with immense China sails, and a deep lead keel. The owner has, since she came here, about a month ago, sought a race with the Yokohama boat, but has always desired the advantage of a light wind. The race on Saturday was arranged, by the owner of *Tantivy* conceding this: the day being almost calm. It was past 1 P.M. when a start was agreed to. The course was the same as previously sailed by the *Zephyr* and *Tantivy*, about 18 miles. They got away at about 4.30 P.M., with a very light

easterly wind, and a dead beat to the lightship. The *Tantivy* gained a little in working up to Treaty point, where she was about 20 yards to windward. Here the other began to gain, got ahead, and soon went about, but not far enough out to make the light. The *Tantivy* held her reach until she could clear it. The wind at this moment shifted 3 points to the southward, which fluke allowed the *Invincible* to lay for the light on an easy bowline; the *Tantivy* being some distance behind. The former cleared the mark with a good lead, which she further improved in the run to the wreck of the *America*—when she was  $7\frac{1}{2}$  minutes ahead. The wind, since the shift, had improved in strength, almost to a gentle breeze; raising a small ripple on the water. The *Tantivy*, after rounding, hove round on the port tack; and having the wind abeam, got her balloon jib full for the first time, and then began to overhaul the other most rapidly. After passing the western mark, it was a dead beat past the town to the Lightship. Every yard the boats went it was clear that the China rigged one was out of the race. The first round (opposite the Y. U. Club) finished soon after 6.30, the *Tantivy* about 8 minutes ahead. She held on, and finished the second round at 8.30. The other gave up after completing the first round.—*J. G.*, Sept. 21st.

### TO-DAY'S BURGLARIES.

September 11th.

DURING last night, The Burglars, to the number of three, armed with swords, paid a visit to Messrs. Chipman, Stone & Co.'s premises. After tying up the *momban* they demanded the keys, but it was explained that they were kept on the Bluff, at the residence of one of the firm. This was a hardship indeed, but the premises seemed impregnable and therefore the attempt to enter them by force was not made. Being high-toned burglars, they came in *jin-riki-shas*, and, as they pointed out to the *momban*, they must have money to pay their fares—for, we know from the records of the old highway-robbery days how punctilious are the gentlemen of the road on such points. The poor *momban's* bedding, his clothes, and four *ryos* had therefore to be appropriated, but this of necessity, they being, as we have already mentioned, high-toned robbers, who would scorn to stoop to a dirty action. Thereupon they departed—as they came, in *jin-riki-shas*.

If we might be permitted to make a suggestion, we would throw out the hint to them that the jaunting cars which ply in our streets are to be engaged by the hour at a reasonable figure. These would be much more convenient, and still more high-toned, than *jin-riki-shas*; we want our Yokohama burglars to keep up the dignity of the Settlement.

No. 82, Messrs. W. Watson & Co.'s store, was last night visited by thieves, but the aspect of affairs was apparently not assuring, as they did not attempt to get inside, and only took away about 10 feet of zinc spouting from the Main Street front.

During Wednesday night, the *momban* of a house at No. 129 observed a European sneaking out of the front door with something bulky under his clothes. The alarm being raised, it was found that a hearth-rug was missing. The thief got away. Marks of boots were found on the plaster under the window.

Another attempt was made to enter Messrs. North, Thompson & Co.'s godown at No. 61, last night. The thieves managed to strip off the metal sheathing from the lower part of the door, and then gave up the job. We believe

this is the fourth visit this firm has lately received from thieves.

The *momban* of No. 24, Messrs. Hartley & Co.,—who have been twice before similarly visited within a fortnight—hearing a noise at one of the windows last night about 9 o'clock, ran round in time to see the robbers, who had been endeavouring to effect an entrance, decamp.

During last night, The Burglars broke into the godown of Messrs. Driscoll & Co., at No. 77, by wrenching off the very heavy padlock which secured the outer door. Sliding back the inner door, which is a heavy one and must have made some noise, nothing intervened between the robbers and the spoil. About two o'clock this morning, the *momban*, in going his rounds, came to the godown and thus interrupted the burglars, who had just got fairly into their work. They went off, leaving the alley way which leads to the godown strewn with all kinds of clothing material, which, but for the timely arrival of the *momban*, would doubtless have been carried off. Shortly after this, a Japanese policeman saw a Chinaman walking off with some goods, to his shop in Hattoba Street. A search-warrant was procured this morning, but of course nothing was found. Black cloths, silks, flannels, trowserings, &c., are missing, the value of which is set down at about \$500. This is the second time the godowns of Messrs. Driscoll & Co. have been tampered with. A European constable, who was in the vicinity at the time of the robbery, arrived on the spot just in time—to be too late.—*J. G.*, Sept., 12th.

An attempt was made, during the night, to remove a "Downton" pump which stands in the P. & O. Company's Compound. The thieves succeeded in unscrewing three of the nuts which secure it to the ground, and were apparently interrupted whilst operating on the fourth and last. They left behind a pair of "spanners," which are now lying at No. 15, awaiting a claimant.—*Idem*.

DURING last night the premises of Mr. A. Wylie, engineer, at No. 159 Swamp, were burglariously entered, and property to the value of \$700 abstracted from the Show-Room. The Burglars obtained ingress by prizing up the heavy shutters with some powerful lever, thereby drawing the bolt from the socket; a pane of glass was then broken and the window opened. The following is a list of the articles stolen:—Two rolls, insertion rubber, (Grey); one roll, red rubber  $\frac{1}{2}$  in. thick; one roll, brass wire gauze; one 2in. packed gun metal flange cock; 12 steam and vacuum gauges, marked Jno. Dewrance & Co.; one 12 in. twin-screw; 60 lbs. "C. Silvertown" packing, one in.,  $1\frac{1}{2}$ , and  $1\frac{3}{4}$ ; 60 ft.  $\frac{1}{2}$  in., 60 ft.  $\frac{3}{8}$  in., and 60 ft.  $\frac{1}{4}$  in., India-rubber tubing, and one small clock. All the articles will be easily identified by the owner so that hopes are entertained of soon being able to recover all or part of the property. This time it is scarcely likely to be Japanese and if some of our friends "the loafers" could be induced to tell "the truth, the whole truth, and nothing but the truth," we should probably hear something about the robbery.—*J. G.*, Sept. 15th.

DURING LAST night, an office on lot 157 was burglariously entered and a considerable amount of property, more than three men could have carried, abstracted from the private compartment. The goods stolen were chiefly samples, as nothing else of importance was kept in the office. The same place was broken into four

months ago, and cleaned out; after which the owner had iron shutters and doors fitted up. Three days ago, an attempt was made to enter the premises, but the burglars must have been disturbed. Last night, an entrance was gained by breaking the door; the padlock had been tampered with, but had evidently foiled the efforts of the robbers, who then tried their skill on the iron door, which they smashed open. A Chinese boy went to open the office this morning, when he found everything in disorder. Information has been given to the police, but the owner of the property seems to have but slight hopes of ever again seeing his samples. He complained to Mr. Nakashima, who told him that, beside the native police, he had sixteen men going about the town, in plain clothes, armed with swords, whose business it was to watch the police, and that, as he did not think they were sufficient, he was going to employ several more.—*Idem*.

A BUNGALOW upon Lot No. 85 was also entered, early this morning, and a large mirror and a small clock were stolen from the parlour. The thieves entered by breaking the shutter of a small window at the side of the house. They were evidently Japanese, as they have left the marks of their *gelas*.—*Idem*.

THE BURGLARS have been out again in force, and visited no less than three places within the last two nights. The first from whom we heard of the marauders were Messrs. North, Thompson & Co., whose store at No. 79, was, last night or early this morning, again attacked. The thieves removed 4 laths from the venetian shutter of one of the side windows, and had loosened a pane of glass, by cutting at the sash outside, when they must have been disturbed, probably by the approach of a *momban*, with his thief-alarming clappers. This morning the shutters were found open, and a ladder was lying on the ground, directly under the window.

Woodruff and Co. have also again suffered from the *fraternity*. Mr. Woodruff rose this morning at half-past five o'clock, and, between that time and 9 A.M., his bed-room was entered, and a coat and \$10 stolen. There were some letters on the table, which were also taken, but were, at a later hour, returned by a coolie.

The night before last, about 9 o'clock in the evening, a gentleman named Nielson, of No. 119, went out to see a friend, living in the same compound, and returned at 10 A.M., when the first thing that attracted his attention was the absence of a pane of glass from the window, which was certainly in its place an hour previous. Upon entering the house he found that *our friends* the burglars had kindly paid him a visit, and not finding the occupant at home, had politely taken all the clothing &c. that 5 or 6 men could conveniently carry. Of course there were then no signs of his considerate visitors.

Under this head we have something a little pleasanter to speak about: the recovery of stolen property. It will be remembered that, last Monday night, the premises of Mr. Wylie, engineer, at No. 159, Swamp, were entered, and a considerable amount of property stolen. Last night the following articles: The India-Rubber, Brass Wire Gauze, and Packed Gun-Metal Flange cock, all identified by Mr. Wylie, were found by a Japanese boy in a private house at Ishikawa. The boy in question is a servant of Mr. Wylie. There will now be some hopes of finding a trace to some of the burglaries.—J. G., Sept. 18th.

FOUR JAPANESE burglars have been captured at Kanagawa, but not through the

vigilance of the police force. They had been on a *spree* to Kawasaki, and upon returning, late at night, with rather too much *saki* on board, one of them struck his wife with his sword and cut her across the face, which so enraged her that she gave information to the police.—*Idem*.

WE HOPE that soon we shall have to discard the heading which appears above, and that burglaries will, at all events, be but occasional items, and not an everyday subject of discourse. We have, however, another attempted robbery to record. Last night, the store of Messrs. Busch, Schraub & Co., Ship-Chandlers, No. 55A, was the place selected by the burglars. Luckily, since robbery has been rampant through the Settlement, the above firm have taken the precaution to put two padlocks upon their outer door, one being a patent and the other a small common brass pad-lock. The small lock was smashed to pieces, but the patent resisted the efforts of the burglars, although they have rendered it useless for the future, and, consequently, an entrance was not effected.—J. G., Sept. 19th.

IN our last night's issue we mentioned several articles which were taken from a private house at Ishikawa, and identified by Mr. Wylie as part of the property stolen from his store, No. 159. The police have taken into custody the occupant of the house in question, and also the inmates of a neighbouring domicile, who, alarmed, probably, by the judgment that was descending upon their friend, gave up the remainder of the stolen property, with the exception of a few small articles, worth \$3 or \$4, upon the first questions being put to them by the police. Mr. Wylie says that a Japanese customer first apprised him of the whereabouts of the stolen goods. The authorities will no doubt soon persuade the receivers of the various articles, by some of their well-known gentle means, to confess whence they became possessed of them, and thus there is good ground to suppose the neck of burglary, in Yokohama, is broken.—*Idem*.

LAST NIGHT, the premises of No. 226 Bluff, were chosen by the burglars as a place for attack; but, owing probably to the vigilance of the police, they did not effect an entrance. The owner says that, about once a fortnight, for some time past, attempts have been made to enter his house. The last time the burglars paid him a visit they were disturbed by the servants.—J. G., Sept. 22nd.

THE OFFICE of Messrs. Martin & Co., Coal Merchants, No. 108, was again broken into last night, but, luckily, since he was robbed a few weeks back, Capt. Martin has not bought another clock, and, therefore, with the exception of a few *tempos*, nothing was stolen. The burglars obtained ingress by breaking open the front window.—J. G., Sept. 23rd.

DURING last night, The Burglars tried to break open the front door of No. 1, Bluff, occupied by Mr. I. A. Sitwell, but were prevented effecting an entrance owing to the appearance of Mr. S. J. Stransome. They decamped, and the latter gentleman regrets that he did not allow them to enter, that he might have entertained them in an appropriate manner.

Also during the night, a thief effected an entrance into premises at No. 25, but was promptly chased all over the compound by Capt. Carst, and at last managed to jump over the fence at the back. He got away, leaving

behind, in his hurry, some boots and shoes which he had annexed, and a *zori*, which latter, being of no use to the captor, will be returned to him on personal application at No. 25. Captain Carst went out into the street and searched for a policeman for some time. He says none was to be found. Extraordinary, isn't it?

Here is something still more extraordinary, a tale of an honest *jin-riki-sha* man.

Early this morning, the conductor of one of those useful vehicles, on his way across *Maida-bashi*, the second bridge over the Creek, picked up the following articles, which in all probability were dropped by a thief on the appalling (because so unusual) sight of a live policeman; the owner may perhaps be able to identify them:—1 piece billiard cloth; 3 white musquito nets; 1 coloured bed curtain; 5 long window curtains, of various colours; 3 white jumpers, similar to those worn by American men-of-war's men, and 2 pair of sailor's white trousers. The clothing and the musquito nets were clean and wet, and appeared as if they might have just been taken off a clothes' line. The whole of the articles are deposited at the Ken-cho, until claimed.

If there's any city, or town, or settlement, in these parts—or anywhere else—which can produce as good, and successful, and daring, and mean an assortment of burglars as we've got in Yokohama, and as useless a lot of dummies—we mean police—just let it trot 'em out, and we'll throw up our hand in disgust.—J. G., Sept. 9th.

During last night, The Burglars broke into Messrs. F. G. Woodruff & Co.'s premises at No. 26, and abstracted a quantity of preserved meats and other stores and an umbrella. Entrance was gained through a small window at the side. Some short while ago, the premises were burglariously entered and a quantity of soiled linen which had been sent ashore from a vessel to be washed was stolen. A pair of socks bearing a mark similar to that on the stolen linen was picked up this morning outside of the store, which leads to the supposition that the former thief and the latter may be one and the same person. A boy whom Messrs. Woodruff suspected has been discharged to-day from their employ.

A pane of glass was (also last night) removed from the window of a private office at Messrs. Walsh, Hall & Co.'s, and some Japanese gold coins taken away. We hear of no further loss having been sustained.

There was a robbery at No. 129 last night, we understand; as yet we have been unable to obtain the particulars.—J. G., Sept. 10th.

The following captures were made by the Police last week.

11th September	Caught one thief.
12th	" " one do.
13th	" " one do.
14th	" " { one do.
	four burglars (Gado)
	forceible robbery.
15th	" " two thieves.
16th	" " { one burglar.
	one thief.
18th	" " { one do.
	five burglars.

—*Idem*.

LAST night, about 11 o'clock, a fire broke out in a shed near the Shinbashi Railway Station. It consumed a large quantity of stores, but the rolling-stock was removed without having sustained any injury.—J. G., Sept. 10th.

FOR VERY many months, the columns of the Yokohama Press have teemed with reports of burglaries and robberies, and, lately, the matter has become of so aggravated a nature that our chronicle of such events, under the head of "To-day's Burglaries," has come to be looked for quite as a matter of course; as one would turn to the shipping columns naturally expecting to find the arrivals and departures. Letters to the newspapers and to the Municipal Authorities, and direct appeals from the sufferers in person to the officials, having failed to procure any amelioration of this disgraceful condition of affairs, a suggestion which was made in the *Gazette* a few days ago, that an appeal be made to the Consuls is now in course of being carried into effect. The subjoined address to the Board of Consuls we recommend to the notice of the public, who are invited to add their names to it as soon as convenient, that it may be presented at an early date. Copies of the address lie at the Clubs for signature.

#### TO THE HONOURABLE BOARD OF CONSULS, YOKOHAMA.

GENTLEMEN,—The Undersigned, Landholders and Householders of Yokohama, respectfully call the attention of your Honourable Board to the defective police arrangements of the Settlement; in consequence of which, robberies are every day taking place, and, every night, burglaries are effected, without any of the culprits being taken by the police. Several of the undersigned have already been victims of the thievish fraternity, whose operations being carried on with great success and with perfect impunity, an extension, rather than a diminution of them, is the result; and it is impossible to say who will be the next sufferers. We therefore strongly request that your Honourable Board will bring this matter under the notice of the Japanese Authorities, in such a manner as may lead to the greater efficiency of the police and the immediate rectification of the grievance.

We have the honour to be,

Gentlemen,

Your obedient, humble servants.

Yokohama, September 18th, 1874.

THIS afternoon, a meeting was held in the Chamber of Commerce rooms, to take into consideration the insufficiently protected state of the Foreign Settlements, as evidenced by the frequent burglaries.

The chair was taken at 3 o'clock by Mr. A. J. Wilkin.

The gentlemen present were: Messrs. A. Winstanley, Hooper, H. Cope, Strachan, Wylie, T. Walsh, Howell, Stewart, Boulet, Purvis, Pratt, L. Davis, P. Bohm, A. Mitchell, North, Hohnholz, Harmand, Isaacs, Rickett, Pfoundes, Cocking and Singleton.

The small attendance of those expected to take an interest in the matter before the meeting, may, perhaps, be accounted for by their having signed the memorial presented to the Board of Consuls on Saturday last.

The Chairman opened the meeting by a few remarks, showing how inefficiently the settlements were protected, and said that already complaints had been made to the Governor, who had promised to obtain a reinforcement of 100 men, and also to put a larger number of police on duty at night, and make a decrease of those on day duty. In answer to a request that persons going about with parcels at night-time might be stopped, the Governor had said that the law of Japan did not authorise parties

being taken up on suspicion, and that therefore the police had to be very careful.

The following resolutions were then put to the meeting:—

Moved by Mr. Hooper, and seconded by Mr. Strachan,

That the frequent burglaries now occurring are to be attributed to the inadequacy of the native police force for the foreign settlements.

Carried.

Moved by Mr. Wylie, and seconded by Mr. North,

That it is desirable to urge upon the Japanese government, through the medium of the Board of Consuls, the necessity of an increase of the police force, and a thorough patrol of the foreign settlements; and especially the examination of suspicious characters crossing the bridges during the night.

Carried.

Proposed by Mr. Cope, and seconded by Mr. Pistorius,

That a committee of five be appointed, who shall place themselves in communication with the Board of Consuls, and act generally on behalf of the foreign community, in this matter; reporting progress from time to time, through the newspapers, and, if necessary, by summoning a public meeting.

This proposition was unanimously carried, and the following gentlemen elected to serve on the committee: Messrs. T. Walsh, P. E. Pistorius, E. G. Vouillemont, A. Evers, and A. J. Wilkin.

After a few general remarks the meeting was brought to a close, with the usual vote of thanks to the chair, at 4 o'clock.

#### SCHOOL EXCURSIONS.

It was one of the best compliments ever paid to a religious institution, when a little boy described it as "the society that takes care of the children;" and we have some pleasure in thinking that Yokohama might be described as a community that takes care of its children. For many years past we have had the benefit of a well-conducted Sunday-school, sustained chiefly by Missionary ladies, though others have co-operated, both in the teaching, and in the ever-to-be-remembered Christmas Trees. And now, quite a list might be made out of the various schools which are sustained here, suited to the wants of all the children amongst us; except, perhaps, the class of growing boys, who need classical or commercial training. The number of these does not suffice for the support of a higher-grade school, although the situation of Yokohama is well adapted for the purpose. Previous efforts in this direction, however, shew that until the population of our settlement is greatly increased by those who are minded to make themselves "at home" here, a good old-fashioned boy's grammar school cannot be looked for.

The above remarks are suggested by the little incident of observing yesterday, the whirling along of some dozen or so of *jin-riki-shas* filled with the children of what is called the "Parsonage School," all full of life and spirits, and anticipating the delights of a day in the country. We understand that they had their Pic-nic and their plays in the ground of the Temple at Boken-ji, and got home late in the afternoon, tired, of course, but without trouble or accident. Those who contribute time, trouble or material in such heathful excursions promote the happiness of children in a most commendable manner, and deserve the best thanks of our community.

ON MONDAY, at 5 p.m., a meeting of Englishmen will be held at the Y. U. Club, to arrange for a crew to pull in the International Race, which will take place on, or about, the 10th proximo.

WE RECENTLY mentioned the fact, reported in Tokai, that the Satsuma clan had offered patriotic assistance to the government in the present crisis. It will be seen that this spirit is not confined to that clan. From Tochigi Ken we learn that the Shizoku of the former Daimio Akimoto, having heard of the probability of war between China and Japan, have held meetings, the first of which was attended by about 350 of them, and which have daily increased in numbers. The result of the meetings is the following memorial to the Kencho:

"We humbly present this memorial. We have lately heard that a question has broken out with China, respecting the expedition to Formosa: and that Mr. Okubo, Naimukiyo and Sangi (Home Minister and Privy Councillor), has been sent on an embassy to China, for the purpose of preserving the peace. But, under present circumstances, it is better to have war; or we shall create contempt abroad and trouble at home, and at length, unless we put the whole Empire of China under our power, we shall decline and make as poor an appearance as Poland in Europe. Indeed, upon this one effort the existence or destruction of our Empire depends. And thus we cannot restrain our mortification, our sorrow, and our anger.

"When we were the vassals of Akimoto, our lord educated us in military arts and literature, that we might serve the Empire; and he always told us that military arts and literature are the foundation of loyalty and filial piety. Not forgetting these words, we fought in our Mikado's cause, at the time of the revolution. On the eve of a war with China, we assemble in league under the name of volunteers; and we hope we shall become instruments of brightening the power of the Empire abroad, even at the risk of our lives, according to the instruction of our former lord. We desire earnestly to be added to the military forces, and to march to some battle-field in China.

"Victory in battle depends on the general. But it is very difficult to find a suitable person for a general. Saigo and Itagaki, the late Sangi, are men of wisdom and ability, who would be approved of as generals by the whole Empire. What is the reason that Saigo is allowed to live in retirement, without discharging any public duties? He should be quickly employed in military duty by special order from the Mikado. Then, marching under his command, the troops of the Empire will lay waste China. If this is not done, the people will doubt his treatment by the government, and in the end this will lead to defeat. We cannot, therefore, remain silent.

"With fear and trembling, we humbly request you to present our Memorial to His Majesty the Emperor.

KIROKU TAIZO, } *Shizoku.*  
HOSHINO SAKUMA, }

Representing the Shizoku and Volunteers."

To NABESHIMA,

Kenrei of Tochigi.

2nd September, 1874.

THE inquiry into the death of R. M. Bevell, was finished about half-past 5 this afternoon. The following is the verdict:—We, the undersigned, sitting as a jury, to enquire into the cause of death of R. M. Bevell, do find that the deceased came to his death from an overdose of morphia, administered by himself; and from wounds inflicted by his own hand, with a pen-knife, while under the influence of the poison. We further find that the deceased had been for several days labouring under great mental agitation.—Sept. 17th.

LAST NIGHT, a Temperance Meeting was held at the Hall, No. 86, but, owing no doubt to the attractions of Signor Chiarini's Circus Troupe, the attendance was not, by any means, good. The Rev. E. W. Syle spoke a few words upon the excitement and evil caused by drink; showing forcibly how attractive alcoholic drinks must be to the habitual drunkard, and proving, by various arguments, that excitement is the principle end in view when a man, especially a sailor off a long voyage, goes to a public house with the determination to have a "drunk"; to leave, for a time, the sameness and monotony of life, and enter a world of dreamland. The reverend gentleman spoke also of the danger of the excitement of all games of chance, but advocated the practice of games of skill.

Several temperance songs were sung, and, in a few words, Mr. J. Y. Henderson, told how well the "Total Abstinence Society" was progressing, and spoke hopefully of the cause for the future.

The meeting closed about quarter past 10 o'clock.—J. G., Sept. 18th.

WE are requested to publish the following correspondence:—

Yokohama, 31st August, 1874.

SIRS.—We beg to draw your attention to the serious annoyance and inconvenience experienced by the Residents of this settlement from the noise and shouting made by the coolies employed in drawing loads along the streets.

The grievance is a real not a sentimental one. The noise begins at an hour which, if not claimed by rest, many desire to devote to occupations demanding all obtainable quiet, and it continues incessantly throughout the day to the disturbance of necessary business conference, which it is often so excessive as to interrupt entirely.

We would therefore respectfully request you to draw the attention of the local Japanese authorities to this subject, and obtain from them the abolition of this very unnecessary and irritating evil.

We have, &c.

(Signatures of the Residents)

To the Members of the Consular body  
(enumerated.)

KONGELIGT DANSK GENERAL CONSULATE.

Yokohama, 29th July, 1874.

NAKASHIMA NOBUYUKI, Esq., *Kenrei*.

SIR,

We have the honour to solicit your attention to a matter in respect to which frequent complaints are made by members of the foreign community. We allude to the nuisance caused by the cries of coolies and labourers in the streets of the foreign settlement. At most, if not indeed at all, the Treaty Ports in China this nuisance, which existed at one time in as great a degree as it now exists here, has been either altogether suppressed or at least so controlled as no longer to constitute a nuisance, and there is no reason why the same good result should not be obtained here. The most prominent annoyance under this heading is the noise made by coolies when dragging carts or carrying burdens through the settlement.

A Regulation simply worded, having for its object the repression of these noises, would be gladly welcomed by the entire foreign community. The enforcing of the Regulation could be entrusted to the Police who should begin by warning offenders, and if the utter-

ance of the noise complained of, is persisted in, punishment in the shape of a small fine would meet the requirements of the case. The police however should not be authorized to levy the fine but simply to report the offender to the authorities.

At first the Regulation will probably only be enforced with difficulty, but if the police are alive in the matter the nuisance will either cease altogether or become so mitigated that there will be no further complaints on the part of Foreigners.

We have, &c., &c.

Signed by,

E. DE BAVIER.

OSCAR COLLEAU.

*U. S. Vice Consul.*

GUSTAVUS FARLEY.

*H. I. R. M.'s Actg. V. Consul.*

[TRANSLATION.]

Kanagawa, 12th August, 1874.

SIR,

I have the honour to acknowledge the receipt of the letter addressed to me by the Consular Board on the 29th July, with regard to the shouts of cart-coolies in the foreign settlement and asking me to make some regulations to suppress the nuisance.

These shouts enable the coolies to keep step with each other, to put out their strength together, and greatly ease their labour; they vary also according to circumstances with the view of preventing accidents. It would, therefore, be a very difficult matter for the Kencho to issue a notification stopping the practice.

I also beg to say that useless shouting to the annoyance of others has been prohibited, and I will see that more strict attention be paid to the order.

I have the honour to be,

Sir,

Your obedient servant,

(Signed) NAKASHIMA NOBUYUKI,

*Kanagawa Ken no Kami,*

*Dairo SANTO NAOTO, Sanji.*

To E. BRENWALD, Esq.,

*Chairman of the Board of Consuls.*

YESTERDAY, a canoe race, of rather a novel character, came off at 5 o'clock, starting from a position opposite the Y. U. Club. The conditions were given last Tuesday. The weather was exceptionally fine and calm, and a better evening could not have been selected, that is, for the canoeists, for, if there had been a little "joggle" on there might have been more fun for the spectators, the number of whom, both afloat and ashore, was unusually large. A great number started, Messrs. Thomas, Alfred Dare, J. J. Dare, and Tripp noticeably leading. Mr. Thomas was the first to round the first stake-boat, and Alfred and J. J. Dare next. As each one rounded he jumped overboard, and pushed his canoe to the next stake-boat. J. J. Dare and Alfred Dare then took the lead, and the rest were all swimming in a batch. J. J. Dare was the first to regain his canoe, and went away with a lead of some lengths, but Alfred Dare fouled the bow and hawser of the 2nd stake-boat. The rest were following in

straggling order, the swim having somewhat taxed their powers, and considerable amusement was caused by the repeated efforts of some of the stouter canoeists to recover their seats. Julius Dare, who had too great a start for the others to overhaul him, came in first, and Alfred Dare second; the rest were considerably astern, and so scattered, that it would be difficult to give their order. Messrs. Henley and Jones, being the two last, had to pay the second prize.—J. G., Sept. 19th.

YESTERDAY MORNING, a deputation waited on H. E. Nakashima Nobuyuki, the Kenrei, in reference to the insecurity of property in the settlements. The Kenrei promised to do all in his power to effect an improvement; to apply to the Central Government for the addition of another 100 men to the force; and to consult with the superintendent of police, as to the expediency of increasing the force on night-duty and making a corresponding decrease of those on day-duty. At present, there are five police stations in the settlement, including the large barracks; and four more on the Bluff. The force consists of 400 men; 200 of them are paid by the Central Government, for the protection of the foreign settlements, and the remaining 200, for the protection of the Japanese part of the town, are paid by the native community. This number, however, has been lately reduced, by 20 or 30 men, owing to the increased rate of wages now ruling; and a further deduction must be made for those on the sick list, or absent on leave. Thus there remains, say about 120 men, available for duty in the settlements; and, if these are divided into watches of 6 hours each, and allowances be made for officers, there will be only twenty-five men actually on duty at one time, both on the Bluff and in the foreign settlement proper. The cost, per annum, of maintaining the police force in the foreign settlements is \$20,000.

The *Herald*, in an article, respecting the police force, in their issue of last Wednesday, stated that the European constables were only "useful to pick up deserters from ships." This we are by no means prepared to say, for the Municipal Director, stated that there were not enough European police, and that they were not strong enough to cope with the burglars.—J. G., Sept. 19th.

THIS MORNING, another trial took place of the magnificent "Silsby" steam fire engine. A lengthened description of which has appeared in our columns. We need only say, now, that it is the most beautiful and compact piece of mechanism of the kind that we have seen, either of American or European manufacture. A trial came off, some six or seven weeks ago, when, with 60 lbs. of steam, two 1½ in. jets of water were thrown, horizontally 165, feet. On that occasion, Mr. Comstock, the Agent of the Silsby Co., got steam up in 4 minutes. The engine was tried to-day at the request of some Japanese gentlemen, and proved quite a success, pleasing all parties. Steam was not generated so quickly as on the previous trial, owing to fact that the man who laid the fire had not put sufficient wood into the furnace. It was therefore 12 minutes before the gauge showed 10 lbs., upon which low pressure the engine was started. In 20 minutes, with 60 lbs. of steam, two streams of water were thrown as far and as high as on the previous occasion. This splendid machine is valued at \$8,500; the engine alone at \$6,000.—J. G., Sept. 24th.

To-day, His Majesty the Mikado entertained the Foreign Ministers at Hama Go Ten.

## CORONER'S INQUEST.

AN INQUIRY was held, on the 8th instant, at 5 o'clock, P.M. at the International Hotel, before Gen. Thos. B. Van Buren, U. S. Consul-General, and two assessors, into the cause of death of Richard M. Bevell, who died yesterday morning at that hotel, from wounds inflicted and poison administered, it was supposed, by his own hand.

Messrs. W. L. Clarke and J. Mendelson were duly sworn as assessors, and the inquest was opened.

G. T. M. Purvis, sworn:—This morning, about half-past 10 o'clock, I was called by my chief-steward, who informed me that Mr. Bevell had cut his throat in his room. I immediately sent in all directions for doctors, and, after a short time, Dr. Elliot came to the hotel, and, with me, went to the room of the deceased, whom we found lying on his bed, groaning, with a wound in his throat, and insensible. The doctor made an examination, and found a number of wounds on the breast. I searched the room, and, on the dressing-table, found the remains of a bottle of morphia, and, on the wash-stand, a tumbler with morphia on the rim of it. On searching the clothes of the deceased I found, in his coat pocket, a small pistol, loaded. Mr. Bevell died in my presence, and Dr. Putsey, of the Marines, and Dr. McDonnell, arrived shortly before his death. He had been staying at the hotel for 4 or 5 days. I did not touch his effects, but several things which were lying about I had put into boxes, and I took possession of his watch, chain, and rings, and have them safe. I saw him last about half-past ten last night, sitting in his room. I went round the hotel, as usual, to see if all was right, and, on passing his door saw him sitting at the table as if writing, and, on returning, I bid him "good-night," to which he replied "good-night." That is the last I saw of him alive. I saw him yesterday forenoon. Another gentleman saw him later than I did last night. Mr. Bevell did not live at the hotel altogether, he only came there to sleep. There was a bundle of accounts lying on the table.

To a Juror:—It was 10 or 12 minutes after I sent that Dr. Elliot arrived.

Dr. W. St. George Elliot, sworn:—I am a physician, but not in practice. A messenger came to my house this morning, and told me that I was wanted at the International Hotel; that Mr. Bevell had cut his throat. I went immediately, and entered the room with Capt. Purvis. I found deceased lying on his bed, with his clothes covered with blood, and apparently in a dying condition. I felt his pulse, and it was very feeble. I listened over his right lung, which was perfectly healthy. In the region of the heart there were 37 stabs, and immediately under the surface there was a great deal of irritation. I did not probe the wounds, so I cannot tell their depth. Two of them have penetrated the lung. There was some tumefaction round the wounds on the throat, and round one or two of those on the breast. The insignificance of the wounds induced me to look for some other cause of death. About this time Capt. Purvis found a bottle containing morphia, and, as we found the capsule lying on the floor, we concluded it had been an original package, one-eighth of an ounce. It was about half empty, or about 30 grains taken out. An ordinary dose is an eighth of a grain. Attempts were made to resuscitate deceased with brandy, but he was not able to swallow it. The beating of his heart became more and more indistinct. About this time the other two physicians arrived, and deceased died soon afterwards. In moving the body

from the bed to the floor we found the pen-knife with which he is supposed to have inflicted the wounds. The knife is in the room. My opinion is that death was caused by morphia, and the passage of the air and blood through the lung. I cannot judge when he took the morphia, but I think he took it at different times during the night. I think if he took it all in one night it would cause death. It was the powder of morphia. There was nothing to indicate the cause of death. When I first saw deceased I dressed the wounds. His lungs were not sufficiently obstructed in their action to account for his condition. I knew the deceased; I came from Nagasaki and Kobe with him, but I have not seen him for three or four years. Thirty grains of morphia would kill a healthy man in 4 or 5 hours. It is possible, but not probable, with some poisons, that a man may take too much, so that it will become an emetic, but it is not so with an opiate. I think he had cut his throat with the same instrument that he inflicted the wounds with. There were no arteries cut. There were some buises about his throat, as if he had attempted to throttle himself. I had not attended him for any complaint or disease.

Coroner:—Was there anything in addition to the fact that 30 grains of morphia were missing from the package to indicate that deceased died from the effects of morphia?

Dr. Elliot:—If there had been no wounds I should have said he was suffering from some narcotic poison.

Coroner:—If a man were afflicted with a fatal disease, and should take morphia enough to produce the outward symptoms you saw in this case, could it be said with any certainty that he died from poison?

Dr. Elliot:—Not certainly.

Coroner:—Then the symptoms exhibited by him might have been exhibited without death being produced by poison? You must understand me, Dr. Elliot, I do not wish to compromise you, and the reason I am so particular is that, for the sake of his family, the true cause of death should be known.

Dr. Elliot:—No, it could not. I am of opinion that morphia caused death. The indications that I saw to-day are such as always result in death. I should say the wounds were made some hours before I saw deceased. The mental condition of a man after taking morphia would depend entirely upon the quantity taken. One of the effects of small doses is purely stimulating. It is not likely he took it in small doses. After taking all the morphia (30 grains) I think he would have command of his senses for half an hour. I never heard of a man who had been given to drink taking morphia. I should say the wounds were inflicted about four hours.

Dr. Henry MacDonnell, sworn:—I am a physician at the British Naval Hospital. About 10 o'clock this morning, a messenger came to my house and told me that Mr. Bevell had cut his throat. I went to the International Hotel, and Dr. Putsey, who was with me at the time, accompanied me. Deceased was lying on the bed, and apparently dying. I went over to the hospital for some restoratives, and when I returned Mr. Bevell was dead. I examined his body and found several punctured wounds on his chest. The majority of them were over an inch and a half in depth. I saw the knife found. The body was taken from the bed on to the verandah, and, in searching the clothes, the pen-knife was found. It was closed. I also saw the bottle of morphia. In my opinion, internal hemorrhage

produced death. When a man takes an opiate there are several indications, such as,—heat of skin, feeble pulse, giddiness, drowsiness, sound sleep, coma, and, in nearly all cases, contraction of the pupil. There were no such indications. He was insensible; that was one sign. I think he could not have taken 30 grains of morphia without producing all, or most of the symptoms. I have not had much experience with regard to poisoning. I have known one case of poisoning by morphia. I have had occasion to use it. I could not form any opinion about the length of time the wounds had been made.

To a Juror:—When I went to the hospital I was away 5 minutes. I did not make an examination of the body before I went.

The inquest was then adjourned until 4 o'clock to-day. The Coroner and Jury proceeded to view the body, which was lying in a dressing room adjoining the chamber lately occupied by Mr. Bevell, and it was again searched, when 66 cents in Japanese money was taken from the trowsers pocket. The small pen-knife was shown to the Coroner and Jury; it is about 2 inches in length when closed. Upon the table in the bedroom were lying a bundle of accounts belonging to the P. M. S. S. Co., and a piece of paper, upon which was written, in almost illegible characters:—

"My dear Mr. Irwin,

I forgot to call to-day will you kindly tell ——— to do do ———"

Here the letter ended incoherently. It was signed,

"Yours very faithfully,

R. M. BEVELL."

(Continued from Yesterday.)

Yesterday afternoon, at 4 o'clock, the inquiry into the cause of death of Richard M. Bevell was resumed at the International Hotel, before Gen. Thos. B. Van Buren, U. S. Consul-General, and Messrs. W. L. Clark and S. Mendelson, assessors.

Dr. W. H. Putsey, sworn:—I am a Surgeon in the British Royal Navy. I have heard the evidence of Dr. McDonnell, and I quite agree with all he said. I could not give any opinion as to the mental condition of the deceased, but from the writing found on his table (letter to Mr. Irwin produced) I should judge that he had been drinking very hard, and, if he had been drinking hard, he would be deranged. A man who had taken morphia would be powerless to do anything, unless he did it directly after taking it; but he would have a disinclination to do anything at all. The intoxicating liquors would cause him to write incoherently. I should think the writing produced would indicate that the writer was suffering from the effects of a debauch, and consequently from diseased brain. When I heard of the bottle of morphia being found I looked for some symptoms of poisoning, but I only found that the pupils were slightly contracted. This, and the fact of the bottle being found, were the only evidences of his having taken morphia. There were two other symptoms that were wanting; the first,—the eyelids were open: they are closed in opium poisoning; and the second,—the skin was cool and dry: in opium poisoning the skin is covered with perspiration. I consider that I made a close examination of the wounded parts, and I counted 24 punctured wounds reaching downwards and backwards. Three of them had penetrated the chest wall, communicating with its cavity,

first disclosed by the contents of an intercepted letter, from one of the leaders at Ma Ch'ang to another at Hsin Ch'eng. It was the intention of the insurgents, according to this letter, to march upon Tientsin simultaneously from both these camps, on the 19th inst., capture and hold the place, and put all the foreigners to death. The letter giving the above information was intercepted on the 14th inst., and the facts were immediately sent to Li Hung-chang, who issued prompt orders for the apprehension of a number of suspected parties. It was the expectation of the leaders that, as soon as the rebel standard should be hoisted over the walls of Tientsin, the whole body of Li Hung-chang's Southern soldiery would join them, as they are known to be exceedingly hostile to foreigners. The Viceroy's detectives were soon upon the scent of their game, and, on the day following the receipt of this extraordinary disclosure, seven of the ringleaders were arrested at an obscure Chinese inn near the western suburbs of the city; and, on the day following that, six more were brought in irons from the camp of Hsin Ch'eng, escorted by a strong body of soldiers from the Viceroy's guard. The leader of the revolt, General Whang, made good his escape, and is still at large.

The badge adopted by these rebels is a white turban, and their standard is a white flag bearing this inscription, (Hsin An.) Quite a number of these flags have been captured.

The men who are under arrest are being secretly tried by a Military Commission, in the city of Tientsin. So far, only one of them has been forced to confess. He says the object of the attack was to plunder Tientsin and to kill all the foreigners. It is claimed by the Chinese that this movement is not political; that it is organized by a band of bad characters, and that loot is their object. Of this, time will be the safest judge.

There is a singular fact in connection with this affair, viz., that the local officials, one and all, so far as I can learn, profess entire ignorance of what is going on. I suppose there is a reason for their reticence. It will be an awkward thing for the Viceroy if he should be called to task by his Imperial Master, for this misconduct on the part of his favorite troops. And here it should be added that every confidence is felt in the Viceroy's fidelity toward foreigners in this movement. Whatever may be its extent or result, there is no doubt as to the position of Li Hung-chang. His loyalty to the present dynasty, his courage, and his ability to deal with refractory subjects, give great promise of a satisfactory solution of this troublesome looking affair. But, from the knowledge of Chinese character which past experience has given us, it would seem the part of wisdom to keep ourselves in readiness, prepared to defend ourselves, without depending too much upon others.

The gunboats *Curlew*, *Hornet* and *Sobol* are here; and I believe that the English, American, and French Consuls have each asked for reinforcements.—*N.-C. Daily News*.

The Japanese Embassy still remain here, and the duration of their stay will probably depend on contingencies. I hear that they have despatched a courier to the capital, and that his return is expected before any further movement will be made.

It is noteworthy that, when the Ambassador was landing, on the 1st inst., the Japa-

nese sailors manned yards and cheered in true man-o'-war fashion. The Consuls called upon the Ambassador during the course of the day, and a gentleman ranking as a secretary of the Embassy visited the Custom's Taoutae at 5 p.m., to inform him of the arrival of the Embassy and of his Excellency's intention to proceed to Peking on public business. The Secretary's call was returned on the following day by the Taoutae. I am not aware that he saw the Ambassador. When the resident Japanese minister, Mr. Yanagiwara, called on the Governor-General, Li Hung-chang, while en route for his post at Peking, Li returned his call by sending two subordinate people belonging to the Chinese Merchants' Steamer Company. I fancy the Ambassador is not likely, therefore, to place himself in the position of not having his call returned by the Governor-General. Li Hung-chang must now feel that his cool reception of Mr. Yanagiwara was a mistake which is likely to react against him, and it does not raise him in the eyes of his countrymen at Tien-tsin.

The common talk amongst the Chinese, high and low, is entirely touching the Japanese action in Formosa. It is evident to every one that they consider the position taken up by Japan as a gross insult, and that they would gladly see the honour of China vindicated by force. Everywhere we hear of all kinds of preparations being made to drive the Japanese out of Formosa. At present, however, it is like the whale fighting the sword fish. The Japanese are, undoubtedly, masters of the position at this moment; and the Chinese are now paying the penalty for their ignorance and conceit in fancying that the few and inefficient foreign appliances they have acquired were, at the present day, sufficient for measures of offence or defence against the least powerful of foreign nations. We now see that all the wretched wooden men-of-war, built at Shanghai and Foochow, can be completely overawed by a couple of Japanese ironclads, so that China is at the mercy of Japan. Till lately, to listen to the talk of the mandarins, one would have thought they were able to fight a European nation like France. China is the whale, and Japan the sword fish, and their respective positions are likely to be maintained until the Chinese Government at Peking determines that its military and naval mandarins shall be instructed in the art of war in the same way as the military and naval officers of European Powers. The whole military and naval system of China requires to be organized on the European model, ere she will be able to compete against even the small country of Japan. I am decidedly of opinion that even such an apparently trivial matter as dress is a condition of weakness. Until China abolishes the black satin boots, mandarin hats, and long dresses for her army and navy, and adopts European dress for these forces, she will compel her men to fight at a disadvantage. The mandarin dress makes the military and naval officers like men with the half of the body in sacks, unable to make use of their limbs. The Japanese naval officers and men are smart and sailor-like, and I believe their military are also uniformed in a neat and serviceable style, after the European pattern.

Two Japanese were arrested yesterday on the road from Peitang to Peking, as travelers without passports, and were brought to Tien-tsin. It is probable that, under different conditions, they would have been allowed to

proceed, but in any case exception can hardly be taken to their arrest. They are so particular in requiring foreigners who travel in Japan to be furnished with passports, that it is surprising they should place themselves in a position to be challenged for the same fault.

One of the Japanese sailors had a round with a Chinese soldier on the bund last night. The Chinaman got an awful thrashing, and the incident may perhaps be taken as prophetic and premonitory.

As to the recent threatened revolt amongst the soldiers, Li's promptness has, for the present at least, overawed the malcontents. The officials, I understand, still profess ignorance of the whole affair; but it is positively known that over 700 soldiers left the camp above Taku, taking their arms with them. Some people call this desertion, but the wholesale character of the movement, and attendant circumstances, lead to an impression that it is something more. It is idle to say that there is not, and has not been, deep and widespread disaffection among the soldiers. Many among them are now ripe for mischief, and ready to coalesce with men of their class outside the "service"; and if ever there is another scene of bloodshed here, it will most likely come from that cause.—*Idem*.

Sept. 3rd, 1874.

September 1st.

An interesting event transpired here today. At 9 o'clock A.M., a Japanese war vessel arrived, bearing His Excellency Okubo, his secretaries and attachés, and accompanied by Admiral Ito, of the Imperial Japanese Navy.

The news that the Ambassador's frigate *Rio-jio-kan* had arrived outside Taku bar, reached here yesterday, creating a lively flutter in official circles in the city. An active interest has been manifest here in everything Japanese of late, but this has been greatly intensified within a day or two, so that, when the little gunboat, flying the Mikado's banner from its fore, came steaming up the reach this morning, she was greeted by a large and curious, if not an appreciative, assemblage, principally of Chinese.

Shortly after his arrival, the Ambassador was conducted to the residence of the American Consul, Mr. Sheppard, whose guest he will remain during his sojourn in Tien-tsin. The number of attachés accompanying the Embassy is unusually large, and I believe there has been some difficulty in finding suitable accommodation for them on shore. It is not known how long the Embassy will remain in Tien-tsin, but there is, somehow, an impression abroad that they will be here for some days yet. No official communications or interchanges of any kind have passed, as yet, between the Ambassador and Li Hung-chang. But it is hardly time for overtures from either side. About to-morrow, or the day after, we shall begin to see a stir amongst the *ting-chais* and yamen underlings, and pretty soon after that we will see a great cavalcade winding its way to the viceroy's yamen; there will be much bowing and scraping there, some flowery things will be said, there will be tea and champagne, and fruits and watermelon seeds, and then conversation will insensibly drift from "the set phrase of peace" to matter in Formosa, and then — *Idem*.

August, 29th, 1874.

Nothing important has transpired within the past few days, concerning the threatened

revolt amongst the Viceroy's soldiers. Reports of desertions in large numbers from the camps between here and Taku, still continue; but there is every indication that the danger from an organized conspiracy is now past, and that, for the present at least, there is little probability of any serious disturbance. The excitement and feeling of insecurity which these rumors produced have subsided, but there remains the unpleasant conviction that so long as large bodies of soldiers are quartered in this vicinity, we are exposed to more or less danger from that source. The Chinese officials still affect an utter ignorance of what has been going on. They admit that a few of the soldiers have deserted, but pretend to know nothing of any attempt to revolt.

General Wu, commander of the Chinese forces in this district, is dangerously ill. He is at present occupying the house of the German Consul, (who is absent), where he is being treated by Dr. Fraser. His disease is dropsy, and it is believed he will live but a short time.

The Japanese Ambassador is daily expected to arrive here.—*Idem*.

We are informed that negotiations are progressing with the Japanese for the sale of the steamer *Glengyle*. We do not give this out as a fact, but our authority is good, and there is nothing particularly improbable about it.—*Evening Gazette*.

The Japanese transport *Takaisago-maru* (late P. & O. S. S. *Della*) was observed, on the afternoon of the 7th, to get up steam, and in the afternoon she went down the river on her way, we believe, for Tien-tsin. The *Yong Pao*, a Chinese gunboat which came into port the day previous to the arrival of the *Takaisago-maru*, also got up steam, and, soon after, followed the Japanese vessel. It is evident that each side is keeping a watchful eye upon the other, and we are not surprised that the Taku defenders declined to be caught napping. We understand that the *Takaisago-maru*, being a swifter vessel than any of those in commission, has been detached for the conveyance of the Embassy and suite to Nagasaki, on the conclusion of the present negotiations. As the S. S. *Haining* was coming down the Peiho, she was requested to stop between the Taku Forts and Tien-tsin, to enable a Japanese gentleman, a passenger on board, to visit his Excellency the ambassador, who was in the *Moshinkan*, which also stopped.—*N.-C. Daily News*.

With reference to the recruiting in Hong-kew, for the Chinese army in Formosa, it appears that few, if any, besides Cantonese and Soochow men were accepted. In the French Settlement, recruiting has also been brisk for a week past, but was conducted in so quiet a manner that few foreign residents were aware of it. The recruits are divided into bands or companies numbering from ten to fifty, and the headman of each is responsible to the one immediately above him in number for the safety of his contingent, and so on until the chief of all is reached, who, by this system of enumeration, can see at a glance what force he should have at his command. Chang Yuan-qua, the recruiting officer, has taken his departure for Ningpo, for the purpose of raising another regiment there. The activity displayed by this man is described as being something remarkable in a Chinaman, as was, also, the tact and quickness he showed in the selection of the human material he re-

quired from the bulk before him. The force recruited here will shortly be despatched, per steamers, to Taiwan.—*Idem*.

From Peking, we hear that the audience of the Belgian Minister, Mr. Serrnys, was fixed to take place on the 31st August.—*Idem*.

Mr. Thomas Fawcett, to whose re-arrest we recently referred, went to Chefoo by the *Sin Nansing*, in custody of a constable. We hear that Mr. N. J. Hannen has been retained to defend Mr. Fawcett.—*Idem*.

The Japanese transport *Takasago-maru* (late P. & O. S. S. *Delta*) arrived yesterday from Langkiao Bay, Formosa, for orders from the Japanese Consulate here. There is nothing new by her from the "seat of war." The *status quo* is being maintained till news arrives from the North, and the impression was that there would be no disturbance between China and Japan.—*Idem*.

Our Tien-tsin correspondent reports the arrival there of H. E. Mr. Okubo, Ambassador Extraordinary to the Court at Peking. The frigate *Rio-jio-kan* only went to Taku, and, we hear, has returned to Chefoo, where she will remain until his Excellency's return from Peking. Crowds of natives witnessed the landing of the Embassy, but no great excitement was manifested. We hear on good authority; however, that the arrival of the *Rio-jio-kan* and the gunboat *Moshinkan* off the Taku Forts created great excitement and uncertainty among the defenders of the mouth of the Peiho, who seem to have been taken by surprise at their appearance. The fort guns were uncovered and ammunition served out to the men, so that all should be in readiness to return fire, in the event of any demonstration on the part of the Japanese ships. But, perhaps, only a courteous response to a possible salute was intended.—*Idem*.

Mr. Thomas Fawcett arrived yesterday, a prisoner, in the *Glengyle*, from Nagasaki, and was at once delivered over to H. M. Sheriff, pending his transmission to Chefoo, which will probably be effected towards the end of the week. It seems natural and right that he should be called to a strict account for the manslaughter in which he is reported to have been concerned on the Shantung Promontory, but it seems hard that he should be dragged all the way from Japan back to the scene of the accident, after having been practically declared free of criminality by the Consul; and it is sincerely to be hoped that, whilst the machinery of justice is being so actively put in motion to secure redress on our side, some one is taking the trouble to see that the Chinese officials at Chefoo are doing their duty in arresting all the parties concerned in the mob attack upon the lighthouse artificers, and calling them to account for committing the breach of the peace which gave rise to the unfortunate accident (as we believe it to be) through which life on the Chinese side was sacrificed. It is curious to observe the frantic demand of a life for a life penalty, at all hazards, which has characterised the conduct of the Chefoo mandarins in this instance, as it similarly did that of the Taotai and Chehsien of Shanghai, in the Ford case, and to contrast therewith the cold blooded hesitation and atrocious duplicity with which our cry for justice was met, when innocent blood was foully, and of set purpose, shed in

the streets of Tien-tsin. The persistent energy of the Taotai of Chefoo, which expended itself in the shaking of H. M.'s Consul, when he found his wished for victim likely to escape such justice as he desired to inflict, might be copied by some of our officials with advantage, when cases of real wrong call for adjustment and are treated by the Chinese with the neglect or evasion in which they are such wonderful adepts where the foreigner unluckily happens to be on the right side.—*Idem*, 3rd September.

The Chinese officials seem to put faith in the report started about a week ago, that an understanding had been arrived at in Peking regarding the Formosan difficulty, and we hear that they are relaxing the haste of their preparations for a contest. The Danish iron-clad they have purchased is said to be the *Rolf Krake*, a vessel of the monitor class, built in 1861, and which saw some active service during the Schleswig-Holstein business.—*Idem*.

The Chinese gunboat *Ching-yun* left her anchorage down river on Wednesday, and went alongside the China Navigation Company's Wharf, to take on board 7 Vavasour rifled guns, and 2,000 shot and shell, for Foocho.—*N.-C. Daily News*.

The Foochow-built gunboat *Ching-yun*, Captain Cheong Ching, the smartest looking and apparently the best equipped in every respect of the Foochow fleet we have seen, arrived in port yesterday. The *Ching-yun* is a vessel of 300 tons burthen, 100 horsepower, 7 guns (rifled), and has a well-trained crew of 100 men.—*Idem*.

YESTERDAY afternoon (26 ult.), one of the Chinese gun-boats went alongside the China Navigation Company's pontoons, for the purpose of shipping some of Krupp's guns and ammunition which she is take to Foochow. On board this vessel the words of command are given in English, and every thing is in first-class order.—*Idem*.

A collision of a rather serious nature occurred on Monday afternoon, in which the Japanese transport *Takaisago-maru* (late P. & O. S. S. *Delta*), and the *John R. Worcester* were concerned. As stated in our paragraph in yesterday's issue, when the *Takaisago-maru* left her anchorage she was followed closely by a Chinese gunboat. It would appear that after reaching Gough's Island the Japanese thought proper to anchor there and allow the Chinaman to pass on, which he did, and when the latter got the length of Woosung he anchored right on the bar, no doubt intending to await the movements of the other. Meantime, the *John R. Worcester* had been lying inside the bar, but at high water took a tug to go down river. As she approached the spot where the Chinese gunboat was at anchor, she was overtaken by the *Takaisago*. At the moment the *John R. Worcester*, with tug attached, got abreast of the Chinaman, the *Takaisago*, coming down rather faster than the tug, also got abreast the former, thus bringing them all three on the bar together. The *Takaisago* now star-boarded her helm, and ran right into the bow of the *John R. Worcester*, carrying away her bow rails and stanchions, forward of the fore-rigging, breaking her rail and cathead, and doing other considerable damage. Surveyors were sent down to examine, and report as to the extent of the damage, and to

September 8th.

At 4 A.M. on 3rd September, a fire broke out at the theatre in the "Gaukero" quarter of Horai-machi, at Hakodadi. It raged with great violence for three hours. About thirty houses of large size and a number of smaller buildings were destroyed; the unregulated efforts of the firemen being almost useless. The only salvation really done was by the sailors of the Japanese Imperial steamers *Osaka* and *Hosho*,—who, under direction of their officers, pulled down a building or two. On the futility of endeavouring to stop the progress of conflagrations without resort to the destruction of buildings, to cut off communication, the following letter was addressed to the Governor.

Hakodadi, 3rd September, 1874.

To H. E. SINGIURA HANGUAN,

Governor of Hakodadi,

SIR,—The experience of the fire at Horai-machi this morning, added to that of many prior occurrences of equally destructive nature since your administration, should be sufficient to convince you of the insufficiency of the present means and methods employed in this town for the suppression of conflagrations.

Those various reforms which have been introduced by your government allow me to presume that some remarks and suggestions may not be taken amiss.

Watching the progress of the fire to-day, it must have been evident to you that, even at a late stage, the pulling down of one building would have saved three or four large houses, representing a value of seven or eight thousand rios, to say nothing of the indirect protection against damage of much valuable property hurriedly ejected from houses in the vicinity. But this is only a single, and, of course, the most recent, instance of loss which might have been guarded against by destroying standing buildings, in order to cut gaps to prevent the spreading of the fire.

Japanese are, as a rule, very good workers at a fire; but they require organization and direction. The native fire-engines are very useful for keeping buildings wet in the vicinity of the fire; but they are of insufficient power to make headway against such violent combustion as takes place in a wooden town. Your steam fire-engine—notwithstanding its want of power—is still capable of smothering the fire of fallen buildings, and preventing the spread of flames towards detached edifices: while the two or three small engines owned by foreign residents might, if worked in combination, be of material assistance. But the principal point is, that, under the present system,—if system it can be called—the spread of fire throughout a mass of houses more or less

connected together is almost a certainty. There seems never to be anyone on the spot to order and carry out the destruction of houses, with a view of saving others; and each brigade or squad of people appears to work just as its members are inclined.

Allow me, therefore, to suggest:—

1st.—The organization of what are known as "hook and ladder companies," to be composed of carpenters, axe-men, and coolies; with implements in the form of light bamboo ladders, hooks or grapnels with short chains attached to long strong ropes, hooks on the ends of poles with chains and ropes attached, forks on the ends of strong poles (as at present used), axes, saws, fire-hooks, and fire-buckets.

2nd.—The placing of the best fire-engines under directions of officers; the hook and ladder companies under competent leaders selected from amongst the town's-people; and the whole under the orders of a fire-master and his deputies.

3rd.—The adoption of scarlet caps as a distinction for all firemen, marked with badges of the respective brigades and companies.

4th.—Power given to the police to prevent such crowding as impedes the work of the firemen; and to be able to impress bystanders as labourers.

5th.—The fire-master to have absolute control of measures for the suppression of fire, to adopt such means as he may deem necessary—including the destruction of houses, for cutting off the fire—and have the police, firemen, and people subject to his orders.

The adoption of such organization and means, I can safely say, would effect a saving of many thousand rios worth of property annually. It would instil a kind of discipline amongst the inhabitants of Hakodadi, which might avail the government in time of war or rebellion; while it could not but conduce towards a feeling of security which would have its effect on the mercantile and manufacturing investments in property, and on the general prosperity of the people.

Feeling that I have touched upon a subject in which Your Excellency cannot but take the most lively interest, and placing at your disposal any further advice which it may be in my power to give,

I have the honor to be, Sir,

September 10th.

THE Danish steamer *H. C. Oersted* and the *Denshin-Maru* returned during last night from completing the laying of the second telegraph cable between Fukushima, on the Yezo shore, and Imabits (near Mimaiya), on Nipon side. Each cable contains one wire, and measures 21 miles in length. Mr. Morris, of the Telegraph Department, is to test the line between Hakodadi and Awomori, if possible, to-morrow, the sea cable and land lines having been joined. The line from Hakodadi through to Yedo is expected to be completed by the end of October. One of the foreign staff is employed on the most difficult portion of the work, north of Sendai.

## Despatches in re Formosa.

A short time ago we extracted from the Japan papers a translation of the first despatch from the Tsung-li Yamèn to the Japanese Foreign Office, regarding the Formosan affair. We have since been placed in possession of a translation of that document and a succeeding one, together with the acknowledgment sent by Japan. We reproduce the translation of the first despatch along with the other two, to keep the correspondence together, and because the new version of the former is, we are assured, more correct, though less elaborate in style, than that previously given. It will be noticed, if compared with that published by us on 4th July, that it lends less support to the permission theory set up on behalf of Japan:—

Peking, 11th May, 1874.

Since the treaty between China and Japan was ratified, the relations between our two countries left nothing to be desired. The high officer Soyeshima, who arrived in China last year as ambassador from Japan, has, in his negotiations with the Tsung-li Yamèn, shown an ardent desire to be in unanimity with ourselves, and the intercourse between his Excellency and us has always been of a very friendly character.

In the 5th month of last year, (May-June) Mr. Soyeshima sent the first Secretary of the Embassy, Mr. Yanagiwara, and the Interpreter Tei to the Yamèn to address to us three questions. [The first two, relating to Macao and Corea, it is unnecessary to reproduce here.] The third was in regard to the aborigines of Formosa, and the murder by them of certain Loochoo islanders, as to which Mr. Yanagiwara said Japan intended to send messengers (or a mission) to parley with the savages. Thereupon a long conversation took place, and we enquired more particularly as to the purpose and meaning of these three questions. Mr. Yanagiwara replied through the Interpreter Tei as follows: Concerning Macao, it will be necessary for us to carry on trade with that place, and our enquiry is made with the object of having a basis for future negotiations. As to Corea, Japan hopes that China will lend her good offices in smoothing over the difficulties which have arisen between her and that country. Concerning the Formosan aborigines, the question is only one of sending messengers to admonish the aborigines, so that in future any Japanese subjects, who may be cast away there, shall be treated with kindness. Yanagiwara said that in respect to none of these three matters did Japan contemplate any warlike enterprise. This explanation, taken in connection with the uninterruptedly friendly relations between our two countries, satisfied us so completely, that any doubts we might have had were at once cleared away. When, afterwards, Soyeshima, before his departure, took leave of us, we made use only of these words: "Let both countries, in future, keep strictly to the terms of the treaty of peace, in which each engages to respect the integrity of the territory of the other." Mr. Soyeshima replied to this our remark, in these four words, "So it should be." Looking back on the interviews which were held, it does not appear that Soyeshima himself, during the whole of his protracted stay in China, entered upon the consideration or discussion of these three questions. On our part, we made no engagements with Japan beyond those which are stipulated for in the treaty of friendship. Anything beyond the stipulations of that treaty, therefore,

never came up for discussion between our two countries.

However, the Ministers of the Treaty Powers residing in Peking have lately transmitted to us the intelligence that Japan is about to send an expedition with troops against the aborigines of Formosa, and we have learned the same thing also from the newspapers, as well as from the reports of our own officers along the coast. The latter state that in the 2nd moon of this year, (March-April, 1874) a large Japanese man-of-war anchored at Amoy, and the commander said it was intended to ask permission to get ground there for purposes of drill. According to the statement of the commander, the ship came from the Pescadores, which are under the same administration as Formosa.

The little island of Formosa, an oasis in the desert of the sea, is, as is well known, partly inhabited by aboriginal tribes. Following the dictates of the *Leke*, which says, "Leave a people their customs, and do not disturb them in that which is agreeable to them," China has never attempted to force these tribes to come under Chinese administration and legislation, and has therefore never properly defined governmental and administrative districts in their territory. The ground which they occupy is not the less Chinese territory, however. In other provinces of China, also, there are, within the frontiers of our empire, savage tribes which we leave in undisturbed possession of their own customs.

We can hardly bring ourselves to believe the statement, put forth so unexpectedly, that Japan intends to send out a warlike expedition against the aborigines of Formosa. But if the Japanese Government really intend to set on foot such an expedition, we would beg leave to ask why consultation about such an undertaking did not previously take place with us. We also expect shortly to be favoured with information as to the objects which are contemplated in connection with the man-of-war now anchored at Amoy.

(Signed by Prince Kurg and the Ministers of the Tsung-li Yamén.)

Second despatch of the Tsung-li Yamén to the Japanese Minister for Foreign Affairs:—

Peking, 2nd June, 1874.

We had the honour, in our despatch of 11th May, to inform you that we have received from our own officers on the coast, and also from the Ministers of the Treaty Powers resident at Peking, the intelligence, which we find considerable difficulty in believing, that Japan has formed the intention of sending troops to Formosa. In that our despatch we communicated the statements verbal and written which had reached us on the matter, and took the liberty also to request that you would do us the favour to reply. As our despatch must have long since reached Japan, we do not doubt that your reply is already on the way to Peking. We have now to inform you that on the 29th May the following Imperial Edict appeared:—

"Shên Pao-chên is hereby nominated as Imperial Commissioner, in consideration of the importance of Taiwan and its dependencies, to administer affairs on the coast, and as high officer to attend, at the same time, to the regulation of international business."

In connection with the above, we beg to add that when international affairs have to be

regulated at Taiwan, the Governor-General of Fohkien and Chehkiang, who resides at the provincial capital, on the mainland, is at too great a distance from Formosa to attend to them. [Hence the appointment of Shên, whose commission would seem to cover not only the settlement of the Japanese affair, but any international matter arising in regard to Formosa, of which, in fact, he becomes Governor, with certain special powers and for special purposes.] The Commissioner now appointed for the place, Shên Pao-chên, who is well-posted in Chinese and foreign affairs, is undoubtedly capable of forming a correct judgment on all matters which may come before him, and of carrying out thoroughly the duties of his difficult position. This institution of the commissionership is also quite in accordance with the Treaties, and will contribute to the friendly relations between China and foreign countries. It becomes our duty to inform you of the above.

Japanese Minister for Foreign Affairs (TERASHIMA) to the Tsung-li Yamén:—

I have the honour to acknowledge receipt of the friendly despatch of the Tsung-li Yamén of 11th May, and understand from it that your Government is in some uncertainty how to explain rumours which have reached them about an intended Japanese expedition against the aborigines of Formosa. The Yamén has therefore done me the honour to refer several questions to me for answer, in regard to which I beg to reply. The statement contained in the Yamén's despatch correctly represents the leading facts, as to our Ambassador Soyeshima, when in Peking last year, having sent members of his suite in order to put certain questions to the members of the Yamén. The two Ministers Mao (Mao-chang-he) and Tung (Tung-hseun) were present on the occasion. Our expedition to Formosa, which could only now be despatched, is in accordance with the general tendency of that interview, and has no other objects in view than those which were brought up at that time. As, however, before the receipt of the Yamén's despatch, our Minister, Yanagiwara, had received orders to proceed to his post, we may presume that he has already afforded you the necessary explanations, and there is, therefore, no longer occasion for me to reply at length to the despatch in question.—*N.-C. Daily News*.

#### NAGASAKI.

TAKASIMA.—It is estimated that the damage done by the hurricane at Takasima is about \$50,000.—*Rising Sun and Nagasaki Express*.

VESSELS OFF THE ROCKS.—It is with pleasure we have to announce this week that the vessels which were blown on the rocks by the late storm have been got off. The steamer *Ping On* floated again on Friday night; the rock on which she lay the captain had broken away, and by means of her anchors she was got off without having sustained much injury. The *Adzuma-kan*, which was supposed to have suffered such injuries as to effectually stop her war career, was raised on Saturday night. Messrs. Boyd & Co. were the contractors, and used two centrifugal pumps to get the water out, after which the leak was temporarily stopped and she was got into deep water once more. It was at first thought she would have to be sent to Yokohama to undergo repairs, but as the extent of her damage consisted only in the springing of an iron plate or two, we learn that she will

be taken below the patent slip, so that when the tide recedes the injured parts may be got at and repaired, and it is expected that she will soon be ready for sea again. We hear that the contract price for raising this vessel was \$5,000. The *Hamburg* is also afloat; and as for the *Sooloo*, which was generally supposed to have been on the rocks, from the position in which she lay in the water, it turns out she was not on them at all, her awkward position being caused by her cargo being nearly all at one end, thereby causing it to sink considerably deeper in the water than the other. Tenders have been called for repairing the barque.—*Idem*, September 4th.

#### HONGKONG.

We are glad to learn that five others of the pirates in the *Spark* tragedy were arrested at Aberdeen on the evening of the 1st, and were brought up at the Police Court on the morning of the 2nd with the two previously in custody. On the application of Superintendent Deane, the whole of the prisoners were remanded until 3rd, morning.—*H. K. Daily Press*.

#### TIENTSIN.

A dangerous conspiracy amongst Li Hung-chang's soldiery here, has just been detected. Rumors of the most alarming character are in circulation amongst the foreign community, and a general feeling of insecurity is everywhere manifest. While there is little doubt that many of the flying rumors are untrustworthy, there is much reason for the apprehension, shared by the most thoughtful, that a crisis may be precipitated at any time. It is probably known to your readers that the district of Tientsin is, and has been, since the visit of Soyeshima from Japan, in 1873, the scene of great military activity. It is estimated that, ever since that time, there has been from 20,000 to 60,000 troops within two days march of Tien-tsin. These troops are principally from Honan. They are Li Hung-chang's pets, and constitute the flower of his army. They are consequently strangers in this province, but they are none the less masters of the soil, and they live on the fat of the land. It is not, then, a matter of surprise, that these vagabonds, weary of inactivity, corrupted by idleness and lust, and restrained by no power but their own will, should engage in any game, however desperate.

The leader of the present revolt, it is supposed, is General Whang, one of the Viceroy's late officers, and it is reported that a large number of the soldiers at Ma Ch'ang, on the Grand Canal, have joined his standard. There are a great number of ex-military officers at Ma Ch'ang, who are at present out of employment, and it is said that they will be able to bring a great body of southern soldiers to the rebels, as soon as the signal for revolt is given. There is serious disaffection also amongst the troops at the large military Camp at Hsin-ch'eng, on the south bank of the Peiho, 16 miles above Taku, and several hundred, of the men have deserted the Camp. So great has been the consternation amongst the commandants of the forts at Taku, in consequence thereof, that every preparation has been made for an assault upon their works by the rebels, which is daily and hourly expected.

The conspirators have an organization which indicates that their work has been in progress for some time. It is said their designs were

over the region of the heart. From this I infer that he had felt pulsation against the chest wall, and had tried to reach the heart. Two or three of the wounds were still bleeding. There was another superficial wound, on the left breast, a little below the others, and two superficial horizontal ones in the skin covering the windpipe; the two latter were evidently the first inflicted. I should say the cause of death was hemorrhage, internal and external, from the wounds. There being no marks of blood any where except on the bed and on his person, it is quite evident he did not leave the bed, after inflicting the wounds, to reach the morphia which was in the adjoining room.

To a Juror:—I was present, from the time of my calling at 11 o'clock until he died, about 10 minutes.

C. A. Fletcher, sworn:—I am at present a resident in Yokohama. I have been acquainted with deceased since 1862. I have noticed lately that he has been living very freely and drinking pretty heavily. I heard that, the day prior to his death, he was at the International Hotel going about in drink.

Mrs. Jenks, sworn:—I am at present residing at the International Hotel. On the day before I heard of the death of deceased I saw him. He passed me, with the letter to Mr. Irwin in his hand, and asked me to take it to Capt. Purvis. This was near the door of his room. A lady named Mrs. Young was with me. He was dressed in his pajamas. I noticed nothing strange about him at the time, except that I thought he looked sick. I saw him at 8 o'clock in the evening, sitting at the table in his room, apparently in meditation, quite still; and at 12 o'clock I went out of my room to call the boy to get some ice-water, when he was still in the same position. I did not speak to him, nor he to me. It struck me, when I heard of his death, that he had looked curious during the day. He was perfectly quiet.

Charles A. Harman, sworn:—I have known deceased about 4 months. I have seen him frequently lately, when he was in port. He was purser of the *Oregonian*, in the employ of the P. M. S. S. Co. He always seemed to have been drinking whiskey pretty freely when I saw him on board. I have seen him with amounts of money lately. I went on board the *Oregonian* last Wednesday evening, the 2nd inst., about 5 o'clock. Deceased was then in the purser's room. He had been removed from his position as purser and was assisting the new purser in paying off the ship. He was then under the influence of liquor, and, two or three times within a quarter of an hour, took from his pocket a large roll of bank-notes. I should think the roll of bills was 3 inches in diameter. The two or three outside bills I saw were for \$25 each. I do not think deceased said anything about the amount.

To the Coroner:—He was not using that money for paying off the ship. He exhibited the money in a boastful manner.

G. T. M. Purvis, recalled, produced a chit signed by deceased, in the afternoon of the day before he died, for a quart of ale. Witness then said:—This writing is very different from deceased's ordinary writing. It is more illegible, so much so, that it was some time before I could decipher it. It was a great contrast to those he had previously written.

The Coroner said he would like to hear the evidence of some other gentlemen who could throw light upon the matter, and would therefore adjourn the case until 4 o'clock, Thursday, at the U. S. Consulate-General.

(Concluded from yesterday.)

The inquiry into the cause of death of R. M. Bevell, held at the U. S. Consulate, was concluded yesterday; General Thos. B. Van Buren, U. S. Consul-General, acting as Coroner.

John Robert Puckering, sworn:—I am the purser of the *Oregonian*. I knew deceased; he was formerly purser of the same vessel for more than three years, and I have known him all the time. I have only seen him twice lately; on board the ship on the 2nd September, and in the office of the Co. on the same day. I went on board the ship that day, and told him I had come to pay off the ship. He said he had plenty of money, and shewed a roll of bank notes. I saw a few of the outside ones; they were \$25 bills. He said he had over \$1,000. He did not appear to be under the influence of liquor. I saw him about 11 o'clock that night. He did not say where he got the money. I did not see him the day before he died, I don't know anything about his habits of life.

W. J. Ramage, sworn:—I have known Mr. Bevell about eight years, as an acquaintance. I have not seen much of him for the last week or two. For the last two trips he has been very steady. I saw him on board the ship the night we left for Hakodadi. He had a roll of bills. It was about 7 o'clock in the evening; I had just finished for the day, so I thought I would go and bid him good-bye. He asked me to sit down, and when I enquired of him the reason why he had been removed, he showed me a paper to certify that Mr. Puckering would pay off the crew. I said that did not look like a discharge. After some conversation, he pulled out the roll of bills, and said there was more than \$800 there, and more in the safe. A man named Smith came on board, and deceased asked me not to speak about the money before him. After Mr. Smith left, he showed me the bills and asked me to count them, but, when I had turned over the two outside notes, one for \$5 and the other for \$20, he took them back. They were bank bills, such as are used in Yokohama. I have known deceased to take iodide of potash, but I never knew him to take morphia. He formerly used a truss, but had discarded it of late.

To a Juror:—I never saw but one truss.

William H. Thompson, sworn:—I knew Mr. Bevell. I have known him for 5 or 6 years; ever since he has been in the country. I have only seen him twice, this time of his being here; once at this Consulate, and once at the *Cafe de L'Univers*. The latter occasion was on last Saturday, the 5th instant, about 11 o'clock in the evening. He walked into the room where I sat, and I saw him shortly afterwards, playing *roulette*. Mr. Bernard was dealing. He won \$480, and I then advised him to quit, but he continued playing and lost \$380 of what he had won, quitting *roulette* the winner of \$100. I then left the room, and, some time afterwards, I saw Mr. Bevell playing *poker*, and took part in the game. I never saw deceased show \$1 during the whole evening. I have no idea how long Mr. Bevell played; I played for an hour, and I think Mr. Bevell was then "out." There were, deceased, Mr. Nuttall, and a stranger, whom they called "Dutchy," playing when I went and made a fourth. I heard Mr. Bevell was "out" some \$150 or \$200. I have had no money transactions with Mr. Bevell. I did not think he was playing right. He did not seem like a man in his senses. He seemed altogether different to what he had always been, and that was the reason I quitted the game. I had two

drinks the whole evening, and I believe Mr. Bevell had two. I had \$300 left, and that I lent to Mr. Bevell. There was a Frenchman present named Caillens, and he, Mr. Bevell, and "Dutchy" were then playing. It was daylight on Sunday morning.

To a Juror:—Whilst deceased was playing *roulette*, I saw the banker give him \$40 for \$115, and he took no notice of it, although I tried to attract his attention.

William Nuttall, sworn:—I saw Mr. Bevell on the evening of the 5th instant, for the first time in my life. It was at the French Cafe. I saw him play *roulette*, which he "quit" the winner of \$100. He asked me to play *poker*. I left him playing. He "quit" loser, but I could not say how much. By the time I left he owed me \$280. I asked parties round if he was "good." I lent him \$20 more, making \$300. Jenks was there. I did not know any one else but Jenks and Thompson. Caillens was playing. I noticed, while playing *poker*, that deceased did not seem very strong-minded. He played very rashly, and like a man who was a little soft. He would overbet himself recklessly and wildly. I do not think he was drunk. I do not think he drank more than two glasses of beer, and I'll swear he did not drink four. I have not been repaid the money I lent him. I have never seen him before, nor since. I don't think he lost more than \$100, cash.

This closed the evidence, and, after a consultation of nearly 20 minutes, the following verdict was returned:—We, the undersigned, sitting as a jury, to enquire into the cause of death of R. M. Bevell, do find that the deceased came to his death from an overdose of morphia, administered by himself; and from wounds inflicted by his own hand with a pen-knife, while under the influence of the poison. We further find that the deceased had been for several days suffering under great mental agitation.

#### "A TYPHOON"—WHAT IS IT?"

To the Editor of the Japan Gazette.

SIR,

I have often thought that there seems to be a kind of looseness or indefiniteness in the popular use of the term "typhoon," and, as I think I have discovered the chief reason for this lack of clearness in the use of the word, I will offer a few remarks by way of elucidation. Our English word "typhoon" is plainly derived from the Chinese or Japanese words *Tai-fu*. It seems a little remarkable that it also comes so near the Greek word "*Typhon*," a terrible giant, and also "*Tiupsón*," a great whirlwind. The Japanese-Chinese word *Tai-fu* has no reference to a whirlwind, being only (literally) a great wind of any kind, coming from any point of the compass. So that those who have spoken of the storms felt in Yokohama, last year and this, calling them "typhoons," are quite correct, if they mean to use the word in the same sense as the natives use the word *Tai-fu*. But, in the other sense, that of a great whirlwind or cyclone, I am thankful to say that we have seen nothing of that terrific and destructive kind during last

year and, so far, this year. Many people are anxious lest a "typhoon" is about to burst upon us, whenever a storm begins with high wind and rain. But an experience of over twenty years in this part of the world has taught me that an approaching cyclone may be easily, and without mistake, distinguished from all other storms, during the first half hour, or hour, of its progress. My signs are as follows. 1st.—A warm, faint air, so overcharged with moisture as to leave great drops of water condensed upon the walls and furniture, and causing even the clothing to feel very damp about one's person. This is quickly followed by wild gusts of wind from the east or a few points north of east, which, if watched a few minutes, will be found gradually working round towards the south. When due south it generally reaches its climax. Often, at a few points West of South, there is a sudden lull, which lasts for from 15 minutes to half an hour, when a new fury seems to have seized the storm, which is, however, soon spent, and gradually dies away in the west. Any storm that begins without the above-mentioned premonitory symptoms, and after observation, does not revolve as before mentioned, from east to south, may prove to be a *Tai-fu* or great wind, but still we need not fear the terrific fury of the Greek *Tipson* or cyclone. Especially if we see that the wind is shifting in the opposite direction around the circle, with no unpleasant warmth of the atmosphere, we may give thanks and rest content that the terrible giant is not yet coming to pay us a visit.

Yours faithfully

PIONEER.

To the Editor of the *Japan Gazette*.

DEAR SIR,

We have only just received a copy of your paper containing an account (copied from the *Hiogo News*) of the conduct of the purser of the *S. S. Heian-maru*, upon the occasion of the death of a child belonging to a foreign passenger. "It is certainly not our wish that foreign or any passengers should be treated with incivility by any of our officers, and our orders issued to them are most strict on that subject."

By Pacific Mail Steamer to-day we send a man to take the place of the purser of the *Heian-maru*, and have ordered the man complained of by the correspondent of the *Hiogo News* to proceed forthwith to Tokio, in order that the charge may be investigated; and if proved against him he will at once be dismissed from the Company.

In conclusion, we wish to express to the public, through the medium of your valuable paper, our regret that such an occurrence as that described should have taken place on one of our steamers, as it has been and always will be our endeavour to provide every possible comfort and kind treatment for our passengers.

We are, Dear Sir,

Your obedient Servants,  
THE DIRECTORS, MITZU-BISHI  
STEAM SHIP COMPANY.

Tokio, September 11th, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

What is to be done as a preventive to the burglaries that are taking place in our midst, night after night, and through which European residents are assuredly sustaining heavy

losses? I hear that Messrs. Driscoll & Co's, godown was broken into last night, for the second time, and a large quantity of valuable goods carried away; to which, as usual, they are not likely to obtain the slightest clue. And even if they did, they would be powerless to have any punishment inflicted upon the perpetrators by their own government, so very lax are the laws of Japan upon such matters.

Why cannot the many members of the community who have been sufferers convene a meeting for an early day, and appoint a committee to wait on Sir Harry Parkes, and urge upon him the immediate necessity of having further protection, during the night, from the Japanese authorities, or devise other means for sufficient protection amongst ourselves. I consider that the present state of affairs is far from being creditable either to ourselves or to the government upon whose territory we are supposed to be free from such molestation. Any steps adopted, at all likely to conduce to our future safety, will have the strongest support of

#### ONE OF THE MANY SUFFERERS.

To the Editor of the *Japan Gazette*.

SIR,

It is amusing to see numerous reports fabricated and spread by those speculative germs who never fail to seize the opportunity, to propagate exaggerated falsehood whenever there exist any theme likely to attract public attention. The Formosan expedition is one of these subjects. Many and various are the statements concerning the state of relation between Japan and China, some of which reports may be allowed on doubtful excuse of creating market for long unsold articles by exciting warlike spirit of both nations, but to say, as has been published in one of the newspaper's that "Li-hung-chang being descended from Tang dynasty (Li being family name) is secretly watching for the opportunity of putting into execution his cherished design of expelling Tartar dynasty from China by first creating disturbance with Japan," is simply monstrous.

Li, is the Minister of acknowledged ability, considered by his countrymen as keystone to the Government-fabric, surely he will not sacrifice well-being of his country to his mere ambition; the writer is confident, should there occur any difficulty in the negotiation at Peking, he will employ all his influence and audience to arrange the matter amicably.

The writer has no interest in these advocating for Li, but he is prompted to make this statement by the unreasonable charge of broil-torous character thus put on the illustrious Chinese statesman.

#### ANTI-CHINESE.

To the Editor of the *Japan Gazette*.

SIR,

Certain conference with China having been rendered necessary by the recent expedition to Formosa, the Government of Japan despatched Okubo to the Court of Peking, to proceed with the negotiation already commenced by Yanagiwara, resident Minister in that city. Okubo, is the great talent and experience high in esteem of His Majesty Tenno, his advice and Council are indispensable even a day for the administration of state, he would not be sent for the mission, should the intention of the Government be less important than to preserve the peace and good will of both nations. If there be any difference in view between two Government, whose relation is otherwise in

perfect amity, his is the duty to investigate the matter in harmony with Chinese Government and come to understanding with justice in view and satisfaction to both parties, to which duty he is so well qualified, and, that we confidently expect he will succeed. It is only next to absurdity to think of the rupture between two empires, consequent of a question which has other means of being settled than by force of arms. Yet, there are many who go so far as to say, that the war is being or is even already declared, "founding their opinions on mere conjectures and serving only to keep the minds of public in constant doubt and apprehension. Imagine, what means of information those people have, (have they the magic glass), while no report nor message about the result of negotiation has been received from Okubo.

It is but nature of man to exaggerate matter whenever it excite a least interest among the public, and, the author warns readers not to be put into any anxiety by such a fabricated story of the warlike nature.

#### TRUTH TELLER.

To the Editor of the *Japan Gazette*.

SIR,

A suggestion has been made that, as "America has actually bound herself by treaty to use her influence on behalf of Japan, in case of difficulty with a foreign state," her assistance should be invoked in the present crisis. The idea might be valuable, were it not for the fact that Japan has already, in past times, endeavoured to test the sincerity of the United States' Government on this very point, and has found that the supposed pledge is nothing but an empty formula of words. The friendly intercession of America was asked on an occasion of serious importance, some four years ago, and the result was simply a humiliation to the Japanese authorities. They are not likely to place themselves in the same awkward position a second time.

O. P.

15th September, 1874.

#### HAKODADI.

September 8th.

THE *Iron Duke* and *Thistle* left at 10 A.M. to-day for Nagasaki direct, and the *Ringdove* for Yokohama.

The telegraph steamers *H. C. Oersted* and *Denshin Maru* ran back to Hakodadi this morning on account of bad weather. They have laid one cable across the straits separating Yezo from Nippon. The second broke when half-way across. It snapped short off—it is supposed, on account of the strain in suddenly dropping off a submarine hill or rock into very deep water. About seven miles more had been paid out when the parting took place. Blame is thrown on the survey of the *Hosho-kan* and *Denshin-maru* (the latter under foreign management) which showed an even bottom of fine gravel, nowhere deeper than 110 fathoms. So much for not having surveyed other portions of the straits carefully, as was recommended by the late superintendent Mr. George, which might have resulted in finding a good crossing-place from Hakodadi itself—where the shore end of the cable would have been under the guns of the port, instead of thirty miles away, and wholly unprotected.

The *H. C. Oersted* and *Denshin Maru* leave again when the weather moderates, to pick up and relay.

*Oregonian* detained till 4 A.M. on cargo account.

decide what was to be done. Mr. J. J. Tucker represented the Insurance interest, and Capt. Roberts the Japanese Consulate. After the survey, the *J. R. Worcester* was ordered back to Shanghai for repairs, which will probably take from eight to ten days to complete. We are given to understand that the Japanese acknowledge that their vessel was in the wrong. She was in charge of a foreign pilot, but on whom rests the actual responsibility of the mistake which resulted in the catastrophe we have not heard.—*N. C. Daily News*, Sept. 9th.

### Law Reports.

#### In H. B. M.'s Provincial Court.

Before RUSSELL ROBERTSON, Esq., Consul.

Wednesday, September 9th, 1874.

T. D. Scott, master of the British ship *Laju*, was charged with having committed a breach of the Merchant Shipping Act, in having informally shipped three seamen, in Newcastle, N.S.W.

Defendant pleaded not guilty.

John Condon, sworn :—I was sent on board the ship in Newcastle, and knew nothing about it. I had been paid off five days before. I was "speechless" drunk. When I recovered, the ship was at sea and I was lying in the fore-castle. I do not remember making any sign on the articles.

Walter Scott, sworn :—I was shipped in Newcastle. The boarding-master took me on board. The ship was under-weight. The articles were not read over to me. I remember Condon being brought on board the ship. He was so drunk that he did not know what he was about. It was about noon when he was brought on board ; the steamer was towing the ship out.

William Johnson, sworn :—When I shipped in Newcastle, the articles were not read over to me. It was Friday, the 3rd July. I asked the captain to read the articles, and he said he would read them the following day. I then signed the articles. I saw Condon in his bunk about 10 minutes after he came on board. He was very drunk.

In defence, defendant said :—I shipped the men in the usual way of shipping in Newcastle. I intended to read the articles the next day, but it came on to blow a gale and I was not able. The men knew what the articles were ; my articles are the same as everybody else's.

His Honour said he considered the charge proved, as defendant did not, according to his own confession, read the articles to the men ; and he would therefore order him to pay the full penalty prescribed by the Act, £5.

#### In the U. S. Consular-General Court.

Before Gen. T. B. VAN BUREN, Consul-General.

Thursday, 17th September, 1874.

SAKAKUA KAMUKICHI vs. JOHN GARGAN.

In this case Sakakua Kamukichi, a Japanese builder, sued John Gargan of No. 57 Pluff, for 40 yen, being the balance of a contract for building a house and store upon Lot 52 Bluff. The contract, a copy of which was produced in court, required that plaintiff should build the house and store, and do everything necessary, finding all the labour, for which he was to receive \$250 ; on condition that he had the house and store both finished within 40 days ; defendant himself providing material. Plaintiff also claimed 31 *riyos* 2 *boos*, for extra fittings in the store, and venetian blinds in the house.

Sakakua Kamukichi, cautioned, deposed that when the contract was entered into there were no such things as venetians upon the plans, but, when defendant saw other houses with them, he ordered plaintiff to fit them, and also some shelving under the stairs. For these, and the fittings in the store, he (plaintiff) charged 31 *riyos* and 2 *boos*. Kamukichi stated that defendant claimed to have paid him fifty *riyos*, for which he had got no receipt. This plaintiff wished positively to deny.

John Gargan, sworn, stated that, according to the contract, everything necessary had to be done, and therefore, the venetians and shelving were not extra work ; but the fittings in the store he did consider as extra, and valued the work at 27 *riyos*, 2 *boos*. Plaintiff had contracted to finish the job in 40 days, from the time of commencement, the 18th of February, but he had worked at it over 90 days, until the 19th of May, and had even then not finished everything. Defendant asserted that he had paid plaintiff the full amount of the contract, and \$10 extra, in all 260 yen ; and the 50 *riyos*, which plaintiff denied having received, he had paid in the garden of No. 52 Bluff, in the presence of his sister, on the 16th of March last.

W. L. Laufenburg, builder, sworn, stated that he had examined the fittings in the store, and considered that defendant would give quite enough for the work done if he valued at 27 *riyos* 2 *boos*.

J. Goble, sworn, asserted that, in his presence, plaintiff had acknowledged receiving the 50 *riyos* in dispute.

Miss A. T. Gargan, sworn, said that, upon the 16th of March, she was with her brother at No. 52 Bluff, when plaintiff asked him for money. Defendant gave him fifty *riyos*, and plaintiff went to the gardener and asked him for a piece of paper to write a receipt, but, as he could not procure any, he promised to give a receipt on the morrow.

Plaintiff, recalled, admitted having, upon the day in question, received 50 *riyos*, and going to the garden-boy for some paper, but he asserted that he obtained a piece of paper, and, there and then, give a receipt ; but that was another amount, not the one in dispute.

His Honour said that he would reserve his decision.

Friday, 18th September, 1874.

WILLIAM RANGAN vs. WILLIAM H. THOMPSON.

In this case William Rangan of 122, sued William H. Thompson, keeper of the "Hotel," Tskidji, Yedo, for the payment of a promissory note for \$246.64.

William Rangan, sworn :—I am the plaintiff in this case. I have given defendant credit for the amount stated on the promissory note ; it was for cash at different dates : in 1872 ; February 19th, cash \$16 ; May 14th, \$100 ; October 7th, \$75 ; July 8th, 1873, \$50, and the interest on the amount. On the 29th July 1873 defendant gave me two cases of wine, but that was payment for the loan of 2 ponies, which Mr. Thompson hired from me to go to Katase. Mrs. Thompson went with him. The wine was not worth \$15 a case ; he bought it at an auction of Messrs. Bourne & Co., and gave \$7 a case for it. I also got a water-tank from him. It was offered at an auction, but was not sold, and Mr. Thompson agreed to let me have it, but there was no price fixed. It was not a 500 gallon tank, but only a small one, worth \$10 or \$12. I have seen larger ones sold for \$15. Mr. Thompson had a sulky, which General Capron wished to buy, and Mr. Jaffray gave me \$60 and

Mr. Thompson gave me \$40, making in all \$100, the price of the sulky. That was on the 14th of May, 1872. A couple of weeks ago, Mr. Thompson and I had a dispute about the price of a pony, which I bought of him for \$75. He wanted to add \$25, but, at last, agreed, in the presence of another gentleman, that the price was \$75.

To defendant :—I kept horses for hire in 1871. I forget when I sold out the business, but I think it was in 1871. I did not keep horses for hire in 1872. You hired the horses from me in 1870 or 1871, and I found you tiffin. The bill was still owing when you gave me the two cases of wine. It was not champagne, it was moselle. You were then living at the Commercial Hotel. You bought the wine at an auction, and gave \$7 a case for it.

William H. Thompson, sworn :—I am the defendant in this case. I admit \$16 owing by me. The \$100 was cash paid by me to complainant, and a clerk made out the receipt. The receipt is at Yedo. I never paid him \$60. I sold him two cases of wine. He agreed to pay \$15 a case for it. I have never hired two horses from him. I never remember being at Katase. I once went out that way with a woman, but I rode my own horse, a Californian mustang ; but the other horse I might have hired from complainant.

To complainant :—I never had words with you about the promissory note ; you asked me to pay it, and I told you to see me in a day or two. I told you to go to a certain woman and get paid.

Complainant, recalled :—Defendant paid me \$175, in the presence of Mr. C. Sheppard, in the front room of this Consulate. That was the latter end of 1873 or the beginning of 1874. It was then agreed that that amount was all that was paid up to that time. I never received any money from Mr. Jaffray. The pony, the wine, and tank were all I had from defendant. The charge for the horses was an old charge. A young man named Wilkin kept my books, but he has gone to America.

Judgment was reserved.

Saturday, Sept. 19th, 1874.

In the case of Sakakua Kamukichi vs. John Gargan, which was published in our issue of Thursday evening, His Honour decided in favour of the plaintiff, the Japanese builder, and allowed him \$27.50, being the amount agreed to by Mr. Gargan, and costs.

In the case of William Rangan vs. William H. Thompson, which was tried before His Honour, yesterday morning, judgment was given in favour of the plaintiff, William Rangan, for the full amount claimed, and costs.

SOME TIME ago, his Excellency the Minister of Marine, Kawamura, was, at his own wish, invited on board the German frigate *Elizabeth*, Captain Livonius, to witness gunnery practice in the bay. To show his acknowledgment of the kindness which he and his officers received on board at the hands of the Captain and the officers of H. I. G. M. navy, the Minister of Marine yesterday gave a magnificent entertainment, at Hama-goten, to the officers of both ships—the *Arcona* and the *Elizabeth*. Previous to dinner the officers were present at a parade of the marines, who went through their drill in such good style as to merit the admiration of their foreign spectators. After the drill, the German officers were invited to inspect the Naval School, which was found by them in a highly efficient state.—*Herald*.

YOKOHAMA HAS again been visited by a most violent storm of wind and rain, which has happily been unattended by any serious results. About 8 o'clock on Saturday night, the rain commenced to fall in torrents, and continued with but slight intermissions until about six o'clock last night. The wind throughout yesterday was violent, and apprehensions of a typhoon were entertained by many. These were fortunately unfounded, and to-day nature smiles under a brilliant sky.

During the storm, a considerable amount of property was damaged by the wind and waves, and an accident occurred, in the height of the tempest, which might have been attended with serious consequences. Shortly after noon yesterday, a boat put off from the Creek with some men who wished to get on board the schooner *Myrtle*. It had not got many yards from the Bund when the boat shipped a sea and capsized, leaving its occupants to reach the schooner, or the shore, as best they might. Luckily it was low water and all managed to reach the land. Abreast of the British Naval Hospital, a portion of the seawall was knocked down by the force of the waves, and the Bund, from the Grand Hotel to the French Hatoba, was strewn with seaweed, which had been washed up. The store-ship *Emilie* and H. B. M.'s *S. Thalia* dragged their anchors, but no damage was done to either. About town, several houses suffered slightly, but no serious accidents occurred. The barometer fell rapidly in the morning and, at about noon, stood as low as 29.19. Towards 4 o'clock in the afternoon it again began to rise, but the wind continued high for some time after dark.

AN ATTEMPT has just been made to cheat the executioner. A Japanese, who was apprehended, the other day, for robbery with violence between Yokohama and Yedo, and confined in the native cells at the Police Station, Kanagawa, was found this morning, at eight o'clock, by a Japanese police-sergeant, hanging from a post in his cell. He had tied his *obi* round his neck, which was considerably swollen and inflamed. The sergeant at once cut him down, and medical help was procured, but, although he was not dead at 11 o'clock, little hope is entertained of his recovery, and the headsman is likely to lose a victim.

THE FOLLOWING sentence, passed upon the murderer of Mr. Haber, the German Consul at Hakodate, was published in the *Mainichi Shinbun* of the 15th inst.

"Akita Ken Kanzoku, Shizoku Tazaki Hidechika, you, in your bigoted belief that the decay of Sinto principles was owing to the intercourse with Europeans and Americans, resolved to slay some of them for your own satisfaction, and, leaving your native village, you came to Hakodate, where you met Mr. Haber, the German Consul, whom you murdered, at Tasigashira, with a sword."

"Being found guilty of this shameful and lawless deed, you are sentenced to be beheaded, and your Shizoku rank is taken away, according to national law."

WE HAVE good reason to believe that the negotiations between China and Japan were first broken off by Yanagiwara, who declared that there was no alternative but war. The Chinese then asked time to reconsider the Japanese proposals. These were ultimately rejected; and Okubo has, consequently, not been received. We believe that Okubo will be in Japan within a few days.

A RACE against time of rather a novel character is being run off to-day, the course being from Yokohama to Odawara, the "animiles" a pair of coolies dragging a *jinrikisha*, and the "rider" a gentleman of Yokohama, of well-known sporting proclivities. A start was made at 12.45 p.m. from the Y. U. Club, the backer of Time betting \$100 that the whole distance could not be covered by 10 o'clock to-night, by any two coolies, indiscriminately selected, dragging him in an ordinary *jinrikisha*. Judges and attendants on the "mokes" accompany the cavalcade, and some interest is excited amongst sporting men, the course being rather heavy after the rains.

At a meeting of Insurance Agents, held yesterday 24th inst., at the Chamber of Commerce Rooms, the following offices were represented:—Sun, Imperial, Phoenix, Norwich-Union, North British, Victoria, Royal Exchange, Hamburg and Bremen, Staffordshire, London, and German Fire Insurance Companies.

Attention was called to the wooden cornices now so frequently put on otherwise well-built dwelling-houses, and particular objection was taken to them.

The subject of a salvage Corps was discussed, the formation of which was recommended to the Fire Brigade, the Agents agreeing to apply to their head offices for support towards it, to a like extent with the community.

A GENTLEMAN was returning home from the Circus, last night, in his carriage, with two *betto*s running ahead, and, upon nearing the house of Mr. Benson, Municipal Director, upon the Bluff, the two *betto*s took to their heels, and ran off as if they have seen a ghost. The gentleman himself looked round for some cause for their fright, and, upon the road-side, saw four men, armed with swords, with their faces concealed. He was, of course, not at all frightened, but drove home as fast as possible, where he found the *betto*s had preceded him. Upon taxing them with having deserted him, they said the four men were robbers. Perhaps, however, they were only some of Mr. Nakashima's detectives.

NOTICE has been sent to the various Legations by the government to the effect that in view of the probability of Chinamen being obliged to leave the country in the event of war being declared, those who are engaged at the Legations must be at once registered.

We see also that the U. S. Consul at Hiogo has notified American citizens that they are not to engage in hostile acts against China.

WE HAVE made special and particular enquiries to-day, respecting news from Mr. Okubo. We are assured that none of any kind have been received, though the government is in constant expectation. The preparations now going on do not, in themselves, shew that there will be war, and everything consistent with the honour of Japan will be done to avoid it. But no relaxation of the present arming will take place, until it be seen that peace will be preserved.

Our private information is very warlike.

ON SATURDAY at 6 o'clock A.M. all the troops in Tokei, comprising Infantry, Cavalry, and Artillery, were formed in line-of-battle in front of the castle at 6.30. H. E. the Mikado, mounted on a magnificent white horse, took command of the troops, who were then marched to Itzushima. On arrival there manoeuvres were commenced, which lasted until night. The troops

took their rations on the ground. The Emperor appeared very pleased with their soldierly appearance, and the precision with which they went through their drill.

About 7.0 p.m., a body of about 4,000 of these troops escorted His Majesty to the Imperial residence. The review was considered a grand success, and reflects great credit on the French Military mission, who have instructed these troops with so much perseverance.—*L'Echo du Japon*.

IN OUR Daily issue of this morning it was stated that the Chinese had contracted a loan for five millions sterling on the security of the Customs revenue at Foochow. The amount should have been stated as five millions of dollars.—*Japan Mail*.

THE REPRESENTATIVE of an American firm here left for the United States per *Vasco de Gama*, commissioned to purchase a large quantity of rifles on Japanese Government account.

THE *Herald* speaks, in a light and careless tone, of the "so-called iron-clads" of the Japanese. This really is carrying the affectation of contempt a little too far. If the *Stone-wall* is not a genuine "iron-clad," and one of great strength and destructive capacity, where, among the navies of the world, are such ships to be looked for?

It is true, as the *Herald* intimates, that Yosida, of the Treasury Department, has been appointed to a foreign mission. His new post will be Washington, but the exact time of his departure, for certain public reasons, is still undetermined. At present, it appears probable that he will leave at a very early date.

IT IS understood that Okubo did not arrive in Peking until the 10th instant, which shows a strange delay in reaching the Capital, for in the early part of the month it was generally supposed that he would have been there by the 27th. And there are strange rumours abroad in regard to his reception, for the truth of which we in no way vouch, but which are given for what they may be worth. It is said that he had been received by the Emperor, though, if the fact be as stated, no certain inference could be drawn from it. On the one hand it might be said that this betokened an earnest that peace between the two countries should be maintained. On the other it might be urged,—and the wily nature of Chinese diplomacy would certainly favour the suspicion,—that a reception of this nature would certainly tend to cause delays in negotiation, and make it more difficult to break off relations begun under such flattering auspices. The Chinese will do anything and everything to gain time. Whatever may be the irritation or determination felt by the Government, the mandarins, or the people, the country is in no condition to fight, and numbers are nothing against drilled troops.—*J. M. Advertiser*.

THERE IS but too much reason to think that the mission of Okubo has failed, and that all hope of avoiding war must be abandoned.—*Idem*.

THE CHINESE Government has contracted a foreign loan for five millions sterling at the rate of eight per cent per annum. The total sum is redeemable in ten years, and the security offered is the Custom's revenue at Foochow.—*Idem*.

ANOTHER Japanese has been "dreaming his little dream." This time, however, although much slaughter is chronicled, the slain are but the figments of the dreamer's fancy, and altogether the story, which is written *a la* Battle of Dorking, betrays the bias of the writer on the question now vexing the public mind—"Peace or War?"

"One rainy night in autumn, I was sitting reading a narrative of a European dream, when the paper fell from my hands, my eyes closed, and I beheld a vision, which I will endeavour to reproduce for the benefit of the readers of this paper. Directly sleep overtook me, a pleasant echo vibrated around my pillow, and I heard someone calling my name. I started with surprise and beheld an old grey-bearded man close to me, dressed in a crimson robe, and holding in his right hand a fan made of feathers. My astonishment was still greater when the old man thus addressed me: 'Well, you have roused your patriotic heart by reading a narrative of a European dream. I came here to show you something.' He then took me by the hand, and we were together lifted by the wind and carried through the air. At last, we reached a cloud upon which the old man stopped, and presented me with two instruments, one of which is called Senrigan and the other Jinjifu. (In old Chinese fable, Senrigan was a demon who had eyes of such immense power that he could see a thousand *ri*; and Jinjifu was another demon, who could hear voices at a very great distance.) From this elevation I looked upon all sides, by applying one of the instruments to my eyes; the other I held to my ear. I beheld an extensive capital in the northern corner of a large country. This was Peking, in China. In this country there stood a palace, resembling Yen-rio-kuwan, in one of the rooms of which sat two men, in council. One of them was Okubo, the messenger, and the other, Ko-shin-too (a relation of the emperor). The messenger said:—'We sent our army to Formosa, in accordance with the agreement between Riso-haku and Soyejima, but now your government opposes it and denies that such an agreement was made. It is useless to waste day after day in deciding the question; answer me as quickly as possible, and say whether or not your government will indemnify us for the expense of the expedition to Formosa.' Ko-shin-too, intending to gain time and cause delay, gave an obscure and undecided answer, and retired to hold a consultation with some high officials. Some cried out for peace, others for war, and their voices, coming to me from that distance, resembled the buzzing of a swarm of mosquitoes in a bamboo grove. The majority decided upon war, and the messenger was told that the "satisfaction money" would not be paid. Okubo, shortly afterwards, retired from Peking, and in two days reached Tien-tsin. Here he was joined by Yanagiwara and other officers, and, in a body, they embarked for Shanghai in the steamer *Riojo*, whence Okubo telegraphed to Japan, giving the decided answer. The government of this country instantly ordered reinforcements, naval and military, to be sent to Formosa. The navy was divided into two fleets, one of which blockaded the shore of Fukushin whilst the other scoured the seas, to cut off stragglers and protect the transports which the government sent with troops against China. In a few days the transports reached Tien-tsin, where the forces landed, and, after a fierce battle, siezed the harbour. Our army also routed the Chinese in battle at Formosa, and the Celestials fled to the north-east corner of the island, where they were pursued and surrounded, and in a short time capitulated. The Chinese steamers anchored off the Arsenal,

and the entrenchments at the mouth of the harbour were, in a short time, entirely destroyed. The Japanese, after taking all the cannon and ammunition from the last mentioned place, divided themselves into three companies and marched into the interior, one company attacking Nanking and the other two besieging Peking, one on either side. The Chinese Emperor, alarmed at all these defeats, held a consultation with his officers, and then sent a messenger to the Japanese camp to sue for peace, which was granted upon the condition that Japan should receive Kawan, Honan and other places, and 20,000,000 Yen as indemnification. All this I saw from the cloud, and was so overjoyed that I raised a great shout, which entered my ears, and I started from my nap with surprise, and found that I had been dreaming."

A MEETING of the Nobles will be held, on the 25th, to consider the question of contributing a part of their revenues to assist the Government during the expected war with China.

THE storm of 20th and 21st of last month was very severely felt in Shirakawa Ken. Ten thousand houses were destroyed, and more than one thousand persons perished, some being drowned and others crushed. Thirteen places, lately reclaimed from the sea were washed away, and restored by the force of the waves to the dominion of Neptune.

URENO, Vice Minister of Foreign Affairs, has been appointed Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James. He will start for his post in about six weeks. Awoki Senzo is promoted to the post of Envoy Extraordinary and Minister Plenipotentiary to Germany.

THE "talk about town" to-day is to the effect that the Pacific Mail Steamship Company have bought the steamers and all plant belonging to the China Trans-Pacific Steam Ship Co., and that, consequently, the English line has ceased to exist. To-morrow, we shall doubtless be enabled to give fuller information on the subject.

ON FRIDAY, that two high Japanese officials have been "arrested" by the Chinese, in Tien-tsin; and that 10,000 troops are under orders to go to China at once. From the feeling in Yedo to-day we think the declaration of war cannot be long delayed.

THE *Mainichi-Shinbun* gives the following items. During last month, a farmer at Koganoi-mura, Musashi, named Inouye Takejiro, entered the house of another farmer, named Tanaka Tahei, during the absence of the latter, and threw his daughter, Uta, and grandson, Taichiro, into a well in the garden. The murderer then decamped, with all the money and clothes upon which he could lay his hands.

ON THE 8th instant, a little boy, three years old, the son of Nashimiro Choshiro, who resides at No. 16, Hayatomi-mura, near Tokei, was playing upon the road near his father's house, when he was bitten by a mad dog. The animal, which belonged to Saito Tsunezo, of the same village, was immediately killed, and its owner has the pleasure of paying the doctor's bill.

IN THE race against time, of which we spoke in our last night's issue, the backer of time has won, as one of the "mokes" gave in at Totska, not half the distance stipulated.

ONE of the largest military reviews ever known in Japan took place to-day, before the Mikado.

Higashi Fushimi no Miya is appointed Commander-in-Chief.

There is no doubt that the Japanese are in earnest, and mean war.

THE *Nichi-nichi Shinbun*, yesterday, gave an estimate of the damage done by the typhoon of the 21st ultimo, in Matsuma Ken, which seems to have suffered more severely than any of the surrounding districts. Every river was swollen about 15 feet higher than usual by the rain; and, by the force of the wind, waves rose 10 feet high, and washed right over the mound into rice fields; 18,725 houses were destroyed, 500 persons killed, and 605 wounded; 8,685 store-houses were blown down, and 35 horses killed by the fall of the ruins.

THE *Mainichi Shinbun* is responsible for the following. "A Japanese woman, named Kane, who lives with a foreigner at No. 19, Blue, near Ishikawa, hired a maid, named Haru, for 3 years and eight months. Latterly, she had been cruel to the girl, ordering her to obtain money for her by prostitution. This she refused to do, whereupon the wicked mistress whipped her in a most shameful manner, and repeated the thrashings upon each occasion that the poor servant committed the slightest fault. At last Haru, no longer able to endure such treatment, ran away, and, after wandering about Hommoku for some time, met a young coolie, named Tsune, who had pity upon her, and took her home with him, and they became so friendly that she tarried there for some time. The "fiendess," hearing of this, sent a man for poor Haru, and, when she once more had her in her power, bound her to a pillar and whipped her, at intervals, night and day. The girl escaped for the second time, and threw herself into a well, but was taken out, and again dragged before the she-devil, who most cruelly beat her to death. When her friends, who live at Kawasaki, heard of her death, they went to No. 19 and saw the corpse. There were evident signs that she had been killed in torture, so they demanded satisfaction from the wicked woman; but the father, Kawayaya Bunzaimon, was eventually induced to take away the body, and say no more about it."

SAYS a Tokio paper:—"Unless the grass be cut, it will continue to grow, and so will evil habits. Last year, the rabbit trade prevailed, and many men, native and foreign, made much money by it; but government, seeing its uselessness, put a stop to the trade. It has, however, again revived, and at Asakusa, Shinjuku, Hongo, Komagome, and other places in Tokyo, many people now keep rabbits, and *Kasari* are said to purchase them, sometimes giving as much as fifty yen for one. It is half laughable, half sorrowful, that there are people employed in such frivolous pursuits, amidst this industrious community."

THE GOVERNMENT are offering to purchase the gold coins formerly in circulation, at fixed rates which are set forth in recent issues of the *Nichi-nichi-Shinbun*. The *Koban*, *nichibu-ichibu-ban*, *nishi-ban*, and *ishi-kin* are the coins mentioned, and the prices set against pieces of the same denomination vary according to the year in which they were issued. The 10th month of 8th year of Meiji (Decr. 1875) is the limit beyond which they cannot be purchased, and, except for the payment of taxes, they must not be tendered. The melting-pot is the ultimate destination.

A LETTER has been sent to the *Nisshin Shinjishi* by an anonymous small yakunin of the Banchi Jimu Kiyoku, contradicting the statement respecting the government having paid \$280,000 for the *New York*. He says the price paid was \$250,000, which was the amount received by the P. M. S. S. Co. We rejoice that our publication of the rumour has led to this denial.

THE *Tokio-Maru* (*New York*) has returned to Yokohama from Nagasaki, and goes on to Shinagawa with a heavy cargo. On her down trip she landed 1,700 soldiers at Fukuoka. She reports sighting a P. M. steamer and an English gunboat, but brings no news of importance.

THE Imperial Naval School at Yedo had a narrow escape of being destroyed by fire this afternoon. Flames were seen arising from the roof, fortunately in time to allow of their being quickly dealt with and subdued.

LAST WEEK, we had an account of a man who tried to commit suicide because they would not taken him for a soldier. A native paper now tells of a man, named Masakichi, at Okawado-mura, Adachigori, Musashi, who attempted self-destruction because the Fuk Kocho enrolled him for a soldier against his wish. He had a wife and family, and thought it was better to die before them, than to perish in a strange land; and, on the ninth of last month, he attempted to cut his throat, but was prevented by a man who saw him with the knife at his throat.

THE *Mainichi-Shimbun* says that Cholera is raging in Iku, Wada, and Watari in Iwaki; and there are over 670 deaths since the epidemic first visited those ports. People die at the rate of about 30 per diem, and the environs are ravaged by the disease like a prairie by fire. Dysentery is also prevalent, especially at Sendai, where it sweeps numbers into the grave.

THE *Nisshin Shinjishi* gives the following items. A certain woman, living at Matsu-shiro, in Shinano, was left a widow when quite young, and, since the death of her husband, her neighbours have admired her virtue; but, a short time ago, at the age of 50, she brought forth a son. This somewhat astonished her friends, who asked her to explain the extraordinary circumstance; but she only replied that she herself could not understand it. A wise man, who happened to hear of it, remarked:—"This is an occurrence that is seldom seen or heard of. In the Holy Bible we read of it. Besides, I read in the narratives of old China, of one woman who sucked the egg of a black-bird with this result; of another who stepped upon the trace of a large man, and of many who had children by the influence of *Ursa Major*. Therefore we ought not to be surprised about this woman, because, no doubt, she experienced the influence of the Comet which appeared a few weeks ago." The Editor adds that all women, who wish to escape suspicion, should avoid the influences of *Ursa Major*.

A NOTIFICATION, signed by Sanjo Daijin, dated 10th September is to the following effect: that money being required for many expenses, buildings which must be done and are already commenced may be continued, attention being paid to economy; but money for buildings not commenced must be returned to Okurasho.

THE Kazoku, who, a short time ago, asked the government to explain to them the state of affairs in Formosa, have been allowed to read the records of all the consultations held between the Japanese messengers and the Chinese government, upon the conditions that they would neither remove nor copy them. It is said that the obstinate and unjust behaviour of China, as shown by the despatches, has greatly enraged all the Kazoku (nobles.)

SINCE Mr. Inabe deepened the harbour of Yokkaichi, trade has increased rapidly. Mr. Inabe has improved the harbour and built a landing stage at his own expense, at the cost of fifty thousand yen.

"What hid'st thou in thy treasure caves and cells  
Thou ever changing and mysterious main?"

A LETTER from Yochigo, dated 29th August, states that a whale was caught at Ima-machi, in which, when it was cut up to boil down the blubber, a hide bag was found which turned out to contain in gold and silver coin of every kind, upwards of 10,000 yen.

A YOUNG jackass of a fellow named Otozo, a hair dresser, 24 years old, has attempted to commit hara kiri because he is not accepted for the army, to fight the Chinese, on the ground that he is too short of stature. The *Nichi Nichi Shimbun* says he did it under the impression that at any rate his soul would go to China.

SOME stones have been picked up at the mountain known as Compira-san in Musashi, which are causing some excitement. The natives call them crystals. Others declare them to be diamonds; and so the controversy goes. Mr. Schwartz would soon settle the question for them—and we daresay would charge no fee.

AFTER THE fire at Hakodate, on the 3rd inst., of which we gave the particulars in our issue of the 11th inst., a human skeleton was found amongst the ruins of a house. It was pronounced by a physician to be that of a man, and is supposed to be the remains of an engineer, belonging to the *Inagawa-maru*, named Kondo Kango, who went on shore the night of the fire and has not since been heard of. He had been assisting, amongst some more from the same ship, to extinguish the conflagration.

THE FOLLOWING curious case of divorce was recently tried in Tokei, between a *tofu* (a food made of beans) maker and his wife. The man's name is Tomokichi, and, as his wife was very quarrelsome, he sued for, and obtained, a divorce, upon the conditions that everything should be divided fairly between them. The wife thereupon went home and began the division. There were five mats; two of these she took for herself and the remaining one she cut in two. The chest of drawers, and other odd articles of furniture, she had evenly cut in halves. She then commenced with the building itself; but the husband thought that the "fair division" had gone quite far enough, and offered her 10 yen instead of her half of the building. This she accepted and departed, leaving him with a house full of pieces of furniture.

THE *Nichi-Nichi-Shimbun* gives the following curious items. The gale of wind which visited Yokohama, on the 13th instant, must have raged with greater violence at Shinagawa, as four large trees, near the temple of Hachiman Oimura, were blown down; and a man, named Tanaka Koturo, was lifted from his feet and

dashed to the ground with great violence, injuring his left shoulder and otherwise bruising himself.

A snake was gliding along a rice field, belonging to a farmer, named Yamamoto Tetsujiro, at Naritamachi, Shimosa, when it touched a conch, which had its shell wide open; but, when it felt the touch of the snake, it closed its shell, as it happened, upon the reptile's lower jaw. The poor creature writhed in agony, but the conch would not relax its hold. In a few days the snake died, partly from hunger, and partly from the injury inflicted by the sharp edge of the conch shell.

THE severe rain and wind storm which passed over Yokohama and Yedo yesterday, reached its culminating point at a little after twelve o'clock, the barometer continuing to fall until 3 p.m., when the mercury stood at 28.75. At twelve o'clock it indicated 29.35, the wind being E. S. E., so that its fall in the interval between that hour and 3 p.m. was exactly six-tenths of an inch, the wind having in the meantime veered to E. N. E. At 3.30 p.m., the barometer indicated 28.82, the wind being N. W., and at 6 o'clock it had risen to 29.28, with a S. W. wind and fine weather. Some damage has of course been caused, both in Yokohama and Yedo, but nothing of moment is reported.—*Japan Mail*.

A CORRESPONDENT writes from Yedo:—"It is said that the Government has despatched officers to America for the purpose of purchasing iron-clads in that country. There is very good cause for believing this report to be well founded, and that the United States has been selected as a suitable emporium for iron-clads, with as much reason as on a former occasion as a money market."—*Idem*.

THE following are the shipments of tea, &c., per C. T.-P. S. *Vasco de Gama*:—From Yokohama to New York, 163,261 lbs.; to Chicago, 190,098; to Boston, 19,953; to Canada, 97,294; to San Francisco, 45,131; total, 515,737 lbs. From Kobe to New York, 17,050; to Chicago, 49,868; to San Francisco, 96,984. Grand total, 679,639 lbs.; also 7 bales silk and 73 bales cocoons, for New York.

ON THE 20th of last month three villages at Shirakawagori, in Iwaki suffered from the effects of a violent hail-storm. It is said that the stones fell like bricks, and, when the shower was over, they were heaped on the ground 5 sun high. They were neither round nor square, but had the appearance of pieces of flint; the largest were 80 me in weight, and the smallest 8 momme. Considerable damage was done by this extraordinary shower of hail.

THE *Nichi-Nichi-Shimbun* gives another account of an honest jinrikisha man, named Ogawa Heijiro, who lives at No. 4 Matsudamachi, Kanda, Tokei. One night, as he was clearing up his jinrikisha, he found a silver watch under the cushion, and, leaving the watch in charge of his land-lord, immediately departed in search of the owner amongst the men who had hired him during the day. At last he found the owner, who had despaired of ever again seeing his watch, at No. 17 Tatamicho, Kiobasho, and, after giving a description of the watch, took him back to his lodgings, where he delivered it up. The owner offered the honest fellow 50 sen, but he refused to take it, saying that he did not require a reward for such a slight service. However, after some persuasion, he took the money, and conveyed his benefactor home in his jinrikisha.

AN OFFICER in the Hanchi Jimu Kiyoku (Formosan Affairs Department) writes to *Hochi Shinbun* to the following effect:—The *Nisshin Shinjishi*, No. 95, translating from the *Japan Gazette*, said that the price paid by government for the steamer *New York* was \$280,000, but the Japanese officer employed in that affair paid \$250,000, and kept the remaining \$30,000 for himself. This is a calumny. The price of the ship recorded in the account-books of the Hanchi Jimu Kiyoku is \$250,000, so there is not even a trace of suspicion against any officer. The *Japan Gazette*, believing some popular rumour, publishes far and wide a false report, and consequently can give no excuse; but the *Nisshin Shinjishi*, which knows the false from the true, and mentioned this carelessly, should lose the *Shin* (true) of *Shinjishi*. Though newspapers are the best mediums for publishing the latest events, care should be taken respecting those concerning one's honour, whether it may relate to a single person or a whole community. To those things, especially, which concern the government, attention ought to be paid. I think an editor should be the last to injure an innocent man, or to speak ill of a just government. Though people may be deceived occasionally, no one would believe that \$280,000 were paid by government when the real price of the ship was \$250,000. Errors are often found in the *Gazette* and *Nisshin Shinjishi*, and they seem to me to be very willing to speak ill of the present state of affairs. Therefore, I, who am a low officer in the same department, correct their false report."

THE *Hochi-Shimbun* gives an account of the discovery of a robbers' den, at Asakusa-bashi Nakadori, but more commonly called Osoyashimmichi. It appears that two policemen, of Godaiku, were patrolling near the above bridge, when they observed a faint light coming from a channel leading into a subterranean cavern, which had formerly been full of water. Rather surprised at the appearance of a light in that place, they entered, and found a natural chamber, illuminated by a single lamp, which gave but an indefinite view of the apartment, around which were arranged shelves, loaded with dishes, plates &c., enough for 5 or 6 persons. All the occupants were absent, in search of booty, with the exception of one man, who is dumb, and, therefore, cannot be persuaded to inform upon his companions. He has, however, been taken into custody; and the place is continually watched, so that, directly the rest of the gang return home, they will also be captured.

THE SAME paper speaks of a fire which almost consumed Wakazakura, in the province of Inaba, on the 8th inst. It broke out in the house of a farmer, named Asano Densaburo; about nine o'clock in the morning, and destroyed 348 houses; the entire number in the town was 354, so that now only six remain. No lives, however, were lost.

THE HIGHWAY robber, who hung himself at the police station, on Saturday, in order that he might be buried with his head upon his shoulders, has succeeded in cheating the executioner. He died in his cell yesterday afternoon.

A GENIUS, named Hayashi Yachio, has just invented a machine to fly through the air, and writes to the *Nisshin-Shinjishi*, giving the following account of it. The apparatus, which the inventor calls *Jokicho*, will go up and down at pleasure, and can be stopped when and where convenient.

It resembles a large bird, and is worked by wind-mills, which move both wings up and down, with the regularity of the motion of a bird's flight. The wonderful machine is also supplied with a tail, which answers the same purpose as a ship's rudder, and by which the occupant can steer to any place he thinks fit. The inventor has constructed a small one, and by proportion, he calculates that a *Jokicho* with wings and wind-mills 50 feet in length, and carrying between 8 and 9 cwt., can move through the air at from 70 to 100 *ri* an hour; and thus perform a journey of from 1,000 to 2,500 *ri* in a day and a night. Hayashi Yachio seems confident of success, if he had the means, and calls upon his countrymen to aid him in this great enterprise; inviting them either to call at his house, at No. 7 Tamuramachi, Shiba Atago-shita, Tokei, or to write through the columns of the *Nisshin Shinjishi*. The object of the inventor is to carry despatches with his mighty machine. We have heard of sending messages by balloons, but this plan will be far superior, if it do not meet the same fate as Professor de Groof's parachute.

(From the *Tokei Journal*.)

Another mint has commenced operation, and the Japanese Yen very successfully imitated in its initial essay. Numismatologists in search of specimens will find a good exemplar of the new leaden coinage nailed to the counter of the Yokohama Hotel de l'Univers. It is to be hoped that few, if any, have gone into the interior, and that, this time, the coiners will not establish themselves in the quarters they once before found so good an asylum.

Some new stretchers have been invented and constructed in Tokei, for use in Formosa. They are intended to carry two wounded persons, and consist of two cane sofa-chairs, placed back to back upon mountain-chair poles. Two or four men may carry the burden with ease, and as the stretchers can be carried along mountain paths with facility, they will be of much use in a mountainous country like Formosa, should there be war with China.

In view of the possibility of a war with China, the Chinese in Yokohama are, in many instances, anxious, and making preparations, to leave. We understand that H. B. M.'s Consul has stated that Chinamen who may be partners with foreigners in mercantile houses would be protected; but that Chinamen born in Hongkong, but who have registered as Japanese subjects, will not be considered, except in rare cases and after reference to the Registrar at Hongkong, as English subjects.

It is said that, in consequence of the numerous robberies, the Japanese police are to be furnished with swords. It is to be hoped this is not true. A moment's passion, and policemen are but mortal, might produce serious consequences.

The Daijokuan has notified that the Post-office will issue post-office orders for any sum under 30 yen.

As we are going to press, we learn from official sources that a pacific arrangement is on the point of being concluded between Japan and China. Rumour says war has already commenced.

ON THE 19th inst. Monsieur Berthemey the French minister in Japan, was entertained by H. E. Sanjo Daijin. Several of the leading men in the public works and foreign affairs departments were present in compliment to Monsieur Berthemey.

THE *Mainichi Shimbun* gives the following account of the capture of robbers.

On the night of the 15th instant a man named Buhai, was walking up Sakurada, Tokei, when he was met by a highway robber, who shot him and then took 100 yen from his person. Several people, who heard the shot, ran to the spot in time to see the robber make off with his booty. He was, however, followed, and arrested in Kawasaki. On examination he said he was a physician, and lived at Kominato, Yokohama; and gave his name as Ikeda Riyosai.

On the 16th, a young man, named Yen-kichi, the son of a tradesman, who is suspected of having been connected with several of the burglaries in Yokohama, was arrested and lodged in gaol; and Kenjiro, another of the same company, was arrested the following day at his lodgings at Sakuragicho.

On the 18th instant a policeman was on duty at Ishizaki, Yokohama, when he met a farmer, named Sakichi, carrying a large bag on his back. This vigilant and enterprising officer of the native force, suspecting from the appearance of the man that something was wrong, asked what the bag contained and was told that the only contents were lotus roots. Not being satisfied, the policeman demanded to see the inside of the mysterious sack, but the farmer demurred, and threats had to be used before he would show the inside of his bundle. Upon opening the mouth of the bag the first thing the officer saw was the handle of a sword, which as a general consequence, was connected with an article of that description, and one of no mean length. Perfectly satisfied with his examination the constable took the farmer into custody. It was afterwards discovered that he was a robber who was "wanted."

THE FOLLOWING proclamation has been addressed by Mr. Watanabé, vice-governor of Osaka, to the old samourai who have engaged to go at volunteers to Formosa.

It is not long since the Saga insurrection was ended. Then as now you were courageous in combatting the enemy in the service of your country. Your fidelity to the State merits reward. I recall it and shall never forget it. The officers who were then in Osaka for the defence of the district, and to whom I have reported your noble conduct and your fidelity to the country have highly approved. But before you could even start the insurrection was finished. To-day, the country demands other services from you. The Formosan war has produced great complication between China and Japan. The hour has come for you to shew your brave and your fidelity to the country. You have no desire to remain indifferent to this great affair, in which is bound the glory or the ruin of our empire. Courage, then! And may your example be quickly followed by thousands of your brothers. You will fight our new enemies. You will die for the country. But your name will be honoured by the nation; and all the world will speak of you with respect and admiration.—*L'Echo du Japon*.

\*.\* Bravo, Watanabe! That's the way to shew the spirit of the nation. We hear that even the native merchants of Yokohama are anxious to form a corps of volunteers to fight the Chinese.

ALL our readers must be acquainted with the beautiful work published in Paris in two volumes, entitled "Le Japon illustré," written by M. Aimé Humbert, formerly Envoy extraordinary and Minister plenipotentiary of the Swiss Confederation to Japan. It is a work most admirably got up—both as to its information, its pictures and its typography; and it has already received favourable notice in our columns. This work has been translated into English by Mrs. Cashel Hoey edited by Mr. H. W. Bates, the Assistant Secretary to the Royal Geographical Society; published by Richard Bentley and Son of London, and may now be purchased of F. R. Wetmore & Co., Yokohama.

It appears under the title of "Japan and the Japanese, illustrated." \* It is however, an abridgement of the original work, and does not contain more than half the number of illustrations, and not half of the reading matter; but the latter is well selected as that possessing most interest to the general reader, and describes very fully, as the cover of the book denotes, the "Manners and Customs of the Japanese."

It is well that this book is at last published, for it has already been freely pirated by Bayard Taylor. If M. Humbert were now travelling in Japan, he would see occasion to alter a good deal of the information given in his original work, and some of what is now before us. Bayard Taylor seems to have searched for the least reliable portion of the book. If, before this abridgement was published, a revise had been carefully undertaken with the aid of that "faithful attaché" mentioned by M. Humbert who accompanied him in all his peregrinations, and who has now, we believe, learnt a good deal more of Japan and its people, than they could become acquainted with in the early times, the book would be even more valuable than it is.

Taking it, however, as we find it, we welcome it. It contains a vast amount of information, most pleasantly written; and the greater part of it is such as gives a fair insight into the characteristics of the people and the government.

But we wish that the Editor had been content to let his work finish as did the original. He has added two chapters on "The new order of things in Japan;" and in these, errors altogether predominate.

Thus he says:—

Europeans inevitably commit the error of transacting their affairs in the Eastern world in too systematic a spirit. In this particular case, England, happily guided by the instinct of commercial interests, made an exception to this rule. She became the friend and confidant of the prince whose capital she had, shortly before, burned to ashes.

The prince [whose capital had been burned to ashes five years before was Satsuma; and it is hardly necessary for us to state that to this day no such intimacy has existed between the English Minister and either this or any other feudal prince. After the affair of the Bizen retainers at Hiogo, when the place was temporarily under martial law, a high officer of the Satsuma clan went from Kioto to Hiogo to confer with the foreign ministers; but Sir Harry Parkes and his colleagues flatly refused to see any one but a properly accredited envoy from the Mikado. The Satsuma officer had to return with his mission unfulfilled; and a Kugé was sent in his

place. It was the resolute stand made by the foreign ministers, and more particularly by the English, that convinced the southern daimios that their game must be altered; and it was altered accordingly. Nothing that can be said—nothing that can be written, can expunge the fact of their determined hostility to foreigners up to the very day on which that Satsuma officer saw the firm position assumed by the foreign ministers. From that day the entire foreign policy was changed, and those who had made the revolution saw that the part of the plan which had for its object the driving of foreigners out of the country, if possible, but at all events out of Osaka and Hiogo, must be given up. They had the grace to make a virtue of necessity; and so we see the initiation of "the new order of things in Japan."

Again, speaking of the commencement of the revolutionary strife, he says:—

Then Stotsbashi made up his mind to open the campaign. The four palaces which Satsuma possessed at Yeddo, and which served as a centre of operations for the conspirators in that capital, were attacked and destroyed by cannon. \* \* \* The army of Stotsbashi formed in line at Fousimi, on the north-west of Osaka. \* \* \* The first engagement took place January 28th, 1868. Stotsbashi remained in observation at Osaka. His forces, ill-directed, fell back on the fortress of Yeddo. On the following days they lost it, retook it, and were finally beaten in a pitched battle, when a great number of his men passed over to the enemy, on the pretext that the latter, having hoisted the standard of the Mikado, any further struggle would have been sacrilege. The citadel of Osaka fell, without the firing of a shot, into the hands of the conquerors of Yeddo, who burned it to ashes.

Now a man who undertakes the task of editing such a work as "Japan and the Japanese," ought, by the mere reading of the book itself, to have known better than to make such a jumble as this. It is so palpably blundering that it stamps the editor as very careless, if not altogether incompetent. It were an insult to our readers to point out the errors.

Then as to the climate of Japan, the Editor writes:

The four seasons are very distinctly marked there: from March to the latter half of May, a splendid spring; from June to September, summer, commencing with a brief rainy season, followed by heat, during which the thermometer marks from 63° to 70° Fahr; from September to the end of November is autumn, without great heat, and free from rain, storm, and mosquitoes; finally three months of winter usually free from tempests, and under a perfectly serene sky; with a temperature that sometimes falls at Yokohama as low as 43° Fahr.

We need no further quote the errors of the two chapters added by the editor. Let the book be taken in hand, and read to the end of Book IV. Chapter XII. It will amply repay perusal, and with a few exceptions thus far may be considered reliable. At least it has as few mistakes as most foreigners would make in writing such a book; and it contains a vast amount of information on Japanese subjects which have not been published in the English language elsewhere. Of course, a large portion of it is descriptive of a state of things now totally changed—totally swept away; but seeing that the changes have all occurred within the memory of residents of seven years standing, those very chapters become the most interesting.

We have no fault to find with the very free translation; nor the editing—save with regard to those unfortunate concluding chapters; and these the reader may scan as cursorily as he pleases—not to glean information from them; but to perceive how even a man who is "assistant secretary to the Royal Geographical Society" and who ought to have read every word of Mr. Humbert's book, before

he claimed the merit of editing it, can so thoroughly have disregarded the information it contains; and laid himself open to unlimited censure.

## Local Correspondence.

### A SAD DISAPPOINTMENT!

To the Editor of the Japan Gazette.

SIR,

Being a stranger in Yokohama, and but newly arrived, my chief amusement is to roam about this place, where almost every sight to me is a refreshing novelty. On passing the Municipal Office a few mornings ago, I heard sounds of sobbing and acute anguish; and the door being open, I was induced to enter, fearing some one had been suddenly taken ill and might require assistance.

A benevolent looking party was leaning over a table, on which was opened a copy of the *Japan Mail*. His weeping eyes were fixed on the journal, and, ever and anon, he would read some paragraph and break into fresh paroxysms of tears and lamentations. Thinking he might have seen the notice of the death of some near relative, and feeling that grief is a sacred thing, I was about to withdraw, when he said, "don't go; take a seat; I shall be better presently." He took out his handkerchief, gently dried his swimming optics, and when more composed, said, "Sir, this is a sad affair; have you read it? It's enough to shake the whole framework of Yokohama society."

"I have not yet seen to-day's paper," I observed.

"It's awful," he replied; "positively heart-breaking."

"Whatever can it be?" I enquired. "You don't mean to say that any of Druse's pigs are dead, or that White has ran over the Consul with his basket-trap?"

"Worse than that," he answered, shaking his head and wiping away a fresh accession of briny moisture.

"Ah!" I said; "no doubt another marine disaster. Some vessel in the dark has mistaken W—'s nose for a lighthouse, and gone on the rocks in consequence."

"No," he replied, "it's even worse than such a casualty."

"Well; the ways of Providence are inscrutable; if another heavy load has been laid on the missionaries in the shape of more houses and land on the Bluff, then, indeed, do I deeply sympathise with them in the trials they undergo in passing through this weary vale of tears."

"No," said he, "direful as such a visitation would undoubtedly be, it surpasses even that."

"Then," I rejoined, "it's a conundrum that I must give up. What on earth is it that can excite sobbing and draw tears from such a mature customer as you are?"

"Look here," he said, "and just listen to this: 'We rejoice to be able to record that there were no burglaries last night.' Now, Sir, what is your opinion of No. 32 after this unfeeling remark?"

"Well, no doubt, he naturally rejoices that midnight robberies are not so prevalent; and, though I am a stranger, I should imagine it to be a change devoutly to be wished."

"My dear Sir," he replied; "you are evidently fresh out from home, or have perhaps resided in the gay cities of Hongkong, Shanghai or Kobe. But let me ask you, in the present dull condition of Yokohama

\* JAPAN AND THE JAPANESE, Illustrated." By Aimé Humbert, Late Envoy Extraordinary and Minister Plenipotentiary to the Swiss Confederation. Translated by Mrs. Cashel Hoey and edited by H. W. Bates, Assistant Secretary to the Royal Geographical Society. London: R. Bentley and son, Yokohama: F. R. Wetmore & Co., 1874.

what amusing excitements have we to fall back upon? Our earthquakes are of the mildest description, and the worst shakes we get don't come up to a touch of the ague. For months we have lived in the dreariest condition; there is no further intelligence from Formosa; telegraphic communication is interrupted, and we have no relations with distant parts. What is there of interest now but these burglaries? Take away these and you reduce us to the condition of Nagasaki, and remove the last prop that keeps us from the unfathomable gulf of everlasting lethargy and stagnation."

"But" I ventured to remonstrate, "some people here will hail the new state of things with complacency. . . Wylie will no longer be under the necessity of chaining up his steam gauges, and Spratt will be able to indulge in the luxury of an upstairs bed, in lieu of the scanty accommodation afforded by a narrow counter."

"Ah!" he said, with a melancholy shake of the head. "it's all over. I shall never have another chance to win the sweepstakes."

"Sweepstakes! What have these burglaries to do with your winning a sweepstakes?"

"A great deal. A lot of us put in five dollars apiece, and we all draw different numbers, representing the houses that have not yet been broken into. So you see that if the Grand Hotel should be the next place feloniously entered, the holder of the ticket marked No. 20 would be the winner of the sweepstakes. Besides, I've got a bet on with Assborne that when these burglars get into the house on the Bluff where the Manager of the Anti-Rational Hotel sleeps, they won't be able to steal his eye-glass without waking him up. Don't tell me. They can't get it; it's fixed in too tight. This cessation of our principal amusement is to be deplored. The Circus, good as it is, after a few visits, brings on an attack of familiarity that breeds something akin to indifference. During the greater part of these burglarious visitations, of course, I have been away in the country, and the arrival of the papers has been my only comfort; and if something don't happen soon to awaken what little interest I take in Municipal affairs, I fear I shall either be driven to resign, or terminate my uneventful existence in the Canal. But I am troubling you with my private griefs."

"Not at all," I said. "Yours is a sad case of disappointment. But we can't have everything we want. Don't lose heart. This congratulatory paragraph may be premature. P'raps the burglars are merely having a rest after their arduous duties, or have a glut of goods on hand. Give them time to recover from the effects of the medicines they helped themselves to when they visited North's dispensary. The bottles may have got mixed up a little, and instead of quinine they may have partaken of white arsenic and are a little discouraged. Only give them time, and they will probably resume their nocturnal visits. Good morning."

I am, &c.,

C. R. T.

Yokohama, Sept. 25th, 1874.

To the Editor of the *Japan Gazette*.

DEAR SIR,

I have no doubt that others, besides myself, were surprized at the reply of our Kenrei, Nakashima Nobuyuki, to the very reasonable request of the honorable Board of Consuls, for an abatement of the nuisance of the demoniac yells of the street-coolies of Yokohama. This

nuisance is not known in other parts of Japan as we hear it here; and, as Yokohama is one of the ports of Japan most frequented by foreigners, this is one of the barbarisms that strike the foreign visitor with disgust, and cause him to set this people down, at once, as an uncivilized race. The exertion of the lungs exhausts the coolie's strength more than the strain upon his muscle, and any one, who can gravely defend and excuse such uncivilized hootings and belowlings, cannot lay claim to any great degree of civilization, or even to a patriotic desire that his country and people should appear to advantage in the eyes of civilized nations.

We thought that, when this hideous nuisance of our streets, that gives us so unenviable a preeminence over the other open ports of Japan, was brought under the notice of our chief magistrate, he would at once see the shame it caused to his country and people; and that he would try to have it abolished. But, if a sense of shame cannot be excited to produce an abatement of this nuisance, there is yet another way by which a mitigation of the evil may perhaps be obtained. Let those who have most to do with the carting of goods, etc., make an agreement with certain coolie masters, that if, in sending their carts through the streets, they will not allow the coolies to shout, they shall have all their custom; and they will soon find that it pays to be quiet. Let the carts, of which the coolies agree to this arrangement, bear a little flag, marked "Noiseless"; and, if all persons, in calling a cart, would take pains to secure one of these, in preference to the noisy ones, we shall soon see the desired reformation. This will not only be a great satisfaction to ourselves, but tend greatly to the elevation of our native friends in the estimation of the world at large.

Yours sincerely,

CENSOR.

### SPORTING NOTES.

To the Editor of the *Japan Gazette*.

SIR,

The training for our Autumn Race Meeting is in full swing, and a goodly number of early risers are to be found, who daily

"At early morn bring forth the fiery steed,  
And scour the velvet sward,"

only that the Yokohama Race Course does not go much on the sward. From appearances at present we ought to have a very good meeting. A great many new ponies have been imported from China, not to mention new riders from distant quarters of the world. Among the former, I notice, are "Saxon," "Gambler," and the white pony said to be "Grindstone," but he does not look big enough. These form a valuable addition to the mystery stable. Mr. Morrison has replaced some of his old ponies by the importation of "Jossakeca," "Roanaki," and "Doubloon," while Mr. Radley has secured "Pice," "Picayune," and "Glencoe." It is needless to say much about these animals or their performances, for everyone that takes any interest in such matters will have preserved a copy of the *N. C. D. Herald*, wherein all these things are carefully noted. Of course such a prize as the "Derby Stakes" has brought down crowds of griffins, most of them a weedy worthless lot. I have not yet seen any new pony that deserves to carry off a prize. Black, Bay, Chestnut, Grey, and even painted ponies have appeared on the course. The latter I am sorry to see, but there must be a motive in all disguises, and sooner or later (if we are to believe in old sayings) truth will out;

and we shall learn why these extraordinary apparitions have flaunted before us. The course is in very bad order. One pony has, I hear, already been killed. Fortunately, however, one of our leading Esculapeans is always on the spot which doubtless adds to the confidence of aspirant jockeys. Every one is anxious to see what kind of a programme will be placed before them, and the forthcoming Sale of "Typhoon" will doubtless shew who means business. Next week I shall likely be able to tell you about some gallops. It's a little too early for that kind of fun yet, and the "Man in the Bush" must find his work very slow.

HAWKS-EYE.

To the Editor of the *Japan Gazette*.

SIR,

Like your correspondent "Censor" I was much surprised to learn that a gentleman of Mr. Nakashima Nobuyuki's reputed intelligence should have not only refused to take any steps towards the suppression of that hideous public nuisance, the coolies' cries, but even defended the practice as necessary.

I must confess, however, that my surprise was somewhat lessened by reading the correspondence on the subject lately published. Had the Consuls who signed the letter bringing the matter to the Governor's notice been content with indicating the grievance and asking that proper steps be taken to remedy it there might have been less risk of an unfavourable reply. But when these gentlemen went further and, instead of leaving to the native authorities to judge what were the proper steps to be taken with their own people for the end in view, undertook to advise the Governor to do it in this way and that way and not in the other way, they seem to me to have engaged in the fruitless enterprise of trying to teach their grandmother to milk ducks.

But while this may possibly account for, it assuredly does not extenuate the silliness of the Governor's reply. If his assertion that the coolies find the noises indispensable to true, the fact ought, in the interests of science, to be made known to anthropologists, to whom it will be useful in assigning the position of the Japanese in the scale of civilization. Such howls and cries have always, I believe, been found indispensable to the due performance of wild Indian war-dances and the various similar exertions of central African tribes; but I am not aware that they are to be found practised in the towns or sea-ports of any other nation, China excepted, calling itself civilized.

Obviously the first attempts to remedy the nuisance should have been made by the foreign merchants themselves, in some such way as "Censor" indicates; and, if these failed, the aid of the native authorities might then have been reasonably invoked. It is to be feared, however, that it is now too late for this course to be adopted, as the coolies are not likely to abandon, to please foreigners, a practice which they know to be sanctioned and openly defended by their own authorities.

It will be much to the credit of Mr. Nakashima Nobuzuki, if upon, more mature reflection, he should come to see that his reply to the Consuls on this matter was, after all, a blunder.

I am, Sir,

Yours truly,

CENSORIOUS

Sept. 24th, 1874.

To the Editor of the *Japan Gazette*.

SIR,

A number of paragraphs have appeared in your paper on the subject of a false rumour as to a large sum of money having been appropriated by an officer of the government in connection with the purchase of the ship *New York*, which make a notice of them seem called for by me. \* \* \*

The statement made by an officer of this department to the *Hochi Shimbun* is quite accurate and is one of facts within his knowledge. Those facts are known to all the officers of this department, and could have been learned by any one justly interested in, and respectfully applying for such information.

I am, Sir,

Very respectfully,

Your obdt. Servant,

IWAHASHI,

*Auditor and Treasurer,*

Banchi-jimu-kyoku.

Tokai, 24th Sept., 1874.

\* \* \* Mr. Iwahashi should have sent a denial long ago, and thus at once authoritatively stopped the rumour. As for any one respectfully applying for information at any government office, receiving it, that is altogether too good a joke. As he evidently wished his statement to be received seriously, as the truth, it is a pity he should have introduced a statement so thoroughly provocative of laughter.

THE following is an extract of a letter from Captain Wynn, of the *Saturnus*, lately wrecked on the coast, to a friend in Yokohama.

SHEBUSA, Sept. 19th, 1874.

"I think bad luck never comes single handed. I have now lost my ship and very nearly my life, which happened as follows :

"On the 13th, we had fine weather and fair wind, expecting to be in Ishabama, Sendai, at night; but, about 3 P.M., a typhoon came on without any warning, and at 6.30 P.M., we let go both anchors and cut away the masts, as the ship was then close in shore, where she very shortly after went. The sea was very heavy and the current running very strong, so that we could get no communication with the shore until low water, which was about 11 P.M. We then got a line on shore, and got all the crew and the crew of a fishing boat we had picked up, on shore. For them it was pretty easy as they are as much at home in water as on land, but for me it was different, as I cannot swim; however, one of the sailors remained behind with me, and when I jumped overboard with a hold of the line he followed me. I had not got very far before a heavy sea came and I lost my hold of the line, and would have lost the hold of my life if the sailor had not got hold of my collar and dragged me on shore with him. By 3 A.M. of the 14th, we were all landed without loss of life, but with loss of everything else. I landed with a pair of old trowsers and a shirt; but the Japanese on shore were very kind and gave us dry clothes, and food and shelter, which was very much needed. I have now got some Japanese clothes made, and am in fact quite a Jap. About 5.30 A.M. of the 14th the ship parted in midship and begun to break up. There is scarcely anything of her left now. In a few days I will go on to Sendai, which is 60 English miles to the north of this place, and from there take the first steamer down to Yedo."

### CORONER'S INQUEST.

Yesterday afternoon, an inquiry was held, at the Hospital in the British Camp, before Russell Robertson, Esq., H. B. M.'s Consul, and a jury, into the cause of death of Paul Curtis, Corporal in the Royal Marines.

Messrs. Henry Liddle, Thomas Rose, and Sidney Charles Pass were duly sworn as jurymen, and the inquest was opened.

Lance-Corporal Edward Ricklesworth, sworn :—I was on control duty this morning near the steps where boats load and unload, when some Japanese called me, and told me that there was a man dead in the creek. The Japanese used the word *sindany*. I went and told the sergeant on duty. I saw the body in the water, and recognised it as that of Corporal Curtis. The last time I saw him alive was two or three days ago. The body was about 8 feet from the steps.

To a Juror :—The body was on the bottom. I could see it from the steps. He had white clothes on. His head was about 2 feet below the water.

Sergeant Henry Simpson, sworn :—I was on control guard about 5 minutes to six this morning, when Lance-Corporal Ricklesworth came and told me that there was a man lying at the bottom of the canal. I went down to the bottom of the steps and found the deceased man lying in the water with his hands crossed and fists clenched. I sent up to the Camp, and likewise gave information at the police station. I took a boat-hook from one of the boats and pulled him close into the steps. Assistance came and we took him up to the Camp. I last saw Curtis 4 or 5 days ago. I recognised him perfectly.

J. Caldwell, Staff-Surgeon, R. M. L. I., sworn :—On being called, about a quarter to seven this morning, to see the body, I found life quite extinct, and the body had all the appearance of having been some time in the water, as there were several erosions upon the face and legs, probably caused by fish. The only mark of external violence was on the scalp, where there was a wound which might have been caused by his body coming in contact with something, and sending him over. I am of opinion that death was caused by drowning. I should think he had been in the water the better part of two days. He was reported absent since Friday night, and I should think he had been all that time in the water.

Private James Richardson, sworn :—I last saw deceased on Saturday morning, about a quarter past eleven, down in Homura. He was dressed in white. I spoke to him, and said, "Well, Corporal, what is the matter with you now;" and he replied, "I don't know, but I shall not go to the Camp until Monday morning." It was nearer the creek than Jaffray's stables. He was standing still when I spoke to him. I went down to No. 133, and left him.

To a Juror :—He was the worse for drink.

To Coroner :—After his death I told Corporal Fussell that I had seen him alive. Corporal Fussell asked me if I had seen deceased. I came off Legation Guard yesterday morning about half-past nine o'clock, and went to the Camp at ten minutes to ten. I left the camp again, about twelve minutes to eleven.

To a Juror :—I had heard that Paul was absent from duty.

Lance-Corporal Fussell, sworn :—I was sent to look for Curtis, about 9 o'clock yesterday forenoon, and saw Richardson in Homura. I asked him if he had seen Corporal Curtis, and I

understood him to say that he had heard he was in Yokohama somewhere. I told him that if he knew where he was he should go with me, or let me know where to find him. I did not understand him to say that he had seen Curtis. I then went to a place where I had seen Curtis, on Friday evening, at, or near, No. 133, Yokohama. There were some Japanese *saki* shops close to, but no public-houses. I had left Curtis there on Friday night with a man named Shaw; he said he was going to have a glass of beer and then go to the camp. I was not looking for him then; he had not then been reported absent. I had been walking with him all the day.

Private William Shaw, sworn :—I was in company with Curtis last Friday night, up to a quarter past nine o'clock. He left me in a Japanese *saki* shop in Homura. It was about three parts of the way up Homura on the left hand side. He did not say where he was going. There was a civilian with us, but he had then left. I do not know whether he is a resident of this place. I could not say Curtis was drunk, but he had enough to jog along with. It was in the back street where the 101 steps are.

To a Juror :—Curtis had drunk as much as he was able. He left a glass full of *saki*.

A Japanese woman, who keeps the house, No. 133, was cautioned, and stated that she had been the mistress of the deceased man. On Friday night last, about 9 o'clock, he went to her house for a glass of liquor. He was the worse for drink.

Edward Russell, sworn :—On Friday evening last, at a quarter to nine, I was in Homura, and sitting down conversing with the keeper of a *saki* shop, when two marines came up; one of them had a long beard. One was a private and the other a corporal. It was the corporal who had the large beard. They asked me into the *saki* shop, and the private called for three glasses of *saki*. After a while the private went out to see the time, and, during his absence, the corporal called for some more *saki*, but had not money enough to pay for it. He said he would pay for it on the next day. He then said it was getting late, and that it was nearly time he was getting up "top-side." I could see that the man was in drink, so I told him it was time to go to the barracks. He got up, left his full glass, and bid me *sayonara*, saying he was going to the barracks. He then went out. Five or six minutes afterwards, the private returned and asked where the corporal was, and I told him that he had gone up to the Camp. The private then bade me "good night," and left the house.

Private Thomas Iving, sworn :—I left the Club, at nine o'clock, on Friday night, and shortly afterwards saw deceased, at a *saki* shop, near No. 132, I think. I wanted him to come along with me, but he would not. He was along with Shaw, and a civilian, named Russell. I afterwards found out that they had been in another *saki* shop. I was standing, about half past nine, near the temple, when I again saw deceased walking towards the camp. All at once he turned back and walked the opposite way. Both times I saw him he appeared to have been drinking.

To a Juror :—It did not strike me to go after him. I did not speak to him on the second occasion. I saw his body in the creek about 40 yards from where I last saw him. When he turned round he went in the opposite direction from where he was found. The night was dark, but I could easily recognise him as Curtis.

Edward Russell, recalled :—I did not know the corporal. I did not even know his name. I have seen Shaw several times before. I am out of employment.

This closed the evidence; and, after a few minutes consultation, the following verdict was returned:—

"We, the undersigned, sitting as a jury to enquire into the cause of death of Paul Curtis, do find that deceased came to his death by drowning, in the creek, between 9 30 P.M. of the 18th instant and daylight on the morning of the 19th instant; but how, or under what circumstances, there is not sufficient evidence to show.

(Signed) HENRY LIDDLE,  
" THOMAS ROSE,  
" SIDNEY CHARLES PASS.  
Approved (signed) RUSSELL ROBERTSON,  
Consul and Coroner."

### In the U. S. Consular-General Court.

Before Gen. T. B. VAN BUREN, *Consul-General*.

*Tuesday, September 22nd, 1874.*

Wm. Nuttall was charged, by Wm. Thompson, with having stolen a certain certificate of deposit for \$1,000, granted, by the Chartered Mercantile Bank, to Mrs. Thompson, and by her transferred, with consent of the Bank, to her husband.

W. H. Thompson, sworn:—On Friday and Saturday morning last, I had been playing at a *Faro* bank, dealt by Nuttall, and had lost some \$900, in bank bills, and I had in my possession the certificate of deposit, which, on or about the 4th or 5th of the month, I had endorsed, and deposited with the Bank as security for a loan of \$600. I did not endorse it at the time Nuttall got possession of it; and I never knowingly delivered it to Nuttall. The box from which Nuttall dealt *Faro* was a fraudulent one. I wanted to look at it, but Nuttall showed me another box.

E. H. Jones, in defence, said:—I was present on the occasion of this deposit note being given to Nuttall. Thompson had lost for several evenings. On Friday night he did not lose \$900 as alleged, but only some 40 or 50 gold *yen*. Thompson then proposed to exchange this deposit note for *Faro* checks, when Thompson and Nuttall stepped into another room to discuss the matter. They called me into the room. Nuttall said he did not know anything about such deposit notes out in this country, and asked me if it was good. I replied that I had no doubt it was good. Thompson then said, "I am no scoundrel. The paper is good. You may go to the Bank, and collect the money in the morning."

Thompson, recalled:—I knew that, an hour ago, the deposit note was in the hands of a third party.

His Honour, in giving judgment, said that the charge had not been sustained; and that he should inform the Bank that the deposit note had been transferred to Nuttall, for gambling chits, and that the consideration of the transfer was void.

The present holder of the note keeps it, subject to the orders of the Consul-General.

Wm. Nuttall was then arraigned for keeping a gambling-house, and fined \$200.

His Honour stated that he had before informed the prisoner that he should punish him, if it should ever be proved, before him, that he kept a gambling saloon; that he had no sympathy with Mr. Thompson for his losses, but was determined to protect the community against these

gambling hells, as far as he had the power; and that prisoner would stand committed until the fine was paid.

After a consultation with Mr. Jones, Nuttall paid the fine, and was discharged.

### NIIGATA.

September 15th.

On the 11th, Lieut. Sandwith and Mr. Gubbins left for Sado, and, being pressed for time, intended to return here on the 13th. On Sunday afternoon, the *Niigata-Maru* was seen off the bar, but, on account of the surf and strong gale, which had come up quite suddenly, she could not come across. She then tried to make Sado, but the gale was too strong, and she was blown away down the coast; leaving all here in great state of anxiety. Messengers were sent along the coast and one to Sado to see if by chance she had made that island. All day yesterday and up to noon to-day no news was received; but, at 1 P.M., the servant of the captain of the steamer arrived, who reports that they were blown away from here to Kashiwasaki, a town distant 25 ri, where they arrived at 2 A.M. on the 14th, and came to an anchor. In the morning, Lieut. Sandwith and Mr. Gubbins went on shore to return overland. Capt. Fagg started same day with the steamer and is near here, but cannot come in and so sent the boy on shore for food. The river is higher than ever was known, and a tremendous current is running out, the mail-carriers report the rain to have fallen in torrents in the mountains during the 13th and 14th. The only damage to the *Niigata-Maru* is the loss of one mast.

#### OBSERVATIONS BY ANEROID BAROMETER.

12th, evening,	29.64	} Wind, in the morning of the 13th, N.E. light, and squally; in the afternoon, heavy rain and strong gale from N.E.
13th, 7 A.M.	29.54	
" 2 P.M.	29.22	
" 6 P.M.	28.95	
" 8 P.M.	29.09	
" 9 P.M.	29.03	

In the Typhoon of Aug. 21st, this Barometer indicated 28.86.

It is the custom here to confine all prisoners, who have been tried and convicted of serious crimes, in one large strong cell, not even having a separate cell for murderers. Here all await punishment, the time when it will be carried out not being told them. One evening, in addition to their usual food, a small fish is given to each; and, by this, all know that one or more of their number will suffer death on the morrow, but who the doomed ones are is not known until the jailer comes in the morning and reads out his list; those whose names he mentions are then taken to the rear of the prison and hanged. The gallows being inside the prison, and the day of execution not being generally known, there are usually only a few spectators present beside the prison officials; but notices of the execution, &c., are posted round the town.

Rice is rising in price.

The notes of the National Bank here are 2 per cent. premium over the Government *sats*, as the former are redeemable for gold on demand.

There was a slight shock of earthquake last night; they are, however, very rare here, and never so severe as in Yokohama.

Sept. 15th, 4.30 P.M.—Lieut. Sandwith and Mr. Gubbins have just arrived, all well.

THE Ken school, which received some damage during the late typhoon, is about to be repaired and enlarged, at a cost of \$3,500. The work is to be completed within 60 days. In the meanwhile, the duties of the school are being conducted in a large temple, formerly used as the English Consulate.

Sept. 19th, 1874.

ON THE 16th instant a timber merchant's yard caught fire, through the carelessness of some workman on the premises. About 4.30 A.M. they lighted a fire to cook their victuals before going to work, and then went to another part of the yard leaving the fire burning. Shortly afterwards the flames caught some shavings which were lying near, and quickly spread to a large stack of wood. Luckily it began to rain heavily, and, as there was little or no wind the fire was confined to the place in which it broke out. The men were arrested and have each the pleasure of cutting timber in gaol for three months.

THE RIVER is very high, swollen by the late rains. *Masu* a very nice fish of the salmon kind, are just coming into season. Grapes, figs and other fruits are very plentiful.

DURING THE recent gale, in which the *Niigata-maru* was driven off the coast, the Japanese steamer *Dumbarton*, which was loading rice off this port was also obliged to get up anchor, and run for shelter. Since then, great anxiety has been felt about her, as she has not been heard of. She has a European Captain and Engineer on board; her engines are good, but her boilers are in a wretched condition. It is hoped that she has rounded the south end of Sado, and is now lying safely at anchor in some port on the west coast. She had only 90 piculs of rice to take in to complete her loading.

ALL SPARE arms, ammunition and guns are being forwarded hence to Tokio.

ONE OR TWO persons have been lately prosecuted at the Saibansho, and severely punished for not affixing a sufficient number of stamps to contracts.

THE Japanese newspaper here now comes out daily.

## The New York Agent FOR

THE "JAPAN GAZETTE," published every evening in Tokei (Yedo) and Yokohama;

The "Japan Gazette Mail Summary," published for every United States Mail Steamer;

The "Nisshin Shinjishi," the Official Organ of the Japanese Government, published daily in Tokei, in the Japanese language;

And,

The "Far East," a monthly Journal, published in Yokohama, illustrated by photographs;

# Hokohama Market Report and Prices Current.

## STAPLE IMPORTS.

The impending conflict between China and Japan has not had the effect of checking business to any extent. On the contrary, the transactions in imports since our last have been altogether larger and more satisfactory than we have been able of late to report.

COTTON YARNS have felt the improvement in the demand for the lower grades of 16 to 24 and the higher of 28 to 32.

GREY SHIRTINGS have met with increased demand.

DRILLS AND T-CLOTHS are freely saleable, and most staple dry goods except Blankets have shared the improvement.

METALS.—are quiet. Large quantities of Iron have been imported from Hongkong by Chinese merchants.

SUGAR.—The demand has been active and prices have advanced.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$1.95 to 2.20	} Exceedingly dull of sale.

Raw Cotton (China) ... .. "	14.90 to 15.20	
Kerosine Oil, ... .. 10 Galls., per case.	3.05 to 3.15	

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—The business since our last has been on a liberal scale, and in consequence of advices from Europe, prices have advanced \$10 or \$20 per picul. The stock on offer offers little attraction.

**SILK-WORM'S EGGS.**—The stock is now very large and buyers slow to operate. The consequence is that the Japanese are larger sellers, and about 170,000 cards have changed hands. The nominal price is from 40 cents to 80 cents.

**TEA.**—An active and brisk business has been done in Tea since our last mail issue. Settlements to the extent of Piculs 10,800 having been made, and in consequence our prices are decidedly firmer. The native holders, emboldened by the eager competition amongst foreign buyers existing this season, continue only to supply the market as clearances are made by Sales and thus keep stocks at a low figure.

Recent telegraphic advices received from the New York markets would indicate that severe losses can only be looked for on most of the parcels now *in transitu*, and the idea of propping up the home markets by supporting a fictitious high scale of quotations at the source of produce will this year from increased telegraphic facilities prove inutile; we can only expect further advices from the American markets, taking into consideration the excessive amount already shipped this season, to be anything but favourable, and which should demand a heavy reduction on ruling rates to encourage further business.

Our quotations for outgoing American Mail will rule as follows: but an important reduction in rates is likely to ensue in the course of the next ten days.

The *Ambassador* has completed her cargo and will have early despatch for New York leaving the *New Republic* on the berth for the same destination at £2. 15s. per ton of 40 cubic feet.

Per Am. str. *Nevada*, for Hongkong:

Messrs. F. E. Woodworth, Newman, Horgan, Mrs. W. H. Bell, Miss Smithers.

## REPORTS.

The British steamer *Washi* reports: Left Hakodate Sept. 12th, at 7.30 p.m. On Sunday, 13th, indications of approaching storm. At 4 p.m. barometer had fallen to 29.70; wind blowing a gale from East; heavy sea running. At 2 a.m., 14th Sept., barometer 28.60, blowing a hurricane from W.N.W., heavy rain squalls, mountainous sea running. Ship behaving admirably throughout. At 4 a.m. moderated. Wind South-westerly. After the gale, sighted a Japanese schooner flying distress signal, both masts gone, under jury rig: stopped ship and sent a boat aboard. No assistance needed. When last seen, she was running up the coast. Had strong S.W. wind until arrival at 3 a.m.

### THE "Japan Gazette" MAIL SUMMARY

FROM 28TH SEPT. TO 13TH OCT., 1874.

#### BIRTH.

On the 26th inst., at No. 89, Yokohama, Mrs. JAMES EDWARDS, of a son.

#### MARRIAGE.

On the 7th Oct., at H. B. M. Legation, Japan, by the Rev. W. B. Wright, M.A., and subsequently at the Catholic Church, by H. G. Monseigneur Petitjean, Bishop of Myriofite, EMILIO DE OJEDA, Chargé d'Affairs of Spain a.i., son of MANUEL DE OJEDA, of Madrid, to JULIA, second daughter of JOHN HENRY BROOK, Esq.

OUR last Mail Summary was dated Sept. 28th, and left this, via San Francisco, by the P. M. S. S. *Japan*, on the 30th ult. Since that date the following mails are to hand:—

		Due.	Arrived.
American	"	...	Sept. 30th
French	"	...	Oct. 3rd
English	"	...	" 7th
American	"	...	" 12th

### Summary.

SINCE our last, Yokohama has been very quiet, and even the burglars seem to be about "played out." Five were apprehended the other evening, some of them with swords in their possession. The principal topic of interest is the late typhoon at Hongkong, full accounts of which are given in our columns. We have heard nothing, for some time, with respect to the relations between China and Japan, but it is still hoped that war may be averted. The Japanese continue to make preparations, and have lately bought several steamers, which they intend to use as transports. From Formosa, we hear that the Japanese army is in tolerable good

condition, and that the sick list is not nearly so full as during the excessive heat of the past few months. The soldiers have been employed in erecting winter quarters, and coolies have been sent from Yodo to assist them.

THE ROYAL Marines encamped upon the Bluff, Yokohama, seem to be especially the butt of fate. It will be remembered that, six weeks ago, a private was sunstruck. Exactly three weeks afterwards, 20th ultimo, the body of a corporal was taken out of the creek. He had fallen in whilst in a state of intoxication. Last Sunday morning, a gunner, named Hickman, who for some time had been imbibing freely, took a drink of arsenical soap, a mixture for preserving skins, &c., in mistake for water, and, as a consequence, was a subject for a coroner's enquiry on the following day.

THE SILK-WORM egg trade is not brisk; there are a great quantity of *cartons* in the market and very little demand for them.

THE PLEASURE excursion of the P. M. S. S. *China* down the bay was a great success.

THE MEMBERS of the French Transit of Venus expedition have been received by the Mikado, at Hamagoten.

THE JAPANESE Ironclad ram *Azuma-kan* (*Stonewall*), on being docked at Yokoska, was found to have sustained no material injury, after being ashore at Nagasaki.

CHIARINIS CIRCUS is not so well patronized as formerly, owing to the fact that nearly everyone in the neighbourhood have already paid it two or three visits. The benefit in aid of the Funds of the General Hospital

drew a bumper house, and did much towards relieving that institution from debt.

THE HEIGHT of the Japan famed mountain Fuji-yama, has again been measured, by Mr. Cawley, whose calculations give 12,531 feet.

AN accident on the railway, the first that has happened in Japan, occurred last Sunday forenoon. It was not, however, a very serious one.

THE NUMBER of burglaries in Yokohama have decreased considerably since the alterations effected by the governor in the police force came into operation.

THE MURDERER of Mr. Haber, the North German Consul, at Hakodadi, was executed on 26th ulto.

Messrs. TAKAKI and Tomita, appointed Consuls at San Francisco, leave for their post by this steamer.

THERE IS a case now pending at H. B. M.'s Provincial Court, which promises to occupy some time, and to give considerable trouble to the several lawyers. Messrs. Davison & Co., merchants sue the Oriental Bank Corporation, for an amount somewhat exceeding \$16,000, for storage, insurance, &c., of certain goods, said to be entrusted to plaintiffs by the Bank.

ANOTHER FOREIGNER has been attacked by a Japanese, but in this case the assailant did not "dream a little dream." It was the result of interference. The foreigner saw a sailor abusing a woman, and shoved the man on one side. He no doubt did it with the best intentions, but he is now lying at the Hospital, Yedo, with two severe wounds in the calf of one of his legs.

WE ARE enabled to state authoritatively that Chinese residents, of all classes and kinds, in Japan, will not be molested or interfered with in any way, in the event of war becoming a necessity. This decision was long ago arrived at by the government, but its announcement has been postponed, lest it should be taken as an indication that war was actually expected. Nothing has since occurred to cause any apprehensions of speedy hostilities, other than those which have all along existed to a certain extent, but the anxieties shown by the Chinese residents in regard to their situation, and their fear that they may be made to suffer here for the acts of their government at home, have been taken into consideration, and a proclamation has been prepared which will demonstrate to them that they have no cause for alarm. From the first, it has been the intention of the authorities to give such an assurance at the proper moment, and the only question has been in respect to the expediency of publishing it before the direct occasion for it should arise. The good feeling of the government, in now anticipating the evils which the Chinese believed to be in store for them, and its manifestation of willingness to allay their disquietude, will be heartily welcomed, not only in this community, but wherever its action shall become known. In the late war between France and Germany, the course of the latter power, in permitting all French denizens to continue to reside and follow their avocations, commanded universal approbation; while the conduct of the French, in expelling Germans from their territory, was equally condemned. The same appreciation will be acknowledged in the present instance, excepting on the part of those whose only pursuit of happiness is the search for and the pretended discovery of unworthy motives for every action, great or little, undertaken by Japan.

There will be certain reasonable conditions attached to the privilege of free residence. The Chinese will be expected not to communicate improperly with their own country, and will be rigidly restrained from any attempts at carrying on business with parties in Chinese ports. So long as they do not try to afford, directly or otherwise, aid and comfort to the enemy, they will be subjected to no restriction. If they violate this necessary regulation they will undoubtedly be made to undergo a just penalty. But they will probably be prudent enough to avoid this danger, and will take the concession granted them with as near an approach to gratitude as their stolid nature allows. All this, however, is conditional upon a contest being inevitable, and we may still hold to the hope that it can be averted. The real question of peace or war has yet to be decided.

EXPLOSIONS of affected virtue and indignation on the part of the *Japan Mail* are not uncommon, and, if we give a moment's notice to its latest demonstration of the sort, it is not on account of its exceptional singularity, but simply to show how injudicious it might be for an habitual fault-finder to scatter reproaches and imputations without reckoning their applicability to his own case. The *Mail* thinks it has discovered that an announcement in a Yedo newspaper, in reference to the prospects of peace, was unwarranted by actual facts. Perhaps it was, but there was nothing in the circumstances of its publication to justify the assertion that "it is not easy to imagine anything more wanton and reprehensible." The statement was given in perfect good faith, and upon authority than which

none higher in Japan—unless it be absolutely official—can be named. To speak of it as "a blundering piece of carelessness" is precisely like characterizing in a similar way some declaration made in a London journal on the representation of a member of a minister's household. The *Mail* ventures to say that "it is little less than criminal to put in circulation reports of this nature unless known to be true." If we are to accept this strict standard of editorial accountability, what are we to think of the *Mail's* recent avowal to the effect that all hope was over, and nothing could avert war? Was this known to be true, two weeks ago? On the contrary, everybody knows that it was false, and that the *Mail* had no authentic information that would sustain such a conclusion. And we undertake to say that the authority on which the Yedo newspaper's report was based is as superior to that of the *Mail's* lackadaisical abandonment of hope as sunlight to the flicker of a farthing dip. Our own theory is that every reasonable effort should be made to ascertain the trustworthiness of important items of intelligence; but to say that the conductors of journals must positively know their truth in all cases, before making them public, is to assert that they must be sifted with omniscience. The possession of that endowment is not claimed anywhere in Yokohama, we believe, outside of the office of the *Mail*; but, admitting its existence there, we again ask, what shall be said of that paper's unqualified announcement, week before last, that peace was utterly hopeless?

IT seems unreasonable to complain of the ignorance of European communities in regard to Japanese affairs when we consider the contradictory and erroneous reports that are continually supplied to them by correspondents who themselves appear wholly at fault upon the subjects which they discuss. A recent paper in the *Revue de Deux Mondes*, contributed by a gentleman who certainly could have had no intention of misrepresenting a single fact, contains a multitude of mistakes in geography and history, which, though not of serious moment, are likely to confuse readers who seek for real information. The extract from the *Colonge Gazette*, reprinted on Wednesday by a contemporary, misstates no less than a score of circumstances connected with the relations between Japan and China, many of which would have to be set down as wilful inventions, were it not that the tone of the communication forbids the suspicion of intentional unfairness. Yet this letter is said to have been sent from Yokohama. The narrative furnished by Mr. Gribble, of Nagasaki, to the *London Times*, was exceptionally free from errors, although a few trifling inaccuracies, not affecting its general value, found their way into it. A second letter to the *Times*, the initials attached to which reveal its authorship, and which is dated "Yokohama, June 10th," deals with the Chinese question in a more general way, and, without entering upon explicit details, presents a wholly different view from that offered by Mr. Gribble. Here, as in other cases, there can assuredly be no purpose to convey impressions based upon anything but actual facts, yet we find several statements that will not bear close examination, and which, we may presume, the writer has since discovered to be not entirely warranted:—for example, the assertions that Okubo was among those in favor of the expedition; that the enterprise was actually forbidden, previous to the departure from Nagasaki, by orders from Yedo; that General Le Gendre "constantly pressed upon the Minister for

Foreign Affairs the importance of despatching an expeditionary force to Formosa," and that the first ships requested or obtained "permission" from the Chinese to take coal and water at Amoy. To admit these statements would be to acknowledge that the punishment of the savage murderers was a foreign suggestion rather than the natural impulse of the Japanese Government; that the fleet started upon its errand in defiance of the central authority at Yedo; that the necessity of consulting the Chinese, after the first steps had been taken, was ever recognised by the leaders, and that Okubo has secretly held opinions at variance with those he has openly expressed. But none of these positions can be maintained. To other errors, chiefly of dates, which do not materially affect the question, it is not necessary to allude, except to show how the very persons supposed to possess the best guides to accurate knowledge may swerve from strict exactness. The slaughter of the Loo Choo castaways was considerably longer ago than two years, and it is quite incorrect to say that all action on the matter was postponed for a while, "as the moment was not opportune." On the contrary, there was continual action, from the time of the first intelligence of the murders. Many preliminaries required to be arranged. The settlement of the terms upon which Loo Choo was formally adopted into the nationality of Japan, and converted from a tributary dependency of Satsuma to a "han" of the empire was one of these. With regard to the opinions expressed by the correspondent, there need be no doubt of their sincerity and genuineness, but we do not find that they are duly fortified by any satisfactory argument. We are assured that "the legality of the course taken by the Cabinet at Yedo can hardly be sustained." Nothing, however, is shown in support of this declaration. Nor does it appear which part of the Cabinet's course is believed to be illegal, or whether the whole of it is thus designated. A general sweeping statement of this sort carries no conviction to the minds of readers. As a matter of fact, we believe that very few of the steps thus far taken, that come within the bearing of international or municipal law, have been decided upon without ample justification by the Government's legal advisers of more than one nationality. A word or two may be said in regard to the representation of the Chinese position respecting the right of control over Formosa. The claim of that empire is favoured on the grounds that the viceroy of Fokien says that the Japanese have been misled "by frivolous tale-bearers," and that when the Secretary at Peking declared that China had no jurisdiction over the savage region, he lied. The correspondent does not offer this as a conjecture of his own, but puts it forward as an undisputed fact. He admits that the power of jurisdiction was denied, but explains this awkward incident by saying that there is nothing "in the Chinese mind which resents the telling of an untruth under these, or, for that matter, any conceivable circumstances." No one can be seriously influenced by reasoning of this kind. The officials of the Chinese government, we are told, admit the existence of a certain condition of affairs at various periods and to representatives of various nations, and finally to a messenger from Japan. A little later, the same officials, or others of equal authority, allege the existence of a totally opposite condition of affairs, and this time we are expected to believe them, because the Chinese are capable of lying, "under any conceivable circumstances." Obviously enough, this theory of easy mendacity is equally applicable to both of the positions taken by the Chinese. Why.

however, it should be necessary for a writer in Yokohama to assume that they lied in a declaration, advantageous to the position of this government, and did not lie in the contradictory declaration which is injurious to Japan, it is beyond our power to understand. But the opinions or arguments of individual writers will not be sufficient, in any case, to fashion public sentiment upon this question, if it should ever grow to dangerous dimensions. That must be guided by a clear understanding of established facts, the careful collection and accurate chronicling of which should be the chief concern of every correspondent.

### THE JAPANESE EXPEDITION TO FORMOSA.

To the Editor of the *Times*.

SIR,—Although it is probable that news will have reached you direct from China of the proceedings of the Japanese in Formosa, the position of the question which is now chiefly engrossing attention both in Yedo and Pekin may not be so familiar to your readers as to render unacceptable the few following lines devoted to the object.

Two years ago a vessel, manned by Japanese or Loochooans, was wrecked on the coast of Formosa, and its crew barbarously murdered. Intelligence of this outrage having reached Japan, a strong feeling arose among the Southern men to revenge it. But as the moment was not opportune the Government postponed all action on the matter, and it was only last year, when an Ambassador was sent by Japan to the Court of Pekin, at about the time when an audience of the Emperor was granted to the Ministers of the Powers having treaties with China, that the first steps were taken which have led to the present inauspicious condition of the relations between the two countries. These steps were curious. Soyejima, the Japanese Envoy, was instructed to inquire whether the Chinese Government claimed jurisdiction over the island of Formosa but, as we may infer from his course of action, to do this so incidentally that the Cabinet at Pekin could not suspect that Japan had any designs in that direction. Soyejima, therefore, in one of the conferences at Tsung li Yamén, bade his interpreter ask one of the Secretaries whether China claimed any such jurisdiction. Now, in answer to a question of this nature a Chinese replies in the negative almost by instinct, whatever may be the actual truth. This course clothes him at once with a kind of defensive armour, of which he is quite willing to divest himself again when he has found out by subsequent conference that you intend making no demands on him. Nor is there anything in the Chinese mind which resents the telling of an untruth under these or, for that matter, under any conceivable circumstances. The secretary obeyed this instinct, and the conversation was at once allowed to drop. Soyejima had obtained exactly what he required—as much and no more. With this he returned to Yedo, and the Japanese at once laid their plans. I should here mention that the Japanese Envoy was accompanied by a certain Mr. Le Gendre, formerly United States' Consul At Amoy, who had come over to Japan a few weeks previous to the departure of the Embassy, and who, having formerly visited Formosa in connexion with some outrages perpetrated on an American shipwrecked crew similar to those which were now exciting the Japanese, was introduced to the Japanese Foreign Minister by Mr. De Long, then United States' Minister at Yedo,

as being an eminently fit person to advise on such a matter. The Japanese accepted the services of Mr. Le Gendre, gave him the high rank of an officer of the second grade, with a large salary, and at once appointed him to accompany Soyejima to Pekin.

On the return of the Embassy, Mr. Le Gendre constantly pressed upon the Minister for Foreign Affairs the importance of despatching an expeditionary force to Formosa. But the affair hung fire. The Government would gladly have let the question drop, for it had matters on hand demanding both its time and money. But the insurrection in the Provinces of Hizen and Saga broke out in the midst of its hesitation, and Okubo, the Minister of the Interior, who had been despatched to the disturbed districts, telegraphed to Yedo very shortly after his arrival in Saga that nothing but the promise of an expedition to Formosa or Corea would quiet the excited soldiery. He received *carte blanche*; the *samurai* were appeased; preparations were at once made for the Formosa expedition, and, without another word to Pekin, the vessels of which it was composed were sent to rendezvous at Nagasaki. When on the very point of sailing, the expedition was countermanded by orders from Yedo. But though the start was a bad one the horses were off, and no power in Japan could stop them. The transports ran over to Amoy, took in coal and water there with the permission of the Chinese, and set sail again for Formosa. The troops were at once thrown on to the island and hutted, and a few days afterwards some skirmishes followed between the Beotans, the perpetrators of the outrages, and the Japanese soldiery, resulting in the severe punishment of the savages. Similar events were repeated, and the Japanese sent over word to telegraph to Yedo that their victory was complete, and that the attitude of an Envoy whom they had just despatched to Pekin should be a firm one.

But the Chinese began to look jealously upon this intrusion into their territory. They had craftily watched the proceedings of the Japanese, sending only some inferior officials to communicate with them, and probably forming an accurate estimate of their strength meanwhile. At last the Viceroy of Fo-kien addressed a despatch to Saigo, Commander-in-Chief of the Japanese troops, intimating that the action of his Government was unwarranted by the law of nations, and wholly unjustified by any negotiations at Pekin between Soyejima and Tsung li Yamén, and requesting him at once to withdraw his troops. In this despatch the Viceroy says that the Japanese have been misled "by frivolous tale-bearers" if they imagine either that China does not possess or has abrogated jurisdiction over the whole of Formosa, and he proceeds to adduce facts in proof that she possesses and exercises this jurisdiction. He also pleads that the Japanese are acting in violation of the 1st, 3rd, and 4th Articles of the Treaty recently concluded between the two countries, and concludes by saying that peace between the two Empires is endangered by this course of action.

Meanwhile the Cabinet at Yedo is divided. Okuma, Minister of Finance, Okubo, Minister of the Interior, and Shimadzu Saburô, uncle of the ex-Prince of Satsuma, the instigator of the Richardson murder, and now Sadaijin, or second subject in the Empire, are for prosecuting the expedition, while most of the other Ministers are against it. It is said this evening that a reinforcement of 5,000 troops is to be at once sent to Formosa, but the report requires confirmation.

The legality of the course taken by the Cabinet at Yedo can hardly be sustained, while

it will be difficult if not impossible, for the Japanese to withdraw, without humiliation, from the position they have taken up. Should they refuse to do so, war between the two countries can hardly be avoided.

I am, Sir,

Your very obedient Servant,

W. G. H.

Yokohama, June 19th.

### REPORT OF THE COMMITTEE APPOINTED AT THE PUBLIC MEETING OF FOREIGN RESIDENTS HELD ON 21ST SEPTEMBER, 1874.

Your Committee promptly placed themselves in communication with the Chairman of the Board of Consuls, and were invited by that gentleman to an interview with himself and colleagues upon the first available day.

It will be known that the Consular Board had already directed their serious attention to the subject, but your Committee were anxious not only to verbally discuss some details, but also to bring forward what they deemed to be the root of the whole matter.

At this interview, which took place yesterday, the Chairman of the Board informed your Committee that the representations of the Foreign residents in respect to the inadequacy of the Native Police Force, as embodied in the Resolutions passed at the Public Meeting in question, had been at once transmitted, in a covering despatch, to the Kenrei; a copy of the Resolutions had also been forwarded to H. E. Sir Harry S. Parkes, Doyen of the Diplomatic Corps, through whom the matter would be pressed at Yedo.

No answer had yet been received to this despatch, but already the Kenrei had added ten fresh police beats in the Settlement, and five on the Bluff, to those previously existing.

The Kenrei had also agreed to an important measure, viz: the licensing of native grog-shops around the Foreign Settlement. Henceforth, no native can retail liquor on draught without a license, for which he has to pay \$12 per month. This, it was hoped, would have a repressive effect on crime, by diminishing the number of these places of resort.

The Board of Consuls had also urged upon the Kenrei the desirability of appointing a Foreign Inspector of Police.

As regarded the searching of suspicious characters, the Consuls were averse to urging it, for they feared that foreigners' servants carrying their masters' property would be as likely to be stopped as thieves, and that there would be incessant complaints from their countrymen thereanent.

Your Committee suggested that this difficulty might be met, if the police were instructed to stop persons with bundles only between midnight and dawn, and that when a foreigner had occasion to send a servant out during that time, he might furnish him with a pass and a lantern; and for the rest, they were sure that if occasional inconvenience did arise the good sense of the community would induce it to accept such rare inconvenience rather than frustrate a measure intended for the public good. The Consular Board accepted this suggestion, and further, in response to the representations of your Committee, undertook to urge upon the Kenrei severe measures with receivers of stolen goods.

In conclusion, the Chairman of the Board took occasion to press upon the consideration of the Community his belief that the lighting

of the streets with Gas would be one of the most powerful preventives of burglary,—a sentiment which your Committee wish heartily to endorse.

Your Committee further learnt that some small changes are in contemplation in the arrangement of the office for the Registration of servants:—When these are completed, the Consuls will probably notify their respective countrymen.

Your Committee believe that the Registration office may be made a means of checking a good deal of dishonesty.

Having thus finished with the Police question in its more superficial aspects, your Committee were desirous of representing to the Consular Board that they deemed that the best remedy for the whole matter lay in a radical change of the municipal system; and that the present seemed to be an opportune time to revive the subject, for there was an idea, on the one hand, that the Japanese Government were somewhat tired of the annual Municipal expenditure; and on the other, that although much had been done of late years to improve the condition of the settlement, much remained to be done.

The Japanese Government might give up the greater part of the ground rents, and yet be better off. With such an income and a power by charter to levy taxes in case of need, the Community, it was believed, might effect all that it needed, and be generally in a much more satisfactory position. As an opposite illustration, the Gas question—which a number of residents were now laboriously endeavouring to carry through by means of a voluntary assessment—would have been long ago accomplished off hand by a Municipality.

The Chairman of the Board replied that this was too important a matter to be discussed by a section of the Board, such as was then present; and that therefore it would be impossible on that occasion to enter upon it. He suggested that a written memorial, embodying the views of the Community, should be prepared.

Your Committee, believing as they do that the Municipal question may be said to under by the police question, and that the present is a peculiarly opportune time for reviving the discussion of the Municipal question, consider that they are quite within the authorization granted to them, when they propose to call a Public Meeting for the full discussion of this subject, at as early a date as may be expedient; and they hope then to offer some definite propositions for the consideration of their fellow residents.

Yokohama, October 1st, 1874.

#### TO-DAY'S BURGLARIES.

ON FRIDAY evening last (Sept. 25th), whilst the residents of No. 124 were at dinner, one of the bedrooms was entered and a portmanteau, containing articles of apparel &c. to the value of \$50, was stolen. As usual nothing has since been heard of the thief.

During last night, the Eastern Club, No. 87, was broken into. The thieves first wrenched off the outer venetian, then, by taking out a pane of glass, opened the window. After stealing some wines they got clear off, although a *momban*, who is supposed to make regular rounds, was kept on the premises.—J. G., Sept. 28.

THE *Mail* alludes to what it calls the "Munro doctrine" with an ease that shows it to be familiar with the subject. Now, will that journal be good enough to inform us who "Munro" was?—*Idem*.

THE *Herald* complains of the foreign representatives for standing supinely by, and not tendering advice, and failing to persuade the Japanese to keep the peace towards China, and, in a vague way, wants to know what they, the ministers, are about. A general impression has hitherto prevailed that a good deal of advice, of one kind and another, has been tendered, and that supineness has not been the distinguishing characteristic of the ministerial attitude during this crisis. Most persons are aware, for example, that one minister protested against the Employment of a German doctor in Formosa; that another tried to prevent the departure of a French advocate in company with Okubo; that a third did his best to interfere with the engagements of American assistants, and actually caused the stoppage of the "New York," and that others have issued proclamations of neutrality, and injunctions against the use of foreign ships. It is strange that the *Herald* has heard nothing of all this.—*Idem*.

FOR SOMETIME past the policemen of Yokohama have been dressed during the night in Japanese clothes, so as to hide their uniforms from the thieves which infest our town. By this means they are enabled more easily to surprise those whom they suspect of theft, as the sight of a Japanese in national costume does not inspire the robbers with suspicion.—*L'Echo du Japon*.—*Idem*.

NINE MEN, who were imprisoned for life for being connected with a plot against the government, requested, in the case of war with China, to be enlisted as volunteers in the army; but their request was not granted. In their written petition they stated that they had repented of their crimes, and would willingly die in the defence of their country's honour. The editor adds that it is a great pity such men may not be allowed to fight for their liberty.—*Idem*.

#### TO-DAY'S BURGLARIES.

THE BURGLARS were out again last night (28th Sept.), but one of them had the misfortune to be caught. A Japanese house near the Railway Station was the place attacked. We are not informed how the thieves obtained an entrance, but they had only just got fairly to work when they were disturbed. This caused them to leave rather abruptly, and one of them was so overlaid that he fell over his spoil into a well. He was, however, rescued from a watery grave and placed in durance vile. It is evident that man was not born to be drowned.—J. G., Sept. 29.

THE REPORT that Lieut. Commander Cassel's leave of absence has been revoked, and that orders have been sent him from the U. S. Navy Department to withdraw from the Formosa Expedition is now fully corroborated. But the latest advices from that island state that official notice to that effect had not reached him up to the middle of this month, and that he was still with the Japanese troops. Mr. Wasson is at present in Nagasaki, to which place he was obliged to go by severe illness. His recovery is now complete, and he is awaiting instructions to resume his position on General Saigo's staff. He will probably sail for Formosa within a few days.—*Idem*.

GEN. MYERS, who came to Japan a few weeks since, bringing presents of arms, etc. from President Grant to the Mikado, is seriously ill with rheumatism, at Kiga near Hakone, and is obliged to defer his return to the United States on that account.—*Idem*.

SEVERAL ADDITIONAL ships have been purchased by the Japanese government, for use as transports, in case of sudden need.—*Idem*.

A RIGID examination of the iron-clad *Azuma*, or *Stonewall*, at Yokoska, showed her to be in as sound condition as at the time of her arrival in Japan. The accidental injury at Nagasaki was trifling, and in all other respects she was found to require no repairs whatever.—*Idem*.

ON THE evening of the 28th of September, as an assistant of Messrs. J. Curnow & Co. was walking along Homura Road, he saw several bottles of sherry, which he suspected to be some specially imported by his employers, in a Japanese store. He entered the store, looked more closely at the bottles, and found that each cork bore the name of the firm to which he belonged. He bought the wine, and ordered it to be sent to No. 83 in the morning, when it would be paid for. This morning, as the individual did not make his appearance, the gentleman again went to the store, when he was told that the wine had been sold to another foreigner. The gentleman then laid a complaint at the Saibansho, but it is doubtful if he will ever get any redress. The wine is, in all probability, part of that stolen from Messrs. Curnow's premises when they were broken into some time ago. This is a good chance for some of these policemen who are going about in plain clothes; they will, perhaps, be able to obtain some clue to other burglaries if they find the wine or its whereabouts.—*Idem*.

IT APPEARS, from a native paper, that the market for silk-worm eggs is not very brisk, owing to the fact that a merchant from Shinano sold cartons at 65 *sen* each. The Italians now insist upon the sellers following his example, and keeping that price; but the Japanese will not accede to this, so that, between the two parties, there is not much business done.

Since writing the above, a number of cartons have been offered at a very considerable reduction from the above price, but we hear of no sales having taken place. The supply of cartons appears to be greatly in excess of the demand.—*Idem*.

DURING LAST NIGHT (Sept. 28th), the refreshment room adjoining the Circus was entered by thieves, who departed with the clock, and all the champagne in the place, without even waking Mr. Scott, who was sleeping in the booth, with a loaded revolver under his head.—*Idem*.

THE VERY latest despatches, received officially from the Japanese embassy in China, give no decisive information as to the result of the pending negotiations. Of course nothing is said, as has been frequently reported, of an intention to return to Japan at short notice.—J. G., Sept. 30.

THE following exciting story we extract from the *Hochi Shimbun*. We should not deem it worthy of insertion, but that it is no uncommon thing for Japanese to build such airy castles.

"One evening, after I had finished my dinner, I was washing the various utensils, (as my wife was attending to the baby, and I had no servant) when a particular friend of mine, with his black and bony face, his hollow eyes flashing fire, his body clothed in despicable rags, and feet wrapped in straw sandals, presented himself before me, and, in a language of supernatural eloquence, thus addressed me:

'If, when our army is sent against China, our Government will make me commander-in-chief of the forces, the shaven-headed rascals shall not have time to run away, with their shoes like horses' hoofs and swinging their pig-tails in the air, but shall be all slaughtered. I will then lead my army, without opposition, to the very gates of Peking, to which city will I lay siege.

Then the emperor of China, no longer able to resist my power, shall come out of the northern gate of his castle, bearing a coffin as a token of surrender, and kneel before my horse, until I tell him to rise; and all the princes and great men, taking off their hats and shoes, with their faces covered with mud, and prostrating themselves to the earth, shall offer unto me a document to certify that they unconditionally surrender. I will then take them as prisoners of war, and, in token thereof, will burn the coffin and correct the emperor for his injustice.

I will then enter the imperial palace, and, after collecting all the important writings and records, lock up all the treasures; after which I will send the emperor and all his officers of state to Tokei; and the whole of China shall be under the jurisdiction of Japan.

Upon the arrival of the prisoners at Tokei, Mikado shall convene an assembly of all his subjects, and, after rebuking the Emperor of China for his unjust behaviour, order all their bonds to be cut, and treat them with such kindness that they will be both ashamed and surprized. The emperor shall be made a Kazoku, and all the rest of the prisoners Shizoku; and they shall be supplied with splendid residences and pensions.

When the army returns from China, in gorgeous array, with banners streaming, and with trophies of war, the soldiers shall be rewarded for their bravery. The Mikado shall appoint a viceroy over China, who shall order all the Chinese to let their hair grow, and to change their clothes; and then the population of our empire, including that of the 400 provinces of China, will be 392,000,000.

We will then appoint three expeditions; the first of which shall march against and conquer the Russian Empire. The second shall subdue the whole of Europe; and, by the third expedition, the whole world shall be rendered provinces of Japan. After the earth is entirely subdued I will lead my army against the moon, stars, and planets; and mount to the sun itself, whence I will look, in all my glory, upon this pigmy world with contempt.

Without pausing, I will go one step further and contend with the Creator, whose unlimited power I will take and offer to my sovereign.

Then I shall think my work accomplished and retire to some quiet place, with all the stars and planets my friends, and end my happy existence in peace. Is not this a noble ambition?

Excited by this eloquent discourse, with my heart on fire, I replied:—'Very well! Lead and I will follow you and aid you in your glorious enterprise.'

However, I spoke rather too loud in my excitement, for I heard another voice, which I instantly recognised as my wife's, saying, 'You need not trouble yourself about exterior

affairs, but just mind your own business, and attend to the work in which you are engaged.' Somewhat abashed, I turned my face, and my airy castles fell to the earth with a mental crush, leaving a void, and my worthy friend departed with sorrow depicted upon his countenance."

This is rather a matter-of-fact termination to so romantic a story, but, as we are the chroniclers of reality, we must tell the truth. But for the unlucky interruption of *Okamasan* we might have seen Japan a second Rome, and the unknown hero a second Cæsar.—*Idem*.

A RECEPTION was held yesterday afternoon, at Enriokuan, by the Acting Minister of Education, in compliment to Prof. Davidson and his party, who arrived last week in Japan and are to proceed to-morrow to Nagasaki to select the position from which to observe the transit of Venus. The U. S. Minister and most of the American ladies and gentlemen residing in Yedo were present at the entertainment. Among the guests were also several Japanese ladies, the wives of distinguished officials.—*Idem*.

Tokio, 30th Sept., 1874.

No war between China and Japan. China pays indemnity. Troops to be withdrawn from Formosa. China guarantees good treatment to persons ship-wrecked on Formosa.

The Korean news is true. Corea desires peace with Japan, and promises to send to Japan the heads of those who insulted her, and who are already imprisoned.—*Idem*.

MESSRS. TAKAKI and Tomita, appointed consuls at San Francisco and New York, will start for their posts by the next American mail or by that following.—*Idem*.

There is startling news from Corea. A sudden move has been made against all the statesmen hostile to Japan, who have been seized and a strong desire has arisen, for the first time for many years, to cultivate friendly relations with the Japanese.

This extraordinary movement does not owe its origin to any force from within, but to the teaching of a Japanese, who has persuaded some of the most influential Coreans of the superiority of Western knowledge over that of the Chinese, and of the advantage which would accrue to them from the acquisition of it. We hope to be able to give fuller particulars of this revolution of sentiment and policy among the Coreans in our Weekly issue.—*J. M. Advertiser*.—*Idem*.

A MAN, who signs himself Noda Kojuro, writes to H.E. the Minister of Finance, through the medium of the *Nisshin Shinjishi*, and makes the following suggestions as to forming regulations for the silk worm egg trade:—That, as petty merchants coming to Yokohama are compelled, on account of their limited supply of money, and their long stop in Yokohama, to sell the cartons at extraordinarily low prices, the trade should be put entirely in the hands of rich men, who shall act as agents, and a proper price be fixed which they shall always pay to the petty merchants, half before the cartons are sold and half afterwards, making a slight deduction as interest for the agent. Thus one price may be preserved, and foreigners will not be able to compel the owners of the cartons to lower the price. The average number of cartons in the market for export is about 800,000 of the best quality, 1,200,000 of the second, and 800,000 of the third. Such a valuable produce ought to be protected by government.—*J. G.*, Oct. 1.

BETWEEN 8 and 9 o'clock this morning, thieves entered a back window of Dr. Dalliston's house, No. 85, Club St., and walked off, as was most natural, with all the doctor's boots, six or seven pairs.—*Idem*.

AMERICAN NEWSPAPERS contain the intelligence that the demand of the U. S. Government, presented through Minister Bingham, for the payment of the balance of the Simonski Indemnity has caused great surprise and dissatisfaction. We believe it is beyond question that Mr. Bingham was wholly opposed to the exaction of the final amount, he having been a member of the House of Representatives at the time of the passage of an act by the body relinquishing the claim for the outstanding indebtedness, and knowing that the public feeling was strongly against the receipt of any more money upon that account. It is generally understood that he avoided taking the successive installments that were ready for him at the time when the demands of the other three powers concerned were acceded to, in the belief that a bill would be passed by both branches of Congress cancelling the agreement. The bill was laid over, in the pressure of other business, and Mr. Fish at once sent instructions under which it became necessary for the U. S. Envoy to collect the whole sum. The following explanation and comments appear in the New York journals, which we quote to shew the feeling entertained in America, and not as representing any opinion of our own upon the merits of the general question:—

The grounds upon which the order from the State Department was based are not that the claim is just, or that the United States Government desires the money; but solely that, as the other Governments concerned have received their share, ours must also be paid, according to the bond. The Japanese are greatly chagrined, not wholly on account of the unlooked-for loss of money, but principally because they had been given to understand, for the last two years, that the balance of the payment would never be exacted. In this conviction they felt themselves in a better position to resist the aggressions of other nations. They now consider themselves free to believe that the assurances of forbearance and unwillingness to press an extortionate demand were nothing but empty declamation.—*Idem*.

A TELEGRAM from Washington to the newspapers announces that the State Department "has more detailed information relative to the Japanese expedition to Formosa than has yet been made public," and proceeds to give an outline of what that information is. Among other items, it is asserted that the Consular officer, (Gen. Le Gendre), is on leave of absence from his post. If this is a specimen of the detailed information, it is doubtful if any of it can be trusted. Gen. Le Gendre ceased to hold the office of Consul at Amoy before he came to Japan in 1872. The opinions of the State Department, as reported in the same despatch, may perhaps rest upon a surer basis. It is said that the claim of breach of neutrality by Lieut. Com. Cassel—and, as a matter of course, by General Le Gendre and Lieut. Wasson as well—is not recognized in Washington, and declares that "it is not considered by the U. S. Government, and has not been considered by other civilized nations, that the participation of citizens in the wars of other countries is a violation of international law." If this is published by authority, there will be a sudden end to all schemes of interference by U. S. authorities in Japan and China.—*Idem*.

THE STEAMSHIP *Mikado*, which is spoken of by San Francisco papers as having just arrived from Australia, is an old instance of a vessel named after the sovereign of a country at no port of which she has ever touched or is ever likely to be seen. She was built in Scotland with the view of being placed in the regular Pacific Mail line, and having been chartered by the company, was brought as far as Hongkong, in command of Captain Doane, formerly of the *America*. But here it was discovered that she could not be made available, under the U. S. laws, for carrying mails, and the contract between her owners and the P. M. Co. was annulled. She was then sent to Australia, on a venture, and was presently adopted into the line connecting that colony with California. She would have been, in all respects, unsuitable for the China and Japan service. As a passenger ship she was particularly worthless, and travellers accustomed to the advantages and conveniences of the Pacific route would not have tolerated her innumerable discomforts.—J. G., Oct. 3.

THE FOLLOWING is a translation of the notification made by government to the Chinese residents of Yokohama:—When the natives of Formosa murdered and plundered our people, we sent an army and punished them; but the Chinese government insisted that we were invading their territory. To settle the difficulty we have sent an embassy to China. Now, we hear that you, the Chinese stopping in Japan, are afraid that, if War is declared between the two countries, you will be imprisoned and your property taken away from you. But all this fear is caused by your overwrought fancy, for you, who are only peaceful inhabitants, shall not be disturbed. Though there may be War we will never arrest or plunder any one, except he be a spy, or concerned with his own government affairs. All you have to do is to obey our laws, and you may continue your several vocations, without fear of interruption.—*Idem*.

#### TO-DAY'S BURGLARIES.

LAST NIGHT, a gentleman living at No. 114, Creek, went to bed about 9 o'clock, and left everything, as he thought, entirely secure; but when he rose, at daylight this morning, he found the front door wide open, and, upon making an examination, was somewhat surprised to find that a suit of clothes and about \$200 were missing. Nothing as yet has been seen or heard of the stolen property.—J. G., Oct. 5th.

WE SHALL have to recall our encomiums upon the police department, for, if such as the following occurs very often, we must praise them as a very vigilant company. On the 2nd of August last, Mr. R. W. Thorp of 139 Bluff left home to pay a short visit to his wife, who was then residing temporarily at Yonoshima, and, upon returning the same night he found that his Japanese boy had decamped with a watch, chain, some trinkets about \$60 in cash, and a quantity of household stores. The following morning, information was given to the police; and, although Mr. Thorp was unable to give the number of the watch, that article with the chain and trinkets were recovered by the police and returned to the owner.—*Idem*.

JAPAN HAS indeed been an unfortunate country of late, especially during the last year. The rage of the elements has been directed against her, on several occasions, with unprecedented violence, as the frequent statistics we

have been constrained to publish will show. One Capital and over thirty ken have suffered, more or less, from the effects of flood and storm. By what are here called slight gales, trees have been up rooted, and vegetation destroyed; but, by the powerful and awful typhoon, houses and stores have been blown down, ships driven ashore, wrecked, and capsized, and human lives lost; besides the cattle innumerable which have perished, either by drowning or through buildings falling upon them. So much for natural calamities, which no man can avert; but there have been greater evils caused by human passions. In the early part of the year, an insurrection broke out at Saga; and the government had scarcely brought the rebels under subjection, when on account of some Japanese subjects having been murdered by the savages of Formosa, and an expedition was accordingly sent to that island to punish the aborigines. The government of China then chose to assert a claim to the whole of Formosa, although they had distinctly averred, upon the Japanese, before sending the expedition, claiming an indemnity, that that part of the island inhabited by the savages was not under their control. An embassy has been sent to China to settle the difficulty, if possible, but it is still a matter of doubt whether or not War can be averted. There have already been serious demands upon the public purse, and the national debt is already very heavy, and, if War should be declared, Japan will have a sore trial. Rice and other articles of native food have considerably risen in price, but the patriotism of the Japanese is proverbial, and they will suffer many privations for the sake of their country. It is sincerely to be hoped, for the general good, that War will be averted.—J. G., Oct. 6.

WE READ in the *Nisshin-Shinjishi* that at Tokei-Fu there is a large quantity of rice in the Government stores, which Okurasho has ordered to be ground; and all the strong men of the neighbourhood, including *jinrikisha* men, have been called upon to grind it. Popular rumour—if that may be believed—says that this rice, about one thousand *koku*, is for shipment to Formosa, in case peace is not firmly established.—*Idem*.

THE *barque Lizzie*, Capt. Graham, encountered a severe typhoon on her passage hence to Hakodadi. She lost both main and mizen masts, her deck timbers were started, and nothing but the extraordinary efforts of the Captain and crew enabled the ship to reach her port of destination. The schooners, *Hokaido* and *Snowdrop*, both built by Messrs. Thompson & Bewick, left Hakodadi, at 9.30 p.m., on Thursday, 24th ulto. The *Snowdrop* had a slight advantage in point of time. The *Hokaido*, under the skilful seamanship of Capt. Schell, after encountering a very severe passage, in which she proved herself an excellent seaboat, arrived in port on Sunday last; so that the *Snowdrop* may be hourly expected.—*Idem*.

WE HAVE heard tales of a female sailor and a female cabin boy, but the following story is more extraordinary than either:—A farmer named Kaminomura Kagawagori, of Higashi, Sanuki, had several sons, but they all died. At last another son was born, and, in order, according to his superstitious ideas, to avert from him the fate of his brothers, he called the child by the female name of Oto. As the boy grew he learned the various manners and occupations of woman, and passed as a girl. At the age of eighteen, he entered the service of a farmer Samurai, of

Takamatsu-han, as a maid. After staying there a short time a varnisher, living at Miki-gori, in the same province, took a fancy to this *soi disant* maid, and offered her marriage. Although he was told by the young man himself that he was not a female, he persisted in his proposals of marriage, and the ceremony was eventually gone through. They lived together as man and wife for three years, when, upon the census being taken, it was found that the wife had been registered as a male child, and an officer was sent to enquire into the matter. Upon the discovery of his sex, his hair was cut short, and, for the first time in his life, he had to wear the clothes of a man. He is now earning a living as a dress-maker, and keeps a handkerchief wrapped about his head.—*Idem*.

THE CASE of Otomo Sadajiro vs. W. H. Doyle, which was postponed from the 28th ulto., was, this morning, settled out of Court.—*Idem*.

THE drunken insolence of Japanese soldiers at Yedo is again attracting attention. Not long ago a lady, the wife of one of the foreign employes of the Government, was insulted, and a formal complaint was made through the British Minister. Yesterday, Mr. de Bavier, Consul-General for Denmark, whilst returning from a walk to Meguro, was stopped on the road by a couple of drunken soldiers, one of whom took off his hat and insisted on Mr. de Bavier saluting him, which, as a matter of course, was refused. The soldier used insulting language, and, laying hands on Mr. de Bavier, prevented his passing on. Having at length extricated himself, Mr. de Bavier went to an adjacent police station, and gave the two men into custody. The men were armed with side arms, and it was fortunate that the party assailed so far contented himself as to take the course he did, for had he struck his assailants, very unpleasant consequences might have ensued.—*Herald*.—*Idem*.

THE AMUSING pretence of correspondence from Japan and Formosa, in the *New York World*, to which we have before alluded, is regularly continued. But an imposture of this kind must necessarily be detected by little slips like that which we find in a letter dated July 1st, in which it is stated that M. Giquel and a high Chinese official were then in Liangkiao, and that they refused to say anything of the purpose of their mission until after the arrival of a certain Japanese official to treat with them;—the facts being that M. Giquel and his companions left that place on the 26th of June, that their mission was fully disclosed before that date, and that no special messenger was ever sent, or expected, to treat with them. Almost every detail of this imaginary correspondence is a pure invention. The trifling balance is made up from genuine letters previously published in other journals. It will be interesting to see the result of the exposure, when it comes.—J. G., Oct. 7.

ABOUT a fortnight ago, under the heading of "To-day's Burglaries," we gave an account of a robbery at No. 136, when Madame Labie lost a gold watch and chain, valued at \$200. Yesterday a Japanese woman, who, at the time of the robbery, was a servant at No. 136, was taken into custody upon another charge, and, when she was searched at the police station, Madame Labie's watch and chain were found in her *kimono*. There is no doubt that in many other cases of robbery which have happened of late the servants are the thieves, either directly or indirectly.—*Idem*.

THIS MORNING, about 20 minutes past five, smart shock of earthquake was felt throughout Yokohama.—*Idem.*

WE EXTRACT the following items from the *Mainichi-Shimbun* and *Hochi-Shimbun* :—

The number of cartons brought to the Yokohama market, during last month, was estimated at 1,395,696.—*Idem.*

ABOUT 2 o'clock in the morning of the 2nd instant, a tradesman, named Watanabe Han-uro, who lives at Miharagori in the province of Awa, attempted to commit suicide by hanging himself. It appears that he owed a large sum of money to a man named Hashimoto Benzo, who lives at Benten-dori, Nichome, Yokohama, and, not being able to pay the debt, he went, upon the morning in question, to his creditor's house, and deliberately hung himself by his *obi*, which he had fastened to the roof. Luckily he was discovered and cut down, when he said that, as he could not pay his debt he was determined to hang himself under Benzo's roof, so that when his creditor saw him he would pity and forgive him. He was taken to the police station and searched, when two letters, telling the reason he attempted suicide, and a photograph of himself were found upon him. He was given up to Maruya Kajiro, at whose house he was residing.—*Idem.*

ON THE 2nd instant, during a fire at Gabenbo, Azabu, Tokio, two officials were driving past in a carriage, when the horse shied and upset the vehicle, throwing one of the officials violently to the ground, and causing him to strike his head against the pavement. He was very severely hurt, but is recovering. He is under the care of a European surgeon.—*Idem.*

THE SHIZOKU of Kumagaya-ken have proposed the following:—We the Shizoku of Kawagoi-machi, Musashi, in the jurisdiction of Kumagaya-ken, beg respectively to propose, that :—

As our expedition has landed in Formosa, and subdued the savages, the Chinese Government is making preparations to drive our soldiers out of the island by force of arms. If war breaks out between the two countries, the people should do their utmost to help their own country, so we, who retain the name of Shizoku, are ready to shed our blood for ours. Therefore, though we do not know what may be the plans of Government, we beg to be placed either in the army or navy, so that we may give our strength to the battle. This is our earnest desire.—*Idem.*

A PRIVATE letter from Venice, dated 24th July, states :—H. E. the Minister Plenipotentiary for Japan left to-day, *via* America. Before his departure, he visited the School for the Japanese language, at the High School of Commerce, in Venice. His Excellency was much pleased, and expressed his satisfaction to the Professor, Mr. Yoshida, and also to the pupils, who attend in great numbers. It is the school of Oriental languages, and has the greatest number of pupils of any in Europe.—*G. G.*, Oct. 8

THE French steamer *Charles Albert* was sold to the Japanese Government on Saturday, the 3rd inst., and upon the completion of the transfer, which, it is expected, will be tomorrow, she will proceed, under the Japanese flag, to Hiogo, to deliver the balance of her original cargo for that port. We are given to understand that our contemporaries are greatly in error as to the price paid. The correct sum is not at liberty, however, to divulge at present.—*Idem.*

Messrs. North, Thompson & Co., were again visited by the burglars last night, but not at their store. It was the godown, No. 61, which, for the fourth time, was entered. Various chemicals were scattered in all directions, but it is almost impossible to say how much they have carried off. Entrance was effected by removing a Chubb's lock of the largest size, which the burglars had the good sense to carry away with them. Immediately opposite the door of the godown, there is a very good gas lamp, belonging to the Hongkong and Shanghai Bank, but the only good that seems to have accrued from that was to the burglars, who could see what they were about. No policeman was at hand, as usual, and Mr. North was called at an early hour this morning by a man, who gave him the unpleasant information that the door of his godown was open.

THE *Mainichi-Shimbun* gives an account of a large serpent which is now being exhibited at Tokei, and which, it is said, was caught in a Swamp at Canton, China. It is over 15 feet long, and its back is covered with bright scales, of hexagonal shapes, somewhat resembling tortoise shell.

THE FOLLOWING are extracts from other native papers :

On the 5th instant, Messrs. Oyeno, Yoshida, and Awoki, who have been appointed Japanese Ministers for England, United States of America, and Germany respectively, and who will shortly leave for their several posts, were entertained, at a well-known restaurant at Riogoku, Tokei, by about 20 officers of the Foreign Affairs Department. Thirty singing girls and a number of jesters were introduced, and a very merry evening seems to have been spent, for, the following night, the three Ministers returned the compliment, and gave even a grander feast to the officers, at the same house.—*Idem.*

THE CONDITION of Formosa seems to be quite peaceful. The Chinese settlers and the natives trade together quietly, and the savages even enter the Japanese camp to make exchanges, and seem to be perfectly peaceable. The army is lying in idleness and has nothing to do ; the officers take walks about the country to while away the time. They never get any news from China, but occasionally a ship arrives from Japan with news ; they have as yet heard nothing about Mr. Okubo's mission. Two large buildings have been erected as headquarters for the troops, and a stockade has been formed around them. Strict watch is kept, night and day. As the weather becomes cooler sick men recover rapidly. Still, a great number of *samurai* have died from sickness, who would have much preferred to have fallen amongst shots and arrows. The news that workmen and coolies were to be sent out to them from Tokio, was received with joy.—*Idem.*

WE READ in the "Gazette of Venice" for the 22nd of August :—

The Japanese government, according to the letter of the our Correspondent published yesterday, has recalled Nakayama, the Consul General, to raise him to high honours in his own country thus leaving the Consulate of Milan vacant for a short time.

Nakayama paid a farewell visit to the Minister of Foreign Affairs, a few days since ; he is now on the point of departure, and greatly regrets leaving Italy, where he has made important studies, so as to be able to develop as much as possible her commerce with Japan.

Mr. Nakayama has for a year occupied the post of Consul General at Venice, and it is with great regret we see the departure of such an intelligent and distinguished man, for we have been witnesses of his efforts in favour of the commerce and interests of our town.

Let us hope that, being called to the Counsels of the Mikado, Nakayama will carry thither his sympathies for Italy ; particularly for the port of Venice, which is the principal and most direct one for Italian Japanese commerce.—*L'Echo du Japon.*—*Idem.*

### HEIGHT OF FUJI YAMA.

Imperial College of Engineering, }  
Tokio, October.

To the Editor of the *Japan Gazette*.

DEAR SIR,

It may seem almost superfluous, after the direct—and doubtless exact—measurements taken, lately, by Mr. Stewart, of the Survey Department, of the altitude of Fuji Yama, to trouble your readers further with any results—which, at the best, can only be approximate, when compared with the results obtained from the instrument used by Mr. Stewart—based upon barometrical observations. But, as I have taken note of observations, in a journey to this, at least, Japan-famed mountain, which I did not notice in the above-named gentleman's report, I venture to make them public, with the desire that they may prove of interest to your readers.

With this preliminary, I may say that I left Yedo, *en route* for Fuji Yama, on 17th August, and having proceeded to Yokohama by train, I arrived at Fujisawa the same evening, where, while the time away before going to bed, and with a view from a second-floor window of a tea-house, I beheld some edifying scenes. For at frequent intervals, batches of foreign gentlemen arrived, either in *bashas* or *jinrikishas*, at the door over which I was perched, and all seemed to delight in having his own war, either with a *jinrikisha* coolie or *betto*, in which altercations some of them caused their features to make such horrible grimaces and indescribable contortions, indicative of anger, I have large enough mind to suppose—that any caricaturist would have given his boots for a minute's view of them. Blended with this, they would walk up and down and around the street for short distances, while their arms and hands—the latter generally grasping a large stick—went through grotesque evolutions as if wreaking vengeance on some visionary foe—but which would appear "in the flesh" if a poor unlucky coolie came within fencing distance. During this, and to heighten its effect, a few words learned from the slang-Japanese vocabulary would be uttered with great force, but which being exhausted, round Anglo-Saxon was given with an unlimited supply, and in expressions that if spoken by a London costermonger, would cause him to blush, were he once to consider his good-breeding.

It is a pity these gentlemen do not turn their histrionic talent to advantage, for either as actors of high-class tragedy or delineators of low-comedy, they would assuredly "bring down the house" before any audience susceptible of being satisfied.

Leaving here early on the 18th, we passed—for I had a Japanese companion, and my servant—through Oiso, Mimezawa, and arrived at the Sakano-gawa. We crossed this river in a boat, while the stream was running about six miles an hour. At a short distance from here, and at the sea level, I tested the boiling

point of my thermometer with an aneroid barometer I had with me. Having done this we proceeded to Sekimoto, via Odawara, where we arrived at 5 p.m.

We left Sekimoto the next morning in kagos, with one pack-horse to carry our luggage, to cross the Ashigara mountains. The top of the pass of which, I found to be 2,037 feet above the level of the sea. We arrived, at Takenoshita in time for tiffin, and while having it my presence (or rather my passport) was kindly enquired after by a Japanese official. He being satisfied, we were allowed to depart for Subashira, the road to which lies in the almost sterile valley between the Ashigara mountains and Fuji Yama. Here the Fuji "pilgrim" can form some conception of the difficult height that he has to climb, for the dimensions of this fine volcanic cone can be viewed here unobstructedly on a fine day in all the majesty of its fame. The surface of this valley is covered with the dust and ashes that have been evolved from the crater at some eventful period. We arrived at Subashira at 6 p.m., where we were met at the gates of the village by a young Buddhist priest who had been informed—by what means I don't know—that we were en route thither, and by him we were conducted to a building which, I believe, was originally constructed for a Buddhist temple, but which is now, at once a temple, a police office, and a harbour of rest for foreigners in that locality. I had scarcely entered when two policemen, who had been kept in readiness for this purpose, made their appearance before us, and demanded to see my passport. I readily complied with their request, and after writing my name and address for them several times, and answering divers questions, which they put to me with a freezing point kind of civility, they considered that they had no legal right to prevent us ascending the mountain. Being desirous of ascending and descending in one day, I was advised by the host to ascend early in the morning. Accordingly I ordered horses for 12.30 a.m. which being there at the appointed time, we started by torchlight for Uma Gois (Horse return) where we arrived at 3 a.m. Leaving the horses behind us there, we began to ascend the mountain on foot, being provided with torch lights by which we were able to discern our way along the narrow pass with the help of two guides. We got to Chiugikiba at 4.30 a.m. and partook of some breakfast; after which we continued our upward journey and reached Tarobo at break of day, at which place we purchased three sticks (kongotszye) some four or five feet long to expedite our ascending. When at Ni-go-me my barometer declined to indicate any further—its range not being suited for great altitudes—having fallen to 21.49 inches; but this misfortune was more than recompensed by the view afforded by the rising sun, which, at this time, gradually emerged from behind the horizon in its garb of ruby red; and reflected its rays on the region of grey clouds which lay beneath us, forming, from our point of view, a sight at once grandly and resplendently beautiful. After passing the other various stations, which afford you rest, we reached the summit at 10 a.m., and obtained a fine view of the crater, not a cloud hovered about the top while I stayed there. There was snow on the western side of it, and the bottom appears to consist of sand. The top of the crater is irregular in form, rising into three mounds on the west, north-east, and south-east sides consisting of scoriae and lava. From the north-east corner, which I thought the highest, I made observations with a view of ascertaining its height and the diameter of the crater from a north to south direction.

From this, I make the height 12,531 feet above the level of the sea; the diameter of the crater, north and south, 4,950 feet; from east to west, 4,500 feet; and its depth, 2,500 feet. The temperature at noon was 100° Fah. in the sun, and 64° Fah. in the shade. On the south edge of the crater are two wells giving out "gold and silver water" which if springs, (as the Japanese declare they are) and not reservoirs of melted snow, are not a little curious in their elevated position. Perhaps, some *savant* would enlighten us how, and whence, they receive their supply. Can it be that it is raised by volcanic action, or does its source underlie some impermeable strata which stretches to some more elevated position, like the Himalayas of India?

I began to descend, by a different route from that by which I ascended, at 12.45 p.m.; and reached Uma Gois at 3.30, where mounted a pack-horse and was shortly afterwards landed at Subashira, as capable of appreciating rest as any person need to be. Here I may remark that Subashira and the highest part of the pass across the Ashigara mountains stand about equal heights above the sea—viz: a little exceeding 2,000 feet. Also, I may say that the host of the Buddhist temple in that place (bless his religious avocation!) led me to believe from experience, that speculation is one of his favourite religious tenets, and while foreigners are his guests, one of his daily devotional exercises. I bear this testimony to his character for the benefit of those who may visit there hereafter.

We left Subashira the next morning (the 21st) desirous of getting to Miyanoshta the same day, but a heavy storm of wind and rain compelled us to seek shelter at Go-tembi for the night. We started thence the next morning, crossing the mountain pass known as Otome-toga, from which a good view of Hakone lake is obtainable. The summit of this pass is 3681 feet above sea level. Having descended this pass, which is very steep and difficult to travel on the Sengoku side of the mountain, we shortly afterwards reached Miyanoshta, which I find to be situated 1325 feet above sea level. After staying there several days, I visited Ashinoyu, Hakone, Obango, and Kiga their several heights above sea level I find to be, as follows:

Ashinoyu .. .. .	2,930 feet
Hakone Lake .. .. .	2,440 "
Obango.. .. .	3,238 "

These numbers must be taken only as approximate to correct results, being liable to the error likely to occur with a single observer, namely, the variation of the atmospheric pressure in the period of time between the observations.

Yours very truly,

GEORGE CAWLEY.

UPON the application of Mr. Dickins, Mr. A. Gibson, son of the Rev. H. Gibson of Fyfield, Essex, England, has been admitted to practice in these Courts. We are given to understand that Mr. Gibson took high honours at his examination.—J. G., Oct. 9.

THE members of the French commission for the observation of the transit of Venus are to receive the same attentions as those recently shown to the American visitors, at Hamagoten.—*Idem*.

WE are authorized to say that the reports of excessive mortality among the Japanese soldiers in Formosa are incorrect. Naval officers who have just returned from that island state that, although there has been much sickness, the deaths have been very few.—*Idem*.

WE are informed that a match is about to take place between the Rifle Associations of Yokohama and Hongkong. There have already been two, each association carrying off a prize, so that this will be the deciding match. We trust the members will exert themselves, and endeavour to maintain the honour of the local club. They have every chance, as, we are authorized to state, that the targets are ready every Saturday afternoon, at 2 p.m., and other times, when opportunity offers for practice.—*Idem*.

It is almost useless to say anything about the performance at the Circus last night, for we believe that nearly all the European residents of Yokohama were present. It was literally a crowded house. In the first and second class compartments members were obliged to stand, still people continue to apply for tickets, until, at last, the issue of them was stopped. All the boxes, and there were three times the usual number, were occupied, and some had to be supplied with extra chairs. At the entrance to the reserved seats were displayed several medals, which, at various times, have been presented to Signor Chiarini. Of the performance it is only necessary to say that all the artistes appeared in their best feats, and went through them with their usual precision. We may add that the two youthful artistes Tommy Leon and José Chiarini not only received more than their usual tribute of sweetmeats, but obtained a more substantial offering in the form of several pieces of silver, which were thrown into the ring by admiring ladies or gentlemen; in fact, all the performers were received in a manner which is only seen when a good troupe act before a good house. There was only one drawback to the entertainment. A man who had the appearance of a sailor, and who could not get a seat in the first class compartment, thought that he had paid for one, and would have one, even though it were in an occupied box. Doubtless with this idea, he coolly came to anchor in the Governor's box, and would not leave, although he was several times requested so to do. Great praise is due to Signor Chiarini, for, although, he has himself been disappointed every night this week, on account of the rainy weather, he exerted himself to the utmost to procure a good entertainment for the benefit of the General Hospital, the supporters of which will never forget the Signor's advent to Yokohama. The residents will, we are sure, patronise him, for the rest of his sojourn, to such an extent that he will be able to make up for the numerous disappointments he has had.—*Idem*.

THIS MORNING, a Japanese, tightly bound with his hands behind his back, was taken to the police-station in the custody of several native policemen. Upon making enquiries we were told that he was one of the desperate gang of burglars who have been keeping the blood of the settlements of Yokohama from stagnating, for some time past. The authorities are determined that this man, at all events shall not cheat the headsman; for, before putting him into a cell, they cast off his bonds and rebound him so securely that there is no fear that he will hang himself. This ferocious desperado did not look very savage, but rather the opposite, and it was ridiculous to see several men guarding a meek-looking creature as if he were some wild beast; but we are told not to judge by appearances, and, beneath that calm and docile exterior, might be concealed an indescribable ferocity.

## TERRIFIC TYPHOON IN HONGKONG.

## Immense loss of Life and Property.

It is our painful duty to record, by the present mail, one of the most appalling disasters that has ever happened in this Colony. A typhoon of unprecedented violence raged in this neighbourhood on Tuesday night and Wednesday morning last. The weather during the day had been threatening, the barometer having fallen very considerably during the forenoon, and still remaining low in the evening. About six o'clock the wind began to rise, and shortly after 8 o'clock it was blowing a strong gale. This increased rapidly and in the course of an hour it was evident that a typhoon of a severe character was to be apprehended, and this proved too soon to be the case. The Barometer kept rapidly falling, and the wind increased frightfully in violence, raging and howling at first, and after a time sounding like one continued peal of musketry, broken at intervals by artillery, as sudden and more violent gusts swept through the harbour and over the land. At times even above the fierce howling of the wind could be heard the pitiful cries of thousands vainly battling with the storm. Not a single ship in port escaped undamaged, and the casualties and loss of life—the latter estimated at over 2,000 souls—have exceeded anything which has ever before been upon record. The city, after the occurrence, presented the appearance of a town which had been besieged. In all directions were roofless and shattered houses, crumbling walls, naked poles and rafters standing out gloomily against the leaden sky. The roads were strewn right and left with debris, wrecks of boats, and trees—some of gigantic size—torn up by the roots. The telegraph on the Island and the Marine telegraph between Hongkong and Saigon was interrupted; the gas-pipes were torn up; dead bodies in all directions washed ashore; the flag staff at the Peak was seen leaning at an angle, a sad signal to ships miles away of the ravages to which the Colony has been subjected. The tide was exceptionally high, which materially increased the amount of the damage inflicted, and to the Eastward a great deal of injury both to life and property was caused by the height of the water, which on the plane at East Point was on an average about four feet high. To add to the disasters, a fire occurred in a house on the Praya near the Canton wharf, but fortunately was soon got under, but is a noticeable and somewhat ominous incident, in connection with the news as to incendiaries from Macao, as it is to be feared that there are desperate characters here ready to avail themselves of any such disaster as a typhoon for the purpose of plunder. So strong was the wind that the flames of the fire were blown out in some instances like the light of a candle. A very curious circumstance is mentioned on good authority, namely, that a large number of clocks in the Colony stopped at the same hour. Our informant has heard of five, and suggests the hypothesis of a slight shock of an earthquake having occurred while the typhoon was raging. Certainly the oscillation in many of the houses would favour such a supposition.

To convey an adequate idea in general words of the awful effects which this unprecedented gale has produced is impossible. At the present moment all business is suspended and an oppressive silence reigns over the Colony, broken only by the clanking of the hammers of those repairing the houses

and other ruins; at Aberdeen, near the Docks, lies, high and dry on the land, the magnificent steamer *Alaska* belonging to the Pacific Mail Company, and the dead bodies of the victims are being drifted ashore in all directions.

## THE BAROMETER.

The readings of the barometer were as follows:—

## AT THE HARBOUR MASTER'S OFFICE.

## Readings of Barometer reduced to sea level.

22nd.—7.45 P.M. 29.63	23rd.—2.00 A.M. 28.88

3.00 „ 29.235	.....
3.30 „ 29.286	.....
4.00 „ 29.315	.....

As may be judged from the above readings, the storm steadily increased up to 2.15 a.m. when the barometer was at the lowest, but it raged with great severity till fully half-past three o'clock, when it began perceptibly to abate, and subsided between 5 and 6 a.m.

The Chinese had, as usual, during the Tuesday, anticipated the danger, and the sampans and junks cleared out in large numbers to seek shelter. Some doubts were however felt among foreigners as to whether there would be more than a gale, though the preponderating opinion on Tuesday evening was that a typhoon was to be anticipated. In fact the indications were strongly in that direction, and the doubts probably only arose in consequence of there having already been several false warnings of typhoons this year.

## THE PRAYA AND SHIPPING.

An eye witness of the terrible occurrence sends us the following description of the scene on the Praya:—

“I had been out dining with a friend and started to return home at a little after eleven. It was then blowing very hard, but neither I nor any of my companions had an idea of the severity to which the gale was destined to reach. I accordingly went with a companion to the Praya to see the sight, and certainly never witnessed anything so striking in my life. Although I have seen many typhoons during a stay of over fourteen years in Hongkong, I do not know of any which has caused so much injury to the Colony, and so much loss of life. By the time we had arrived at the Praya the wind had freshened rapidly, and the typhoon was raging with full vigour. The sea was breaking over the Praya with terrific force, while the roar of the wind was deafening. The waves broke bright with phosphorescent light and presented a striking and awful sight. The lights on shore flickered through the darkness, and seemed only to render it the more intense. Gradually the swell increased and the waves

rushed first half cross the Praya, and afterwards quite across it, and before I had reached Pustau's wharf, towards which I was going westwards, they were more than across the Praya, and I had to push my way knee deep in water. Clinging to such projections from the houses as were within my reach I endeavoured to continue on my course, but soon found that it was too dangerous to persevere as the waves were coming in with such force that there was every chance of being washed away, while tiles and bricks were falling in all directions from the shaken houses. It was about 1 o'clock when I was thus forced to beat a retreat, and I may mention that up to that time none of the sad casualties which have been recorded had occurred; and as the gale began to moderate by 3 o'clock, it is evident that the havoc must have been the work of little more than two hours.”

The scene presented on the Praya from west to east on Wednesday morning, was melancholy in the extreme. Coming on to the Praya at Peddar's wharf, or what was Peddar's wharf, for it is now almost a wreck, and proceeding westward to Douglas wharf, of which only a few piles remain, we first came across the wreck of two vessels, one the Spanish steamer *Albay*, which arrived only on Tuesday from Manila, with a number of passengers on board, and the other the Spanish steamer *Leonor*, which was to sail on Tuesday, and had also a large number of passengers on board. At high tide only the masts of the unfortunate vessels could be seen, but later in the day their decks were above water and presented a melancholy spectacle, as attempts were made to get at the unlucky inmates and at the papers, baggage, &c. It was stated that in the *Albay* some 90 passengers were lost, but this, it is hoped, is more than the actual number, but the fact cannot be ascertained, as she had not as yet handed in her papers. Out of 47 who were on board the *Leonor*, 36 were saved by Mr. Tauffer, of the Engine House. It appears that this gentleman most gallantly went off at the risk of his life in a small boat, and brought back small batches of passengers each journey to land. A number of the crew, we are glad to say, saved themselves by swimming ashore. It appears that the immediate cause of the disaster to these two vessels was their having drifted ashore and collided when close upon the Praya. This took place between one and two o'clock. A little to the east of these two vessels was the ship *Lizzie H.*, which was more fortunate than the steamers. She had drifted exactly on the wharf, against which she lay. She did not sustain much damage beyond losing her masts and making some water. From the Bank wharf up to the Oriental Bank there was a vast amount of timber which had been washed up by the sea, and all along the Praya were huge blocks of debris, the massiveness of which testified to the violence of the gale. Close to Bank wharf lay a mass consisting of five of the ponderous granite blocks of which the Praya is composed, linked together by iron couplings, which had been thrown, bodily, considerably more than half way across the road. Farther on was a large mass of piles which had formed part of one of the wharves, and which was also thrown more than half way across the Praya. All the shops and stores, not only along the Praya, but a long way up the abutting streets, were flooded to the depth of several feet—the water being actually three feet high in Messrs. Frickel & Co's. store. From these some idea may be formed of the

loss of property which has been sustained. The office of the M. M. Company was still flooded on Wednesday morning. A few piles only remain to show where the Canton wharf stood. The British barque *Mindano* was driven up against it with terrific force and went right through. She then struck the Pacific Mail wharf and sank. It is not known how many were on board of her when she went down. Between the Canton wharf and the Harbour Master's office four houses have been completely blown down. The P. & O. Office was not very heavily damaged, but the iron railings in front of it were bent and displaced in several directions. The godowns of the Pacific Mail Company have sustained considerable damage. The front of them was entirely blown in and the cargo lay exposed to view. Large parts of the Pacific wharf were carried away and washed ashore three hundred yards distant. From the Pacific wharf to the Borneo Company's premises, some ten houses were knocked down. The ship *Lizzie & Rosa* lies off the Pig Lan well filled with water, having struck, and injured her bottom. Outside of her, and bottom upwards, lay the Borneo Company's barque *Courier*. In front of the same company's office also lies their vessel the *Imogen*, a total wreck, but we hear that the crew were saved. Farther on lay the *Morning Light*, a complete wreck, with all her masts gone, and beyond her were several other vessels dismantled and otherwise injured. In addition, we hear that the *Maury* and the *Aldebaran* were either badly damaged or had been wrecked. The steamer *Amoy* also got badly ashore; and a Siamese barque, name not known, sank. The M.M. steamer *Ava* has ridden the storm out admirably. Early on Wednesday morning she was observed steaming to her ordinary anchorage having apparently, during the height of the gale, been forced to the Westward. We hear the little tug *Early Bird*, belonging to Messrs. Hook & Co., is missing; and among the minor casualties we may mention one of the ferry boats; two Government steam launches sunk; the old Hospital ship ashore near the Naval Yard, and all the launches and boats belonging to that institution either ashore or broken up. At the extreme West Point were several junks ashore, laden with merchandize, and the morning after the storm Chinese were busily engaged diving for cargo. A large number of bodies were washed up during the day, and some heartrending scenes occurred where women and others recognised their friends and relations. The Praya wall from the Bath House to the extreme West is almost completely washed away, and presented a most desolate appearance. The body of the captain of the *Leonor* was unexpectedly discovered, some time after the foundering of that vessel, actually half way up the Alley between Messrs. Turner & Co.'s and Messrs. Carlowitz, and nearer to the Queen's Road than to the Praya.

The following is a list of vessels known as having been wrecked or injured, and of vessels seen, but whose names are not known:—

*Sea Bird*, British schooner, on the Commisariat wharf, but can be got off.

*Flamer*, H. M. G. B., on the Government Pier, since sold.

*Alaska*, P. M. S. S., on shore at Aberdeen.

*Lizzie H.*, American bark, went on Messrs. D. Lapraik & Co.'s wharf, but already afloat.

*Leonor*, Spanish steamer, at Messrs. D. Lapraik & Co.'s wharf, sunk.

*Albay*, Spanish steamer, at Messrs. D. Lapraik & Co.'s wharf, sunk.

*Mindanao*, British bark, at the P. M. S. S. Co.'s wharf, sunk.

*Courier*, British bark, at West Point, capsized and sunk.

*Imogen*, British bark, at West Point, sunk.

*Malvern*, British bark, off Possession Point, sunk.

*Macao*, Peruvian ship, sunk and since broke up.

*Teresa*, Spanish bark, sunk.

*Seaforth*, Siamese bark, sunk.

Vessels unknown:—One off Cheung Yue Point, seen to go down at 1 p.m., sunk; one near North-east Point, off Lantau, water-logged; one, in Sulphur Channel, with two masts gone; one, at South Point, off Chung Hue.

*Low Toa*, Siamese schooner, missing.

*Dudu*, Siamese bark, missing.

*Amoy*, Siamese brig, missing.

*Early Bird*, Steam tug, missing.

*Aldebaran*, German bark, missing.

*Lizzie and Rosa*, British bark, high and dry, at West Point.

*Blue Bell*, British tug-steamer, at Belcher's Bay, high and dry.

A bark not known, on Green Island, has been got off since.

A bark, not known, off N.E. Point, Lantau, at anchor.

*Theresa*, American bark, off N. E. Point, at anchor.

*Morning Light*, British ship, cut away masts.

*Panturet*, American steamer, dismantled.

*Ardent*, British bark, dismantled and stem knocked in.

*Charlotte Andrews*, British bark, dismantled and stem knocked in.

*Courier*, British bark, dismantled and stem knocked in.

*Belle Sauvage*, German ship, drifted down to Green Island from Kowloon.

The German barque *A. E. Vidal* is lying in the Capsingmoon Pass, with the masts cut away, but ship all right, and all hands well.

The German barque *Everhard* is lying high and dry on Lantau, all hands well.

The steamer *Powan*, the night boat of the Hongkong, Canton and Macao Company, arrived on Wednesday at about 4 p.m. She started from Canton at the usual hour with 1,400 passengers on board and at the time felt no indications of bad weather; but met the storm when near Lin Tin. Here she anchored to wait out the brunt of it, when a high wave smashed in about fifty feet of the hull. Captain Benning sent about 700 of the passengers below and took precautions for the safety of the others, which were fortunately successful. The *Hung Yang*, which left about the same time, arrived at half-past five o'clock.

#### EASTWARD.

Immense damage, both in the harbour and ashore, was done Eastwards. As usual a number of native craft sought shelter in the creek where in an ordinary way they are safe, but so violent was the wind that many of them over here were severely damaged or broken up. One junk, we hear, was cast ashore as far as 150 yards inland. The *Wan Loong* stranded and sank in this neighbourhood. In Jardine's Bazaar, facing Causeway Bay, all the houses have been blown down. The Hongkong Ice Company's chimney fell, as also that of the Sugar Company. We learn also that the latter sustained great loss in consequence of the water rushing in some three feet deep and injuring 2,000 piculs of refined sugar. Considerable injury was also done by water to one of Jardine, Matheson & Co.'s Godowns. Captain

Glover's house was greatly damaged. One of Messrs. Jardine's residences, occupied by Mr. Magniac, was completely unroofed. At the East Point Foundry, the roof of the boiler shed was completely taken off, and the other parts of the premises sustained considerable damage. We also hear that they have lost two of their steam launches. Returning westward, the houses at Wanchi present almost as desolate an appearance as those in the western part of the town. Numbers of them are unroofed and others have sustained damage more or less serious. Near the Eastern Market about fifteen houses have been blown clean down, but we learn that the majority of the inmates escaped. The pier belonging to the Pier and Godown Company has met the expectations of the builders by weathering a typhoon of greater magnitude than could even have been anticipated. The galvanized shed and other structures upon it have, it is needless to say, been completely blown away. The bath house was bound to go, and has gone completely—all that remains being one-half of the pier. A great deal of the wall at the cricket ground has been washed away.

#### PUBLIC AND PRIVATE BUILDINGS, ETC.

The loss in the Centre of the town has of course not been so great as at the Praya, but the injury is nevertheless of a heavy character. The Queen's Road has escaped pretty fairly, the worst injury being to some of the shops in the Queen's Road West. In Wellington Street, Messrs. Schellhass & Co.'s house, abutting on Graham Street, was unroofed, and several of the partition walls blown away and much injury done inside. In Hollywood Road, the top stories of several of the smaller houses are completely blown down, while some of the verandahs of the larger were swept away. Trees strewn the road in all directions. In Aberdeen-street, the London Mission House received the full force of the gale and has sustained very serious damage in many directions, several windows have been blown right out, and partition walls, &c., shattered. The house at the corner of Staunton and Aberdeen Streets has been almost completely stripped of its verandahs; and a number of Chinese houses in the same locality were unroofed, while others sustained damage of a less serious nature. In Bridges Street about a dozen houses, occupied by Portuguese, fell down, but fortunately not more than one person was injured. He was a Manilaman, who was unfortunately sick and could not be got off his bed in time to prevent his being buried under the ruins of the falling house, though his wife made every effort in her power to get him taken away. In Rozario street the whole of the verandahs went, but the houses escaped. Here a very peculiar incident occurred. A daring band of robbers went round and knocked at the doors of the various houses demanding admission, which was of course not accorded. On coming to Mr. Pereira's house they threatened to burst open the door, and to prevent their doing so, he fired at them, after giving them warning, but did not hit any of them. Notwithstanding this, however, they continued in the yard till about half past four o'clock. This daring act was probably prompted by the fact that the street is most defectively lighted. Along the Causeway Road the damage was not so great as might have been expected from the exposed position of many of the houses. On the lower side of the road the injury was most apparent. Mr. Belilios' house "Kings-clear" had the verandahs and railings damaged; a part of

the roof of Sir John Smale's house was laid bare, and considerable damage was done to Forest Lodge, the residence of Dr. Adams. Baxter House was completely blown away at one end, and the Berlin Foundling House also sustained much injury. Seen from this locality, China town presented a most desolate appearance. Tier after tier of houses were seen roofless and with their rafters and supports standing bare. Mr. Ede's house at the end of the residences on the Pokfulum road had a portion of the roof carried away. Returning to the Eastward, the first house to notice as much damaged was that occupied by Mr. Lowcock, which had a hole blown through the roof. The East part of the Hermitage was riddled, and the inmates had to take refuge in the other portion for the night. The damage done at Government House is very slight indeed, and does not extend beyond injury to a few venetians. A large number of the trees and shrubs in the compound were however destroyed, and great injury was done to the Public Gardens. As showing the force of the gale it may be interesting to note that the smallest twigs were broken off almost as sharply as if it cut by a knife. The new Catholic Church at the Nullah is the saddest loss in the way of property which has to be recorded. It is simply a ruin—with the exception of the Chancel, where the altar stands alone amidst a mass of stones, glass, broken benches and the wreck of the organ, with the pipes on which little children were playing. The principal portion of the roof was blown off one block of the Murray Barracks, but the other barracks have escaped with comparative impunity. The Cathedral seems to be almost uninjured. The North East corner of the City Hall was damaged, and it is stated that some of the volumes and newspapers in the library have been injured. The porchway has been completely blown down—and the magnificent tree at the West side has fallen. The clock in the tower has been seriously injured, the dial facing the harbour being smashed completely in. The clock had stopped at 2.35, about the time when the gale was at its highest. The Catholic Cathedral in Wellington street has escaped with very slight injury. The Police Station has been completely unroofed, and the roof has been in part taken off the Civil Hospital. The gas pipes have been so much damaged that it was impossible to light the town on Wednesday or Thursday night.

## THE PEAK-GAP, ETC.

The damage done to the buildings on the heights has been very extensive. The Governor's bungalow has been completely unroofed, with the exception of one room. H.E. the Governor and some ladies and gentlemen were at the Peak at the time and must have had a terrible night. H.E. came down the next morning, after the storm had abated. The new Sanitarium at the Gap has been completely blown down. A gentleman with his wife and children were staying there, contrary to a warning given to them, and had to pass three hours under the shelter of a rock. The wind both at the Peak and the Gap was something terrific, and exceeds anything which has been known there before. The Governor's bungalow was purposely built in the strongest possible manner, and was considered to be proof against any typhoon that could occur.

## ABERDEEN, ETC.

At Aberdeen the Pacific Mail steamer *Alaska* has gone ashore, and it is said there is little hope of floating her again. The force

of the wind was so great that although they got out all the largest hawsers, it was impossible to keep her lashed. We regret also to learn that her launch capsized and caused the death of two men. The scene among the junks and on shore is described as terrific. The dock has sustained great injury, sheds and buildings having been damaged to an estimated value of no less than \$50,000. Large numbers got adrift and many of them went down in a short time. At Pokfulum, the bungalows belonging to Messrs. Forbes and Deacon have entirely disappeared—and the boys who were in charge of them have not since been heard of.

## GREEN ISLAND.

The bark *Teresa* collided with the *Morning Light*, and the former is now lying sunk near to Green Island, and the latter vessel is lying near the same spot. It is reported that all, except two men on board the *Teresa*, were lost, and if this is correct, the casualty is a very sad one, as the Captain, his wife and all on board would appear to have had no chance of escape. The *Bulle Sauvage* is stated to have been last seen in this neighbourhood. A vessel, name not yet known however, was observed there broken up, but she is supposed to be another ship.

## STONE-CUTTER'S ISLAND.

This spot, one of the customary places of refuge for small craft, was crowded with junks and sampans of all descriptions at an early hour on Tuesday. Many of them, however, were, notwithstanding this precaution, unable to weather out the gale and were dashed ashore by the waves, where numbers of them lay high and dry, bottom upwards. The loss of life among the Chinese must, it is feared, have been very great. The gaol has been partly unroofed. The lighter No. 6, belonging to the P. & O. Co., drove down on the island, beyond Green Island, and the captain is the only one saved. His wife and four children perished in sight of him, and the craft broke up.

## KOWLOONG.

The gale was felt very severely here, and the damage done to the junks which went over for refuge is also very large—many of them having been forced a great distance on shore. The whole place presents the appearance of being levelled, and dead bodies are found hundreds of yards from the shore. Three foreign vessels are also reported ashore.

## LATEST PARTICULARS.

The British bark *Malvern* was run into by the *Falcon*, off Possession Point, and sank; the captain and his wife and all hands are supposed to be lost. The captain of the *Mauvy* was lost when the vessel went down. The American ship *Comet* from Manila lost all her masts. The whole of Thursday bodies were being picked up and washed on shore, and up to late in the afternoon about 112 had been recovered. It is stated that the lowest state of the barometer at the Peak on Wednesday morning was 27.10.

One remarkable feature about the total wreck of the Siamese bark *Dudu*, is that one of the crew alive is a seaman in gaol, who was sentenced to ten days' imprisonment for attempting to stab the mate. We learn that three others have escaped from this vessel. The Spanish steamer *Formosa* put back on Thursday. The Captain of the Siamese bark *Seaforth*, is the only one of that vessel who is saved. It appears that he got on to a plank and was drifted down to Belcher's

Bay, but he states that he does not know what became of his vessel, from which he was washed, or the crew. One man belonging to the steamship *Leonor*, owes his life to being away at Macao, and the purser by being on shore here and unable to get on board. The second and third engineers of the *Leonor* desire to express in high terms their obligation to the Messrs. Tamer (brothers), of the fire engine house, who so gallantly assisted in the rescue of themselves and fellow sufferers from their perilous position. The above two officers were in the rigging from three to four hours, and were the last to leave. All the crew and a number of passengers were taken to Messrs. Lane, Crawford & Co.'s, where they were most kindly treated. We learn that the chief mate, who was reported drowned, was saved, but the Captain and Chief Engineer were lost. All the rest of the crew escaped. Up to the present it has been impossible to recover any of the property on board.

Thieves during the height of the typhoon took advantage of the state of things and robbed Messrs. McEwen, Frickel & Co., to the amount of \$500, and we are told that armed burglars made several attempts to enter houses in other parts of the town.

Two large cargo boats are lying near the Sugar House gate, in Mint street, and two more near where the chimney fell. The whole of the East Praya wall is lined with wrecks of junks, and small craft. The Bridge on the Praya beyond Mr. Standford's wood yard has been completely blown away.

A vessel, which was on MacDonald's slip for repairs, escaped marvellously, the supports all holding firmly and the ship being uninjured all through the calamity.

The British gunboat *Kestrel*, was forced aground and went right into the Boat-house, which is almost in ruins, most of the boats are broken up. The walls are all down, with the exception of a portion of that looking on the Praya, and part of the wall facing the Barracks.

The M. M. steamer *Tanais* got through the gale admirably. She did not move from her anchorage, although the M. M. steamer *Ava*, which was close to her, drifted some distance.

Mr. Spratt's launch, which was lost, has since been found near Causeway Bay.

A great deal of damage to houses, in addition to what was reported on Thursday, has taken place. The house known as Ball's Court, occupied by the Surveyor-General, was almost completely blown down, and how it has held together at all is a wonder.

From Stanley, the accounts which are brought in are most disastrous. A large number of junks were lost, and great injury done to houses, many of which have fallen.

The Government School houses at Aberdeen, Stanley, and near Mr. Maginac's Garden at Wanchi have been seriously injured in the roofs and in some portions of the walls.

The houses on the Robinson Road, occupied by the Hon. Mr. Alexander and Hon. Mr. Bramston respectively have sustained great injury, the roofs in some places having entirely gone.

The above are all the facts which we have been able to ascertain up to the departure of the Mail, but unfortunately they cannot be considered by any means to embrace all the disasters, which it will take time fully to discover. The more the effects of the typhoon become known the more disastrous does it appear, and it indeed seems impossible to exaggerate its terrible effects.—*H. Daily Press.*

## MACAO.

The Macao steamer *Poyang*, which arrived on Thursday afternoon, brought very bad news of the disasters there. The typhoon and fires together have almost levelled the entire City. The whole of the houses along the Praya Grande are in ruins, and houses in all directions fell from the force of the terrific gale. To add to the horror of this, fires broke out in various places, and the church of St. Antonio, and many fine buildings were burned to the ground. Many hundreds of lives were lost by the downfall of houses, and by the fires. The appearance of the Colony from the water was awfully grand. The *Poyang* sustained considerable damage, all the after hurricane deck and houses being blown away. One strange feature on board was a boat forward, which was taken up into the air high above the masts and came down aft with a terrible crash. The barometer at 3 a.m. on the 23rd was 28.00. A feature in the barometer not noticed before by those on board, was that at the height of the squalls, the needle was observed to move round quickly and as the squalls lulled, as quickly go back again. The *Poyang* warped off to the stream and rode at the full length of her cables with some difficulty. A large junk broke adrift and came down on the steamer *White Cloud*, causing her to drift out into the stream where she capsized, and went on shore bottom upwards. All on board were, however, saved by getting on to her bottom. The junk broke up, and its crew were all lost. The Portuguese bark *Concordia*, was driven on shore high and dry, and the two Portuguese gunboats *Camoës* and *Príncipe don Carlos*, have gone right upon shore, and there is no hope of either of them being of any further use.

Our own correspondent at Macao writes:—A typhoon of a most terrific character occurred here early on Wednesday morning. Its arrival was anticipated the day before, as the barometer kept falling until about two o'clock the following morning, when the typhoon broke out with all its violence. The gale blew first from the N.E., then changed to the East and finally veered round to South East. The tide was high at the time, and the waves broke on shore with awful violence, sweeping everything before them. When the tempest was at its height, fires broke out in no less than six different places. These were maliciously raised by a band of pirates to allow of them carrying off their spoil. The Church of St. Antonio and a large number of houses in its neighbourhood have been completely burned down. Many people have lost everything they possessed, and been rendered homeless. The whole of the Praya Grande has been swept away. The fine row of houses all along it has been almost completely blown down, and property everywhere has been destroyed. In fact Macao is in ruins, and the misery thus entailed upon hundreds of the residents is fearful, while the loss of life is enormous.—*Hongkong Daily Press*.

## Gallant Action.

We trust that amidst the painful excitement which has been produced by the melancholy occurrence, the details of which occupy so large a portion of our space this day, the noble conduct of the brothers Tauffer, who at the risk of their lives saved a large number of the shipwrecked men from the *Leonor*, and, we since learn, also from the *Albay*, will not be overlooked. A tribute to them in the form of an address from the community would be the least that should be made; and we

trust that those in high authority may deem the matter one deserving of recognition on their part. Time does not permit us to enter at greater length upon the matter, to which it has also been possible only to do scant justice in the report of the Typhoon, crowded as it is by many startling and painful details, but we learn that the difficulties which they had to encounter were of an unheard of character, and were met with fortitude such as will bear comparison with the most heroic deeds on record. The action is one which should certainly call for recognition also on the part of the Humane Societies of Great Britain and America, of which latter country, we learn Messrs. Tauffer are citizens. We are confident that we need not say more on the subject, and that, so soon as the painful excitement at present existing has subsided, steps will be taken to perform the duty of making some public recognition of the heroic conduct of these brave men.—*Idem*.

We have been requested by the Captain Superintendent of Police to warn the public that in consequence of the late disaster, dead bodies are coming in rapidly on the Praya, and that those who wish to avoid unpleasant sights will do well to abstain from going there. There is great difficulty in procuring men to remove the dead, on account of the superstitious fear which the Chinese have of touching a corpse.—*Idem*.

In addition to the more noticeable injury done by the Typhoon, we learn that great damage has been done to the goods in many of the godowns on the Praya. In some of them the water was as much as four feet deep. In consequence a large number of bales and cases have been much injured, and we presume they will have to be sold by auction.—*Idem*.

The scene presented at Kowloon at the present time is of a most desolate character. The whole place has been levelled and is covered with dead bodies. There are only two Sikh policemen there, who succeeded in burying twenty-four bodies yesterday morning—but large quantities are lying uninterred. At Yowmahtee, the scene is even worse than at Kowloon.—*Idem*.

The crew of the *Macao No. 2* were about the town to-day, (Sept. 25th). They report the vessel gone to pieces on an island; mate and 2nd mate lost; the master was not on board.—*China Mail*.

We learn that about 70 bodies have been taken up to the Hospital to-day, (Sept. 25th). Large numbers are being buried at Stone Cutters Island. Parts of the Praya actually smell offensively from the proximity of the corpses.—*Idem*.

Bodies are coming on shore so rapidly that it is perhaps right to warn people, who wish to avoid unpleasant sights, against visiting the Praya. The number of Chinese who—whatever money is offered—will touch a dead body, is so limited, that great delay must arise in the removal of these corpses.—*Idem*.

## THE WAR IN FORMOSA.

(From our Special Correspondent.)

Takao, 11th September, 1874.

We have been a whole month without any means of direct communication with Amoy; and for the present opportunity of sending

our mails we are indebted to a British man-of-war.

During the latter part of last month Captain Cassel passed through Takao with a party of Japanese, on his way to Taiwanfoo, where he had some official business connected with the expedition. It is understood that he went there in the hope of meeting M. Giquel, who, however, happened not to be at Taiwanfoo. He therefore had to return to Langkiau without effecting anything. The *Delta* has made periodical trips to Langkiau, and has brought a few more men, either soldiers or coolies, but not enough to make a noticeable addition to those already on the spot. The health of the troops there has been exceedingly good, and the number of deaths has been very small. There have been some cases of intermittent fever, but fewer than one would expect during an unusually wet summer in Formosa. Both the American gentlemen connected with the expedition have suffered severely.

The Customs cruiser *Ling Fung* has paid us a short visit, after which she departed for the Pescadores. She is to remain there for some length of time, for the purpose of instructing and drilling the officers and sailors of the Foochow men-of-war. It is commonly reported that the sailors and some of the officers of the Foochow fleet are good seamen, but that they know nothing about fighting their ships, and are unaccustomed to the strict discipline which is considered necessary for an European navy.

On the 25th of last month seven Chinese steamers arrived, with four thousand troops, from Chinkiang. Four of the vessels were Shanghai men-of-war, and the other three were borrowed from the Chinese Steam Navigation Company. A Japanese corvette, which had been in the Pescadores, accompanied them from there, and anchored here for some hours; after which she went on to Langkiau. The ships were all too large to come inside, but, fortunately meeting with fine weather, landed the troops, munitions, treasure, &c., on board, very rapidly by means of two small Chinese steamers, formerly called the *Volunteer* and the *Island Queen*, and the foreign tug-steamer *Taiwan* belonging to this port. A small quantity of horses and mules came in the steamer, but it is not intended to bring over any cavalry. A large number of the soldiers were encamped here for two or three days before moving to their present camps, a few miles inland. They gave some trouble to foreigners, chiefly by borrowing foreign-owned cargo-boats and sampans in the same unceremonious way that they took those of the Chinese. But no serious trouble occurred; and both the local and the military mandarins were perfectly ready to attend to any complaints brought before them. The first day was spent by the native boatmen in pulling crowded sampans forwards and backwards across the harbour, for which they got no pay. Finding this unpleasant and unprofitable, many of them disappeared in the night with their oars, leaving their sampans on the shore, in some cases with a plank taken out of the bottom. The military officers on the other hand retaliated by opening a store for oars and masts, and whenever they got hold of a boat which they did not want at the moment, they appropriated its oars for future use. The departure of these soldiers was not only a welcome, but a very interesting sight. The lines of crowded tents were all standing, and apparently no preparations were being made for moving, when, at a given signal, tents were struck, bedding rolled, and the men with their baggage all

marching off in less than a quarter of a hour.

These troops embarked at Chinkiang, but had marched there overland from Szechow, a town in the extreme North of the Province of Kiangsoo, on the South bank of the old course of the Yellow River. There are fourteen thousand more coming from the same place, all formerly belonging to the Victorious Army, at the head of which Le Hung-chang made his reputation, fighting against the Taipings. These are all foreign armed; but while some carry breech-loaders, some have muzzle-loading rifles, and others only muskets made in the Chinese Arsenals. They are said to be, to some extent, foreign drilled. Their commander, General Tang, has already arrived. He is considered by the Chinese to be a brave soldier, and took part in many sieges and battles in the neighbourhood of Shanghai and Soochow during the Taiping rebellion. He had twenty-four thousand men under his command in Kiangsoo; and being only a little over forty years old, he is a young man for his high position. Those of the soldiers that I have seen are large and well made men; but their Chinese uniform gives them a very unmilitary appearance.

Two or three members of the Customs' outdoor staff, old soldiers I presume, have arrived at Taiwanfoo to act as drill instructors. I am told that there are soldiers stationed at all the gates of Taiwanfoo, and that for the future no stranger will be allowed to enter, unless he can satisfy the guard that he is not a Japanese.

There is a rumour that the Japanese at Lengkiaou are going to make a fresh attack on some savages, but which and why is more than the rumour can tell.—*H. K. Daily Press.*

## SHANGHAI.

### Settlement of the Formosan Difficulty by Okubo.

Letters have been received to-day from Peking privately, but emanating from an official source, to the effect that the Chino-Japanese difficulty has been amicably settled between the Tsung-li-yamen and Okubo. There will be no war, and the Japanese undertake to retire peaceably from Formosa. Such is the tenor of these letters, which we give without comment, almost verbatim.—*Shanghai Evening Gazette.*

Seeing that the Japanese Ambassador Okubo is accredited to the Court at Peking it is very doubtful after all whether he would have cared to have had an interview of a diplomatic nature while at Tientsin with the Viceroy Li Hung-chang. Doubtless he is well advised of the antecedents of the noble Earl, and cares not to discuss the matters of his master with one who, whatever his power amongst a rebel soldiery, is still not empowered by the Government he serves to definitely settle the question of Peace or War between the two countries.—*Idem.*

Since our last report, the Japanese Embassy, with General Le Gendre, who reached here after the gun-boat had, left on Sunday, September 6th, for the Capital. The whole retinue occupied fifteen or twenty houseboats, which was a windfall for the rivermen, whose trade is not brisk, as for almost the first time for a year or two, boats are not "unusually high." The great question was whether the Japanese would or would not call on Li Hung-chang. It is understood

that as he did not return the call of the preliminary embassy that passed up some weeks ago, no enthusiasm was felt on the part of the present diplomat to favor His Excellency with another opportunity to show a slight. Accordingly no calls were made, and none received, and the Japanese are perhaps rejoicing in the conception of an angry and outraged Governor-General, whose pride is wounded. But what the real motives of these statesmen may be it is no easy thing to say. It is said that a couple of Japanese who have been here for a long time, stranded by a reflux wave of some of the Embassies, strayed off to Pei T'ang on the gulf, when they were arrested as spies, and sent under guard to Peking. They were not ill treated, and alleged that they had lost their way; which would be as likely to happen, as that a person bound from London to Glasgow should casually turn up at Brighton *en route.*

The *Hornet* left here on the 8th inst. for Chefoo, where Mr. Mongan, the British Consul, now is.—*Idem.*

We are informed that from seven to eight thousand troops are encamped at Woosung, where stockades and earth works are being pushed rapidly forward.—*Evening Gazette.*

### The Formosan Business.

The *Wui-pau* contains another article on the Formosan business. It informs its readers that the Japanese, having negotiated a loan of six hundred thousand dollars with the Oriental Bank, wished to contract another; but the Bank refusing, they had recourse to Messrs. Jardine, Matheson & Co. from whom they obtained two hundred thousand more. The *Wui-pau* goes on to comment upon the formidable expense entailed upon the Japanese by their persistence in the expedition, which it estimates at forty thousand dollars a month. The price of provisions in Formosa, if we are to credit our contemporary, has risen enormously; and an egg, which lately cost eight cash, is now unobtainable under sixty. Besides this, the sufferings of the Japanese are said to be very great, the hot moisture of the climate having caused much sickness among the soldiers; their stores of gunpowder have been seriously damaged by the heavy rains, and in fact, concludes our contemporary, with pious unction, Heaven is sending them warning after warning to desist from their wicked design.—*Idem.*

### TIENTSIN.

The Japanese Embassy left for Peking on the 6th instant, after a rather uneventful, but not uninteresting stay, of six days in Tientsin. The protracted stay of the Ambassador at this place, encouraged the belief that negotiations would be entered into between his Excellency and Li Hung-chang. The latter has been represented as desiring an opportunity to discuss the vexed question with the Ambassador. So the interchanges and interviews, which were expected to take place between them, were naturally awaited with the liveliest anticipations on the part of the outside public. The interested outside public were, however, doomed to disappointment. Nothing whatever, so far as I can learn, passed between them.

This is, I believe, the first instance in which a Minister, or Ambassador, accredited to Peking, has ever passed Li Hung-chang's yamen without a visit of ceremony or a friendly salutation of some kind. It looks

significant, to say the least of it. If the Ambassador had remained in Tientsin for one or two days only, it might be overlooked; but to tarry nearly a whole week, within fifteen minutes' ride of the Viceroy's yamen, without any advances being made—not so much even as the sending of a present or friendly message—gives the affair a chilling matter-of-fact air, quite at variance with our fixed notions of oily, soft-worded, Oriental diplomacy.

I doubt whether any single event, since the occupation of Tientsin by the allied army in 1860, has awakened such a profound and universal feeling amongst the officials of this Province, as the advent of the present Embassy from Japan.

The Ambassador was accompanied by Admiral Ito, General Le Gendre, and a large body of attendants. The party occupied 16 houseboats, and each boat displayed the national flag of Japan. The little fleet created quite a flutter of interest, as it filed slowly up the Peiho, through the shipping and past the bridge of boats.

Whatever may be the result of the present mission, it will continue to attract an increasing public interest, until the final solution of the present difficulties is attained. Whether that issue shall be Peace or War, remains a sealed mystery.—*Idem, Sept. 8th.*

### Despatches in re Formosa.

The Japanese Minister Yanagiwara to the Imperial delegate and Provincial Treasurer of Kiangsu, P'an:—

Shanghai, 7th June, 1874.

By Imperial Edict of your August Sovereign, you have been appointed principal assistant of the Imperial Commissioner, Shen Pao-chen, and on your way to your destination you passed Shanghai, and did me the high honour to pay me a visit. On the occasion, in view of the fact that Japan had already sent out an expedition whose destination was Formosa, you enquired of me against whom and which of the thirty-six clans of the aborigines, Saigo intended to wage retributive war, and what might be the ulterior purpose of the enterprise. I thereupon detailed to you the circumstances of the massacring of my countrymen, and informed you that the instructions of my Government to General Saigo were to secure the following three points: first, the apprehension and execution of the murderers by martial law; secondly, the pursuit and execution of those who have assumed a belligerent attitude and have offered resistance to our troops; thirdly, to take proper means to prevent the repetitions of the cruelties practiced upon shipwrecked people. I added also that, considering the treacherous character of the aborigines, it was intended to bind them under a solemn oath to the observance of any conditions they made.

I beg now to ask that, as soon as you reach your destination, you will, in common with the Imperial Commissioner Shen Pao-chen, adopt a course of proceeding in conformity with the tenor of this communication.

The expression of these my sentiments proceeds from an earnest desire to see maintained the friendly relations existing between our two countries, and as I spoke to you without reserve, so I hope to be met on your side in a frank and friendly spirit. Any communications which you may have to make to me will be received, on my part, with a desire, to the utmost of my humble ability, to secure a good understanding, and I shall endeavour to give proof of the sincer-

ity of the intentions to which I have always tried to give expression.

Reply of the Delegate, Treasurer P'an, to the Japanese Minister Yanagiwara.

Shanghai, 7th June, 1874.

My desire to make your personal acquaintance having been gratified by the instructive conversations which we held yesterday and to-day, and having ascertained for myself your friendly intentions (may the same further the welfare of our two countries) and your practical insight into the position of matters, I feel myself unable to express adequately my high consideration for you.

To your courteous letter, just received, and in which you indicate three points it is desired to carry out, I beg to reply as follows: Concerning the first and second points, you informed me in conversation that these only related to the marauding and blood-thirsty clans of the Mootans and Penans, and that the other aboriginal tribes, who were not guilty of cruelties, were to be out of the question. By that statement the extent to which operations are to be pushed is distinctly limited, and should such things happen again, it will be the duty of China to send soldiers to the place to punish the malefactors. No difficulties, therefore, should arise on those points. Concerning the third point, the Chinese Government unquestionably acknowledges its obligation by Treaty to see by all means in its power to the safety of those who claim its protection. We would, therefore, on those dangerous places near which ships generally pass, either station garrisons or men-of-war, or erect lookouts and lighthouses, in order to warn merchant vessels in proper time, that they may steer clear of dangers and not again fall into the hands of the savages. On this point you may also be free from any apprehensions regarding the friendliness of our intentions. As soon as I have reached my destination, and spoken with the Commissioner Shen Pao-chen, and as soon as I have received the instructions of the Tsung-li Yamen, I will make haste to send a full reply. I am now just in the act of sending a copy of your letter of to-day to my higher authorities.

In replying to-day, in a preliminary manner, to your letter, I beg to offer my wishes for your continued welfare.—*N.-C. Daily News.*

#### TIEN-TSIN.

H. E. Jusammi Okubo Tochimichi, the Japanese Ambassador, intimate to the Customs Taoutai on the day of his arrival, through Mr. S. Okata, first secretary of the Embassy, that he had reached Tien-tsin *en route* for the capital on public business, and requested that the Taoutai would give the necessary instructions to the local authorities *en route*, of the intention of the Embassy to proceed in a few days to the capital. The Ambassador did not call on H. E. Li Hung-chang, the Imperial Commissioner, as his mission was specially to the Chiefs of the Tsung-li Yamen, on the Formosa occupation, and did not relate to the general affairs of the two countries. Mr. Okubo and suite having left here by river on the 6th, will no doubt reach the Capital on the 10th instant.

The grand style in which the Ambassador has come to Tien-tsin, has made an immense impression on the natives. One large iron-clad, which the Chinese say has on board 3,000 men (!) brings the Embassy to the

Taku outer anchorage; a fine gunboat brings them in from there to Tien-tsin; and H. E. is accompanied by several secretaries and attachés, besides a host of servants. Now the Chinese mandarins measure the importance of an official by the length of his "tail." Evan-Dhu, in "Waverley," exclaimed to Edward Waverley when that gentleman was going to visit Fergus MacIvor: "Ah! if you Saxon Duinhé-wassel (English gentleman) saw but the chief with his tail on." "With his tail on?" echoed Edward, in some surprise. "Yes, that is, with all his usual followers when he visits those of the same rank." In July last an Envoy from the West, the land of the setting Sun, arrived in Tien-tsin, accompanied by his portmanteau, his leather bag, and his writing case. At the same time, an Envoy arrived from the Land of the Rising Sun, accompanied by two Secretaries of Legation (one right and one left), several attachés, and a number of servants. I have heard a mandarin of high position remark most contemptuously on the paucity of servants in the establishment of a foreign minister, saying, "He had not even people to bring you a cup of tea." The contrast is in favor of the Orientals in this respect.

On the 30th August, an announcement in the Peking Gazette stated that the Emperor would, on the following day, pass through such and such gates of the city, and visit certain places for the transaction of public business, including the building called the Tsze-kwang-ko, now known to the outer world as the Hall where Imperial audience is given to the Foreign Ministers. Since then we have learnt that, on the day in question, the Emperor here gave audience to the Belgian Envoy.—*N.-C. Daily News, September 8th.*

September 12th.

The U. S. S. *Ashuelot* arrived here on the 9th instant, from Nagasaki, and is to remain at Tien-tsin during the winter. Popular feeling in Nagasaki is described as of a decidedly belligerent nature. The *Ashuelot* brings an American astronomical party to observe the transit of Venus in North-China.—Woo Tung-ling, the head executive of the Southern Chinese forces in Chihli, died on the 1st instant. He was much trusted by Li Hung-Chang in regard to the management of the troops.—The weather still keeps hot during the daytime, and the wind is variable. We have escaped all floods this year, and the crops so far have been gathered successfully. In ten days the millet in this district will all have been cut, and the peasantry no doubt deem the year a favourable one, crops being good and the general tranquillity having remained undisturbed.

The common talk in regard to politics is all about the Formosan difficulty. The natives have long since come to the conclusion that China is more powerful than Japan, and that her forces will speedily drive the forces of the latter country out of Formosa. Conversation on the subject generally concludes with the exclamation: "Just see the fine-looking men the Chinese are, in comparison with those small Japanese who come to our country. We shall easily beat the Japanese on land." That the Japanese should possess a couple of active and effective ironclads is a disagreeable feature, and is contemplated with a less self-satisfied feeling.—*Idem.*

#### PEKING.

September 11th.

A decree which appears in the Peking Gazette of the 10th instant, reducing Prince Kung from his rank of a hereditary Imperial Prince to that of a secondary Prince, has naturally given rise

to a great deal of comment among the Chinese here. What has led to it can only be matter of conjecture, for the decree is brief. The Ambassador Okubo arrived on the 9th, but has not yet, so far as has been learnt, entered upon the object of his mission. The Japanese are very reticent about the Formosa business.—*Idem.*

#### NINGPO.

I am told, and it is supposed to come from the officials, that war is all but declared between China and Japan; and one might suppose it was, from the number of soldiers that have taken their departure from here for Chinghai, Chusan, &c.; 500 left yesterday and 500 again at an early hour this morning, creating such a noise on their march past as to make one really imagine the rumoured massacre, which is to take place on the 1st of the present Chinese moon, was being already precipitated. Ningpo has to supply recruits to the extent of 5,000. The forts at Chinghai are being put in order, and another one is to be erected on the hill opposite Joss-house hill. Many of the people have placed themselves in security by going to the hills, there awaiting further news.—The prefect of T'aetsiu has had orders from the Governor-General to proceed at once to Hangchow; he passed through here yesterday, on his way to the provincial capital. He is a man well acquainted with military matters.

#### Local Correspondence.

To the Editor of the Japan Gazette.

DEAR SIR,

Will you allow me space in your columns to say a few words on the subject of

NATIVE EVIDENCE IN OUR CONSULAR COURTS. The custom has arisen, somehow, of merely warning the native witness that he must speak the truth. This seems to me to be altogether too free-and-easy a way to take testimony from a class of witnesses for whom none will claim the highest character for veracity; indeed the natives themselves often admit that they have more confidence in the veracity of Europeans in general than in the average of their own people.

And then the case is so very different where the native is called upon to give testimony in the native courts. There he is constantly under the fear of torture, and, from beginning to end, is sharpened by cross questions from the Judge or other officers of the Court, who are experts in entangling a witness in his own words. With the terror of constant warnings to speak the truth, and threats of severe punishment upon the least failure in the thread of his story, it would be almost a miracle if any fictitious testimony could escape detection. After passing this severe ordeal of sifting and bewildering questions, and terrifying warnings and threats, the evidence having all been written down by the court clerk, the witness is required to affix his seal to the book or document in which it is written. This he does with a full consciousness that he will incur condign punishment if, at any future time, it shall be discovered that his evidence has been false, in any essential point or particular. Under such a weight of responsibility and fearful warnings few would have the temerity to tell a deliberate falsehood, or the skill to enable them to pass the ordeal without detection. But when a native witness in a foreign court is merely told that he must speak the truth, there is no fear of a penalty to make

him feel any responsibility; the entangling cross-questioning of the native court is almost entirely ignored, and the witness is not even required to affix his seal to the official record of his testimony! Well may natives, who have been called to give evidence in our courts, jokosely remark that "foreign judges care but little about the veracity of witnesses who testify before them, and that there is no danger in telling lies before them." Thus we are not only often great sufferers from the irresponsible testimony of native witnesses, but the character of our courts for integrity and stern justice as compared with the native jurisprudence is greatly depreciated in the estimation of the people among whom we live!

Could this not be, in some measure, remedied if our judges and advocates would adopt the mode of the native judges, by watching closely for opportunities to catch the native witness or entangle him in his own words, and, in addition to this, have a native scribe to write down the testimony, to which the witness should be required to affix his signature and seal? From considerable observation among natives in their courts and in other business transactions, I believe that the seal affixed to any written document has nearly the same weight among Eastern, as our oath has among Western people.

It is a testimony that few natives would lightly use, for fear that it might be produced against them at some future time.

Some people will perjure themselves by telling falsehoods under oath, and so also might a man put his seal to a false statement. But still this would not ordinarily occur without some weight of temptation, and either the one or the other might be expected to afford some pledge of sincerity in giving evidence.

In addition to the above, I would suggest that there should be some fixed formula established in giving the *warning* to native witnesses, that would be calculated to produce some feeling of responsibility and reverence for the truth in their minds while in the witness box.

Believing this to be a subject much needing public attention in our extreme Oriental Settlements, I offer these remarks with respect.

PRO BONO PUBLICO.

To the Editor of the *Japan Gazette*.

DEAR SIR,

Perhaps, if you reside upon the Bluff, you have had occasion to ascend and descend the 101 steps, in Motomachi, by which you are enabled to make a short cut to the summit of Sengen-yama. If so you will doubtless be aware that one of the aforesaid steps is broken; and, if a stranger were to go up or down in the night, there are ten chances to one that he would not need any assistance in reaching the bottom. The first time I made an acquaintance with them was in descending, a few weeks ago, and I had a narrow escape from losing the number of my mess. A friend was several steps before me and upon getting about halfway down he turned and warned me to "beware of the broken step," but his warning came too late, and, if I had not had a good hold of the rail, I should, in all probability, have sent my friend into eternity, as well as myself, thereby causing two deaths at the same time. It is really dangerous, and the matter should be reported to the authorities, if they do not already know of it; for if a man slipped without having hold of the rail, nothing short of a miracle could save him from falling, and if he fell it would take something more than a miracle to save his life. It will be remembered that, some time

ago, a man did fall down these steps and break his neck, and, then the evil was not nearly so palpable. Another matter of which I wish to speak is the *Tom-and-Jerry* mode of building, which we see about us every day. After a house has been reared a few years it commences to crumble away. A gentleman was passing a building, now in the process of erection in Homura Road, when a piece of brick fell from the top of the structure, striking a man on the thigh. These things should be seen to, for, what with the burglars and the other evils of the day, the settlers will be afraid to walk the streets during the day, and to go to bed at night. With all respect I offer these my opinions to the public notice, and remain,

Yours sincerely,

PRO HAC VICE.

The piece of brick has been sent to the *Japan Gazette* Office, where it may be seen at any time.

To the Editor of the *Japan Gazette*.

Hakodate, Sept. 27th, 1874.

On Friday evening, notice was given to the Consuls that at 9 o'clock A.M. of the day following Tazaki Hidechika would be sentenced for the murder of the late Mr. Haber, Acting German Consul at this port, and that he would be executed at ten o'clock, in the jail enclosure.

The sentence was read at the Saibansho, in the presence of the Foreign Consuls, Chief of Foreign Affairs and Chief of Police. The prisoner was made to kneel with his head about four inches from the floor so that he could not see the Judge.

It was agreed by Minister Von Brandt and the Japanese authorities at Yedo that Tazaki Hidechika should be executed privately within the prison walls, believing that the ends of justice would be best promoted by this course, as the prisoner might, if any opportunity was offered, exhibit unseemly bravado.

In bowing to signify that he understood, he struck his head against the floor, and as soon as his sentence was pronounced he was rudely shoved out of the door, which was banged after him with great violence, the officer seeming to think that noise served to make the scene impressive.

The prisoner was carried to the place of execution in a *kago*, guarded by twelve policemen. Inside, and in one corner of the prison enclosure, was a kind of small court surrounded by a high wall and fence. At one side sat the witnesses, consisting only of the three Foreign Consuls and several native officers. In the middle, was a trench about six inches deep and three feet in length. The murderer was soon brought in blind folded, and made to kneel on a mat, by the side of the trench; an officer then loosed his cords and tucked the clothes down about the neck, laid bare one knee, and arranged the hair, during which time prisoner occasionally mumbled something, apparently addressed to the executioner, giving directions about his clothes. He looked pale but did not seem much concerned.

Two executioners stood by with their swords which were dipped in water. First executioner advanced and struck, missing his aim and hitting below the neck, close to the shoulders; the body fell forward, with the head in the trench, seeming to suffer much. A second blow was struck, and then the assistant executioner advanced and delivered a heavy blow, which, being unsuccessful, a fourth attempt to sever the head from the body was made but failed. One executioner then took the

head by the hair, and commenced to saw the head off with his sword in a most horrible manner, but was stopped by the chief officer. Water was thrown on the face, and, in order to show the face to the witnesses, the head not being entirely severed it was necessary to partially lift the body up with it.

The body was covered with a mat, and Tazaki Hidechika had met his due reward.

The time occupied by the decapitation was about two minutes.

As the head was not severed from the body as per sentence and according to Japanese custom, the question may be raised as to whether the failure was intentional or not, as Hidechika may have preferred to suffer more to having his head cut entirely off; as to the Japanese idea of disgrace I am ignorant.

Notice of the execution was posted in one place, written in Japanese.

KOMAGADAKI.

To the Editor of the *Japan Gazette*.

DEAR SIR,

At a meeting of the Agents of the various Fire Insurance Companies, held a few days ago, the formation of a Salvage Corps was discussed. It seems rather absurd to talk of forming a body of men to save property from a fire, before they have any efficient means to extinguish that fire. What we want most is to have the Fire Brigades well organized, and to have a good supply of water throughout the settlement, as at present there are but two wells available for use in case of fire, and a building might almost be burned down before water could be played upon it,—that is, in some parts of the settlement. One of the wells in question is between Lots, 75 and 76; and the other, in front of the New Town Hall, is the one to which the various fire-engines are occasionally taken for practice. There are several very good Fire-Engines and Fire Brigades, besides a Hook-and-Ladder Company; and, if we had a plentiful supply of water, and the Fire Brigades were properly officered, we should not need a Salvage Corps. Besides, it is not likely the public will assist a Salvage Corps; it is purely an institution for the benefit of Insurance Companies. Feeling certain that most of the residents will coincide with me I remain,

Yours &c.,

FIAT.

THE following interesting account of the state of affairs in Corea was published in the *Mainichi Shimbun*:—Moriyama Shigeru, a sixth class officer of the Foreign Affairs Department, who, some four months ago, was despatched to Corea, has succeeded, by various arguments, in persuading the government of that place to acknowledge the supremacy of Japan. The governor of Toraifu, who was the greatest enemy of Japan, has been exiled; and his adherent Kundo and the interpreter Jakuzaiishi have been imprisoned in a stone cell. The rest of the malcontents have been arrested, and their estates and possessions confiscated. Though their wickedness is great, their punishment is severe, for it is understood that Kundo and Jakuzaiishi are to be beheaded.

The officers of Corea, in a public meeting, entreated Mr. Moriyama to establish a friendly feeling between the two countries, and their appearance was like that of a defeated army.

During the last six years Mr. Moriyama has been backwards and forwards between the two countries more than ten times, and has been degraded by both; but now that he has succeeded he will be honoured by his own countrymen, and respected by the Koreans.

## NI-IGATA.

September 22nd.

THE *Dumbarton* arrived safe, this morning, from Sado, and is leaving to-morrow for Yokohama via Hakodadi with a full cargo.

OUR SPORTING season, which commenced last year on October 1st, is this year to begin on November 1st. Pheasants may now be heard calling in the bushes along the hill sides, they seem, however, to understand that they are pretty safe under the cover of the notice boards of "Not to hunt with firearms &c." which are stuck up nearly everywhere.

A party of Yedo wrestlers have been exhibiting their skill to crowded houses, and intend visiting all the principal towns on this coast. Many of the men here tried a fall, but, although strong fine looking fellows, they had to give in to the superior skill of the Yedo men, who have not as yet met their match here.

AN ACCIDENT occurred here on the 14th instant, attended with the loss of two lives. A junk was about to proceed to Niitsu, and when passing the canal of Nashijima at Okawara, the stream being much swollen by the rain of the previous day, she struck the mooring cable of a large junk, which was at anchor, and capsized. There were five persons on board, three men and two women. The three men were rescued, but the women, mother and daughter, were drowned.

THE 17TH inst. was a general holiday here; the streets were all decorated with flags during the day, and illuminated in the evening. The neighbouring farmers came in procession to the temple and offered up each an ear of rice, and prayed for a successful year, and a good harvest. It is said that the late gales have injured both the rice and cotton crops; the former has risen 3 boos in fourteen days, and now stands at 10 boos per picul; cotton, however, remains the same.

ABOUT two months ago a Japanese boy, employed at No. 90, ran away, embezzling about \$600. Yesterday, he was apprehended in Yedo and brought to the police-station at Kanagawa, where he was lodged in a cell to await trial.

FROM THE *Hochi Shimbun* we extract the following:—About 4 o'clock in the morning of the 21st instant a policeman at Dai-juichi-daiku, Tokei, was informed that a gang of 10 robbers was prowling about the country. Taking two other constables he went in search of the robbers and fell in with them at Tenjinbashi, when a fierce contest ensued. The robbers being armed with swords, as well as being three to one, had the advantage and escaped, after wounding two of the policemen. It was afterwards ascertained that, near 12 o'clock of the night previous, the house of a man named Taguchi Genyemon, at Hiraimura, was attacked by a gang of 10 men, and it is now thought that they must be the same with whom the police had a scuffle. From Genyemon's house four swords, 20 yen, and 40 pieces of wearing apparel were stolen, and a female nurse, who had attempted to stop the robbery, was wounded.

A NATIVE paper states that, about 8 p.m. of the 19th instant, a young man darted into the shop of a furniture seller at Bashamichi, Yokohama, and, picking up a gold watch, left as unceremoniously as he had entered. The shop-keeper followed him; but the thief was swift of foot, and would have escaped, but for two foreigners, who stopped him and gave him into custody.

THE *Nichi-nichi Shimbun* gives the following interesting criminal calendar, for the month of August, in the Tokei district:—There were 36 houses attacked by burglars, and 6 were set on fire; the value of coins stolen was, of gold and silver, 4341 yen 14 sen, and of copper, 144 yen 7 sen; 2478 articles of wearing apparel, 4957 pieces of furniture, etc., were stolen from 1314 houses and stores; 262 robbers and thieves were arrested, and the total number of criminals was 797; 74 children were lost and three were found destitute in the streets; showing in all a pretty fair average of crime for a small place, when compared with some European and American cities, the worst of which would hardly show so large a criminal sheet for one month.

SUICIDE seems to be the "rage" in Tokei, as will appear from the following extracts from the *Nichi-nichi Shimbun*. On the 19th inst., a singing girl of Yoshiwara threw herself into the Sumida-gawa, and was drowned. On the following day, a woman named Hisa, the mother of Suyekawa Naojiro, living at Nakanoda-machi, Azabu, committed suicide, but how, or in what manner, the native paper does not say. The same day the wife of a man named Nakamura, who resides in Keu-yemoncho, Kanda, attempted to commit suicide by biting her tongue, but, happily, was discovered before she had bitten enough off it to kill herself. On the 21st inst., a man named Iseya Shinichi, who lived in the neighbourhood of the latter woman, hanged himself.

ON THE 18th inst., a school-boy at Shiba caught a small tortoise in a garden, and upon its shell were carved, in Japanese, "possession of Akamatsu, 2nd year of Yempo" (1674), showing, if these words were really carved at that time, to what great age these creatures live.

THE *Nisshin-Shinjishi* gives the following items.—A bridge, which has been under construction, across the Ommaya-Gawa, since the 5th of February last, has just been completed, and will shortly be opened to the public. Its length is 510 shaku and its breadth 20 shaku; the entire cost of the construction was 14,800 yen.

FROM THE *Mainichi Shimbun* we extract the following account of a matricide:—During last October, a young man named Sato Utaro, the son of a farmer at Tamagori, Nibugata-mura, left home, and nothing was seen or heard of him by his friends until the 23rd ultimo, when he entered his father's house about 2 o'clock in the morning, and collected all the clothing and money upon which he could lay his hands. He was about to retire with his booty when his mother saw him and tried to detain him; but the inhuman monster threw the aged woman down a well, and decamped. The poor woman was afterwards taken out of the well but she was quite dead; nothing has since been heard of the son and murderer.

ADMIRAL AKAMATSU has returned to Tokio, bringing the latest intelligence from the camp at Formosa. The soldiers are said to be somewhat wearied with their long inactivity, but as ready as every to kindle at the slightest hint of war prospects, and as enthusiastically devoted to their general as at the day of his landing among them.

The number of highway robberies is on the increase, and as winter approaches we may expect to frequently have the task of chronicling such deeds as the following.

About three weeks ago a postal courier was attacked by three men armed with swords. This was at night and in the neighbourhood of Akashi. The robbers examined the letters but found no money. The courier having made no resistance, he was not further molested. On another occasion an attack was made on a courier between Nishinomiya and Kobe, but again the robbers were unsuccessful, no money being found in the postman's possession. The robbers in both these cases were afterwards arrested. At midnight, on Monday last, the night courier on the Osaka road was waylaid near to the village of Ashiyamura. One of the men making the attack seized the pole upon which the mail boxes are carried, and upon the courier venturing to ask him what he was doing, another of the gang struck the unfortunate postman on the head several times with a stone. The courier then ran away leaving behind him the mail box. On reaching Uchidemura he called up some policemen and the latter went back with him towards Ashiyamura in search of the robbers; but, as was naturally to be expected, the thieves had not stayed to be caught.

All that the party could find was the empty mail box. A package of cloth which had also been tied to the shoulder pole had been carried off. On the following day the cloth and letters were found at the foot of a mountain by some men who had been sent from Nishinomiya in search of traces of the robbers.

The number of letters which were despatched from Kobe on the occasion in question was 245; 6 of these, were left at Mikere and 32 were received from there, which would make the total number in the possession of the courier at the time he was robbed 271. Of these it was found that 173 were still intact, and they have been since distributed according to their respective addresses. Of the remaining 98 a heap of fragments only remained; these are now being put together at the Osaka office, and such of them as can be made intelligible will be forwarded to their destinations. The letters which were torn open were chiefly those of a bulky appearance and those bearing Chinese and official addresses. Most of the letters were probably posted by residents of Kobe and Hiogo, and but few of them from places further west, as all letters arriving from the latter direction after 10 p.m. are, it appears, not forwarded until the following morning.

A notification to the following effect has been issued from the local post office:

The letters for towns and places on the Eastern roads which were posted between 5 p.m. and 9.30 p.m. at this office, or at the pillar boxes in Kobe and Hiogo between 4 p.m. and 9 p.m. yesterday, have been stolen and have not yet been traced. Therefore although these may be recovered the distribution will be late.

POST OFFICE, KOBE.

15th September, 1874.—*Hiogo News*.

### PLEASURE TRIP of the P.M.S.S. Co's STEAMER "CHINA."

On Saturday morning, at 10 o'clock, in compliance with invitations issued by Mr. Hart, the General Agent of the Company, about 200 guests assembled on the hurricane deck of this large and handsome steamer, (4,300 tons register, under the command of Captain Phillips, U.S.N.) than which but few others, and those belonging to the same Company, could have been found better suited to accommodate with such perfect comfort, so large a number.

*Les invités* consisted of a large gathering of ladies, several Japanese officials, amongst whom were Okuma, (Minister of Finance), Oki, Nakashima, (Governor of Kanagawa), Admiral Akamatz, Generals Teneda and Nodsey, Mori, (formerly Minister at Washington), Santo, Iwahashi, Tendo, Hirai, Takanagai, Noguchi, Mihara, Yanagiwara, Kawaji, and Osaki; also the United States, British, Russian, Italian and Belgian Ministers, the Captains and officers of the Russian, American, British, French, North German and Italian ships of war in harbour, evidently bent on an enjoyable excursion, in which owing to the splendid weather, calmness of the water, and the amusement, so opportunely provided for the guests, in the services of the brass band of H.I.R.M.'s ship *Vсадник* had their expectations fully realised.

At 10.30 A.M., the steamer got underweigh and proceeded down the harbour; the ensigns of the several ships passed being dipped in answer to her salute. Towards 12 o'clock, the haze of the morning having disappeared, the striking picturesqueness of the coast, with its innumerable inlets and villages, became distinctly visible to the naked eye.

At noon, a champagne luncheon was provided in the main saloon, which, as well as other parts of the vessel, had been very tastefully decorated for the occasion with shrubs, flags, evergreens, &c. At 2.15 P.M., having neared Vries Island, the ship's bow was turned towards Yokohama, and her engines slowed down to allow of dinner being served before reaching there.

The afternoon was most agreeably passed in dancing to the liveliest strains of the brass band, which, during the morning, as well as at luncheon and dinner, so materially added to the pleasures of the day. Shortly after 4 o'clock, the engines were stopped to allow of a photographic group being taken of the guests assembled; this had scarcely been completed when the Japanese steamer *Tokio-Maru* (formerly the P. M. S. S. *New York*), which had been gradually coming up astern, passed, on her way to Shinagawa, amid mutual cheers and congratulations.

The excellent dinner served at 6 o'clock, and which was done ample justice to by the numerous guests, reflected great credit upon the management and skill of the Company's *cuisine*. The festivities of the day were brought to a conclusion at 8.30 P.M., by drinking to the health of Mr. Hart, Capt. Phillips, and the success of the P. M. S. S. Co.

The Company's steam tug and house boats were in waiting to convey the guests on shore, nothing having been omitted in any way that could add to the comfort and enjoyment of this pleasant trip.—J. G., Oct. 12.

WE HAVE just heard of another savage attack upon a foreigner by a Japanese. Last Thursday evening, Emmanuel Yeo, a gunnery instructor at the Naval College, Yedo, observed a Japanese sailor abusing a woman (Japanese), and foolishly interfered, shoving the

man on one side. The Japanese stumbled and, as he fell, clutched Yeo round both legs. He then drew a large knife, such as native sailors generally use, and inflicted two frightful gashes in the calf of one of his legs. He then let go his hold, and, rising, rushed again at Yeo, aiming a violent blow at his right breast. Luckily Yeo had the longer arms and struck his assailant full in the face with his fist, knocking him down. It was fortunate he did, for although the knife did not enter his breast, it pierced all his clothing, and cut them down as far as the thigh, without even scratching his skin. Assistance then arrived, but the Jap. escaped before he could be seized. Yeo would have fallen but for the support of one or two men, who conveyed him to the hospital, where he now lies in a very precarious state.—*Idem*.

LAST night, several Japanese policemen observed four men walking in the Settlement with drawn swords. On the appearance of the policemen, the four men ran into a bye street. However, two of them were captured, and the other two went into the compound, No. 122 and entered a betto's house. The police then returned to the station for help, when one of the European constables accompanied them to No. 122. Upon entering the betto's premises three men were found in one of the rooms, and a sword was found concealed under the mats. They are supposed to be some of the burglars who have been about Yokohama for the last few months.—*Idem*.

Among the passengers who arrived yesterday by the Shanghai steamer, we observe the name of Major Kinder, the Director of the Mint at Osaka. It is understood that changes of importance are contemplated in this establishment, and that Major Kinder has resigned the post he has held during the past five years.—*Japan Mail*.

We believe that Major Kinder's resignation is no new affair, and was determined upon by that gentleman some months ago, unless he were allowed to continue to conduct the Mint without interference. We know not what the other changes may be, which our contemporary refers to, but we have good reason for stating that one important change is that the connection of the Oriental Bank with the mint is to cease in a few months. The future is veiled in darkness, but we may at once predict the downfall of one of the most useful institutions to the country, and prepare our readers for the same disgraceful variations in the coinage which took place a few years ago.—*Idem*.

### CORONER'S INQUEST.

An inquest was held this morning at the Camp, before R. Robertson, Esq., Coroner, and Messrs. A. Wylie, D. Scott and J. Y. Henderson, jurors, to enquire into the cause of death of Henry Hickman, a gunner in the Royal Marine Artillery.

Dr. W. H. Putsey, sworn:—I am a surgeon in the Royal Marines. Shortly after 6 o'clock yesterday morning I was called to see deceased, Henry Hickman. I found him lying on one of the hospital beds, foaming at the mouth, face flushed, eyes suffused, breathing embarrassed, skin cool, pulse quick and feeble. I asked him what he had taken. He replied, "Arsenical soap." I then asked him why he had taken it. He replied, "I had been drinking, sir, and without knowing what I was doing I drank the stuff, thinking it was water." I at once

administered a brisk emetic, had him covered with blankets, and placed hot water bottles to his feet. He began to vomit very soon after taking the emetic, the vomited matter being fluid and containing a quantity of mucus in flakes. After this he became rapidly worse. The skin became colder, and the skin of the hands livid. He lost all control over both sphincters, sank into a state of collapse, and died at ten minutes to eight. Three hours afterwards I made a *post mortem* examination. The lining member of the stomach was intensely congested. The stomach contained some mucus and serum, the products of inflammation, and there were two small patches of the poison adhering to its internal coat. There was no solid matter in the stomach, and the same may be said of the intestines. I have heard that he has been drinking for several days, and that for three or four days he has not been to his mess. He has drunk as much as two bottles of spirits a day. I once attended him about a year ago for drunkard's epilepsy. He was a London pot-boy previous to joining the service, and had probably been a drinker all his life.

George Less private R.M., sworn:—The first I saw of Hickman, he came to my door about 5.30 yesterday morning. The next that I saw of him was about half an hour afterwards. He called to me, and I went to see what he wanted. He asked me to take him to the doctor, and I asked him what he had been doing. He told me that he had drunk some stuff out of a pot instead of a glass of water; and I ran over to the guard-room to get a stretcher and two men. I brought him to the hospital, and told the hospital sergeant, and I then ran over to call Dr. Putsey. The pot was standing by his bed, and he pointed it out to me, and told me that was what he had drunk.

William Vale, private R.M., sworn:—I saw deceased at 5.15 yesterday morning. He came into the cook-house and asked me to give him some fire. I told him to take some; he did so, and returned again, and said that would not do. He took some more fire, and asked me if I had a drink of tea. I told him "Yes," and he took some. I have not seen him since.

To Jury:—He seemed to be quite sober when I saw him.

After a short consultation, the Jury returned a verdict that deceased came to his death from "Accidental poisoning."—*Idem*.

### RAILROAD ACCIDENT.

An accident occurred yesterday morning, to the train which left Yokohama for Shinbasi at 8.15, on arriving at the "points" outside the latter station, where the line diverges to the Goods Department. The engine and the carriage immediately attached to it passed safely, but the second carriage from the engine, for some reason not yet ascertained with certainty, passed on the diverging line of rails, throwing the engine and the preceding vehicle off the line. After leaving the rails, the engine proceeded for about 20 yards, when, meeting with an obstacle on one side, it swerved round, and fell over on its side across the line of rails, completely blocking the way. Fortunately, with the exception of a severe shaking, none of the passenger were hurt; the Engine Driver received some injury to one of his legs, and one of Fireman was rather severely scalded.

The entrance to Shinbasi Station being blocked up, the train service was resumed as soon as possible between Yokohama and Shinagawa, but in consequence of the want of

sufficient shunting facilities at Shinagawa, only half the usual number of trains were run, the intervals between each being of double the ordinary length.

The disabled Engine and Carriages were removed, and the line repaired ready for the resumption of traffic to Shinbasi by 11 p.m. last night, and this morning the usual train service has been resumed.—*Idem.*

*A LETTER from BILL SYKES, of Yokohama, to his pal JOE PRIGGLINS, of Whitechapel.*

DEAR JOE, for three years I've been in Japan, and am fly to their curious manners.

I thought I know'd a few things, but, my word! you can learn something from the Japaners.

For cracking a crib, they put us in the shade, and their house-breaking tools smartly handle.

I'm nowhere at all compared with these chaps, and to 'em I can't hold a candle.

Vy, Lor' bless your 'art, there ain't a night passes but what these coves makes it a varning.

You locks up at night all safe and secure, and finds half the things gone in the morning.

The merchants and store-keepers here in this town begin to pull werry long faces.

Not a night passes now but what these here fellers get into some three or four places.

They got into North's, lots of physic they stole; for the lock, they didn't care a cuss for it;

And all the aperient medicines they took, without feeling any the vuss for it.

They cleared out the Cockles and Holloway's pills, and was never disturbed by a peeler;

Took bottles of scent, but kindly left behind the prescriptions of Buckle and Wheeler.

They're no ways pertickler where they gets in, in search of the plunder, Lor' bless yer.

They tuned up a average tater, and stole the Manila cigars of poor Cheshire.

They paid a visit to the *Gazette*, and Anglin, in order to stop such a caper,

Left his bed on the bluff, and had to come down and sleep on some big bales of paper.

'T was supposed they'd enter the *Herald*, as well, and on the things there make a levy;

But they didn't attempt it, for they fear'd they find out the articles of Mumpos too heavy.

They broke into a big machinery place, and stole lots of things very slyly,

But the owner's learnt wisdom, and now it would seem, every evening he acts very wily,

For he sleeps in the shop, and if they come again there's a risk of their being detected;

For every steam guage and pump in the place by a chain to his leg is connected.

And he's such a big burly chap you must know that there is 'nt much danger of taking him

Avay with any machinery there, without a good chance of their vaking him.

There vos Spratt vos afraid they'd move off with a lot of his shirts, cuffs and nice linen collars;

But he didn't lose any of those ninety cent hats, they preferred Driscoll's plugs, at two dollars.

But would you believe it, they got in one place took the swag off, but this is the best of it,

There vos too much to carry, and three nights arterwards, they came back again for the rest of it.

And those Irish cars they'd have had long ago, but it seems they've got some sort of pride in 'em.

And are quite above such jaunting affairs; it strikes me that they'd scorn to ride in 'em.

'T was one of the gang I've not the least doubt that tried a dodge novel and funny;

And opened the eyes of that smart circus man ven he vos a counting his money.

Yet in this Yokohama you von't go ten yards but vot you will notice a bobby,

With a staff four foot long, in European clothes too, and with brass buttons toggled up so nobby.

But still they don't capture these fellers at night, you'd fancy these coppers stand in vith 'em,

And ven a crib's cracked and the stuff has been sold, they naterally then shares the tin vith 'em.

Don't think to come here and go into that line, don't have no such waulting ambition;

You'd never make salt at it Joe, you'd be slewed by such Japanese Competition.

It's ridiculous though to suppose as you'd come, it a werry unlikely ewent is;

If you *did* come you'd learn how to do a job clean, if so be they would take an apprentice.

They crack cribs so neat, never make the least noise in the calmest or stormiest veather;

Not like me and you who bungled that job at Mitcham and got *jugged* together.

Ve've caught 'em alive vith the Lighthouse, and they got a werry expensive telegraph of us;

So ve must'nt grumble if the Japs get even, and in burglaries here have the laugh of us.

I'm on the square now, and in contracts and such like, I manage to make a few tanners;

And go up to Yedo and stick it in nice to these unsophisticated Japanners.

I can sling the cards too at poker a bit, and I've joined a Californian Yankee;

And ve make a few 'satz every night out of flats, who don't tumble to our hanky panky;

And every now and then these fanciful Japs adopts some queer hobbies and habits;

And me and my pal, though you may think it strange, made quite a small pile selling rabbits.

Ve sold 'em some bucks, and swore they vos does, and at Yedo the money ve collars;

Ve managed to get a respectable price ve sold four for eight hundred dollars.

Ve did 'em in the eye, and the werry next day with a bobby they tried to prevent us

From keeping the tin, but it vos no go, ve vere werry soon non est inwentus.

But I must conclude, and as to the beaks, here's vishing that you'll get the best of 'em;

So I remain's your old pal vith respecx to Vitechapel Sam, and the rest of 'em.

—J. G., Oct. 8,

### THE LATE TYPHOON.

The particulars of the sad disaster of the 22nd and 23rd October are gradually coming to light; but even up to the present time the full effects of the typhoon can only be surmised. It is certain that the estimate of the number who have been lost is considerably under the actual total, which cannot be less than eight thousand at Hongkong and Macao together, even if that comes up to the fact. Vessels arriving at the present time report meeting with dead bodies a long distance before reaching the port, and corpses continue daily to be washed ashore in various parts of the island. The damage done to property also turns out to be much larger than was anticipated. Persons well able to

judge estimate that in Hongkong alone, the property lost in the form of vessels, damage to houses, buildings destroyed and goods damaged, cannot be short of a million of pounds. The steamers *Albay* and *Leonor* still lie in the harbour, the latter with thirty or forty dead passengers in her, and it is doubtful whether they can be raised; and, although efforts have been made to move the Pacific Mail steamer *Alaska* from her position ashore at Aberdeen, they were, we regret to say, unsuccessful.

After the typhoon, great difficulty was experienced in removing the dead bodies which came ashore in all directions. The destruction of life in native craft vastly outnumbers anything that has occurred before. In ordinary typhoons the places of shelter which the Chinese, who have a marvellous instinct in foreseeing the advent of these terrible visitations, seek, are sufficient to protect the large bulk of the junks and sampans. The poor people had, in the present instance, relied upon the shelter which had afforded them protection on former occasions, but were utterly mistaken in their calculations, as their craft were driven from their places of refuge and in the words of an eye-witness, who himself had a narrow escape in his vessel—large junks broke up actually like match-boxes. One of the officers who was on board the Pacific mail steamer *Alaska*, says that he saw a batch of fully a hundred junks founder all at once. The misery which has been spread both in this Colony and at Macao is something appalling. One of the saddest considerations is that numberless junks have utterly gone to atoms with every soul on board, so that hundreds of people must be kept in lengthened suspense as to the fate of friends and relatives, of which no one lives to tell the tale.

In addition to the misery which has been spread by the loss of life and property on the water, many sad stories are told of the ruin which has been wrought through loss of property ashore. Some have lost almost their all—and few owners of property have escaped without some loss. Some of the stories told of the anxiety gone through on the night of the typhoon are startling. One gentleman, whose wife was ill, had to carry her from room to room in his bungalow, the roof going off one after another, and finally he had to seek the friendly shelter of a neighbour's house; and others with families suffered worse suspense, some instances having occurred of children being ushered into the world amidst the uproar and turmoil, and while large portions of the roof of the houses in which they were borne were being blown away. Many, we hear, were forced to leave their dwellings, and large numbers had to pass the night on the lowest floors or in cellars, in hourly fear that their houses would go.

After the typhoon, efforts were made by the police to clear away the dead bodies, but considerable complaint, which certainly appears well justified, has been made by the public of the slowness and inadequacy of the measures adopted. For a whole day almost nothing was done, as the Chinese coolies refused to work partly on account of a superstition which the Chinese have against handling dead bodies—their idea being that if they touch a body they will be injured by the spirit of the dead man if they do not perform the funeral rites at his grave—and partly, no doubt, from the more practical idea that by holding out they would get better pay. In the confusion a large number of bodies were taken to the Civil Hospital, and

remained there till the effluvia was such as to become dangerous to the patients. This state of affairs being represented, steps were taken for the removal of the bodies, and more vigorous efforts made to get on with the work. The prisoners in the gaol were called out and more coolies were then obtained. Complaints are, however, made that no application for assistance was made to the Military, with whose aid the work, which has not been accomplished in a week, might probably have been put through in at most a couple of days. At the present moment there are, as above noticed, between thirty and forty bodies on board the steamer *Leonor*, which lies close to the Praya in the centre of the town. Had military aid been invoked at once, attention might have been brought to bear in this direction. To remove the bodies, as will have to be done, in a state of horrible decomposition with a thermometer at 85 degrees, cannot but be attended with very great danger.

We regret also to record a more serious cause of complaint which has arisen—the main particulars of which may be gathered from the report of the Inquest on some of the bodies from the steamer *Leonor*. The Captain Superintendent of Police was informed of the perilous position of the *Albay*, that there were men on board of her to be saved, and that it was reported that another steamer was coming ashore—but refused without hesitation to allow any of the Police to go out to assist. On the alarm of the fire reaching the Police Station, he gave orders that the fire bell should not be rung, and omitted to send any intimation to the Superintendent of the Fire Brigade, Mr. May, and the Assistant Superintendent, Mr. Russell. The second Assistant Superintendent of the Fire Brigade happening to be Mr. Creagh, who is Deputy Superintendent of Police, that gentleman sallied forth in his fire brigade capacity, and with the aid of a few police whom he found out, and some of the Volunteer Firemen, belonging to Messrs. Gibb's hong, he succeeded in getting out the fire engine and bringing it to the scene of action, where he exerted himself in a very courageous and energetic manner. These circumstances getting wind, the Hon. R. Rowett, a member of the Legislative Council, addressed a letter to the Colonial Secretary, suggesting that an official enquiry should be made into the matter. A somewhat lengthy correspondence ensued, in which the Government, supporting Mr. Deane in his action, replied that they saw no reason to question his exercise of the discretion which is vested in him in refusing to send his men out in the storm—when he might have “other, and more formidable evils than loss of life by shipwreck” to suppress. What those other evils are is not stated—and it is noticeable that in his minutes to the Government, explanatory of his conduct, the Capt. Superintendent, while he says he would have been guilty of the most wanton rashness had he ventured the lives of the police before he did, states that he took them out at 2.50 a.m., though, as a matter of fact, the barometer was lower then than at 1 a.m., when the *Albay's* being ashore was reported to him, and the storm, at the last named hour, was raging with undiminished fury. The Government being pressed, in a further letter from the Hon. Mr. Rowett, with regard to the failure to give the alarm of fire, sent a reply, which would make it appear that Mr. Creagh was sent out by the Captain Superintendent instead of going as a fireman; that Mr. Deane would have sent men had Mr. Creagh sent back and asked him, though he

had before distinctly said the men should not go out; and that, though a typhoon was blowing sufficient to cause a conflagration to spread in a short space of time over the whole town, the bell was not rung because it is not the custom to ring it on all occasions, but “only when it appears specially necessary to do so;” and ends with a final plea, that if the bell had been rung it would not have been heard—which is contrary to fact, as it would have been heard to leeward and the wind was blowing right over the town. The despatch is so unique that it deserves to be preserved, and we accordingly subjoin it, commending it to the careful perusal of home readers who wish to form an idea of how things are managed in Her Majesty's Crown Colony of Hongkong.

Colonial Secretary's Office,

Hongkong, 1st October, 1874.

SIR,—I have the honour to acknowledge the receipt of your letter of the 29th ultimo, and to acquaint you, in reply, by desire of His Excellency the Governor, that the Captain Superintendent of Police has reported that not only did the Deputy Superintendent go to the fire to which you allude, but that there was a Police Station with 13 men close by, and that if more assistance had been required, the Deputy Superintendent could have sent for it.

In respect to the bell at the Central Station, it was not rung because, under the foregoing circumstances, the Captain Superintendent did not deem it necessary to turn out the men, and because it has not been the custom to ring the bell on all occasions, but only when it appeared to be specially necessary.

Moreover, the bell could scarcely have been heard 20 yards from the station, even if it had been rung.

I have the honour to be, Sir,

Your most obedient Servant,

J. GARDINER AUSTIN,

Colonial Secretary.

The Honorable R. ROWETT,

&c., &c., &c.,

The whole affair has caused much public indignation, letters speaking of it in the strongest terms having appeared daily in the local papers. It is understood that a protest will be sent in by the community, and one of the non-official members has given notice of some questions in Council concerning the Fire Brigade. The lagging action of the officials in this Colony has been in marked contrast with what was done in Macao, where the Governor himself went out and some of the officers of the troops performed daring feats in rescuing the shipwrecked, and rendered invaluable assistance in clearing away the dead bodies and averting the danger of pestilence.

The subjoined details will give an idea of the main particulars which have come to light since the departure of the English mail. From the accounts given of the extraordinarily high tide, it would almost seem that there must, at one time, have been a tidal wave—and this would fit in with statements made in some quarters with reference to the stoppage of clocks which seemed to indicate that a slight shock of an earthquake occurred while the typhoon was raging. The weather at present is fair, but continues unusually hot for the time of year. The Chinese, however, very generally predict that another typhoon will occur shortly. They name 4th inst. (to-morrow), as the day; but so far as can be judged by the indications of the barometer, there does not appear to be any foundation for their fears.

#### LATEST DETAILS.

Saving of a Portion of the Crew and Passengers on Board the Steamers “*Albay*” and “*Leonor*.”

We have been able to obtain the following details with reference to the gallant conduct of the gentlemen who assisted in saving a portion of the crew and passengers of the *Albay* and the crew of the *Leonor* during the typhoon. We take this opportunity of correcting an oversight in our previous notice of the matter, namely, that of mentioning the names of other gentlemen who assisted in company with E. and G. Tauffer of the Engine House. Messrs. A. P. MacEwen and C. W. Baird, of Messrs. Holiday, Wise & Co.'s, Lieut. Prior of the 80th, and Mr. Lembke exerted themselves to the utmost, and contributed largely to saving the unfortunate men who were brought ashore. The particulars of the action were as follows: They heard that a ship, which proved afterwards to be the *Albay*, had got ashore about 20 minutes past one o'clock, and upon ascertaining the state of affairs, the Messrs. Tauffer, of the Engine House, went out with lamps, but the violence of the wind was such that they could not be kept lighted. They then made torches of turpentine and waste, and Mr. E. Tauffer made the end fast while his brother threw it on board; by which means three men were landed. While Mr. E. Tauffer was holding on to the rope a severe sea struck him and carried him away into the lane, his foot being at the same time hit by some object which had been washed up; and about the same time the lights on the ships went out and total darkness ensued. After a little Mr. MacEwen, Mr. Baird, Lieut. Prior and Mr. Lembke took the ropes in hand and succeeded in picking up several men, and, as they came off, brought them into the Engine House. Mr. MacEwen then went to the police station, and reported the circumstance, as related in the report of the inquest given below, to Captain Deane, who expressed his regret that, on account of the severity of the weather, he could not send out any of his men to assist. Mr. MacEwen then returned to the scene of action. The captain, chief and second mates stayed at the Engine House all night, being too exhausted to move, and the remainder were taken by the party who saved them up the Police Station. This was effected only with great difficulty, and the only way they could get them on was by Mr. MacEwen and the others leading the way and shouting out repeatedly to them, so that they might know in what direction to follow. In this manner they reached their destination, and on their arriving at the Police Station the men were taken in and attended to. At about three or half-past three o'clock the party again went out with lamps to see what further assistance could be rendered. There was no one within reach at the time; but shortly after a Chinaman came swimming ashore. On asking him who he was, he said he was the fireman of the *Leonor*, which vessel had got ashore outside the *Albay*. They then enquired of him whether there were any men on board, and he replied that he did not know. While holding the lamps out they heard cries and they then flashed the light outwards towards the ship's mast and found that was a man hanging on among three masts which had got entangled. The sea having by this time to some extent subsided, the brothers Tauffer launched a boat, and went out and took five off the fore-mast of the *Leonor*, two of them the second and third engineers, and the remaining three Chinese. On a subsequent journey they

brought back five more Chinese, and on a third trip two more men. Mr. Cox and another gentleman, of Messrs. Lane, Crawford & Co.'s, helped to launch the boat, supplied them with rope, and rendered assistance to the unfortunate men.

The above are the main facts connected with this matter, which reflects great credit upon all the gentlemen concerned in this timely saving of life. We have already suggested that some recognition should be made of the conduct of the Messrs. Taufer; and are glad to hear that some steps will probably be taken with that object. It is perhaps hardly necessary to add that the services of the others concerned are also deserving of some kind of honorary acknowledgment, and we trust that the whole matter will be brought under the notice of the Humane Societies at home, who, we are confident, will not fail to show their appreciation of such gallant conduct.

The wreck of the steamer *Albay* and *Leonor*.—

Inquest on some of the bodies.

The adjourned inquest on the body of Capt. Echanique, of the Spanish steamship *Leonor*, who was drowned on the night of the typhoon, was resumed on the 28th ultimo, before James Russell, Esq., coroner, and the jury, Messrs. Blakeman, McCulloch, and Alford.

Mr. Alex. R. McEwen, sworn, said he was on the *Praya* on the night of the typhoon, with Lieut. Prior, Mr. Baird, of Holiday Wise & Co.'s, and the two brothers G. and E. Taufer. These came on his seeing a steamer coming on shore, which turned out to be the *Albay*. This was at 1 a.m., he having at that time called them. They went into the Hong-kong Insurance Engine House, and each procured a lamp. George Taufer then got a torch and a rope. As soon as the lights were displayed he heard shrieks from the steamer, which by torch-light he saw had struck on shore. By the aid of the light the people on board could see their position, and many of them jumped on shore from the bows. All the men belonging to the steamer apparently got on shore and the last man was a Malay. They all went into the Engine House, the Captain amongst them, and witness was asked how many he had on board, and he answered 46. He counted them and found 36, not counting the Captain and three officers. He believed the others he did not count went up a lane. Some one said in the Engine House that there was another steamer dragging her anchors to the westward. He then went up and reported at the Central Police Station concerning the men in the Engine House, and that there was another steamer dragging her anchors. He saw Mr. Deane, the Superintendent, at about 1.30 a.m., and to him he again reported the circumstance connected with the *Albay*, and said to him it was reported that there was another steamer coming on shore. Captain Deane replied that he was very sorry, but he did not feel himself justified in sending men out, or words to that effect. He believed the word was "allow." He would not swear whether the word was "allow," "send," or "order," as the time was one of excitement. Mr. Deane said the barometer was 28.88. He did not request any men to be sent down. He then returned to the Engine House, and told the men that they would get no assistance from the Police Station. He meant by that, assistance to conduct them to the station and give them refuge there, as the Engine House was small for so many men all wet, and there was some fear of the masts falling on the Engine House. Himself, Mr. Baird and Lieut. Prior,

after consulting the Captain, escorted the thirty-six men to the station for refuge. Mr. Baird and Lieut. Prior then returned with him to the office of his firm, and again attempted to go down to the *Praya*, but could not get down as the sea was over the *Praya* and running up the streets leading there. He did not assist Mr. Taufer to launch a boat.

The jury found the deceased was washed from the rigging of the Spanish steamer *Leonor*, and drowned, after she had stranded on the *Praya* during the typhoon, early on the morning of the 23rd instant.

The jury desired to express their sense of the conduct of the brothers Taufer, in the efforts made by them to rescue the survivors, and trusted that they would be suitably rewarded by the Government.

Considering the frequency of typhoons during certain seasons of the year and their disastrous effects to life and property afloat, the jury would recommend that the Government should supply proper life saving apparatus for use where required.

#### MISCELLANEOUS PARTICULARS.

We are glad to hear that H. E. the Governor has addressed a letter of thanks to Mr. McLeod and the other gentlemen who assisted in putting out the fire in Bonham Strand, on the night of the typhoon.

We regret to learn that the Hon. W. H. Alexander, Registrar of the Supreme Court, received a rather serious wound on the front of the leg just above the foot, by the falling of a window during the typhoon. On account of a difficulty in procuring medical assistance, the wound bled for some time, and Mr. Alexander is, in consequence, somewhat weakened.

Fifteen seamen of the Peruvian ship *Macao* No. 2, having been saved and returned to the Colony in a sampan, presented themselves at the Magistracy, and (such is routine) were placed on the charge sheets charged with being destitutes. They said the Consul was at Macao, and no boarding house would take them in as they had lost all, and their keep was not guaranteed by the Consul. His Worship told them that he would communicate with the Consul, but in the meantime they could stay in the gaol. A boarding house keeper in Court, however, consented to keep the men himself till Monday in his house, when it may be ascertained from the Consul what he will do with them.

On the 28th ultimo, at high water, an attempt was made to haul the *Alaska* from her position on shore at Aberdeen. The *Kiukiang*, *Fame*, and *Little Orphan* were employed, but they tugged, unfortunately, to no avail. The *Celestial* hulk was lashed alongside for the purpose of lightening the steamer. The large 14-in. hawser used was snapped by the *Kiukiang*. The P.M.S.S. Co. express themselves much indebted to the Commodore and the authorities at the Naval Yard for supply of hawsers, &c., &c., which they generously placed at their disposal. We are informed that further and more carefully prepared efforts will now be made to get the steamer afloat, and we trust sincerely that they will prove successful. By latest accounts there was no change in the position of the steamer. She was still tight and fast, and had not suffered in any way. We learn that it is hoped in the course of a few weeks to have her floated off, which is considered to be only a question of time and systematic operations.

The missing on board the British bark *Malvern* are Captain Myles and wife, chief mate, boatswain, carpenter, steward, cook, five able seamen, two ordinary seamen, and two apprentices. On board the Peruvian

ship *Macao* No. 2, the mate, second mate, three seamen, and ten Chinese passengers perished in the breaking up of that vessel on an island near the Cap-sing-moon Pass. There is yet some hope that the Spanish bark *Teresa* will turn up again, as she was to have left the same afternoon as the French ship *Radama*, which vessel, set down as missing, returned to port again on Saturday. Several gangs of prisoners were out on Saturday in Taiping-shan and other places clearing away the wreck of houses, from under the debris of which many dead bodies were drawn. The sailors at the Home were employed by the police to bury the dead found on land and water. The police on Saturday exerted themselves to assist, and some hundreds were interred at Lap-sap-wan, Stone-cutter's Island, and Kowloon. The stench along the *Praya* from the dust-bin rubbish spread about, from putrid rice, fish, and such like Chinese merchandise, is dreadful, and had not the dead bodies been taken away this Colony would assuredly have been visited by a plague.

Considerable damage has been sustained by the Camphor Works, East Point. The works are eight feet above high water mark, and the tide rose five feet in the building, thus showing that it was no less than thirteen feet above high water mark.

The ship *Macao* has broken up on some rocks at the corner of Lantau Island to which she drifted. She is now a complete wreck. The ship *Everhard*, wrecked close upon the Point, has also gone to pieces. The P. & O. cargo boat has also been found near the same spot, not much injured.

We hear that Inspector Yungson, of the Police Force, who is stationed at Sowkewan, has been performing wonders in meeting the difficulties resulting from the typhoon there; and has in fact, acted almost as a hero, having, single-handed, taken matters in hand, had the dead buried, and so averted the consequences in the form of disease which must otherwise have accrued. Inspector Burns, of Yowmah-tee, is also deserving of great credit. He was most active during the storm, and succeeded in saving twenty-six Chinese from a junk which had capsized. He went off in a sampan, and cut a hole in the bottom with a hatchet, and so took the men out.

Macao, Sept. 26th, 1874.

It is impossible to describe the complete desolation which reigns over this place, in consequence of the late typhoon. The mortality among the Chinese has been unprecedented, and the length of the beach, in the whole of the inner and outer harbour, is lined with corpses. No less than four hundred dead bodies have already been picked up, and they are coming ashore thick at each flow of the tide. The police and the soldiers are busily engaged gathering them together, and in order to avoid a pestilence, which it is considered will infallibly follow longer delay, the bodies will be burned at Porta do Ares, as it is impossible to obtain hands to bury them.

At Taipa and at Colowane the destruction and loss of life have also been enormous.

The National Battalion has been ordered out by the Government for the better protection of the city, as plundering is going on in all directions. The misery which has been caused is terrible and wide-spread, and the Governor has, with praiseworthy consideration, ordered that food shall be supplied to the poor Christians from the parish churches.

The French barque *Chateaubriand* left this for Newchwang two days before the hurricane, and must have suffered severely.—H. K. Daily Press.

## Law Reports.

## In Chambers.

October 3rd, 1874.

ORIENTAL BANK v. J. DAVISON.

This was a motion by Mr. Marks, defendant's solicitor, asking that the plaintiff's petition, which was in effect to try the right to possession of certain goods alleged by the plaintiffs to be wrongfully detained from them by the defendant, should be dismissed or amended.

Mr. Dickens appeared for the plaintiffs, and objected to the form of the motion, finally withdrawing his objection on its being settled that the motion was in demurrer under Rule 43. The motion paper specified six different grounds of law in support, one of which was struck out by the Judge, the remaining five being disallowed, and the motion dismissed, with costs, against the defendant.—*Mail*.

F. BEATO v. J. DAVISON.

This was another motion by Mr. Marks, defendant's solicitor, asking that the plaintiff's petition, which was in effect a suit for an account against the defendant, should be dismissed or amended under Rules 27 and 28.

Mr. Dickens appeared for the plaintiff.

After some preliminary discussion the motion was amended by striking out the demand for dismissal, and three out of the five grounds in support contained in the motion paper.

Mr. Marks then urged that the heading to the petition, "In Equity," should be struck out, which was ordered, it being intimated that the plaintiff's equitable rights were in no way affected by this.

Mr. Dickens then showed cause at considerable length; to which Mr. Marks replied, urging that the petition was a jumble which he could not answer; that it embarrassed him in his defence; that it joined wrong causes of action; that no particulars of demand were attached; that it was insufficient in part; that he never saw such a petition in his life; that if it were allowed to pass muster everybody in Yokohama would be filing similar petitions, &c., &c.

The Counsel's objections were overruled, and the motion was dismissed, with costs against the defendant.

## In H. B. M.'s Provincial Court.

Before C. W. GOODWIN, Esq., Assist. Judge.

Friday, 9th October, 1874.

DAVISON vs. ORIENTAL BANK CORPORATION.

This case, which has been pending for some time, was brought on to-day.

Messrs. W. Cheshire, W. B. Criuckshank, W. H. Smith, H. Collins, and H. J. H. Tripp were duly sworn as jurymen.

Mr. F. W. Marks appeared for the plaintiff, and Mr. F. V. Dickens for the defendants.

James Davison, the plaintiff, was examined at great length by Mr. Marks, and cross-examined by opposing counsel.

By request of His Honour we withhold the publication of proceedings until the finding of the jury.

Tuesday, October 13th, 1874.

James Anderson, fireman of the S. S. *Vancouver*, was charged with being drunk, and assaulting a jin-riki-sha coolie and a Japanese police officer, last night.

Prisoner pleaded not guilty.

A European police officer deposed to prisoner being brought to the station "very drunk and violent."

A Japanese police officer stated that he saw prisoner strike a jin-riki-sha man, and took him to the police station. He was very drunk, and struck the officer several times.

The jin-riki-sha man asserted that prisoner refused to pay his fare and then struck him. He took him from the English Hatoba to Takashima-cho.

Prisoner said he objected to being taken to the police station, when he wanted to go on board his ship. He wasn't "so" drunk.

His Honour, who considered the charge proved, fined prisoner \$5 and costs, and ordered him to pay the jin-riki-sha fare.

## In the U. S. Consular-General Court.

Before Gen. T. B. VAN BUREN, Consul-General

Monday, September 28th, 1874.

OTOMO SADAJIRO vs. W. H. DOYLE.

In this case the plaintiff claimed \$350 from defendant, W. H. Doyle, upon the grounds that he had been engaged by defendant as an agent to procure him a partner with a capital of \$15,000, to engage with defendant in setting up a paper-manufacturing business.

Mr. F. V. Dickens, who appeared for the plaintiff, opened the case by saying it was a great pity it came before a Court at all and he sincerely regretted that it could not be settled outside. The defendant did not deny that he had engaged plaintiff, but admitted that he had acted as a go-between or interpreter, and therefore the only question was about the amount. He would just state that, some time ago, Mr. Doyle came to this country with some machinery, with the primary intention of obtaining a purchaser for it; but finally resolved to start a paper-factory with his machinery if he could obtain a partner with capital. Plaintiff was engaged to look for that partner, and presented to Mr. Doyle a Japanese named Hayashi, who had the required capital. In travelling and other expenses plaintiff had paid money out of his own pocket, and had been some time in search of a person who would suit Mr. Doyle. The learned gentleman concluded by saying that his client claimed \$350, which was a very small commission upon \$15,000.

Otomo Sadajiro, cautioned, and examined by Mr. Dickens:—The first I heard about this matter I was told that Mr. Doyle wanted some one to get him a partner to start in the paper making business. I got a letter of introduction to Mr. Doyle. I went to Yedo to look for a partner. I took Hayashi and Okumoto to Mr. Doyle. I was searching about 3 months before I found Hayashi. Mr. Doyle first told me that he wanted a partner with \$10,000, but afterwards said that would not be enough and that he required \$15,000. I introduced Mr. Hayashi to Mr. Doyle. Hayashi and Mr. Doyle had some talk about the matter. I took a great deal of trouble to find Mr. Hayashi. I tried to get other people before him. I talked to several Japanese about the matter. I spent money out of my own pocket; I could not talk to people in the street, but had to take them into a refreshment room, and there we must have something to eat or drink. These expenses, and money spent in travelling, altogether came to about 60 *riyos*. I have received \$42 from Mr. Doyle, at three different times but I have not received money from any one else. I have requested Mr. Doyle to pay me commission 5 or 6 times.

The last time I asked him was during last winter. Mr. Doyle agreed to pay me commission, but did not fix the amount.

Cross-examined by Mr. Doyle:—I have been known by the name of Rokonoski, but my real name is Sadajiro. Otomo is an ancient family name. Very few people know me by the name of Rokonoski. I was first introduced to you by letter, but I do not know the contents of that letter. All I know is that I was engaged to find a person to buy the machinery or to go into partnership with you. I introduced a man to you who was sent by Mr. Haraki, of the *Nisshin Shinjishi*. Mr. Haraki said he was one of the Kaga people. I am quite positive that I presented him to you, and that you had a talk together. He told you that if you could not set up the machinery in Yokohama, he would undertake to set it up. I never saw Mr. Hayashi before I saw him in company of Mr. Okumoto. I had seen a man named Unakura, who was in the same business as Hayashi. I was about 4½ months altogether employed in searching for a partner. The paper produced is a statement of 50 *riyos* loaned by Okumoto to myself. I received the money. I have not repaid it.

Re-examined:—I have never received any money from Mr. Doyle except the \$42. Mr. Okumoto was engaged in business for himself in exchange. I have known him for some time about Yokohama. I spoke to him about getting a partner for Mr. Doyle. Mr. Okumoto told me that there was a man living in his house who had the money. He was a partner with Mr. Hayashi, and the business was done in the name of the latter.

Defendant said he had a witness whom he would like to produce, and the further hearing of the case was postponed to the 6th proximo.

Wednesday, October 7th, 1874.

Lewis Williams, part-proprietor of the "Shakespeare" saloon, was charged with being drunk, assaulting a jinrikisha man, and breaking the jinrikisha.

Prisoner pleaded guilty.

A native police officer heard some one calling for "police," last night about half-past 7 o'clock, in Nogeyama street. He ran to the place whence the voice proceeded, and saw prisoner holding the jinrikishaman on the ground with his left hand, and pointing a revolver at him with his right. The policeman wrested the revolver from him, and took him into custody. The jinrikishaman, who gave his name as Staba Sajariko, conveyed prisoner from the Railway Station, but did not know where to take him, as he was drunk and could not give any direction. Upon reaching the street where the disturbance occurred, prisoner got out of the vehicle, and, shoving the coolie on one side, tried to run away with it, but knocked it against the pavement, causing damage to the extent of \$1.00. He then seized hold of the coolie, knocked him down, and pointed the revolver at him. He was, however, prevented from firing by the arrival of the officer.

His Honour said that some men thought it was fine fun to go about town abusing jinrikishamen, who, as a class, were a very honest, diligent set of people; but he did not call it fun. Prisoner had no business, in the first place, to carry a loaded revolver; he might have committed murder without knowing it. He should fine him \$20, (out of which the damage to the jinrikisha would be paid), and he would stand committed until the payment of the fine. If prisoner liked he might go, in company with the deputy-Marshall, to see if his partner, Mr. Hamill, would pay the fine; but if he attempted to escape, he would be sent to gaol for 6 months.

## STAPLE IMPORTS.

GREY SHIRTINGS, particularly the lower qualities, have met with fair enquiry at quotations.

T.-CLOTHS & COTTON SATRENS have been quitted to some extent, reducing Stocks considerably; in BLANKETS there is no improvement to note.

METALS.—For Nail Rod Iron there has been some enquiry; Flat and Round Iron only very limited sales.

SUGAR, BROWN FORMOSA, has met with ready sale at an advance, but no enquiry for CANTON WHITE.

RAW COTTON has changed hands at an advance.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—The advance in price noted in our last has been fully maintained, quotations closing \$15 to \$20 per picul higher, a large business has been done, leaving Stock about 500 bales.

The M. M. Steamer *Menzaleh* left yesterday with 718 bales.

**SILK-WORMS' EGGS.**—Total arrivals to date nearly one million and a half *cartons*, against about a third of that number to same date last year. Settlements are estimated at 400,000 ranging at from 25 cents to 50 cents; favourite marks only, realising 75 cents. to \$1.00. Holders with a view to forcing on advance in the price have refused to sell, and in some cases have commenced to burn the *cartons*.

**TEA.**—Business in Tea for the last few days presented less features for comment and a decidedly quieter tone prevails on our market.

Settlements since 24th ulto. to date are about 6500 piculs, and supplies continue on a liberal scale replacing forementioned clearances.

Prices are unaltered but within the last few days a greater inclination to realise is apparent; stocks in Yokohama are moderate and quotations at present juncture must be considered almost nominal.

To-days prices close nominally as under.

The *New Republic* is the only sailing craft on the berth for the United States @ £2. 15 per ton of 40 cubic feet.

**EXCHANGE.**—Considerably more business has been doing in Exchange during the past fortnight; some extensive settlements of Private bills were made in the early part of the past week, and rates having advanced, a fair amount of Bank paper has been secured at 4s. 2½d. At closing however, rates are somewhat weaker.
